(Teacher Professional Conduct)

Professional relationships between employees and students

You must not develop a relationship with any student that is, or that can be misinterpreted as having a personal rather than a professional interest in a student.

You must not enter into a romantic or sexual relationship with any student (including any adult student) that you are responsible for teaching, tutoring, advising, assessing, or for whom you provide pastoral or welfare support. To do so raises serious questions of conflict of interests, trust, confidence, dependency, and of equality of treatment. Such relationships may also have a negative impact on the teaching and learning environment for other students and colleagues, and may carry a serious reputational risk for the Department.

Where a personal relationship, such as family relationship or close friendship exists between you and a student, or where there is a preexisting sexual relationship with an adult student attending the same workplace, you must report the conflict of interest, or any potential conflict, to your supervisor or principal, and it must be managed carefully. Wherever practical, you should avoid teaching or being involved in educational decisions involving family members or close friends. Staff should make any significant decisions relating to the student's assessments and have those endorsed by a supervisor.

Your professional relationship may be compromised if you: • invite students to join your personal electronic social networking site or accept students' invitations to join theirs • attend parties or socialise with students • invite a student or students back to your home or attend theirs without an appropriate professional reason and without the consent of their parent or carer • transport a school student in your car without prior approval from a supervisor and a parent or carer.

The boundaries of the professional relationship will be breached if you: • have a sexual relationship or develop an intimate relationship with a student • use sexual innuendo or inappropriate language and/or material with students • hold conversations of an intimately personal nature, where you disclose private information about yourself • have contact with a student via written or electronic means including email, letters, telephone, text messages or chat lines, without a valid context • give students gifts of a personal nature that encourages them to think they have an individual and special relationship with you

ADMISSIONS PHILOSOPHY

The University seeks mature, capable students who have the preparation and motivation needed to accomplish their academic and professional goals. In addition, it is expected that successful applicants will demonstrate a commitment to and a passion for their chosen field of study.

The University shall admit any student who is obviously qualified or who does appear to have a reasonable prospect of completing the program. Applications will be reviewed by Office of Admissions to ensure that the candidate is of good quality for admissions. Candidates must also be able to demonstrate significant potential and promise of completing the program. This can be demonstrated with prior academic performance, professional experience and life experiences. The University exercises an open admissions policy. That is, all students who apply and meet the admissions criteria will be admitted into the program.

The University welcomes all students and does not discriminate on the basis of race, color, national origin, religion, disability, gender or in any other way in its policies, practices, or procedures involving applicants, students, faculty, staff and the public. Please note, however, that the University reserves the right to refuse admission to anyone the University believes does not meet its academic standards.

NON-MATRICULATED APPLICANTS

All applicants must matriculate into an academic program. No non-program applicants shall be accepted.

GRADUATE ENTRANCE EXAMINATIONS

No graduate entrance examinations are required at the time of admissions.

WAIVER OF BACHELOR DEGREE REQUIREMENT

In special circumstances, the University may not require an earned bachelor degree to be admitted into the graduate degree program. This is permissible if the applicant has achieved sequential learning equivalent in breadth of knowledge and understanding (i.e., general education) and equivalent in depth of achievement in business administration or management to that acquired in four years of study beyond high school, as measured by a minimum of 120 semester units or its equivalent in other units of credit.

HIGH SCHOOL ATTESTATION

If applicant is applying for Associate degree program and has no prior college coursework completed, applicant must complete High School Attestation form.

OFFICIAL TRANSCRIPT

You must contact every college or university you have attended and request that an official transcript be sent to the Office of Admissions. An official transcript is one that is sent directly to IAU from the issuing institution. Prior college and university transfer courses and/or degrees must be from an institution approved by a State Approval Agency (SAA), nationally or regionally accredited, or a foreign equivalent. A minimum of a 2.0 cumulative grade point average depicted will be considered for transfer. An official transcript is one that has been received directly from the issuing University. It must bear the college seal, date, and an appropriate signature.

IQY does not

complete your
program.

TRANSFER CREDIT (TC)

The University will consider accepting transfer students from other schools as determined by the Office of Admissions. To transfer to the University, an applicant must file an application for admission, satisfy all admission requirements, and submit official copies of transcripts from all schools previously attended. The Director of Admissions has the sole discretion to award transfer credits.

STANDARDIZED EXAM CREDIT (SEC)

The University welcomes students from a wide variety of backgrounds and learning experiences. The University recognizes their prior learning by accepting a full range of standardized exams, which measure mastery of college-level, introductory course content in a wide range of disciplines. Students who obtain the credit-granting score required can earn credits and course exemptions. The University establishes standards that are recommended by the American Council on Education (ACE). The University grants a credit on standardized exams for undergraduate credit only. Official exam scores must be sent from crediting exam center.

For list of Standardized Exams, the University accepts, visit website: www.iau.la/adm/policies.asp

EXPERIENTIAL LEARNING CREDIT (ELC)

IAU recognizes that learning may take place in settings other than the college classroom. Many adult students have acquired knowledge from training or life experiences (a job, self education or practical experience), which is equivalent to that provided in the classroom. Where college level learning from these experiences can be verified and properly documented, IAU will award college credit.

IAU is one of a growing number of colleges and universities which are receptive to the idea of awarding credit for the learning acquired through non-college experience prior to entering or returning to the pursuit of a college degree. Such learning, frequently called Prior Experiential Learning, may result from such activities as work experience, volunteer work, community service, travel abroad or internationally, military or Peace Corps experience, independent reading or conversations with experts.

Prior Experiential Learning credit can save money and reduce the length of time to achieve a degree. Although numerous other colleges also recognize experiential learning, IAU sets its own standards on what and how many credits it will accept in transfer. Students intending to transfer should inquire of that school how experiential credit will be accepted. The maximum amount of experiential learning credit which may be awarded depends on the academic program enrolled.

- **Save Time.** Successful completion of a Request for Prior Experiential Learning credit can cut a significant amount of time from the degree-completion process.
- **Save Money.** Credits awarded through Request for Prior Experiential Learning credit assessment are evaluated for a fee much lower than tuition.
- **Gain Understanding.** The process helps students understand how they have acquired learning.
- **Value Knowledge.** Credit awards show the value of experiential learning.

ENGLISH FLUENCY FOR INTERNATIONAL APPLICANTS

No program applicant is admissible unless she/he can demonstrate proficiency in the English language. At the Office of Admissions' discretion, proficiency may be demonstrated by:

- 1. Completion of certificate or degree program in country where English is primary language;
- 2. Writing sample, personal interview, nature of current employment; or
- 3. Special exams: IAU Institutional TOEFL/TOEFL 500+ (PBT) / 173+ (CBT) / 61+ (IBT)

APPLICANTS WITH FOREIGN DEGREES

If you completed your degree at a foreign (outside of the United States) college or university, you will need to submit a professional General Report foreign credential evaluation. If you want to receive transfer credit for coursework you have completed at a foreign (outside of the United States) college or university you will need to submit a professional Course-By-Course evaluation of your coursework.

These agencies will interpret your educational credentials and identify the U.S. equivalents in terms of both credits and degrees. They can also evaluate high school work if you need proof that you have the equivalent of a U.S. high school diploma.

Official evaluation of your credentials by one of these agencies does not guarantee that **IQY** will accept all or any of your coursework. The final decision for the acceptance of transfer credits is determined by IAU, not the agency doing the evaluation of your foreign credentials. For list of approved credential evaluating agencies, visit website:

International
Applicants &
Foreign
Education Policy

Admissions Requirements

ADMISSIONS REQUIREMENTS

English as a Second Language (ESL) Certificate Program

- Placement Exam: A Placement Exam is required for ESL applicant, so that s/he is placed in the appropriate level.
- Pre-Education: Evidence of a high school diploma or the student's capacity to engage in post-secondary education.
- No transfer credit, standardized exams, or prior experiential learning credit awarded.

Certificate of Achievement / Graduate Management Certificate Program

- Pre-Education: The University may require evidence of some college or the student's capacity to engage in post-secondary education / evidence of a bachelor degree in any discipline.
- Professional Experience: May require some professional experience.
- No transfer credit, standardized exams, or prior experiential learning credit awarded

Associate's Degree Program

- Pre-Education: The University will require either evidence of a high school diploma, or some completed college-level coursework. If applicant is applying for Associate degree program and has no prior college coursework completed, applicant must complete High School Attestation form.
- Maximum Transfer Units: The maximum number of transfer credits for the undergraduate Associate degree program is 60 semester units.
- Standardized Exams: 60 semester units.
- Prior Experiential Learning: The maximum number of Experiential Learning credits for the undergraduate Associate degree program is 15 semester units.

Bachelor's Degree Program

- Pre-Education: The University will require evidence of an earned Associate Degree, or equivalent or completed at least 2 years of college-level coursework.
- Maximum Transfer Units: The maximum number of transfer credits for the undergraduate Bachelor degree program is 90 semester units.
- Standardized Exams: 90 semester units.
- Prior Experiential Learning: The maximum number of Experiential Learning credits for the undergraduate Bachelor degree program is 30 semester units.

Master's Degree Program

- Pre-Education: The University will require evidence of a bachelor degree in any discipline. In special circumstances, applicants without bachelor degrees will be admitted.
- Professional Experience: The University may require at least 3 years of professional experience.
- Maximum Transfer Units: The maximum number of transfer credits for the graduate Master degree program is 6 semester units.
- Prior Experiential Learning: The maximum number of Experiential Learning credits for the graduate Master degree program is 6 semester units.

Doctor Degree Program

- Pre-Education: The University will require evidence of a bachelor degree and MBA, or equivalent. In special circumstances, applicants without bachelor degrees will be admitted.
- Professional Experience: The University may require at least 5 years of professional experience.
- Maximum Transfer Units: The maximum number of transfer credits for the graduate Doctoral degree program is 30 semester units.
- Prior Experiential Learning: The maximum number of Experiential Learning credits for the graduate Doctoral degree program is 9 semester units. Of the first 30 semester units awarded a student in a graduate program, no more than 6 semester units may be awarded for prior experiential learning. Of the second 30 semester units (i.e., units 31 to 60) awarded a student in a graduate program, no more than 3 semester units may be awarded for prior experiential learning.

APPLICATION PROCESS & PROCEDURES

Applicants applying to academic programs must go through the University's Admissions process. The Admissions process is a process that assists the student in achieving his or her educational goals. It is an agreement between the college and the student who enrolls for credit. IAU asks that you participate in the matriculation process with us to ensure your educational success. If you commit to an educational goal, we commit to helping you succeed.

1. Applicants must submit a completed Admissions Portfolio. The completed Admissions Portfolio and any supporting materials (such as transcripts and test scores) become the property of the University and will not be returned to the applicant or transmitted to a third party.
 - Application for Admissions (required): Complete all items on the printed Application for Admission form.
 - Application Fee (required): Submitting an application requires a \$75.00 non-refundable application fee.
 - Library Acknowledgement Form (required): Student will be responsible for obtaining access to sufficient library resources. Student must complete and submit the library acknowledgement form.
 - Official Transcripts (required): Request official transcripts from all Colleges or Universities that you have attended since graduating high school. You may submit personal copies for evaluation purposes. Official copies must be received directly from the issuing College or University prior to official enrollment.
 - High School Attestation (optional): If applicant is applying for Associate degree program and has no prior college coursework completed, applicant must complete High School Attestation form.
 - Foreign Credential Evaluation (FCE) (required for foreign students): If you completed your degree at a foreign (outside of the United States) college or university, you will need to submit a professional foreign credential evaluation.
 - Bachelor Degree Waiver (optional): If applicant is applying for Bachelor degree waiver for graduate degree program, please complete Application for Bachelor Degree Equivalency. Please complete and submit this application and associated fees in addition to the standard Application for Admissions and Application Fee. This application does not substitute the standard Application for Admissions.
 - Standardized Exam Credit (optional): Submit any exams cores directly to the Office of Admissions.
 - Experiential Learning Credit (ELC) (optional): The University recognizes that not all learning takes place in a traditional classroom, and we are pleased to offer students a way to receive college credit for learning they have acquired through their professional and life experiences. Upon applying, you may submit this Prior Experiential Learning Credit request to the Office of Admissions for review.
2. After the Admissions Portfolio has been received, the Office of Admissions will conduct a formal Academic Credential Evaluation (ACE). This will allow the applicant to understand what credit has been awarded for transfer credit, standardized exams, and experiential credit.
3. If the applicant is accepted for admission, an acceptance letter will be sent to the applicant. If the applicant is not accepted, the Office of Admissions will send a letter to the applicant informing applicant of the decision, stating why his/her qualifications are deficient.

Admissions Process & Procedure

Student Services

Dedicated to
fostering the
academic and
personal
endeavors of
every student

STUDY GROUPS

Residential Students

The University believes that study groups can be very valuable in the learning process. They can provide support, discipline, and ready feedback. Residential Students can form study groups on campus.

Distance Learning Students

As with any distance-learning program with students throughout the world, it is difficult for students to convene in traditional study groups for learning purposes. The University provides for "electronic interaction" between students and their Faculty Mentors, which it believes offsets this limitation. Through electronic means, students are in direct one-on-one contact with their Faculty Mentors and Academic Advisors to enhance their learning.

LIBRARY SERVICES

Residential Students

The library of the University exists primarily to serve the scholarly and research needs of the faculty and students of University. The library contains mainly specialized holdings in those subject areas relevant to the University's course offerings- Business and English.

Distance Learning Students

Students will be required to use his or her best judgment to evaluate the Library Resources required to successfully complete the educational program and determine if Student can comfortably meet those needs.

TRANSCRIPT SERVICES

The University will provide you with one transcript at no charge when you graduate from your program. If you wish to order additional transcripts, send a written request containing your signature to the Office of Admissions & Records. The fee for an official copy is \$10.00. A check or money order must accompany your request or the request will not be processed. Transcript request form can be downloaded online. Visit: www.iau.la/adm/forms.asp

Also see *Student Records Policies*

CAREER PLANNING & PLACEMENT

The University's programs do not prepare graduates for a specific occupation or employment and does not provide formal career planning services. All students are encouraged to speak with the Office of Student Services, faculty, and instructors regarding career and professional planning. The University will provide a list of employers who have contacted the University offering employment opportunities. These postings will be made available on the public bulletin board or online in the student resources page.

ALUMNI ASSOCIATION

The mission of the Alumni Association of the University is to foster a mutually beneficial relationship between the University and its alumni ... to perpetuate a sense of pride in and commitment to the outstanding qualities of the University and the education it provides, and to promote, in partnership, a positive image of the University and its alumni through communication, service and leadership.

University policies have been established to create a safe and productive academic and work environment. All university employees and students are expected to be familiar with these policies and to follow them. University policies are subject to change at any time and faculty, staff and students are responsible for familiarizing themselves with current policies. Individuals with questions about a particular policy should contact the main administrative offices.

ATTENDANCE POLICY

Residential Students

Regular and punctual attendance, as well as active student participation, is an important part of a student's education. Except for emergencies, students will notify the University twenty-four (24) hours in advance of any absences. Student must maintain satisfactory academic progress. Attendance is strictly monitored. All missed assignments and/or additional assignments must be completed according to professors' guidelines.

Distance Learning Students

Since the University provides a distance learning program for its students and requires no classroom attendance, campus attendance is not necessary.

WITHDRAW / DROP POLICY

A student may withdraw / drop from the University at any time during the term by the last day of regularly scheduled classes by completing the proper forms from the Office of Admissions & Records. Official notification in writing must be received before any withdrawal from the University is processed. Student's cancellation notices must be in writing and that a withdrawal may be noticed by a student in writing or by the student's conduct including lack of attendance.

Students who wish to withdraw from their program of study should send a written notice to the

Office of Admissions & Records

IQY Technical College

E mail: admin@iqytechnicalcollege.com

The e-mail address is registrar@iau.la. The notice of cancellation and withdrawal is effective when delivered, postmarked, or e-mailed. ***See Tuition Refund Policy - General herein***

LEAVE OF ABSENCE

The University realizes that an emergency may occur for a student that may only be solved by electing to interrupt class attendance for a time by requesting a Leave Of Absence (LOA).

The student must direct such a request to the Office of Student Services by writing a note clearly stating the reason for the request for leave of absence and stating the date of the request, the anticipated date of return, and signing the request. The LOA may be granted if sufficient reason is provided. When a student is granted a leave of absence, consequences may include:

1. Receiving an "F" grade for all courses that were not completed,
2. Repeating failed courses, and
3. Extending the graduation date.

Attendance, Withdraw, Leave- of Absence Policies

Grading Policies

GENERAL POLICY ON GRADING

It is an integral part of the teaching responsibility of the faculty to provide careful evaluation, timely assignments, and appropriate grades for each enrolled student. In the absence of compelling reasons, such as a mistake, fraud, bad faith, or incompetence, the grade determined by the instructor of record is to be considered final. Final course grades must be submitted by the faculty to the Office of the Admissions & Records no later than noon of the second academic day after the end of the Final Examination period.

TIME BETWEEN GRADING & EVALUATION

Submitted Examinations will be graded and returned to students within 5 business days.

Doctoral Thesis will be reviewed and returned to students with comments after 60 business days. This will allow faculty ample time to review, critique, and provide constructive feedback.

STANDARDS FOR STUDENT ACHIEVEMENT

Students must achieve a 1.0, or "D", average to receive credit for a particular class. Students may retake any classes for which they have not achieved this passing grade. Standard tuition fees are applicable. An undergraduate student who falls below a cumulative grade point average of 2.0 is academically dismissed. Graduate students must maintain an overall G.P.A of 2.5 or student will be placed on academic probation. A graduate Student who falls below a cumulative grade point average of 2.5 is academically dismissed.

GRADE REPORTS

At the end of each course, notification of the student's academic standing and report of grades achieved while in enrollment at the University are provided to each student. Grades are normally provided within two weeks following the completion of the course. If there are any unpaid charges or other penalties on record against a student, request for transcripts and class grades will be withheld unless arrangements to the contrary have been made in advance with the administration. Questions regarding grade reports, academic credit, or transcripts should be referred to the Office of the Admissions & Records.

COMPLETION TIME

Minimum Completion Time

Students must be enrolled for a minimum of 2 academic terms to complete any degree program. Certificate programs have may be completed in 1 academic term.

Maximum Completion Time

Students are required to complete the program within 150% of the standard time of completion of the time of their admission.

Program	Standard (Yrs)		Maximum (Yrs)	
	Full-time	Part-time	Full-time	Part-time
Associate Degree	2.0	4.0	3.0	6.0
Bachelor Degree	2.0	4.0	3.0	6.0
Master Degree	1.75	3.5	2.75	5.5
Doctor Degree	2.0	4.0	3.0	6.0
Certificates - Achievement / Graduate	0.75	1.5	1.5	3.0
Certificates - ESL	N/a	N/a	N/a	N/a

CHEATING AND PLAGIARISM

One or more of the following actions are available to the faculty member who suspects a Student has been cheating or plagiarizing. The choice of action taken by the faculty member is guided by the extent to which the faculty member considers the cheating or plagiarism reflects the Student's lack of scholarship or lack of academic performance in the course:

- 1. Review - no action
- 2. Oral reprimand with emphasis on advising to prevent further occurrence.
- 3. Requirement that the work be repeated.
- 4. Assignment of "Failure" for the specific work in question.
- 5. Assignment of "Failure" for the course as a result of No. 4 above.
- 6. Referral to the Dean of the University, as appropriate.

STUDENT HEALTH AND SAFETY REGULATIONS

The University is not liable for injuries sustained by students in their activity as students, even though such injuries occur on school premises, in laboratory work, or in clinics. Students are advised to be certain that they are covered by personal health and accident insurance.

GRIEVANCE PROCEDURE

Students have the right to address grievances to the Director. If the situation cannot be resolved promptly, the student shall submit a report of the policy violation to the President. Upon receipt of the report, the President shall promptly notify the student that an investigation will begin and furnish the Student with a copy of this policy. The Director shall immediately investigate the situation and shall have the power to question persons with pertinent information, examine any pertinent materials, and question the student. Within fifteen (15) school days, exclusive of weekends and holidays, of notice to the student, the Director shall determine whether a complaint shall be filed with the Executive Office. If a complaint is filed, the person against whom the complaint is filed shall receive written notice which shall include the initial report, the factual allegations, a list of witnesses and evidence, the time and place of the hearing, a statement that the accused has the right to be represented by counsel or representative of his/her choice, and an opportunity to review any information gathered by the Director.

If no complaint is filed with the University because the allegation is without merit, the conduct is de minimus, or the evidence is insufficient, the Director shall keep a record of the allegation, nonetheless. The student shall be informed accordingly. Unresolved complaints may be directed to the above address.

Rules of
Conduct

Student
Records
Policies

AVAILABILITY OF STUDENT RECORDS

Student records are maintained on-site for a minimum of five (5) years. Students have access to their own personal records during regular business hours upon reasonable notice, but access can only be had in the presence of a duty-authorized University representative. Transcripts are available for fifty (50) years.

DISCLOSURE OF STUDENT RECORDS

With several exceptions provided by law, the University cannot release information concerning Students to prospective employers, government agencies, credit bureaus, etc., without the written consent of the Student. Students and alumni applying for jobs, credit, graduate school, etc., can expedite their applications by providing the University with written permission to release their records, specifying which records and to whom the release should be made. The Student's written consent is not required for the disclosure of grades, disciplinary action, or other information to parents of Students who are dependents for federal income tax dependency.

RIGHTS AND ACCESS BY OTHERS

The law provides that right of access to Student records is available to authorized officials of State or Federal agencies when such access is necessary for audit or evaluation of educational programs supported by such agencies.

RIGHT TO WITHHOLD TRANSCRIPTS AND GRADES FOR NONPAYMENT OF TUITION

The Office of the Admissions & Records may withhold a student's transcript or grades if the student is in default on a student tuition contract.

ADDRESS CHANGE

It is important for us to have current mailing addresses for all students. If you change your address, you may notify us via email. If you do not have Internet access, you may notify the Office of the Admissions & Records by phone, mail, or fax.

NAME CHANGE (STUDENT OR GRADUATE)

Students who need to change the names on their academic records may do so by contacting the Office of the Admissions & Records in writing and providing appropriate documentation. The Office of the Admissions & Records will then notify other IAU offices of the name change.

DECEASED STUDENTS (UPDATING RECORDS)

Family members of students who have passed away during the course of their program and are entitled to a refund are required to submit a copy of the Death Certificate to the Office of the Admissions & Records. The Office will update the deceased student's file at that time.

The University is committed to doing everything possible to help eligible Students meet their financial needs. Major responsibility for securing the necessary financial resources rests with the student. In some cases, assistance can be expected and should be sought from the home church, support of family and friends, summer savings, and work-study funds. The University does not currently participate in state or federal financial assistance programs. Financial assistance may come in the form of Financing Plans, private scholarships, or the President's Scholarship.

TUITION

Tuition for a class must be paid before course work is sent begins, unless student opts for **Financing Plan** described in **Financial Information** section. The University reserves the right to collect any unpaid financial obligations by any means necessary for any education services and/or training provided. Students may use electronic funds transfer, personal or business checks, cashier's check or money order.

ENROLLMENT AGREEMENT

An enrollment agreement must be signed for the entire program enrolled. It is the policy of the University to collect all tuition and other fees from a Student before he or she starts the course. A tuition payment plan may be developed to assist students who need to pay on an installment plan. See **Financing Plan** policy herein.

RELEASE OF INFORMATION

The University will not provide documentation for any student or graduate who is delinquent in payment of tuition, fees or any other financial obligation incurred through the school. Nor will any such Student have final examinations graded or next course work sent. See *Student Records Policies herein*

FINANCIAL SUSPENSION

A student may be suspended from the University for failure to pay the tuition and fees as agreed to in the enrollment agreement.

TUITION REFUND UPON CANCELLATION PRIOR TO FIRST DAY OF INSTRUCTION

For all students, without penalty or obligation, shall refund 100 percent of the amount paid for institutional charges, less a reasonable deposit or application fee not to exceed \$250, if notice of cancellation is made prior to or on the first day of instruction.

If the first lesson in a home study or correspondence course is sent to the student by mail, the University shall send it by first-class mail, postage prepaid, documented by a certificate of mailing, and the student shall have the right to cancel until midnight of the 7th business day after the first lesson was mailed. The request for cancellation from class(es) must be in writing and should state the reasons for the request.

Financial Policies

TUITION REFUND POLICY - GENERAL

Students may withdraw from a course after instruction has started and receive a prorated refund for the unused portion of the tuition if the student has completed 60% or less of the instruction. The University shall pay or credit refunds due on a reasonable or timely basis, not to exceed 45 days following the date upon which the student's withdrawal has been determined.

TUITION REFUND CALCULATION

The refund calculation for students shall be calculated as follows:

- i. Deduct a registration fee not to exceed \$250 from the total tuition charge.
- ii. Divide this figure by the number of weeks in the program.
- iii. The quotient is the weekly charge for the program.
- iv. The amount owed by the student for the purposes of calculating a refund is derived by multiplying the total weeks attended by the hourly charge for instruction plus the amount of the registration fee specified in paragraph (1).
- v. The refund shall be any amount in excess of the figure derived in paragraph (4) that was paid by the student.

English

For the people who just look as Wikipedia

Wikipedia/.org/.com such website can be created by anyone. Anyone can post in Wikipedia
This is why to write and present the thesis/ term papers at the universities, the references drawn
out from Wikipedia is not accepted by the university academics.

St Clements University is International University Group which has the branches registered with the
Governments of

- 1/Switzerland
- 2/Cambodia
- 3/Niue
- 4/British West Indies
- 4/Liberia

5/Somalia
6/Turkey

and US Department of Education registered California Foreign Credential Evaluations (California FCE) also assesses St Clements degrees as equivalent to US degrees.

The Institute of Manufacturing/ The Institute of Management Specialists which are part of British Qualifications also recognize St Clements University Qualifications.

STC Technological University is member of St Clements University Group.

The Institution of Professional Engineers Myanmar, registered with NSW Government of Australia and Member of International Federation of Engineering Education Societies (IFEES) also accredits the degrees issued by St Clements University and STC Technological University.

IQY Technical College registered with AISC of Australian Government is Authorized Training Centre of Singapore Institute of Engineering Technologists and The Institution of Professional Engineers Myanmar.

There is no Private University and Tertiary Colleges Registration law in Myanmar.

All the organizations which have named themselves as Universities are actually operating with the business licenses and act as Representative / Agents of Foreign Universities.

IQY Technical College is legally registered in Australia although we do not operate as RTO in Australia, we possess the legal right to award our own diplomas.

IQY Professional Diplomas are designed at Bachelors degree level and IQY Master Diplomas are designed at Masters degree levels.

To issue the degrees, we co-operate with St Clements University/ STC Technological University.

Accreditation and Recognition

If you pay \$100,000 and you get Australian degree, you got the accredited qualification.

But if you want to get Australian Permanent Resident Visa, you must sit IELTS

Without PR, no legal right to work .

What is meaning of Accredited Qualification

Washington Accord of IEA (International Engineering Alliances) is designed for International Mobility of Engineers

Now Covid 19 stops all international travels and borders. What will be real usage of Washington Accord?

Even if Covid 19 vaccine has been developed, the recovery of the industries and businesses of all countries will be long term. In this case, all countries will focus on giving the jobs to their own citizens and residents and when the real benefit of accredited qualifications under Washington Accord will be acquired?

It is important for you to decide your near future rather than too much concerning Accreditation/ International Recognition etc.

Because the employers will pay you for your real skills rather than your papers

IQYနည်းပညာကောလိပ်၏နိုင်ငံတကာအသက်မွေးဝမ်းကြောင်းသင်တန်း

IQY Technical College International Vocational Training Course

IQYနည်းပညာကောလိပ်၏နိုင်ငံတကာအသက်မွေးဝမ်းကြောင်းသင်တန်းများသည်သြစတြေးလျ Training Packages များ ပေါ်တွင်အခြေခံသည်။ သို့သော် NRT Australia အရည်အချင်းများကိုပေးခြင်းမရှိပါ။

IQYသည်အသက်မွေးဝမ်းကြောင်းသင်တန်းများကိုမြန်မာဘာသာဖြင့်လည်းသင်ကြားပေးသည် (Myanmar Vocational Training Certificate)

ကျွန်ုပ်တို့သည်ကျွန်ုပ်တို့၏ကိုယ်ပိုင်သင်တန်းများနှင့်သင်ယူမှုစနစ်ကိုတွဲဖက်ကာ

လိပ်များ၊တက္ကသိုလ်များနှင့်ပရော်ဖက်ရှင်နယ်အသင်းအဖွဲ့များနှင့်ပူးပေါင်းဆောင်ရွက်သည်။

IQY Technical College uses Australian Training Packages to teach International Vocational Training Courses.

IQY also teaches Vocational Training Courses in Myanmar Language (Myanmar Vocational Training Certificate)

We collaborate with our partner colleges , universities and professional associations to deliver our training.

Courses

Study Area 1 စိုက်ပျိုးရေး စီးပွားရေး(Agri Business)

IQY Professional Diploma 5999801/Advanced Diploma 4999801/Diploma 3999801/Certificate (2999801/1999801) Bachelor of Agri Business(BAB)

(STC Technological University)

The will be specialization streams such as

- Diploma in Agri Business(Animal Studies)
- Diploma in Agri Business(Production Horticulture) etc
- **Bachelor of Agribusiness**
- • ACM20117 - Certificate II in Animal Studies
- တိရိစ္ဆာန်လေ့လာရေးလက်မှတ် II
- •
- • **AHC30616** Certificate III in Production Horticulture
- •
- သစ်သီးဝလံ ထုတ်လုပ်မှုလက်မှတ်
- • Certificate in Wool Production
- • သိုးမွေးထုတ်လုပ်မှုလက်မှတ်
- • AMP30815 Certificate III in Meat Processing (Retail Butcher)
- အသားပြုပြင်ထုတ်လုပ်ခြင်း (လက်လီအရောင်းဆိုင်)
- • FBP30117 - Certificate III in Food Processing AND FBP30918 Certificate III in Wine Industry Operations
- အစားသောက်ထုတ်လုပ်မှုလက်မှတ်
- • Certificate in Animal Transportation
- တိရိစ္ဆာန်သယ်ယူပို့ဆောင်ရေးလက်မှတ်

Study Area 2 အလုပ်အကိုင်ဖွံ့ဖြိုးတိုးတက်မှု(Career Development)

IQY Professional Diploma 5999802/Advanced Diploma 4999802/Diploma 3999802/Certificate (2999802/1999802) Bachelor of Career Development(BCD)(STC Technological University)

The will be specialization streams such as

- Diploma in Career Development(Pathways to Further Study) etc
- Certificate in Skills Development

- • ကျွမ်းကျင်မှုဖွံ့ဖြိုးတိုးတက်မှုလက်မှတ်
- • Maths/ Science/ Physics/Chemistry/Design & Technology/ Software Design
- • English
- • Legal System
- • Social Justice
- • Certificate in Human Body System Studies
- • လူ့ခန္ဓာကိုယ်စနစ်လေ့လာရေး
- • **PSP20218**: Certificate II in Auslan.
- • Certificate in Ecosystem Studies
- • ဂေဟစနစ်လေ့လာရေးလက်မှတ်

Study Area 3 ဖန်တီးမှုဒီဇိုင်း (Creative Design)

IQY Professional Diploma 5999803/Advanced Diploma 4999803/Diploma 3999803/Certificate (2999803/1999803)
Bachelor of Creative Design(BCDS)

(STC Technological University)

The will be specialization streams such as

- Professional Diploma in Creative Design (Interior Design) etc
- The will be specialization streams such as
- • Professional Diploma in Creative Design (Interior Design) etc
- • **CUA30715** Certificate III (3) in Design Fundamentals
- • ဒီဇိုင်းအခြေခံလက်မှတ်
- • **CUA40715** Certificate IV in Design
- • ဒီဇိုင်းလက်မှတ်
- • **MSF40118** Certificate IV in Interior Decoration
- • အတွင်းပိုင်းအလှဆင်ခြင်းလက်မှတ်
- • Certificate in Textile
- • အထည်အလိပ်လက်မှတ်
- • **SHBBMUP002** Design and apply make-up Statement of Attainment
- • ဒီဇိုင်းနှင့်မိတ်ကပ်လက်မှတ်

Study Area 4 ကျန်းမာရေးဘာယာဝပြောရေး လူ့အဖွဲ့အစည်း(Health Wellbeing Community)

IQY Professional Diploma 5999804/Advanced Diploma 4999804/Diploma 3999804/Certificate (2999804/1999804)
Bachelor of Health Wellbeing Community (BHCW) (STC Technological University)

The will be specialization streams such as

- Professional Diploma in Health Wellbeing Community (Early Childhood) etc
- Professional Diploma in Health Wellbeing Community (Early Childhood) etc
- • Certificate in Introduction to Health Service Business

- • ကျန်းမာရေး ဝန်ဆောင်မှုလုပ်ငန်းမိတ်ဆက်လက်မှတ်
- • **CHC30113** Certificate III in Early Childhood Education and Care
- အစောပိုင်းကလေးဘဝပညာရေးနှင့်စောင့်ရှောက်မှုလက်မှတ်
- • **CHC33015** Certificate III in Individual Support
- တစ်ဦးချင်းအထောက်အပံ့လက်မှတ်
- • **CHC42015** Certificate IV in Community Services
- ရပ်ရွာဝန်ဆောင်မှုများလက်မှတ်
- • **CHC43015** Certificate IV in Ageing Support
- • အိုမင်းခြင်းအထောက်အပံ့လက်မှတ်
- • **HLT33115** - Certificate III in Health Services Assistance
- • ကျန်းမာရေးဝန်ဆောင်မှုများလက်မှတ်
- • **SIS30315** Certificate III in Fitness
- ကြံ့ခိုင်ရေးလက်မှတ်

Study Area 5 အခြေခံအဆောက်အအုံစွမ်းအင်ဆောက်လုပ်ရေး(Infrastructure Energy Construction)

IQY Professional Diploma 5999805/Advanced Diploma 4999805/Diploma 3999805/Certificate (2999805/1999805)
Bachelor of Infrastructure Energy Construction (BIEC) (STC Technological University)

The will be specialization streams such as

- Professional Diploma in Infrastructure Energy Construction (Building Construction) etc

Study Area 6 ဆန်းသစ်သောကုန်ထုတ်လုပ်မှုသိပ္ပံ (Innovative Manufacturing Science)

IQY Professional Diploma 5999806/Advanced Diploma 4999806/Diploma 3999806/Certificate (2999806/1999806)
Bachelor of Innovative Manufacturing Science (BIMS) (STC Technological University)

The will be specialization streams such as

- Professional Diploma in Innovative Manufacturing Science (Interior Design) etc

Study Area 7 ထောက်ပံ့ရေးကွင်းဆက်လေ့လာရေး(Supply Chain Studies)

IQY Professional Diploma 5999807/Advanced Diploma 4999807/Diploma 3999807/Certificate (2999807/1999807)
Bachelor of Supply Chain Studies (BSCS) (STC Technological University)

The will be specialization streams such as

- Professional Diploma in Supply Chain Studies (Maritime Operations) etc

Study Area 8 နည်းပညာစီးပွားရေး လေ့လာရေး(Technology Business Studies)

IQY Professional Diploma 5999808/Advanced Diploma 4999808/Diploma 3999808/Certificate (2999808/1999808)
Bachelor of Technology Business

Studies (BTBS) (STC Technological University)

The will be specialization streams such as

- Professional Diploma in Technology Business Studies (Cyber Security) etc
- • **BSB30415** Certificate III in Business Administration
- • စီးပွားရေးအုပ်ချုပ်မှုလက်မှတ်
- • **FNS40217** - Certificate IV in Accounting and Bookkeeping
- စာရင်းကိုင်လက်မှတ်
- • **ICT30118** - Certificate III in Information, Digital Media and Technology
- • သတင်းအချက်အလက်, ဒီဂျစ်တယ်မီဒီယာနှင့်နည်းပညာလက်မှတ်

Study Area 9 ဧည့်ဝတ်ပြုခြင်းနှင့်ခရီးသွားလုပ်ငန်း လေ့လာရေး (Hospitality and Tourism Studies)

IQY Professional Diploma 5999809/Advanced Diploma 4999809/Diploma 3999809/Certificate (2999809/1999809)
Bachelor of Hospitality and Tourism

Studies (BHTS) (STC Technological University)

The will be specialization streams such as

- Diploma in Hospitality and Tourism Studies (Hairdressing) etc
- rm 140 Diploma in Tourism Management
- ခရီးသွားလုပ်ငန်းစီမံခန့်ခွဲမှုလက်မှတ်
- • Certificate in Work Practice

အလုပ်အလေ့အကျင့်လက်မှတ်

- • **FBP20217** - Certificate II in Baking
- မုန့်ဖုတ်လက်မှတ်
- • **SHB30115** - Certificate III in Beauty Services
- • အလှအပဝန်ဆောင်မှုများလက်မှတ်
- • **SHB30416** Certificate III in Hairdressing.
- • ဆံပင်အလှပြုပြင်ခြင်းလက်မှတ်
- • **SHB60118** - Advanced Diploma of Intense Pulsed Light and Laser for Hair Reduction
- လေဆာရောင်ခြည်ပြင်းထန် Pulsed အလင်းနှင့်ဆံပင်ကိုလျှော့ချလက်မှတ်
- • **SIT20316** - Certificate II in Hospitality
- • ဧည့်ဝတ်ပြုခြင်းလက်မှတ်
- • **SIT30816** Certificate III in Commercial Cookery

- စီးပွားဖြစ် ချက်ပြုတ်လက်မှတ်

သင်လိုသည့် ယူနစ်ကိုရွေးပါ။

သင်တန်းအားလုံးကို Certificate, Diploma နှင့် Advanced Diplomas များအတွက်စီစဉ်ပေးထားပါသည်။ ပရော်ဖက်ရှင်နယ် ဒီပလိုမာသို့မဟုတ်ဘွဲ့ရရှိရန်အတွက် IQY သင်တန်း၏သက်ဆိုင်ရာအင်ဂျင်နီယာသို့မဟုတ်သတင်းအချက်အလက်

နည်းပညာသို့မဟုတ်စီမံခန့်ခွဲမှုဘာသာရပ်များကိုလေ့လာရန်လိုအပ်သည်။

-
- Award Rules
- 15 ခရက်ဒစ် -Certificate
- 30 ခရက်ဒစ် -Diploma
- 60 ခရက်ဒစ် - Advanced Diploma

ယူနစ်တစ်ခုစီသည်အဆင့် ၁၊ ၂၊ ၃၊ ၄ တို့နှင့်မသက်ဆိုင်ဘဲ ၃ ခရက်ဒစ်ဖြစ်သည်။

- အဆင့်မှန်ကိုရွေးချယ်ခြင်းသည်ကျောင်းသားတစ်ဦး ချင်း၏စမ်းဆောင်နိုင်မှုနှင့်သင်တန်းကြီးကြပ်သူမှပေးသော သင့်လျော်သောကြီးကြပ်မှုနှင့်လမ်းညွှန်မှုပေါ်တွင်မူတည်သည်။
- ကျောင်းသားသည်အခက်အခဲတွေ့ပါကသူသည်သူမသည်သင်တန်းကြီးကြပ်သူနှင့်တိုင်ပင်ပြီးသင့်လျော်သောယူနစ် သို့ပြောင်းနိုင်သည်။
- အဆင့်သင့်ပြုလုပ်ထားသောလေ့လာမှုအရင်းအမြစ်များကိုအချို့ယူနစ်များအတွက်စီစဉ်ပေးသည်။
- သင့်လျော်သောလေ့လာမှုအရင်းအမြစ်များကိုအလွယ်တကူမရရှိနိုင်ပါက သင်တန်းကြီးကြပ်ရေးမှူးသည် သင့်လျော်သောလေ့လာမှုအရင်းအမြစ်များကိုအင်တာနက်သုတေသနဒေါင်းလုပ်လုပ်ကာယူနစ်၏အမည်ကိုထည့်သွင်း ပါ။

အကဲဖြတ်ခြင်း

- လေ့လာမှုတိုးတက်မှုအစီရင်ခံစာတင်သွင်းခြင်း

Award Rule

15 credits- Certificate

30 credits -Diploma

60 credits-Advanced Diploma

Each unit will be weighted 3 points regardless of level 1 or 2 or 3 or 4

Choosing the right level will depend on individual candidate's capability and appropriate supervision and guidance provided by the course supervisor.

There is no pre-requisite. If the candidate finds the difficulty, he or she can consult with the course supervisor to switch to appropriate level of the unit.

The ready made study resources are arranged for some units. If the appropriate study resources is not readily available, the candidate or course supervisor should perform the internet research by entering the name of the unit for example Handle horses safely to be entered for ACMEQ202 Handle Horse Safety unit and utilize the downloaded appropriate study resources.

Australian Qualifications Framework/ Fiji Qualifications Framework/ IQY Qualifications Framework

Australian Qualifications Framework (AQF)	Fiji Qualifications Framework (FQF)	IQY Qualifications Framework (IQYQF)
Level 1: Certificate 1	Level 1: Certificate 1	Level 1 Skilled Training Vocational Training to Tertiary Bridging
Level 2: Certificate 2	Level 2: Certificate 2	
Level 3: Certificate 3	Level 3: Certificate 3	
Level 4: Certificate 4	Level 4: Certificate 4	
Level 5: Diploma	Level 5: Diploma	Level 2- First Two Years of Tertiary Higher Education Studies
Level 6: Advanced Diploma	Level 6: Advanced Diploma	
Level 6: Associate Degree		Level 3-Final Two Years of Tertiary Higher Education Studies
Level 7: Bachelor's Degree	Level 7: Bachelor's Degree	
Level 8: Post Graduate	Level 8: Post Graduate	Level 4 post Graduate
Level 9: Masters Degree	Level 9: Masters Degree	
Level 10: Doctorate Degree	Level 10: Doctorate Degree	Level 5-Doctorate Degree

IQY System is

12 Years- Secondary Schooling/ additional years may be taken to undertake skilled training-Level 1

2 Years- Para-professional Studies-----Advanced Diploma Level-----Level 2

2 Years-Professional Studies----- Bachelors Degree Level-----Level 3

Postgraduate level-----Graduate Diploma/ Master Diploma-----Level 4

Diploma in Doctorate Studies-----Level 5

Please note that 2 Years- Para-professional Studies and 2 Years-Professional Studies are roughly arranged for studies.

Depending on the nature of studies, some courses may take longer at Para-professional Studies and Professional Studies. It means that although First two years of Para-professional Studies is mentioned, some courses may take 3 Years. Similar system is applied for Final two years of Professional Studies.

In Australian System, Level 6 is for both Advanced Diploma and Associate degree but in our IQY course, AQF Level 6 Advanced Diploma is at IQY Level 2 and AQF Level 6 Associate Degree is at IQY Level 3. It means that IQF can not give exemption in our Level 3 subjects for those with AQF Level 6 but can give the exemption for the relevant studies at AQF Level 6 Associate degree.

The same system will also be applied for FQF

Covid ခေတ်သင်ကြားရေးနှင့်သင်ယူရေးစနစ်

အွန်လိုင်း / အဝေးသင်ပညာရေးကိုယခင်ကနိုင်ငံများ၏ပညာရေး ဝန်ကြီးဌာနများက လက်ခံခြင်းမရှိပါ။

ယခု Covid 19 သည်နိုင်ငံတကာတက္ကသိုလ်များအတွက်အွန်လိုင်းပညာရေးကိုပြုလုပ်စေခဲ့သည်။ အွန်လိုင်းမှာတက်မလား?သို့မဟုတ်လုံးဝမသင်ယူဘဲအရည်အချင်းပြည့်မီခြင်းမရှိဘဲနေသင်ဘာကို ရွေးချယ်မည်နည်း။

ရပ်ကွက်အာဏာပိုင်များ၏ခွင့်ပြုချက်ဖြင့်မြန်မာနိုင်ငံတွင်ပုဂ္ဂလိကကျောင်းများကိုပြန်လည်ဖွင့်လှစ် နိုင်ပြီဖြစ်သည်။ covid ကူးစက်မှုမရှိပါက OK ဖြစ်နိုင်သည်။

ဒါပေမယ့်တစ်ခုခုမှားယွင်းပြီး covid ကူးစက်မှုတစ်ခုခုဖြစ်ခဲ့ရသင်နဲ့ရပ်ကွက် အာဏာပိုင် တွေတရားစွဲအရေးယူခြင်းခံရမည်၊ စွန့်စားမှာလား။ ပုဂ္ဂလိကကောလိပ်များ၏အခြေအနေသည်အစိုးရကျောင်းများနှင့်လုံးဝကွာခြားလိမ့်မည်။

Covid ခေတ်သင်ကြားရေးနှင့်သင်ယူရေးစနစ်တွင်စစ်မှန်သောပညာရေးနှင့် အတုအယောင် ခွဲခြားမှုအဓိကအရာမှာအွန်လိုင်း (သို့) ရုပ်ပိုင်းဆိုင်ရာတက်ရောက်မှုမဟုတ်တော့ပါ။

တက္ကသိုလ်ကျောင်းကြီးများတက်ခြင်း (သို့) ရုံးခန်းများမှဘွဲ့များဒီဂရီများသင်ခြင်း မဟုတ်တော့ပါ။

Covid ခေတ်သင်ကြားရေးနှင့်သင်ယူရေးစနစ်တွင်သင်ကြားရေးအရင်းအမြစ်များ၊ သင်ရိုးညွှန်းတမ်းများ၊သင်ကြားမှုစီမံခန့်ခွဲမှုစနစ်နှင့်အရင်းအမြစ်များ၏ပမာဏတို့သည်အဓိကဖြစ် လာသည်။

နောက်တစ်ခုကအသိအမှတ်ပြုခြင်း

ဒါပေမယ့်တစ်ခါမှားပြောင်းစဉ်း covid ကူးစက်မှုတစ်ခုခုဖြစ်ရသင့်လျော်မှု အာဏာပိုင်
ဝတ်တရားဖြစ်အရေးယူချခင်းခံရမည်၊ ဖြန့်ချိဖွားလား။

ပုဂ္ဂလိကကလေးများ၏အချစ်အနာသညာစိုးရိမ်ကင်းရှင်းစွာလုံးဝကြာချိန်လမ်းမညာ။

Covid ဝေဒနာကူးစက်မှုလျော့နည်းစေရန်အားဖြင့် ဝေဒနာကူးစက်မှုလျော့နည်းစေရန်အားဖြင့် အတုအယာဉ်
ခြံချခင်းမီးအဓိကအရာမှာအချိန် (သို့) ဝေဒနာကူးစက်မှုလျော့နည်းစေရန်အားဖြင့် မဟုတ်တော့ပါ။

တကယ့်လိုက်နာကင်းရှင်းစွာတစ်ခုခု (သို့) ဝေဒနာကူးစက်မှုလျော့နည်းစေရန်အားဖြင့် မဟုတ်တော့ပါ။

Covid ဝေဒနာကူးစက်မှုလျော့နည်းစေရန်အားဖြင့် ဝေဒနာကူးစက်မှုလျော့နည်းစေရန်အားဖြင့် အချစ်အနာသညာ
သမိုင်းဥပဒေမီးတစ်ခုခု (သို့) ဝေဒနာကူးစက်မှုလျော့နည်းစေရန်အားဖြင့် အချစ်အနာသညာ
သညာ။

နောက်တစ်ခါအသိအမှတ်ပြုချခင်း

ယခု The Institution of Electrical Engineers ဖြစ်သော The institution of Engineering and
Technology (IET) ကို ၁၈၇၁ ခုနှစ်တွင် ဝေဒနာကူးစက်မှုလျော့နည်းစေရန်အားဖြင့် (Incorporate
Association) အဖြစ်သို့ပြောင်းခဲ့သည်။

ဒါဟာတကယ့်လိုက်နာမဟုတ်တော့ပါ။ ဝေဒနာကူးစက်မှုလျော့နည်းစေရန်အားဖြင့် Professional
Association ဖြစ်သည်။ IET သည် ဝေဒနာကူးစက်မှုလျော့နည်းစေရန်အားဖြင့် အသိအမှတ်ပြုသည်။

ခြံချခင်းစီတစ်ခုခု----- - အစိုးရက Incorporation ပေးသည့် Professional Association
သမိုင်းစီတစ်ခုခုအသိအမှတ်ပြုသည်။ (Accreditation) ပေးသည်။

ထိုမူဝါဒ(Accreditation)အသိအမှတ်ပြုချခင်းဆိုသည့်ပရောဖက်ရှင်သမားအဖြုတ်စွဲဖြုတ်

စည်းချခင်းခွင့်အသိအမှတ်ပြုချခင်းစနစ်ဒီဇိုင်းပြုလုပ်ချခင်းဟုအမွှာကယွဉ်လိုသည့်။

အဖြုတ်စည်းဆက်ကြားလာလေ။ အသိအမှတ်ပြုမီးတိုင်မိုတရား ဝ ဌ်ရှိသောလည်း

မည့်အလုပ်ထိုကဲ့သို့မူဝါဒအသိအမှတ်ပြုချခင်းကိုမပြုမည်လက်ကိုင်ရန်ပေးမရှိပါ။

အလုပ်သမားတို့အလုပ်ခွင့်အဆင့်ပမည့်သူကိုရောင်းယှဉ်ခြင်းရှိသည့်။

ထိုမူဝါဒအနာဂတ်လုပ်ခွင့်ကိုညီရအိမ်ထောင်ရေးကိစ္စများကင်းရှင်းရန်ဆန်းစစ်သည့်။

English

Covid Era Teaching and Learning System

Online/ Distance Education was not previously accepted by Ministries of Education of the countries.

Now Covid 19 has made the online education for most international universities.

Will you attend online ? or do not learn and do not get the qualification at all, what will you choose?

In Myanmar, with the permission by the Ward Authorities, the private schools can now be re-opened. So long as no covid infection, it may be OK. But will you risk with the legal action or will the ward authorities risk with legal action if something wrong and covid infection occurs ? The situation for private colleges will be totally difference from Government schools.

In the Covid Era Teaching and Learning system, the main thing to discriminate the real or fake education no longer lies with the point that online or physical attendance, it does not line on the point that the degrees are offered at the university with large campuses or from an office .

It lies with the amount of the resources, curriculums, learning management system and quality of the resources due to Covid Era Teaching and Learning System.

The another thing is Accreditation?

The Institution of Engineering and Technology (IET) which is former The Institution of Electrical Engineers (IEE) was founded as Incorporated Association in UK in 1871.

It is not university or government service. It is an Incorporated Professional Association.

But IET can accredits the engineering degrees

In analysis--- Professional Association with Government Incorporation can assess and recognize the degrees.

So the accreditation really means that Incorporating an professional association and designing the accreditation system, it can be working. The bigger the organization, the more legitimate in accreditation but there is no law for any employer to universally accept such accreditation. The employer has right to choose the candidate who will best fit with their jobs.

It is important for you to gain the real skills to fit with your future jobs.

Degree Award System

All stages of IQY Education Group Awards are arranged to possess legitimacy and professional recognition

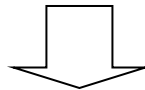

IQY Technical College

Registered in Australia with ASIC/Authorized Training Centre of Singapore Institute of Engineering Technologists-SIET

PART 1 ACADEMIC STUDY AND ASSESSMENT

IQY Technical College designed the online learning portal which includes Videos/ Study Notes/ Textbooks and assignments.

The students will need to submit monthly test/ assignments to complete the subject.

There are 24 units to be completed over 24 months

The learning support sites are

Professional Diploma in Electrical Engineering

www.iqytechnicalcollege.com/profdipelectengg.htm

Professional Diploma in Engineering (Year 3)

www.iqytechnicalcollege.com/profdipengg.htm

www.iqytechnicalcollege.com/profdipenggmod.htm

Assessment Exam Question

Form 55 Professional Diploma in Electrical Engineering Tests

<http://www.iqytechnicalcollege.com/BE-Electrical Tests All.zip>

IQY Technical College keeps record of Assessment Work Evidence of all students

The study is genuine

Part 2 Background of IQY Technical College

IQY Technical College is based in Myanmar.

The website/ address are in the following link

www.iqytechnicalcollege.com

IQY Technical College is Authorized Training Centre of Singapore Institute of Engineering Technologists

The documents related to connection between IQY Technical College and the features of Singapore Institute of Engineering Technologists can be found in the following link

<http://www.iqytechnicalcollege.com/sietatc.htm>

The Singapore Institute of Engineering Technologists (SIET) being the Professional Body for Engineering Technologists is a multi-disciplined learned establishment registered in Singapore since 1980 under the Societies Act [Singapore Government Gazette Notification No: 3310].

www.iqytechnicalcollege.com/IQYSIETRecognition.pdf

Although IQY Technical College is based in Myanmar , Myanmar does not have the law to register Tertiary Education Colleges and Universities.

The private tertiary education colleges and universities are working with overseas Professional Associations or Universities to offer the diplomas and degrees.

IQY Technical College works with Singapore Institute of Engineering Technologists since 2014.

Just in 2020, IQY Technical College makes Business Registration with Australian Investment and Security Commission

Evidences

<http://www.iqytechnicalcollege.com/IQY%20Registration.pdf>

<http://www.iqytechnicalcollege.com/IQY%20ASIC%20Certificate%20Page%201.pdf>

IQY Professional Diploma in Engineering is designed as equivalent to 4 Years BE degree. Due to ASEAN Education and Recognition framework under the supervision of Singapore Institute of Engineering Technologists, IQY Technical College does not confer BE degree instead, it confers Professional Diploma which is equivalent to BE degree.

<http://www.highlightcomputer.com/AER.pdf>

In the above Document, SIET-Singapore Institute of Engineering Technologists can nominate ASEAN Engineering Registration.

AS IQY Technical College courses are accredited by Singapore Institute of Engineering Technologists,

They are accredited.

Part 3 Main Academics of IQY Technical College

<http://www.iqytechnicalcollege.com/Staff.htm>

IQY Technical College is led by Dr Kyaw Naing who was former Lecturer of Fiji Institute of Technology 1990 to 1996

Dr Kyaw Naing is also President of The Institution of Professional Engineers Myanmar which is Member of International Federation of Engineering Education Societies -IFEES USA

The Institution of Professional Engineers Myanmar NSW Australia Chapter is registered in NSW Government of Australia as Professional Association

Dr Kyaw Naing

<http://www.ifees.net/kyaw-naing/>

According to above facts

IQY Technical College is

- Legally registered
- Sound Academic
- Legally offering tertiary education course
- International Accreditation and Recognition
- Managed and taught by suitably qualified academics

Part 4 Linking between IQY Technical College & STC Technological University, Former St Clements Technological University

Actually, St Clements Technological University and IQY Technical College are academically related.

- IQY Technical College provide the teaching, curriculum and assessment. The curriculum materials are accredited by Singapore Institute of Engineering Technologists in ASEAN Engineering Education Framework.
- IQY Technical College teaches BE level studies but it does not confer BE degree
- St Clements Technological University confers BE degree to all graduates of IQY Technical College who complete 4 Years Professional Diploma in Engineering. All are conferred as Scholarship. Only Administrative fees (Small amount was charged)

Background of STC Technological University

<https://www.stclementstu.com/>

From the website, the extractions are as follows

STC Technological University is a technological university which awards Master and Doctoral degrees in Applied Science, Applied Arts, Engineering and Education as well as providing the scholarships to the needy students of the developing countries.

It is a non profit international organization.

It only awards the degrees to the experienced researchers and the students who are awarded the scholarships. It does not offer any degree for commercial purpose.

STC Technological University academic council composes of academics from British West Indies & British Commonwealth Countries who nominate the candidates of research background to be awarded Masters & Doctoral degrees based on their practical research experiences & published works.

STC Technological University academic council also awards the scholarship Bachelor degrees in Engineering, Applied Science , Information Technology , Business Administration and Business Management through the affiliated colleges and schools led by International Academic Councillors.

For scholarship application & degree verification--Contact - stclementstu@gmail.com

Or

Apply through the affiliated schools & colleges

Approval of the scholarship will depend on consultation of the International Academic Councillor responsible for a particular country & e-mail interview with the applicant.

Only the successful candidates will be contacted by e-mail. The university has the right to make no contact to unsuccessful applicants.

International Councillors , Affiliated Organizations & awarded doctorate degree holders

Please contact stclementstu@gmail.com

STC University is an International Non Government Organisation established to provide the education needs of poor students in developing countries and it has the base in British West Indies Islands but it does not register with any government and does not operate as a profit organisation.

It assists the students by providing the education through the Government Registered Schools, Colleges worldwide but it does not issue any degree by charging any cost.

For this reason, it is not our business to take the concern on accreditation, diploma mills, government recognition, any issues raised by any government accreditation authorities , any government education departments, any governmental education laws and accreditation as well as any of degree mills issues.

STC Technological University wants the students to read our website and contact us only if they have satisfied with our information as neither STC Technological University nor our partners and affiliated educational institutions will answer the questions related to above issues because we are operating as EDUCATION REVOLUTIONISTS to equalise the education among riches and poors, First World and Third World.

We confer appropriate awards to academics who join our Worldwide Education Revolution by contributing appropriate academic research, operation , courses, training and resource developments.

ADDITIONAL INFORMATION

STC Technological University means St Kitts, Turk and Caicos Islands Technological University, operating as an International Educational Non Government Organisation since 2011 to assist the education needs especially in engineering which is essential to develop the communities of the students in West Indies, Caribbean , Africa, India, Pakistan, Myanmar and other developing countries.

As the main educational revolutionist activists founding members are engineering teachers from St Kitts, Turk and Caicos Islands who migrated there several years ago, we choose the name STC (St Kitts, Turk and Caicos).

Current CEO is Dr Peter Prasad originally from India.

Now STC Technological University has organised several colleges and schools which are either government registered or recognised by their regional professional organisations,

Based on the original awards, we provides the testimony in academic terms in accordance with MOUs.

Our network of affiliated colleges and schools include those in British West Indies, Africa, Asia, Middle East ,South Pacific and Latin America where there have been the most inequalities in education..

S TC Technological University Engineering Faculty is closely working with IQY Technical College Myanmar to deliver the engineering, engineering management and ICT engineering degree courses accredited by The Institution of Professional Engineers, Myanmar.

As we are educational revolutionist activists , if the instruments of the institutions which have done the most inequalities in education use the international media as the tool to undermine our efforts, we will also follow the same ways as utilized by them with the helps of our member activists worldwide.

From the above facts

1. STC University is an International Non Government Organisation established to provide the education needs of poor students in developing countries and it has the base in British West Indies Islands but it does not register with any government and does not operate as a profit organisation.-----IT IS EDUCATION NGO
2. It works with IQY Technical College

Accreditation

How the accreditation system works.

1. Accreditation is usually provided by Independent Professional Associations such as UK Engineering Council, Engineers Australia.
2. The Associations which provide the accreditation must be Government Registered Incorporated Associations or well known International Professional Associations.

According to the information by The Society of Professional Engineers International (Former Society of Professional Engineers UK), STC Technological University is accredited by The Society of Professional Engineers International.

At the bottom of <http://www.thespeukinternational.org/>

STC Technological University (Academic and Educational Branch)

Furthermore, STC Technological University is accredited by The Institution of Professional Engineers Myanmar NSW Australia Chapter

<http://www.ipemyanmar.org/ipemaccreditation.htm>

<http://www.highlightcomputer.com/ipemaccreditedcolleges.htm>

AND Accreditation Documents

<http://www.highlightcomputer.com/ipemaccreditation.htm>

From the above facts

- To my knowledge, as we are working as International Education System, we focus on real knowledge and skills of the candidate.
- Although Governmental Registration is made on an educational Institution or not, if the institution is not degree mills and its objectives are fair to the students, IQY Technical College has the right to co-operate it.
- STC Technological University is International NGO
- It was accredited by The Society of Professional Engineers International.
- The Institution of Professional Engineers Myanmar also accredited it.
- STC Technological University has already launched its website www.stclementstu.com since the time of 2013 when IQY Technical College co-operate with it.

- It can be easily searchable by Google Search
- Although there will be arguments that the degree can only be awarded by the Institutions formally registered with the Government. For international issues, not all qualifications are formally accepted by all countries of the World.
- It will be up to the employer to recognize or accept it
- But in legal issue, if the candidate genuinely pursues the studies and the award is based on actual effort of the candidate and assessment, it is not illegal practice.

IQY Diploma ရသူအားလုံး IQY Technical College နဲ့ပတ်သက်တဲ့အချက်အားလုံးကို Print out လုပ် IQY Diploma/ Advanced Diploma/ Professional Diploma / Degrees

နဲ့ပူးတွဲပြီးအလုပ်လျှောက်ရင်တင်ပြပါ။

- ☐ Certificate in Aircraft Cabin Cleaning (English)
- ☐ CIV TAE40116 (English only)
- ☐ CIII Electrotechnology Electrician+Diploma/Advanced Diploma in Applied Electrical Engineering+Bachelor of Applied Engineering Electrical/Electronics
- ☐ Other courses in
[www.http://www.iqytechnicalcollege.com/latestknowledge.htm](http://www.iqytechnicalcollege.com/latestknowledge.htm)
- Your Qualification
 - ☐ No Year 10 pass
 - ☐ Year 10 Pass
 - ☐ Engineering Certificate
 - ☐ AGTI or Engineering Diploma , you need to attend Advanced Diploma
 - ☐ AGTI or Engineering Diploma with experiences, you can be exempted to do Advanced Diploma
 - ☐ AGTI + Degree, you can be exempted to do Advanced Diploma as well as some units exemption in Year 3 Professional Diploma
 - ☐ BTech degree , you can attend final stage
 - ☐ BE degree, you can attend final stage with some units to do
 - ☐ BA/BSc or other degrees, only some units can be exempted in Diploma
 - ☐ Masters degree, only some units can be exempted in Diploma
 - ☐ Any certificate,only some units can be exempted in diploma
 - ☐ Year 5
 - ☐ Year 6
 - ☐ Year 7
 - ☐ Year 8
 - ☐ Year9
 - ☐ Year 10
- Fees Payment
 - ☐ I will pay the fees in full in the class
 - ☐ I will pay the feels in instalments in class
 - ☐ I will deposit the fees in to bank account
 - ☐ BE/BTech/Adv Dip in CAE is free for IQY Graduates. // They must submit their student number. For other students, fees must be paid
 - ☐ I am PDF Member and apply for Free Course

- ☐ I would like to apply for Fees Exemption in Spring Revolution Education Support Program.
- Multiple Choice
 - ☐ After Advanced Diploma OR Professional Diploma, I want to apply for membership of Singapore Institute of Engineering Technologists) (Fees applies)
 - ☐ After Professional Diploma, I want to get Bachelors degree from St Clements University/ St Clements Institute (Fees applies)
 - ☐ I want to enroll St Clements University or SPCU Business School leading to UK ATHE Pre,masters Level 6 Diploma
 - ☐ After Professional Diploma , I want to get the Bachelors degree from STC technological University
- As a student/ graduate of IQY Technical College, you can automatically become the Member/ Supporter of The Institution of Professional Engineers Myanmar
 - ☐ Supporter Member while attending the Diploma courses
 - ☐ Graduate Member after completion of Diploma/ Advanced Diploma/ Professional Diploma
 - ☐ Associate Member(AMIPEM) for AGTI/BTech/BE/Advanced Diploma/ Professional Diploma with 3 or more years experience
 - ☐ Member (MIPEM) for AGTI/BTech/BE/ Advanced Diploma/ Professional Diploma with more than 7 years experience
 - ☐ Chartered Engineer (CEng-Myanmar,MIPEM) for AGTI/BTech / Advanced Diploma to be assessed separately
 - ☐ Chartered Professional Engineer (CPEng-Myanmar, MIPEM) for BE/ Professional Diploma to be assessed separately

IQY Technology College & IQY Degree College

www.iqytechnicalcollege.com

www.ipemyanmar.org

IQY Technical College confirms that all our Spring Revolution Support Education Programs are provided to support for Freedom of Myanmar..

This is to certify that

Maung/Ma

Tin Ko Ko Lat

Son/Daughter of

has completed the attached qualification at IQY/IPEM Education Group's Colleges, Universities and Schools which is delivered by IQY/IPEM Education Group to support his/her CDM activities.

Maung Oo

Registrar

Date 11/1/2022

The candidate will need to fill the blanks.

IQY Technical College ရဲ့ ပထမအသုတ်ကျောင်းသားတွေဟာ Professional Diploma နဲ့ Affiliated University တွေဖြစ်တဲ့ STC Technological University နဲ့ St Clements University ကပေးတဲ့ဘွဲ့ တွေကိုစတင်ရရှိကြပြီဖြစ်ပါတယ်။

IQY Professional Diploma in Engineering ကို Singapore Institute of Engineering Technologist ကအသိအမှတ်ပြုပြီး Singapore Membership/ ASEAN Engineering Technologist တွေ့နဲ့ Professional Engineer (UK) တွေ့ဆက်ရမှာဖြစ်ပါတယ်။

IQY Technical College ဟာ British West Indies မှာကုမ္ပဏီမှတ်ပုံတင်ထားပေမဲ့ Cambodia, Switzerland, Niue, Somalia, Liberia, စတဲ့နိုင်ငံတွေမှာတရားဝင်မှတ်ပုံတင်ထားတဲ့ St Clements University ရဲ့ ကျောင်းခွဲ St Clements University Myanmar College အဖြစ်လဲပညာ ပို့ချ ပါတယ်။

St Clements University Myanmar College ဟာ ဖွဲ့စည်းပင်က Royal Government of Cambodia မှတ်ပုံတင် St Clements Institute ရဲ့ ကျောင်းခွဲအနေနဲ့ သင်ကြားဘွဲ့ ပေးတဲ့အတွက် ASEAN Mutual Recognition အကြိုးဝင်တဲ့ဘွဲ့ တွေရမှာဖြစ်ပါတယ်။

ထို့အပြင် British Qualifications မှာအကြိုးဝင်တဲ့ Institute of Management Specialists (UK), The Institute of Manufacturing (UK), Faculty of Technical and Business Management (UK) စတာတွေရဲ့ Professional Recognition ကိုဆက်ရပါမယ်။

IQY Technical College ဟာ မြန်မာနိုင်ငံပြင်ပနေ Director နဲ့ Program Leader တွေရဲ့ Lesson, Lecture, Video စတဲ့ Online တင်ထားတာတွေကို ကမ္ဘာအနှံ့နဲ့ မြန်မာပြည်တွင်းကကျောင်းသားတွေ Online နဲ့ လေ့လာသင်ယူနိုင်သလိုရန်ကုန်၊မန္တလေးနဲ့ မြန်မာပြည်အနှံ့ မှာစုစည်းထားတဲ့ဆရာတွေကပညာရေးအုပ်စုတွေဖွဲ့ စည်းပြီးကိုယ်တိုင်တက်သင်တန်းတွေဖွင့်လှစ်သင်ကြားပါတယ်။ ဒီနည်းနဲ့ နိုင်ငံခြားပညာကိုမြန်မာကျောင်းသားတွေဈေးသက်သက်သာသာနဲ့ သင်ယူလို့ ရသလို မြန်မာဆရာတွေကို Capacity Development/ Knowledge Sharing လုပ်ပါတယ်။

အဲဒါဟာမြန်မာအင်ဂျင်နီယာနဲ့ ပညာရေးတိုးတက်ရေးကိုလက်တွေ့ အကောင်အထည်ဖော်လုပ်ဆောင်ပေးတာဖြစ်ပါတယ်။

Unicode

ကျွန်ုပ်တို့၏ IQYနည်းပညာကောလိပ်ဝက်ဘ်ဆိုက် www.iqytechnicalcollege.com တွင်သတင်းအချက်အလက်အား လုံးကိုတင်လိုက်ပြီ။

1 / IQY Technical College သည်စင်ကာပူအင်ဂျင်နီယာနည်းပညာအင်စတီကျု (Singapore Institute of Engineering Technologists) ၏တရားဝင်ခွင့်ပြုထားသော သင်တန်းစင်တာဖြစ်သည်။

2 / IQY နည်းပညာကောလိပ်သည်ဩစတြေးလျ NSW အစိုးရ တွင်ပညာရပ်အသင်းအဖြစ်မှတ်ပုံတင်ထားသော The Institution of Professional Engineers Myanmar ၏တရားဝင်ခွင့်ပြုထားသော သင်တန်းစင်တာဖြစ်သည်။

၃ / The Institution of Professional Engineers Myanmar အဖွဲ့အစည်းသည် International Federation of Engineering Education Societies အပြည်ပြည်ဆိုင်ရာအင်ဂျင်နီယာပညာရေးအသင်း၏အသင်းဝင်ဖြစ်သည်။

4 / IQY Technical Collegeသည်ဩစတြေးလျလုံခြုံရေးနှင့် ရင်းနှီးမြှုပ်နှံမှုကော်မရှင် Australian Security and Investment Commission တွင်မှတ်ပုံတင်ထားသည်။

သို့သော်ကျွန်ုပ်တို့သည်ဩစတြေးလျားတွင်အလုပ်မလုပ်ပါ။

ကျွန်ုပ်တို့သည်ဩစတြေးလျားအစိုးရနှင့်မှတ်ပုံတင်ထားသောသင်တန်းအဖွဲ့ RTO (Registered Training Organization) အဖြစ်မှတ်ပုံတင်ရန်မလိုအပ်ပါ။

ဤအကြောင်းကြောင့်ကျွန်ုပ်တို့ကို Degree Mills အဖြစ်ပုတ်ခတ်သောမည့်မည်သည့်ပုဂ္ဂိုလ်ကိုမဆိုသို့မဟုတ်မည်သည့်အဖွဲ့အစည်းကိုမဆိုတရားဥပဒေအရအရေးယူရန်တွန့်ဆုတ်မည်မဟုတ်။

The Institution of Professional Engineers Myanmar အဖွဲ့အစည်းသည် မြန်မာနိုင်ငံမှအဖွဲ့အစည်းတစ်ခုအားမြန်မာနိုင်ငံတရားရုံးတွင်တရားလိုအဖြစ်တရားဝင်စိန်ခေါ်နေသည်။

Zawgyi One

English

On our IQY Technical College Website, www.iqytechnicalcollege.com we have uploaded all Information.

1/ IQY Technical College is Authorized Training Centre of Singapore Institute of Engineering Technologists

2/IQY Technical College is Authorized Training Centre of The Institution of Professional Engineers Myanmar which is registered as Incorporated Professional Association with NSW Government of Australia

3/ The Institution of Professional Engineers Myanmar is Member of International Federation of Engineering Education Societies-USA

4/IQY Technical College is registered with Australian Security and Investment Commission
But we do not operate in Australia and we do not need to registered as RTO (Registered Training Organization with Australian Government).

For this reason, we will not hesitate to take the legal action against any individual or any organization which blackmail us as Degree Mills .

The Institution of Professional Engineers Myanmar is also legally challenging one organization in Myanmar at Myanmar Court of Justice as Plaintiff.

IQY Qualifications and Myanmar Qualifications Matching-Engineering/ Engineering Education

IQY Level	IQY Qualifications Framework (IQYQF)	Level	Myanmar National Qualifications Framework	Equivalency/ Assessment/ Advanced Standing
1	Year 9 to 12 Bridging Education Certificate	1/2	High School Level 2 Primary School Level 1	Matured age people experiences are to be taken into account for bridging courses
	Myanmar Vocational Training Certificate Level 1 (MVTC 1)	1	V&T C /SC1 (TVET) (Primary/Middle School Qualifications)	Only vocational training aspects will be equated
	Myanmar Vocational Training Certificate Level 2 (MVTC 2)	2	V&T C /SC2(TVET) (High School Qualifications)	Only vocational training aspects will be equated
	Myanmar Vocational Training Certificate Level 3 (MVTC 3)	3	V&T C /SC3(TVET)	Only vocational training aspects will be equated/ Other degrees
	All Diploma Part 1 (Advanced Certificate) / Advanced Diploma in General Engineering	4	V&T C /SC4(TVET)	BE/BTech Year 1/ AGTI incomplete/ Different discipline diploma / C&G Level 3 Same or Different Discipline
2	Diploma in Engineering Part 2- Specialized Discipline/	5	TVET Diploma	BE/BTech Year 2/AGTI completed without experience/All other same or relevant discipline diplomas/ C&G Level 4 Same discipline
	Advanced Diploma (Diploma in Engineering Education Level 1-Diploma in Vocational Education and Training)	5	TVET Advanced Diploma	AGTI with experience/ BE (Year 3) /BTech (Year 3) Same discipline /C&G Level 5 Same discipline For other degrees, assessment will be based on individual subject/
3	Professional Diploma Part 1 (Year 3) (Diploma in Engineering Education Level 2-Diploma in Technical Teaching)	5	Associate Degree	Professional Level Degree such as (Same discipline BE(Year 4) BTech (Final Year) C&G Level 6) / BE Different discipline (Complete) For other degrees, assessment will be based on individual subject
	Professional Diploma Part 2 (Year 4) (Diploma in Engineering Education Level 3-Diploma in Engineering Education)	6	Bachelors Degree TVET Degree	Same discipline Professional Level Degree such as BE(Year 5/6)/BTech complete For other degrees, assessment will be based on individual subject
4	Master Diploma Part A (Diploma in Engineering Education Level 4-Diploma in Engineering Education-Specialist Studies)	7	Postgraduate Diplomas	
	Master Diploma Part B/ Master Diploma in Research Studies	7	Masters	
5	Diploma in Doctoral Studies	8	Doctorate degree	

V&T S/C—Vocational Training Certificate/ Skills Certificate ---- Other degree—Non Engineering degrees

AGTI/BE/BTech/City & Guild Diploma / Engineering Diploma can be given entry to IQY Advanced Diploma/ Professional Diploma. Other Qualifications need to do IQY Diploma

IQY Technical College ရဲ့ Diploma သင်တန်းအားလုံးကို Australia နဲ့ နိုင်ငံတကာအဆင့်အတိုင်းဝင်ခွင့်ကို Year 12 အဆင့်သတ်မှတ်ထားပြီး 1 Year ပြီးရင် Diploma (Credit Point 30) 2 Years ပြီးရင် Advanced Diploma (Credit Point 60)) 4 Years ပြီးရင် Professional Diploma (Credit Point 120)စီစဉ်ထားသလို Australian Qualifications Framework ကိုမှီငြမ်းထားတဲ့ IQY Qualifications Framework အရ Graduate Attribute တွေရှိအောင်စီစဉ်ထားပါတယ်။

Year 10 ပြီးသူတွေကို IQY ဝင်ဘို့ ပေါင်းကူး Program တွေဖြစ်တဲ့ Myanmar Vocational Certificate Level 1/2/3, Bridging Course, THS ပြီးသူတွေအတွက် Advanced Diploma in General Engineering and Drafting စတာတွေကိုစီစဉ်ထားသလို Australian Year 11/12 Maths, Physics, Science, Chemistry, Design & Technology, Software Design ဘာသာတွေကိုစီစဉ်ထားပြီးBridging Course မှာထဲသွင်းမှာဖြစ်ပါတယ်။

IQY Professional Diploma ဟာ Bachelor Degree အဆင့်စီစဉ်ထားပေမဲ့ Accreditation ပေးထားတဲ့ Singapore Institute of Engineering Technologists က ASEAN Federation of Engineering Organization ရဲ့ ဘောင်အတွင်းမှရှိအောင် Bachelor ဘွဲ့ ကို IQY ကမပေးဘဲ Professional Diploma ကိုပေးသလို Singapore Institute of Engineering Technologists (SIET) အနေနဲ့ လဲ The Institution of Engineers Singapore (IES)နဲ့ အပြိုင်မဖြစ်အောင် ASEAN Engineer အတွက် Nominate မလုပ်ဘဲ ASEAN Engineering Technologist ကို Nominate လုပ်သလို Professional Engineer Assessment ကို UK Society of Professional Engineers နဲ့ ပူးပေါင်းလုပ်ဆောင်ပါတယ်။

IQY Professional Diploma ရသူတွေကို Cambodia Government မှတ်ပုံတင် St Clements University/ St Clements Institute က Bachelor of Applied Engineering/ Bachelor of Applied Science/ Bachelor of Applied Management ဘွဲ့ တွေပေးအပ်သလို မြန်မာကျောင်းသားတွေအတွက် St Clements University Myanmar College <http://www.stclements.edu/myanmar/> ကို IQY St Clements Education Group ကထူထောင်ထားပါတယ်။

Nature of IQY Diplomas (IQY ဒီပလိုမာများ၏သဘောသဘာဝ)

	Theory စာတွေ့ အခြေခံ	Practical လက်တွေ့ အခြေခံ	Theory PLUS Practical စာတွေ့ + လက်တွေ့ အခြေခံ
Trades ကျွမ်းကျင်သူ	Diploma in Engineering	Diploma in Engineering Trades Practice	Diploma in Engineering Practice (After Diploma/Advanced Diploma/ Professional Diploma in Engineering)
Technician နည်းပညာရှင်	Advanced Diploma in Engineering	Advanced Diploma in Engineering Trades Practice	Advanced Diploma in Engineering Practice (After Diploma/Advanced Diploma/ Professional Diploma in Engineering)
Engineer အင်ဂျင်နီယာ	Professional Diploma in Engineering	Professional Diploma in Engineering Internship	Professional Diploma in Engineering Practice (After Diploma/Advanced Diploma/ Professional Diploma in Engineering)
Remark မှတ်ချက်	Can be used to apply for Membership Can convert Professional Diploma to Bachelors degree အင်ဂျင်နီယာအသင်းဝင်လျှောက်နိုင်သည် Professional Diploma ကိုဘွဲ့ သို့ ပြောင်းနိုင်သည်။	Needs to attend the special theory course to get Diploma/Advanced Diploma/ Professional Diploma in Engineering to apply for Membership and Bachelors degree အင်ဂျင်နီယာအသင်းဝင်လျှောက်ရန် ဘွဲ့ သို့ ပြောင်းရန် Diploma/Advanced Diploma/ Professional Diploma in Engineering အတွက်အထူးသင်တန်းတက်ရမည်။	Can be used to apply for Membership Can convert Professional Diploma to Bachelors degree အင်ဂျင်နီယာအသင်းဝင်လျှောက်နိုင်သည် Professional Diploma ကိုဘွဲ့ သို့ ပြောင်းနိုင်သည်။

Faculty	Graduation Dress
<p>1.Faculty of Engineering</p> <p>BE/BTech/BEngSc/BWS Engg/BArch BTP-Engg/BProfPrac-Engg The same dresses for Masters/Grad Dip degrees. Doctorate-Regalia</p>	
<p>2.Faculty of Management</p> <p>BMgt/BBA/BAcct/BEcon/BBus BProf Prac -Mgt/BWS-Mgt/BEngMgt The same dresses for Masters/Grad Dip degrees. Doctorate-Regalia</p>	

3.Faculty of Information Technology

BAppSc-IT/ BWS-IT

BProfPrac-IT/Grad Dip GIS

The same dresses for
Masters/Grad Dip degrees.

Doctorate-Regalia

4.Faculty of Arts

ALL BA degrees other than English and
Myanmar

The same dresses for
Masters/Grad Dip degrees.

Doctorate-Regalia

5.Faculty of Teacher Education

BEd

The same dresses for
Masters/Grad Dip degrees.

Doctorate-Regalia

6. Faculty of Science

All BSc Degrees

The same dresses for
Masters/Grad Dip degrees.

Doctorate-Regalia

7. Faculty of Humanities

BHS

The same dresses for
Masters/Grad Dip degrees.

Doctorate-Regalia

8. Faculty of Law

LLB/BL/BBA-Law/

BA-Politics/Human rights

The same dresses for
Masters/Grad Dip degrees.

Doctorate-Regalia

**9. Faculty of
Vocational Education (Including
Department of Health)**

All BWS Degrees other than
Engineering/IT and Management

The same dresses for
Masters/Grad Dip degrees.

Doctorate-Regalia

**10. Faculty of Fitness and
Language**

BA (English)-Brown

BA (Myanmar)-Brown

All other language degrees

The same dresses for
Masters/Grad Dip degrees.

Doctorate-Regalia

All Undergraduate Diplomas
Certificates/ School Certificates

Dresses(Formal)

IQY သင်ရိုးအဆင့်များနှင့်စစ်ဆေးမှုပုံစံများ

IQY Courses Levels and the way of assessment

IQY Technical College ဟာ Level သုံးခုသင်ပါတယ်။

Level 1

Tertiary Bridging (Year 9/10/11/12) စာတွေနဲ့ Technical/Vocational ဘာသာတွေပေါင်းထားတဲ့သင်ရိုး

Advanced Diploma in General Engineering & Drafting

Level 2

တက္ကသိုလ်၊ ကောလိပ်ပထမ နှစ်အဆင့် Advanced Diploma in Engineering (Specialist Discipline) such as Advanced Diploma Civil/Electrical/Mechanical Engineering/ IT/ Management.

Level 3

တက္ကသိုလ်၊ ကောလိပ်နောက်ဆုံး နှစ်အဆင့် Professional Diploma in Engineering (Specialist Discipline) such as Advanced Diploma Civil/Electrical/Mechanical Engineering/ IT/ Management./ BE/BMgt/BSc(IT)

အဲဒီမှာအခြေခံအဆင့်သိသင့်တာမသိခဲ့ဘဲဘွဲ့ လိုချင်ဇောနဲ့ Professional Diploma in Engineering (Specialist Discipline)ကိုဝင်တက်ရင်သင်တဲ့စာတွေနားလည်ဘို့ ခက်ခဲမှာဖြစ်လို့ သင့်တော်တဲ့အဆင့် ကစင်ဘို့ လိုပါတယ်။

နောက်တခုကစာမေးပွဲအောင်တာကျတာ IQY မှာမရှိပါဘူး။ Memory ကို Test မဟုတ်ပါဘူး။

သိသင့်တတ်သင့်တဲ့စာကိုပြည့်ဝစွာသင်ယူပြီးလုပ်ရမဲ့ Assignment/ Exercise တွေပြည့်ဝစွာလုပ်ပြီးမှ

Qualification ကိုပေးမှာဖြစ်ပါတယ်။

Assignment/ Exercise လုပ်တာကိုသင်တဲ့ဆရာကမကျေနပ်သေးရင်လိုတာထောက်ပြပြီးပြန်လုပ်ခိုင်းမှာ ဖြစ်ပါတယ်။

IQY Technical College courses are arranged at three levels

Level 1

It is tertiary bridging level combining Year 9 to 12 lessons and technical/ vocational subjects. Example- Advanced Diploma in General Engineering & Drafting

Level 2

It is first two years level of College/ University Courses. The courses are Advanced Diploma in Engineering (Specialist Discipline) such as Advanced Diploma Civil/Electrical/Mechanical Engineering/ IT/ Management.

Level 3

It is final two years level Professional Diploma in Engineering (Specialist Discipline) such as Advanced Diploma Civil/Electrical/Mechanical Engineering/ IT/ Management./ BE/BMgt/BSc(IT)

If the students who are ambitious in getting the degree but do not possess the necessary skills and knowledge join the Professional Diploma/ Degree class, they will find it difficult to understand the lessons. It is important for them to join at appropriate level.

IQY does not have the system of Passing or Failing the examinations. We do not test the memory. The qualification will only be awarded to the students who have learnt all necessary studies and have fully done the necessary exercises and assignments.

If the teacher does not satisfy with the student's work, the weaknesses will be pointed out and the student will be asked to redo the work.

THS/ITC/ Year 10 မှဝင်သူများသည်အောက်ပါအစီအစဉ်အတိုင်းတက်ရမည်။

Year 1

Diploma in General Engineering and Certificate in Tertiary Preparation (First 6 months)

Diploma in Electrical/Mechanical/Civil Engineering (Myanmar Version) (Second 6 months)

Associate Degree in Work Studies-Engineering

Year 2

Advanced Diploma in Electrical/Mechanical/Civil Engineering Part 1+Associate Degree of Work Studies in Engineering

BTech/BE ဆက်မတက်နိုင်ပါက Bachelor of Work Studies-Engineering ကို Year 3 တွင်အခမဲ့တက်ကာဘွဲ့ရယူနိုင်မည်။

အလုပ်အတွေ့အကြုံတစ်နှစ်ရှိပါက Bachelor of Work Studies-Engineering ကို Bachelor of Science-Engineeringသို့ CV (Curriculum Vitae) တင်ပြပြီးအဆင့်မြှင့်နိုင်သည်။

Original Information in English

All mainstream universities (and, note, I emphasise the word 'university' for this scenario, and am not interested in Colleges etc) in the world have some form of legal authority to grant degrees. This authority ranges from:

- 1) Royal Charter
- 2) Act of Parliament
- 3) Accreditation (National & RA)
- 4) Ministry of [Education](#) Accreditation
- 5) State Licensing/ Authority
- 6) Any other international forms I have missed, I apologise but please add in.

All of the above involves some form of review/ assessment by an external body. This external body and process is designed to assess the capacity of the applicant and ensure that it has the minimum requirements in a range of areas ranging from physical to human resources in order to confer the range of degrees it is seeking to deliver.

If the entity meets the requisite standards, set at that particular point in time, then it is conferred authority, whether it be perpetual autonomy, or a set period of time, to confer degrees. At the same time, the entity can also be conferred the authority to use the word 'University', which is the approach in the Commonwealth, Europe etc but not in the USA, where the word is not controlled in legislation. This is called, in a broad sense, accreditation and not quality assurance. Quality assurance is the ongoing maintenance of standards, which the entity promises to comply with, and even improving and refining these standards, as it operates as a higher education institution.

It is now suggested that there is another form of legal authority to grant degrees. This allegedly comes in the form of Company Incorporation whereby an organisation incorporates itself as a legal entity using the word 'university' in its business name. The authority to grant degrees is derived from the company's articles of incorporation, spelling out its own empowerment to confer degrees. The Directors of the company generally draft these articles. This form of incorporation generally occurs in jurisdictions where the word 'university' is not controlled under the Business Names Act, or similar legislation. If it were controlled under legislation, then the above 'accreditation' steps would have to be followed.

So, we now have organisations referring to themselves as 'self-validating' or 'autonomous institutions', essentially claiming the same level of legal authority to grant degrees as those that have gone through the above mainstream processes. Examples of institutions using this legal structure are Knightsbridge University, Warnborough University, Earlscroft University etc. etc.

I would be interested in the members view as to this legal position re-approval to grant degrees. Is it acceptable for a university to incorporate itself, empower itself to confer degrees, and undergo no external assessment/benchmarking etc? I emphasise again - I am not interested in the quality assurance frameworks - I am interested in the legal authority to grant degrees.

IQY Technical College's academic policy & procedure in line with Myanmar Engineering Council's Accreditation Requirements & Sample of Educational Institution Documents

www.highlightcomputer.com/Accreditation.htm

Executive Summary

This is voluntary information related to IQY Technical College's online engineering programs & this information report related to sample engineering programs, curriculums and learning materials is prepared by citing the accreditation manual of Myanmar Engineering Council

Objective

Although it is not a main objective of IQY Technical College to seek the accreditation in Myanmar, the main reason to prepare this document is to be referred by relevant course developers of the Government Technical Colleges & Technological Universities in Myanmar how to fulfil the international standard accreditation procedures as the writer of this documents have over 25 years experiences in teaching, designing & implementation of engineering programs in Fiji, Australia & New Zealand in accordance with Australian/ New Zealand standards.

It is solely aimed to share the knowledge with engineering educators in Myanmar especially to develop e-Learning which is new to most educators in Myanmar. This submission describes how e-Learning in engineering can be effectively applied to fulfil the accreditation needs of Myanmar Engineering Council because Government Technical Colleges & Technological Universities are spread throughout Myanmar & e-Learning is the only most effective way to equalize teaching & learning at different geographical locations of Myanmar.

The document contains the online links from where the relevant documents can be downloaded.

9.2.1 General Information (MEng C)

i. Provide general information on the Technological Institutions and the specific programme.

- IQY Technical College of Highlight Computer Group teaches St Clements Technological University, St Clements University Higher Education School Niue's Diploma/ Advanced Diploma and Bachelor Degree programs in Engineering, Information Technology and Management courses to the students of Myanmar at the price affordable to average working class people of Myanmar.

- E-Learning system that provides on line & off line DVD/USB based teaching system is utilized for the student to do self directed learning combined with simulated practical video/ slide shows and audio/ visual aids are utilized to effectively apply Information Technology in e-Learning & Teaching.
- The main objective of our program is to maximize the individual student's self directed learning by applying the maximum use of technology & by minimizing the teacher's assistance personally .
- Although IQY Technical College refers & applies the relevant international educational standards, IQY Technical College maintains it's academic independency.

ii. Provide detailed information on programme history of accreditation (year of accreditation, conditions imposed and actions taken). (MEng C)

Further Submission

iii. Describe any self-initiated changes made to the programme and state the year the changes were introduced (MEng C)

Further Submission

Programme Objectives.

<http://www.highlightcomputer.com/objectives.htm>

9.2.2 Programme Objectives

I State the vision and mission of the Technological Institutions. (MEng C)

- IQY Technical College of Highlight Computer Group teaches St Clements Technological University, St Clements University Higher Education School Niue's Diploma/ Advanced Diploma and Bachelor Degree programs in Engineering, Information Technology and Management courses to the students of Myanmar at the price affordable to average working class people of Myanmar.
- IQY Technical College of Highlight Computer Group will independently provide the international standard education & engineering education to the poor students of Myanmar whom are being taught by the voluntary education groups of Myanmar .
- IQY Technical College is Non Profit/ Non Government Educational Organization which assist the needy students of Myanmar as well as the students in other developing countries by co-operating with the international organizations of same objectives/ visions and missions.

li Describe the Programme Objectives and state where they are published. (MEng C)

- IQY Technical College offers three levels of Engineering Programs
 1. One year Diploma in Engineering
 2. Two years Advanced Diploma in Engineering
 3. Four years Professional Diploma in Engineering which is set at the same level of standard to Bachelor of Engineering degree
- The entry requirement for IQY Technical College is Year 12 . The students who have less than year 12 level education will need to undertake IQY Technical College's Year 11+12 programs which are set at Australian NSW State Year 12 Standard.
- Based on the entry Year 12 standard, Year one to four Academic programs are arranged.

The objectives

Diploma in Engineering (Electrical+ Mechanical+ Civil+ Renewable Energy Engineering+ Computer Engineering & Information Technology)

IQY Technical College's one year Diploma in Engineering is designed to train the students to work as Engineering Associate or Engineering Technicians in wide ranges of industries.

It is designed to provide the following competencies.

To train the students to have a wide range of functions within engineering enterprises and engineering teams.

The training is designed for the students

- To be closely familiar with standards and codes of practice, and to become expert in their interpretation and application to a wide variety of situations.
- To develop very extensive experience of practical installations, and may well be more knowledgeable than Professional Engineers or Engineering Technologists on detailed aspects of plant and equipment that can contribute very greatly to safety, cost or effectiveness in operation.
- To develop high levels of expertise in aspects of design and development processes. These might include, for example, the use of advanced software to perform detailed design of structures, mechanical components and systems, manufacturing or process plant, electrical and electronic equipment, information and communications systems, and so on.
- To do the construction of experimental or prototype equipment.
- To develop detailed practical knowledge and experience complementing the broader or more theoretical knowledge of others.

Advanced Diploma in Engineering (Electrical+ Mechanical+ Civil+ Renewable Energy Engineering+ Computer Engineering & Information Technology) Course Outlines

IQY Technical College's two years Advanced Diploma in Engineering is designed to train the students to work as Engineering Technologist in wide ranges of industries.

The training is designed to provide expertise to the students which may be at a high level, and fully equivalent to that of a Professional Engineer. That is designed

- to exercise the same breadth of perspective as Professional Engineers, or carry the same wide-ranging responsibilities for stakeholder interactions, for system integration, and for synthesising overall approaches to complex situations and complex engineering problems.
- to possess for a strong understanding of practical situations and applications, with the intellectual challenge of keeping abreast of leading-edge developments as a specialist in a technology domain and how these relate to established practice. For this purpose Engineering Technologists need a strong understanding of scientific and engineering principles and a well-developed capacity for analysis.
- to apply current and emerging technologies, often in new contexts; or with the application of established principles in the development of new practice.
- To contribute to the advancement of technology.
- to take responsibility for engineering projects, services, functions and facilities within a technology domain, for specific interactions with other aspects of an overall operating context and for managing
- to contribute the specialist work to a broader engineering system or solution. In these roles, Engineering
- to focus on sustainable solutions and practices which optimise technical, social, environmental and economic outcomes within the technology domain and over a whole systems life cycle.
- to have an intimate understanding of the standards and codes of practice that underpin the technology domain and ensure that technology outcomes comply with statutory requirements. Engineering Technologists are required to interact effectively with Professional Engineers and Engineering Associates, with other professionals, tradespersons, clients, stakeholders and society in general, to ensure that technology outcomes and developments fully integrate with the overall system and context.
- to ensure that all aspects of a technological product, or operation are soundly based in theory and fundamental principle.
- to understand how new developments relate to their specific field of expertise.
- to interpret technological possibilities, to investigate interfaces, limitations, consequences, costs and risks.

Professional Diploma in Engineering (Electrical+ Mechanical+ Civil+ Renewable Energy Engineering+ Computer Engineering & Information Technology)

IQY Technical College's four years Professional Diploma in Engineering is designed to train the students to work as Engineering Technologist /Professional Engineer in wide ranges of industries.

It is designed to provide the following competencies.

- To perform the reliable functioning of all materials, components, sub-systems and technologies used; their integration to form a complete, sustainable and self-consistent system; and all interactions between the technical system and the context within which it functions. The latter includes understanding the requirements of clients, wide ranging stakeholders and of society as a whole; working to optimise social, environmental and economic outcomes over the full lifetime of the engineering product or program; interacting effectively with other disciplines, professions and people; and ensuring that the engineering contribution is properly integrated into the totality of the undertaking.
- To do interpreting technological possibilities to society, business and government; and for ensuring as far as possible that policy decisions are properly informed by such possibilities and consequences, and that costs, risks and limitations are properly understood as the desirable outcomes.
- To bring knowledge to bear from multiple sources to develop solutions to complex problems and issues, for ensuring that technical and non-technical considerations are properly integrated, and for managing risk as well as sustainability issues. While the outcomes of engineering have physical forms, the work of
- To train the students to become predominantly intellectual in nature. In a technical sense, Professional Engineers are primarily concerned with the advancement of technologies and with the development of new technologies and their applications through innovation, creativity and change. Professional Engineers may conduct research concerned with advancing the science of engineering and with developing new principles and technologies within a broad engineering discipline.
- To contribute to continual improvement in the practice of engineering, and in devising and updating the codes and standards that govern it.
- To take a particular responsibility for ensuring that all aspects of a project are soundly based in theory and fundamental principle, and for understanding clearly how new developments relate to established practice and experience and to other disciplines with which they may interact. One hallmark of a professional is the capacity to break new ground in an informed, responsible and sustainable fashion.

iii. Describe how the Programme Objectives are consistent with the vision and mission of the Technological Institutions and stakeholder requirements. (MEng C)

Diploma in Engineering (Electrical+ Mechanical+ Civil+ Renewable Energy Engineering+ Computer Engineering & Information Technology)

The training includes feasibility investigation, scoping, establishing criteria/performance measures, assessing and reporting technical and procedural options; design and development; component,

resources and materials sourcing and procurement; construction, prototyping, manufacture, testing, installation, commissioning, service provision and de-commissioning; tools, plant, equipment and facilities acquisition, management, maintenance, calibration and upgrades; operations management; procedures documentation; presentation and reporting; maintenance systems design and management; project and facility management; quality assurance, costing and budget management; document control and quality assurance.

The training is also designed to provide a good grounding in engineering science and the principles underlying their field of expertise, to ensure that their knowledge and skills are portable across different applications and situations within the broad field of practice. Equipment, vendor or context-specific training in a particular job are not sufficient to guarantee generic competency. Given a good knowledge base, however, the graduates may build further on this through high levels of training in particular contexts and in relation to particular equipment.

The competencies of graduates to equip them to certify the quality of engineering work and the condition of equipment and systems in defined circumstances, laid down in recognised standards and codes of practice.

The training is also designed to lead or manage teams appropriate to these activities. Some may establish their own companies or may move into senior management roles in engineering and related enterprises, employing Professional Engineers, Engineering Technologists, and other specialists where appropriate.

Diploma in Electrical Engineering

This program is designed with 30 credit points integrating 15 credit points Certificate in Electrical Engineering. The completion of this program can be articulated into 60 points Advanced Diploma in Electrical Engineering & 120 credit points Professional Diploma in Electrical Engineering which is the award of Bachelor of Engineering degree by the universities affiliated to IQY Technical College.

The graduates of Diploma in Electrical Engineering can apply for Associate Member of Singapore Institute of Engineering Technologists & then leading to the professional status of ASEAN Engineering Technician.

Diploma in Mechanical Engineering

This program is designed with 30 credit points integrating 15 credit points Certificate in Mechanical Engineering. The completion of this program can be articulated into 60 points Advanced Diploma in Mechanical Engineering & Mechatronics & 120 credit points Professional Diploma in Mechanical Engineering & Mechatronics which is the award of Bachelor of Engineering degree by the universities affiliated to IQY Technical College.

The graduates of Diploma in Mechanical Engineering can apply for Associate Member of Singapore Institute of Engineering Technologists & then leading to the professional status of ASEAN Engineering Technician.

Diploma in Civil Engineering

This program is designed with 30 credit points integrating 15 credit points Certificate in Civil Engineering & Construction Studies . The completion of this program can be articulated into 60 points Advanced Diploma in Civil Engineering & 120 credit points Professional Diploma in Civil Engineering & Building Services which is the award of Bachelor of Engineering degree by the universities affiliated to IQY Technical College.

The graduates of Diploma in Civil Engineering can apply for Associate Member of Singapore Institute of Engineering Technologists & then leading to the professional status of ASEAN Engineering Technician.

Diploma in Renewable Energy Engineering

This program is designed with 30 credit points integrating 15 credit points Certificate in Renewable Energy Course Completion Certificate which is delivered through the public seminars . The completion of this program can be articulated into 120 credit points Professional Diploma in Renewable Energy Engineering which is the award of Bachelor of Engineering degree by the universities affiliated to IQY Technical College.

The graduates of Diploma in Renewable Energy Engineering can apply for Associate Member of Singapore Institute of Engineering Technologists & then leading to the professional status of ASEAN Engineering Technician.

Diploma in Computer Engineering/ Diploma in Information Technology

This program is designed with 30 credit points integrating 15 credit points Certificate in Information Technology . The completion of this program can be articulated into 60 points Advanced Diploma in Information Technology & 120 credit points Professional Diploma in Information Technology or Professional Diploma in Computer Engineering which is the award of Bachelor of Applied Science (Information Technology)/Bachelor of Engineering degree by the universities affiliated to IQY Technical College.

The graduates of Diploma in Computer Engineering can apply for Associate Member of Singapore Institute of Engineering Technologists & then leading to the professional status of ASEAN Engineering Technician.

The graduates of Diploma in Information Technology can apply for membership of International Institute of Science Engineering & Management.

To be awarded Diploma in Computer Engineering, the students need to do Diploma in Information Technology & Diploma in Electrical Engineering at the same time.

Advanced Diploma in Engineering (Electrical+ Mechanical+ Civil+ Renewable Energy Engineering+ Computer Engineering & Information Technology) Course Outlines

It is designed to provide the following competencies.

To train the students to operate within broadly-defined technical environments, and undertake a wide range of functions and responsibilities. They are often specialists in the theory and practice of a particular branch of engineering technology or engineering-related technology (the technology domain), and specifically in its application, adaptation or management, in a variety of contexts. Their expertise often lies in familiarity with the current state of development of a technology domain and most recent applications of the technology.

The training is also designed to provide the skills of Engineering Technologists who may lead teams responsible for the implementation, operation, quality assurance, safety, management, and maintenance of projects, plant, facilities, or processes within specialist practice area(s) of the technology domain. Some Engineering Technologists may establish their own companies or may move into senior management roles in engineering and related enterprises, employing Professional Engineers and other specialists where appropriate.

Advanced Diploma in Engineering can be studied in the following specializations

- Advanced Diploma in Electrical Engineering
- Advanced Diploma in Mechanical Engineering
- Advanced Diploma in Civil Engineering
- Advanced Diploma in Renewable Energy Engineering
- Advanced Diploma in Computer Engineering / Advanced Diploma in Information Technology

Advanced Diploma in Electrical Engineering

This program is designed with 60 credit points integrating 30 credit points Diploma in Electrical Engineering. The completion of this program can be articulated into 60 of 120 credit points Professional Diploma in Electrical Engineering which is the award of Bachelor of Engineering degree by the universities affiliated to IQY Technical College.

The graduates of Advanced Diploma in Electrical Engineering can apply for Member of Singapore Institute of Engineering Technologists & then leading to the professional status of ASEAN Engineering Technician.

Advanced Diploma in Mechanical Engineering

This program is designed with 60 credit points integrating 30 credit points Diploma in Mechanical Engineering. The completion of this program can be articulated into 60 of 120 credit points Professional Diploma in Mechanical Engineering which is the award of Bachelor of Engineering degree by the universities affiliated to IQY Technical College.

The graduates of Advanced Diploma in Mechanical Engineering can apply for Member of Singapore Institute of Engineering Technologists & then leading to the professional status of ASEAN Engineering Technician.

Advanced Diploma in Civil Engineering

This program is designed with 60 credit points integrating 30 credit points Diploma in Civil Engineering. The completion of this program can be articulated into 60 of 120 credit points Professional Diploma in Civil Engineering which is the award of Bachelor of Engineering degree by the universities affiliated to IQY Technical College.

The graduates of Advanced Diploma in Civil Engineering can apply for Member of Singapore Institute of Engineering Technologists & then leading to the professional status of ASEAN Engineering Technician.

Advanced Diploma in Renewable Energy Engineering

This program is designed with 60 credit points integrating 30 credit points Certificate in Renewable Energy Course Completion Certificate which is delivered through the public seminars . The completion of this program can be articulated into 120 credit points Professional Diploma in Renewable Energy Engineering which is the award of Bachelor of Engineering degree by the universities affiliated to IQY Technical College.

The graduates of Advanced Diploma in Renewable Energy Engineering can apply for Member of Singapore Institute of Engineering Technologists & then leading to the professional status of ASEAN Engineering Technician.

Advanced Diploma in Computer Engineering/ Advanced Diploma in Information Technology

This program is designed with 30 credit points integrating 30 credit points Diploma in Information Technology . The completion of this program can be articulated into 60 of 120 credit points Professional Diploma in Information Technology or Professional Diploma in Computer Engineering which is the award of Bachelor of Applied Science (Information Technology)/Bachelor of Engineering degree by the universities affiliated to IQY Technical College.

The graduates of Advanced Diploma in Computer Engineering can apply for Member of Singapore Institute of Engineering Technologists & then leading to the professional status of ASEAN Engineering Technician.

The graduates of Advanced Diploma in Information Technology can apply for membership of International Institute of Science Engineering & Management.

To be awarded Advanced Diploma in Computer Engineering, the students need to do Advanced Diploma in Information Technology & Diploma in Electrical Engineering at the same time.

Professional Diploma in Engineering (Electrical+ Mechanical+ Civil+ Renewable Energy Engineering+ Computer Engineering & Information Technology)

It is designed at the same academic requirement as to Bachelor of Engineering degree but IQY Technical College is operating as a vocational education & training college not as a university, the award is to be described as Professional Diploma. The graduates of the Professional Diploma in Engineering can be awarded Bachelor of Engineering by the universities which are affiliated to IQY Technical College.

The program is designed to train the students to become Professional Engineers who are required to take responsibility for engineering projects and programs in the most far-reaching sense.

The program is also designed to provide the skills required for the graduated to lead or manage teams appropriate to these activities, and may establish their own companies or move into senior management roles in engineering and related enterprises.

Professional Diploma in Engineering can be studied in the following specializations

- Professional Diploma in Electrical Engineering
- Professional Diploma in Mechanical Engineering
- Professional Diploma in Civil Engineering
- Professional Diploma in Renewable Energy Engineering
- Professional Diploma in Computer Engineering / Professional Diploma in Information Technology

Professional Diploma in Electrical Engineering

This program is designed with 120 credit points integrating 60 credit points Advanced Diploma in Electrical Engineering. The completion of this program can be awarded Professional Diploma in Electrical Engineering together with the award of Bachelor of Engineering degree by the universities affiliated to IQY Technical College.

The graduates of Professional Diploma in Electrical Engineering can apply for Fellow of Singapore Institute of Engineering Technologists & then leading to the professional status of ASEAN Engineering Technologists or ASEAN Engineer.

Professional Diploma in Mechanical Engineering

This program is designed with 120 credit points integrating 60 credit points Advanced Diploma in Mechanical Engineering. The completion of this program can be awarded Professional Diploma in Mechanical Engineering together with the award of Bachelor of Engineering degree by the universities affiliated to IQY Technical College.

The graduates of Professional Diploma in Mechanical Engineering can apply for Fellow of Singapore Institute of Engineering Technologists & then leading to the professional status of ASEAN Engineering Technologists or ASEAN Engineer.

Professional Diploma in Civil Engineering

This program is designed with 120 credit points integrating 60 credit points Advanced Diploma in Civil Engineering. The completion of this program can be awarded Professional Diploma in Civil Engineering together with the award of Bachelor of Engineering degree by the universities affiliated to IQY Technical College.

The graduates of Professional Diploma in Civil Engineering can apply for Fellow of Singapore Institute of Engineering Technologists & then leading to the professional status of ASEAN Engineering Technologists or ASEAN Engineer.

Professional Diploma in Renewable Energy Engineering

This program is designed with 120 credit points integrating 60 credit points Advanced Diploma in Renewable Energy Engineering. The completion of this program can be awarded Professional Diploma in Renewable Energy Engineering together with the award of Bachelor of Engineering degree by the universities affiliated to IQY Technical College.

This program explores the way to make the best use of renewable energy technologies including solar thermal systems, photovoltaics, wind and biomass. Renewable Energy Engineering borrows much of its structure from some other areas of engineering, such as electrical engineering and photovoltaic engineering. It encompasses a broad range of renewable energy technologies including electricity generation from solar thermal systems, photovoltaics, wind and biomass. It also covers solar architecture and energy efficient housing design

The graduates of Professional Diploma in Renewable Energy Engineering can apply for Fellow of Singapore Institute of Engineering Technologists & then leading to the professional status of ASEAN Engineering Technologists or ASEAN Engineer.

Professional Diploma in Computer Engineering/ Professional Diploma in Information Technology

This program is designed with 120 credit points integrating 60 credit points Advanced Diploma in Information Technology . Professional Diploma in Computer Engineering which is the award of Bachelor of Applied Science (Information Technology)/Bachelor of Engineering degree by the universities affiliated IQY Technical College.

The graduates of Professional Diploma in Computer Engineering can apply for Fellow of Singapore Institute of Engineering Technologists & then leading to the professional status of ASEAN Engineering Technologist or ASEAN Engineer.

The graduates of Professional Diploma in Information Technology can apply for membership of International Institute of Science Engineering & Management.

To be awarded Professional Diploma in Computer Engineering, the students need to do some Bachelor of Engineering (Electrical) units at the same time.

iv. Describe the processes used to establish and review the Programme Objectives, and the extent to which the programme's various stakeholders are involved in these processes.

v Describe how the Technological Institutions ensures achievement of the Programme Objectives.

vi. Describe the ongoing evaluation of the level of achievement of these objectives, and the extent to which the programme's various stakeholders are involved in these processes.

vii. Describe how the results obtained from evaluation are being used to improve the effectiveness of the program (MEng C)

Please see Attachment 1.Assessment Validation Records 2.Assessment Evidences 3.Quality Assurance Records

9.2.3 Learning Outcomes

I List down the Learning Outcomes and state where are they published. (MEng C)

Diploma / Advanced Diploma in Engineering (Electrical+ Mechanical+ Civil+ Renewable Energy Engineering+ Computer Engineering & Information Technology)

1. KNOWLEDGE AND SKILL BASE

1.1. Systematic, theory based understanding of the underpinning natural and physical sciences and the engineering fundamentals applicable to the technology domain.

1.2. Conceptual understanding of the, mathematics, numerical analysis, statistics, and computer and information sciences which underpin the technology domain.

1.3. In-depth understanding of specialist bodies of knowledge within the technology domain.

1.4. Discernment of knowledge development within the technology domain.

1.5. Knowledge of engineering design practice and contextual factors impacting the technology domain.

1.6. Understanding of the scope, principles, norms, accountabilities and bounds of sustainable engineering practice in the technology domain.

2. ENGINEERING APPLICATION ABILITY

2.1. Application of established engineering methods to broadly-defined problem solving within the technology domain.

2.2. Application of engineering techniques, tools and resources within the technology domain.

2.3. Application of systematic synthesis and design processes within the technology domain.

2.4. Application of systematic approaches to the conduct and management of projects within the technology domain.

3. PROFESSIONAL AND PERSONAL ATTRIBUTES

- 3.1. Ethical conduct and professional accountability.
- 3.2. Effective oral and written communication in professional and lay domains.
- 3.3. Creative, innovative and pro-active demeanour.
- 3.4. Professional use and management of information.
- 3.5. Orderly management of self, and professional conduct.
- 3.6. Effective team membership and team leadership.

Professional Diploma in Engineering (Electrical+ Mechanical+ Civil+ Renewable Energy Engineering+ Computer Engineering & Information Technology)

COMPETENCIES

1. KNOWLEDGE AND SKILL BASE

- 1.1. Comprehensive, theory based understanding of the underpinning natural and physical sciences and the engineering fundamentals applicable to the engineering discipline.
- 1.2. Conceptual understanding of the mathematics, numerical analysis, statistics, and computer and information sciences which underpin the engineering discipline.
- 1.3. In-depth understanding of specialist bodies of knowledge within the engineering discipline.
- 1.4. Discernment of knowledge development and research directions within the engineering discipline.
- 1.5. Knowledge of engineering design practice and contextual factors impacting the engineering discipline.
- 1.6. Understanding of the scope, principles, norms, accountabilities and bounds of sustainable engineering practice in the specific discipline.

2. ENGINEERING APPLICATION ABILITY

2.1. Application of established engineering methods to complex engineering problem solving.

2.2. Fluent application of engineering techniques, tools and resources.

2.3. Application of systematic engineering synthesis and design processes.

2.4. Application of systematic approaches to the conduct and management of engineering projects.

3. PROFESSIONAL AND PERSONAL ATTRIBUTES

3.1. Ethical conduct and professional accountability.

3.2. Effective oral and written communication in professional and lay domains.

3.3. Creative, innovative and pro-active demeanour.

3.4. Professional use and management of information.

3.5. Orderly management of self, and professional conduct.

3.6. Effective team membership and team leadership.

ii how the Learning Outcomes relate to the Programme Objectives.

iii. Describe the processes used to establish and review the Learning Outcomes, and the extent to which the programme's various stakeholders are involved in these processes.

i Describe the data gathered and explain the results of the assessment.

v Explain how the assessment results are applied to further develop and improve the programme.

vi. Describe the materials, including student work and other tangible materials that demonstrate

Processes and Results: (MEng C) The programme shall have a clear linkage between Programme

Objectives and Learning Outcomes (Section 4.0); a process of ongoing assessment an

evaluation that demonstrates the achievement of Programme Objectives with documented

results; and evaluation results that are used in the continual improvement of the programme.

Diploma in Engineering (Electrical+ Mechanical+ Civil+ Renewable Energy Engineering+ Computer Engineering & Information Technology)

Program Objective	Learning Outcome
<ul style="list-style-type: none"> • To be closely familiar with standards and codes of practice, and to become expert in their interpretation and application to a wide variety of situations. • To develop very extensive experience of practical installations, and may well be more knowledgeable than Professional Engineers or Engineering Technologists on detailed aspects of plant and equipment that can contribute very greatly to safety, cost or effectiveness in operation. • 	<p><u>1. KNOWLEDGE AND SKILL BASE</u></p> <p>1.1. Systematic, theory based understanding of the underpinning natural and physical sciences and the engineering fundamentals applicable to the technology domain.</p> <p>1.2. Effective team membership and team leadership.</p>

Professional Diploma in Engineering (Electrical+ Mechanical+ Civil+ Renewable Energy Engineering+ Computer Engineering & Information Technology)

Program Objective	Learning Outcome
<ul style="list-style-type: none"> To perform the reliable functioning of all materials, components, sub-systems and technologies used; their integration to form a complete, sustainable and self-consistent system; and all interactions between the technical system and the context within which it functions. The latter includes understanding the requirements of clients, wide ranging stakeholders and of society as a whole; working to optimise social, environmental and economic outcomes over the full lifetime of the engineering product or program; interacting effectively with other disciplines, professions and people; and ensuring that the engineering contribution is properly integrated into the totality of the undertaking. To do interpreting technological possibilities to society, business and government; and for ensuring as far as possible that policy decisions are properly informed by such possibilities and consequences, and that costs, risks and limitations are properly understood as the desirable outcomes. 	<p>1. KNOWLEDGE AND SKILL BASE</p> <p>1.1. Comprehensive, theory based understanding of the underpinning natural and physical sciences and the engineering fundamentals applicable to the engineering discipline.</p> <p>1.2. Conceptual understanding of the mathematics, numerical analysis, statistics, and computer and information sciences which underpin the engineering discipline.</p> <p>1.3. In-depth understanding of specialist bodies of knowledge within the engineering discipline.</p> <p>1.4. Discernment of knowledge development and research directions within the engineering discipline.</p> <p>1.5. Knowledge of engineering design practice and contextual factors impacting the engineering discipline.</p> <p>1.6. Understanding of the scope, principles, norms, accountabilities and bounds of sustainable engineering practice in the specific discipline.</p>
<ul style="list-style-type: none"> To bring knowledge to bear from multiple sources to develop solutions to complex problems and issues, for ensuring that technical and non-technical considerations are properly integrated, and for managing risk as well as sustainability issues. To train the students to become predominantly intellectual in nature. In a 	<p>2. ENGINEERING APPLICATION ABILITY</p> <p>2.1. Application of established engineering methods to complex engineering problem solving.</p> <p>2.2. Fluent application of engineering techniques, tools and resources.</p> <p>2.3. Application of systematic engineering</p>

<p>technical sense, Professional Engineers are primarily concerned with the advancement of technologies and with the development of new technologies and their applications through innovation, creativity and change. Professional Engineers may conduct research concerned with advancing the science of engineering and with developing new principles and technologies within a broad engineering discipline</p>	<p>synthesis and design processes.</p> <p>2.4. Application of systematic approaches to the conduct and management of engineering projects.</p>
<ul style="list-style-type: none"> • To contribute to continual improvement in the practice of engineering, and in devising and updating the codes and standards that govern it. • To take a particular responsibility for ensuring that all aspects of a project are soundly based in theory and fundamental principle, and for understanding clearly how new developments relate to established practice and experience and to other disciplines with which they may interact. One hallmark of a professional is the capacity to break new ground in an informed, responsible and sustainable fashion. 	<p>3. PROFESSIONAL AND PERSONAL ATTRIBUTES</p> <p>3.1. Ethical conduct and professional accountability.</p> <p>3.2. Effective oral and written communication in professional and lay domains.</p> <p>3.3. Creative, innovative and pro-active demeanour.</p> <p>3.4. Professional use and management of information.</p> <p>3.5. Orderly management of self, and professional conduct.</p> <p>3.6. Effective team membership and team leadership.</p>

(iii) Stakeholders Involvement: The Technological Universities/Institutions shall provide evidence of stakeholder involvement with regard to (i) and (ii) above

Please see Attachment Industry Consultation Folder

<http://www.highlightcomputer.com/industryconsultation.htm>

8.0 Qualifying Requirements and Accreditation Criteria (MEng C)

An engineering programme shall be assessed by EAC to enable graduates of the programme to register as graduate engineers with the M.Eng.C. The assessment involves a review of qualifying

requirements of the Technological Institutions and an evaluation based on the following criteria, apart from

Programme Objectives (4.0) and Learning Outcomes (5.0):

1 Academic Curriculum

9.2.4 Academic Curriculum

- Discuss the programme structure and course contents to show how they are appropriate to, consistent with, and support the development of the range of intellectual and practical skills and attainment or achievement of the Learning Outcomes. (MEng C)

IQY Technical College's Diploma program is focussed on practical applications, use of materials, tools & equipment by combining with theoretical studies at tradesmen/ technician level, it will provide the foundation of engineering studies.

At the advanced diploma level, more complex level engineering contents, applied science & mathematics contents & cross-disciplinary engineering and management contents are included.

At the professional diploma level, the skills required for the graduated to lead or manage teams appropriate to these activities, and may establish their own companies or move into senior management roles in engineering and related enterprises are provided.

- Discuss the programme delivery and assessment methods and how these are appropriate to, consistent with, and support the development of the range of intellectual and practical skills and attainment or achievement of the Learning Outcomes. (MEng C)

Program delivery & assessment at Diploma & Advanced level

The students are provided with online lessons, study guides which include audio visual explanations in both English & Myanmar languages. The electronic text books and reference books are also provided.

For the students who can not have the access to the high speed internet are provided with DVDs, CDs and USBs consisting of the lessons.

It has established the learning platform from which the study guides & instructions, exercise, assignments, audio & video lessons can be downloaded.

<http://www.highlightcomputer.com/onlineteaching1.htm>

To provide the online teaching to be the same learning environment as to face to face class, IQY Technical College has established the online videos & Youtube videos of lectures.

Youtube videos of lectures

<http://www.highlightcomputer.com/videos2.htm>

Online videos

<http://www.highlightcomputer.com/videos1.htm>

Online practical simulation at Level 1 is also provided.

Practical is important aspect in engineering education. IQY Technical College also provides the engineering practicals by online mode.

It has established the online practical support websites to provide three levels of engineering practicals.

The sites are

<http://www.highlightcomputer.com/PracticalCourses.htm>

&

<http://www.iqytechnicalcollege.com/youtubevideos.htm>

Level 1- Tradesmen Level in which the basic trades tasks videos such as brick laying, motor winding, wiring, engine fittings, machining etc are presented.

Level 2- Technician Level in which the technician tasks such as electrical laboratory, surveying etc are presented

Level 3- Engineer Level in which use of engineering design handbooks are presented.

For all three levels, the reference books related to practical applications are presented.

Assessment

The students need to do the continuous study as per guidelines and instruction provided in study guides and do the exercises. They are required to regularly submit the assignments and sit the online MCQ tests

Online Theory & MCQ Practice

http://www.filefactory.com/file/6m8zvfek7797/n/Online_Theory_MCQ_Practice_pdf

Online Practical Practice

http://www.filefactory.com/file/3ap0vv6o8azx/n/Online_Practical_Practice_pdf

Upon satisfactory completion of the assessments, the progression is granted.

Upon completion of all units / subject in the program, the qualification is awarded.

Program delivery & assessment at Professional Diploma level

The same learning system is applied. But for the professional diploma level, the written tests as well as engineering management, project tasks, design presentation and engineering competency demonstration report writings are included in the assessment.

- The information required in items (i) and (ii) should include but is not limited to the following:
- A matrix linking courses to Learning Outcomes to identify and track the contribution of each course to the Learning Outcomes. (Overall Learning outcomes link to each unit)
- Distribution of engineering courses according to areas specific to each program

(MEng C)

Diploma in Electrical Engineering

Learning Outcome	Subjects	Study Area
<u>1. KNOWLEDGE AND SKILL BASE</u> 1.1. Criterion 1: Academic Curriculum

(curricular design)the philosophy and approach adopted in the programme structure, (MEng C)

The Diploma & Advanced Diploma level engineering curriculums are designed to provide the Engineering Competencies at Technician/ Technologist & Professional Engineer level.

They are based on Year 12 level schooling.

At the diploma level, the basic engineering theories are mixed with trades level practical knowledge and applications. Appropriate contents of mathematics, science and cross disciplinary contents are inserted.

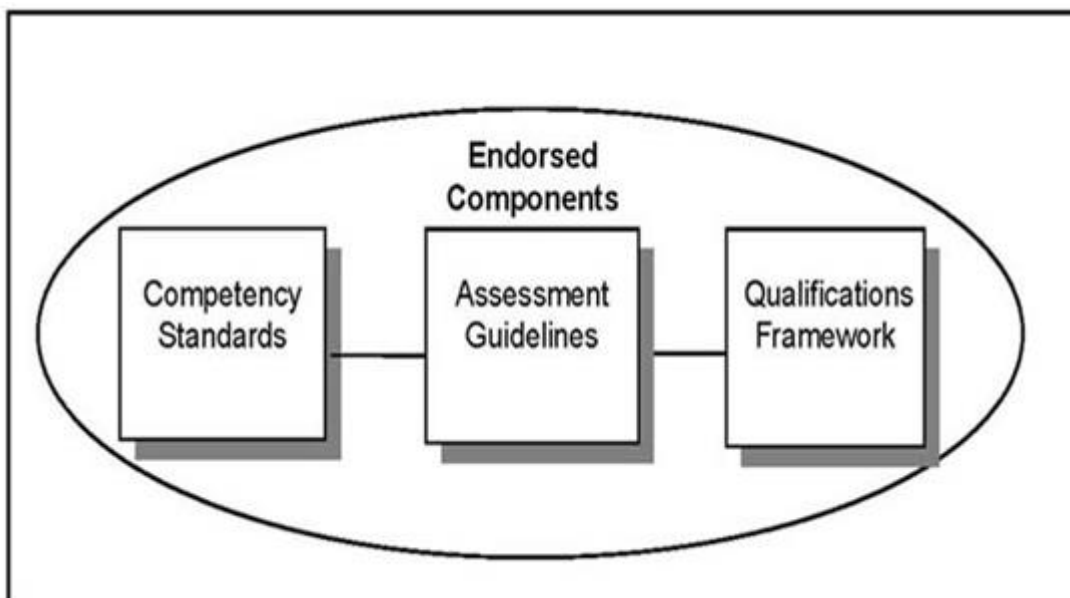

The engineering Industry is subject to high levels of legislation, regulation, codes of practice, guidelines and advisory standards, related to: research, assembly, installation, construction, diagnoses, maintenance, commissioning, programming, testing and repair of networks; systems,

circuits, equipment, components, appliances and facilities in the field of electricity and communications. The regulatory requirements are typically based on the principle of operation of the various systems and associated circuits involving equipment, apparatus and systems, public safety, safety and health of individuals who work on lines/circuits, systems and apparatus/equipment and other codes and practices related to the environment in which they are installed, operate and are maintained.

To fulfil such requirements, IQY Technical College Diploma & Advanced Diploma program are designed with the following requirements

- To provide a consistent and reliable set of components for training, recognising and assessing people's skills, and may also have optional support materials
- To enable the qualifications to be awarded through direct assessment of workplace competencies
- To apply and delivery of flexible training which suits individual and industry requirements
- To encourage learning and assessment in a work-related environment which leads to verifiable workplace outcomes.

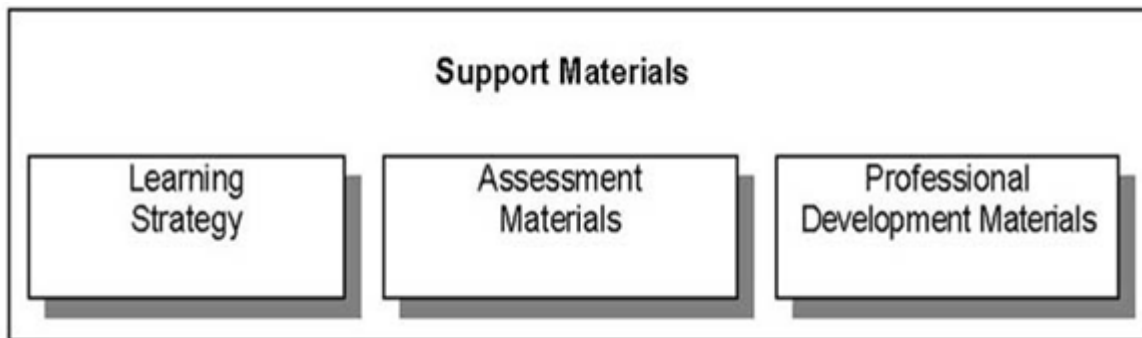

IQY Technical College's Diploma & Advanced Diploma program are largely based on Australian training system that reflect the following structure.

Competency Standards

Each unit of competency identifies a discrete workplace requirement and includes the knowledge and skills that underpin competency as well as language, literacy and numeracy; and occupational health and safety requirements. The units of competency must be adhered to in training and assessment to ensure consistency of outcomes

The online & off line learning support materials are designed with the following features.

The following competency areas are included

- A – Assembly
- C – Commercial
- D – Computer systems
- E – Cross discipline
- F – Data and voice communications
- G – Electrical
- H – Electronic
- I – Instrument and Control
- J – Refrigeration and Air Conditioning
- K – Renewable and sustainable energy
- M – Hazardous areas
- P – Restricted and specialist
- R – Research

Language, Literacy, Numeracy

The study support materials have been written to reflect the technical and operational needs of industry and include appropriate language and literacy requirements of Myanmar students. A new and specific section related to literacy and numeracy skills has been included in the competency standard. It characterises how participants are to be best equipped to achieve the relevant unit, in terms of reading, writing and numeracy skill levels.

Access, Equity and Cultural Diversity

The skills required of employees in the Engineering Industry are comprehensive and are relevant to many different employment situations. The study support materials reflect the range of knowledge and skills and their application, required in the Industry. They are written in a non-exclusive manner so as to increase the participation rates of under-represented groups and to minimise unintentional bias.

Quality Control Aspects

- *Maintenance of Contents Standards* – to initiate and respond to the need to review, vary, delete and add to the Engineering competency standard units, as part of the sector's standards inventory
- *Maintenance of Competency Delivery Processes* – to monitor the effectiveness of the delivery of competency and so initiate and respond to issues which may impact on those processes
- *Maintenance of Assessment Guidelines* – to monitor the effectiveness of the Assessment Guidelines and supporting systems; to initiate and respond to issues which impact, or are likely to impact, on the quality of the assessment systems and to promote quality improvement throughout the system
- *Maintenance of the Qualification and Recognition Systems* – to monitor the effectiveness of the application of the Qualification and Recognition Systems contained in the courses and to review/revise the system as required

Philosophy related to Learning Out comes provided by IQY Technical College Diploma & Advanced Diploma curriculums

Certificate (Part 1)

Characteristics of Learning Outcomes

- Breadth, depth and complexity of knowledge and competencies would cover selecting, adapting and transferring skills and knowledge to Australian environments and providing technical advice and some leadership in resolution of specified problems. This would be applied across a range of roles in a variety of contexts with some complexity in the extent and choice of options available.
- Performance of a defined range of skilled operations, usually within a range of broader related activities involving known routines, methods and procedures, where some discretion and judgement is required in the selection of equipment, services or contingency measures and within known time constraints.
- Applications may involve some responsibility for others. Participation in teams including group or team coordination may be involved.
- Distinguishing Features of Learning Outcomes
- Do the competencies enable an individual with this qualification to:
- demonstrate some relevant theoretical knowledge
- apply a range of well-developed skills
- apply known solutions to a variety of predictable problems
- perform processes that require a range of well-developed skills where some discretion and judgement is required
- interpret available information, using discretion and judgement
- take responsibility for own outputs in work and learning
- take limited responsibility for the output of others

Certificate (Part 2)

Characteristics of Learning Outcomes

- Breadth, depth and complexity of knowledge and competencies would cover a broad range of varied activities or application in a wider variety of contexts most of which are complex and non-routine. Leadership and guidance are involved when organising activities of self and others as well as contributing to technical solutions of a non-routine or contingency nature.
- Performance of a broad range of skilled applications including the requirement to evaluate and analyse current practices, develop Australian criteria and procedures for performing current practices and provision of some leadership and guidance to others in the application and planning of the skills.
- Applications involve responsibility for, and limited organisation of, others.
- Distinguishing Features of Learning Outcomes
- Do the competencies enable an individual with this qualification to:
- demonstrate understanding of a broad knowledge base incorporating some theoretical concepts
- apply solutions to a defined range of unpredictable problems
- identify and apply skill and knowledge areas to a wide variety of contexts, with depth in some areas

- identify, analyse and evaluate information from a variety of sources
- take responsibility for own outputs in relation to specified quality standards
- take limited responsibility for the quantity and quality of the output of others

Diploma

Characteristics of Learning Outcomes

- Breadth, depth and complexity covering planning and initiation of alternative approaches to skills or knowledge applications across a broad range of technical and/or management requirements, evaluation and coordination.
- The self directed application of knowledge and skills, with substantial depth in some areas where judgement is required in planning and selecting appropriate equipment, services and techniques for self and others.
- Applications involve participation in development of strategic initiatives as well as personal responsibility and autonomy in performing complex technical operations or organising others. It may include participation in teams including teams concerned with planning and evaluation functions. Group or team coordination may be involved.
- The degree of emphasis on breadth as against depth of knowledge and skills may vary between qualifications granted at this level.
- Distinguishing Features of Learning Outcomes
- Do the competencies or learning outcomes enable an individual with this qualification to:
demonstrate understanding of a broad knowledge base incorporating theoretical concepts, with substantial depth in some areas
- analyse and plan approaches to technical problems or management requirements
- transfer and apply theoretical concepts and/or technical or creative skills to a range of situations
- evaluate information, using it to forecast for planning or research purposes
- take responsibility for own outputs in relation to broad quantity and quality parameters
- take some responsibility for the achievement of group outcomes

Advanced Diploma

Characteristics of Learning Outcomes

- Breadth, depth and complexity involving analysis, design, planning, execution and evaluation across a range of technical and/or management functions including development of Australian criteria or applications or knowledge or procedures.
- The application of a significant range of fundamental principles and complex techniques across a wide and often unpredictable variety of contexts in relation to either varied or highly specific functions. Contribution to the development of a broad plan, budget or strategy is involved and accountability and responsibility for self and others in achieving the outcomes is involved.
- Applications involve significant judgement in planning, design, technical or leadership/guidance functions related to products, services, operations or procedures.
- The degree of emphasis on breadth as against depth of knowledge and skills may vary between qualifications granted at this level.
- Distinguishing Features of Learning Outcomes
- Do the competencies or learning outcomes enable an individual with this qualification to:
 - demonstrate understanding of specialised knowledge with depth in some areas
 - analyse, diagnose, design and execute judgements across a broad range of technical or management functions
 - generate ideas through the analysis of information and concepts at an abstract level
 - demonstrate a command of wide-ranging, highly specialised technical, creative or conceptual skills
 - demonstrate accountability for personal outputs within broad parameters
 - demonstrate accountability for personal and group outcomes within broad parameters

Professional Diploma

Year 2+3 Learning Outcomes & Teaching /Assessment Strategies

Purpose

Development and consolidation of discipline knowledge and skills, with increasing opportunities for application

Knowledge

comprehensive understanding of the major theoretical approaches, concepts, practices, methodologies, etc.

Skills

- Consolidate and extend key academic skills including:

- high order cognitive skills in processing knowledge
- rigorous techniques of enquiry involving primary and secondary sources and a range of technologies
- problem solving and creativity using various techniques in diverse contexts
- collaborative and independent learning
- communication skills (oral, written, academic, professional) including the use of relevant technologies
- Consolidate and extend key discipline technical skills

Application of Knowledge & Skills

- apply and adapt major theoretical principles and approaches to real world contexts
- develop skills in planning, problem solving, decision-making, teamwork, communication, intellectual independence and accountability in professional practice and/or scholarship

Key Verbs

- organise
- integrate
- differentiate, examine
- distinguish
- discuss, elaborate
- calculate
- collaborate
- discover
- critically review
- explain, interpret
- compare, contrast
- summarise, paraphrase
- demonstrate
- cooperate
- use, modify
- organise

Types of assessments

- critical review
- construct a chart
- analyse data, graph
- create a database
- write a reflective journal
- analyse an argument
- compare theories
- make generalisations

- apply models
- develop and conduct a survey
- investigate an issue
- critical essay
- role play
- make a presentation
- debate
- defend a position
- quiz, test, exam
- tutorial paper

Year 4 Learning Outcomes & Teaching /Assessment Strategies

Purpose

The Professional Diploma comparable to Bachelor Degree qualifies individuals who apply a broad and coherent body of knowledge in a range of contexts to undertake professional work and as a pathway for further learning

Knowledge

- broad and coherent knowledge with depth in one or more disciplines

Skills

- cognitive skills to critically, analyse, consolidate and synthesise knowledge
- cognitive and technical skills to demonstrate a broad understanding of knowledge with depth in some areas
- cognitive and creative skills to exercise critical thinking and judgement in identifying and solving problems with intellectual independence
- communication skills to present a clear, coherent and independent exposition of knowledge and ideas

Application of Knowledge & Skills

- apply knowledge and skills with initiative and judgement in planning, problem solving and decision making in professional practice and/or scholarship
- adapt knowledge and skills in diverse contexts
- with responsibility and accountability for own learning and professional practice and in collaboration with others within broad parameters

Key Verbs

- assemble
- manage
- formulate, devise
- generate, construct
- deconstruct
- solve

- assess, estimate
- investigate, scope
- plan
- convert, translate
- justify, predict
- create, design, compose
- judge, determine, diagnose
- innovate, invent

Types of Assessment

- project
- presentation on a topic/project
- seminar paper and presentation
- report
- case study
- scenarios
- major essay
- plan
- creative writing (story, poem song)
- musical work, sculpture
- performance of a musical work, play
- film making
- translation of a text
- simulation
- organisation of an event
- work-integrated learning
- teamwork
- quiz, test/exam
- reflective journal
- posters
- portfolio
- exam
- viva voce

Preparation for Professional Engineer Program

Purpose

The Professional Engineer Status who apply a body of knowledge in a specific context to undertake professional work and as a pathway for research and further learning.

Knowledge

- coherent advanced knowledge of the principles and concepts in one or more disciplines and knowledge of research principles and methods

Skills

- cognitive skills to review, analyse, consolidate and synthesise knowledge to identify and provide solutions to complex problems with intellectual independence
- cognitive and technical skills to demonstrate a broad understanding of a body of knowledge and theoretical concepts with advanced understanding in some areas
- cognitive skills to exercise critical thinking and judgement in developing new understanding technical skills to design and use research in a project
- communication skills to present a clear and coherent exposition of knowledge and ideas to a variety of audience

Application of knowledge & Skills

- apply knowledge and skills with initiative and judgement in professional practice and/or scholarship
- adapt knowledge and skills in diverse contexts
- with responsibility and accountability for own learning and practice and in collaboration with others within broad parameters
- plan and execute project work and/or a piece of research and scholarship with some independence

Key Verbs

- research work on system/ modification/ re-engineering/ reverse engineering
- adapt the news systems / alternative system/ more efficient system
- initiate the new technology & application
- consolidate the several functions
- execute the planning & management in engineering works

Types of assessment

- literature review on application/ methods/ system report/ project report
- research paper on new engineering development & systems
- report on project
- creative work on engineering design project
- seminar paper and presentation
- conference paper
- journal article
- viva voce

Based on the above learning outcomes & teaching strategies, the curriculums are arranged & relevant contents are integrated as follows.

Detailed Contents

Detailed Contents of BE,B Bus& B App Sc (IT) Programs

[http://highlightcomputer.com/B%20E+B%20App%20Sc\(IT\)+B%20Bus%20Course%20Detailed%20Contents.htm](http://highlightcomputer.com/B%20E+B%20App%20Sc(IT)+B%20Bus%20Course%20Detailed%20Contents.htm)

Detailed Contents of Diploma + Advanced Diploma in Engineering, IT , Management & Business Programs

<http://www.highlightcomputer.com/detailedcontent.htm>

Course Outlines

<http://www.highlightcomputer.com/syllabus.htm>

Diploma Programs (IQY Technical College)

Electrical Engineering Course Outline

Management Course Outline

Information Technology Course Outline

Certificate in Information Technology Course Outline

Diploma in Information Technology Course Outline

Advanced Diploma in Information Technology Course Outline

Mechanical Engineering Course Outline

Civil Engineering Course Outline

Automotive Engineering Course Outline

Marine Engineering Course Outline

Professional Diploma + Bachelor of Engineering (Electrical, Civil, Mechanical Combined with Renewable Energy) Programs

Professional Diploma+ Bachelor Degree in Electrical Engineering

Professional Diploma+ Bachelor Degree in Civil Engineering

Professional Diploma+ Bachelor Degree in Mechanical Engineering

**Bachelor Degree Programs (St Clements University Higher Education School&
St Clements Technological University of British West Indies)**

Bachelor of Engineering (Electrical Engineering) Course Outline

Bachelor of Applied Science (Computer Science & Computer Technology)

Bachelor of Engineering (Mechanical Engineering-Mechatronics) Course Outline

Bachelor of Engineering (Civil Engineering-Building Services) Course Outline

Graduate Diploma of Civil Engineering + Bachelor of Applied Engineering (Final Year
Civil Design) Course Outline

Bachelor of Engineering (Civil) Course outline

Bachelor of Engineering (Mechanical) Course outline

Graduate Diploma of Mechanical Engineering + Bachelor of Applied Engineering
(Final Year Mechanical Design) Course Outline

Bachelor of Business /Bachelor of Applied Management Course Outline

Graduate Diploma of Engineering Practice (Computer Control Engineering) Course
Outline

Certificate in Teaching Support+ Diploma in Teaching Practice+ Bachelor of
Teaching+ Bachelor of Education (School & Vocational)

Scholarship Application Form for Volunteer Teachers

**Myanmar Engineers Board Professional Engineer (PE) (Electrical-Building
Services) Registration Support Program**

Graduate Diploma of Engineering Practice (Mechanical) Course Outline

Graduate Diploma of Engineering Practice (Civil) Course Outline

Graduate Diploma of Engineering (Electrical+ Electronics) Course Outline

AUSTRALIAN ELECTRICIAN TRAINING

Master Degree Programs (St Clements Technological University of British West Indies)

Master of Science (Information Technology)/Master of Information Technology

Master of Management

Master of Science (Engineering) / Master of Engineering

Master of Science (Renewable Energy Engineering)

Learning Outcome/Course/Assessment/ Time Allocation

Diploma in Electrical Engineering Each unit has 1 pt unless stated

Learning Outcome	Subjects	Time Allocation/ Assessment Method
<u>1. KNOWLEDGE AND SKILL BASE</u>	Each unit has 1 pt unless stated	Time Allocation
1.1. Systematic, theory based understanding of the underpinning natural and physical sciences and the engineering fundamentals applicable to the technology domain.	EE101 DC Circuit Problems	1 Credit Point=24 Hr
	EE113 Electrical Fundamental (2 pt)	Assessment
	EE201 Engineering Mathematics (1)	Assignment/Test/ Examination/ Summative/ Formative Assessment Practical Simulation
1.2. Conceptual understanding of the, mathematics, numerical analysis, statistics, and computer and information sciences which underpin the technology domain.	EE111 Electromagnetism & Basic Electrical Machines(2 pt)	
	EE112 Alternating Current Principle (2 pt)	
1.3. In-depth understanding of specialist bodies of knowledge within the technology domain.	EE109 Electrical Control Circuits EE114 Electrical Power Principle EE115 Basic Analogue & Digital Electronics	
1.4. Discernment of knowledge development within the technology domain.	EE102 Basic Electrical Fitting & Wiring EE103 Basic Electrical Drafting EE104 Electrical Equipments Safety Protection (2 pt)	

<p>1.5. Knowledge of engineering design practice and contextual factors impacting the technology domain.</p> <p>1.6. Understanding of the scope, principles, norms, accountabilities and bounds of sustainable engineering practice in the technology domain.</p>	<p>EE105 Electrical Installation Design EE106 Advanced Electrical Wiring</p> <p>EE107 Electrical Equipments EE108 Electrical Fault Finding</p>	
<p><u>2. ENGINEERING APPLICATION ABILITY</u></p> <p>2.1. Application of established engineering methods to broadly-defined problem solving within the technology domain.</p> <p>2.2. Application of engineering techniques, tools and resources within the technology domain.</p> <p>2.3. Application of systematic synthesis and design processes within the technology domain.</p> <p>2.4. Application of systematic approaches to the conduct and management of projects within the technology domain.</p>	<p>EE121 Electronics Power Control Device EE116 Process Control System(3 pt)</p> <p>EE117 Solar Electrical System EE118 Electrical Energy Supply System(3 pt) EE110 Computer Applications</p> <p>EE105 Electrical Installation Design EE106 Advanced Electrical Wiring</p> <p>EE119 Electrical Risk Assessment EE120 Electrical Contracting & Specification</p>	

<p><u>3. PROFESSIONAL AND PERSONAL ATTRIBUTES</u></p> <p>3.1. Ethical conduct and professional accountability.</p> <p>3.2. Effective oral and written communication in professional and lay domains.</p> <p>3.3. Creative, innovative and pro-active demeanour.</p> <p>3.4. Professional use and management of information.</p> <p>3.5. Orderly management of self, and professional conduct.</p> <p>3.6. Effective team membership and team leadership.</p>	<p>EE120 Electrical Contracting & Specification</p> <p>EE120 Electrical Contracting & Specification</p>

Effective team membership and team leadership.</p>	<p>Mgt 501 Basic Management</p>	

Advanced Diploma in Mechanical Engineering Each unit has 1.5 pt unless stated

Learning Outcome	Subjects	Time Allocation/ Assessment Method
<p><u>1. KNOWLEDGE AND SKILL BASE</u></p> <p>1.1. Systematic, theory based understanding of the underpinning natural and physical sciences and the engineering fundamentals applicable to the technology domain.</p> <p>1.2. Conceptual understanding of the, mathematics, numerical analysis, statistics, and computer and information sciences which underpin the technology domain.</p> <p>1.3. In-depth understanding of specialist bodies of knowledge within the technology domain.</p> <p>1.4. Discernment of knowledge development within the technology domain.</p> <p>1.5. Knowledge of engineering design practice and contextual factors impacting the technology domain.</p> <p>1.6. Understanding of the scope, principles, norms, accountabilities and bounds of sustainable engineering practice in the technology domain.</p>	<p>ME 306 Theory-of-waves-in-materials ME 301 Fluid Dynamics</p> <p>Maths 403 Engineering-Mathematics (EE302) ME 304 Introduction to Nonlinearity-in-control-systems</p> <p>ME 301 Fluid Dynamics ME 302 Automation-and-Robotics ME 301 Fluid Dynamics ME 302 Automation-and-Robotics</p> <p>ME 303 Computer Aided Design and Manufacturing</p> <p>ME 305 Corrosion Prevention ME 334 Airconditioning and Refrigeration</p>	<p>Time Allocation</p> <p>1 Credit Point=24 Hr</p> <p>Assessment</p> <p>Assignment/Test/ Examination/ Summative/ Formative Assessment Practical Simulation</p>

<p><u>2. ENGINEERING APPLICATION ABILITY</u></p> <p>2.1. Application of established engineering methods to broadly-defined problem solving within the technology domain.</p> <p>2.2. Application of engineering techniques, tools and resources within the technology domain.</p> <p>2.3. Application of systematic synthesis and design processes within the technology domain.</p> <p>2.4. Application of systematic approaches to the conduct and management of projects within the technology domain.</p>	<p>ME 534 Numerical Control</p> <p>EE 624 Process Control</p> <p>ME 434 Mechtronics-Robotics</p> <p>ME 634 Pneumatics</p> <p>EE 617 Building Electrical and Mechanical System Part 1 (EE309)</p> <p>Mgt 503 Production & Operation Management</p> <p>Mgt 505 Quality Management and Manufacturing Engineering</p>	
<p><u>3. PROFESSIONAL AND PERSONAL ATTRIBUTES</u></p> <p>3.1. Ethical conduct and professional accountability.</p> <p>3.2. Effective oral and written communication in professional and lay domains.</p> <p>3.3. Creative, innovative and pro-active demeanour.</p> <p>3.4. Professional use and management of information.</p> <p>3.5. Orderly management of self, and professional conduct.</p> <p>3.6. Effective team membership and team leadership.</p>	<p>Mgt 503 Production & Operation Management</p> <p>Mgt 505 Quality Management and Manufacturing Engineering</p> <p>ME310 Engineering Competency Demonstration Report</p> <p>ME310 Engineering Competency Demonstration Report</p>	

Professional Diploma in Mechanical Engineering Each unit has 2 pt unless stated

Learning Outcome	Subjects	Time Allocation/ Assessment Method
<p>1. KNOWLEDGE AND SKILL BASE</p> <p>1.1. Comprehensive, theory based understanding of the underpinning natural and physical sciences and the engineering fundamentals applicable to the engineering discipline.</p> <p>1.2. Conceptual understanding of the mathematics, numerical analysis, statistics, and computer and information sciences which underpin the engineering discipline.</p> <p>1.3. In-depth understanding of specialist bodies of knowledge within the engineering discipline.</p> <p>1.4. Discernment of knowledge development and research directions within the engineering discipline.</p> <p>1.5. Knowledge of engineering design practice and contextual factors impacting the engineering discipline.</p> <p>1.6. - the choice of the teaching-learning (delivery) methods.
- The curricular approach, the educational content and the teaching-learning
- assessment & evaluation methods for the attainment achievement of the Learning Outcomes. (MEng C)

Assessment Validation

<http://www.highlightcomputer.com/assessmentvalidation.htm>

The folder in the above link contains the assessment validation documents for IQY Technical College 's programs

- A balanced curriculum shall include all technical and non-technical attributes listed in the Learning Outcomes, (the essential elements forming the core of the programme and additional specialist or optional studies (electives). (MEng C)
- The curriculum shall integrate theory with practice through adequate exposure to laboratory work and professional engineering(MEng C)
- Time allocation
- Credit points (The academic programme component must consist of a minimum total of 120 credit (a) A minimum of 80 credit hours shall be engineering courses consisting of engineering sciences and engineering design/projects appropriate to the student's field of study. (MEng C)

(b) The remaining credit hours shall include sufficient content of general education component (such as mathematics, computing, languages, general studies, co- curriculum, management, law, accountancy, ec(MEng C)

The following curriculums are prepared to address the above issues

<http://www.highlightcomputer.com/BECurriculum.htm>

<http://www.highlightcomputer.com/DiplomaAdvancedDiplomaCivilEngineeringCurriculum.htm>

<http://www.highlightcomputer.com/DiplomaAdvancedDiplomaElectricalEngineeringCurriculum.htm>

<http://www.highlightcomputer.com/DiplomaAdvancedDiplomaMechanicalEngineeringCurriculum.htm>

Diploma in Engineering

This program is designed with 30 credit points integrating 15 credit points Certificate in Electrical Engineering. The completion of this program can be articulated into 60 points Advanced Diploma in Electrical Engineering & 120 credit points Professional Diploma in Electrical Engineering which is the award of Bachelor of Engineering degree by the universities affiliated to IQY Technical College.

Advanced Diploma in Electrical Engineering

This program is designed with 60 credit points integrating 30 credit points Diploma in Electrical Engineering. The completion of this program can be articulated into 60 of 120 credit points Professional Diploma in Electrical Engineering which is the award of Bachelor of Engineering degree by the universities affiliated to IQY Technical College.

Professional Diploma in Civil Engineering

This program is designed with 120 credit points integrating 60 credit points Advanced Diploma in Civil Engineering. The completion of this program can be awarded Professional Diploma in Civil Engineering together with the award of Bachelor of Engineering degree by the universities affiliated to IQY Technical College.

Curriculum Contents (MEng C)

Diploma in Electrical Engineering the curriculum content should cover the following:

(i) Engineering mathematics, science, engineering principles, skills and tools (computing, experimentation) appropriate to the discipline of study

The curriculums have been designed to cover the following aspects.

Study Areas (Overview)

Electrical circuits, Basic Electronics, Mathematics, Physics, Electrical Wiring, Electrical Machines, Electro-magnetism, Computer Applications, Control System, Process Control, Electrical Contracting, Solar Electrical System, Electrical Drafting

Detailed contents of the units

Detailed contents of the units can be viewed at the following links.

Electrical Engineering Course Outline

<http://www.highlightcomputer.com/Diploma & Advanced Diploma in Electrical Engineering Course outline.doc>

Detailed Contents of Diploma + Advanced Diploma in Engineering, IT , Management & Business Programs

<http://www.highlightcomputer.com/detailedcontent.htm>

Diploma in Mechanical Engineering

Study Areas

Mathematics, Physics, Machine Principle, Electrical Circuits, Heat Transfer, Principle of Engines, Fluid Mechanics, Engineering Mechanics, Mechanical Drawing, Hydrocarbon, Wind Turbine, Polymer Science, Turbo Machinery, Basic Management

Specialized Fields

Automotive Engineering, Marine Engineering

Detailed contents of the units

Detailed contents of the units can be viewed at the following links.

Mechanical Engineering Course Outline

<http://www.highlightcomputer.com/Diploma in Mechanical Engineering.doc>

Detailed Contents of Diploma + Advanced Diploma in Engineering, IT , Management & Business Programs

<http://www.highlightcomputer.com/detailedcontent.htm>

Diploma in Civil Engineering

Study Areas

Mathematics, Physics, Electrical Principle, Fluid Mechanics, Hydraulics, Hydrology, Building Construction, Sanitation & Water Supply, Energy Efficient Building Design

Detailed contents of the units

Detailed contents of the units can be viewed at the following links.

Civil Engineering Course Outline

http://www.highlightcomputer.com/Diploma_in_Civil_Engineering.doc

Detailed Contents of Diploma + Advanced Diploma in Engineering, IT , Management & Business Programs

<http://www.highlightcomputer.com/detailedcontent.htm>

Diploma in Renewable Energy Engineering

Study Areas

Foundation Studies in Renewable Energy and Sustainability, Grid Connected Photovoltaic Power Systems, Solar and Thermal Energy Systems, Energy Storage Systems, Renewable Energy Resource Analysis, Wind Energy Conversion Systems, Energy System Efficiency

Detailed contents of the units

Detailed contents of the units can be viewed at the following links.

Renewable Energy Engineering Public Seminar + Diploma& Bachelor of Engineering (Renewable Energy)

<http://www.highlightcomputer.com/re.pdf>

Diploma in Computer Engineering/ Diploma in Information Technology

Study Areas

IT Fundamental , Computer Application, Computer Programming, System Analysis, Software Engineering, IT Project, Business Information System

Detailed contents of the units

Detailed contents of the units can be viewed at the following links.

Diploma in Information Technology Course Outline

Advanced Diploma in Engineering (Electrical+ Mechanical+ Civil+ Renewable Energy Engineering+ Computer Engineering & Information Technology) Course Outlines

Advanced Diploma in Engineering can be studied in the following specializations

- Advanced Diploma in Electrical Engineering
- Advanced Diploma in Mechanical Engineering
- Advanced Diploma in Civil Engineering
- Advanced Diploma in Renewable Energy Engineering
- Advanced Diploma in Computer Engineering / Advanced Diploma in Information Technology

Advanced Diploma in Electrical Engineering

Study Areas

Electrical Power Circuits, Electrical Power System, Mathematics, Physics, AC/DC Machines, Control System, Power System Protection, Energy Efficiency, Project Management, Advanced Electrical Drafting, Power Transmission Line, Engineering Officer Competency Report.

Detailed contents of the units

Professional Diploma in Engineering (Electrical+ Mechanical+ Civil+ Renewable Energy Engineering+ Computer Engineering & Information Technology)

It is designed at the same academic requirement as to Bachelor of Engineering degree but IQY Technical College is operating as a vocational education & training college not as a university, the award is to be described as Professional Diploma. The graduates of the Professional Diploma in Engineering can be awarded Bachelor of Engineering by the universities which are affiliated to IQY Technical College.

The program is designed to train the students to become Professional Engineers who are required to take responsibility for engineering projects and programs in the most far-reaching sense.

The program is also designed to provide the skills required for the graduated to lead or manage teams appropriate to these activities, and may establish their own companies or move into senior management roles in engineering and related enterprises.

Professional Diploma in Engineering can be studied in the following specializations

- Professional Diploma in Electrical Engineering
- Professional Diploma in Mechanical Engineering
- Professional Diploma in Civil Engineering
- Professional Diploma in Renewable Energy Engineering
- Professional Diploma in Computer Engineering / Professional Diploma in Information Technology

Professional Diploma in Electrical Engineering

Study Areas

Mathematics, Engineering Mechanics & Thermodynamics, Electrical Circuit Analysis, Electro-magnetics & Electrical Machines, Control System, Power System, Electronics, Telecommunication, Industrial Management, Computer Programming, Computer Network, Engineering Project, Building Services, Competency Demonstration Report Writing, Renewable Energy.

Detailed contents of the units

Detailed contents of the units can be viewed at the following links.

www.highlightcomputer.com/LearnerResources.htm

(v) Industrial training -exposure to professional engineering practice in an engineering-practice environment;

+

(vi) Exposure to engineering practice; (MEng C)

The simulated online mode of practical is provided in the following link.

Practical Training Link

www.highlightcomputer.com/PracticalCourses.htm

The folder in the above link contains the Online practical courses for IQY Technical College 's programs.

(vii) Relevant tutorial class (MEng C)

Online discussion & tutorial forums are arranged

Credit Hours (MEng C)

- For a 16-week semester (not including examination or mid-term break), one credit hour is defined as:
- One hour per week of lecture (additional independent study of two hours is assumed to have been included).
- Two hours per week of laboratory or workshop lecture (additional independent learning time of one hour is assumed to have been included).
- Two hours per week of supervised and compulsory tutorial session (additional independent learning time of one hour is assumed to have been included), subject to a maximum of one credit hour for each course in that semester.

- Three hours per week of facilitated activities involving other modes of delivery such as problem-based learning, e-learning modules, site visits, discovery learning, integrated design and coursework projects.
- Three hours per week of activities involving final year project inclusive of meeting with supervisor

One hour per week of lecture

Every 1 credit point has the weighted hour of 24 hours. The credit points are expressed in the curriculum. In online delivery mode, the time to view the videos & time to reflect the learning can be equivalent to lecture hours in face to face classes. The lecture times in the following online videos are arranged as to fulfil the class lecture time.

Online Lecture + Youtube Lecture

www.highlightcomputer.com/videos2.htm

www.highlightcomputer.com/videos1.htm

Two hours per week of laboratory or workshop lecture

The time taken to view the Practical Videos/ To read the practical instruction books/ Design Handbooks are counted as laboratory or workshop hour to do the online practicals in the following links.

www.highlightcomputer.com/PracticalCourses.htm

&

<http://www.iqytechnicalcollege.com/youtubevideos.htm>

Students Area/ Forum

<http://www.highlightcomputer.com/students.htm>

Two hours per week of supervised and compulsory tutorial session

The time allocated to download & study the Instruction Powerpoints, Listing to the audio explanations & do the exercises in the following link is arranged as tutorial sessions time.

<http://www.highlightcomputer.com/onlineteaching1.htm>

Click **HERE** to log in the lesson sequences.

Click **HERE** to log in the online study materials

Click **HERE** to log in to the Learning Platform

Three hours per week of facilitated activities

This time can be allocated for participation in online forum, reading the learning support CD/DVD, the time to write the assignments & the accumulated time to take part in residential sessions as well as working in the industry.

Industrial Training

- For industrial training, the following guideline shall be followed:
- Industrial training shall be for a minimum of 8 weeks of continuous training. One credit hour is allocated for every two weeks of training subject to a maximum of six credit hours. The training shall be adequately structured, supervised and recored in log book/ record.

The e-Learning Engineering programs are aimed to provide the on-going professional development for the workers in the industry. The work experience recorded are counted for fulfilling the practical training needs to completion the courses.

Final Year Project

- A final year project is subject to a minimum of six credit hours and a maximum of twelve credit

Some students' project works.pdf File

<http://www.highlightcomputer.com/Somestudentsprojectworks.htm>

The folder in the above link contains the students' project documents related to IQY Technical College 's programs

2 - Students (MEng C)

- Maths+Physics (Remedial)
- Teaching & Learning Environment

9.2.5 Students

- students' performance in relation to Learning Outcomes.
- the requirement and process for admission of students to the programme.
- students' workload.

- iv. Discuss students' activities and involvement in student organisations

The students who need Year 12 level Mathematics & Science are provided with Learning Support online tutorials for Maths & Science at the following link.

<http://www.highlightcomputer.com/y712lessons.htm>

3 - Academic and Support Staff (MEng C)

- (Postgraduate/ Master degree)
- 9.2.6 Academic and Support Staff
- i. Discuss the strength and competencies of the academic staff in covering all areas of the programme.
- ii. Discuss how the overall staff workload enables effective teaching, student-staff interaction, student advising and counselling, Technological Institutions and research activities, professional development and interaction with industry.
- iii. Discuss the sufficiency and competency of technical and administrative staff in providing adequate support to the educational programme.
- iv. The information required in items (i) to (iii) should include but is not limited to the following:
 - A breakdown in terms of numbers of academic staff (full-time, part-time and inter-programme) by year for the past four years
 - An analysis of all academic staff
 - academic qualifications of academic staff
 - the posts held by full time academic staff
 - A summary of teaching workload of academic staff for the current semester
 - An analysis of all support staff
 - A summary of the posts held by support staff
 - The staff: student ratio by year for all academic years for the past four years

The folders in the following links link contains teachers skilled documents of teachers who are teaching the IQY Technical College 's programs

Teacher skilled matrix

<http://www.highlightcomputer.com/teacherskillmatrix.htm>

Staff list

www.highlightcomputer.com/staff.htm

Staff competency

<http://www.highlightcomputer.com/teacherskillmatrix.htm>

4 Facilities

- Library
- Quality Management Systems
- controlling, managing, directing, organising and supervising of the overall management system planning, development, delivery and review of engineering programmes

From www.highlightcomputer.com main page, the following online facilities can be accessed by requesting the relevant links.

- Public Library
- Engineering Resources
- Reference Materials & Resources

9.2.7 Facilities

- Discuss the adequacy of teaching and learning facilities such as classrooms, learning-support facilities, study areas, information resources (library), computing and information-technology systems, laboratories and workshops.
- Describe the adequacy of support facilities such as hostels, sport and recreational centres, health centres, student centres, and transport in facilitating students' life on campus and enhancing character building.
- The information required in items (i) to (ii) should be provided in the supporting documents but is not limited to the following:

- A summary, in tabulated form, of the lecture facilities (give number, capacity, and audio video facilities available).
- A summary, in tabulated form, of the laboratories (list down the equipment available in each laboratory).
- A summary, in tabulated form, of the workshops (list down the equipment/machinery available in each workshop).
- A summary, in tabulated form, of the computer laboratories (list down the hardware and software available).
- A summary, in tabulated form, of the other supporting facilities such as the library (list down the titles of books/journals/magazines/standards of relevance to the programme).

From the following link, online practical facilities can be accessed.

Online Practical

Click **HERE** to log in to the online electrical/
mechanical/civil practical materials. You will need the
password.

The password will be issued to the enrolled students.

5 - Quality Management Systems (MEng C)

8.5.2 Programme Quality Management and Planning

- programme planning, curriculum development, and
- regular curriculum and content review must involve all academic staff. The processes include
- reviewing Programme Objectives and Learning Outcomes, tracking the contributions of individual courses to the Learning Outcomes, tracking performance assessment processes, the comments from
- External Examiners, reviewing feedback and inputs from stakeholders including students and alumni.
- The process of continual quality improvement shall be implemented with full accountability. For a new programme,
- External examiner report

8.5.4 Quality Assurance

- Student admission
- Teaching and learning
- Assessment and evaluation which include: examination regulations and criteria for pass/fail
- preparation and moderation processes
- level of assessment
- assessment processes including final year project/industrial training

From the following links, the documents related to Quality Assurance can be accessed.

Online Assessment / Test / Examination/ MCQ link

9.2.8 Quality Management System (MEng C)

- Outline the organisational structure of the Technological Institutions as well as the structure within the faculty/department/programme. Discuss the level and adequacy of institutional support, operating environment, financial resources, constructive leadership, policies mechanisms for attracting, appointing, retaining and rewarding well-qualified staff and provision of professional development, and provision of infrastructure and support services to achieve Programme Objectives and assure continuity of the programme. All relevant policies are to be made available during the visit.
- Discuss the mechanism for the following: programme planning; curriculum development; curriculum , course review and course monitoring; internal audit; management review meeting; responding to feedback and inputs from stakeholders including industry advisors, students and alumni; tracking the contribution of individual courses to the Learning Outcomes; tracking outcomes of performance through assessment; responding to External Examiners comments; reviewing of Programme Objectives and Learning Outcomes; and continual quality improvement. Where these are discussed elsewhere in the report, specify their locations.
- Summarise responses to the external examiner's report.
- Discuss how the quality management system of the Technological Institutions provides quality assurance and benchmark.
- The information required items (i) to (iv) should be provided in the supporting document and is not limited to the following:

As this document provides the development of e-Learning in engineering for small and medium size colleges and institutes where the program planning and management tasks are mainly performed by one or two key staff, for the larger institutions, more complex and wider organizational structure can be designed.

1. Evidence on the participation of academic staff, support staff and students in the continual quality improvement process. (MEng C)
2. Evidence on the development of academic staff through opportunities in further education, industrial exposure, as well as research and development.
3. Policies, internal processes and practices that are in place at all levels within the Technological Institutions relating to the five criteria as stated in Section 9 of this Manual.
4. Evidence of the on-going participation of industry advisors in discussions and forums,

From the following links, the documents related to Assessment Validation & Quality Assurance can be accessed by clicking the relevant menus

EKAS-Assessment Validation-EE-OZ+IEAust

9.3 Supporting Material Document – Digital Format (MEng C)

This document is to provide supporting material for the programme in digital format (softcopy) as follows:

9.3.1 Supporting Information

- Provide additional information on the Technological Institutions, faculty/school/department, and programme not provided in the Self-Assessment Report.

9.3.2 Academic and Laboratory Support Staff

- Provide personal file and certificate for each staff member.

Staff file

9.3.3 Programme Structure and Contents

- Provide evidence of the use of tutorials and non-conventional delivery methods such as Problem Based Learning (PBL) techniques alongside traditional lectures. Provide a summary of industrial training schemes, and list of companies involved. Provide evidence of activities relevant to industry exposure.

From the following link, online practical facilities can be accessed.

Online Practical Link

Click **HERE** to log in to the online electrical/
mechanical/civil practical materials. You will need the
password.

The password will be issued to the enrolled students

9.3.4 Equipment, Software and Titles of Books and Journals

- Provide a list of all equipment and software used by the programme including recent additions and planned additions, as well as the titles of books, and journals for the programme.

Physical Resources folder

From the following link, practical resources can be accessed.

Practical Resources

www.highlightcomputer.com/PracticalResources.htm

Physical Resources

www.highlightcomputer.com/PhysicalResources.htm

Learner Resources

www.highlightcomputer.com/LearnerResources.htm

9.3.5 External Examiner and Advisory Board (MEng C)

- Provide the external examiner's reports and reports/minutes from advisory board meetings.

9.4 Institutional Documents and Additional Documentation to be Made Available during the Visit

- The following items, which constitute evidence to support the information requested in Sections 9.2 and 9.3 shall be made available during the visit:

9.4.1 Technological Institutions Documents

- Provide the Handbook, Calendar supplement, or other official publications relating to the faculty/school/department, and containing the statement of programme details; Technological Institutions brochure and any other documents that relate to the faculty/school/department,

9.4.2 Documents Related to Programme Objectives and Outcomes

- Provide all relevant documents and evidence related to Programme Objectives and Learning Outcomes (one copy) as follows:
- Course files – for every course offered by the programme, provide the course information to include the targeted course learning outcomes, course synopsis/syllabus, and a list of references (texts used).
- Final examination papers complete with answer scheme and graded examination papers with low, medium and high grades are also to be provided.
- Any information with regard to other learning activities and assessment measures such as projects, quizzes, tutorial questions, assignments, class projects, copies of the course notes (optional), and any other materials used for the course are also to be included. For laboratory courses,
- Objectives and outcomes assessment instruments – supporting documentation for objectives and
- outcomes assessment including sample questionnaires, portfolios, survey forms, video recordings, etc.
- All evidence related to Continual Quality improvement of the program.

The documents related to above requirements are presented in DVDs and will be available upon request.

DVD Contents

- Mixed DVD Lessons School + Higher Education/ IQY+STCTU Degrees

- Study Guides+Lessons for Adv Dip Eng+Mgt+IT ALL Combined Update Mixed
- Study Guides+Lessons for Bachelor Degree-Common Subjects 1 Mixed
- Students File/ Evidences
- BE Test

- Assessment/
- Assessment Cover Sheet+Assessment Information+Assessment Feedbacksheet
- Assessment Mapping
- Assessment Validation
- Components of Assessment Mapping
- Test Questions
- Unit Evaluation

Self-Assessment Report – Hardcopy (MEng C)

- A Self-Assessment Report is an account of the Technological Institutions' plan, implementation, assessment and evaluation of the programme conducted. It reflects the processes with result obtained used in continual quality improvement at all levels of the programme's activities. This appropriately bound document, ranging between 50 – 100 pages with all pages numbered and a table of contents.

A minimum of 120 credit hours of which 80 credit hours must be core engineering courses offered over a period of four years (It means 3rd, 4th, 5th, 6th).

Final year project (minimum 6 credit hours)

Industrial training (minimum of 8 weeks)

The above requirements have been provided in curriculum section

9.4.3 Final Project Reports

- For a sample of students, provide a copy of the final project report, instruction sheets, and grade
- sheets or other means of evaluation for the project.
- Provide the listing of final project titles for the past few years.

From the following links, the students project works can be accessed.

Some students' project works.pdf File

<http://www.highlightcomputer.com/Somestudentsprojectworks.htm>

9.4.4 Industrial Training Reports (MEng C)

- For a sample of students, provide a copy of the training reports, guidelines for the training, and reviews by the industry sponsors as well as the faculty mentors.

9.4.5 Laboratory Reports

- For a sample of students, provide a copy of the laboratory reports, instruction sheets, and grade sheets or other means of evaluation for the project laboratory report.

From the link below, the above 9.4.4 * & 9.4.5 and the records related to the following points can be accessed.

- Practical participation Record
- Elect Eng Students' taking parts in practicals(Joe).pdf

<http://www.highlightcomputer.com/studentstakingpartinpractical.htm>

9.4.6 Quality Assurance Records (MEng C)

- Provide minutes and records of action and improvement of meetings of the programme teaching team,

From the link below, records related to the above 9.4.6 can be accessed.

IQY Technical College's academic policy & procedure in line with Myanmar Engineering Council's Accreditation Requirements & Sample of Educational Institution Documents

www.highlightcomputer.com/Accreditation.htm

Executive Summary

This is voluntary information related to IQY Technical College's online engineering programs & this information report related to sample engineering programs, curriculums and learning materials is prepared by citing the accreditation manual of Myanmar Engineering Council

Objective

Although it is not a main objective of IQY Technical College to seek the accreditation in Myanmar, the main reason to prepare this document is to be referred by relevant course developers of the Government Technical Colleges & Technological Universities in Myanmar how to fulfil the international standard accreditation procedures as the writer of this documents have over 25 years experiences in teaching, designing & implementation of engineering programs in Fiji, Australia & New Zealand in accordance with Australian/ New Zealand standards.

It is solely aimed to share the knowledge with engineering educators in Myanmar especially to develop e-Learning which is new to most educators in Myanmar. This submission describes how e-Learning in engineering can be effectively applied to fulfil the accreditation needs of Myanmar Engineering Council because Government Technical Colleges & Technological Universities are spread throughout Myanmar & e-Learning is the only most effective way to equalize teaching & learning at different geographical locations of Myanmar.

The document contains the online links from where the relevant documents can be downloaded.

9.2.1 General Information (MEng C)

i. Provide general information on the Technological Institutions and the specific programme.

- IQY Technical College of Highlight Computer Group teaches St Clements Technological University, St Clements University Higher Education School Niue's Diploma/ Advanced Diploma and Bachelor Degree programs in Engineering, Information Technology and Management courses to the students of Myanmar at the price affordable to average working class people of Myanmar.

- E-Learning system that provides on line & off line DVD/USB based teaching system is utilized for the student to do self directed learning combined with simulated practical video/ slide shows and audio/ visual aids are utilized to effectively apply Information Technology in e-Learning & Teaching.
- The main objective of our program is to maximize the individual student's self directed learning by applying the maximum use of technology & by minimizing the teacher's assistance personally .
- Although IQY Technical College refers & applies the relevant international educational standards, IQY Technical College maintains it's academic independency.

ii. Provide detailed information on programme history of accreditation (year of accreditation, conditions imposed and actions taken). (MEng C)

Further Submission

iii. Describe any self-initiated changes made to the programme and state the year the changes were introduced (MEng C)

Further Submission

Programme Objectives.

<http://www.highlightcomputer.com/objectives.htm>

9.2.2 Programme Objectives

I State the vision and mission of the Technological Institutions. (MEng C)

- IQY Technical College of Highlight Computer Group teaches St Clements Technological University, St Clements University Higher Education School Niue's Diploma/ Advanced Diploma and Bachelor Degree programs in Engineering, Information Technology and Management courses to the students of Myanmar at the price affordable to average working class people of Myanmar.
- IQY Technical College of Highlight Computer Group will independently provide the international standard education & engineering education to the poor students of Myanmar whom are being taught by the voluntary education groups of Myanmar .
- IQY Technical College is Non Profit/ Non Government Educational Organization which assist the needy students of Myanmar as well as the students in other developing countries by co-operating with the international organizations of same objectives/ visions and missions.

li Describe the Programme Objectives and state where they are published. (MEng C)

- IQY Technical College offers three levels of Engineering Programs
 1. One year Diploma in Engineering
 2. Two years Advanced Diploma in Engineering
 3. Four years Professional Diploma in Engineering which is set at the same level of standard to Bachelor of Engineering degree
- The entry requirement for IQY Technical College is Year 12 . The students who have less than year 12 level education will need to undertake IQY Technical College's Year 11+12 programs which are set at Australian NSW State Year 12 Standard.
- Based on the entry Year 12 standard, Year one to four Academic programs are arranged.

The objectives

Diploma in Engineering (Electrical+ Mechanical+ Civil+ Renewable Energy Engineering+ Computer Engineering & Information Technology)

IQY Technical College's one year Diploma in Engineering is designed to train the students to work as Engineering Associate or Engineering Technicians in wide ranges of industries.

It is designed to provide the following competencies.

To train the students to have a wide range of functions within engineering enterprises and engineering teams.

The training is designed for the students

- To be closely familiar with standards and codes of practice, and to become expert in their interpretation and application to a wide variety of situations.
- To develop very extensive experience of practical installations, and may well be more knowledgeable than Professional Engineers or Engineering Technologists on detailed aspects of plant and equipment that can contribute very greatly to safety, cost or effectiveness in operation.
- To develop high levels of expertise in aspects of design and development processes. These might include, for example, the use of advanced software to perform detailed design of structures, mechanical components and systems, manufacturing or process plant, electrical and electronic equipment, information and communications systems, and so on.
- To do the construction of experimental or prototype equipment.
- To develop detailed practical knowledge and experience complementing the broader or more theoretical knowledge of others.

Advanced Diploma in Engineering (Electrical+ Mechanical+ Civil+ Renewable Energy Engineering+ Computer Engineering & Information Technology) Course Outlines

IQY Technical College's two years Advanced Diploma in Engineering is designed to train the students to work as Engineering Technologist in wide ranges of industries.

The training is designed to provide expertise to the students which may be at a high level, and fully equivalent to that of a Professional Engineer. That is designed

- to exercise the same breadth of perspective as Professional Engineers, or carry the same wide-ranging responsibilities for stakeholder interactions, for system integration, and for synthesising overall approaches to complex situations and complex engineering problems.
- to possess for a strong understanding of practical situations and applications, with the intellectual challenge of keeping abreast of leading-edge developments as a specialist in a technology domain and how these relate to established practice. For this purpose Engineering Technologists need a strong understanding of scientific and engineering principles and a well-developed capacity for analysis.
- to apply current and emerging technologies, often in new contexts; or with the application of established principles in the development of new practice.
- To contribute to the advancement of technology.
- to take responsibility for engineering projects, services, functions and facilities within a technology domain, for specific interactions with other aspects of an overall operating context and for managing
- to contribute the specialist work to a broader engineering system or solution. In these roles, Engineering
- to focus on sustainable solutions and practices which optimise technical, social, environmental and economic outcomes within the technology domain and over a whole systems life cycle.
- to have an intimate understanding of the standards and codes of practice that underpin the technology domain and ensure that technology outcomes comply with statutory requirements. Engineering Technologists are required to interact effectively with Professional Engineers and Engineering Associates, with other professionals, tradespersons, clients, stakeholders and society in general, to ensure that technology outcomes and developments fully integrate with the overall system and context.
- to ensure that all aspects of a technological product, or operation are soundly based in theory and fundamental principle.
- to understand how new developments relate to their specific field of expertise.
- to interpret technological possibilities, to investigate interfaces, limitations, consequences, costs and risks.

Professional Diploma in Engineering (Electrical+ Mechanical+ Civil+ Renewable Energy Engineering+ Computer Engineering & Information Technology)

IQY Technical College's four years Professional Diploma in Engineering is designed to train the students to work as Engineering Technologist /Professional Engineer in wide ranges of industries.

It is designed to provide the following competencies.

- To perform the reliable functioning of all materials, components, sub-systems and technologies used; their integration to form a complete, sustainable and self-consistent system; and all interactions between the technical system and the context within which it functions. The latter includes understanding the requirements of clients, wide ranging stakeholders and of society as a whole; working to optimise social, environmental and economic outcomes over the full lifetime of the engineering product or program; interacting effectively with other disciplines, professions and people; and ensuring that the engineering contribution is properly integrated into the totality of the undertaking.
- To do interpreting technological possibilities to society, business and government; and for ensuring as far as possible that policy decisions are properly informed by such possibilities and consequences, and that costs, risks and limitations are properly understood as the desirable outcomes.
- To bring knowledge to bear from multiple sources to develop solutions to complex problems and issues, for ensuring that technical and non-technical considerations are properly integrated, and for managing risk as well as sustainability issues. While the outcomes of engineering have physical forms, the work of
- To train the students to become predominantly intellectual in nature. In a technical sense, Professional Engineers are primarily concerned with the advancement of technologies and with the development of new technologies and their applications through innovation, creativity and change. Professional Engineers may conduct research concerned with advancing the science of engineering and with developing new principles and technologies within a broad engineering discipline.
- To contribute to continual improvement in the practice of engineering, and in devising and updating the codes and standards that govern it.
- To take a particular responsibility for ensuring that all aspects of a project are soundly based in theory and fundamental principle, and for understanding clearly how new developments relate to established practice and experience and to other disciplines with which they may interact. One hallmark of a professional is the capacity to break new ground in an informed, responsible and sustainable fashion.

iii. Describe how the Programme Objectives are consistent with the vision and mission of the Technological Institutions and stakeholder requirements. (MEng C)

Diploma in Engineering (Electrical+ Mechanical+ Civil+ Renewable Energy Engineering+ Computer Engineering & Information Technology)

The training includes feasibility investigation, scoping, establishing criteria/performance measures, assessing and reporting technical and procedural options; design and development; component,

resources and materials sourcing and procurement; construction, prototyping, manufacture, testing, installation, commissioning, service provision and de-commissioning; tools, plant, equipment and facilities acquisition, management, maintenance, calibration and upgrades; operations management; procedures documentation; presentation and reporting; maintenance systems design and management; project and facility management; quality assurance, costing and budget management; document control and quality assurance.

The training is also designed to provide a good grounding in engineering science and the principles underlying their field of expertise, to ensure that their knowledge and skills are portable across different applications and situations within the broad field of practice. Equipment, vendor or context-specific training in a particular job are not sufficient to guarantee generic competency. Given a good knowledge base, however, the graduates may build further on this through high levels of training in particular contexts and in relation to particular equipment.

The competencies of graduates to equip them to certify the quality of engineering work and the condition of equipment and systems in defined circumstances, laid down in recognised standards and codes of practice.

The training is also designed to lead or manage teams appropriate to these activities. Some may establish their own companies or may move into senior management roles in engineering and related enterprises, employing Professional Engineers, Engineering Technologists, and other specialists where appropriate.

Diploma in Electrical Engineering

This program is designed with 30 credit points integrating 15 credit points Certificate in Electrical Engineering. The completion of this program can be articulated into 60 points Advanced Diploma in Electrical Engineering & 120 credit points Professional Diploma in Electrical Engineering which is the award of Bachelor of Engineering degree by the universities affiliated to IQY Technical College.

The graduates of Diploma in Electrical Engineering can apply for Associate Member of Singapore Institute of Engineering Technologists & then leading to the professional status of ASEAN Engineering Technician.

Diploma in Mechanical Engineering

This program is designed with 30 credit points integrating 15 credit points Certificate in Mechanical Engineering. The completion of this program can be articulated into 60 points Advanced Diploma in Mechanical Engineering & Mechatronics & 120 credit points Professional Diploma in Mechanical Engineering & Mechatronics which is the award of Bachelor of Engineering degree by the universities affiliated to IQY Technical College.

The graduates of Diploma in Mechanical Engineering can apply for Associate Member of Singapore Institute of Engineering Technologists & then leading to the professional status of ASEAN Engineering Technician.

Diploma in Civil Engineering

This program is designed with 30 credit points integrating 15 credit points Certificate in Civil Engineering & Construction Studies . The completion of this program can be articulated into 60 points Advanced Diploma in Civil Engineering & 120 credit points Professional Diploma in Civil Engineering & Building Services which is the award of Bachelor of Engineering degree by the universities affiliated to IQY Technical College.

The graduates of Diploma in Civil Engineering can apply for Associate Member of Singapore Institute of Engineering Technologists & then leading to the professional status of ASEAN Engineering Technician.

Diploma in Renewable Energy Engineering

This program is designed with 30 credit points integrating 15 credit points Certificate in Renewable Energy Course Completion Certificate which is delivered through the public seminars . The completion of this program can be articulated into 120 credit points Professional Diploma in Renewable Energy Engineering which is the award of Bachelor of Engineering degree by the universities affiliated to IQY Technical College.

The graduates of Diploma in Renewable Energy Engineering can apply for Associate Member of Singapore Institute of Engineering Technologists & then leading to the professional status of ASEAN Engineering Technician.

Diploma in Computer Engineering/ Diploma in Information Technology

This program is designed with 30 credit points integrating 15 credit points Certificate in Information Technology . The completion of this program can be articulated into 60 points Advanced Diploma in Information Technology & 120 credit points Professional Diploma in Information Technology or Professional Diploma in Computer Engineering which is the award of Bachelor of Applied Science (Information Technology)/Bachelor of Engineering degree by the universities affiliated to IQY Technical College.

The graduates of Diploma in Computer Engineering can apply for Associate Member of Singapore Institute of Engineering Technologists & then leading to the professional status of ASEAN Engineering Technician.

The graduates of Diploma in Information Technology can apply for membership of International Institute of Science Engineering & Management.

To be awarded Diploma in Computer Engineering, the students need to do Diploma in Information Technology & Diploma in Electrical Engineering at the same time.

Advanced Diploma in Engineering (Electrical+ Mechanical+ Civil+ Renewable Energy Engineering+ Computer Engineering & Information Technology) Course Outlines

It is designed to provide the following competencies.

To train the students to operate within broadly-defined technical environments, and undertake a wide range of functions and responsibilities. They are often specialists in the theory and practice of a particular branch of engineering technology or engineering-related technology (the technology domain), and specifically in its application, adaptation or management, in a variety of contexts. Their expertise often lies in familiarity with the current state of development of a technology domain and most recent applications of the technology.

The training is also designed to provide the skills of Engineering Technologists who may lead teams responsible for the implementation, operation, quality assurance, safety, management, and maintenance of projects, plant, facilities, or processes within specialist practice area(s) of the technology domain. Some Engineering Technologists may establish their own companies or may move into senior management roles in engineering and related enterprises, employing Professional Engineers and other specialists where appropriate.

Advanced Diploma in Engineering can be studied in the following specializations

- Advanced Diploma in Electrical Engineering
- Advanced Diploma in Mechanical Engineering
- Advanced Diploma in Civil Engineering
- Advanced Diploma in Renewable Energy Engineering
- Advanced Diploma in Computer Engineering / Advanced Diploma in Information Technology

Advanced Diploma in Electrical Engineering

This program is designed with 60 credit points integrating 30 credit points Diploma in Electrical Engineering. The completion of this program can be articulated into 60 of 120 credit points Professional Diploma in Electrical Engineering which is the award of Bachelor of Engineering degree by the universities affiliated to IQY Technical College.

The graduates of Advanced Diploma in Electrical Engineering can apply for Member of Singapore Institute of Engineering Technologists & then leading to the professional status of ASEAN Engineering Technician.

Advanced Diploma in Mechanical Engineering

This program is designed with 60 credit points integrating 30 credit points Diploma in Mechanical Engineering. The completion of this program can be articulated into 60 of 120 credit points Professional Diploma in Mechanical Engineering which is the award of Bachelor of Engineering degree by the universities affiliated to IQY Technical College.

The graduates of Advanced Diploma in Mechanical Engineering can apply for Member of Singapore Institute of Engineering Technologists & then leading to the professional status of ASEAN Engineering Technician.

Advanced Diploma in Civil Engineering

This program is designed with 60 credit points integrating 30 credit points Diploma in Civil Engineering. The completion of this program can be articulated into 60 of 120 credit points Professional Diploma in Civil Engineering which is the award of Bachelor of Engineering degree by the universities affiliated to IQY Technical College.

The graduates of Advanced Diploma in Civil Engineering can apply for Member of Singapore Institute of Engineering Technologists & then leading to the professional status of ASEAN Engineering Technician.

Advanced Diploma in Renewable Energy Engineering

This program is designed with 60 credit points integrating 30 credit points Certificate in Renewable Energy Course Completion Certificate which is delivered through the public seminars . The completion of this program can be articulated into 120 credit points Professional Diploma in Renewable Energy Engineering which is the award of Bachelor of Engineering degree by the universities affiliated to IQY Technical College.

The graduates of Advanced Diploma in Renewable Energy Engineering can apply for Member of Singapore Institute of Engineering Technologists & then leading to the professional status of ASEAN Engineering Technician.

Advanced Diploma in Computer Engineering/ Advanced Diploma in Information Technology

This program is designed with 30 credit points integrating 30 credit points Diploma in Information Technology . The completion of this program can be articulated into 60 of 120 credit points Professional Diploma in Information Technology or Professional Diploma in Computer Engineering which is the award of Bachelor of Applied Science (Information Technology)/Bachelor of Engineering degree by the universities affiliated to IQY Technical College.

The graduates of Advanced Diploma in Computer Engineering can apply for Member of Singapore Institute of Engineering Technologists & then leading to the professional status of ASEAN Engineering Technician.

The graduates of Advanced Diploma in Information Technology can apply for membership of International Institute of Science Engineering & Management.

To be awarded Advanced Diploma in Computer Engineering, the students need to do Advanced Diploma in Information Technology & Diploma in Electrical Engineering at the same time.

Professional Diploma in Engineering (Electrical+ Mechanical+ Civil+ Renewable Energy Engineering+ Computer Engineering & Information Technology)

It is designed at the same academic requirement as to Bachelor of Engineering degree but IQY Technical College is operating as a vocational education & training college not as a university, the award is to be described as Professional Diploma. The graduates of the Professional Diploma in Engineering can be awarded Bachelor of Engineering by the universities which are affiliated to IQY Technical College.

The program is designed to train the students to become Professional Engineers who are required to take responsibility for engineering projects and programs in the most far-reaching sense.

The program is also designed to provide the skills required for the graduated to lead or manage teams appropriate to these activities, and may establish their own companies or move into senior management roles in engineering and related enterprises.

Professional Diploma in Engineering can be studied in the following specializations

- Professional Diploma in Electrical Engineering
- Professional Diploma in Mechanical Engineering
- Professional Diploma in Civil Engineering
- Professional Diploma in Renewable Energy Engineering
- Professional Diploma in Computer Engineering / Professional Diploma in Information Technology

Professional Diploma in Electrical Engineering

This program is designed with 120 credit points integrating 60 credit points Advanced Diploma in Electrical Engineering. The completion of this program can be awarded Professional Diploma in Electrical Engineering together with the award of Bachelor of Engineering degree by the universities affiliated to IQY Technical College.

The graduates of Professional Diploma in Electrical Engineering can apply for Fellow of Singapore Institute of Engineering Technologists & then leading to the professional status of ASEAN Engineering Technologists or ASEAN Engineer.

Professional Diploma in Mechanical Engineering

This program is designed with 120 credit points integrating 60 credit points Advanced Diploma in Mechanical Engineering. The completion of this program can be awarded Professional Diploma in Mechanical Engineering together with the award of Bachelor of Engineering degree by the universities affiliated to IQY Technical College.

The graduates of Professional Diploma in Mechanical Engineering can apply for Fellow of Singapore Institute of Engineering Technologists & then leading to the professional status of ASEAN Engineering Technologists or ASEAN Engineer.

Professional Diploma in Civil Engineering

This program is designed with 120 credit points integrating 60 credit points Advanced Diploma in Civil Engineering. The completion of this program can be awarded Professional Diploma in Civil Engineering together with the award of Bachelor of Engineering degree by the universities affiliated to IQY Technical College.

The graduates of Professional Diploma in Civil Engineering can apply for Fellow of Singapore Institute of Engineering Technologists & then leading to the professional status of ASEAN Engineering Technologists or ASEAN Engineer.

Professional Diploma in Renewable Energy Engineering

This program is designed with 120 credit points integrating 60 credit points Advanced Diploma in Renewable Energy Engineering. The completion of this program can be awarded Professional Diploma in Renewable Energy Engineering together with the award of Bachelor of Engineering degree by the universities affiliated to IQY Technical College.

This program explores the way to make the best use of renewable energy technologies including solar thermal systems, photovoltaics, wind and biomass. Renewable Energy Engineering borrows much of its structure from some other areas of engineering, such as electrical engineering and photovoltaic engineering. It encompasses a broad range of renewable energy technologies including electricity generation from solar thermal systems, photovoltaics, wind and biomass. It also covers solar architecture and energy efficient housing design

The graduates of Professional Diploma in Renewable Energy Engineering can apply for Fellow of Singapore Institute of Engineering Technologists & then leading to the professional status of ASEAN Engineering Technologists or ASEAN Engineer.

Professional Diploma in Computer Engineering/ Professional Diploma in Information Technology

This program is designed with 120 credit points integrating 60 credit points Advanced Diploma in Information Technology . Professional Diploma in Computer Engineering which is the award of Bachelor of Applied Science (Information Technology)/Bachelor of Engineering degree by the universities affiliated IQY Technical College.

The graduates of Professional Diploma in Computer Engineering can apply for Fellow of Singapore Institute of Engineering Technologists & then leading to the professional status of ASEAN Engineering Technologist or ASEAN Engineer.

The graduates of Professional Diploma in Information Technology can apply for membership of International Institute of Science Engineering & Management.

To be awarded Professional Diploma in Computer Engineering, the students need to do some Bachelor of Engineering (Electrical) units at the same time.

iv. Describe the processes used to establish and review the Programme Objectives, and the extent to which the programme's various stakeholders are involved in these processes.

v Describe how the Technological Institutions ensures achievement of the Programme Objectives.

vi. Describe the ongoing evaluation of the level of achievement of these objectives, and the extent to which the programme's various stakeholders are involved in these processes.

vii. Describe how the results obtained from evaluation are being used to improve the effectiveness of the program (MEng C)

Please see Attachment 1.Assessment Validation Records 2.Assessment Evidences 3.Quality Assurance Records

9.2.3 Learning Outcomes

I List down the Learning Outcomes and state where are they published. (MEng C)

Diploma / Advanced Diploma in Engineering (Electrical+ Mechanical+ Civil+ Renewable Energy Engineering+ Computer Engineering & Information Technology)

1. KNOWLEDGE AND SKILL BASE

1.1. Systematic, theory based understanding of the underpinning natural and physical sciences and the engineering fundamentals applicable to the technology domain.

1.2. Conceptual understanding of the, mathematics, numerical analysis, statistics, and computer and information sciences which underpin the technology domain.

1.3. In-depth understanding of specialist bodies of knowledge within the technology domain.

1.4. Discernment of knowledge development within the technology domain.

1.5. Knowledge of engineering design practice and contextual factors impacting the technology domain.

1.6. Understanding of the scope, principles, norms, accountabilities and bounds of sustainable engineering practice in the technology domain.

2. ENGINEERING APPLICATION ABILITY

2.1. Application of established engineering methods to broadly-defined problem solving within the technology domain.

2.2. Application of engineering techniques, tools and resources within the technology domain.

2.3. Application of systematic synthesis and design processes within the technology domain.

2.4. Application of systematic approaches to the conduct and management of projects within the technology domain.

3. PROFESSIONAL AND PERSONAL ATTRIBUTES

- 3.1. Ethical conduct and professional accountability.
- 3.2. Effective oral and written communication in professional and lay domains.
- 3.3. Creative, innovative and pro-active demeanour.
- 3.4. Professional use and management of information.
- 3.5. Orderly management of self, and professional conduct.
- 3.6. Effective team membership and team leadership.

Professional Diploma in Engineering (Electrical+ Mechanical+ Civil+ Renewable Energy Engineering+ Computer Engineering & Information Technology)

COMPETENCIES

1. KNOWLEDGE AND SKILL BASE

- 1.1. Comprehensive, theory based understanding of the underpinning natural and physical sciences and the engineering fundamentals applicable to the engineering discipline.
- 1.2. Conceptual understanding of the mathematics, numerical analysis, statistics, and computer and information sciences which underpin the engineering discipline.
- 1.3. In-depth understanding of specialist bodies of knowledge within the engineering discipline.
- 1.4. Discernment of knowledge development and research directions within the engineering discipline.
- 1.5. Knowledge of engineering design practice and contextual factors impacting the engineering discipline.
- 1.6. Understanding of the scope, principles, norms, accountabilities and bounds of sustainable engineering practice in the specific discipline.

2. ENGINEERING APPLICATION ABILITY

2.1. Application of established engineering methods to complex engineering problem solving.

2.2. Fluent application of engineering techniques, tools and resources.

2.3. Application of systematic engineering synthesis and design processes.

2.4. Application of systematic approaches to the conduct and management of engineering projects.

3. PROFESSIONAL AND PERSONAL ATTRIBUTES

3.1. Ethical conduct and professional accountability.

3.2. Effective oral and written communication in professional and lay domains.

3.3. Creative, innovative and pro-active demeanour.

3.4. Professional use and management of information.

3.5. Orderly management of self, and professional conduct.

3.6. Effective team membership and team leadership.

ii how the Learning Outcomes relate to the Programme Objectives.

iii. Describe the processes used to establish and review the Learning Outcomes, and the extent to which the programme's various stakeholders are involved in these processes.

i Describe the data gathered and explain the results of the assessment.

v Explain how the assessment results are applied to further develop and improve the programme.

vi. Describe the materials, including student work and other tangible materials that demonstrate

Processes and Results: (MEng C) The programme shall have a clear linkage between Programme

Objectives and Learning Outcomes (Section 4.0); a process of ongoing assessment an

evaluation that demonstrates the achievement of Programme Objectives with documented

results; and evaluation results that are used in the continual improvement of the programme.

Diploma in Engineering (Electrical+ Mechanical+ Civil+ Renewable Energy Engineering+ Computer Engineering & Information Technology)

Program Objective	Learning Outcome
<ul style="list-style-type: none"> • To be closely familiar with standards and codes of practice, and to become expert in their interpretation and application to a wide variety of situations. • To develop very extensive experience of practical installations, and may well be more knowledgeable than Professional Engineers or Engineering Technologists on detailed aspects of plant and equipment that can contribute very greatly to safety, cost or effectiveness in operation. • 	<p><u>1. (iii) Stakeholders Involvement: The Technological Universities/Institutions shall provide evidence of stakeholder involvement with regard to (i) and (ii) above

Please see Attachment Industry Consultation Folder

<http://www.highlightcomputer.com/industryconsultation.htm>

8.0 Qualifying Requirements and Accreditation Criteria (MEng C)

An engineering programme shall be assessed by EAC to enable graduates of the programme to register as graduate engineers with the M.Eng.C. The assessment involves a review of qualifying

requirements of the Technological Institutions and an evaluation based on the following criteria, apart from

Programme Objectives (4.0) and Learning Outcomes (5.0):

1 Academic Curriculum

9.2.4 Academic Curriculum

- Discuss the programme structure and course contents to show how they are appropriate to, consistent with, and support the development of the range of intellectual and practical skills and attainment or achievement of the Learning Outcomes. (MEng C)

IQY Technical College's Diploma program is focussed on practical applications, use of materials, tools & equipment by combining with theoretical studies at tradesmen/ technician level, it will provide the foundation of engineering studies.

At the advanced diploma level, more complex level engineering contents, applied science & mathematics contents & cross-disciplinary engineering and management contents are included.

At the professional diploma level, the skills required for the graduated to lead or manage teams appropriate to these activities, and may establish their own companies or move into senior management roles in engineering and related enterprises are provided.

- Discuss the programme delivery and assessment methods and how these are appropriate to, consistent with, and support the development of the range of intellectual and practical skills and attainment or achievement of the Learning Outcomes. (MEng C)

Program delivery & assessment at Diploma & Advanced level

The students are provided with online lessons, study guides which include audio visual explanations in both English & Myanmar languages. The electronic text books and reference books are also provided.

For the students who can not have the access to the high speed internet are provided with DVDs, CDs and USBs consisting of the lessons.

It has established the learning platform from which the study guides & instructions, exercise, assignments, audio & video lessons can be downloaded.

<http://www.highlightcomputer.com/onlineteaching1.htm>

To provide the online teaching to be the same learning environment as to face to face class, IQY Technical College has established the online videos & Youtube videos of lectures.

Youtube videos of lectures

<http://www.highlightcomputer.com/videos2.htm>

Online videos

<http://www.highlightcomputer.com/videos1.htm>

Online practical simulation at Level 1 is also provided.

Practical is important aspect in engineering education. IQY Technical College also provides the engineering practicals by online mode.

It has established the online practical support websites to provide three levels of engineering practicals.

The sites are

<http://www.highlightcomputer.com/PracticalCourses.htm>

&

<http://www.iqytechnicalcollege.com/youtubevideos.htm>

Level 1- Tradesmen Level in which the basic trades tasks videos such as brick laying, motor winding, wiring, engine fittings, machining etc are presented.

Level 2- Technician Level in which the technician tasks such as electrical laboratory, surveying etc are presented

Level 3- Engineer Level in which use of engineering design handbooks are presented.

For all three levels, the reference books related to practical applications are presented.

Assessment

The students need to do the continuous study as per guidelines and instruction provided in study guides and do the exercises. They are required to regularly submit the assignments and sit the online MCQ tests

Online Theory & MCQ Practice

http://www.filefactory.com/file/6m8zvfek7797/n/Online_Theory_MCQ_Practice_pdf

Online Practical Practice

http://www.filefactory.com/file/3ap0vv6o8azx/n/Online_Practical_Practice_pdf

Upon satisfactory completion of the assessments, the progression is granted.

Upon completion of all units / subject in the program, the qualification is awarded.

Program delivery & assessment at Professional Diploma level

The same learning system is applied. But for the professional diploma level, the written tests as well as engineering management, project tasks, design presentation and engineering competency demonstration report writings are included in the assessment.

- The information required in items (i) and (ii) should include but is not limited to the following:
- A matrix linking courses to Learning Outcomes to identify and track the contribution of each course to the Learning Outcomes. (Overall Learning outcomes link to each unit)
- Distribution of engineering courses according to areas specific to each program

(MEng C)

Diploma in Electrical Engineering

Learning Outcome	Subjects	Study Area
<u>1. KNOWLEDGE AND SKILL BASE</u> 1.1. Systematic, theory based understanding of the underpinning natural and physical sciences and the engineering fundamentals applicable to the technology domain. 1.2. Conceptual understanding of the, mathematics, numerical analysis, statistics, and computer and information sciences which underpin the technology domain. 1.3. In-depth understanding of specialist bodies of knowledge within the technology domain. 1.4. Discernment of knowledge development within the technology domain.	EE101 DC Circuit Problems EE113 Electrical Fundamental EE201 Engineering Mathematics (1) EE111 Electromagnetism & Basic Electrical Machines EE112 Alternating Current Principle EE109 Electrical Control Circuits EE114 Electrical Power Principle EE115 Basic Analogue & Digital Electronics EE102 Basic Electrical Fitting & Wiring EE103 Basic Electrical Drafting EE104 Electrical Equipments Safety Protection	Electrical Maths Electrical/Science Electrical/Electronics Electrical/Drafting

<p>1.5. Knowledge of engineering design practice and contextual factors impacting the technology domain.</p> <p>1.6. Understanding of the scope, principles, norms, accountabilities and bounds of sustainable engineering practice in the technology domain.</p>	<p>EE105 Electrical Installation Design EE106 Advanced Electrical Wiring</p> <p>EE107 Electrical Equipments EE108 Electrical Fault Finding</p>	<p>Design/ Trade Work</p> <p>Instrumentation/ TradeWork</p>
<p><u>2. ENGINEERING APPLICATION ABILITY</u></p> <p>2.1. Application of established engineering methods to broadly-defined problem solving within the technology domain.</p> <p>2.2. Application of engineering techniques, tools and resources within the technology domain.</p> <p>2.3. Application of systematic synthesis and design processes within the technology domain.</p> <p>2.4. Application of systematic approaches to the conduct and management of projects within the technology domain.</p>	<p>EE121 Electronics Power Control Device EE116 Process Control System</p> <p>EE117 Solar Electrical System EE118 Electrical Energy Supply System EE110 Computer Applications</p> <p>EE105 Electrical Installation Design EE106 Advanced Electrical Wiring</p> <p>EE119 Electrical Risk Assessment EE120 Electrical Contracting & Specification</p>	<p>Electronics/ Instrumentation</p> <p>Renewable Energy Power Engineering Computer</p> <p>Design/ Trade Work</p> <p>Project Management</p>
<p><u>3. PROFESSIONAL AND PERSONAL ATTRIBUTES</u></p> <p>3.1. Ethical conduct and professional accountability.</p> <p>3.2. Effective oral and written communication in professional and lay domains.</p>	<p>EE120 Electrical Contracting & Specification</p>	<p>Project Management</p>

<p>3.3. Creative, innovative and pro-active demeanour.</p> <p>3.4. Professional use and management of information.</p> <p>3.5. Orderly management of self, and professional conduct.</p> <p>3.6. Effective team membership and team leadership.</p>	EE120 Electrical Contracting & Specification	Project Management

3.6. Effective team membership and team leadership.		

Criterion 1: Academic Curriculum

(curricular design)the philosophy and approach adopted in the programme structure, (MEng C)

The Diploma & Advanced Diploma level engineering curriculums are designed to provide the Engineering Competencies at Technician/ Technologist & Professional Engineer level.

They are based on Year 12 level schooling.

At the diploma level, the basic engineering theories are mixed with trades level practical knowledge and applications. Appropriate contents of mathematics, science and cross disciplinary contents are inserted.

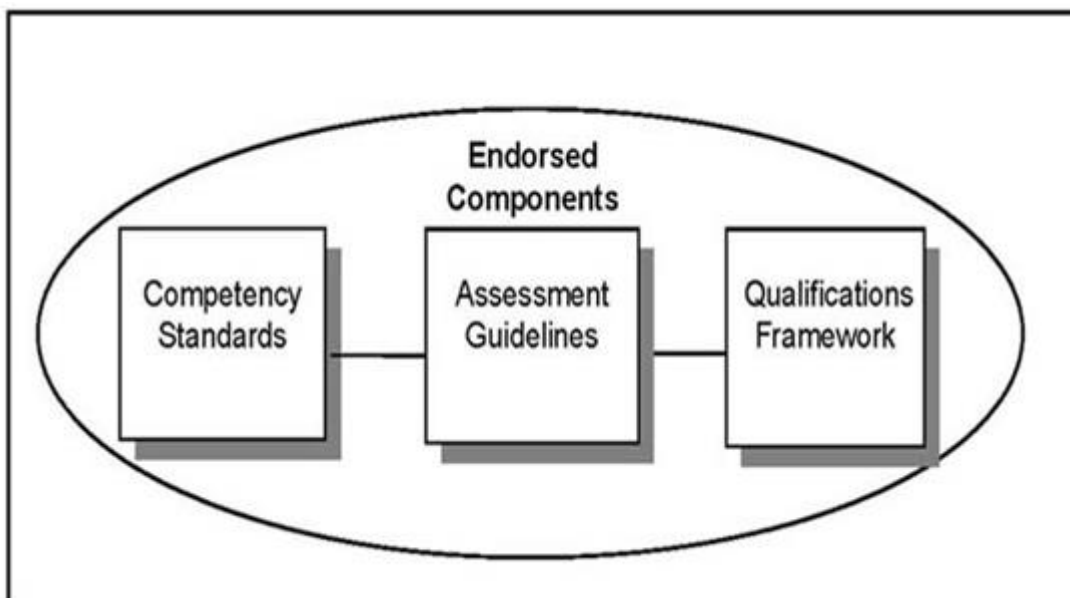

The engineering Industry is subject to high levels of legislation, regulation, codes of practice, guidelines and advisory standards, related to: research, assembly, installation, construction, diagnoses, maintenance, commissioning, programming, testing and repair of networks; systems,

circuits, equipment, components, appliances and facilities in the field of electricity and communications. The regulatory requirements are typically based on the principle of operation of the various systems and associated circuits involving equipment, apparatus and systems, public safety, safety and health of individuals who work on lines/circuits, systems and apparatus/equipment and other codes and practices related to the environment in which they are installed, operate and are maintained.

To fulfil such requirements, IQY Technical College Diploma & Advanced Diploma program are designed with the following requirements

- To provide a consistent and reliable set of components for training, recognising and assessing people's skills, and may also have optional support materials
- To enable the qualifications to be awarded through direct assessment of workplace competencies
- To apply and delivery of flexible training which suits individual and industry requirements
- To encourage learning and assessment in a work-related environment which leads to verifiable workplace outcomes.

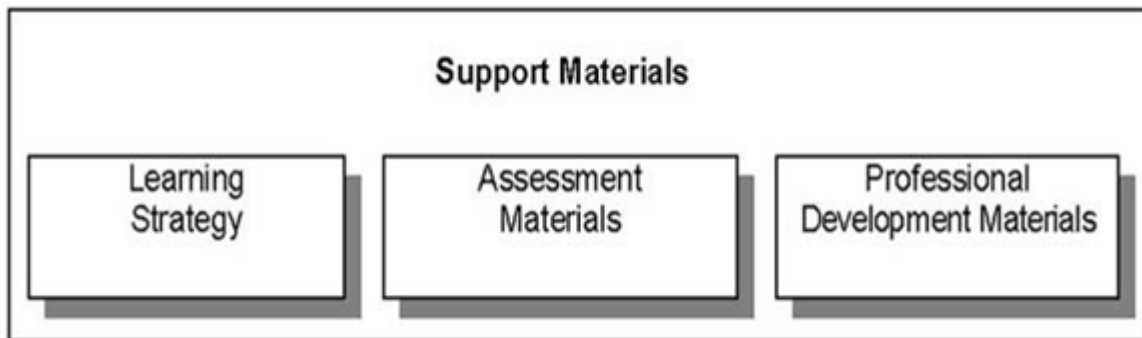

IQY Technical College's Diploma & Advanced Diploma program are largely based on Australian training system that reflect the following structure.

Competency Standards

Each unit of competency identifies a discrete workplace requirement and includes the knowledge and skills that underpin competency as well as language, literacy and numeracy; and occupational health and safety requirements. The units of competency must be adhered to in training and assessment to ensure consistency of outcomes

The online & off line learning support materials are designed with the following features.

The following competency areas are included

- A – Assembly
- C – Commercial
- D – Computer systems
- E – Cross discipline
- F – Data and voice communications
- G – Electrical
- H – Electronic
- I – Instrument and Control
- J – Refrigeration and Air Conditioning
- K – Renewable and sustainable energy
- M – Hazardous areas
- P – Restricted and specialist
- R – Research

Language, Literacy, Numeracy

The study support materials have been written to reflect the technical and operational needs of industry and include appropriate language and literacy requirements of Myanmar students. A new and specific section related to literacy and numeracy skills has been included in the competency standard. It characterises how participants are to be best equipped to achieve the relevant unit, in terms of reading, writing and numeracy skill levels.

Access, Equity and Cultural Diversity

The skills required of employees in the Engineering Industry are comprehensive and are relevant to many different employment situations. The study support materials reflect the range of knowledge and skills and their application, required in the Industry. They are written in a non-exclusive manner so as to increase the participation rates of under-represented groups and to minimise unintentional bias.

Quality Control Aspects

- *Maintenance of Contents Standards* – to initiate and respond to the need to review, vary, delete and add to the Engineering competency standard units, as part of the sector's standards inventory
- *Maintenance of Competency Delivery Processes* – to monitor the effectiveness of the delivery of competency and so initiate and respond to issues which may impact on those processes
- *Maintenance of Assessment Guidelines* – to monitor the effectiveness of the Assessment Guidelines and supporting systems; to initiate and respond to issues which impact, or are likely to impact, on the quality of the assessment systems and to promote quality improvement throughout the system
- *Maintenance of the Qualification and Recognition Systems* – to monitor the effectiveness of the application of the Qualification and Recognition Systems contained in the courses and to review/revise the system as required

Philosophy related to Learning Out comes provided by IQY Technical College Diploma & Advanced Diploma curriculums

Certificate (Part 1)

Characteristics of Learning Outcomes

- Breadth, depth and complexity of knowledge and competencies would cover selecting, adapting and transferring skills and knowledge to Australian environments and providing technical advice and some leadership in resolution of specified problems. This would be applied across a range of roles in a variety of contexts with some complexity in the extent and choice of options available.
- Performance of a defined range of skilled operations, usually within a range of broader related activities involving known routines, methods and procedures, where some discretion and judgement is required in the selection of equipment, services or contingency measures and within known time constraints.
- Applications may involve some responsibility for others. Participation in teams including group or team coordination may be involved.
- Distinguishing Features of Learning Outcomes
- Do the competencies enable an individual with this qualification to:
- demonstrate some relevant theoretical knowledge
- apply a range of well-developed skills
- apply known solutions to a variety of predictable problems
- perform processes that require a range of well-developed skills where some discretion and judgement is required
- interpret available information, using discretion and judgement
- take responsibility for own outputs in work and learning
- take limited responsibility for the output of others

Certificate (Part 2)

Characteristics of Learning Outcomes

- Breadth, depth and complexity of knowledge and competencies would cover a broad range of varied activities or application in a wider variety of contexts most of which are complex and non-routine. Leadership and guidance are involved when organising activities of self and others as well as contributing to technical solutions of a non-routine or contingency nature.
- Performance of a broad range of skilled applications including the requirement to evaluate and analyse current practices, develop Australian criteria and procedures for performing current practices and provision of some leadership and guidance to others in the application and planning of the skills.
- Applications involve responsibility for, and limited organisation of, others.
- Distinguishing Features of Learning Outcomes
- Do the competencies enable an individual with this qualification to:
- demonstrate understanding of a broad knowledge base incorporating some theoretical concepts
- apply solutions to a defined range of unpredictable problems
- identify and apply skill and knowledge areas to a wide variety of contexts, with depth in some areas

- identify, analyse and evaluate information from a variety of sources
- take responsibility for own outputs in relation to specified quality standards
- take limited responsibility for the quantity and quality of the output of others

Diploma

Characteristics of Learning Outcomes

- Breadth, depth and complexity covering planning and initiation of alternative approaches to skills or knowledge applications across a broad range of technical and/or management requirements, evaluation and coordination.
- The self directed application of knowledge and skills, with substantial depth in some areas where judgement is required in planning and selecting appropriate equipment, services and techniques for self and others.
- Applications involve participation in development of strategic initiatives as well as personal responsibility and autonomy in performing complex technical operations or organising others. It may include participation in teams including teams concerned with planning and evaluation functions. Group or team coordination may be involved.
- The degree of emphasis on breadth as against depth of knowledge and skills may vary between qualifications granted at this level.
- Distinguishing Features of Learning Outcomes
- Do the competencies or learning outcomes enable an individual with this qualification to:
demonstrate understanding of a broad knowledge base incorporating theoretical concepts, with substantial depth in some areas
- analyse and plan approaches to technical problems or management requirements
- transfer and apply theoretical concepts and/or technical or creative skills to a range of situations
- evaluate information, using it to forecast for planning or research purposes
- take responsibility for own outputs in relation to broad quantity and quality parameters
- take some responsibility for the achievement of group outcomes

Advanced Diploma

Characteristics of Learning Outcomes

- Breadth, depth and complexity involving analysis, design, planning, execution and evaluation across a range of technical and/or management functions including development of Australian criteria or applications or knowledge or procedures.
- The application of a significant range of fundamental principles and complex techniques across a wide and often unpredictable variety of contexts in relation to either varied or highly specific functions. Contribution to the development of a broad plan, budget or strategy is involved and accountability and responsibility for self and others in achieving the outcomes is involved.
- Applications involve significant judgement in planning, design, technical or leadership/guidance functions related to products, services, operations or procedures.
- The degree of emphasis on breadth as against depth of knowledge and skills may vary between qualifications granted at this level.
- Distinguishing Features of Learning Outcomes
- Do the competencies or learning outcomes enable an individual with this qualification to:
 - demonstrate understanding of specialised knowledge with depth in some areas
 - analyse, diagnose, design and execute judgements across a broad range of technical or management functions
 - generate ideas through the analysis of information and concepts at an abstract level
 - demonstrate a command of wide-ranging, highly specialised technical, creative or conceptual skills
 - demonstrate accountability for personal outputs within broad parameters
 - demonstrate accountability for personal and group outcomes within broad parameters

Professional Diploma

Year 2+3 Learning Outcomes & Teaching /Assessment Strategies

Purpose

Development and consolidation of discipline knowledge and skills, with increasing opportunities for application

Knowledge

comprehensive understanding of the major theoretical approaches, concepts, practices, methodologies, etc.

Skills

- Consolidate and extend key academic skills including:

- high order cognitive skills in processing knowledge
- rigorous techniques of enquiry involving primary and secondary sources and a range of technologies
- problem solving and creativity using various techniques in diverse contexts
- collaborative and independent learning
- communication skills (oral, written, academic, professional) including the use of relevant technologies
- Consolidate and extend key discipline technical skills

Application of Knowledge & Skills

- apply and adapt major theoretical principles and approaches to real world contexts
- develop skills in planning, problem solving, decision-making, teamwork, communication, intellectual independence and accountability in professional practice and/or scholarship

Key Verbs

- organise
- integrate
- differentiate, examine
- distinguish
- discuss, elaborate
- calculate
- collaborate
- discover
- critically review
- explain, interpret
- compare, contrast
- summarise, paraphrase
- demonstrate
- cooperate
- use, modify
- organise

Types of assessments

- critical review
- construct a chart
- analyse data, graph
- create a database
- write a reflective journal
- analyse an argument
- compare theories
- make generalisations

- apply models
- develop and conduct a survey
- investigate an issue
- critical essay
- role play
- make a presentation
- debate
- defend a position
- quiz, test, exam
- tutorial paper

Year 4 Learning Outcomes & Teaching /Assessment Strategies

Purpose

The Professional Diploma comparable to Bachelor Degree qualifies individuals who apply a broad and coherent body of knowledge in a range of contexts to undertake professional work and as a pathway for further learning

Knowledge

- broad and coherent knowledge with depth in one or more disciplines

Skills

- cognitive skills to critically, analyse, consolidate and synthesise knowledge
- cognitive and technical skills to demonstrate a broad understanding of knowledge with depth in some areas
- cognitive and creative skills to exercise critical thinking and judgement in identifying and solving problems with intellectual independence
- communication skills to present a clear, coherent and independent exposition of knowledge and ideas

Application of Knowledge & Skills

- apply knowledge and skills with initiative and judgement in planning, problem solving and decision making in professional practice and/or scholarship
- adapt knowledge and skills in diverse contexts
- with responsibility and accountability for own learning and professional practice and in collaboration with others within broad parameters

Key Verbs

- assemble
- manage
- formulate, devise
- generate, construct
- deconstruct
- solve

- assess, estimate
- investigate, scope
- plan
- convert, translate
- justify, predict
- create, design, compose
- judge, determine, diagnose
- innovate, invent

Types of Assessment

- project
- presentation on a topic/project
- seminar paper and presentation
- report
- case study
- scenarios
- major essay
- plan
- creative writing (story, poem song)
- musical work, sculpture
- performance of a musical work, play
- film making
- translation of a text
- simulation
- organisation of an event
- work-integrated learning
- teamwork
- quiz, test/exam
- reflective journal
- posters
- portfolio
- exam
- viva voce

Preparation for Professional Engineer Program

Purpose

The Professional Engineer Status who apply a body of knowledge in a specific context to undertake professional work and as a pathway for research and further learning.

Knowledge

- coherent advanced knowledge of the principles and concepts in one or more disciplines and knowledge of research principles and methods

Skills

- cognitive skills to review, analyse, consolidate and synthesise knowledge to identify and provide solutions to complex problems with intellectual independence
- cognitive and technical skills to demonstrate a broad understanding of a body of knowledge and theoretical concepts with advanced understanding in some areas
- cognitive skills to exercise critical thinking and judgement in developing new understanding technical skills to design and use research in a project
- communication skills to present a clear and coherent exposition of knowledge and ideas to a variety of audience

Application of knowledge & Skills

- apply knowledge and skills with initiative and judgement in professional practice and/or scholarship
- adapt knowledge and skills in diverse contexts
- with responsibility and accountability for own learning and practice and in collaboration with others within broad parameters
- plan and execute project work and/or a piece of research and scholarship with some independence

Key Verbs

- research work on system/ modification/ re-engineering/ reverse engineering
- adapt the news systems / alternative system/ more efficient system
- initiate the new technology & application
- consolidate the several functions
- execute the planning & management in engineering works

Types of assessment

- literature review on application/ methods/ system report/ project report
- research paper on new engineering development & systems
- report on project
- creative work on engineering design project
- seminar paper and presentation
- conference paper
- journal article
- viva voce

Based on the above learning outcomes & teaching strategies, the curriculums are arranged & relevant contents are integrated as follows.

Detailed Contents

Detailed Contents of BE,B Bus& B App Sc (IT) Programs

[http://highlightcomputer.com/B%20E+B%20App%20Sc\(IT\)+B%20Bus%20Course%20Detailed%20Contents.htm](http://highlightcomputer.com/B%20E+B%20App%20Sc(IT)+B%20Bus%20Course%20Detailed%20Contents.htm)

Detailed Contents of Diploma + Advanced Diploma in Engineering, IT , Management & Business Programs

Diploma Programs (IQY Technical College)

Electrical Engineering Course Outline

Management Course Outline

Information Technology Course Outline

Certificate in Information Technology Course Outline

Diploma in Information Technology Course Outline

Advanced Diploma in Information Technology Course Outline

Mechanical Engineering Course Outline

Civil Engineering Course Outline

Automotive Engineering Course Outline

Marine Engineering Course Outline

Professional Diploma + Bachelor of Engineering (Electrical, Civil, Mechanical Combined with Renewable Energy) Programs

Professional Diploma+ Bachelor Degree in Electrical Engineering

Professional Diploma+ Bachelor Degree in Civil Engineering

Professional Diploma+ Bachelor Degree in Mechanical Engineering

**Bachelor Degree Programs (St Clements University Higher Education School&
St Clements Technological University of British West Indies)**

Bachelor of Engineering (Electrical Engineering) Course Outline

Bachelor of Applied Science (Computer Science & Computer Technology)

Bachelor of Engineering (Mechanical Engineering-Mechatronics) Course Outline

Bachelor of Engineering (Civil Engineering-Building Services) Course Outline

Graduate Diploma of Civil Engineering + Bachelor of Applied Engineering (Final Year
Civil Design) Course Outline

Bachelor of Engineering (Civil) Course outline

Bachelor of Engineering (Mechanical) Course outline

Graduate Diploma of Mechanical Engineering + Bachelor of Applied Engineering
(Final Year Mechanical Design) Course Outline

Bachelor of Business /Bachelor of Applied Management Course Outline

Graduate Diploma of Engineering Practice (Computer Control Engineering) Course
Outline

Certificate in Teaching Support+ Diploma in Teaching Practice+ Bachelor of
Teaching+ Bachelor of Education (School & Vocational)

Scholarship Application Form for Volunteer Teachers

**Myanmar Engineers Board Professional Engineer (PE) (Electrical-Building
Services) Registration Support Program**

Graduate Diploma of Engineering Practice (Mechanical) Course Outline

Graduate Diploma of Engineering Practice (Civil) Course Outline

Graduate Diploma of Engineering (Electrical+ Electronics) Course Outline

AUSTRALIAN ELECTRICIAN TRAINING

Master Degree Programs (St Clements Technological University of British West Indies)

Master of Science (Information Technology)/Master of Information Technology

Master of Management

Master of Science (Engineering) / Master of Engineering

Master of Science (Renewable Energy Engineering)

Learning Outcome/Course/Assessment/ Time Allocation

Diploma in Electrical Engineering Each unit has 1 pt unless stated

Learning Outcome	Subjects	Time Allocation/ Assessment Method
<u>1. KNOWLEDGE AND SKILL BASE</u>	Each unit has 1 pt unless stated	Time Allocation
1.1. Systematic, theory based understanding of the underpinning natural and physical sciences and the engineering fundamentals applicable to the technology domain.	EE101 DC Circuit Problems	1 Credit Point=24 Hr
1.2. Conceptual understanding of the, mathematics, numerical analysis, statistics, and computer and information sciences which underpin the technology domain.	EE113 Electrical Fundamental (2 pt)	Assessment
1.3. In-depth understanding of specialist bodies of knowledge within the technology domain.	EE201 Engineering Mathematics (1)	Assignment/Test/ Examination/ Summative/ Formative Assessment Practical Simulation
1.4. Discernment of knowledge development within the technology domain.	EE111 Electromagnetism & Basic Electrical Machines(2 pt) EE112 Alternating Current Principle (2 pt) EE109 Electrical Control Circuits EE114 Electrical Power Principle EE115 Basic Analogue & Digital Electronics EE102 Basic Electrical Fitting & Wiring EE103 Basic Electrical Drafting EE104 Electrical Equipments Safety Protection (2 pt)	

<p>1.5. Knowledge of engineering design practice and contextual factors impacting the technology domain.</p> <p>1.6. Understanding of the scope, principles, norms, accountabilities and bounds of sustainable engineering practice in the technology domain.</p>	<p>EE105 Electrical Installation Design EE106 Advanced Electrical Wiring</p> <p>EE107 Electrical Equipments EE108 Electrical Fault Finding</p>	
<p><u>2. ENGINEERING APPLICATION ABILITY</u></p> <p>2.1. Application of established engineering methods to broadly-defined problem solving within the technology domain.</p> <p>2.2. Application of engineering techniques, tools and resources within the technology domain.</p> <p>2.3. Application of systematic synthesis and design processes within the technology domain.</p> <p>2.4. Application of systematic approaches to the conduct and management of projects within the technology domain.</p>	<p>EE121 Electronics Power Control Device EE116 Process Control System(3 pt)</p> <p>EE117 Solar Electrical System EE118 Electrical Energy Supply System(3 pt) EE110 Computer Applications</p> <p>EE105 Electrical Installation Design EE106 Advanced Electrical Wiring</p> <p>EE119 Electrical Risk Assessment EE120 Electrical Contracting & Specification</p>	

EE120 Electrical Contracting & Specification

EE120 Electrical Contracting & Specification

Learning Outcome

	Time Allocation/ Assessment Method
1. Introduction and Welcome	10 minutes / Lecture
2. Overview of the Course	10 minutes / Lecture
3. Module Objectives and Learning Outcomes	10 minutes / Lecture
4. Key Concepts and Theoretical Framework	20 minutes / Lecture
5. Case Study Analysis	20 minutes / Interactive Discussion
6. Group Work and Problem Solving	30 minutes / Group Activity
7. Summary and Q&A Session	10 minutes / Lecture
8. Assignment Briefing	10 minutes / Lecture
9. Student Feedback and Evaluation	10 minutes / Survey
10. Conclusion and Next Steps	10 minutes / Lecture

1.1. Systematic, theory based understanding of the underpinning natural and physical sciences and the engineering fundamentals applicable to the technology domain.

EE201 Engineering
Mathematics
EE302 Advanced
Engineering Mathematics

EE202 Electrical Circuits

EE204 Engineering Physics

EE203 Three Phase Power Circuits

Time Allocation

1 Credit Point=24 Hr

Assessment

Assignment/Test/
Examination/
Summative/
Formative Assessment
Practical Simulation

1.3. In-depth understanding of specialist bodies of knowledge within the technology domain.	EE205 Electrical Power System(2 pt) EE206 AC Machines(2 pt) EE207 DC Machine EE208 Operational (2 pt)Amplifiers EE209 Analogue Electronics	
1.4. Discernment of knowledge development within the technology domain.	EE303 Transmission Line (2 pt)	
1.5. Knowledge of engineering design practice and contextual factors impacting the technology domain.	EE301 Advanced Electrical Drafting EE307 Energy Efficient Building Design(2 pt)	
1.6. Understanding of the scope, principles, norms, accountabilities and bounds of sustainable engineering practice in the technology domain.	EE308 Sustainability	
<u>2. ENGINEERING APPLICATION ABILITY</u>		
2.1. Application of established engineering methods to broadly-defined problem solving within the technology domain.	EE305 Power Transformer (2 pt) EE306 Electro-mechanical Control (2 pt)	
2.2. Application of engineering techniques, tools and resources within the technology domain.	EE301 Advanced Electrical Drafting	
2.3. Application of systematic synthesis and design processes within the technology domain.	EE307 Energy Efficient Building Design (2 pt)	

<p>2.4. Application of systematic approaches to the conduct and management of projects within the technology domain.</p>	<p>EE309 Project Management (2 pt)</p>	
<p><u>3. PROFESSIONAL AND PERSONAL ATTRIBUTES</u></p> <p>3.1. Ethical conduct and professional accountability.</p> <p>3.2. Effective oral and written communication in professional and lay domains.</p> <p>3.3. Creative, innovative and pro-active demeanour.</p> <p>3.4. Professional use and management of information.</p> <p>3.5. Orderly management of self, and professional conduct.</p> <p>3.6. Effective team membership and team leadership.</p>	<p>EE309 Project Management (2 pt) EE310 Engineering Officer Competency Report (2 pt)</p> <p>EE309 Project Management (2 pt)</p> <p>EE310 Engineering Officer Competency Report (2 pt)</p>

- the choice of the teaching-learning (delivery) methods.
- The curricular approach, the educational content and the teaching-learning
- assessment & evaluation methods for the attainment achievement of the Learning Outcomes. (MEng C)

Assessment Validation

<http://www.highlightcomputer.com/assessmentvalidation.htm>

The folder in the above link contains the assessment validation documents for IQY Technical College 's programs

- A balanced curriculum shall include all technical and non-technical attributes listed in the Learning Outcomes, (the essential elements forming the core of the programme and additional specialist or optional studies (electives). (MEng C)
- The curriculum shall integrate theory with practice through adequate exposure to laboratory work and professional engineering(MEng C)
- Time allocation
- Credit points (The academic programme component must consist of a minimum total of 120 credit (a) A minimum of 80 credit hours shall be engineering courses consisting of engineering sciences and engineering design/projects appropriate to the student's field of study. (MEng C)

(b) The remaining credit hours shall include sufficient content of general education component (such as mathematics, computing, languages, general studies, co- curriculum, management, law, accountancy, ec(MEng C)

The following curriculums are prepared to address the above issues

<http://www.highlightcomputer.com/BECurriculum.htm>

<http://www.highlightcomputer.com/DiplomaAdvancedDiplomaCivilEngineeringCurriculum.htm>

<http://www.highlightcomputer.com/DiplomaAdvancedDiplomaElectricalEngineeringCurriculum.htm>

<http://www.highlightcomputer.com/DiplomaAdvancedDiplomaMechanicalEngineeringCurriculum.htm>

Diploma in Engineering

This program is designed with 30 credit points integrating 15 credit points Certificate in Electrical Engineering. The completion of this program can be articulated into 60 points Advanced Diploma in Electrical Engineering & 120 credit points Professional Diploma in Electrical Engineering which is the award of Bachelor of Engineering degree by the universities affiliated to IQY Technical College.

Advanced Diploma in Electrical Engineering

This program is designed with 60 credit points integrating 30 credit points Diploma in Electrical Engineering. The completion of this program can be articulated into 60 of 120 credit points Professional Diploma in Electrical Engineering which is the award of Bachelor of Engineering degree by the universities affiliated to IQY Technical College.

Professional Diploma in Civil Engineering

This program is designed with 120 credit points integrating 60 credit points Advanced Diploma in Civil Engineering. The completion of this program can be awarded Professional Diploma in Civil Engineering together with the award of Bachelor of Engineering degree by the universities affiliated to IQY Technical College.

Curriculum Contents (MEng C)

Diploma in Electrical Engineering the curriculum content should cover the following:

(i) Engineering mathematics, science, engineering principles, skills and tools (computing, experimentation) appropriate to the discipline of study

The curriculums have been designed to cover the following aspects.

Study Areas (Overview)

Electrical circuits, Basic Electronics, Mathematics, Physics, Electrical Wiring, Electrical Machines, Electro-magnetism, Computer Applications, Control System, Process Control, Electrical Contracting, Solar Electrical System, Electrical Drafting

Detailed contents of the units

Detailed contents of the units can be viewed at the following links.

Electrical Engineering Course Outline

<http://www.highlightcomputer.com/Diploma & Advanced Diploma in Electrical Engineering Course outline.doc>

Detailed Contents of Diploma + Advanced Diploma in Engineering, IT , Management & Business Programs

<http://www.highlightcomputer.com/detailedcontent.htm>

Diploma in Mechanical Engineering

Study Areas

Mathematics, Physics, Machine Principle, Electrical Circuits, Heat Transfer, Principle of Engines, Fluid Mechanics, Engineering Mechanics, Mechanical Drawing, Hydrocarbon, Wind Turbine, Polymer Science, Turbo Machinery, Basic Management

Specialized Fields

Automotive Engineering, Marine Engineering

Detailed contents of the units

Detailed contents of the units can be viewed at the following links.

Mechanical Engineering Course Outline

<http://www.highlightcomputer.com/Diploma in Mechanical Engineering.doc>

Detailed Contents of Diploma + Advanced Diploma in Engineering, IT , Management & Business Programs

<http://www.highlightcomputer.com/detailedcontent.htm>

Diploma in Civil Engineering

Study Areas

Mathematics, Physics, Electrical Principle, Fluid Mechanics, Hydraulics, Hydrology, Building Construction, Sanitation & Water Supply, Energy Efficient Building Design

Detailed contents of the units

Detailed contents of the units can be viewed at the following links.

Civil Engineering Course Outline

http://www.highlightcomputer.com/Diploma_in_Civil_Engineering.doc

Detailed Contents of Diploma + Advanced Diploma in Engineering, IT , Management & Business Programs

<http://www.highlightcomputer.com/detailedcontent.htm>

Diploma in Renewable Energy Engineering

Study Areas

Foundation Studies in Renewable Energy and Sustainability, Grid Connected Photovoltaic Power Systems, Solar and Thermal Energy Systems, Energy Storage Systems, Renewable Energy Resource Analysis, Wind Energy Conversion Systems, Energy System Efficiency

Detailed contents of the units

Detailed contents of the units can be viewed at the following links.

Renewable Energy Engineering Public Seminar + Diploma& Bachelor of Engineering (Renewable Energy)

<http://www.highlightcomputer.com/re.pdf>

Diploma in Computer Engineering/ Diploma in Information Technology

Study Areas

IT Fundamental , Computer Application, Computer Programming, System Analysis, Software Engineering, IT Project, Business Information System

Detailed contents of the units

Detailed contents of the units can be viewed at the following links.

Diploma in Information Technology Course Outline

http://www.highlightcomputer.com/Diploma_in_Information_Technology_Course_outline.doc

Electrical Engineering Course Outline

Advanced Diploma in Engineering (Electrical+ Mechanical+ Civil+ Renewable Energy Engineering+ Computer Engineering & Information Technology) Course Outlines

Advanced Diploma in Engineering can be studied in the following specializations

- Advanced Diploma in Electrical Engineering
- Advanced Diploma in Mechanical Engineering
- Advanced Diploma in Civil Engineering
- Advanced Diploma in Renewable Energy Engineering
- Advanced Diploma in Computer Engineering / Advanced Diploma in Information Technology

Advanced Diploma in Electrical Engineering

Study Areas

Electrical Power Circuits, Electrical Power System, Mathematics, Physics, AC/DC Machines, Control System, Power System Protection, Energy Efficiency, Project Management, Advanced Electrical Drafting, Power Transmission Line, Engineering Officer Competency Report.

Detailed contents of the units

Detailed contents of the units can be viewed at the following links.

[Detailed Contents of Diploma + Advanced Diploma in Engineering, IT , Management & Business Programs](http://www.highlightcomputer.com/detailedcontent.htm)

<http://www.highlightcomputer.com/detailedcontent.htm>

Advanced Diploma in Mechanical Engineering

Study Areas

Higher Mathematics, Fluid Dynamics, Automation & Robotics, Computer Aided Design & Manufacturing, Control System, Manufacturing, Mechatronics, Numerical Control, Pneumatics, Building Services. Air-conditioning Refrigeration

Detailed contents of the units

Detailed contents of the units can be viewed at the following links.

[Detailed Contents of Diploma + Advanced Diploma in Engineering, IT , Management & Business Programs](http://www.highlightcomputer.com/detailedcontent.htm)

<http://www.highlightcomputer.com/detailedcontent.htm>

Advanced Diploma in Civil Engineering

Study Areas

Surveying, Road & Bridges, Structure, Estimating, Electrical Installation, Electrical Wiring, Air-conditioning Refrigeration, Engineering Mechanics

Detailed contents of the units

Detailed contents of the units can be viewed at the following links.

Detailed Contents of Diploma + Advanced Diploma in Engineering, IT , Management & Business Programs

<http://www.highlightcomputer.com/detailedcontent.htm>

Advanced Diploma in Renewable Energy Engineering

Study Areas

Advanced contents in Renewable Energy, Electrical Engineering, Basic Civil & Mechanical Engineering, Electrical Machines, Electronics Control

Detailed contents of the units

Detailed contents of the units can be viewed at the following links.

Renewable Energy Engineering Public Seminar + Diploma& Bachelor of Engineering (Renewable Energy)

<http://www.highlightcomputer.com/re.pdf>

Advanced Diploma in Computer Engineering/ Advanced Diploma in Information Technology

Study Areas

Organizational Behaviour, IT Networking, Information System Analysis & Design, Advanced Programming, Project Work

Professional Diploma in Engineering (Electrical+ Mechanical+ Civil+ Renewable Energy Engineering+ Computer Engineering & Information Technology)

It is designed at the same academic requirement as to Bachelor of Engineering degree but IQY Technical College is operating as a vocational education & training college not as a university, the award is to be described as Professional Diploma. The graduates of the Professional Diploma in Engineering can be awarded Bachelor of Engineering by the universities which are affiliated to IQY Technical College.

The program is designed to train the students to become Professional Engineers who are required to take responsibility for engineering projects and programs in the most far-reaching sense.

The program is also designed to provide the skills required for the graduated to lead or manage teams appropriate to these activities, and may establish their own companies or move into senior management roles in engineering and related enterprises.

Professional Diploma in Engineering can be studied in the following specializations

- Professional Diploma in Electrical Engineering
- Professional Diploma in Mechanical Engineering
- Professional Diploma in Civil Engineering
- Professional Diploma in Renewable Energy Engineering
- Professional Diploma in Computer Engineering / Professional Diploma in Information Technology

Professional Diploma in Electrical Engineering

Study Areas

Mathematics, Engineering Mechanics & Thermodynamics, Electrical Circuit Analysis, Electro-magnetics & Electrical Machines, Control System, Power System, Electronics, Telecommunication, Industrial Management, Computer Programming, Computer Network, Engineering Project, Building Services, Competency Demonstration Report Writing, Renewable Energy.

Detailed contents of the units

Detailed contents of the units can be viewed at the following links.

Learner Resources

www.highlightcomputer.com/LearnerResources.htm

(v) Industrial training -exposure to professional engineering practice in an engineering-practice environment;

+

(vi) Exposure to engineering practice; (MEng C)

The simulated online mode of practical is provided in the following link.

Practical Training Link

www.highlightcomputer.com/PracticalCourses.htm

The folder in the above link contains the Online practical courses for IQY Technical College 's programs.

(vii) Relevant tutorial class (MEng C)

Online discussion & tutorial forums are arranged

Credit Hours (MEng C)

- For a 16-week semester (not including examination or mid-term break), one credit hour is defined as:
- One hour per week of lecture (additional independent study of two hours is assumed to have been included).
- Two hours per week of laboratory or workshop lecture (additional independent learning time of one hour is assumed to have been included).
- Two hours per week of supervised and compulsory tutorial session (additional independent learning time of one hour is assumed to have been included), subject to a maximum of one credit hour for each course in that semester.

- Three hours per week of facilitated activities involving other modes of delivery such as problem-based learning, e-learning modules, site visits, discovery learning, integrated design and coursework projects.
- Three hours per week of activities involving final year project inclusive of meeting with supervisor

One hour per week of lecture

Every 1 credit point has the weighted hour of 24 hours. The credit points are expressed in the curriculum. In online delivery mode, the time to view the videos & time to reflect the learning can be equivalent to lecture hours in face to face classes. The lecture times in the following online videos are arranged as to fulfil the class lecture time.

Online Lecture + Youtube Lecture

www.highlightcomputer.com/videos2.htm

www.highlightcomputer.com/videos1.htm

Two hours per week of laboratory or workshop lecture

The time taken to view the Practical Videos/ To read the practical instruction books/ Design Handbooks are counted as laboratory or workshop hour to do the online practicals in the following links.

www.highlightcomputer.com/PracticalCourses.htm

&

<http://www.iqytechnicalcollege.com/youtubevideos.htm>

Students Area/ Forum

<http://www.highlightcomputer.com/students.htm>

Two hours per week of supervised and compulsory tutorial session

The time allocated to download & study the Instruction Powerpoints, Listing to the audio explanations & do the exercises in the following link is arranged as tutorial sessions time.

<http://www.highlightcomputer.com/onlineteaching1.htm>

Click **HERE** to log in the lesson sequences.

Click **HERE** to log in the online study materials

Click **HERE** to log in to the Learning Platform

Three hours per week of facilitated activities

This time can be allocated for participation in online forum, reading the learning support CD/DVD, the time to write the assignments & the accumulated time to take part in residential sessions as well as working in the industry.

Industrial Training

- For industrial training, the following guideline shall be followed:
- Industrial training shall be for a minimum of 8 weeks of continuous training. One credit hour is allocated for every two weeks of training subject to a maximum of six credit hours. The training shall be adequately structured, supervised and recored in log book/ record.

The e-Learning Engineering programs are aimed to provide the on-going professional development for the workers in the industry. The work experience recorded are counted for fulfilling the practical training needs to completion the courses.

Final Year Project

- A final year project is subject to a minimum of six credit hours and a maximum of twelve credit

Some students' project works.pdf File

<http://www.highlightcomputer.com/Somestudentsprojectworks.htm>

The folder in the above link contains the students' project documents related to IQY Technical College 's programs

2 - Students (MEng C)

- Maths+Physics (Remedial)
- Teaching & Learning Environment

9.2.5 Students

- students' performance in relation to Learning Outcomes.
- the requirement and process for admission of students to the programme.
- students' workload.

- iv. Discuss students' activities and involvement in student organisations

The students who need Year 12 level Mathematics & Science are provided with Learning Support online tutorials for Maths & Science at the following link.

<http://www.highlightcomputer.com/y712lessons.htm>

3 - Academic and Support Staff (MEng C)

- (Postgraduate/ Master degree)
- 9.2.6 Academic and Support Staff
- i. Discuss the strength and competencies of the academic staff in covering all areas of the programme.
- ii. Discuss how the overall staff workload enables effective teaching, student-staff interaction, student advising and counselling, Technological Institutions and research activities, professional development and interaction with industry.
- iii. Discuss the sufficiency and competency of technical and administrative staff in providing adequate support to the educational programme.
- iv. The information required in items (i) to (iii) should include but is not limited to the following:
 - A breakdown in terms of numbers of academic staff (full-time, part-time and inter-programme) by year for the past four years
 - An analysis of all academic staff
 - academic qualifications of academic staff
 - the posts held by full time academic staff
 - A summary of teaching workload of academic staff for the current semester
 - An analysis of all support staff
 - A summary of the posts held by support staff
 - The staff: student ratio by year for all academic years for the past four years

The folders in the following links link contains teachers skilled documents of teachers who are teaching the IQY Technical College 's programs

Teacher skilled matrix

<http://www.highlightcomputer.com/teacherskillmatrix.htm>

Staff list

www.highlightcomputer.com/staff.htm

Staff competency

<http://www.highlightcomputer.com/teacherskillmatrix.htm>

4 Facilities

- Library
- Quality Management Systems
- controlling, managing, directing, organising and supervising of the overall management system planning, development, delivery and review of engineering programmes

From www.highlightcomputer.com main page, the following online facilities can be accessed by requesting the relevant links.

- Public Library
- Engineering Resources
- Reference Materials & Resources

9.2.7 Facilities

- Discuss the adequacy of teaching and learning facilities such as classrooms, learning-support facilities, study areas, information resources (library), computing and information-technology systems, laboratories and workshops.
- Describe the adequacy of support facilities such as hostels, sport and recreational centres, health centres, student centres, and transport in facilitating students' life on campus and enhancing character building.
- The information required in items (i) to (ii) should be provided in the supporting documents but is not limited to the following:

- A summary, in tabulated form, of the lecture facilities (give number, capacity, and audio video facilities available).
- A summary, in tabulated form, of the laboratories (list down the equipment available in each laboratory).
- A summary, in tabulated form, of the workshops (list down the equipment/machinery available in each workshop).
- A summary, in tabulated form, of the computer laboratories (list down the hardware and software available).
- A summary, in tabulated form, of the other supporting facilities such as the library (list down the titles of books/journals/magazines/standards of relevance to the programme).

5 - Quality Management Systems (MEng C)

8.5.2 Programme Quality Management and Planning

- programme planning, curriculum development, and
- regular curriculum and content review must involve all academic staff. The processes include
- reviewing Programme Objectives and Learning Outcomes, tracking the contributions of individual courses to the Learning Outcomes, tracking performance assessment processes, the comments from
- External Examiners, reviewing feedback and inputs from stakeholders including students and alumni.
- The process of continual quality improvement shall be implemented with full accountability. For a new programme,
- External examiner report

8.5.4 Quality Assurance

- Student admission
- Teaching and learning
- Assessment and evaluation which include: examination regulations and criteria for pass/fail
- preparation and moderation processes
- level of assessment
- assessment processes including final year project/industrial training

From the following links, the documents related to Quality Assurance can be accessed.

9.2.8 Quality Management System (MEng C)

- Outline the organisational structure of the Technological Institutions as well as the structure within the faculty/department/programme. Discuss the level and adequacy of institutional support, operating environment, financial resources, constructive leadership, policies mechanisms for attracting, appointing, retaining and rewarding well-qualified staff and provision of professional development, and provision of infrastructure and support services to achieve Programme Objectives and assure continuity of the programme. All relevant policies are to be made available during the visit.
- Discuss the mechanism for the following: programme planning; curriculum development; curriculum , course review and course monitoring; internal audit; management review meeting; responding to feedback and inputs from stakeholders including industry advisors, students and alumni; tracking the contribution of individual courses to the Learning Outcomes; tracking outcomes of performance through assessment; responding to External Examiners comments; reviewing of Programme Objectives and Learning Outcomes; and continual quality improvement. Where these are discussed elsewhere in the report, specify their locations.
- Summarise responses to the external examiner's report.
- Discuss how the quality management system of the Technological Institutions provides quality assurance and benchmark.
- The information required items (i) to (iv) should be provided in the supporting document and is not limited to the following:

As this document provides the development of e-Learning in engineering for small and medium size colleges and institutes where the program planning and management tasks are mainly performed by one or two key staff, for the larger institutions, more complex and wider organizational structure can be designed.

1. Evidence on the participation of academic staff, support staff and students in the continual quality improvement process. (MEng C)
2. Evidence on the development of academic staff through opportunities in further education, industrial exposure, as well as research and development.
3. Policies, internal processes and practices that are in place at all levels within the Technological Institutions relating to the five criteria as stated in Section 9 of this Manual.
4. Evidence of the on-going participation of industry advisors in discussions and forums,

9.3 Supporting Material Document – Digital Format (MEng C)

This document is to provide supporting material for the programme in digital format (softcopy) as follows:

9.3.1 Supporting Information

- Provide additional information on the Technological Institutions, faculty/school/department, and programme not provided in the Self-Assessment Report.

9.3.2 Academic and Laboratory Support Staff

- Provide personal file and certificate for each staff member.

Staff file

9.3.3 Programme Structure and Contents

- Provide evidence of the use of tutorials and non-conventional delivery methods such as Problem Based Learning (PBL) techniques alongside traditional lectures. Provide a summary of industrial training schemes, and list of companies involved. Provide evidence of activities relevant to industry exposure.

From the following link, online practical facilities can be accessed.

Online Practical Link

Click **HERE** to log in to the online electrical/
mechanical/civil practical materials. You will need the
password.

The password will be issued to the enrolled students

9.3.4 Equipment, Software and Titles of Books and Journals

- Provide a list of all equipment and software used by the programme including recent additions and planned additions, as well as the titles of books, and journals for the programme.

Physical Resources folder

From the following link, practical resources can be accessed.

Practical Resources

www.highlightcomputer.com/PracticalResources.htm

Physical Resources

www.highlightcomputer.com/PhysicalResources.htm

Learner Resources

www.highlightcomputer.com/LearnerResources.htm

9.3.5 External Examiner and Advisory Board (MEng C)

- Provide the external examiner's reports and reports/minutes from advisory board meetings.

9.4 Institutional Documents and Additional Documentation to be Made Available during the Visit

- The following items, which constitute evidence to support the information requested in Sections 9.2 and 9.3 shall be made available during the visit:

9.4.1 Technological Institutions Documents

- Provide the Handbook, Calendar supplement, or other official publications relating to the faculty/school/department, and containing the statement of programme details; Technological Institutions brochure and any other documents that relate to the faculty/school/department,

9.4.2 Documents Related to Programme Objectives and Outcomes

- Provide all relevant documents and evidence related to Programme Objectives and Learning Outcomes (one copy) as follows:
- Course files – for every course offered by the programme, provide the course information to include the targeted course learning outcomes, course synopsis/syllabus, and a list of references (texts used).
- Final examination papers complete with answer scheme and graded examination papers with low, medium and high grades are also to be provided.
- Any information with regard to other learning activities and assessment measures such as projects, quizzes, tutorial questions, assignments, class projects, copies of the course notes (optional), and any other materials used for the course are also to be included. For laboratory courses,
- Objectives and outcomes assessment instruments – supporting documentation for objectives and
- outcomes assessment including sample questionnaires, portfolios, survey forms, video recordings, etc.
- All evidence related to Continual Quality improvement of the program.

The documents related to above requirements are presented in DVDs and will be available upon request.

DVD Contents

- Mixed DVD Lessons School + Higher Education/ IQY+STCTU Degrees

- Study Guides+Lessons for Adv Dip Eng+Mgt+IT ALL Combined Update Mixed
- Study Guides+Lessons for Bachelor Degree-Common Subjects 1 Mixed

- Assessment Cover Sheet+Assessment Information+Assessment Feedbacksheet
- Assessment Mapping
- Assessment Validation
- Components of Assessment Mapping
- Test Questions
- Unit Evaluation

Self-Assessment Report – Hardcopy (MEng C)

- A Self-Assessment Report is an account of the Technological Institutions' plan, implementation, assessment and evaluation of the programme conducted. It reflects the processes with result obtained used in continual quality improvement at all levels of the programme's activities. This appropriately bound document, ranging between 50 – 100 pages with all pages numbered and a table of contents.

A minimum of 120 credit hours of which 80 credit hours must be core engineering courses offered over a period of four years (It means 3rd, 4th, 5th, 6th).

Final year project (minimum 6 credit hours)

Industrial training (minimum of 8 weeks)

The above requirements have been provided in curriculum section

9.4.3 Final Project Reports

- For a sample of students, provide a copy of the final project report, instruction sheets, and grade
- sheets or other means of evaluation for the project.
- Provide the listing of final project titles for the past few years.

From the following links, the students project works can be accessed.

Some students' project works.pdf File

<http://www.highlightcomputer.com/Somestudentsprojectworks.htm>

9.4.4 Industrial Training Reports (MEng C)

- For a sample of students, provide a copy of the training reports, guidelines for the training, and reviews by the industry sponsors as well as the faculty mentors.

9.4.5 Laboratory Reports

- For a sample of students, provide a copy of the laboratory reports, instruction sheets, and grade sheets or other means of evaluation for the project laboratory report.

From the link below, the above 9.4.4 * & 9.4.5 and the records related to the following points can be accessed.

- Practical participation Record
- Elect Eng Students' taking parts in practicals(Joe).pdf

<http://www.highlightcomputer.com/studentstakingpartinpractical.htm>

9.4.6 Quality Assurance Records (MEng C)

- Provide minutes and records of action and improvement of meetings of the programme teaching team,

From the link below, records related to the above 9.4.6 can be accessed.

Diploma in Mechanical Engineering
Diploma in Civil Engineering
Diploma in Computer Engineering
Diploma in Renewable Energy Engineering

Diploma in Engineering (Electrical+ Mechanical+ Civil+ Renewable Energy Engineering+ Computer Engineering & Information Technology) Course Outlines

IQY Technical College's one year Diploma in Engineering is designed to train the students to work as Engineering Associate or Engineering Technicians in wide ranges of industries.

It is designed to provide the following competencies.

To train the students to have a wide range of functions within engineering enterprises and engineering teams.

The training includes feasibility investigation, scoping, establishing criteria/performance measures, assessing and reporting technical and procedural options; design and development; component, resources and materials sourcing and procurement; construction, prototyping, manufacture, testing, installation, commissioning, service provision and de-commissioning; tools, plant, equipment and facilities acquisition, management, maintenance, calibration and upgrades; operations management; procedures documentation; presentation and reporting; maintenance systems design and management; project and facility management; quality assurance, costing and budget management; document control and quality assurance.

The training is designed for the students

- To be closely familiar with standards and codes of practice, and to become expert in their interpretation and application to a wide variety of situations.
- To develop very extensive experience of practical installations, and may well be more knowledgeable than Professional Engineers or Engineering Technologists on detailed aspects of plant and equipment that can contribute very greatly to safety, cost or effectiveness in operation.
- To develop high levels of expertise in aspects of design and development processes. These might include, for example, the use of advanced software to perform detailed design of structures, mechanical components and systems, manufacturing or process plant, electrical and electronic equipment, information and communications systems, and so on.
- To do the construction of experimental or prototype equipment.
- To develop detailed practical knowledge and experience complementing the broader or more theoretical knowledge of others.

The training is also designed to provide a good grounding in engineering science and the principles underlying their field of expertise, to ensure that their knowledge and skills are portable across different applications and situations within the broad field of practice. Equipment, vendor or context-specific training in a particular job are not sufficient to guarantee generic competency. Given a good knowledge base, however, the graduates may build further on this through high levels of training in particular contexts and in relation to particular equipment.

The competencies of graduates to equip them to certify the quality of engineering work and the condition of equipment and systems in defined circumstances, laid down in recognised standards and codes of practice.

The training is also designed to lead or manage teams appropriate to these activities. Some may establish their own companies or may move into senior management roles in engineering and related enterprises, employing Professional Engineers, Engineering Technologists, and other specialists where appropriate.

Diploma in Engineering can be studied in the following specializations

- Diploma in Electrical Engineering
- Diploma in Mechanical Engineering
- Diploma in Civil Engineering
- Diploma in Renewable Energy Engineering
- Diploma in Computer Engineering / Diploma in Information Technology

Diploma in Electrical Engineering

This program is designed with 30 credit points integrating 15 credit points Certificate in Electrical Engineering. The completion of this program can be articulated into 60 points Advanced Diploma in Electrical Engineering & 120 credit points Professional Diploma in Electrical Engineering which is the award of Bachelor of Engineering degree by the universities affiliated to IQY Technical College.

The graduates of Diploma in Electrical Engineering can apply for Associate Member of Singapore Institute of Engineering Technologists & then leading to the professional status of ASEAN Engineering Technician.

Study Areas

Electrical circuits, Basic Electronics, Mathematics, Physics, Electrical Wiring, Electrical Machines, Electro-magnetism, Computer Applications, Control System, Process Control, Electrical Contracting, Solar Electrical System, Electrical Drafting

Detailed contents of the units

Detailed contents of the units can be viewed at the following links.

Diploma in Mechanical Engineering

This program is designed with 30 credit points integrating 15 credit points Certificate in Mechanical Engineering. The completion of this program can be articulated into 60 points Advanced Diploma in Mechanical Engineering & Mechatronics & 120 credit points Professional Diploma in Mechanical Engineering & Mechatronics which is the award of Bachelor of Engineering degree by the universities affiliated to IQY Technical College.

The graduates of Diploma in Mechanical Engineering can apply for Associate Member of Singapore Institute of Engineering Technologists & then leading to the professional status of ASEAN Engineering Technician.

Study Areas

Mathematics, Physics, Machine Principle, Electrical Circuits, Heat Transfer, Principle of Engines, Fluid Mechanics, Engineering Mechanics, Mechanical Drawing, Hydrocarbon, Wind Turbine, Polymer Science, Turbo Machinery, Basic Management

Specialized Fields

Automotive Engineering, Marine Engineering

Diploma in Civil Engineering

This program is designed with 30 credit points integrating 15 credit points Certificate in Civil Engineering & Construction Studies. The completion of this program can be articulated into 60 points Advanced Diploma in Civil Engineering & 120 credit points Professional Diploma in Civil Engineering & Building Services which is the award of Bachelor of Engineering degree by the universities affiliated to IQY Technical College.

The graduates of Diploma in Civil Engineering can apply for Associate Member of Singapore Institute of Engineering Technologists & then leading to the professional status of ASEAN Engineering Technician.

Study Areas

Mathematics, Physics, Electrical Principle, Fluid Mechanics, Hydraulics, Hydrology, Building Construction, Sanitation & Water Supply, Energy Efficient Building Design

Diploma in Renewable Energy Engineering

This program is designed with 30 credit points integrating 15 credit points Certificate in Renewable Energy Course Completion Certificate which is delivered through the public seminars. The completion of this program can be articulated into 120 credit points Professional Diploma in Renewable Energy Engineering which is the award of Bachelor of Engineering degree by the universities affiliated to IQY Technical College.

The graduates of Diploma in Renewable Energy Engineering can apply for Associate Member of Singapore Institute of Engineering Technologists & then leading to the professional status of ASEAN Engineering Technician.

[Study Areas](#)

Foundation Studies in Renewable Energy and Sustainability, Grid Connected Photovoltaic Power Systems, Solar and Thermal Energy Systems, Energy Storage Systems, Renewable Energy Resource Analysis, Wind Energy Conversion Systems, Energy System Efficiency

Diploma in Computer Engineering/ Diploma in Information Technology

This program is designed with 30 credit points integrating 15 credit points Certificate in Information Technology. The completion of this program can be articulated into 60 points Advanced Diploma in Information Technology & 120 credit points Professional Diploma in Information Technology or Professional Diploma in Computer Engineering which is the award of Bachelor of Applied Science (Information Technology)/Bachelor of Engineering degree by the universities affiliated to IQY Technical College.

The graduates of Diploma in Computer Engineering can apply for Associate Member of Singapore Institute of Engineering Technologists & then leading to the professional status of ASEAN Engineering Technician.

The graduates of Diploma in Information Technology can apply for membership of International Institute of Science Engineering & Management.

To be awarded Diploma in Computer Engineering, the students need to do Diploma in Information Technology & Diploma in Electrical Engineering at the same time.

[Study Areas](#)

IT Fundamental, Computer Application, Computer Programming, System Analysis, Software Engineering, IT Project, Business Information System

Advanced Diploma in Electrical Engineering

Advanced Diploma in Mechanical Engineering

Advanced Diploma in Civil Engineering

Advanced Diploma in Computer Engineering

Advanced Diploma in Renewable Energy Engineering

Advanced Diploma in Engineering (Electrical+ Mechanical+ Civil+ Renewable Energy Engineering+ Computer Engineering & Information Technology) Course Outlines

IQY Technical College's two years Advanced Diploma in Engineering is designed to train the students to work as Engineering Technologist in wide ranges of industries.

It is designed to provide the following competencies.

To train the students to operate within broadly-defined technical environments, and undertake a wide range of functions and responsibilities. They are often specialists in the theory and practice of a particular branch of engineering technology or engineering-related technology (the technology domain), and specifically in its application, adaptation or management, in a variety of contexts. Their expertise often lies in familiarity with the current state of development of a technology domain and most recent applications of the technology.

The training is designed to provide expertise to the students which may be at a high level, and fully equivalent to that of a Professional Engineer. That is designed

- to exercise the same breadth of perspective as Professional Engineers, or carry the same wide-ranging responsibilities for stakeholder interactions, for system integration, and for synthesising overall approaches to complex situations and complex engineering problems.
- to possess for a strong understanding of practical situations and applications, with the intellectual challenge of keeping abreast of leading-edge developments as a specialist in a technology domain and how these relate to established practice. For this purpose Engineering Technologists need a strong understanding of scientific and engineering principles and a well-developed capacity for analysis.
- to apply current and emerging technologies, often in new contexts; or with the application of established principles in the development of new practice.
- To contribute to the advancement of technology.
- to take responsibility for engineering projects, services, functions and facilities within a technology domain, for specific interactions with other aspects of an overall operating context and for managing
- to contribute the specialist work to a broader engineering system or solution. In these roles, Engineering
- to focus on sustainable solutions and practices which optimise technical, social, environmental and economic outcomes within the technology domain and over a whole systems life cycle.
- to have an intimate understanding of the standards and codes of practice that underpin the technology domain and ensure that technology outcomes comply with statutory requirements. Engineering Technologists are required to interact effectively with Professional Engineers and Engineering Associates, with other professionals, tradespersons, clients, stakeholders and society in general, to ensure that technology outcomes and developments fully integrate with the overall system and context.
- to ensure that all aspects of a technological product, or operation are soundly based in theory and fundamental principle.
- to understand how new developments relate to their specific field of expertise.
- to interpret technological possibilities, to investigate interfaces, limitations, consequences, costs and risks.

The training is also designed to provide the skills of Engineering Technologists who may lead teams responsible for the implementation, operation, quality assurance, safety, management, and maintenance of projects, plant, facilities, or processes within specialist practice area(s) of the technology domain. Some Engineering Technologists may establish their own companies or may move into senior management roles in engineering and related enterprises, employing Professional Engineers and other specialists where appropriate.

The following competencies are outlined in the Advanced Diploma in Engineering Programs

1. KNOWLEDGE AND SKILL BASE

- 1.1. Systematic, theory based understanding of the underpinning natural and physical sciences and the engineering fundamentals applicable to the technology domain.
- 1.2. Conceptual understanding of the, mathematics, numerical analysis, statistics, and computer and information sciences which underpin the technology domain.
- 1.3. In-depth understanding of specialist bodies of knowledge within the technology domain.
- 1.4. Discernment of knowledge development within the technology domain.
- 1.5. Knowledge of engineering design practice and contextual factors impacting the technology domain.
- 1.6. Understanding of the scope, principles, norms, accountabilities and bounds of sustainable engineering practice in the technology domain.

2. ENGINEERING APPLICATION ABILITY

- 2.1. Application of established engineering methods to broadly-defined problem solving within the technology domain.
- 2.2. Application of engineering techniques, tools and resources within the technology domain.
- 2.3. Application of systematic synthesis and design processes within the technology domain.
- 2.4. Application of systematic approaches to the conduct and management of projects within the technology domain.

3. PROFESSIONAL AND PERSONAL ATTRIBUTES

- 3.1. Ethical conduct and professional accountability.
- 3.2. Effective oral and written communication in professional and lay domains.
- 3.3. Creative, innovative and pro-active demeanour.
- 3.4. Professional use and management of information.
- 3.5. Orderly management of self, and professional conduct.
- 3.6. Effective team membership and team leadership.

Advanced Diploma in Engineering can be studied in the following specializations

- Advanced Diploma in Electrical Engineering
- Advanced Diploma in Mechanical Engineering
- Advanced Diploma in Civil Engineering
- Advanced Diploma in Renewable Energy Engineering
- Advanced Diploma in Computer Engineering / Advanced Diploma in Information Technology

Advanced Diploma in Electrical Engineering

This program is designed with 60 credit points integrating 30 credit points Diploma in Electrical Engineering. The completion of this program can be articulated into 60 of 120 credit points Professional Diploma in Electrical Engineering which is the award of Bachelor of Engineering degree by the universities affiliated to IQY Technical College.

The graduates of Advanced Diploma in Electrical Engineering can apply for Member of Singapore Institute of Engineering Technologists & then leading to the professional status of ASEAN Engineering Technician.

Study Areas

Electrical Power Circuits, Electrical Power System, Mathematics, Physics, AC/DC Machines, Control System, Power System Protection, Energy Efficiency, Project Management, Advanced Electrical Drafting, Power Transmission Line, Engineering Officer Competency Report.

Professional Diploma in Electrical Engineering Professional Diploma in Mechanical Engineering Professional Diploma in Civil Engineering Professional Diploma in Computer Engineering Professional Diploma in Renewable Energy Engineering

Professional Diploma in Engineering (Electrical+ Mechanical+ Civil+ Renewable Energy Engineering+ Computer Engineering & Information Technology) Course Outlines

IQY Technical College's four years Professional Diploma in Engineering is designed to train the students to work as Engineering Technologist /Professional Engineer in wide ranges of industries.

It is designed at the same academic requirement as to Bachelor of Engineering degree but IQY Technical College is operating as a vocational education & training college not as a university, the award is to be described as Professional Diploma. The graduates of the Professional Diploma in Engineering can be awarded Bachelor of Engineering by the universities which are affiliated to IQY Technical College.

The program is designed to train the students to become Professional Engineers who are required to take responsibility for engineering projects and programs in the most far-reaching sense.

It is designed to provide the following competencies.

- To perform the reliable functioning of all materials, components, sub-systems and technologies used; their integration to form a complete, sustainable and self-consistent system; and all interactions between the technical system and the context within which it functions. The latter includes understanding the requirements of clients, wide ranging stakeholders and of society as a whole; working to optimise social, environmental and economic outcomes over the full

lifetime of the engineering product or program; interacting effectively with other disciplines, professions and people; and ensuring that the engineering contribution is properly integrated into the totality of the undertaking.

- To do interpreting technological possibilities to society, business and government; and for ensuring as far as possible that policy decisions are properly informed by such possibilities and consequences, and that costs, risks and limitations are properly understood as the desirable outcomes.
- To bring knowledge to bear from multiple sources to develop solutions to complex problems and issues, for ensuring that technical and non-technical considerations are properly integrated, and for managing risk as well as sustainability issues. While the outcomes of engineering have physical forms, the work of
- To train the students to become predominantly intellectual in nature. In a technical sense, Professional Engineers are primarily concerned with the advancement of technologies and with the development of new technologies and their applications through innovation, creativity and change. Professional Engineers may conduct research concerned with advancing the science of engineering and with developing new principles and technologies within a broad engineering discipline.
- To contribute to continual improvement in the practice of engineering, and in devising and updating the codes and standards that govern it.
- To take a particular responsibility for ensuring that all aspects of a project are soundly based in theory and fundamental principle, and for understanding clearly how new developments relate to established practice and experience and to other disciplines with which they may interact. One hallmark of a professional is the capacity to break new ground in an informed, responsible and sustainable fashion.

The program is also designed to provide the skills required for the graduated to lead or manage teams appropriate to these activities, and may establish their own companies or move into senior management roles in engineering and related enterprises.

COMPETENCIES

1. KNOWLEDGE AND SKILL BASE

- 1.1. Comprehensive, theory based understanding of the underpinning natural and physical sciences and the engineering fundamentals applicable to the engineering discipline.
- 1.2. Conceptual understanding of the mathematics, numerical analysis, statistics, and computer and information sciences which underpin the engineering discipline.
- 1.3. In-depth understanding of specialist bodies of knowledge within the engineering discipline.
- 1.4. Discernment of knowledge development and research directions within the engineering discipline.
- 1.5. Knowledge of engineering design practice and contextual factors impacting the engineering discipline.
- 1.6. Understanding of the scope, principles, norms, accountabilities and bounds of sustainable engineering practice in the specific discipline.

2. ENGINEERING APPLICATION ABILITY

- 2.1. Application of established engineering methods to complex engineering problem solving.
- 2.2. Fluent application of engineering techniques, tools and resources.
- 2.3. Application of systematic engineering synthesis and design processes.
- 2.4. Application of systematic approaches to the conduct and management of engineering projects.

3. PROFESSIONAL AND PERSONAL ATTRIBUTES

- 3.1. Ethical conduct and professional accountability.
- 3.2. Effective oral and written communication in professional and lay domains.
- 3.3. Creative, innovative and pro-active demeanour.
- 3.4. Professional use and management of information.
- 3.5. Orderly management of self, and professional conduct.
- 3.6. Effective team membership and team leadership.

Professional Diploma in Engineering can be studied in the following specializations

- Professional Diploma in Electrical Engineering
- Professional Diploma in Mechanical Engineering
- Professional Diploma in Civil Engineering
- Professional Diploma in Renewable Energy Engineering
- Professional Diploma in Computer Engineering / Professional Diploma in Information Technology

Professional Diploma in Electrical Engineering

This program is designed with 120 credit points integrating 60 credit points Advanced Diploma in Electrical Engineering. The completion of this program can be awarded Professional Diploma in Electrical Engineering together with the award of Bachelor of Engineering degree by the universities affiliated to IQY Technical College.

The graduates of Professional Diploma in Electrical Engineering can apply for Fellow of Singapore Institute of Engineering Technologists & then leading to the professional status of ASEAN Engineering Technologists or ASEAN Engineer.

Professional Diploma in Renewable Energy Engineering

This program is designed with 120 credit points integrating 60 credit points Advanced Diploma in Renewable Energy Engineering. The completion of this program can be awarded Professional Diploma in Renewable Energy Engineering together with the award of Bachelor of Engineering degree by the universities affiliated to IQY Technical College.

This program explores the way to make the best use of renewable energy technologies including solar thermal systems, photovoltaics, wind and biomass. Renewable Energy Engineering borrows much of its structure from some other areas of engineering, such as electrical engineering and photovoltaic engineering. It encompasses a broad range of renewable energy technologies including electricity generation from solar thermal systems, photovoltaics, wind and biomass. It also covers solar architecture and energy efficient housing design

The graduates of Professional Diploma in Renewable Energy Engineering can apply for Fellow of Singapore Institute of Engineering Technologists & then leading to the professional status of ASEAN Engineering Technologists or ASEAN Engineer.

Study Areas

Foundation Studies in Renewable Energy and Sustainability, Grid Connected Photovoltaic Power Systems, Solar and Thermal Energy Systems, Energy Storage Systems, Renewable Energy Resource Analysis, Wind Energy Conversion Systems, Energy System Efficiency, Mathematics & Physics, Engineering Materials, Civil & Mechanical Engineering, Electrical Engineering, Electrical Machines, Electronics Control, Design & Management, Project, Engineering Competency Demonstration Report Writing.

Diploma in information Technology

Diploma in Information Technology

This course will provide the students with the skills and knowledge to manage information and communications technology (ICT) support in small-to-medium enterprises using a wide range of general ICT technologies. The students will learn skills to support computer systems, involving people, hardware, software and procedures in a networked environment. They will also learn skills that enable them to maintain and guide teams and manage projects.

This program is designed with 30 credit points integrating 15 credit points Certificate in Information Technology. The completion of this program can be articulated into 60 points Advanced Diploma in Information Technology & 120 credit points Professional Diploma in Information Technology or Professional Diploma in Computer Engineering which is the award of Bachelor of Applied Science (Information Technology)/Bachelor of Engineering degree by the universities affiliated to IQY Technical College.

Advanced Diploma in information Technology

Advanced Diploma in Information Technology

The Advanced Diploma in Information Technology provides the students with high level Information and Communications Technology (ICT) process improvement in senior ICT roles within organisations. The qualification builds on a base core of management competencies, with specialist and general elective choices to suit particular ICT and business needs, especially in the areas of knowledge management and systems development.

This qualification is suited to dynamic leaders who wish to broaden their business perspective, enhance [management](#) capability and strengthen leadership

behaviour. The focus is on managing the strategic direction of a business through leadership, financial management and comprehensive business operations. It is

ideal for those in senior management positions with responsibility for strategic leadership across the business or in specialist areas.

The following competencies are integrated in this course

- Provide leadership across the organisation
- Manage employee relations
- Develop and implement a business plan
- Manage organisational change
- Manage innovation and continuous improvement
- Manage risk
- to builds on a solid foundation in software and hardware and through flexible study plans allows students to specialise if desired.
- to include bioinformatics, computer systems and networks, enterprise information systems, human-computer interaction, software design and software information systems at technologist level.
- to be project-focused with studies in programming languages, algorithms and information structure and develop the ability to process data or information in

- order to solve problems at technologist level.
- to provide team dynamics, presentation skills and project management at middle class manager level.
- The completion of this program can be articulated into 60 of 120 credit points Professional Diploma in Information Technology which is the award of Bachelor of Applied Science (Information Technology) or Bachelor of Information Technology degree by the universities affiliated to IQY Technical College.

Professional Diploma in Information Technology

IQY Technical College's four years Professional Diploma in Information Technology is designed to train the students to work as computing professionals, to use ICT to be a better scientist, or to empower themselves to better understand the technology behind many of today's careers. Increasingly, employers see an [ICT qualification](#) as a sign of academic well-roundedness. ICT drives innovations such as the human genome project, vaccine research, environmental modelling. Emerging areas include electronic security, earth simulation (related to the mining boom) and bioinformatics. Independent job market surveys show that demand for graduates is escalating, along with salaries. Industry is concerned about a shortage of talent.

It is designed at the same academic requirement as to Bachelor of Information Technology degree but IQY Technical College is operating as a vocational education & training college not as a university, the award is to be described as Professional Diploma. The graduates of the Professional Diploma in Engineering can be awarded Bachelor of Applied Science (Information Technology) & Bachelor of Information Technology by the universities which are affiliated to IQY Technical College. The graduates can apply for membership of International Institute of Science Engineering & Management. The program is designed to train the students to become ICT Professionals who are required to take responsibility for ICT projects and programs in the most far-reaching sense.

It is designed to provide the following competencies.

- to builds on a solid foundation in software and hardware and through flexible study plans allows students to specialise if desired.
- to include bioinformatics, computer systems and networks, enterprise information systems, human-computer interaction, software design and software information systems.
- to be project-focused with studies in programming languages, algorithms and information structure and develop the ability to process data or information in order to solve problems.
- to provide team dynamics, presentation skills and project management.

See the [course list](#) for courses that can be studied as part of the Bachelor of Information Technology.

Diploma in Management

IQY Technical College's one year Diploma in Management is designed to train the students to work as middle class managers in wide ranges of industries & companies.

This program is designed with 30 credit points integrating 15 credit points Certificate in Information Technology or pure management stream. The completion of this program can be articulated into 60 points Advanced Diploma in Information Technology Management & 120 credit points Professional Diploma in Business Management which is the award of Bachelor of Business Management degree by the universities affiliated to IQY Technical College.

The graduates can apply for membership of The Institute of Professional Business and Technical Managers.

It is designed to provide the following competencies.

- To explore the factors for achieving success with a business, management is becoming increasingly challenging.
- To provide the planning on a [management career](#).
- To provide the understanding of the leadership process will form the foundation to build the management skills.
- To be able to effectively manage others to perform at their best while focusing on the growth of a business.
- This course can turn your management experience into a formal qualification, or it can up-skill you to get further ahead in your career.

This course will also train the students to develop a project plan, manage budgets and seek opportunities for further [business](#) improvement. The students will gain knowledge on how to liaise with stakeholders and ensure team effectiveness. This diploma also addresses the multiple challenges faced by managers in today's rapidly changing business environment and provides solutions and strategies to work under various business conditions.

This course is fully flexible with no assessment due dates or classes to attend. Structure your learning around students' current commitments and take the next step in the [business management](#) career.

Potential career outcomes

- business manager
- team leader
- facilities coordinator

- department manager

Detailed contents of the units

Detailed contents of the units can be viewed at the following links.

Advanced Diploma in Management

Advanced Diploma of Information Technology Management

The Advanced Diploma in Information Technology Management provides the students with high level Information and Communications Technology (ICT) process improvement in senior ICT roles within organisations. The qualification builds on a base core of management competencies, with specialist and general elective choices to suit particular ICT and business needs, especially in the areas of knowledge management and systems development.

This program is designed with 60 credit points which is integrated with 30 points from Diploma in Information Technology or Diploma in Management.

- The students who complete Diploma in Information Technology attend the Diploma in Management units together with Advanced Diploma in Information Technology units and then can be graduated with Advanced Diploma in Information Technology Management.
- The students who complete Diploma in Management attend the Diploma in Information Technology units together with Advanced Diploma in Information Technology units and then can be graduated with Advanced Diploma in Information Technology Management.

It is designed to provide the following competencies.

The following competencies are integrated in this course

- Provide leadership across the organisation
- Develop and implement strategic plans
- Manage employee relations
- Develop and implement a business plan
- Manage organisational change
- Manage finances
- Manage innovation and continuous improvement
- Manage risk
- to builds on a solid foundation in software and hardware and through flexible study plans allows students to specialise if desired.
- to include bioinformatics, computer systems and networks, enterprise information systems, human-computer interaction, software design and software information systems at technologist level.
- to provide team dynamics, presentation skills and project management at middle class manager level.

The completion of this program can be articulated into 60 of 120 credit points Professional Diploma in Information Technology or Professional Diploma in Business Management which is the award of Bachelor of Applied Science (Information Technology), Bachelor of Information Technology or Bachelor of Business Management degree by the universities affiliated to IQY Technical College.

Professional Diploma in Management

Professional Diploma in Business Management

Professional Diploma in Business (Management) is a highly innovative and flexible program that is designed to develop professional capabilities for tomorrow's managers and business leaders.

As well as providing the operational skills and knowledge required to manage successful organisations, students also participate in workplace learning subjects that provide real-life, practical experience.

An optimum blend of theory and practice is offered, with a combination of subjects to develop both soft skills for working with people and hard skills directed at areas in operations and project management.

This course is designed with 120 Credit points integrating 60 Points Advanced Diploma in Information Technology Management.

It is designed at the same academic requirement as Bachelor of Business Management degree but IQY Technical College is operating as a vocational education & training college not as a university, the award is to be described as Professional Diploma. The graduates of the Professional Diploma in Business (Management) can be awarded Bachelor of Business by the universities which are affiliated to IQY Technical College.

The graduates of Professional Diploma in Business (Management) can apply for Membership of Institute of Professional Business and Technical Managers.

An Introduction to theory of complex variables

Complex numbers

Functions

Differentiability

Integration in the complex plane

Integral theorems

Power series

Introduction of rational functions of trigonometric functions.

Continuous distribution

Exponential distribution
Normal distribution
Gamma distribution
Convergence in distribution
F distribution

Discrete distribution

Binomial distribution
Poisson distribution

Elementary linear algebra

Algebra in F^n Example problems
Geometric meaning of vectors
Geometric meaning of vector addition
Distance between points in R^n Length of vector
Geometric meaning of scalar multiplication
Dot product
Cross product
System of equation geometry
System of equation – Algebraic operation
Matrice arithmetic
Determinants –Basic technique & properties

Integration and differential equations

List of integrals
Introduction to background
Theorem of integration
Improper integrals
Improper integral problems
Integration of rational functions

Differential equations
First order ordinary differential equations
Homogenous equations
The general linear equations

Random variables

Simple introduction examples
Problems
Frequency and distribution functions in 1 dimension

Mathematical modelling preliminary

Introduction
Discrete time model

Maths 301 Introduction to Complex Variables

The residue Theorem

Fourier Transform

Integral theorem of complex analysis with applications to the evaluation of real integral

Introduction

Integral theorems – The green Theorem

Cauchy's integral theorem

Cauchy's residue theorem

Maths 302 Elementary Linear Algebra

A formula for the inverse

Cramer's rule

Example 6.2.3 , 6.2.4 , 6.2.6, 6.2.7

Rank of a matrix

Example 8.2.9 , 8.2.10, 8.3.3 , 8.3.5, 8.3.6, 8.3.7, 8.3.8

Linear independence and bases

Linear transformation

Constructing the matrix of a linear transformation

Linear programming

Maths 401 Continuous Distribution

χ^2 Distribution

F Distribution

F Distribution & "t" Distribution

Estimation of parameters

Maths 402 Discrete Distribution

Geometric distribution

Pascal distribution

Negative binomial distribution

Hyper geometric distribution

Maths 303 Essential Engineering Mathematics

Vectors and matrices

Functions and limits , Example problems

Calculation of one variable (Part 1) Differentiation,

Calculation of one variable (Part 1) Integration,

Calculus of many variables,

Ordinary differential equations,

Complex function theory

Maths 501 Introduction to probability

Theoretical background

Playing card

Binomial distribution

Lotto Example

Conditional probabilities –Baye's formula

Maths 501 Linear algebra and matrices

Linear transformation matrices

Definition 2.1.1 to 2.1.3

i, j Entry of product Definition 2.1.8

Rank of matrices

Row operations

Maths 502 Introductory Finite Difference Method for PDE

Partial differential equations. Example problems

Taylor theorem

Iterative solution methods

Jacobi Iteration

Gauss Seidel Iteration

Successive Relaxation method

Maths 601 Random Variables

Theoretical results

Frequencies and distribution (1 dimension)

Function of random variables

BAE 402 Calculus (3 pt)

Calculus 1 a .pdf

Differentiation, Example problems

Integration, Example problems

Simple differential equations, Example problems

Calculus 2 a .pdf

Integration of trigonometric polynomials

Complex decomposition of a fraction between two polynomials

Chain rule

Calculation of the directional derivatives

An overview of integration in the plane and in the space

Line integrals

Surface integral

Green's theorem in the plane

Wind Energy

Theory of wind energy

Wind turbine types and components

Wind energy measurement, Wheel encoder Worked

ME634 Pneumatics

Principle of pneumatics

Linear actuators

Flow control

Pneumatics sensors

Pneumatics symbols

BAE 405 Advanced Circuit Analysis (3 pt)

DC Circuit Analysis

Circuit Theory

Modulators

Analog, digital signals , electric current, power summary

Circuit analysis, electric potential, electric power, sign convection, electric source, Kirchoffs' law

Circuit elements, characteristics KCL, KVL

Resistor (Series, parallel, wheatstone bridge, Nodal analysis

Nodal analysis, mesh analysis

Superposition theorem, Thevenin's theorem, Norton theorem, Maximum power transfer theorem,

Operational amplifier

Inverting amplifier circuit, Summing amplifier, Differential amplifier

Capacitor, Op-amp integrator, stored energy

Mutual inductance, time constant, transient

Transient response of 1 st order circuit, RL transient analysis, sequential switching

RC/RL Circuit , Propagation, Delay, DRAM

Semi conductor

PN Junction diode

Light emitting diode

MOSFET

Digital signal

CMOS Digital circuit

Combinational logic circuits

Flip flops

Propagation delay in timing diagram

Integrated circuit fabrication
Device isolation methods
Interconnected resistance and capacitance
Transistor scaling
Integrated circuit design for application in communications
Small signal amplifiers
Network noise intermodulation distortion
CAD for noise analysis
Sensors & Detectors
Low noise design methodology
Oscillators
Modulators and demodulators

Concepts in Electrical Circuit

Circuit theorem
Sinusoids & phasors
Frequency response

EE303 Engineering Circuit Analysis

Basic circuits
Basic Nodal and Mesh analysis
Linear and Superposition/ Source Transformation
RL/ RC Circuits
RLC Circuits
Sinusoidal steady state analysis
AC Power Circuit Analysis
Polyphase Circuits
Magnetically coupled circuits
Complex Frequency / Laplace Transform
Laplace Transform
Circuit analysis in " S " domain
Pole/ Zero constellation
Frequency Response
Two ports network
Fourier Circuit Analysis
Use of symmetry theory

EE404 Electrical Measurement (1 pt)

Measurement of inductance and capacitance
Measurement of resistance
Magnetic measurement
High voltage measurement and testing
Location of cable fault
Measurement of power
Measurement of energy

BAE 406 Electro-mechanics (2 pt)

Electro-mechanic -1.0.1 Scope of application

1.1 Electro-magnetic theory

1.1.1a Magnetic field system, Table 1.1

1.1.1.b Electric field system Table 1.2

Lumped electro-mechanical elements

Lumped parameter-electro-mechanic

Rotating machines

Lumped parameter-electro mechanical dynamics

EE 502 Electrical Machines

DC Generator, Example problems

DC Motors, Example problems

Efficiency & heating of electrical machines, Example problems

Three phase transformer, Example problems

Three phase induction motors, Example problems

Synchronous generators, Example problems

Synchronous motors, Example problems

Basic of industrial motor control, Example problems

Regulation

Line and machine chart

Voltage regulation stability

Fault calculation in line

Electrical Power Distribution in Industry & Transmission (Electrical Distribution Engineering)

Planning & design

Electrical design

Mechanical design (Over head)

Mechanical design (Under ground)

Metering

Conductor inductance & capacitance

Power Transmission and Practical Power Distribution

Electric power system

Percentage and per unit quantities

Circuit constants

Assemblies of power system components

Power circuit stability

BAE 502 Linear System (1 pt)

Controllability of linear control system

Finite dimensional linear control system

Linear partial differential equations

Introduction to intelligent control system with high degrees of autonomy

Overview of field

Control system

System identification
Digital and analog
System metrics
System modelling
Classical control
Transform
Transfer functions
Sampled data system
System delays
Poles and zeros
Modern control
State space equation
Linear system solution

BAE 503 Control System (4 pt)

Gain
Block diagram
Feedback control loop
Bode plot
Nichol chart

Stability

Stability
Routh Hurwitz Criterion, Root Locus
Nyquist Criterion
State Space Stability

Controllers & Compensators

Controllability & Observability
System Specifications
Controllers, Compensators
Z - Transform

Non Linear Control Applications

Application of input/ output linearization
Non linear control for 2 stages PF correction converter
Non linear observer based control allocation

Control Engineering MATLAB

Transfer functions and their responses
Frequency response/ Plotting
Closed loop control
Controller design

Feedback and Control System

Introduction to linearized dynamic model
Transfer function model of physical systems
Transient performance / S- Plane
Feedback system modelling / Performance

Dynamic compensation of feedback system

PID Control

Application of PID controllers in motor drive system

Applications of Non Linear Control

Introduction

Phase plane method

Process Control

Analog Signal Conditioning

Digital Signal Conditioning

Final Control

Discrete State Control

Controller Principle

Analog Controller

Digital Controller

Control Loop Characteristics

Numerical Control

Introduction to numerical control machinery

Numerical control system

Programming co-ordinates

Two axis programming

Three axis programming

Maths for numerical control programming

BAE 504 Power System Analysis (1 pt)

Overview

Real & Reactive power injected bus

Classification of buses

Classification of buses

Preparation of data for load flow

Load flow by Gauss Seidel method

Updating load bus voltage

Updating PV bus voltage

Convergence of the algorithm

Solution of a set of non linear equation by Newton Raphson method

Load flow by Newton Raphson method

Load flow algorithm

Formation of Jacobian matrix

Formation of Jacobian matrix

Solution of Newton Raphson load flow

Load flow results

Load flow results

Load flow programs in MATHLAB

Forming Y bus matrix

Gauss Seidel Load Flow

Solving non linear equation using Newton Raphson method

Newton Raphson load flow

Power System Analysis

Transformer

Transmission line model

Gauss Seidel Algorithm

Newton Raphson Iteration

DC Power Flow Algorithm

Modelling

Transient Stability

Power System Analysis

Power Apps Transient Stability validation document for single pole open/ close simulation

(Power flow analysis + FAULT ANALYSIS + Power system dynamics and Stability)

Static Analysis

Introduction

Network model

Active & reactive power flow

Nodal formation of power flow problem

Basic power flow problem

Solution of power flow problems

Fault analysis

Power system dynamics and stability

Synchronous machine model

The swing equation

Power swing in simple system

Oscillation in multi machine system

Voltage stability

Control of reactive power voltage

BAE 505 Power System Optimization (1 pt)

Introduction

Power Flow Analysis

Classic Economic Dispatch

Linear programming method

Mathematical model of economic dispatch

Linear programming model

Optimization of power system performance using facts devices

Optimization of dynamical system

Matrix Eigen Value Method

BAE 506 Power System Stability & Protection (2 pt)

Transient in RL circuit

Symmetrical fault

Transient in RL circuit

DC Source

AC Source

Faults in AC Circuit

Short circuit in unloaded synchronous generator

Symmetrical faults in power system

Calculation of fault current using Z bus matrix

Circuit breaker selection

Symmetrical components & representation of faulted network

Overview

Overview

Real & reactive power

Real & reactive power

Orthogonal Transformation

Sequence circuit for star load

Sequence circuit for delta load

Sequence circuit for synchronous generator

Sequence circuit for symmetrical transmission line

Sequence circuit for transformer

Star/ Star Connected Transformer

Delta/Delta Connected Transformer

Star/ Delta Connected Transformer

Sequence Network

Un- symmetrical Faults

Introduction

Single line to ground fault

Line to line fault

Two lines to ground fault

Fault current computation using sequence network

Transient Stability

Introduction

Power angle relationship

Swing equation

Equal area criterion

Equal area criterion

Multi machine stability

Oscillation in " S " Two areas System

Compensation of power transmission

Introduction

Ideal shunt compensator

Improving voltage profile

Improving power angle characteristics

Improving stability margin

Improving damping power oscillations

Ideal series compensator

Impact of series compensator for voltage profile

Improving power angle characteristics

Improving power angle characteristics

Alternate mode to voltage injection

Alternate mode to voltage injection

Comparison of two modes of operation

Power flow control and power swing damping

Power System Protection

Different types of relays and settings

- Technical feasibility of various options
- Cost of options
- Type of transmission AC/DC
- Number of circuits
- Conductor type
- Transmission loss
- Reactive power support requirements
- Reliability
- Quality of power supply
- Stability aspects of the interconnected system
- Operational planning
- Short circuit levels and breaker requirements
- over voltages and control
- Insulation coordination at substations
- Substation arrangements at the end of line, including switching arrangements.
- Insulation requirements.
- Protection, monitoring, control and automation requirements
- Study of harmonics where needed [as in case of HVDC or when a terminating station is close to sources of harmonics]
- Basic and Detailed engineering related to transmission towers, routes, substations

Philosophy of protective relaying

Fundamental of relaying

Current/ voltage/directional/ differential relay

Distance relaying

Pilot wire relay

Carrier current relay

Voltage transformer

Relay response

Generator protection

Transformer protection

Busbar protection

Line protection

Line protection with distance relay

Line protection with pilot relay

Power system stability

Power system stability Guidelines

Power system stability guidelines for determination and report

Direct stability analysis of electric power system using energy functions

Power system stability –New opportunity for control

Typical power quality and harmonic measurement plots

Robust power system stabilizer design using particle swarm optimisation techniques

Harmonic analysis

Power Quality

Power quality

Electrical protection for power system

Substation automation

Introduction to power quality

Harmonic model of transformer

Substation automation

Modelling analysis of synchronous machines

Life time reduction

Power system modelling under non sinusoidal condition

Impact of power quality on reliability

Role of filters in power system

BAE 507 Electro-mechanical Energy Conversion (2 pt)

Basic semiconductor physics

PN Junction semiconductor

Power switching devices

Electrical rating of switching devices

Cooling

Load/ switch communication

Driving semiconductor & thyristor

Protecting diode / Thyristor/ Transistors

Switching circuit energy recovery

Series , parallel devices operation protection

Naturally commutating converter

AC Voltage Regulator

DC choppers

Power inverters

Switched mode & resonant DC-DC power supplies

Capacitors

Soft magnetic materials

Resistors

Motor Control Electronics

AC Induction motor control

Motor control MCU

Networking for motor control system

DC motor control design

Motor control electronic devices

Power semi conductors

Mechatronics/ Robotics

Robotics Application

Robotic Gears

Interfacing

Robotic Sensors

Communication

BAE 508 Industrial Engineering & Industrial Management (1 pt)

Effective management decision making

Chapter (1) Introduction

Business Information System

Chapter (1) Defining Information System

Chapter (7) Acquiring Information System

Chapter (8) Developing Information System

Managing Human Resources in 21 Century

Chapter (3) Human resources Management

Management Basics

Chapter (2) The Manager's Job

Chapter (4) Planning in Organization

Operation Management

Chapter (1) Introduction

Chapter (2) Operation Strategy

Chapter (10) Work System Design

Chapter (11) Project Management

Chapter (12) Inventory Management

Quality Management

Chapter (7) Leadership in Quality Management

Chapter (8) Strategic Quality Management

Chapter (15) Implementing Quality Management

Strategic Financial Management

Chapter (1) Finance An Overview

Chapter (2) Capital Budgeting

Chapter (5) Equity Valuation & Cost of Capital

Strategic Management

Chapter (2) The Basic of Strategy

Chapter (3) The Levels of formulation of strategy

Chapter (6) External analysis

Chapter (7) Internal analysis

Chapter (10) Strategy implementation

Understanding organization part 1

Chapter (3) Organization structure

Chapter (4) Organization culture

Chapter (5) Managing behaviour

Chapter (6) Effective leadership

Part (2) Competency Units

Mgt 501 Basic Management & Communication Skills (1 pt)

Textbook – Mgt 501 Management Basics

Chapter (1) Management basics

Chapter (3) Planning

Chapter (5) Organizing

Chapter (6) Organizing the organization

Chapter (7) Leading

Textbook—Mgt501 Management Briefs

Chapter (2) Leadership

Chapter (5) Motivation

BAE 601 Computer Programming (3 pt)

Part (1) Overview Knowledge of the subject

Select any of the following textbooks

- C Programming
- C++ Programming
- C# Programming
- Object Oriented Programming
- C Programming in Linux

IT 401 Object Oriented Programming (1 pt)

IT 402 Structured Programming (1 pt)

IT 403 Visual Basic Programming (1 pt)

BAE 602 Computer Network (1 pt)

Computer Network

Peer to peer networking

Client server networking

Network hardware

Network cable

Hub

Wired network

Wireless network card

Firewall

Wiring the network

Wiring the network

Running the network program

Viewing network connection

Network set up on additional computers

Viewing network connection

Introduction

Network model

Data and signals

Data and signals

Data rate limit

Performance

Digital transmission

Digital transmission

Analog transmission

Analog transmission

Bandwidth utilization/ Multiplexing/
Spreading

Bandwidth utilization/ Multiplexing/
Spreading

Transmission media

Error detection & correction

Error detection and correction

Defining needs

Area covered

Organization information requirement

System VS Procedure

Types of systems

What are the systems?

Infrastructure

Support system

Data mart

Organizational structure

Planning for system development

System design

Security of information system

Risk management

BAE 603 Software Engineering (2 pt)

Introduction

Software process

Feasibility study

Project management

Documentation, Requirement analysis

Requirement specification

Business/ Legal aspect

Source code management

Formal specification

Object oriented design 1

Object oriented design 2

Object oriented design 3
System Architecture 1
System Architecture 2
System Architecture 3
Design for utility
Performance of computer system
Coding standard/ Tools for designing 1
Dependable system 1 Reliability
Dependable system 2 Validation
Law aspect
Risks in software engineering
Software engineering as engineering

Nano Technology

What is Nano technology?
Motivation for Nano technology
Scaling laws
Nano technology

BAE 604 Telecommunication Engineering (2 pt)

Communication fundamental
Information & bandwidth
Amplitude modulation transmission
Amplitude modulation reception
Single side banded communication
Frequency modulation –Transmission
Frequency modulation –Reception
Communication Techniques
Communication Receivers
Pulse Modulation
Code transmission
ISDN
Transmission lines
Wave propagation
Antenna
Fibre optics

Data Communication

Overview of data communication
Data terminals
Message and transmission channels
Asynchronous modems and interfaces

Synchronous modem and digital transmission

Protocol and error control

Electronics Telecommunication

RF Transmission

Transmission Lines & Antennas, Video signals

BAE 605 Engineering Management (5 pt)

Part (1) Overview Knowledge of the subject

Completion of BAE 508 Overview also completes BAE 605 Overview

Part (2) Competency Units

Mgt 502 Operation Management (1 pt)

Mgt 503 Production & Operation Management (1 pt)

Mgt 504 Project Management (1 pt)

Mgt 505 Quality Management and Manufacturing Engineering (1 pt)

Mgt 506 Strategic Financial Management (1 pt)

Mgt 502 Operation Management (1 pt)

Chapter (3) Product design and process selection

Chapter (4) Total quality management

Chapter (7) JIT & Lean System

Chapter (8) Capacity planning

Mgt 503 Production & Operation Management (1 pt)

Chapter (6) Planning production

Chapter (7) Managing inventories-Material requirement planning

Chapter (11) Manufacturing

Chapter (13) Dealing with technology and design

Chapter (15) Operation strategy

Mgt 504 Project Management (1 pt)

Chapter (1) Project management

Chapter (2) Project organization

Chapter (4) Project plan

Chapter (5) Progress & performance measurement

Chapter (6) Risk management

Chapter (7) Documentation/ Audit/ Closure

Mgt 505 Quality Management and Manufacturing Engineering (1 pt)

Chapter (2) Background

Chapter (3) Why quality management

Chapter (5) Standards and models

Chapter (5) Progress & performance measurement

Chapter (8) Strategic quality management

Chapter (7) Documentation/ Audit/ Closure

Mgt 506 Strategic Financial Management (1 pt)

Chapter (3) Capital budgeting

Chapter (4) Treatment of uncertainty

Chapter (6) Debt valuation and cost of capital

BAE 606 Building Service Electrical & Mechanical Engineering (2 pt)

Building Construction 1

Making building
Foundations
Wood
Interior finish for wood light frame construction
Wall types
Concrete construction

Air-conditioning & Refrigeration

Controlling the temperature of mass
Electric heat
Humidification
Air-conditioning –Cooling / Comfort
Air-distribution & Balance
Reference Tables

Sanitation & Water Supply

Design of onsite sanitation system
Hydraulic design of sewers

Building Electrical & Mechanical System Part 1

Climate comfort and design strategies
Thermal control
Designing for heating cooling
Large building HVAC system
Water and basic design
Water supply
Water and waste
Fire protection
Fire protection
Illumination
Lighting design
Signal system

Airconditioning and Refrigeration

Theory of heat
Solar heat
Humidification
Air-conditioning-Cooling
Air-distribution & Balance
Air-conditioning Calculation worksheets

BAE 607 Radio Wave Propagation & Microwave Techniques (2 pt)

Radio Wave Propagation

Introduction to radio wave propagation

Propagation features/ Overviews

Electromagnetic waves, Propagation through atmosphere

Antenna

Radio wave propagation fundamentals

Antennas and propagation

Mobile radio propagation

Propagation

Wave propagation

Radio navigation

Wireless communication

Microwave Technique

Microwave antenna and radio wave propagation

Distributed element circuit analysis techniques

Matching networks

Couplers, combiners, dividers

Mixers

Gain and stability

Noise

Electromagnetism and RF Propagation

Antenna Fundamental

Communication system

RF Safety

Rain attenuation of microwave and milli-meter wave signals

Design of microwave filters (Vol 1)

Mechanically & magnetically tunable microwave filters

Design of microwave filters (Vol 1)

General applications of filter structure in microwave engineering

Properties of some common microwave filter elements

BAE 608 Professional Engineer Competency Demonstration Report

- The students will have to write Engineering Competency Demonstration Report based on their academic study and work experiences gained after completion of academic study.
- Competency Demonstration Report is voluntarily to be submitted. It prepares the students to have the necessary skills to gain the membership of Engineers Australia later.
- The outlines of Competency Demonstration Report will be provided to the students after completion of the last course work subject.

BAE421 Building Construction Engineering

1 Basic skills

1 Isometric drawing

1 Retaining walls & Post footings

1 Stair

1 Doors & Windows

1 Trusses

1 Buildings

1 Collar truss

1 Howe truss

- 1 Timber
- 1 Steel
- 1 Brick masonry
- 1 Timber
- 1 Brick-nogging
- 1 Steel
- 1 Reinforced concrete
- 1 Floor plans
- 1 Foundation plan
- 1 Cross section
- 1 Front elevation
- 1 Back elevation
- 1 Left side elevation
- 1 Right elevation
- 1 Culverts
- 1 Bridges
- 1 Buildings
- 1 Pipe culvert
- 1 Box culvert
- 1 Slab culvert
- 1 Deck and girder bridge
- 1 Half top plan of culvert
- 1 Half bottom plan of culvert
- 1 Cross section of culvert
- 1 Longitudinal section of culvert
- 1 Elevation of culvert
- 1 Mix Design
- 1 Permissible water cement ratio

BAE422 Estimating (2 pt)

- 1 Preliminary estimates
- 1 Detailed estimating
 - Culverts
 - Bridges
 - Buildings
 - Roads
- 1 Analysis of rates
- 1 Detailed Estimating
- 1 Buildings
- 1 Up to plinth level
- 1 Above plinth level
- 1 Culverts

- 1 Bridges
- 1 Roads
- 1 Earthworks
- 1 Analysis of Rates
- 1 Total workdone
- 1 Material and labour requirements
- 1 Estimated cost
- 1 Actual PAE or CCE or RFT
- 1 Complete items
- 1 Quantity
- 1 Measurements
- 1 Content calculation
- 1 Rates
- 1 Buildings
- 1 Above plinth level
- 1 Culverts
- 1 Analysis of rates

BAE423 Fluid Mechanics (2 pt)

- 1 *Methods of Application of water*
- 1 *Water Logging, Drainage, land reclamation and irrigation management*
- 1 *Theoretical Concepts of Boundary Layer, Surface Roughness, Velocity Distribution*
- 1 *Gradually varied flow*
- 1 **Scale Model in Hydraulic Engineering**
- 1 Surface irrigation methods
- 1 Subsurface irrigation methods
- 1 Sprinkler irrigation
- 1 Drip or trickle irrigation
- 1 Flooding Methods
- 1 *Wild or uncontrolled Flooding*
- 1 *Controlled Flooding*
- 1 *Flooding from field channels*
- 1 *Border strip methods*
- 1 *Check method*
- 1 *Basin method*
- 1 *Zig-zag method*
- 1 Furrow Method

1 Contour Farming

BAE424 Reinforced Concrete (2 pt)

1 Design of Concrete Structures

1 FUNDAMENTALS OF FLEXURAL BOND

1 Source of bond strength

1 Bond Stress Based on Simple Cracked Section Analysis

1 Actual Distribution of Flexural Bond Stress

1 Development Length

1 Factors influencing Development Length

1 ACI CODE PROVISION FOR DEVELOPMENT OF TENSION REINFORCEMENT

1 ANCHORAGE OF TENSION BARS BY HOOKS

1 Development Length and Modification Factors for Hooked Bars

1 ANCHORAGE REQUIREMENTS FOR WEB REINFORCEMENT

1 Special Requirements near the Point of Zero Moment

1 Structural Integrity Provisions

BAE425+525 Timber Engineering (2 pt)

1 Bending Stress and Deflection of Wood Joists

1 Shearing Stress Caused by Stationary Concentrated Load

1 Shearing Stress Caused by Moving Concentrated Load

1 Strength of Deep Wooden Beams

1 Design of a Wood-Plywood Beam

1 Determining the Capacity of a Solid Column

1 Design of a Solid Wooden Column

1 Investigation of a Spaced Column

1 Compression on an Oblique Plane

1 Design of a Notched Joint

1 Allowable Lateral Load on Nails

1 Capacity of Lag Screws

1 Design of a Bolted splice

1 Investigation of a Timber-Connector Joint

BAE521 Road & Bridge (2 pt)

1 Hydraulic Design of Bridge

1 The establishment of afflux levels

1 Back water levels

1 Long Contraction

1 Yarnell's empirical equation

1 The limiting values of σ

1 Skewed bridges

- 1 Discharge computation
- 1 Scour depth under the bridge
- 1 Scour around bridge piers
- 1 Scour protection works around bridge piers
- 1 Road bridge

BAE522 Rock Mechanics (2 pt)

+

BAE523 Soil Mechanics (2 pt)

- 1 Soil
- 1 Soil Mechanics
- 1 Geotechnical Engineering
- 1 Subsoil Exploration
- 1 Testing (In-situ Tests & Laboratory Tests)
- 1 SPT, CPT, Vane Shear Test
- 1 Moisture content
- 1 Index Properties Tests (LL, PL, SL)
- 1 Grain Size Distribution Test (Sieve Analysis & Hydrometer)
- 1 Specific Gravity
- 1 Shear Strength Tests (Tri-axial Compression:, Direct Shear, Unconfined Compression:)
- 1 Compaction test, CBR Test
- 1 Consolidation Test, Permeability Test

BAE 523A Environmental Engineering

- Distribution of water
- Requirement for good distribution system
- METHOD OF DISTRIBUTION
- Gravity System
- Combined gravity and pumping system
- Pumping system
- PRESSURE IN DISTRIBUTION MAINS
- SYSTEM OF WATER SUPPLY
- CONTINUOUS SYSTEM
- INTERMITTENT SYSTEM

- DRAWBACKS OF INTERMITTENT SYSTEM
- DISTRIBUTION RESERVOIR
- CAPACITY OF DISTRIBUTION RESERVOIR
- **Mac Donald's equation**
- DETERMINATION OF STORAGE CAPACITY
- Hydrograph method
- Mass curve method
- HEAD LOSS DUE TO FRICTION
- Darcy Weisbach formula
- Hazen William formula
- Manning's formula
- Combined Darcy Weisbach and Colebrook White formula
- LAYOUT OF DISTRIBUTION SYSTEM
- Dead end system or Tree system
- Grid iron system or Reticular system
- Circular system or ring system
- Radial system
- ANALYSIS OF PRESSURE IN DISTRIBUTION SYSTEM
- Equivalent pipe method
- Hardy cross method

BAE621 Structural Engineering (3 pt)

- 1 DESIGN OF A SLAB BRIDGE
- 1 FOUNDATION SETTLEMENTS
- 1 Major problems with soil settlement analysis
- 1 Settlement classification
- 1 Immediate settlement & consolidation settlement
- 1 Stresses in soil mass
- 1 Approximate method (2:1 slope)
- 1 Boussinesq's method
- 1 Westergaard's method

BAE623 Surveying & Traffic Engineering (2 pt)

- 1 Airport Runway Orientation
- 1 Wind Rose Diagram
- 1 Highway Pavement Performance
- 1 Traffic
- 1 Roadbed Soils (Sub grade Material)
- 1 Materials of Construction

- 1 Environment
- 1 Drainage
- 1 Reliability
- 1 Transportation Engineering
- 1 Transportation Planning
- 1 Urban Transportation Planning
- 1 Urban Transportation Planning Process
- 1 Coding and Zoning
- 1 Inventory Studies
- 1 Travel Studies
- 1 Forecasts for the Horizontal Year
- 1 Trip General Analysis
- 1 Trip Distribution Analysis
- 1 Modal Split Analysis
- 1 Network Assignment Analysis
- 1 Evaluation

BAE624 Water Supply , Sanitation & Finishing (2 pt)

- 1 Water Quality
- 1 Dissolved Oxygen
- 1 BOD (Biochemical Oxygen Demand)
- 1 COD (Chemical Oxygen Demand)
- 1 Water Sampling
- 1 Requirements for good Sampling Procedure

BAE622 Architecture (3 pt)

Refer any architecture text book , study & prepare the report on practical application problem given by the tutor.

BAE511 Air-conditioning & Refrigeration

- 1 Heat transfer by Conduction
- 1 Convection
- 1 Radition
- 1 Thermal Conductivity, k
- 1 Boundary and Initial Conditions
- 1 Properties and state
- 1 The System
- 1 Internal energy (U)
- 1 Enthalpy (H)
- 1 Work (W)
- 1 Heat (Q)

- 1 Specific Head Capacity (c)
- 1 Heat Engine
- 1 The characteristic equation of a perfect gas
- 1 Expansion processes
- 1 Adiabatic process
- 1 Isothermal Process

BAE613 Mechanical Instrumentation Process

- 1 Problem-solving Methodology
- 1 Matlab Environment
- 1 Initializing Variables
- 1 Data Format
- 1 Printing Matrices
- 1 Useful Commands and Functions
- 1 Fundamental Engineering Computations
- 1 Two-Dimensional Arrays and Matrices
- 1 Variational Method
- 1 Collational Method
- 1 Subdomain Method
- 1 Galerkin's Method
- 1 Least Square Method

BAE614 Machine Design

- **Balancing**
- **Forces**
- **Cam Profile**
- **Resultant Effects of Engine**
- **Arrangement to balance the primary moment (C.W)**
- **V-Engine Mechanism**
- **FORCES IN ENGINE**
- **Inertia Forces and D'Alembert's Principle**

BAE512 Building Service Water Supply System

- Pressure loss in duct
- Pressure loss in duct by loss coefficient method
- Pressure loss in duct by Equivalent Length Method
- To find the duct size by Equal Friction Method
- To find the duct size by Balance Capacity Method
- Design the duct system

BAE311 Plant Engineering (2 pt)

- **Three Degree of freedom**
 - (a) **Newton's method**
 - (b) **Mechanical Impedance method**
 - (c) **Influence coefficients**
 - (d) **Matrix method**
 - (e) **Holzer method**
 - (f) **Matrix Iteration method**
- **INTRODUCTION TO CONTROL SYSTEM**
- **DIFFERENTIAL EQUATIONS**

- **LINEARIZATION OF A NON-LINEAR FUNCTION**
- **MODELLING OF CONTROL SYSTEMS**
- **FREQUENCY RESPONSE METHODS**
- **Stability**

BAE312 Design Engineering (2 pt)

This unit is the same as

[BAE621 Structural Engineering \(3 pt \)](#)

BAE313 Environmental Control (2 pt)

This unit is the same as

[BAE 523A Environmental Engineering](#)

BAE314 Mechanical Power Generation (2 pt)

- **PLC Basics**
- **PLC Structure**
- **PLC in Comparison with Other Control Systems**
- **PLC's CPU**
- **PLC's Memory**
- **PLC in Comparison with Other Control Systems**
- **PLC's CPU**
- **PLC's Memory**
- **Programming Devices**
- **Programming Languages**
- **Instruction Set**
- **Typical Combinations of Languages**
- **Basic Symbols**
- **Elementary Logic Circuit**
- **PLC's Functions**
- **Industrial Programming**
- **PLC PRACTICE**
- **Selection of PLC**
- **Types of I/O & Capacity Needed**
- **Control System Basic**
- **Sequence Control**
- **Automatic Control**
- **Terms of Sequence Control**
- **Basic Knowledge on Contacts**
- **INDUSTRIAL MACHINE CONTROLS**

BAE315 Materials Engineering (2 pt)

- Load, Stress and Strain, Hook's law ,
- Principal of Superposition
- Tensile Test , Factor of Safety
- Strain Energy, Resilience
- Impact Loads
- Varying Cross-section and Loads
- Strain Energy , Resilience
- Compound Bars
- Temperature Stresses

Elective (2 pt)

Subjects
BAE513 Production Technology
BAE611 Maintenance Engineering

BAE612 Engineering Metallurgy

Refer any text book , study & prepare the report on practical application problem given by the tutor.

ICT 403 Professional Programming (2) Object Oriented

object-oriented-programming-using-c-sharp

- Introduction to object oriented programming
- Unified Modelling Language (UML)
- Inheritance & Method Overriding
- Object rules & the importance of polymorphism
- Overloading
- Object oriented software analysis and design
- Generic collection & how to serialize them
- C# development tools
- Creating & using exceptions
- Agile programming
- Case studies

ICT 404 Professional Programming (3) Java

object-oriented-programming-using-java

- Introduction to object oriented programming
- Unified Modelling Language (UML)
- Inheritance & Method Overriding
- Object rules & the importance of polymorphism
- Overloading
- Object oriented software analysis and design
- Collection framework
- Java development tools
- Creating & using exception
- Agile programming
- Case study

ICT 405 Professional Practice (1) Network

This competency standard unit covers develop services for network clients for emails, internet access, shared resources and the like. It encompasses safe working practices, installing and configuring Domain Name Server (DNS), email servers, Dynamic Host Configuration Protocol (DHCP), remote access servers, Network Address Translation (NAT), directory services, Authentication Servers and documenting development activities.

Essential knowledge and associated skills

This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and developing network services.

The extent of the essential knowledge and skills required is given Volume 2 Part 2, Clauses

Network infrastructure

Evidence shall show an understanding of network infrastructure to an extent indicated by the following aspects:

- a. Domain Name Service (DNS) encompassing
 - DNS Server Service
 - Root name server
 - Configuring zones
 - a. *Note:* Examples include configuring for dynamic updates and delegating zone for DNS
 - Caching – only server
 - DNS client
 - Testing DNS Server service
 - Manually creating DNS source
 - Managing and monitoring DNS
- b. Dynamic Host Configuration Protocol (DHCP)
 - Installation of DHCP Server Service
 - DHCP scopes, superscopes and multicast scopes
 - DHCP – DNS integration
 - Active Directory™
 - Managing and monitoring DHCP
- c. Network Infrastructure encompassing
 - Configuring and troubleshooting remote access
 - a. *Note:* Examples include remote access policy, configuration of remote access profile, Virtual Private Network (VPN), multi link connection, routing and remote access for DHCP
 - Managing and monitoring remote access
 - Remote access security
 - *Note.* Examples include authentication protocols, encryption protocols and access policy
- d. Network Protocols encompassing
 - Installation, configuration and troubleshooting of network protocols
 - a. *Note:* Examples include Transmission Control Protocol / Internet Protocol (TCP/IP), NWLink and network bindings
 - Configure TCP/IP packets
 - Configuring and troubleshooting network protocol security and IP Security (IPSec)
 - Managing and monitoring network traffic
- e. Internet Naming Services in a network encompassing
 - Installation, configuring and troubleshooting
 - Configuring Internet Naming Services replication
 - Configuring an application networking interface
 - Managing and monitoring Internet Naming Services
- f. IP Routing encompassing
 - Installation, configuring and troubleshooting of IP routing protocols
 - a. *Note:* This includes updating routing tables, and implementing demand-dial routing
 - Managing and monitoring IP routing
 - a. *Note:* This includes border routing, internal routing and IP routing protocols
- g. Network Address Translation (NAT) encompassing

- Installing Internet connection sharing
- Installing NAT
- Configure NAT properties and interfaces
- h. Certificate Services encompassing
 - Installing and configuring Certificate Authority
 - Issuing and revoking certificates
 - Removing the Encrypted File System recovery keys

· **Directory services**

Evidence shall show an understanding of directory services to an extent indicated by the following aspects:

- a. Installing and configuring directory services encompassing
 - Installing forests, trees and domains including automatic domain controller
 - Creating sites, subnets, site links and connection objects
 - Configuring server objects including site membership and global catalogue designation
 - Transferring of operations master roles
 - Verification and troubleshooting of directory services installation
 - Implementation of and organisational unit structure
- b. Domain Name Service (DNS) for directory services encompassing
 - Installation and configuration of DNS for directory services
 - a. *Note:* Examples are integration with existing DNS infrastructure, configuration of zones for dynamic and secure dynamic updates and creation and configuration of DNS records
 - Management, monitoring and troubleshooting of DNS
- c. Change and Configuration Management encompassing
 - Implementing and troubleshooting Group Policy
 - a. *Note:* Examples are Group Policy Object (GPO), linking to an existing GPO, delegation of administrative control of Group Policy, filtering of Group Policy settings by using security groups and modification of Group Policy prioritisation
 - Managing and troubleshooting user environments using Group Policy
 - Configuring directory services to support Remote Installation Services (RIS) including configuration of RIS options and security.
- d. Components of a directory service infrastructure encompassing
 - Management of directory objects
 - a. *Note:* Examples are moving objects, publishing resources in the directory service infrastructure, location of objects in the directory service infrastructure, creation and management of objects manually and by scripting, access control of objects and delegation of administrative control
 - Monitoring, optimisation and troubleshooting of the directory services infrastructure performance and replication
 - Backup and restoring directory services infrastructure
 - a. *Note:* Examples are authoritative and non authoritative restoration of directory services, restoration from systems failure and the seizing of operations master roles
- e. Security encompassing
 - Applying security policies using Group Policy
 - Creating, analysing and security modification by using Security Configuration and Analysis snap-in and the Security Templates snap-in
 - Implementation of an audit policy
- f. Monitoring and analysing security events

Multi-layer switched networks

Evidence shall show an understanding of multi-layer switched networks to an extent indicated by the following aspects:

a) Campus network design encompassing:

- o core layer
- o distribution layer
- o access layer
- o selection of appropriate devices
- o defining workgroups

b) Managing Redundant Links encompassing:

- o Spanning Tree Protocol (STP)
- o Controlling STP in redundant environments
- o STP in Virtual Local Area Network (VLAN) environments
- o Configuring redundant routing protocols for a fault-tolerant routing

Note. An example is Hot Standby routing protocol (HSRP)

c) Fast layer 2 services encompassing:

- o Fast Ethernet
- o Trunking
- o Fast Ether channels
- o Gigabit services

d) Inter VLAN Routing encompassing:

- o Hardware vs. Software switching
- o Overview of fast switching technologies
- o Elements of a multi-layer switch
- o Configuring multi-layer switches

e) Multicast encompassing:

- o Multi-cast group management
- o Configuring multi-cast control at layer 2
- o Configuring multi-cast control at layer 3

f) Controlling Access to the Campus Network

g) Managing Network Traffic

ICT 406 Professional Practice (2) Website

This unit covers installation, set up, implementation and provision of on-going support of web services. It encompasses working safely, installing and administering server software and databases, server side scripting, configuring access and security and documenting work activities.

Development, implementation and testing HTML pages with at least four of the following features:

Relative and absolute links, images and table formatting
Cascaded styles sheets
Forms
New browser windows
Validation of form data

Development, implementation and testing of server scripting for database access with at least four of the following features:

Form data input response
Form data processing
Database access
Output of database table contents
Insertion of table data to database

Installation and administration of key features of Web and Web application servers

Programming elements

Evidence shall show an understanding of the programming elements to an extent indicated by the following aspects:

- a) Algorithm Design encompassing:
 - o Problem Definition
 - o Steps in Problem-Solving
 - o Modular Design
 - o Top-Down Design
 - o Flow-Charts and Structured Programming
 - o Pseudo-Code
 - o Filtering allowable Data Input
 - o Using standard Input & Output methods
 - o Object-Oriented Design (brief intro.)
 - o Documentation Rationale
 - o Acceptable Documentation Method
- b) Machine-Code, Assemblers and Compilers
- c) Brief History of Languages & Limitations
- d) Parameters of different programming languages encompassing:
 - o Constants and variables
 - o Data types and declarations
 - o Logical flow control
 - o Detecting breaches of structure
 - o Documentation instruction examples
 - o Procedures and function calls
 - o Parameter-passing
 - o Local and global variables
 - o Object-oriented methods
 - o Classes and objects,
 - o encapsulation and inheritance.
 - o Visual programming methods
 - o General-purpose program libraries
- e) Data structures encompassing:
 - o Records
 - o Arrays
 - o File Input/output
- f) Testing and validation encompassing:
 - o Sequencing the process
 - o Inconsistencies detection

Note, An examples is comparing code to documentation, commonly called —Desk-Checking'.

- o Test data selection
- o Modular testing & debug
- o Problems with using

Client side programming

Evidence shall show an understanding of client side programming them to an extent indicated by the following aspects:

- a) Client server architecture
- b) Hyper Text Markup Language (HTML) encompassing:
 - o Forms
 - o Table
 - o Cascading style sheets
- c) Hyper Text Markup Language (HTML) scripting encompassing:
 - o Exposed object model
 - o Events and event handling
 - o Objects methods, properties, events
 - o Window, document, form, and form elements
 - o String object, methods, properties
 - o Form field validation

Note: Examples of scripting language are JavaScript and Visual Basic (VB) Script

- d) Extendable Markup Language (XML) encompassing:
 - o Syntax
 - o Structure (well formed XML)
 - o Schemas
 - o Transformations
 - o Parsing Document Object Model (DOM) and Simple API (SAX)
 - o Scripting to Document Object Model (DOM)

- e) Extendible Stylesheet Language (XSL) generating HTML from XML
- f) Wireless thin client programming

Note. Examples include Java2 Micro Edition (JME), Mobile Information Device Profile (MIDP), Windows CE and Palm OS

- g) Consideration for system architecture
- h) Configurations and profile overview

Server scripting

Evidence shall show an understanding of server scripting the to an extent indicated by the following aspects:

- a) Client server architecture
- b) Web and Application Servers
- c) Server scripting languages e.g. JSP, ASP, PHP, Perl
- d) Server script Tags
- e) Integrating script with HTML
- f) Server script object model
- g) Request, Response, Session, Application
- h) Using server objects
- i) Server components
- j) Using components in server scripts
- k) Scope of server components e.g. session, page, application
- l) Component get / set methods
- m) Deploying server components
- n) Advanced server scripting concepts

Database access

Evidence shall show an understanding of database access to an extent indicated by the following aspects:

- a) Relational Databases encompassing:
 - o Tables, keys, design rules and normalisation
 - o Database management utilities

Note. Example include MSSQL, MYSQL and Access

- b) Structural query language (SQL) queries encompassing:
 - o Select, insert, update and delete processes
 - o Application of conditionals _where', _distinct' and _like'
 - o Create and dropping tables

- c) Data Base connectivity components encompassing:
 - o Drivers, data sources
 - o Database connectivity component loading
 - o Query connection and execution
 - o ResultSets / RecordSets
 - o Rows, columns, cursors, concurrency, pooling
 - o Iterating through ResultSets / RecordSets

Note. Example include ODBC, JDBC, ADO

Web applications and services

Evidence shall show an understanding of web servers to an extent indicated by the following aspects:

- a) Comparison of HTTP servers and platforms

Note. Examples include IIS and Apache

- b) Comparison of Application servers and platforms

Note. Examples include J2EE / tomcat, .NET

- c) HTTP Servers encompassing:
 - o Installation requirements and methods
 - o Security configuration
 - o Content publishing and security

- d) WEB application technologies encompassing:
 - o Server installation and deployment
 - o Security

- e) Server scripting technologies encompassing:
 - o WEB application installation and deployment
 - o Application server administration

- f) Web services overview encompassing:
 - o WEB services XML, API, RPC
 - o XML API processing
 - o XML DOM
 - o SOAP (simple object access protocol)
 - o WEB Services Security

ICT 407 Artificial Intelligence

- Paths to artificial intelligent
- Agents and environment
- Framework for agents environment
- Agent oriented programming languages
- Net logo development
- Movement, Behaviour & Decision making
- Terms of movement
- Animated mapping simulation Embodiment
- Reactive versus cognitive agents
- Emergence, Self organization
- Adaptability evolution
- Communication
- Search behaviour

- Reasoning rules and logic
- Knowledge & reasoning using decision trees
- Intelligence
- Design objectives for artificial intelligence
- Computer problem solving ability

Bachelor of Business

Year 1 Refer Diploma in Management Detailed Contents

Year 2 Refer Diploma & Advanced Diploma in Information Technology Detailed Contents

YEAR (3)

Bachelor of Business (E-Business & Management)

The learning system will be based on self study. Read the given references study materials and prepare the project work. You need to read the books in English.

The following units common to MBA course are to be studied.

[Mgt 301 Electronics Business](#)

[Mgt 302 Information Security](#)

[Mgt 303 Management Information System](#)

[Mgt 304 Electronics Commerce](#)

[Mgt 305 Quantitative Methods for Management](#)

[Mgt 306 Human Resources Management](#)

[Mgt 307 Marketing Management](#)

[Mgt 308 Artificial Intelligence](#)

To assess Level 3, you need to write the report of 10 pages each on what you have learnt in the unit.

YEAR (4)

[Mgt 401 Management Project](#)

[Mgt 402 Electronics Business Project](#)

Mgt 301 Electronics Business

- 1 Project Objective
- 1 Business Capabilities
- 1 Benefits
- 1 Deliverables & Dependencies
- 1 Costs
- 1 Financial Appraisal
- 1 Timescales & Milestones
- 1 Success Criteria
- 1 Risks
- 1 the impacts of electronic commerce
- 1 drivers and inhibitors of electronic commerce from the perspective of the CEOs
- 1 the impacts of Electronic Commerce on the Industry Supply Chain
- 1 Electronic Commerce Maturity Model

Mgt 302 Information Security

Fundamentals of network security

Evidence shall show an understanding of fundamentals of network security to an extent indicated by the following aspects:

- a) Network Security fundamentals
- b) Securing Perimeter Routers
- c) Access Control Lists (ACLs)
- d) Router Authentication, Authorisation and Accounting (AAA) Security
- e) Intrusion Detection
- f) Internet Protocol (IP) Security
- g) Virtual Private Network (VPN)
- h) Firewalls
- i) Translations and Connections
- j) Access Control Lists for Firewalls
- k) AAA and Firewalls
- l) Intrusion
- m) Intrusion Detection Systems (IDS)
- n) Firewall Failover and System Maintenance
- o) Firewall VPN's
- p) Firewall Device Management

q Introduction of Computer Networks and Internet :

- √ Overview of the Internet, client/server program, circuit switching, packet switching, physical media, queuing delay and packet loss, TCP/IP Service models, Internet Protocol Stack (Layers)

q Application Layer :

- √ Service requirements, WWW, HTTP, FTP, Electronic Mail, Domain Name System, Socket programming

q Transport Layer

- √ Service models, Multiplexing/Demultiplexing, Connection-less transport (UDP), Principles of reliable data transfer, Connection-oriented transport (TCP), TCP congestion control

q Network Layer :

- √ Routing and forwarding, IP(The Internet Protocol) IPv4, IPv6 ,Routing algorithms, Routing in the Internet, Multicast

q Link Layer and Local Area Networks :

- √ Link layer services, Error detection and correction, Multiple Access Protocols, Link layer addressing, Ethernet, Hubs and switches, Point-to-Point Protocol

q understand principles of network security:

- √ cryptography and its *many* uses beyond "confidentiality"
- √ authentication
- √ message integrity
- √ key distribution
- √ security in practice:
 - √ firewalls
 - √ security in application, transport, network, link layers
- √ key distribution
- √ security in practice:
 - √ firewalls
 - √ security in application, transport, network, link layers

Mgt 303 Management Information System (MIS)

- The role of information system
- Hardware & software in enterprise
- Database management system
- Business Telecommunication system
- Communication network
- Network application
- Contemporary mobile service
- Examples of information systems
- Management of MIS
- Managing the Digital Firm
- Emergence of the Digital Firm
- The business information value chain
- A Business Perspective on Information Systems
- Variation in returns on information technology investment
- Sociotechnical Systems
- New Options for Organizational Design:
 - The Digital Firm and the Collaborative Enterprise
 - Redesigned workflow for insurance underwriting
- The Challenges of Information Systems: Key Management issues

Mgt 304 Electronics Commerce

- Types of E-commerce
- Understanding E-commerce: Organizing Themes
- E-commerce Business Models and Concepts
- The Internet and World Wide Web: E-commerce Infrastructure
- Building an E-commerce Web Site
- Online Security and Payment Systems
- Marketing Communications
- E-commerce Marketing Concepts
- Ethical, Social, and Political Issues in E-commerce
- Online Retail and Services
- E-commerce Business Models and Concepts
- The Internet and World Wide Web: E-commerce Infrastructure
- Security and Encryption
- E-commerce Payment Systems
- E-commerce Marketing Communications
- Ethical, Social, and Political Issues in E-commerce
- Online Service Industries
- Supply Chain Management and Collaborative Commerce
- Auctions, Portals, and Communities
- Online Content and Media
- Social Networks, Auctions, and Portals
- Online Content Providers: Digital Media
-

Mgt 305 Quantitative Methods for Management

- Research approach
- Data source
- Qualitative method
- Quantitative Methods
- Experiment research & observation
- Questionnaires survey
- Sampling
- Survey analysis
- Statistical analysis
- Writing research report
- Prescriptive Process Models
- Agile Development

Mgt 306 Human Resources Management

- Meeting Present and Emerging Strategic Human Resource Challenges
- **Managing Work Flow and Conducting Job Analysis**
- Understanding Equal Opportunity and the Legal Environment
- Managing Diversity
- Recruiting and Selecting Employees
- Appraising and Managing Performance
- Rewarding Performance
- Managing Compensation

Mgt 307 Marketing Management

- Company (Distributor) background (e.g. brief history, nature of business, etc.)
- Marketing objective(s) on the Chosen product/service
- S.W.O.T Analysis
- Target customers
- Product Positioning in the market
- Describe the current marketing mix:
 - Product
 - Pricing
 - Distribution
 - Marketing Communications (Promotion)
- overall competitive strategy
- planning the details of the marketing mix.

- sales & marketing materials
- understanding of company's competitors
- Marketing Recommendations for improvement
- marketing strategies

Mgt 308 Artificial Intelligence

This is the same as

ICT 407	Artificial Intelligence
-------------------------	---

Mgt 401 Management Project

Mgt 402 Electronics Business Project

Two reports one for Management for (Mgt 303+Mgt 305+Mgt 306) & another for Electronics Business + Marketing (Mgt 301+Mgt 302+Mgt 304+Mgt 307+Mgt 308) subjects are required to be presented.

Each should contain 4000 to 6000 words of how you pursue the study in Management,, Marketing, Electronics Business subjects should be described.

The project should contain management plans, business plan & performance, task, job procedures IT integration etc of the topics of your choices.

St Clements University Certificate/ Diploma / Advanced Diploma in Electrical Engineering

Course + Credit Outlines

YEAR 1 Certificate in Electrical Engineering 15 credits

	SEMESTER (1)	Credits
EE101	DC Circuit Problems	1
EE102	Basic Electrical Fitting & Wiring	1
EE103	Basic Electrical Drafting	1
EE104	Electrical Equipments Safety Protection	2
EE105	Electrical Installation Design	1
EE106	Advanced Electrical Wiring	1
EE107	Electrical Equipments	1
EE108	Electrical Fault Finding	1
EE109	Electrical Control Circuits	1
EE110	Computer Applications	1
EE111	Electromagnetism & Basic Electrical Machines	2
EE112	Alternating Current Principle	2
		15 Credits
	Diploma in Electrical Engineering 30 credits	Credits
	SEMESTER (2)	-
EE113	Electrical Fundamental	2
EE114	Electrical Power Principle	1
EE115	Basic Analogue & Digital Electronics	2
EE116	Process Control System	3
EE117	Solar Electrical System	1
EE118	Electrical Energy Supply System	3
EE119	Electrical Risk Assessment	1
EE120	Electrical Contracting & Specification	1
EE121	Electronics Power Control Device	1
		30 Credits

	Advanced Diploma in Electrical Engineering 60 credits	Credits
	SEMESTER (1)	
EE201	Engineering Mathematics	1
EE202	Electrical Circuits	1
EE203	Three Phase Power Circuits	1
EE204	Engineering Physics	1
EE205	Electrical Power System	2
EE206	AC Machines	2
EE207	DC Machine	1
EE208	Operational Amplifiers	2
EE209	Analogue Electronics	1

	SEMESTER (2)	
EE301	Advanced Electrical Drafting	1
EE302	Advanced Engineering Mathematics	2
EE303	Transmission Line	2
EE304	Power System Protection	2
EE305	Power Transformer	2
EE306	Electro-mechanical Control	2

EE308	Sustainability	1
EE309	Project Management	2
EE310	Engineering Officer Competency Report	2
		30 Credits

EE101	DC Circuit Problems
-----------------------	-------------------------------------

This unit covers determining correct operation of single source d.c. series, parallel and series-parallel circuits and providing solutions as they apply to various electrotechnology work functions. It encompasses working safely, problem solving procedures, including the use of voltage, current and resistance measuring devices, providing solutions derived from measurements and calculations to predictable problems in single and multiple path circuits.

Evidence shall show an understanding of electrical fundamentals and direct current multiple path circuits to an extent indicated by the following aspects:

T1 Basic electrical concepts encompassing:

- ☐ electrotechnology industry
- ☐ static and current electricity
- ☐ production of electricity by renewable and non renewable energy sources
- ☐ transportation of electricity from the source to the load via the transmission and distribution systems
- ☐ utilisation of electricity by the various loads
- ☐ basic calculations involving quantity of electricity, velocity and speed with relationship to the generation and transportation of electricity.

T2 Basic electrical circuit encompassing:

- ☐ symbols used to represent an electrical energy source, a load, a switch and a circuit protection device in a circuit diagram
- ☐ purpose of each component in the circuit
- ☐ effects of an open-circuit, a closed-circuit and a short-circuit
- ☐ multiple and sub-multiple units

T3 Ohm's Law encompassing:

- ☐ basic d.c. single path circuit.
- ☐ voltage and currents levels in a basic d.c. single path circuit.
- ☐ effects of an open-circuit, a closed-circuit and a short-circuit on a basic d.c. single path relationship between voltage and current from measured values in a simple circuit
- ☐ determining voltage, current and resistance in a circuit given any two of these quantities
- ☐ graphical relationships of voltage, current and resistance
- ☐ relationship between voltage, current and resistance

T4 Electrical power encompassing:

- ☐ relationship between force, power, work and energy
- ☐ power dissipated in circuit from voltage, current and resistance values
- ☐ power ratings of devices
- ☐ measurement electrical power in a d.c. circuit
- ☐ effects of power rating of various resistors

T5 Effects of electrical current encompassing:

- physiological effects of current and the fundamental principles (listed in AS/NZS 3000) for protection against the this effect
- basic principles by which electric current can result in the production of heat; the production of magnetic fields; a chemical reaction
- typical uses of the effects of current
- mechanisms by which metals corrode
- fundamental principles (listed in AS/NZS3000) for protection against the damaging effects of current

T6 EMF sources energy sources and conversion electrical energy encompassing:

- basic principles of producing a emf from the interaction of a moving conductor in a magnetic field.
- basic principles of producing an emf from the heating of one junction of a thermocouple.
- basic principles of producing a emf by the application of sun light falling on the surface of photovoltaic cells
- basic principles of generating a emf when a mechanical force is applied to a crystal

(piezo electric effect)

- principles of producing a electrical current from primary, secondary and fuel cells
- input, output, efficiency or losses of electrical systems and machines
- effect of losses in electrical wiring and machines
- principle of conservation of energy

T7 Resistors encompassing:

- features of fixed and variable resistor types and typical applications
- identification of fixed and variable resistors
- various types of fixed resistors used in the Electro technology Industry. e.g. wire-wound, carbon film, tapped resistors.
- various types of variable resistors used in the Electro technology Industry e.g. adjustable resistors: potentiometer and rheostat; light dependent resistor (LDR); voltage dependent resistor (VDR) and temperature dependent resistor (NTC, PTC).
- characteristics of temperature, voltage and light dependent resistors and typical applications of each
- power ratings of a resistor.
- power loss (heat) occurring in a conductor.
- resistance of a colour coded resistor from colour code tables and confirm the value by measurement.
- measurement of resistance of a range of variable' resistors under varying conditions of light, voltage, temperature conditions.
- specifying a resistor for a particular application.

T8 Series circuits encompassing:

- circuit diagram of a single-source d.c. 'series' circuit.
- Identification of the major components of a 'series' circuit: power supply; loads; connecting leads and switch
- applications where 'series' circuits are used in the Electro technology industry.
- characteristics of a 'series' circuit - connection of loads, current path, voltage drops, power dissipation and affects of an open circuit in a 'series' circuit.
- the voltage, current, resistances or power dissipated from measured or given values of any two of these quantities
- relationship between voltage drops and resistance in a simple voltage divider network.
- setting up and connecting a single-source series dc circuit
- measurement of resistance, voltage and current values in a single source series circuit
- effect of an open-circuit on a series connected circuit

T9 Parallel circuits encompassing:

- schematic diagram of a single-source d.c. 'parallel' circuit.
- major components of a 'parallel' circuit (power supply, loads, connecting leads and

· applications where 'parallel' circuits are used in the Electrotechnology industry.

- characteristics of a 'parallel' circuit. (load connection, current paths, voltage drops, power dissipation, affects of an open circuit in a 'parallel' circuit).
- relationship between currents entering a junction and currents leaving a junction
- relationship between branch currents and resistances in a two branch current divider network.
- calculation of the total resistance of a 'parallel' circuit.
- calculation of the total current of a 'parallel' circuit.
- Calculation of the total voltage and the individual voltage drops of a 'parallel' circuit.
- setting up and connecting a single-source d.c. parallel circuit
- resistance, voltage and current measurements in a single-source parallel circuit
- voltage, current, resistance or power dissipated from measured values of any of these quantities
- output current and voltage levels of connecting cells in parallel.

T10 Series/parallel circuits encompassing:

- schematic diagram of a single-source d.c. 'series/parallel' circuit.
- major components of a 'series/parallel' circuit (power supply, loads, connecting leads and switch)
- applications where 'series/parallel' circuits are used in the Electrotechnology industry.
- characteristics of a 'series/parallel' circuit. (load connection, current paths, voltage drops, power dissipation, affects of an open circuit in a 'series/parallel' circuit).
- relationship between voltages, currents and resistances in a bridge network.
- calculation of the total resistance of a 'series/parallel' circuit.
- calculation of the total current of a 'series/parallel' circuit.
- calculation of the total voltage and the individual voltage drops of a 'series/parallel' circuit.
- setting up and connecting a single-source d.c. series/ parallel circuit
- resistance, voltage and current measurements in a single-source d.c. series / parallel circuit
- the voltage, current, resistances or power dissipated from measured values of any two of these quantities

T11 Factors affecting resistance encompassing:

- four factors that affect the resistance of a conductor (type of material, length, cross-sectional area and temperature)
- affect the change in the type of material (resistivity) has on the resistance of a conductor.
- affect the change in 'length' has on the resistance of a conductor.
- affect the change in 'cross-sectional area' has on the resistance of a conductor.

effects of temperature change on the resistance of various conducting materials

· effects of resistance on the current-carrying capacity and voltage drop in cables.

- calculation of the resistance of a conductor from factors such as conductor length, cross-sectional area, resistivity and changes in temperature
- using digital and analogue ohmmeter to measure the change in resistance of different types of conductive materials (copper, aluminium, nichrome, tungsten) when those materials undergo a change in type of material length, cross-sectional area and temperature.

T12 Effects of meters in a circuit encompassing:

- selecting an appropriate meter in terms of units to be measured, range, loading effect and accuracy for a given application.
- measuring resistance using direct, volt-ammeter and bridge methods.
- instruments used in the field to measure voltage, current, resistance and insulation resistance and the typical circumstances in which they are used.
- hazards involved in using electrical instruments and the safety control measures that should be taken.
- operating characteristics of analogue and digital meters.
- correct techniques to read the scale of an analogue meters and how to reduce the 'parallax' error.
- types of voltmeters used in the Electrotechnology industry – bench type, clamp meter, Multimeter, etc.
- purpose and characteristics (internal resistance, range, loading effect and accuracy) of a voltmeter.
- types of voltage indicator testers. e.g. LED, neon, solenoid, volt-stick, series tester, etc. and explain the purpose of each voltage indicator tester.
- operation of various voltage indicator testers.
- advantages and disadvantages of each voltage indicator tester.
- various types of ammeters used in the Electrotechnology industry – bench, clamp meter, multimeter, etc.
- purpose of an ammeter and the correct connection (series) of an ammeter into a circuit.
- reasons why the internal resistance of an ammeter must be extremely low and the dangers and consequences of connecting an ammeter in parallel and/or wrong polarity.

- selecting an appropriate meter in terms of units to be measured, range, loading effect and accuracy for a given application
- connecting an analogue/digital voltmeter into a circuit ensuring the polarities are correct and take various voltage readings.
- loading effect of various voltmeters when measuring voltage across various loads.
- using voltage indicator testers to detect the presence of various voltage levels.
- connecting analogue/digital ammeter into a circuit ensuring the polarities are correct and take various current readings.

T13 Resistance measurement encompassing:

- Identification of instruments used in the field to measure resistance (including insulation resistance) and the typical circumstances in which they are used.
- the purpose of an Insulation Resistance (IR) Tester.
- the parts and functions of various analogue and digital IR Tester (selector range switch, zero ohms adjustment, battery check function, scale and connecting leads).
- reasons why the supply must be isolated prior to using the IR tester.
- where and why the continuity test would be used in an electrical installation.
- where and why the insulation resistance test would be used in an electrical installation.
- the voltage ranges of an IR tester and where each range may be used. e.g. 250 V d.c, 500 V d.c and 1000 V d.c
- AS/NZS3000 Wiring Rules requirements – continuity test and insulation resistance (IR) test.
- purpose of regular IR tester calibration.
- the correct methods of storing the IR tester after use
- carry out a calibration check on a IR Tester
- measurement of low values of resistance using an IR tester continuity functions.
- measurement of high values of resistance using an IR tester insulation resistance function.
- volt-ammeter (short shunt and long shunt) methods of measuring resistance.
- calculation of resistance values using voltmeter and ammeter reading (long and short shunt connections)
- measurement of resistance using volt-ammeter methods

T14 Capacitors and Capacitance encompassing:

- basic construction of standard capacitor, highlighting the: plates, dielectric and connecting leads
- different types of dielectric material and each dielectric's relative permittivity.
- identification of various types of capacitors commonly used in the Electrotechnology industry (fixed value capacitors -stacked plate, rolled, electrolytic, ceramic, mica and Variable value capacitors – tuning and trimmer)
- circuit symbol of various types of capacitors: standard; variable, trimmer and polarised
- terms: Capacitance (C), Electric charge (Q) and Energy (W)
- unit of: Capacitance (Farad), Electric charge (Coulomb) and Energy (Joule)
- factors affecting capacitance (the effective area of the plates, the distance between the plates and the type of dielectric) and explain how these factors are present in all circuits to some extent.
- how a capacitor is charged in a d.c. circuit.
- behaviour of a series d.c. circuit containing resistance and capacitance components. - charge and discharge curves

the term 'Time Constant' and its relationship to the charging and discharging of a capacitor.

- calculation of quantities from given information: Capacitance ($Q = VC$); Energy ($W = \frac{1}{2}CV^2$); Voltage ($V = Q/C$)
- calculation one time constant as well as the time taken to fully charge and discharge a given capacitor. ($\tau = RC$)
- connection of a series d.c. circuit containing capacitance and resistor to determine the time constant of the circuit

T15 Capacitors in Series and Parallel encompassing:

- hazards involved in working with capacitance effects and the safety control measures that should be taken.
- safe handling and the correct methods of discharging various size capacitors
- dangers of a charged capacitor and the consequences of discharging a capacitor through a person

- ☐ factors which determine the capacitance of a capacitor and explain how these factors are present in all circuits to some extent.
- ☐ effects of capacitors connected in parallel by calculating their equivalent capacitance.
- ☐ effects on the total capacitance of capacitors connected in series by calculating their equivalent capacitance.
- ☐ Connecting capacitors in series and/or parallel configurations to achieve various capacitance values.
- ☐ common faults in capacitors.
- ☐ testing of capacitors to determine serviceability.
- ☐ application of capacitors in the Electrotechnology industry.

EE102	Basic Electrical Fitting & Wiring
-------	-----------------------------------

This unit covers fixing, securing and mounting techniques as apply in the various electrotechnology work functions. It encompasses the safe use of hand and portable power tools, safe lifting techniques, safe use of ladders and elevated platforms and the selection and safe application of fixing devices and supporting accessories/equipment.

KS01-EE105A Fixing and support devices/techniques

Evidence shall show an understanding of accessories and support and fixing device and methods and their use to an extent indicated by the following aspects:

T1. Device for securing and mounting electrical/electronic/instrumentation/refrigeration/ air-conditioning/telecommunications accessories for supporting, fixing and protecting wiring/cabling/piping and functional accessories to hollow walls encompassing:

- ☐ types and safe application of devices for hollow wall fixing and support
- ☐ methods/techniques used to fix/support to wood, hollow wall, masonry blocks, plasterboard, panelling
- ☐ types and safe application of fixing devices used in the electrotechnology industry for wood and hollow wall structures (wood screws, coach bolts, self-tappers, self

drilling, metal thread, hollow wall anchors, behind plaster brackets, stud brackets, plasterboard devices, toggle devices)

- ☐ types of tools used for hollow wall fixing and supporting.
- ☐ using various fixing methods to fix/support to hollow walls.

T2. Device for securing and mounting electrical/electronic/instrumentation/refrigeration/ air-conditioning/telecommunications accessories for supporting, fixing and protecting wiring/cabling/piping and functional accessories to solid walls encompassing:

- ☐ types and safe application of devices used for solid wall fixing and support
- ☐ methods/techniques used in to fix to masonry and concrete structures
- ☐ fixing devices used in the electrotechnology industry for solid wall structures (wall-plugs, expanding concrete fixing devices, gas powered fixing tools, powder actuated fixing tools, loxins, dynabolts, chemical devices)
- ☐ regulatory requirements for use of powder fixing tools.
- ☐ hand and power tools used in fixing and supporting accessories
- ☐ using various fixing methods to fix/support to solid walls

T3. Device for securing and mounting electrical/electronic/instrumentation/refrigeration/ air-conditioning/telecommunications accessories for supporting, fixing and protecting wiring/cabling/piping and functional accessories to metal fixing encompassing:

- ☐ accessories that may be fixed to metal (saddle clips, conduits, brackets, switches)
- ☐ techniques for fixing to metal
- ☐ fixing devices: coach bolts, self-tappers, metal thread bolts, hollow wall anchors, rivets
- ☐ fixing tools - spanners, screwdrivers, power screw drivers, pop riveters, files, reamers
- ☐ OH&S issues related to drilling, cutting, eye protection, metal filings, swarf, noise
- ☐ Using power drills, drill bits, change drill speeds.
- ☐ Install a fixing device and accessory capable of supporting up to 20 kg on the metal plate.

T4. Securing and mounting electrical/electronic/instrumentation/refrigeration/ air-conditioning/telecommunications accessories for supporting, fixing and protecting wiring/cabling/piping and functional accessories using fixing adhesives and tapes encompassing:

- ☐ types and safe application of using adhesives and tapes as fixing devices (load limits of different commercial products)
- ☐ accessories that may be fixed using adhesives and tapes
- ☐ techniques for the application of adhesives and tapes
- ☐ tools used to apply and cut adhesives and tapes
- ☐ hazards and safety measures when working with adhesives and chemical fixing devices (fumes, cutting, eye protection, physical contact, hand protection, ingestion)

EE103	Basic Electrical Drafting
-------	---------------------------

This unit covers the use of drawings, diagrams, cable schedules, standards, codes and specifications as they apply to the various electrotechnology work functions. It encompasses the rudiments for communicating with schematic, wiring and mechanical diagrams and equipment and cable/connection schedules, manuals, site and architectural drawings and plans showing the location of services, apparatus, plant and machinery and understanding the use and format of compliance standards and job specifications.

KS01-EE107A Drawings, diagrams and schedules

Evidence shall show an understanding of drawings, diagrams and schedules used in electrotechnology work to an extent indicated by the following aspects:

T1 Architectural drawings encompassing:

- ☐ site plans, floor plans detailed drawings and standard drawings
- ☐ architectural floor plan to determine the power and lighting or communications / audio/ video layouts required in a domestic installation
- ☐ site plan to locate the service point, consumers mains, communication services, main switchboard, distribution boards and/or builders supplies.
- ☐ standard drawing scales to determine the actual lengths represented by dimensions on an architectural drawing.

- reading and interpretation of floor plans to determine the location of the electrical/ communication/audio accessories and appliances.
- Australian standard symbols used on floor plans to show the location of the accessories

and appliances as detailed in an electrical schedule.

T2 Electrical drawings encompassing:

- types of electrical drawings: block, circuit, wiring and ladder diagrams
- purpose and application of block, circuit, wiring diagrams and ladder diagrams
- Australian standard symbols used to represent components on electrical diagrams.
- conventions used in and the features of circuit diagrams
- converting a circuit diagram to a wiring diagram
- identification of cable type, origin and route from a cable schedule.
- developing a cable schedule for a given installation.

T3 Circuit diagrams encompassing:

- purpose of circuit diagrams in the electrotechnology industry
- conventions used in and the features of circuit diagrams
- sketching basic circuit diagrams
- common symbols used in circuit diagram (Australian Drawing Standard AS/NZS 1102)
- developing switching charts to identify the terminals of various types of switches
- connecting equipment using circuit diagrams.

T4 Wiring diagrams encompassing:

- purpose of wiring diagrams in the electrotechnology industry
- conventions used in and the features of wiring diagrams
- sketching basic wiring diagrams
- common symbols used in wiring diagram (Australian Drawing Standard AS/NZS 1102)
- connecting equipment using wiring diagrams.

T5 Building construction drawings and diagrams encompassing:

- building types: timber frame, brick veneer, double brick and metal frame.
- identification of different types of: footings, floors, external walls, roofs, interior walls
- typical cable routes through buildings, structures and premises
- sequence of each constructional stage for brick, brick veneer and timber cottages
- identification of the stages at which the electrical/communications - first and second fixing occurs in the constructional sequence
- areas of cooperation between electrical/communications and other building trades

EE104	Electrical Equipments Safety Protection
-------	---

This unit covers the arrangement and termination of circuits, control and protection devices and systems for electrical installations operating at voltages up to 1,000 V a.c. or 1,500 V d.c. It encompass knowledge and application of schemes for protection of persons and property, correct functioning, ensuring compatibility with the supply, arranging installation into circuits and selecting and arranging switchgear/controlgear and protective devices to meet compliance requirements and documenting arrangement decisions

KS01-EG063A Electrical installations — arrangement, control and protection

Evidence shall show an understanding of circuit arrangements, control and protection of electrical installations that comply with the Wiring Rules and Service Rules to an extent indicated by the following aspects:

T1 Safety principles to which electrical systems in building and premises shall comply.

- Safety principles are given in Part1 (Section 1) of the Wiring Rules AS/NZS 3000 with deemed-to-comply requirements given in Sections 2 to 8.
- Compliant methods for providing protection - include those for providing protection against direct and indirect contact; thermal effects; unwanted voltages; overcurrent; fault currents; overload; overvoltage; injury from mechanical movement.
- Requirements for installation design and selection of equipment - includes compliant protection arrangements; correct functioning; compatibility with supply; estimation of maximum demands; voltage drop considerations; arrangement of circuits and the like

T2 Circuit and control arrangements encompassing:

- reason for dividing electrical installations into circuits
- factors that shall be considered in determining the number and type of circuits required for an installation.
- daily and seasonal demand for lighting power, heating and other loads in a given installation.
- number and types of circuits required for a particular installation.
- diagrams/schedules of circuits for given installations.
- application and arrangements of SELV and PELV circuits
- application and arrangement of an isolated supply

T3 Hazards and risks in an electrical installation encompassing:

- effects on the human body of various levels of a.c. and d.c. current and duration of current flow for various current paths.
- risk of ignition of flammable materials due the thermal effects of current or electric

arcs in normal service of an electrical installation.

- risk of injury from mechanical movement of electrically actuated equipment.
- Protection against direct contact (basic protection)
- acceptable methods
- use of extra-low voltage

T4 Protection against indirect contact encompassing:

- indirect contact with live parts of an electrical installation may occur.
- methods and devices that comply with the Wiring Rules for providing protection against indirect contact.
- components of the 'automatic disconnection of supply' method of protection against indirect contact.
- the terms 'touch voltage' and 'touch current'.
- the current path when a short circuit fault to exposed conductive parts of an appliance occurs.

- ☐ protection against indirect contact is by the use of Class II equipment and by electrical separation.
- ☐ additional protection by use of Residual Current Devices (RCDs)
- ☐ protection against indirect contact by use of extra-low voltage and electrical separation.
- ☐ Protection requirements for damp situations.

T5 Earthing encompassing:

- ☐ the terms: earthed, earthed situation, earth electrode, equipotential bonding, multiple earthed neutral (MEN) system, protective earth-neutral (PEN) conductor, main earthing conductor, protective earthing (PE) conductor, functional earthing, MEN link.
- ☐ selection of minimum size-earthing conductor for a range of active conductor sizes and materials.
- ☐ parts of an earthing system and the purpose of each.
- ☐ typical arrangement for a MEN earthing system.
- ☐ arrangements of protective earthing conductors that comply with the Wiring Rules.
- ☐ requirements for equipotential bonding in a range of installation situations.
- ☐ Installation of a MEN earthing system for a single phase installation

T6 Protection against overload and short circuit current encompassing:

- ☐ overload current or fault currents in an electrical installation.
- ☐ equivalent circuit of an earth fault-loop
- ☐ level of fault current possible at a given point in an installation from the fault-loop impedance and data from the electricity distributor.
- ☐ methods and devices that comply with the Wiring Rules AS/NZS 3000 for providing protection against the damaging effects of overload and fault current
- ☐ requirements for co-ordination between protective devices and conductors

requirements for co-ordination of protection devices for discrimination and back-up protection.

T7 Devices for automatic disconnection of supply encompassing:

- ☐ operating principles of thermal/magnet circuit breakers.
- ☐ operating principles of common types of fuses.
- ☐ operating principles of residual current devices (RCD).
- ☐ time/current curves tripping characteristics of various types of circuit breakers that comply with the requirements of the Wiring Rules.
- ☐ time/current curves fusing characteristics of various types of fuses that comply with the requirements of the Wiring Rules.
- ☐ time/current curves tripping characteristics of various types of RCDs that comply with the requirements of the Wiring Rules.
- ☐ factors in a fault loop that will affect the impedance of the circuit.
- ☐ maximum impedance of an earth fault-loop to ensure operating of a protection device.
- ☐ selecting a fuse for fault current limiting protection.
- ☐ drawing switchboard wiring arrangements of 2-pole RCDs, 4-pole RCDs, combination RCD/MCBs.

T8 Protection against over voltage and under voltage encompassing:

- ☐ causes of over voltage and how this may affect the electrical system.
- ☐ methods for protection against over voltage.
- ☐ causes of under voltage and how this may affect the electrical system.
- ☐ methods for protection against under voltage.

T9 Control of an electrical installation and circuits encompassing:

- ☐ switch types, current and voltage ratings and IP rating and where these apply.
- ☐ switching requirements for isolation, emergency, mechanical maintenance and functional control.
- ☐ control arrangement for complete installations with and without safety services and an alternative supply.

T10 Switchboards / distribution boards encompassing:

- ☐ Purpose, types and applications.
- ☐ Physical and circuit arrangements for whole current and CT metering.
- ☐ Physical and circuit arrangements of main switches, circuit protection devices, fault-current limiters and metering equipment and other distributor equipment.
- ☐ compliance requirements (includes location and access, arc fault protection, identification, construction suitability, equipment marking, wiring, fire protection and arc-fault protection).

EE105	Electrical Installation Design
-------	--------------------------------

This unit covers selecting wiring systems and cables for electrical installations operating at voltages up to 1,000V a.c. or 1,500 V d.c. It encompass knowledge and application of wiring systems and cable types, selecting wiring system compatible with the installation conditions, selecting cables that comply with required current-carrying capacity and voltage drop and earth fault-loop impedance limitations, coordination between protective devices and conductors and documenting selection decisions

KS01-EG107A Electrical installation — cable selection and co-ordination

Evidence shall show an understanding of selecting cables and ensuring co-ordination between protection device and conductors in electrical installations that comply with the Wiring Rules, Selection of cables standards and Service Rules to an extent indicated by the following aspects:

T1 Performance requirements - design and safety encompassing:

- ☐ harmful effects against which the design of an electrical installation must provide protection.
- ☐ performance standards of a correctly functioning electrical installation.
- ☐ supply characteristics that shall be considered when designing an electrical installation.
- ☐ acceptable methods for determining the maximum demand in consumer's mains and sub-mains.
- ☐ AS/NZS 3000 requirements limiting voltage drop in an installation.
- ☐ reason for dividing electrical installations into circuits and the factors that shall determine their number and type.
- ☐ typical external factors that may damage an electrical installation and that shall be considered in the installation design.
- ☐ methods for protecting persons and livestock against direct and indirect contact with conductive parts and the typical application of each.
- ☐ acceptable methods of protection against the risks of ignition of flammable materials and injury by burns from the thermal effects of current, in

normal service.

- ☐ likely sources of unwanted voltages and the methods for dealing with this potential hazard.
- ☐ acceptable methods for protecting persons and livestock against injury and property against damage from the effects of over current.
- ☐ requirement for protection against fault current.
- ☐ requirement for protection against the harmful effects of faults between live parts of circuits supplied at different voltages.
- ☐ need for protection against injury from mechanical movement and how this may be achieved.
- ☐ features of 'fire rated construction' and how the integrity of the fire rating can be maintained in relation to electrical installation.

T2 Final subcircuit arrangements encompassing:

- ☐ factors that shall be considered in determining the number and type of circuits required

for an installation.

- ☐ daily and seasonal demand for lighting, power, heating and other loads in a given installation.
- ☐ number and types of circuits required or a particular installation.
- ☐ current requirements for given final subcircuits.
- ☐ layout/schedule of circuits for given installations.

T3 Factors affecting the suitability of wiring systems encompassing:

- ☐ wiring systems typically used with various construction methods and particular environments.
- ☐ installation conditions that may affect the current-carrying capacity of cables.
- ☐ external influences that may affect the current-carrying capacity and/or may cause damage to the wiring system.
- ☐ AS/NZS 3000 requirements for selecting wiring systems for a range of circuits, installation conditions and construction methods into which the wiring system is to be installed. Note: Wiring systems include cable enclosures, underground wiring, aerial wiring, catenary support, emergency systems, busbar trunking and earth sheath return.

T4 Maximum demand on consumer's mains/submains encompassing:

- ☐ acceptable methods for determining the maximum demand on an installation's consumer's mains and submains.
- ☐ maximum demand for the consumer's mains for given installations up to 400 A per phase.
- ☐ maximum demand for given submains.

T5 Cable selection based on current carrying capacity requirements encompassing:

- ☐ installation conditions for a range of wiring systems and applications.
- ☐ external influences that require the use of a derating factor.
- ☐ AS/NZS 3000 requirements for coordination of cables and protection devices.
- ☐ AS/NZS 3008 used to select conductor size based on the maximum current requirement for a given installation condition including any applicable derating factors.

T6 Cable selection based on voltage drop requirements encompassing:

- ☐ AS/NZS 3000 requirements for maximum voltage drop in an installation.
- ☐ relevant tables in AS/NZS 3008 for unit values of voltage drop.
- ☐ calculation of the expected voltage drop in a given circuit.
- ☐ selecting cables to satisfy voltage drop requirements in addition to current carrying capacity requirements.

T7 Cable selection based on fault loop impedance requirements encompassing:

- ☐ AS/NZS 3000 requirements for maximum fault loop impedance in an installation.
- ☐ relevant tables in AS/NZS 3008 to determine cable impedances.
- ☐ calculation of the expected fault loop impedance for a given circuit arrangement.
- ☐ selecting cables to satisfy fault loop impedance requirements in addition to current

carrying capacity requirements and voltage drop requirements.

T8 Selecting protection devices encompassing:

- ☐ acceptable methods of protection against indirect contact.
- ☐ AS/NZS 3000 requirements for selecting methods and devices to protect against indirect contact for a range of installation types and conditions.
- ☐ coordination between conductors and protection devices to ensure the protection of cables from over heating due to over current.
- ☐ possible injuries to persons and livestock from hazards due to a short circuit.
- ☐ AS/NZS 3000 requirements for selecting devices to protect against overload current for a range of circuits and loads.
- ☐ AS/NZS 3000 requirements for selecting devices to protect against short-circuit current for a range of installation conditions.

T9 Selecting devices for isolation and switching encompassing:

- ☐ requirements for the provision of the isolation of every circuit in an electrical installation.
- ☐ need for protection against mechanical movement of electrically activated equipment.
- ☐ AS/NZS 3000 requirements for selecting devices for isolation and switching for a range of installations and conditions.

T10 Switchboards encompassing:

- ☐ AS/NZS 3000 and local supply authority requirements for switchboards.
- ☐ tariff structures for the supply of electricity.
- ☐ equipment installed at the main switchboards with capacities up to 400 A per phase.
- ☐ layout of a main switchboard for an installation supplied with single phase single tariff whole current metering.
- ☐ layout of a main switchboard for an installation supplied with single phase multiple tariff whole current metering.
- ☐ layout of a main switchboard for an installation supplied with multiphase single tariff whole current metering.
- ☐ layout of a main switchboard for an installation supplied with multiphase multiple tariff whole current metering.
- ☐ layout of a main switchboard for a multiple tenancy installation with whole current metering.
- ☐ layout of a main switchboard, including metering, for an installation supplied with three phase CT metering.
- ☐ local supply authority requirements for connection of an electrical installation to the electrical supply system

This unit covers the installation in building and premises of wiring enclosures, cable support systems, cables and accessories and designed to operate at voltages up to 1,000 V a.c. or 1,500 V d.c. It encompasses working safely and to installation standards, routing cables to specified locations, terminating cables and connecting wiring at accessories and completing the necessary installation documentation.

KS01-EG103A Installation of wiring systems

Evidence shall show an understanding of the installation of wiring systems that comply with standards to an extent indicated by the following aspects:

T1 Standards, codes and requirements applicable to the installation of wiring systems encompassing:

- ☐ Cables and methods of mechanical protection and support
- ☐ Protection against and from other services.
- ☐ Prohibited cable locations
- ☐ Building codes affecting the installation of cables in buildings, structures and premises (limitation on penetration of structural elements, maintenance of fire protection integrity, and wiring above suspected ceilings)
- ☐ Issues affecting electrical installations in heritage buildings and premises (limitation on penetration of structural and finished elements, accessing cable routes, types and colour of exposed accessories).

T2 Use of other installation standards called up by the Wiring Rules for special situations encompassing:

- ☐ standards that apply to Electromedical treatment areas.
- ☐ additional requirements for construction and demolition sites.
- ☐ Relocatable installations and their site supply
- ☐ additional requirements for caravan park.
- ☐ additional requirements for marinas and pleasure craft at low voltage.
- ☐ additional requirements for shows and carnivals.

T3 Hazardous areas encompassing:

- ☐ Conditions that apply in an areas that require them to be classified as a 'Hazardous area'.
- ☐ Responsibility for classifying a hazardous area
- ☐ Awareness of standards called up by the Wiring Rules for selection of equipment and installations in Hazardous areas. (AS/NZS 3000 requirements for hazardous areas).

T4 Requirement for the installation of cables and accessories in damp situations and ELV installations encompassing:

- ☐ restricted zones around baths, showers, fixed water containers, pools, sauna heaters and fountains/water features for given installations.
- ☐ selecting equipment suitable for installation in given damp situations.
- ☐ voltage range that defines extra-low voltage.
- ☐ 'Separated extra-low voltage (SELV) system' and a 'Protected extra-low voltage (PELV) system'.
- ☐ AS/NZS 3000 requirements for selecting extra-low voltage systems and devices for a range of installations and conditions.

T5 Aerial cabling encompassing:

- ☐ Describe the types of aerial cabling.
- ☐ State the AS/NZS 3000 and local supply authority requirements for aerial cabling.
- ☐ Termination of aerial cables in accordance with AS/NZS 3000 and local requirements.
- ☐ installation of consumers mains for connection via overhead consumers terminals in

ccordance with AS/NZS 3000 and local requirements.

- ☐ Testing of installed cables compliance with Australian Standards

T6 Underground cabling encompassing:

- ☐ Describe permissible underground cabling systems.
- ☐ Identify other underground services.
- ☐ State the AS/NZS 3000 and local supply authority requirements for underground cabling.
- ☐ List the advantages and disadvantages of underground wiring systems
- ☐ selection of underground consumers mains in accordance with AS/NZS 3000 and local requirements

T7 Techniques for installing cables and wiring systems encompassing:

- ☐ Typical cable routes through buildings, structures and premises.
- ☐ Application of wiring accessories
- ☐ Drawing-in, placing and fixing of cables
- ☐ Cable and conductor terminations
- ☐ Maintaining fire rating integrity.
- ☐ Inspecting and testing installed and terminated cables to ensure they comply with continuity and insulation resistance and are safe to connect to the supply.

EE107	Electrical Equipments
-------	-----------------------

This unit covers the installation of appliances protection devices, switchgear, controlgear, switchboards, and accessories designed to operate at voltages up to 1,000 V a.c. or 1,500 V d.c. It encompasses working safely and to installation standards, matching appliances and accessories with that specified, making required circuit connections and completing the necessary installation documentation.

vidence shall show an understanding of the installation of appliances (current-using equipment) and accessories to an extent indicated by the following aspects:

T1 Installation standards, codes and requirements applicable to installing electrical equipment encompassing.

- ☐ Protection against thermal effects
- ☐ Connection of electrical equipment (appliances, switchgear and accessories include switchgear and controlgear, switchboards, socket-outlets,

lighting equipment and accessories, lamps and luminaires, smoke and fire detectors, cooking appliances, appliances producing hot water or steam, room heaters, electric heating cables for floors and ceilings, space heating, duct heaters, electricity converters, motors, transformers, capacitors, and batteries).

- Required and permitted locations current-using equipment and accessories
- Control, switching and over current and RCD protection

T2 Terminal configuration for connection of phase, neutral and protective earthing conductors for each type of equipment.

T3 Building codes affecting the installation of current-using equipment and accessories in buildings, structures and premises encompassing:

- maintenance of fire protection integrity, requirements for emergency services (safety services) and the like.

T4 Issues affecting electrical installations in heritage buildings and premises encompassing:

- limitation on types and colour of exposed accessories.

EE108	Electrical Fault Finding
-------	--------------------------

This unit covers trouble-shooting and repairing faults in electrical apparatus and interconnecting circuits and equipment operating at voltages up to 1,000 V a.c. or 1,500 V d.c. It encompasses working safely, reading circuit diagrams, sketching diagrams from traced wiring, logically applying fault finding procedures, conducting repairs and completing the necessary service documentation.

KS01-EG108A Electrical circuit and equipment faults and fault finding techniques

Evidence shall show an understanding of electrical circuit and equipment faults and fault finding techniques to an extent indicated by the following aspects:

T1 Troubleshooting concepts encompassing:

- need to understand the correct operation of a circuit or equipment, switching and control circuit arrangements.
- common faults with circuits and equipment including operator faults, incorrect connections, open-circuits, short-circuits, device faults (mechanical), supply faults.
- typical faults symptoms and their causes: operation of circuit protective device, appliance does not operate, single phase motor does not develop enough torque to drive the load, three phase motor does not develop enough torque to drive the load, motor overload trips
- factors to consider in clarifying the nature of a fault: initial fault report, confirmation of

symptoms of the fault, comparison of symptoms with normal operation

- effect to cause reasoning — assumptions of possible causes
- methods for testing assumptions: visual inspection, component isolation, test equipment, sectional testing, split-half tests
- repairing the fault and the steps needed to ensure fault doesn't re-occur
- dealing with intermittent faults (typical causes of intermittent faults are vibration, shock, changes in temperature and electromagnetic interference).
- final testing and re commissioning

T2 Troubleshooting water heater and appliance circuits/equipment encompassing:

- circuit diagrams of common single phase and three phase hot water systems
- single phase and three phase element resistance values (determined from measurement and calculation from power and voltage ratings)
- testing single and three phase elements for correct insulation resistance and continuity
- element replacement techniques
- operation of thermostats, thermal cut-outs and pressure relief valves, flow switches and checking sacrificial anodes
- locating faults in common single and three phase hot water systems
- repairing faulty water heating systems

T3 Troubleshooting electrical appliance circuits/equipment encompassing:

- circuit diagrams of common single phase and three phase appliances
- methods to determine the cause of an RCD operation
- identification of appliances that is causing an RCD to trip
- testing single and three phase appliances for correct insulation resistance and continuity
- operation of appliances controls
- locating faults in common single and three phase appliances
- repairing faulty appliances

T4 Troubleshooting lighting circuits encompassing:

- circuit and wiring diagrams of common lighting circuits including single light controlled by a single switch, multiple lights controlled by a single switch, two and three way switching using the loop at the light method and the loop at the switch method.
- causes of wiring faults from supplied symptoms and circuit and/or wiring diagrams
- causes of faults in ELV lighting devices, include transformer (iron core or electronic), voltage drop, heat, over-voltage, poor connections, incompatible dimmers
- diagrams of a basic fluorescent light circuit including lamp, ballast and starter
- locating faults in fluorescent light circuits
- operation of a range of lighting control including passive infra-red (PIR), dimmers, photo electric or day-light switches and time clocks
- locating faults in lighting control circuits

T5 Troubleshooting single phase motor and control circuits encompassing:

circuit diagrams of split phase, capacitor start, capacitor start capacitor run, universal and shaded pole single phase motors

- causes of single phase motor faults from supplied symptoms and circuit diagrams
- causes of electrical faults in single phase motors, include open and partially open circuit winding, short and partially short circuit winding, open circuit rotor, burnt out winding, coil shorted to frame.
- reasons for a thermal overload trip and how often they are to be reset before investigating a cause
- internal mechanical faults and their consequences, include bearings, fans, bent shaft, locked rotor, blocked air vents, centrifugal switches,

environmental factors

- ❑ faults on driven loads and couplings and their consequences, include slipping belts, poorly aligned coupling (shims), vibration, loads bearing failing, load stalling.
- ❑ locating faults in single phase motors and their controls

T6 Troubleshooting three phase induction motor encompassing:

- ❑ circuit diagrams of three phase induction motors
- ❑ causes of three phase motor faults from supplied symptoms and circuit diagrams
- ❑ causes of electrical faults in three phase motors, include open and partially open circuit phase winding, short and partially short circuit phase winding, open circuit rotor, burnt out phase winding, coil shorted to frame.
- ❑ reasons for a thermal overload trip and how often they are to be reset before investigating a cause
- ❑ internal mechanical faults and their consequences, include bearings, fans, bent shaft, locked rotor, blocked air vents, environmental factors.
- ❑ faults on driven loads and couplings and their consequences, include slipping belts, poorly aligned coupling (shims), vibration, loads bearing failing, load stalling.
- ❑ locating faults in three phase induction motors and their controls

T7 Troubleshooting electrical installations encompassing:

- ❑ circuit diagrams, wiring diagrams, cable schedules and specifications of electrical installations
- ❑ causes of electrical installation faults from supplied symptoms and circuit diagrams include open and partially open circuit wiring, short and partially short circuit wiring, low insulation resistance, incorrect polarity, transposition of conductors, RCD tripping.
- ❑ locating faults in electrical installations
- ❑ repairing faulty electrical installation circuits components and wiring.

EE109	Electrical Control Circuits
-------	-----------------------------

This unit covers developing, connecting and functionally testing electrical power and control circuits that perform specific control functions. It encompasses working safely; developing schematic/ladder diagrams and converting them to wiring diagrams; selecting and connecting contactors and control devices to perform a specific function.

KS01-EG109A Electrical control devices and circuits

Evidence shall show an understanding of electrical control devices and circuits to an extent indicated by the following aspects:

T1 Basic relay circuits encompassing:

- ❑ Identification of given circuit diagrams (schematic) symbols and explain the operation of the components represented
- ❑ labelling wires and terminal (numbering systems)
- ❑ control relay - operating principles, basic contact configurations and identification and common applications
- ❑ push button - switching configurations and common applications
- ❑ selecting pushbuttons/pilot lamps from manufacturer's catalogues for specific applications
- ❑ development of simple stop-start relay circuit that incorporates pilot lights and latching circuit.
- ❑ connection and testing of control circuits

T2 Relay circuits and drawing conventions encompassing:

- ❑ circuit diagram drawing conventions
- ❑ selecting relays from manufacturers' catalogue for specified applications
- ❑ circuit development of electrical control circuit in accordance with a written description (specification) and list the sequence of operation of the circuit
- ❑ connecting simple electrical control circuit from circuit diagrams
- ❑ applying safe working practices when testing an electrical control circuit

T3 Remote STOP-START control and electrical interlocking encompassing:

- ❑ operation of local and remote start-stop control of relays
- ❑ operation of an electrically interlocked relay circuit
- ❑ development of a relay circuit incorporating local and remote start and stop buttons and electrical interlocking.
- ❑ connecting electrical circuits with local and remote start-stop control and with electrical interlocking.
- ❑ applying circuit checking and testing techniques to an electrical control circuit.

T4 Time delay relays encompassing:

- ❑ timers - operating principles, basic contact configurations and identification and common applications
- ❑ selecting timers for specified functions from manufactures' catalogues
- ❑ development of timer controlled circuits from a written description and list the sequence of circuit operation
- ❑ connecting a timer controlled circuit using a circuit diagram as a guide.
- ❑ timer circuit checking and testing procedures.

T5 Circuits using contactors encompassing:

- ❑ contactors - operating principles, basic contact configurations and identification and common applications
- ❑ thermal overloads - operating principles, basic contact configurations and identification and common applications
- ❑ circuit diagram symbols
- ❑ circuit development using a contactor
- ❑ using contactors for motor control.
- ❑ compliance requirements for devices for isolating circuits.

T6 Jogging and interlocking encompassing:

- ❑ purpose and application of jogging control of motors
- ❑ operation of motor control using start, stop and jog buttons
- ❑ purpose and application of electrical/mechanical interlocking
- ❑ developing a multiple motor starting circuit from a description of the circuit operation including jog and interlock functions.
- ❑ selecting circuit components using manufacturers' catalogues for appropriate duty

ratings

- connecting and testing a multiple motor starting circuit which incorporates start, stop and jog control.

T7 Control devices encompassing:

- common control devices used in automatic control circuits: limit switches, proximity switches, photoelectric cells, pressure switches, float switches, light sensors and temperature sensors
- basic operating principles of common control devices
- advantages and disadvantages of common control devices
- applications for common control devices
- selecting control devices using manufacturers' catalogues for specified applications
- connection of control devices into control circuits

T8 Programmable relays encompassing:

- programmable relays - advantages over electromagnetic relay circuit control.
- typical applications of programmable relays.
- block diagram representation and basic operating principles
- input and output parameters, listing, connections and output types.
- connecting input and output devices to a programmable relay using a diagram
- basic programming of ladder circuits consisting of inputs, outputs i.e. stop-start circuit
- using the monitoring facility of the programmable relay to verify each ladder circuit operation.
- programming timers and using the monitoring facility of the programmable relay to check the values of the timer
- external devices
- implications of programming normally closed field devices
- conversion of control circuits
- installation of programmable control relays
- common faults and their symptoms

T9 Three-phase induction motor starters encompassing:

- reasons for limiting the starting current of large motors.
- requirements of the wiring rules (AS/NZS 3000) and the local supply authority service rules, with regard to starting and control of induction motors.
- DOL starter operating principles, applications and circuits
- electronic (soft) starter operating principles, applications and circuits
- connecting a DOL motor starter and testing the operation of the power and control circuits
- installation of DOL and soft starters

T10 Three-phase induction motor starters- reduced voltage encompassing:

- star-delta starter operating principles and circuits

primary resistance starter operating principles and circuits

· auto-transformer starter operating principles and circuits

- secondary resistance starter operating principles and circuits
- common applications for each starter type
- comparison of motor starters basic characteristics
- selecting the most suitable motor starter for a given situation
- connecting motor starter power and control circuits for correct operation
- measuring starting current and torque of selected motor starters
- installation of reduced voltage starters

T11 Three-phase induction motor reversal and braking encompassing:

- reversing operating principles and control circuits
- plug braking operating principles and circuits
- dynamic braking operating principles and circuits
- regenerative braking operating principles and circuits
- eddy current brakes operating principles and circuits
- mechanical brakes operating principles and circuits
- comparison of the difference braking methods used.
- typical applications for each braking method.
- connecting a circuit with a braking feature to operate a three-phase motor.
- installation of motor braking control circuits

T12 Three-phase induction motor speed control encompassing:

- pole changing operating principles and circuits
- variable frequency drives operating principles and circuits
- slip-ring motors operating principles and circuits
- installation of motor speed controllers.

EE110	Computer Applications
-------	-----------------------

This unit covers the basic use of personal computers application relevant to a work function. It encompasses switching the computer on, applying user preferences, selecting basic applications, entering and retrieving information and printing files.

KS01-ED101A Basic Computer Applications

Evidence shall show an understanding of computer use basics to an extent indicated by the following aspects:

T1 Starting up

T2 Selecting application

T3 Entering information

T4 Saving

T5 Printing

EE111	Electromagnetism & Basic Electrical Machines
-------	--

This unit covers determining correct operation of electromagnetic devices and related circuits and providing solutions as they apply to electrical installations and equipment. It encompasses working safely, power circuit problems solving processes, including the use of voltage, current and resistance measuring devices, providing solutions derived from measurements and calculations to predictable problems in electromagnetic devices and related circuits

KS01-EG101A Electromagnetic devices and circuits

Evidence shall show an understanding of electromagnetic devices and circuits to an extent indicated by the following aspects:

T1 Magnetism encompassing:

- ☐ magnetic field pattern of bar and horse-shoe magnets.
- ☐ magnets attraction and repulsion when brought in contact with each other.
- ☐ common magnetic and non-magnetic materials and groupings (diamagnetic, paramagnetic and ferromagnetic materials).
- ☐ principle of magnetic screening (shielding) and its applications.
- ☐ practical applications of magnets
- ☐ construction, operation and applications of reed switches.

T2 Electromagnetism encompassing:

- ☐ conventions representing direction of current flow in a conductor.
- ☐ magnetic field pattern around a single conductor and two adjacent conductors

carrying current.

- ☐ Using the “right hand rule” to determine the direction of magnetic field around a current carrying conductor.
- ☐ direction of force between adjacent current carrying conductors.
- ☐ effect of current, length and distance apart on the force between conductors (including forces on bus bars during fault conditions).
- ☐ magnetic field around an electromagnet.
- ☐ Using the “right hand rule” to determine the direction of magnetic field around a current carrying coil.
- ☐ magnetomotive force (m.m.f.) and its relationship to the number of turns in a coil and the current flowing in the coil.
- ☐ practical applications of electromagnets.

T3 Magnetic circuits encompassing:

- ☐ magnetic characteristic curve for various materials and identify the various regions.
- ☐ Identify the various conditions of a magnetic material from its Hysteresis loop.
- ☐ factors which determine losses in magnetic material.
- ☐ methods used to reduce electrical losses in a magnetic circuit.
- ☐ magnetic flux (definition, unit and symbol).
- ☐ reluctance as the opposition to the establishment of magnetic flux.
- ☐ permeability (definition, symbol and unit).
- ☐ difference for magnetic and non-magnetic materials in regards to reluctance and permeability.
- ☐ calculation of m.m.f., flux or reluctance given any two values.
- ☐ flux density (definition, symbol, unit and calculation).
- ☐ magnetising force (definition, symbol, unit and calculation).
- ☐ common magnetic circuit types.
- ☐ effect of an air gap in a magnetic circuit.
- ☐ terms “magnetic leakage” and “magnetic fringing”.

T4 Electromagnetic induction encompassing:

- ☐ principle of electromagnetic induction (Faraday’s law of electromagnetic induction).
- ☐ applying “Fleming’s right hand rule” to a current a carrying conductor under the influence of a magnetic field.
- ☐ calculation of induced e.m.f. in a conductor given the conductor length, flux density and velocity of the conductor.
- ☐ calculation of induced e.m.f. in a coil given the number of turns in a coil and the rate of change of flux.
- ☐ calculation of force on a conductor given the flux density of the magnetic field, length of the conductor and the current being carried by the conductor.

- ☐ Lenz’s law
- ☐ applications of electromagnetic induction

T5 Inductance encompassing:

- ☐ construction of an inductor, including a bifilar winding inductor.
- ☐ Australian Standard circuit diagram symbol for the four types of inductor.
- ☐ effect of physical parameters on the inductance of an inductor.
- ☐ common types of inductor cores.
- ☐ applications of the different types of inductors.
- ☐ definition of terms self induction, inductance and mutual inductance.
- ☐ calculation of value of self induced e.m.f. in a coil.
- ☐ mutual induction occurs between two coils.
- ☐ graphical relationship between load voltage, current and self induced e.m.f. in a single d.c. circuit having inductance.
- ☐ practical applications for the effects of self and mutual induction.
- ☐ undesirable effects of self and mutual induction.
- ☐ definition of term “time constant” and draw the characteristic curve as applied to a series circuit containing an inductor and a resistor. (LR circuit) Calculation of value of the time constant for an LR circuit given the values of the components.
- ☐ time constants required for the current in an LR circuit to reach its final value.
- ☐ determining of instantaneous values of voltage and current in an LR circuit using a universal time constant chart.

T6 Measurement Instruments encompassing:

- ☐ moving coil, moving iron, dynamometer meter movements and clamp testers.
- ☐ practical applications for moving coil, moving iron and dynamometer meter movements.
- ☐ Calculation of resistance of shunts and multipliers to extend the range of ammeters and voltmeters.
- ☐ factors to be considered in selecting meters for a particular application.
- ☐ safety category of meters and their associated applications.
- ☐ steps and procedures for the safe use, care and storage of electrical instruments.

T7 Magnetic devices encompassing:

- ☐ construction, operation and applications of relays.
- ☐ construction, operation and applications of contactors.
- ☐ magnetic methods used to extinguish the arc between opening contacts.
- ☐ construction, operation and applications of Hall Effect devices.
- ☐ operation and applications of magnetostriction equipment.
- ☐ construction, operation and application of magnetic sensing devices.

T8 Machine principles encompassing:

- ☐ basic operating principle of a generator.
- ☐ applying Fleming's right hand rule for generators.
- ☐ basic operating principle of a motor.

applying Fleming's left hand rule for motors.

- calculation of force and torque developed by a motor.

T9 Rotating machine construction, testing and maintenance encompassing:

- ☐ components of a d.c. machine.
- ☐ difference between a generator and a motor in terms of energy conversion.
- ☐ nameplate of a machine.
- ☐ using electrical equipment to make electrical measurements and comparison of readings with nameplate ratings.
- ☐ Identification of faults in a machine from electrical measurements.
- ☐ care and maintenance processes for rotating machines
- ☐ safety risks associated with using rotating machinery.

T10 Generators encompassing:

- ☐ basic operation of a d.c. generator.
- ☐ calculation of generated and terminal voltage of a d.c. shunt generator
- ☐ prime movers, energy sources and energy flow used to generate electricity.
- ☐ types of d.c. generators and their applications.
- ☐ methods of excitation used for d.c. generators.
- ☐ equivalent circuit for a d.c. generator.
- ☐ importance of residual magnetism for a self excited generator.
- ☐ open circuit characteristics of d.c. generators.
- ☐ load characteristics of a d.c. generator.
- ☐ reversing the polarity of a d.c. generator
- ☐ Connect and test a d.c. generator on no-load and load
- ☐ Identify safety risks associated with using generators.

T11 Motors encompassing:

- ☐ operation of a motor and its energy flow.
- ☐ effect of back e.m.f. in d.c. motors
- ☐ torque as the product of the force on the conductors and the radius of the armature/rotor.
- ☐ types of d.c. motors and their applications.
- ☐ circuit diagrams for the types of d.c. motors.
- ☐ equivalent circuit for the types of d.c. motors.
- ☐ calculation of power output of a motor.
- ☐ characteristics of the different types of d.c. motors.
- ☐ connection and testing a d.c. shunt motor on no-load and load
- ☐ reversing the direction of rotation of a d.c. motor.
- ☐ safety risks associated with using motors (include risks of series d.c. motors).

T12 Machine efficiency encompassing:

- ☐ losses that occur in a d.c. machine.

methods used to determine the losses in a d.c. machine.

- calculation of losses and efficiency of a d.c. machine.
- ☐ efficiency characteristic of a d.c. machine and the conditions for maximum efficiency.
- ☐ application of Minimum Energy Performance standards (MEPS).
- ☐ methods used to maintain high efficiency.

EE112	Alternating Current Principle
-------	-------------------------------

This unit covers ascertaining correct operation of single and three phase a.c. circuits and solving circuit problems as they apply to servicing, fault finding, installation and compliance work functions. It encompasses safe working practices, multiphase circuit arrangements, issues related to protection, power factor and MEN systems and solutions to circuit problems derived from calculated and measured parameters.

KS01-EG102A Alternating current power circuits

Evidence shall show an understanding of alternating currents power circuits to an extent indicated by the following aspects:

T1 Alternating Current Quantities encompassing:

- ☐ sine, cosine and tangent ratios of a right angle triangle
- ☐ Pythagoras Theorem to a right angle triangle.
- ☐ use of the CRO to measure d.c. and a.c. voltage levels
- ☐ sinusoidal voltage generated by a single turn coil rotated in a uniform magnetic fields

terms 'period', 'maximum value', 'peak-to-peak value', 'instantaneous value', 'average value', 'root-mean-square (r.m.s.) value', in relation to a sinusoidal waveform.

- ☐ calculation of the instantaneous value of induced voltage of a generated sinusoidal waveform.

- ☐ measurement of instantaneous, peak, peak-to-peak values and the period of a sinusoidal waveform.
- ☐ calculation of root-mean-square (r.m.s.) value and frequency of a sinusoidal waveform from values of peak voltage and period.

T2 Phasors Diagrams encompassing:

- ☐ purpose of phasor diagrams
- ☐ 'in-phase', 'out-of-phase', 'phase angle' lead and 'lag'.
- ☐ phase angle between two or more alternating quantities from a given sinusoidal waveform diagram.
- ☐ convention for representing voltage, current and the reference quantity in a phasor diagram.
- ☐ drawing phasor diagrams to show the relationship between two or more a.c. values of voltage and/or current.
- ☐ determination of phase relationship between two or more sinusoidal waveforms from a given diagram and measurements.

T3 Single Element a.c. circuits encompassing:

- ☐ setting up and connect a single-source resistive a.c. circuit and take voltage and current measurements to determine the resistance
- ☐ determining the voltage, current resistances from measure of given values of any two of these quantities.
- ☐ relationship between voltage drops and current in resistive a.c. circuit
- ☐ applications of resistive a.c. circuits
- ☐ defining 'inductive reactance'.
- ☐ calculation of inductive reactance for a given inductor and the relationship between inductive reactance and frequency.
- ☐ applying Ohm's Law to determine voltage, current of inductive reactance in a purely inductive a.c. circuit given any two to these quantities.
- ☐ applications of inductive a.c. circuits.
- ☐ calculation of capacitive reactance
- ☐ applying Ohm's Law to determine voltage, current or capacitive reactance in a purely capacitive a.c. circuit given any two of the quantities.
- ☐ applications of capacitive a.c. circuits

T4 RC and RL Series a.c. circuits encompassing:

- ☐ impedance and impedance triangle.
- ☐ determining the impedance, current and voltages for a series RC circuit given the resistance, capacitance and supply voltage.
- ☐ drawing and labelling the impedance triangle for a series RC circuit

drawing phasor diagrams for a series RC circuit

- ☐ AS/NZS 3000 requirements for the installation of capacitors.
- ☐ examples of capacitive components in power circuits and systems and the effect on the phase relationship between voltage and current.
- ☐ determining the impedance, current and voltages for a series RL circuit given the resistance, inductance and supply voltage.
- ☐ drawing and labelling the impedance triangle for a series RL circuit
- ☐ drawing the equivalent circuit of a practical inductor
- ☐ Draw phasor diagrams for a series RL circuit.
- ☐ examples of inductive components in power circuits and systems and describe their effect on the phase relationship between voltage and current

T5 RLC Series a.c. circuits encompassing:

- ☐ measuring component voltages in a series RLC circuit and using a phasor diagram to determine the supply voltage and phase angle between circuit voltage and circuit current.
- ☐ determining the impedance, current and voltages for a series RLC circuit given resistance, inductance, capacitance and supply voltage.
- ☐ drawing and labelling the impedance triangle for a series RLC circuit.
- ☐ calculation of total impedance for a series RLC circuit.
- ☐ calculation of voltage drop for cables using the values for reactance and a.c. resistance from AS/NZS 3008.
- ☐ comparison of current limiting characteristics of inductors and resistors.
- ☐ practical examples of RLC series circuits

T6 Parallel a.c. Circuits encompassing:

- ☐ determining the branch currents of a parallel circuit that contain RL, RC or LC in two branches.
- ☐ using a phasor diagram to determine the total circuit current and phase angle in parallel RL, RC or LC circuits.
- ☐ determining the total circuit impedance of parallel RL, RC or LC circuits.
- ☐ measuring the branch currents in a parallel RLC circuit and use a phasor diagram to determine the total current and phase angle between circuit voltage and circuit current.
- ☐ determining the branch impedances, branch currents and phase angles voltages for a parallel RLC circuit given resistance, inductance, capacitance and supply voltage.
- ☐ calculation of impedance for a parallel RLC circuit.
- ☐ practical examples of parallel circuits.

T7 Power in an a.c. circuit encompassing:

- ☐ difference between true power, apparent power and reactive power and the units in which these quantities are measured.
- ☐ drawing the power triangle to show the relationships between true power, apparent power and reactive power
- ☐ defining the term "power factor" and phase angle.

methods used to measure single phase power, energy and demand.

T8 Power Factor Improvement encompassing:

- ☐ effects of low power factor.
- ☐ requirements for power factor improvement.
- ☐ methods used to improve low power factor of an installation.
- ☐ local supply authority and AS/NZS 3000 wiring rules requirements regarding the power factor of an installation and power factor improvement equipment.
- ☐ methods used to measure single phase power factor.
- ☐ using manufacturers catalogues to select power factor equipment for a particular installation

T9 Harmonics and Resonance Effect in a.c. Systems encompassing:

- ☐ term "harmonic" in relation to the sinusoidal waveform of an a.c. power system.
- ☐ sources in a.c. systems that produce harmonics.

- ☐ problems that may arise in a.c. circuits as a result of harmonics and how these are overcome.
- ☐ methods and test equipment used to test for harmonics
- ☐ methods used to reduce harmonics in a.c. power system
- ☐ conditions in a series a.c. circuit that produce resonance.
- ☐ dangers of series resonance circuits
- ☐ conditions in a parallel a.c. circuit that produce resonance.
- ☐ dangers of parallel resonance circuits
- ☐ AS/NZS3000 and the local supply authority requirements concerning harmonics and resonance effect in a.c. power systems.

T10 Three Phase Systems encompassing:

- ☐ features of a multiphase system.
- ☐ comparison of voltages generated by single and multiphase alternators.
- ☐ reasons for the adoption of three phases for power systems.
- ☐ how three phases is generated in a single alternator.
- ☐ Calculation of r.m.s. value of voltage generated in each phase given the maximum value.
- ☐ relationship between the phase voltages generated in a three phase alternator and the conventions for identifying each.
- ☐ term "phase sequence" (also, referred to as "phase rotation").
- ☐ determining the phase sequence of a three phase supply

T11 Three phase star-connections encompassing:

- ☐ connecting a three phase star-connection load.
- ☐ phase relationship between line and phase voltages and line and phase currents of a star-connected system.
- ☐ determining the r.m.s. value of line and phase voltage given any one of these quantities.

determining the r.m.s. value of line and phase current given any one of these quantities.

- ☐ terms "balanced load" and "unbalanced load".
- ☐ effect of a reversed phase winding of a star connected alternator.
- ☐ example of balanced and unbalanced loads in typical power systems.

T12 Three phase four wire systems encompassing:

- ☐ purpose of the neutral conductor in a three phase four wire systems.
- ☐ determining the effects of an high impedance in the neutral conductor of a three phase four wire system supplying an unbalanced load where MEN earthing is employed.
- ☐ determining the value and phase relationship of neutral current in an unbalanced three phase four wire systems given line currents and power factors.
- ☐ AS/NZS 3000 requirements regarding neutral conductors.
- ☐ AS/NZS 3008.1.1 method for determining voltage drop in unbalanced three phase circuits

T13 Three phase delta-connections and Interconnected systems encompassing:

- ☐ connecting three phase delta loads.
- ☐ phase relationship between line and phase voltages and line and phase currents of a delta-connected system.
- ☐ determining the r.m.s. value of line and phase voltage given any one of these quantities.
- ☐ determining the r.m.s. value of line and phase current given any one of these quantities.
- ☐ limitations and uses of open delta connections
- ☐ effect of a reversed phase winding of a delta connected transformer
- ☐ example of loads in typical power systems.
- ☐ drawing the typical combinations of three phase interconnected systems using star-connections and a delta-connection.
- ☐ relationship between line and phase voltages and line and phase currents in the typical interconnected systems using star-connections and delta-connections.

T14 Energy and power requirements of a.c. systems encompassing:

- ☐ purposes for measuring power, energy, power factor and maximum demand of a.c. power systems and loads.
- ☐ difference between true power, apparent power and reactive power and the units in which these quantities are measured in a three phase system.
- ☐ drawing the power triangle to show the relationships between true power, apparent power and reactive power in a three phase system.
- ☐ methods used to measure three phase power, energy, power factor and demand.
- ☐ determining how the power factor of a three phase installation can be improved.
- ☐ using manufacturers catalogues to select measurement equipment for a particular installation

T15 Fault Loop Impedance encompassing:

- ☐ term fault loop impedance of a a.c. power system
- ☐ determining fault loop impedance using resistance and reactance values from AS/NZS

3008.1.1

- ☐ measuring fault loop impedance of typical circuits
- ☐ procedures for testing fault loop impedance

EE113	Electrical Fundamental
-------	------------------------

This unit covers the application of calculations required to solve electrotechnical engineering problems. It encompasses working safely, applying problem solving techniques, using a range of mathematical processes and techniques to providing solutions to electrotechnical problems, and justifying such solutions.

Note.

Typical electrotechnical problems are those encountered in meeting requirements in meeting performance requirements and compliance standards, revising systems operating parameters and dealing with system malfunctions

This unit covers ascertaining correct operation of single and three phase machines and solving machine problems as they apply to servicing, fault finding, installation and compliance work functions. It encompasses safe working practices, machine connections circuit arrangements, issues related to machine operation, characteristics and protection and solutions to machine problems derived from calculated and measured parameters.

Evidence shall show an understanding of electrotechnical principles to an extent indicated by the following aspects:

T1 Resistance encompassing:

- ☐ relationship between voltage, current and resistance and the power dissipated in a circuit
- ☐ value of voltage, current and resistance in a circuit given any two of these quantities
- ☐ the factors of length, cross-sectional area and material effect the resistance of conductors
- ☐ effects of temperature change on the resistance of various conducting materials
- ☐ features of fixed and variable resistor types and typical applications
- ☐ characteristics of temperature, voltage and light dependent resistors and typical applications of each

T2 Series circuits encompassing:

- ☐ measurement of resistance, voltage and current values in a single source series circuit
- ☐ the voltage, current, resistances or power dissipated from measured or given values of any two of these quantities
- ☐ relationship between the voltage drops around a circuit and the applied voltage

T3 Parallel circuits encompassing:

- ☐ measurement of resistance, voltage and current values in a single-source parallel circuit
- ☐ the voltage, current, resistance or power dissipated from measured or given values of any of these quantities
- ☐ relationship between currents entering a junction and currents leaving a junction

T4 Series/parallel circuits encompassing:

- ☐ measurement of resistance, voltage and current values in a single-source series / parallel circuit
- ☐ the voltage, current, resistances or power dissipated from measured or given values of any two of these quantities

T5 Measurement of electrical quantities encompassing:

- ☐ operating characteristics of analogue and digital meters
- ☐ selecting an appropriate meter in terms of units to be measured, range, loading effect and accuracy for a given application

T6 Capacitance/Capacitors encompassing:

- ☐ definition of capacitance and explain how a capacitor is charged
- ☐ the units by which capacitance is measured
- ☐ relationship between capacitance, voltage and charge
- ☐ behaviour of a series d.c. circuit containing resistance and capacitance components
- ☐ factors which determine the capacitance of a capacitor and explain how these factors are present in all circuits to some extent

T7 Magnetism and electromagnetism encompassing:

- ☐ field patterns around given permanent magnets
- ☐ magnetic field patterns around a straight current carrying conductor and a solenoid
- ☐ direction in which the magnetic field around a straight current carrying conductor

T8 Electromagnetic induction encompassing:

- ☐ factors required to induce an emf in a conductor

T9 Sinusoidal alternating voltage and current encompassing:

- ☐ how a sinusoidal voltage is generated in a single turn coil rotated in a uniform magnetic field
- ☐ definition of the terms 'period', 'maximum value', 'peak-to-peak value', 'instantaneous value', 'average value' and 'root-mean-square (r.m.s.) value' in relation to a sinusoidal waveform
- ☐ instantaneous value of induced voltage of a generated sinusoidal waveform
- ☐ root-mean-square (r.m.s.) value and frequency of a sinusoidal waveform from values of peak voltage and period

T10 Test equipment encompassing:

- ☐ operating principles of a CRO including block diagram of functional areas
- ☐ set up, calibration and use of an oscilloscope to measure d.c and a.c. voltages and frequency
- ☐ measurement of the instantaneous, peak, peak-to-peak values and the period of sinusoidal and other common waveforms provided by a signal generator
- ☐ calibration and limitation of CRO probes
- ☐ use of signal generator as a voltage source

T11 Phase relationships in a.c. circuits encompassing:

- ☐ phasor representation of graphical waveforms
- ☐ 'in-phase', 'out-of-phase', 'phase angle', 'lead', and 'lag'
- ☐ convention for representing voltage, current and the reference quantity in a phasor diagram
- ☐ phasor diagrams to show the relationship between two or more a.c. values of voltage and/or current

T12 Single-source resistive a.c. circuits of various frequencies encompassing:

single-source a.c. circuit and taking resistance, voltage and current measurements

- ☐ voltage, current, resistances or power dissipated from measured or given values of any two of these quantities

T13 Inductance in a.c. circuits encompassing:

- ☐ concept of inductance, self-inductance and mutual inductance. (in terms of storage of magnetic energy)
- ☐ factors affecting inductance and how the unit of inductance is derived
- ☐ value of induced voltage in a given circuit
- ☐ how a series d.c. circuit containing resistance and inductance behaves
- ☐ 'inductive reactance'
- ☐ inductive reactance of a given inductor and show the relationship between inductive reactance and frequency
- ☐ applying Ohm's law to determine voltage, current or inductive reactance in a purely inductive a.c. circuit given any two of these quantities
- ☐ examples of inductive components in circuits and systems and describe their effect on the phase relationship between voltage and current

T14 Capacitance in a.c. circuits encompassing:

- capacitive reactance of a given capacitor and the relationship between capacitive reactance and frequency
- applying Ohm's law to determine voltage, current or capacitive reactance in a purely capacitive a.c. circuit given any two of these quantities
- examples of capacitive components in electronic circuits and systems and describe their effect on the phase relationship between voltage and current

T15 Impedance in a.c. circuits encompassing:

- definition of 'impedance'
- impedance of series, parallel and series-parallel circuits and draw diagrams showing the relationship between resistive, inductive and capacitive components
- single-source a.c. circuit with resistance, voltage and current measurements
- determination of the voltage, current or impedance from measured or given values of any two of these quantities
- using phasor diagrams to solve problems and show the relationship between voltages and currents in a.c. circuits

EE114	Electrical Power Principle
-------	----------------------------

KS01-EG006A Single and three-phase transformers

Evidence shall show an understanding of single and three phase transformers to an extent indicated by the following aspects:

T1 Transformer construction encompassing:

- types of lamination style and core construction used in single-phase, three phase, double wound, auto transformers and instrument transformers.
- identification of different winding styles/types used in transformers.
- methods used to insulate low and high voltage transformers.
- construction of transformer tanks for distribution transformers.
- transformer auxiliary equipment. (Bushings, surge-diverters, tap-changers, hot oil & winding indicators, breather, Buchholz relay and conservator).
- function of transformer auxiliary equipment.
- types of information stated on transformer nameplates.
- application of transformers.
- performing basic insulation resistance, continuity and winding identification tests.

T2 Transformer operation encompassing:

- principles of mutual induction of a transformer.
- factors that determine the induced voltage in a transformer winding.
- determining the value of a transformers secondary voltage and current given one winding's electrical details and turns ratio.
- identification of voltage and current components of a phasor diagram for a transformer on no-load.
- principles of power transferred from the primary to secondary when a load is connected using a phasor diagram neglecting impedance drops.
- selecting transformers for specific application/s.
- safety features specified in AS/NZS3000 with respect to transformers and isolating transformers.

T3 Transformer losses, efficiency and cooling encompassing:

- power losses which occur in a transformer.
- tests which allow the power losses of a transformer to be determine.
- determination of transformer losses and efficiency using test results.

relationship between transformer cooling and rating.

- methods used for natural and forced cooling of transformers.
- properties of transformer oil.
- tests conducted on transformer oil.

T4 Transformer voltage regulation and percent impedance encompassing:

- voltage regulation as applicable to a transformer.
- reasons for voltage variation in the output of a transformer.
- determine the voltage regulation of a transformer from voltage and percentage impedance values.
- percentage impedance as applied to transformers.
- determine the percent impedance by using test results.
- determine percent impedance of a transformer by calculation.

T5 Parallel operation of transformers and transformer auxiliary equipment encompassing:

- determine polarity markings for an unidentified single phase double wound transformer.
- need for parallel operation of transformers.
- conditions/restrictions required before two transformers can be connected in parallel.
- connecting transformers in parallel to supply a single load (loading on transformers operating in parallel).
- the consequences/effect of an incorrect connection.

T6 Auto-transformers and instrument transformers encompassing:

- identification of auto-transformers, voltage transformers and current transformers from their winding diagrams.
- determining voltage and current in the windings of an auto-transformer by calculation.
- advantages and disadvantages of an auto-transformer.
- AS/NZS3000 requirements with respect to transformers.
- construction of voltage transformers.
- ratings of voltage transformers.
- construction of current transformers.
- ratings of current transformers.
- precautionary measures taken to connect and disconnect instrument transformers.
- connection diagrams for instrument transformers.
- applications for auto-transformers and instrument transformers.

EE115	Basic Analogue & Digital Electronics
-------	--------------------------------------

Part 1 Analogue

This competency standard unit covers developing engineering solutions to solve problems with analogue electronics. It encompasses working safely, apply extensive knowledge of analogue electronics circuit and device operation and their application, gathering and analysing data, applying problem solving techniques, developing and documenting solutions and alternatives.

Note.

Typical analogue electronic problems are those encountered in meeting performance requirements and compliance standards, revising analogue electronics operating parameters and dealing with analogue electronic malfunctions

KS01-EH145A Analogue electronic circuits and systems

Evidence shall show an understanding of analogue electronic circuits, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

Single-stage analogue electronics

T1. Understanding of differential amplifiers using discrete components (transistors) of suitable characteristics to meet system objective

- ☐ differential gain, common mode rejection ratio and the required CMRR
- ☐ variable gain input stage

T2. Operational amplifier circuits

- ☐ use of d.c. offset
- ☐ operation of single-supply inverting and non-inverting amplifiers employing DC offset bias at the input and blocking capacitors
- ☐ operation of a high input resistance unity gain
- ☐ areas of use for single-supply amplifiers.

T3. Comparator circuits (open loop, limited swing and hysteresis) using operational amplifiers:

- ☐ ideal op-amp comparator
- ☐ typical uses of the comparator.
- ☐ comparators with limited (i) negative swing and (ii) both positive negative swing
- ☐ hysteresis comparator with positive resistor divider feedback and calculate the input switching voltages.
- ☐ desirable properties of an operational amplifier for use as comparator and the characteristics of comparator op amps.

T4. Amplifiers with given piecewise linear transfer characteristics

T5. Operation and building precision of half-wave and fullwave rectifiers

- ☐ precision two-diode half-wave and full-wave rectifier
- ☐ typical applications of precision rectifiers.

T6. Oscillators

- ☐ Operation of oscillators
- ☐ Purpose of oscillators
- ☐ Conditions for sustained oscillation
- ☐ Operation of phase shift oscillators
- ☐ The operation and characteristics of a Colpitts oscillator
- ☐ Conditions that cause instability in amplifier circuits

Advanced power amplifiers

- ☐ Analysing the performance of power amplifiers
- ☐ Minimum power, voltage and current rating of an output transistor.
- ☐ Aspects of heat transfer related to heat sinking.
- ☐ Common forms of distortion encountered in power amplifiers. (eg. Total harmonic distortion)
- ☐ Techniques for overcoming common forms of distortion.

T9. (is the number correct?)Classes of power amplifiers and indicate typical maximum efficiencies for each class

- ☐ conduction, angle, output power and efficiency of a power amp.
- ☐ typical and/or maximum efficiencies of each class of power Amp.
- ☐ d.c and/or a.c load line,
- ☐ output power and efficiency of a large signal amplifier

T10. Operation of each class and type of power amplifier circuit

- ☐ load line operation.
- ☐ Class A – direct, RC, transformer coupled. Class B – Complementary symmetry, drivers, single supply/duel supply. Class C and Class D.
- ☐ measure the characteristics of a fully integrated operational power Amplifiers.

T11. Active filters

- ☐ frequency response of low-pass, high-pass, low-Q band-pass, high-Q bandpass, notch and all-pass filters and define pass-band, stop-band and rate of roll-off.
- ☐ main features in the amplitude and phase plots of Butterworth, Chebyshev, Cauer-Elliptic and Bessel filter responses.
- ☐ pros and cons of active and passive filters.
- ☐ non-unity gain Sallen-Key low-pass filter.
- ☐ Types of active filters available in IC form - Variable filter, Switched Capacitor Filters and digital (sampled data) filters.
- ☐ Low-Q (i.e. cascade of lowpass and high-pass) and/or narrow bandpass filters

Part 2 Digital

This unit covers determining correct operation of digital sub-systems. It encompasses working safely, problem solving procedures, including the use of voltage, current and resistance measuring devices, providing solutions derived from measurements and calculations to predictable problems in digital components circuits.

KS01-EH112A Digital sub-system

Evidence shall show an understanding of digital sub-system troubleshooting, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

T1. Analogue and digital signals

- ☐ Comparison between analogue and digital signals
- ☐ Observing digital and analogue waveforms

T2. Numbering systems

- ☐ The binary number system
- ☐ The hexadecimal number system
- ☐ Binary addition and subtraction

T3. Numbering systems - conversions

- ☐ Conversion between numbering systems
- ☐ Binary Coded Decimal (BCD)
- ☐ Gray code
- ☐ The American Standard Code for Information Interchange (ASCII)
- ☐ Unicode

T4. Combinational logic circuits

- ☐ Precautions when handling electronic devices due to electrostatic discharge (ESD)
- ☐ Truth tables
- ☐ Basic operation and characteristics of logic gates

Logic probes

- ☐ Verification of operation of logic circuits

T5. Digital displays

- ☐ Seven segment LED displays
- ☐ Drive requirements
- ☐ Current limiting
- ☐ Multiplexed displays
- ☐ Seven segment Decoders
- ☐ Liquid Crystal Displays (LCD)
- ☐ Emerging display technologies
- ☐ Verification of seven segment display circuit
- ☐ Interfacing with logic circuits

T6. Digital subsystem building blocks

- ☐ Encoders and Decoders
- ☐ Multiplexers and Demultiplexers
- ☐ Timing diagrams
- ☐ Flip flops, Latches and registers
- ☐ Ripple counters
- ☐ MOD counters
- ☐ Synchronous counters Multi-vibrators
- ☐ Clocks
- ☐ Verification and operation (eg. PLDs, ICs)

T7. Digital fault finding

- ☐ General fault finding principles
- ☐ Common digital faults
- ☐ Digital test equipment
- ☐ Digital test equipment (eg. Logic probes, Digital Oscilloscopes, digital trainers)

T8. Logic families and specifications

- ☐ Input and output voltage characteristics
- ☐ Comparison of logic families
- ☐ Unit load
- ☐ Noise margin
- ☐ Interfacing different logic families
- ☐ Tri-state logic devices

Overview and applications of A/D converter and D/A converter

EE116	Process Control System
-------	------------------------

This unit covers solving problems in industrial control systems. The unit encompasses safe working practices, interpreting process and circuit diagrams, applying knowledge of industry controls to problem solving techniques, safety and functional testing and completing the necessary documentation.

Note.

Typical basic industrial control system problems are those encountered in meeting performance requirements and compliance standards, revising control operating parameters and dealing with control malfunctions.

KS01-EI120A

Industrial control systems

Evidence shall show an understanding of industrial control systems to an extent indicated by the following aspects:

Control amplifiers encompassing:

- ☐ Introduction
- ☐ Amplifier Operation
- ☐ Operational Amplifiers
- ☐ Operational Amplifier Configurations

Industrial transducers encompassing:

- ☐ Introduction
- ☐ SI Units
- ☐ Forms of Energy
- ☐ Transducer Terminology
- ☐ Temperature Measurement
- ☐ Force Measurement
- ☐ Speed Measurement

SKILLS AND KNOWLEDGE

- ☐ Positional Measurement

Industrial final control elements encompassing:

- ☐ Introduction
- ☐ Electromagnetic Devices
- ☐ Valves
- ☐ Solid State Switching Devices

Industrial control systems encompassing:

- ☐ Automatic Control
- ☐ Open Loop Control
- ☐ Closed Loop Control
- ☐ Control System Terminology
- ☐ Control System Evaluation
- ☐ Two Position Control
- ☐ Proportional Control (P)
- ☐ Proportional + Integral Control (P+I)
- ☐ Proportional + Derivative Control (P+D)
- ☐ Proportional + Integral + Derivative Control (P+I+D)

Industrial control loops and control signals encompassing:

- ☐ Introduction
- ☐ Control Loops
- ☐ Converters (D to A and A to D)
- ☐ Multiplexing

EE117

Solar Electrical System

This unit covers providing known solutions to predictable problems in photovoltaic energy apparatus and systems operated at ELV and LV. It encompasses working safely, problem solving procedures, including the use of basic voltage, current and resistance measuring devices, providing known solutions to predictable circuit problems.

KS01-EK125A

Photovoltaic power systems

Evidence shall show an understanding of photovoltaic power systems to an extent indicated by the following aspects:

T1 Daily irradiation encompassing:

- ☐ definition of the terms: declination angle, reflectance, sunshine hours, extraterrestrial irradiation, Latitude, direct and diffuse radiation, azimuth and altitude angles, radiance, solar window, tilt angle, solstice, equinox
- ☐ units and symbols for irradiation and irradiance
- ☐ interpretation of solar radiation data tables and contour maps.
- ☐ measuring solar irradiance with a solarimeter.

how radiation varies throughout the year on the surface of a fixed collector.

- ☐ determining, using field measurements and a sun path diagram, the times and dates when a PV array will be shaded by obstacles at a particular site.
- ☐ calculation of the daily average irradiation on a horizontal plane given extraterrestrial irradiation, location constants and sunshine hour data.
- ☐ calculation of the monthly mean daily irradiation falling on a PV array for each month of the year, adjusted for the effects of shading, using irradiance and irradiation data tables and a sun path diagram and/or appropriate software.
- ☐ selection of an appropriate tilt angle for fixed and seasonally-adjustable PV arrays at an given latitude

T2 Photovoltaic modules encompassing:

- ☐ definition of the terms: cell, module, array, mono-crystalline, poly-crystalline, amorphous, band gap energy, semi-conductor
- ☐ diagram of a basic crystalline silicon PV cell, showing its physical structure, with at least five major features labelled
- ☐ major steps in the production of PV modules based on bulk silicon cells, in comparison with the production of thin film PV modules.
- ☐ basic physical principles of PV cell operation for the main types of commercially available PV modules.
- ☐ efficiency, spectral response, cost and typical applications of the main types of commercially available PV modules.
- ☐ new photovoltaic technologies currently being developed towards commercialisation, and their major features.
- ☐ mechanical and electrical features necessary for the long life of a PV module under a wide range of operating conditions.

T3 Module characteristics encompassing:

- ☐ definition of the terms: I-V curve, fill factor, operating point, maximum power point (MPP), cell temperature co-efficient, nominal operating cell temperature (NOCT), current, voltage and power output co-efficient.
- ☐ equivalent circuit for a PV cell, labelling each of the elements and the polarity of the terminals.
- ☐ family of I-V curves for a PV module, labelling major points and showing the effects of variation in irradiance and variation in cell temperature.

For ratings of a PV module from manufacturer's information or nameplate data.

- ☐ determination of the operating point of a PV module with a resistive load, a constant voltage source or any other load with known I-V characteristics, using the load line method.
- ☐ configuration of a typical PV array, including the function, placement and ratings of blocking and bypass diodes.
- ☐ the effect of partial shading of a PV module or array, the impact of bypass diodes and the significance of their configuration on output current in typical operating conditions.
- ☐ calculation of the power at MPP, and the power under typical battery charging conditions, of a PV module, given irradiance and ambient air temperature.
- ☐ calculation of the daily energy output of a PV array in accordance with AS 4509.2, and by using "rule of thumb" de-rating factors.
- ☐ the scope and content of Australian or international standards relevant to the performance of PV modules.
- ☐ the electrical characteristics of a PV module according to relevant Australian or International standards, using an outdoor test method.

EE118

Electrical Energy Supply System

2.6.21

a) Generation

primary energy sources
power stations
power station output
acts and legislation relating to generation
renewable energy sources and techniques

b) Transmission

system requirements
principal components of a power system
voltage levels
grid systems
acts/legislation relating to transmission
future trends

c) Distribution

high voltage distribution systems
medium/low voltage distribution systems
radial feeders
parallel feeders
ring main feeders
acts/legislation relating to distribution

d) Substations

purpose
location
layout

e) Overhead and underground systems
relative merits
applications
planning
installation

f) Power distribution system electrical characteristics
transmission and distribution systems
inductance, capacitance and resistance

g) Voltage problems in a power distribution system
low voltage
unbalanced voltages
voltage rises

h) Voltage regulation
autotransformers with OLTC
transformers with OLTC
static capacitors
load control

i) Control of OLTC
regulation relays
control circuits
line drop compensation

j) Power distribution system faults
type/classification of fault
typical causes/effects of faults
three-phase symmetrical fault levels
fault level limitation

k) Voltage surges in a power distribution system
lightning surges
switching surges
typical surge levels
surge impedance, typical values
significance of the system surge impedance.

l) Metering and metered quantities
purpose
energy
maximum demand
accuracy classes for metering systems

m) Energy and demand meters
construction
operation
adjustments
testing

n) Metering circuits
direct metering
instrument transformer metering

o) Electronic metering systems and recording meters
types
applications
connections

p) Load control
purpose
methods

.6.22.1

a) Protection fundamentals encompassing:
purpose of protection
features of a protection scheme

b) Instrument transformers for protection encompassing:

Operating principles
Applications of current transformers
Applications of voltage transformers

c) Feeder protection encompassing:
fuse protection
overcurrent & earth fault
sensitive earth fault
unit schemes
distance protection
trip/close sequences for feeders
recloser/sectionaliser systems

d) Transformer protection encompassing:
overheating protection
overcurrent protection
restricted earth fault protection
differential protection
oil and gas devices

e) Busbar protection encompassing:
types of fault
requirements of busbar protection
system protection
frame-earth protection

f) Surge protection encompassing:
voltage surges (revision)
surge diverters
arcing horns

EE119	Electrical Risk Assessment
-------	----------------------------

This unit covers the mandatory requirements of persons in a supervisory role to implement and monitor an organisation's occupational health and safety policies, procedures and programs. It encompasses understanding an organisation's OHS obligations, providing safety information to staff, implementing and monitoring participative arrangements, safety procedures and training and maintaining safety records.

KS01-EE117A Energy sector Occupational Health and Safety, supervisory responsibilities

Evidence shall show an understanding of OHS enterprise responsibilities to an extent indicated by the following aspects:

- T1 Provisions of relevant occupational health and safety legislation
- T2 Principles and practice of effective occupational health and safety management
- T3 Workplace hazards, range and selection of control measures
- T4 Organisational health and safety management systems and policies and procedures needed for legislative compliance
- T5 Impact of characteristics and composition of the workforce on occupational health and safety management
- T6 Relevance of occupational health and safety management to other organisational management policies, procedures and systems.
- T7 Analysis of entire work environment and judge occupational health and safety interventions
- T8 Analysis of relevant workplace data
- T9 Ability to assess resources needed for risk control

EE120	Electrical Contracting & Specification
-------	--

This unit covers developing requirement to be incorporated into the writing of specifications for electrical engineering projects. It encompasses determining the safety requirements to be met, establishing client expectations, ensuring cost effective solutions are pursued and documenting design and technical requirements.

KS01-EE071B Electrical engineering specification development

Evidence shall show an understanding of electrical engineering specification writing to an extent indicated by the following aspects:

T1 Electrical engineering specifications encompassing:

- ☐ Purpose and nature of specification
- ☐ Performance based specifications
- ☐ Prescriptive specifications
- ☐ Acceptable evidence of compliance
- ☐ Additional service required with the supply of equipment

T2 Dealing with suppliers and manufacturer's encompassing:

- ☐ Documenting specification
- ☐ Customer/client relations encompassing:
 - ☐ Importance of customer/client relations
 - ☐ Interpersonal skills that enhance customer/client
 - ☐ Dispute resolution
- ☐ Customer/client relations strategies

T3 Using basic computers functions encompassing:

- ☐ Starting up
- ☐ Selecting application

- ☐ Entering information
- ☐ Saving
- ☐ Printing

T4 Research skills encompassing:

- ☐ Terminology - Terminology used in a research workplace; Terminology used in research-specific literature and the like.
- ☐ Theory – why conduct research - The history of research; past research successes; past research failures; Research Protocols; Research practices and the like.
- ☐ The research environment - The research work environment; Standard research practices; Industrial, legal, ethical, political and market environment considerations; Legislation and regulation; Contractual obligations of all parties

and the like.

- ☐ Planning to conduct research - Concept development and/or research brief analysis; Research objectives; Research deliverables; Research project plan; Literature reviews; Methodology development, including; Experimental design, Technology selection, Information Management system selection and the like
- ☐ Clients - identifying client viewpoints and stake in project; Identifying client requirements and parameters; Determining research budgets, timelines, milestones and quality attributes with clients.
- ☐ Research, Development and Commercialisation - Research and Development goals versus Commercialisation goals and realities; Research and Development to inspire a commercialisation process

EE121	Electronics Power Control Device
-------	----------------------------------

This unit covers solving problems with electronic aspects of single phase power control devices and circuits. The unit encompasses safe working practices, interpreting diagrams, applying knowledge of electronic power control devices and their application, using effective problem solving techniques, safety and functional testing and reporting work activities and outcomes.

Note.

Typical single phase electronic power control problems are those encountered in meeting performance requirements and compliance standards, revising control operating parameters and dealing with control malfunctions.

KS01-EI148A

Single phase electronic power control circuit

Evidence shall show an understanding of single phase electronic power control circuit to an extent indicated by the following aspects:

Introduction to Power Control

- ☐ Advantages and benefits of power control
- ☐ Need for power control and typical applications
- ☐ Power control methods
- ☐ Types of solid state switches
- ☐ Block diagram of a power converter
- ☐ Power control terminology

Modes of operation.

Single Phase Power Rectifiers

- ☐ Single Phase Rectifier Circuit Configurations
- ☐ Resistive/Inductive Loads
- ☐ Output Voltages/Waveforms
- ☐ Ripple Voltage/Frequency
- ☐ Peak Reverse Voltages
- ☐ Free Wheeling Diodes

Silicon Controlled Rectifiers (SCRs)

- ☐ Construction and Symbol
- ☐ Basic Operating Principles
- ☐ Characteristics
- ☐ Gate Requirements
- ☐ Commutation
- ☐ Electrical Ratings
- ☐ Testing SCRs
- ☐ Applications.

Triacs and Gate Turn Off (GTO) Thyristors

- ☐ Triac Construction and Symbol
- ☐ Triac Basic Operating Principles
- ☐ Triac Characteristics
- ☐ Triac Triggering Modes
- ☐ Triac Electrical Ratings
- ☐ Triac Testing
- ☐ GTO Construction and Symbol
- ☐ GTO Basic Operating Principles
- ☐ GTO Characteristics
- ☐ GTO Electrical Ratings
- ☐ Applications for Triac and GTOs

Power Transistors (BJTs)

- ☐ BJT Construction and Symbol
- ☐ BJT Basic Operating Principles
- ☐ BJT Characteristics
- ☐ BJT Electrical Ratings
- ☐ BJT Testing
- ☐ Applications for BJTs

Power Field Effect Transistors (FET)

- ☐ Types of FETs used for power control
- ☐ Power FETs Construction and Symbol
- ☐ FET Basic Operating Principles and Characteristics
- ☐ IGBT Basic Operating Principles and Characteristics
- ☐ Power FET Electrical Ratings

Power FET Testing

- ☐ Applications for Power FETs

Triggering Devices

Diac:

- ☐ construction and symbol
- ☐ operating principles
- ☐ breakover voltage.
- ☐ Unijunction transistors (UJTs)
- ☐ construction and symbol
- ☐ operating principles
- ☐ intrinsic standoff ratio and peak point voltage

Programmable Unijunction Transistors (PUTs)

- ☐ construction and symbol
- ☐ operating principles
- ☐ programmable standoff ratio
- ☐ peak point voltage

Triggering Circuits

- ☐ R-C Time Constant Circuits
- ☐ Diac Trigger Circuit Operation
- ☐ UJT Relaxation Oscillator Circuit Operation
- ☐ PUT Relaxation Oscillator Circuit

Half Wave Controlled Rectification

Phase shift control

- ☐ Controlled rectifiers
- ☐ Controlled rectifier power output control
- ☐ Single Phase Half-Wave Controlled Rectifier
- ☐ Circuit configuration
- ☐ circuit operation
- ☐ waveforms
- ☐ load voltage
- ☐ applications and limitations
- ☐ Problems Associated with Phase Shift Control

Full Wave Controlled Bridge Rectification

- ☐ Single phase full-wave controlled bridge rectifier circuit
- ☐ Output voltage
- ☐ Output waveforms
- ☐ Applications and limitations
- ☐ Advantages and disadvantages

Fully Controlled Bridge Rectification

- ☐ Single phase fully controlled rectifier bridge circuit
- ☐ Output voltage
- ☐ Output waveforms
- ☐ Applications and limitations
- ☐ Advantages and disadvantages

Single-Phase a.c. Voltage Control

- ☐ Phase control of a.c. power
- ☐ Circuit configurations - half and full control circuits
- ☐ Triggering circuits
- ☐ Circuit performance and operation on resistive and inductive loads
- ☐ Output voltage and waveform, determination of output voltage using circuit characteristics
- ☐ Range of control with inductive loads
- ☐ Triggering problems associated with inductive loads.
- ☐ Applications and limitations

Zero Voltage Switching (ZVS)

- ☐ Operating principles
- ☐ Circuit configuration – including trigger circuits

Circuit operation and waveforms – resistive loads only

- ☐ Relationship between load power and conduction time
- ☐ Solid state relays; types and ratings
- ☐ Applications and limitations

Fault Finding of Power Control Circuits

- ☐ Fault finding procedures
- ☐ Typical faults – power and trigger circuits
- ☐ Characteristics displayed by common faults
- ☐ Comparison of test data with expected data (voltage/current waveforms)
- ☐ Location and replacement of faulty components

EE201	Engineering Mathematics
-------	-------------------------

This unit covers the application of computational processes to solve engineering problems. It encompasses working safely, applying problem solving techniques, using a range of mathematical processes, providing solutions to electrical/electronics engineering problems and justifying such solutions.

Note. Typical engineering problems are those encountered in meeting requirements in a design brief, meeting performance requirements and compliance standards, revising systems operating parameters and dealing with system malfunctions

KS01-EE126A Electrotechnology engineering maths

Evidence shall show an understanding of electrotechnology engineering maths to an extent indicated by the following aspects:

T1 Rational, irrational numbers and basic algebra

- ☐ simplification of expressions involving square roots and cube roots
- ☐ scientific and engineering notation
- ☐ evaluation of expressions using a calculator
- ☐ convert units of physical quantities using unity brackets
- ☐ substitute given values into formulae to find physical quantities
- ☐ manipulate algebraic expressions using mathematical operations in their correct order, the laws of indices, expansion of brackets and collecting like terms

T2 Algebraic manipulation

- ☐ Factorise algebraic expressions using common factors
- ☐ Factorise quadratic expressions using trial and error on the factors of the coefficients
- ☐ Simplify algebraic fractions using common denominators and cancelling
- ☐ Solve simple one variable equations including algebraic fractions
- ☐ Find the quotient and remainder given a linear divisor.
- ☐ Transpose formulae to find a required variable.

T3 Laws of indices

- ☐ Conversion between decimal notation, scientific notation and engineering notation
- ☐ Laws of indices: positive /negative values, multiplication/division, fractional values, index equals zero
- ☐ Logarithmic laws: multiply/divide
- ☐ solution of exponential equations using logarithms, substitution and solution of relevant formulae involving exponents or logarithms
- ☐ Graphs of exponential functions, 10^x and e^x and the inverses $\log_{10}(x)$ and $\log_e(x)$ functions on log-linear graphs
- ☐ Convert numbers into scientific and engineering notation using the laws of indices
- ☐ Manipulate and simplify arithmetic and algebraic expressions using the laws of indices and logarithms

- ☐ Express logarithms as indices.
- ☐ Perform logarithmic operations.
- ☐ Determine logarithms and antilogarithms to base 10, using a scientific calculator.
- ☐ **Determine logarithms and antilogarithms to base e, using a scientific calculator.**
- ☐ Convert logarithmic values from base 10 to base e and vice versa.
- ☐ **Sketch given functions on log-linear graphs**

T4 Estimations, errors and approximations

- ☐ Errors in measurement
- ☐ **Maximum probable error**
- ☐ **Show awareness of errors in measurement and of giving results in appropriate number of significant figures**
- ☐ Use estimations and approximations to check the reasonableness of results.

T5 Plane figures – triangles and basic trigonometry

- ☐ **Angles in a triangle**
- ☐ Isosceles and equilateral triangles
- ☐ Congruent triangles
- ☐ Similar triangles
- ☐ Pythagoras' theorem
- ☐ Area of triangles
- ☐ Basic trigonometry functions
- ☐ Degrees, radians
- ☐ The ratios: sin, cos, tan, cosec, sec, cot.
- ☐ Inverse trig functions
- ☐ Sine and cosine rules

T6 Plane figures - quadrilaterals and circles

- ☐ Types and properties of quadrilaterals
- ☐ Areas and perimeters of regular quadrilaterals
- ☐ Lengths of arcs
- ☐ **Angles in a circle - degrees**
- ☐ **Angles in a circle - radians**
- ☐ Lengths of chord segments
- ☐ Tangents to circles
- ☐ **Circumference and area of circles**
- ☐ Names and characteristics of common polygons

T7 Graphs of Trigonometric functions

- ☐ Graph trigonometric functions and solve trigonometric equations.
- ☐ Simplify trigonometric expressions using trigonometric identities
- ☐ **Convert angular measure in degrees to radians and vice versa**
- ☐ Graph trigonometric functions including graphs of $y = \sin x$ and $y = \cos x$
- ☐ **Using vocational applications of current or voltage as a function of time, consider changes in amplitude, consider changes in frequency.**
- ☐ Examine relationships of frequency, period and angular velocity.
- ☐ **Sketch graphs of the form $f(t) = a \sin \phi t$ and $f(t) = a \cos \phi t$, where a is the peak voltage or current, and ϕ is the angular velocity**
- ☐ **Solve graphically equations of the form $f(t) = a \sin \phi t$ and $f(t) = a \cos \phi t$**

Show a positive or negative angle on the unit circle.

- Use symmetry properties to find trigonometric ratios for angles greater than $\pi/2$.
- Solve simple vocational problems relating period, frequency and angular velocity.

T8 Graphs of linear functions

- ☐ The number plane
- ☐ Gradient and x and y intercepts of a straight line
- ☐ **Equation of a straight line length and mid-point of a straight line segment**
- ☐ Function notation

T9 Simultaneous equations

- ☐ Graphical solutions
- ☐ Substitution
- ☐ Elimination
- ☐ **Solve 2 linear simultaneous equations both algebraically and graphically.**

T10 Matrices

- ☐ Perform the basic operations on matrices up to 3×3
- ☐ Manipulate matrix equations and expressions
- ☐ **Recognise inverse and identity matrices up to 3×3 and use to solve systems of linear equations.**
- ☐ Find determinants up to 3×3 and use to solve systems of linear equations.
- ☐ Solve problems involving more than two simultaneous equations.
- ☐ State the limitations of graphical methods of solution.
- ☐ Distinguish between a matrix and an array.
- ☐ **Describe the null, diagonal and unit matrix**
- ☐ **Describe and identify a singular/non-singular matrix**

T11 Quadratic functions

- ☐ Graphs of quadratic functions represented by parabolas and the significance of the leading coefficient.
- ☐ Graph quadratic functions and solve quadratic equations.
- ☐ **Sketch and interpret the graphs of quadratic functions showing the significance of the leading coefficient and the zeros**
- ☐ Solve quadratic equations by factoring or using quadratic formula
- ☐ **Solve simultaneously linear and quadratic equations algebraically and geometrically**
- ☐ Interpret verbally formulated problems involving quadratic and linear equations and solve.

T12 Exponential and logarithmic functions

- ☐ Transform non-linear functions (including exponential) to linear forms and plot data.
- ☐ Draw curves of best fit, interpolate data and estimate constants in suggested relationships.

Interpret verbally formulated problems involving growth and decay, and solve.

- Graph exponential and logarithmic functions and solve exponential and logarithmic equations.
- ☐ **Sketch the graphs of simple exponential and logarithmic functions showing behaviour for large and small values**

T13 Vectors and Phasors

- ☐ The vector as an expression of magnitude and direction
- ☐ The vector sum of x and y values in terms of magnitude and direction
- ☐ Rectangular components of vectors in the form $x = r \cos \theta$ and $y = r \sin \theta$
- ☐ Rectangular-polar and polar-rectangular conversion
- ☐ Vector addition and subtraction
- ☐ Express rectangular components of vectors in the form $x = r \cos \theta$ and $y = r \sin \theta$

T14 Complex numbers

- ☐ Definitions and notation of complex numbers
- ☐ Complex numbers as vectors on an Argand diagram
- ☐ laws of complex numbers and apply the laws in suitable calculations.
- ☐ Plot complex numbers on the Argand plane.
- ☐ Express vectors as complex numbers and perform suitable calculations.
- ☐ Calculate the conjugate of a complex number.
- ☐ Using a calculator for rectangular-polar and polar-rectangular conversions.

EE202	Electrical Circuits
-------	---------------------

This unit covers determining correct operation of complex multiple path circuits and providing engineering solutions as they apply to various branches of electrotechnology work functions. It encompasses working safely, problem solving procedures, including using electrical measuring devices, applying appropriate circuit theorems and providing solutions derived from measurements and calculations and justification for such solutions.

KS01-EE125A Circuit analysis

Evidence shall show an understanding of circuit analysis to an extent indicated by the following aspects:

T1 Voltage/Current Sources and Kirchhoff's Law for d.c. Linear Circuits encompassing:

- ☐ calculating the effect of the internal resistance on terminal voltage and current delivered for practical voltage sources and current sources
- ☐ calculating current and voltage in any d.c. network of up to two loops and three sources.
- ☐ Kirchhoff's Law using a circuit simulation program.
- ☐ function and operation of an electronics circuit simulation program.
- ☐ using electronics circuit simulation program.

T2 Superposition Principles for d.c. Linear Circuits encompassing:

- ☐ d.c. networks (two loops, three sources)
- ☐ using simulation programs
- ☐ calculating current and voltage in any d.c. network of up to two loops and three sources.
- ☐ Superposition theorem using a circuit simulation program.

T3 Mesh and Nodal Analysis for d.c. Linear Circuits encompassing:

- ☐ writing mesh equations for d.c. networks containing up to three loops.
- ☐ writing Nodal equations for d.c. networks containing up to three nodes.
- ☐ using mesh analysis to find currents in d.c. networks of up to two loops.
- ☐ using nodal analysis to find node voltage and branch currents in d.c. networks of up to two nodes using a circuit simulation program to confirm the results of Mesh analysis or Nodal analysis of d.c. networks.

T4 Thévenin's principles for d.c. Linear Circuits encompassing:

- ☐ calculating the effect of the internal resistance on terminal voltage and current delivered for practical voltage sources and current sources.
- ☐ calculating the Thévenin equivalent voltage and resistance for d.c. networks and determining the load current, voltage and power.
- ☐ converting the Thévenin equivalent circuit to a Norton equivalent circuit and vice versa.
- ☐ verifying the equivalence of Thévenin equivalent circuits by measurement.

T5 Norton's principles for d.c. linear circuits encompassing:

- ☐ calculating the effect of the internal resistance on terminal voltage and current delivered for practical voltage sources and current sources.
- ☐ calculating the Norton equivalent current and resistance for d.c. networks and determining the load current, voltage and power.
- ☐ converting the Thévenin equivalent circuit to a Norton equivalent circuit and vice versa.
- ☐ verifying the equivalence of Norton equivalent circuits by measurement.

T6 Phasors encompassing:

- ☐ time domain and frequency domain
- ☐ frequency, angular frequency and units of measurement
- ☐ defining rms and convert between time domain and rms phasor values for a sine wave.
- ☐ converting between angular frequency and frequency.
- ☐ using a calculator to convert between polar and rectangular forms of phasor.
- ☐ representing a.c. voltages on a phasor diagram.

T7 Complex Impedance encompassing:

- ☐ defining impedance, resistance and reactance.
- ☐ defining admittance, conductance and susceptance.
- ☐ converting between conductance to resistance.
- ☐ converting between susceptance and reactance.
- ☐ converting between impedance and admittance.
- ☐ sketching impedance and admittance diagrams.
- ☐ calculating two-component series equivalent circuits and two-component parallel equivalent circuits and convert between these forms.

T8 Series and parallel a.c. linear circuits encompassing:

- ☐ Kirchhoff's Laws
- ☐ series equivalent impedance
- ☐ parallel equivalent impedance
- ☐ voltage divider and current divider rules
- ☐ calculating and measuring voltage and currents in a series a.c. circuit and draw the phasor diagram.

calculating and measuring currents in a parallel a.c. circuit and draw the phasor diagram.

· calculating and measuring voltage and currents in a series/parallel a.c. circuit and draw the phasor diagram.

T9 Superposition principles and Kirchhoff's Laws applied to a.c. linear circuits encompassing:

- ☐ calculating current and voltage in any a.c. network of up to two loops and two sources.

- ☐ using circuit simulation programs to demonstrate the superposition theorem.
- ☐ function and operation of an electronics circuit simulation program.
- ☐ entering given circuit specifications into an electronic circuit program.
- ☐ setting the circuit simulation program operation parameters including input and output values, ranges and graduation.
- ☐ producing hardcopies of the circuit and analyse results.

T10 Mesh and Nodal analysis for a.c. linear circuits encompassing:

- ☐ Mesh analysis
- ☐ Node voltages and nodal analysis
- ☐ matrix representation
- ☐ method of determinants
- ☐ writing mesh equations for a.c. networks containing up to three loops.
- ☐ writing nodal equations for a.c. networks containing up to three nodes.
- ☐ using mesh analysis to find currents in a.c. networks of up to two loops.
- ☐ using nodal analysis to find node voltage and branch currents in a.c. networks of up to two nodes.
- ☐ using a circuit simulation program to confirm the results of mesh analysis or nodal analysis of a.c. networks.

T11 Thévenin and Norton theorems applied to a.c. linear circuits encompassing:

- ☐ calculating the effect of the internal resistance on terminal voltage and current delivered for practical voltage sources and current sources.
- ☐ calculating the Thévenin equivalent voltage and impedance for a.c. networks and determining the load current, voltage and power.
- ☐ calculating the Norton equivalent current and impedance for a.c. networks and determining the load current, voltage and power.
- ☐ converting the Thévenin equivalent circuit to a Norton equivalent circuit and vice versa.
- ☐ verifying the equivalence of Thévenin and Norton equivalent circuits by measurement.

T12 Star-delta conversions encompassing:

- ☐ Star connections
- ☐ Star-delta transformation formula equations
- ☐ selection of appropriate conversion
- ☐ calculating the delta connected equivalent of a star connected balanced a.c. or d.c. load and vice versa.
- ☐ converting a complex non-series/parallel network to a series/parallel network by means

of star-delta or delta-star conversions.

- ☐ verifying star-delta and delta-star network conversions by measurements.

T13 Complex a.c. power and maximum power transfer theorem encompassing:

- ☐ true power, reactive power and apparent power
- ☐ maximum power transfer
- ☐ calculating real, reactive and apparent power for series/parallel a.c. circuits and state the appropriate units of measurement.
- ☐ calculating the power factor of a.c. series/parallel circuits.
- ☐ drawing power triangle for a given circuit.
- ☐ calculating the load value which would consume maximum power and calculate this power for d.c. networks.
- ☐ calculating the load value which would consume maximum power in an a.c. network when the load is a pure resistance and calculate the power.
- ☐ calculating the load value which would consume maximum power in an a.c. network when the load is an impedance of variable resistance and reactance and calculate the power.
- ☐ verifying load selection by measurement.

T14 Transients encompassing:

- ☐ transients in R-C and R-L circuits
- ☐ growth and decay
- ☐ calculating voltage and currents in R-C series circuits using exponential equations.
- ☐ calculating voltage and currents in R-L series circuits using exponential equations

EE203	Three Phase Power Circuits
-------	----------------------------

This unit covers determining correct operation of complex polyphase power circuits and providing solutions as they apply to electrical power engineering work functions. It encompasses working safely, problem solving procedures, including using electrical measuring devices, applying appropriate circuit theorems and providing solutions derived from measurements and calculations and justification for such solutions.

KS01-EG149A Polyphase power circuit analysis

Evidence shall show an understanding of polyphase power circuit analysis to an extent indicated by the following aspects:

T1 Polyphase supply system encompassing:

- ☐ advantage of three phase system compared to single phase systems
- ☐ double subscript notation
- ☐ phase sequence
- ☐ 120 degree operator
- ☐ given circuit component parameters, solve practically based problems using:
- ☐ equivalent circuits of transformers, lines and loads.
- ☐ component values using rectangular and polar notation.
- ☐ current divider and potential divider rules using complex impedances.
- ☐ The “per unit” values of voltage, current, VA and impedance to a common VA base.

T2 Types of three phase system connections encompassing:

- ☐ supply to balanced star, 3 and 4 wire loads
- ☐ supply to delta connected loads
- ☐ effects of phase reversal

representation of currents and voltages as complex phasors for 3 phase and 3 phase and neutral quantities.

- ☐ calculation the values of and draw labeled phasor diagrams, not to scale, to represent complex values of current and voltage for balanced and unbalanced loads for star and delta systems.
- ☐ calculation of values of P, Q and S for balanced and unbalanced systems.
- ☐ draw and label single phase diagrams to represent 1 phase of a complex 3 phase system.

- ☐ represent unbalanced voltages or currents as symmetrical components.
 - ☐ Phase to phase currents
 - ☐ Phase to neutral/earth currents.
- T3 Balanced three phase loads encompassing:**
- ☐ calculations of balanced loads connected in star
 - ☐ calculations of balanced loads connected in delta
 - ☐ calculation of steady state values of fault current for various configurations.
 - ☐ evaluation of the symmetrical component impedances for the various distribution system components. Transformers (earthed neutral case).

Generators (high impedance earth)

- ☐ calculation of fault currents using the per unit approach.
- ☐ calculation using the “worst case” values based on transformer impedance only (ie., a short circuit fault)
- ☐ estimation of peak values using accepted multipliers.
- ☐ effects of the d.c. component on the instantaneous magnitudes of fault currents in transformers and generators.

T4 Unbalanced three phase loads encompassing:

- ☐ Star – 4 wire systems
- ☐ Delta systems
- ☐ Star – 3 wire systems
- ☐ Star 4 wire with neutral impedance

T5 Power in three-phase circuits encompassing:

- ☐ summation of phase powers and power in balanced loads
- ☐ measurement of power in balanced loads – 2 Wattmeter methods

T6 Reactive three phase power encompassing:

- ☐ power triangle calculation
- ☐ measurement of VAR
- ☐ power factor correction

T7 Fault currents encompassing:

- ☐ symmetrical components
- ☐ positive, negative and zero sequence impedance

fault current breaking and let-through energy capacities of circuit breakers, fuses

- ☐ importance of fault/arc impedance
- ☐ calculation of fault currents - phase-to-earth faults
- ☐ calculation of fault currents - phase-to-phase faults
- ☐ analysis of asymmetrical faults currents.

T8 Harmonics in three phase systems encompassing:

- ☐ presence of triple in harmonics in 3 phase systems
- ☐ effects of 3 phase harmonics for different star and delta connections.
- ☐ methods for reducing harmonics in three phase systems.

EE204	Engineering Physics
-------	---------------------

This unit covers the law of physics and how they apply to solving electrotechnology related problems. It encompasses working safely, knowledge of measurements of physical phenomena, linear and angular motion, harmonic motion, wave theory, optics, acoustics and heat capacity and transfer, use of measurement techniques, solving physics related problems and documenting justification for such solutions.

KS01-EE082A Electrotechnology engineering physics

Evidence shall show an understanding of electro engineering physics to an extent indicated by the following aspects:

T1 Measurement encompassing

- ☐ SI units in measurement of physical phenomena
- ☐ Uncertainty and tolerance

T2 Linear motion

T3 Angular motion

T4 Simple harmonic motion and vibration

T5 Wave theory

- ☐ Interference
- ☐ Diffraction

T6 Electromagnetic waves and propagation

T7 Optics

- ☐ Mirrors and lenses
- ☐ Optical fibre

T8 Acoustics and ultrasonics

T9 Heat capacity and heat transfer

- ☐ Fluid power

EE205	Electrical Power System
-------	-------------------------

2.6.22.6 Electrical power distribution systems diagnostic

a) Distribution system overview including:

regulatory conditions of supply and utilisation

compliance with Australian Standards.

reticulation system including overhead/underground, urban/rural, HV customers and high-rise building systems. The effects of industrial customers

methods used to ensure continuity of supply.
types of substations in current use.
systems of distribution used, (primary and secondary)
voltage levels, power factor, wave-form distortion and transient loading
supply quality
load curve profiles (residential/industrial/commercial)
types of feeders
distribution systems (urban, rural single-phase systems, SWER, spur, parallel and ring systems etc.)

b) Overhead lines and installation

industry and safety regulations
overhead conductors
conductor material
current rating factors (heating, voltage drops, power losses)
aerial bundled cables (HV and LV)
covered conductors

Note: The characteristics of lines and cables including the calculation of R, X and B for different arrangements of conductor. Typical values for actual lines.

Transposition. Models based on line length. Voltage and line regulation
overhead line poles
types (wood, concrete and steel)
installation of poles (tooling, rake, life, labelling, sinking)
maintenance of poles – above & below ground
pole strength and loads
crossarms
types and standard sizes
insulators
insulation types
types (pin, suspension or disc, shackle)
creepage, necessary clearances
arcing horns, insulator mounting
structure types
mechanical properties (working strength, maximum tension, limiting size)
interpretation of stringing charts

determination of sag (by calculations or measurement and/or tension measurement)
sight and wave sagging, sag correction
stays
components, anchorage

c) Use of design schedules

sample design problems

Note: Examples of common design practice line, voltage, structure types used, line deviation, span sag, crossarms, insulators and stays wind loading and line deviation
loading basic surveying
measurement of levels, deviation angle and compass bearings
perform survey of short distribution line extension of produce field notes

d) Underground cables

cable types, ratings, core material, design considerations, cable dielectrics, insulating materials and abbreviations, electric stress, cable volt drop
and volt drop calculations, cable termination, joints and installation.
induction and eddy currents
cable testing, cable fault location
cable drawing

e) Voltage regulations of feeders and associated equipment

terminology used: distribution system, service line, customer's terminals, customer voltage, utilisation voltage, base voltage, voltage variation and bandwidth
voltage limits and effects of voltage variation
causes of variation: inductance, capacitance and reactance of distribution lines, transformers
methods of voltage control: off-load, on-load tap changers, voltage regulating relays, line drop compensation, different types of voltage regulators
voltage profiles: principles, effect on voltage profiles, limits of voltage, voltage drops due to LV mains transformers, tapsettings feeder and service lines
determining volt drops for components within the profile.

f) Control of voltage. Conditions leading to voltage collapse and system disintegration. Effects on the system of high/low volts. Voltage control devices including:

voltage regulators applied to generators and synchronous phase modifiers
electromagnetic voltage regulators
series and parallel capacitors
OLTC transformers and static Var compensations (SVCs)

g) Range of devices covered by SVCs including:

saturated reactor compensations (SRs)

thyristor controlled reactor compensators (TCRs)
combined TCR/TSCs and
production of wave-form distorting harmonics and control devices

h) Importance of the location in the system of voltage control devices

i) Types of communication systems including telephone, power line carrier, dedicated cable, micro-wave links and fibreoptics. Quantities and signals to be communicated. Advantages and disadvantages of the various systems. Equipment requirements

j) Transient over-voltages in power systems. Switching and lightning overvoltages and their effect on different plant items. Transient over-voltage control and reduction using surge diverters, shield wires and CB are control. Insulation systems, insulation co-ordination, insulation grading in plant items, bushings and capacitor bushings

k) The principles of operation, voltage and current range, breaking capacity and field of use of the following types of circuit breakers. bulk oil, small oil volume, air break, vacuum and SF6 (double pressure and puffer types).

l) The types of isolators in use. Examples include duo-roll, blade and scissor type.

m) Circuit breaker auxiliary systems including:

d.c. systems including battery types, charging and protection systems and earth fault detection systems

SF6 conditioning, storage and handling system

EE206	AC Machines	
-------	-------------	--

Synchronous Machines

This unit covers developing engineering solutions to resolve problems with synchronous machines and their controls. It encompasses working safely, apply extensive knowledge of synchronous machine operation, construction and their application, gathering and analysing data, applying problem solving techniques, developing and documenting solutions and alternatives

KS01-EG143A Synchronous machine diagnostics

Evidence shall show an understanding of developing engineering solutions for synchronous machine problems to an extent indicated by the following aspects:

T1 a.c. generators – construction, types and cooling encompassing:

- ☐ construction of stator and rotor windings
- ☐ rotor construction (cylindrical and salient pole)
- ☐ advantages of rotating field construction
- ☐ excitation methods
- ☐ cooling methods
- ☐ prime movers

T2 a.c. generators – operating principles and characteristics encompassing:

- ☐ a.c. generator equivalent circuits (synchronous reactance and resistance components)
- ☐ tests – open circuit, short circuit, stator impedance
- ☐ voltage regulation, island generator's terminal voltage load power factor
- ☐ determination of excitation voltage and load angle

T3 Synchronising a.c. generators encompassing:

- ☐ conditions for synchronising (infinite bus)
- ☐ methods for synchronising (lamp methods, synchroscope)
- ☐ alternator load sharing, parallel operation

T4 a.c. generators power, torque and efficiency encompassing:

- ☐ power input, input torque, speed
- ☐ power losses
- ☐ output power, load power factor, rotor angle, pu power
- ☐ efficiency
- ☐ performance chart interpretation

T5 Voltage regulation (AVR) encompassing:

- ☐ need for AVR's
- ☐ features of AVR's
- ☐ effects of rotor inductance
- ☐ connections of AVRs
- ☐ operation of AVRs

T6 a.c. generator operational stability encompassing:

- ☐ power output, VAR effects, rotor angle, excitation
- ☐ control of VAR (OLTC transformers)
- ☐ voltage dependant nature of stability
- ☐ critical clearance angle of a.c. generator
- ☐ stability limits

T7 a.c. generator protection encompassing:

- ☐ restricted, unrestricted primary, back up and duplicated protection
- ☐ overcurrent, short circuit, differential, reverse power, load unbalance, rotor overload, loss-of-field, rotor earth fault, station earth fault, under frequency protection
- ☐ external fault protection

T8 Induction generator encompassing:

- ☐ types operating principles, characteristics
- ☐ excitation methods
- ☐ losses and efficiency
- ☐ synchronising and paralleling

T9 Three phase synchronous motors encompassing:

- ☐ construction – rotor, stator, windings
- ☐ excitation methods
- ☐ operating principles (equivalent circuits, synchronous impedance)
- ☐ hunting and stability limits
- ☐ power factor correction
- ☐ paralleling and synchronisation techniques
- ☐ starting methods
- ☐ braking methods

Part 2 Induction Machines

This unit covers developing engineering solutions to resolve problems with induction machines and their controls. It encompasses working safely; apply extensive knowledge of induction machine operation and construction and their application, gathering and analysing data, applying problem solving techniques, developing and documenting solutions and alternatives.

Note.

Typical motor problems are those encountered in meeting performance requirements and compliance standards, revising a machine operating parameters and dealing with machine malfunctions.

KS01-EG145A Induction machines diagnostics

Evidence shall show an understanding of developing engineering solutions for induction motor problems to an extent indicated by the following aspects:

T1 Operating principles of polyphase induction motors encompassing:

- ☐ rotating magnetic field torque slip
- ☐ MMF relationships
- ☐ Leakage fluxes

T2 Construction of polyphase induction motors encompassing:

- ☐ squirrel cage motors
- ☐ slip-ring motors
- ☐ construction considerations in minimisation of tooth locking

T3 Speed-torque relationships in induction motors encompassing:

- ☐ maximum torque
- ☐ torque – slip relationships
- ☐ squirrel cage rotor types
- ☐ power flow in the motors
- ☐ power distribution
- ☐ torque units
- ☐ slip ring rotors

T4 Induction motor performance testing encompassing:

- ☐ no-load tests

locked rotor tests

- development of motor equivalent circuit from test results
- analysis of motor performance using circle diagrams

T5 Induction motor starters encompassing:

- ☐ starting requirements
- ☐ type of starters
- ☐ starting torque
- ☐ starting dynamics
- ☐ static friction
- ☐ mechanical loads
- ☐ starting duration

T6 Reduced voltage starting encompassing:

- ☐ starting dynamics
- ☐ change over conditions
- ☐ starting duration
- ☐ acceleration curves

T7 Speed control of induction motors encompassing:

- ☐ constant torque, constant power concepts
- ☐ torque-flux-voltage relationships
- ☐ rotor resistance control
- ☐ stator impedance control
- ☐ variable frequency control (e.g. PAM, PWM, Flux vector control)

T8 Braking of induction motors encompassing:

- ☐ electrical braking systems (plugging, d.c. dynamic, regenerative, capacitor-magnetic)
- ☐ mechanical braking systems (mechanical drum, demag, eddy current)

T9 Motor protection encompassing:

- ☐ overload
- ☐ earth fault
- ☐ phase failure

T10 Motor selection criteria and RMS rating

T11 Induction motor maintenance/repair encompassing:

- ☐ routine maintenance schedules
- ☐ type of repairs (mechanical, electrical)

T12 Single phase induction motors encompassing:

- ☐ operating principles (especially RMF)
- ☐ construction types

- speed-torque relationships

EE207	DC Machine
-------	------------

This unit covers developing engineering solutions to resolve problems with d.c. machines and their controls. It encompasses working safely; apply extensive knowledge of d.c. machine operation and construction and their application, gathering and analysing data, applying problem solving techniques, developing and documenting solutions and alternatives.

Note:

Typical machine problems are those encountered in meeting performance requirements and compliance standards, revising machine operating parameters and dealing with machine malfunctions.

KS01-EG144A Direct current machine diagnostics

Evidence shall show an understanding of developing engineering solutions for d.c. machine problems to an extent indicated by the following aspects:

T1 Basic d.c. machine construction and operation encompassing:

- ☐ General principles of operation
- ☐ Applications of d.c. machines
- ☐ Construction of d.c. machines
- ☐ d.c. machine configurations; series, shunt, compound long shunt and compound short shunt
- ☐ Armature and field currents
- ☐ Insulation
- ☐ Ratings
- ☐ Cooling paths
- ☐ Bearings
- ☐ General maintenance of d.c. machines

T2 Construction and use of lap and wave windings encompassing:

- ☐ coils and elements
- ☐ generated voltage equation for generator
- ☐ generated voltage equation for motors
- ☐ application of lap and wave windings

T3 Commutation process encompassing:

- ☐ use of interpoles
- ☐ loading of machines
- ☐ brush shifting
- ☐ brush selection

classes of brush grades

Note:

Examples include: natural graphite, hard carbon, electrographite, metal-graphite, metal-carbon, “treated” grades

- ☐ carbon brush contact characteristics

Note:

Examples include: specific resistance, thermal conductivity, density and porosity, elastic properties, contact properties

- ☐ carbon brush factors

Note:

Examples are: pressure, current, polarity, speed

- ☐ brush construction

Note:

Examples are: dimensions, tolerances, preferred sizes, surfaces, edges, bevels, flexible shunts, connection of flexible shunt to brush, insulation of flexible connections

- ☐ brush holders

Note:

Examples are: types, brush angles, trailing holders, reaction holders, top bevel angles, reversible rotation, cantilever holders, effective arc of contact, construction of brush holders, pressure mechanism

- ☐ mounting of brush holders and brushes

Note:

Examples are: clearances, brush angle, brush arm spacing, alignment, staggering, brush bedding, brush pressure

- ☐ brush operation

Note:

Examples are: temperature rise, number and size of brushes, current distribution between brushes, slotting brushes, polarity effects, arc of contact, materials for commutators, mica

- ☐ selection of brush grades

Note:

Examples are: machine data, current density, commutator peripheral speed, brush arc, pitch of segments, number of segments covered by brush, cooling surface

T4 Armature reaction in d.c. machines encompassing:

- ☐ effect of armature reaction on d.c. machine characteristics
- ☐ use of compensating winding

T5 d.c. generators encompassing:

- ☐ relative advantages and disadvantages of the various dc generator configurations

and their performance under various load conditions

- ☐ voltage regulation as a percentage or per unit value
- ☐ operation in parallel

T6 d.c. motors encompassing:

- ☐ relative advantages and disadvantages of the various dc motor configurations and their performance under various load conditions
- ☐ shape of motor speed/torque curves
- ☐ reversal of rotation

T7 Starting and protection of d.c. motors encompassing:

- ☐ types of d.c. motor starters in use
- ☐ d.c. motor protection

T8 Speed regulation and speed control of d.c. motors encompassing:

- ☐ methods in use
- ☐ effect on motor design and operation caused by the use of SCR
- ☐ speed control equipment

T9 Braking of d.c. motors encompassing:

- ☐ Plugging
- ☐ Dynamic
- ☐ Regenerative
- ☐ Mechanical

T10 Losses, heating and efficiency encompassing:

- ☐ Copper losses
- ☐ Iron losses
- ☐ Mechanical losses
- ☐ Efficiency

T11 Acceleration of d.c. motors and loads encompassing:

- ☐ characteristics of typical loads
- ☐ matching a suitable motor to a given load
- ☐ heating of windings
- ☐ derating of motors

T12 Special d.c. motors construction, operation and applications encompassing:

- ☐ permanent-magnet motors
- ☐ brushless motors (e.c. motors)
- ☐ coreless and moving coil motors
- ☐ linear motors
- ☐ printed circuit motor
- ☐ stepping motors

voice-coil motors

T13 Maintenance of d.c. machines encompassing:

- ☐ routine maintenance
- ☐ breakdown repairs

T14 types of faults encompassing:

- ☐ brushes/brush gear problems

Note:

Examples are: sparking, excessive heating, excessive wear of brushes, commutator or slip rings, bad surface conditions, excessive maintenance, flexible burning, flexible corrosion, separation or grooving, blackening, copper picking, copper dragging, brush noise

T15 adjustment of machines encompassing:

- ☐ correct brush position
- ☐ machining and finishing of commutators

EE208	Operational Amplifiers
-------	------------------------

Part 1- Operational Amplifier

This unit covers determining correct operation of amplifiers. It encompasses working safely, problem solving procedures, including the use of voltage, current and resistance measuring devices, providing solutions derived from measurements and calculations to predictable problems in amplifier sections/circuits.

KS01-EH113A Amplifier fundamentals

Evidence shall show an understanding of amplifier troubleshooting, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

T1. Single stage discrete amplifier d.c. characteristics

- ☐ Risk and safety
- ☐ Field effect transistors (FET) and Bi-junction transistor (BJT) circuit symbols
- ☐ Quiescent (Q) point
- ☐ Biasing methods for BJT and FETs
- ☐ Circuit theory for BJT and FETs
- ☐ Verification of performance of BJT and FET amplifier circuits

T2. Single-stage discrete amplifier small signal characteristics

- ☐ Small signal gain
- ☐ Gain measurements
- ☐ Overdrive conditions

T3. Capacitive coupling in single-stage discrete amplifiers

- ☐ Coupling capacitor functions
- ☐ Coupling capacitor effect on low frequency response
- ☐ Emitter/source bypass capacitor effect on low frequency response
- ☐ Verification of circuit operation and frequency response (eg. Bode Plot).

T4. Multistage amplifier coupling methods

- ☐ Coupling methods
- ☐ Total gain
- ☐ Bandwidth considerations
- ☐ Verification of circuit operation

T5. Differential amplifiers

- ☐ Differential amplifier concept
- ☐ Typical circuit operation
- ☐ Differential and common-mode gain
- ☐ Common mode rejection
- ☐ Constant current and voltage sources
- ☐ Verification of circuit operation

T6. Negative feedback

- ☐ Concept of negative feedback
- ☐ Effects of negative feedback
- ☐ Negative feedback configurations
- ☐ Amplifier gain and negative feedback

T7. Introduction to classes of power amplifier operation

- ☐ Power efficiency
- ☐ Classes and applications
- ☐ Crossover distortion

Class AB operation

- Heat sinking

T8. Complimentary symmetry power amplifiers

- ☐ Biasing and crossover distortion
- ☐ Power efficiency
- ☐ Quasi-complimentary and Darlington output configurations
- ☐ Complete amplifier operation
- ☐ D.C. operating condition calculations
- ☐ Verification of circuit operation

T9. Other solid state power amplifier design

- ☐ Transformer coupled power amplifiers
- ☐ I.C. power amplifiers
- ☐ Class D power amplifiers

Part 2 Three phase electronic power control

This unit covers solving problems with electronic aspects of polyphase power control devices and circuits. The unit encompasses safe working practices, interpreting diagrams, applying knowledge of electronic power control devices and their application, using effective problem solving techniques, safety and functional testing and reporting work activities and outcomes.

Note.

Typical polyphase electronic power control problems are those encountered in meeting performance requirements and compliance standards, revising control operating parameters and dealing with control malfunctions.

KS01-EI149A Polyphase electronic power control circuit

Evidence shall show an understanding of polyphase electronic power control circuit to an extent indicated by the following aspects:

T1 Three-Phase Rectifier Circuits encompassing:

- ☐ Three-Phase Rectifier Configurations
- ☐ Resistive/Inductive Loads
- ☐ Output Voltages/Waveforms
- ☐ Ripple Voltage/Frequency
- ☐ Peak Reverse Voltages
- ☐ Free Wheeling Diodes

Measurement of rectifier output parameters.

T2 Three-Phase Half Wave Controlled Rectifiers encompassing:

- ☐ Phase control
- ☐ Purpose/operation of half controlled rectifiers
- ☐ Circuit configuration
- ☐ Rectifier performance and operation - resistive loads
- ☐ Output voltage – resistive load
- ☐ Rectifier performance and operation - inductive loads
- ☐ Rectifier output waveforms
- ☐ Applications and limitations
- ☐ Advantages and disadvantages three-phase controlled rectifiers.

T3. Three-Phase Half Controlled Bridge Rectifier encompassing:

- ☐ Purpose/operation of a half controlled bridge rectifiers
- ☐ Circuit configuration and connections

- ☐ Rectifier output - resistive loads
- ☐ Output voltage – resistive loads
- ☐ Rectifier output - inductive loads
- ☐ Output voltage - inductive loads
- ☐ Flywheel diode
- ☐ Output voltage calculations
- ☐ Applications and limitations
- ☐ Advantages and disadvantages three-phase half controlled bridge rectifiers.

T4. Three-Phase Fully Controlled Bridge Rectifier encompassing:

- ☐ Purpose/operation of a fully controlled bridge rectifiers
- ☐ Circuit configuration and connections
- ☐ Rectifier output - resistive loads
- ☐ Output voltage – resistive loads
- ☐ Rectifier output - inductive loads
- ☐ Output voltage - inductive loads
- ☐ Flywheel diode
- ☐ Output voltage calculations
- ☐ Applications and limitations
- ☐ Advantages and disadvantages three-phase fully controlled bridge rectifiers.

T5. Three-Phase a.c. Controllers encompassing:

- ☐ Circuit configurations
- ☐ Circuit operation
- ☐ Triacs and SCRs circuits
- ☐ Triggering requirements

Output voltage and waveforms

- Determination of output voltage
- Applications
- Advantages and disadvantages

T6. DC Converters encompassing:

- ☐ Purpose and operation of d.c. converters
- ☐ Circuit configurations
- ☐ Voltage control methods
- ☐ Forced commutation methods
- ☐ Calculation of load voltage
- ☐ Output voltage/waveforms
- ☐ Applications
- ☐ Advantages and disadvantages

T7. Cycloconverters encompassing:

- ☐ Purpose/operation of a cycloconverter
- ☐ Basic circuit configurations
- ☐ Measurement of output voltage
- ☐ Calculation of load voltage
- ☐ Output voltage/waveforms
- ☐ Applications and limitations
- ☐ Advantages and disadvantages

T8. Invertors encompassing:

- ☐ Purpose/operation of an inverter
- ☐ Basic circuit configurations
- ☐ Measurement of inverter outputs
- ☐ Output voltage
- ☐ Applications and limitations
- ☐ Advantages and disadvantages

T9. Thyristor Protection encompassing:

- ☐ Power Control Devices Failure
- ☐ Protection Techniques
- ☐ Snubber Networks
- ☐ Series Inductors
- ☐ Amp Trap (HRC) fuses
- ☐ Gate Pulse Suppression

10. Installation of Thyristor Devices and Circuits encompassing:

- ☐ Need for heat sinking of power thyristor devices
- ☐ Heat sink features and types

Installation methods for all types of thyristor packages

- Basic thermal model, only to demonstrate the effect of different heat sink
- Types and profiles and installation methods on thyristor junction temperature.

T11. Series and Parallel Thyristor Connections encompassing:

- ☐ Purpose of Series/Parallel Connection
- ☐ Series Connections
- ☐ Reasons
- ☐ Operational Problems
- ☐ Parallel Connections
- ☐ Reasons
- ☐ Operational Problems

T12. Fault Finding Three Phase Thyristor Circuits encompassing:

- ☐ Fault finding procedures
- ☐ Typical faults – power and trigger circuits
- ☐ Characteristics displayed by common faults
- ☐ Comparison of test data with expected data (voltage/current waveforms)
- ☐ Location and replacement of faulty components

EE209	Analogue Electronics
-------	----------------------

This unit deals the replacement of electronic components, cabling and sub systems of electronic apparatus. It encompasses safe working practices, following written and oral instruction and procedures, basic testing and techniques, dismantling and assembling apparatus and disconnecting and reconnecting components.

KS01-EH102A Component replacement to repair basic electronic apparatus faults

Evidence shall show an understanding of component replacement to repair basic electronic apparatus faults, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

T1. Electronic soldering equipment and techniques

- ☐ Workshop hazards and safety associated with soldering
- ☐ Quality concepts
- ☐ Electronic soldering equipment
- ☐ The soldering process
- ☐ Lead free solder

T2. Printed circuit board soldering techniques

- ☐ Electronic component mounting
- ☐ Solder rework of printed circuit boards.
- ☐ Faulty solder joints

T3. Soldering electronic cables

- ☐ Soldering multi-strand, ribbon and coaxial cables
- ☐ Effects and prevention of electrostatic discharge (ESD)

T4. Electronic component basics

- ☐ Types of components
- ☐ The physical features and primary characteristic of components
- ☐ Marking and codes on components
- ☐ Handling static sensitive components

T5. Electronic cable overview and coaxial cable

- ☐ Coaxial cables types and characteristics
- ☐ Coaxial cable termination

T6. Performance copper cables

- ☐ Twisted pair voice and data cables
- ☐ Insulation displacement (IDC) termination
- ☐ Colour codes
- ☐ Terminating performance cables
- ☐ Harness wiring

T7. Electronic apparatus components

- ☐ Fault finding
- ☐ Testing
- ☐ Replacement

EE301	Advanced Electrical Drafting
-------	------------------------------

This unit covers the production of detailed electrical drawings, drawing sets and documentation. It includes safe working practices; interpreting technical data and specifications; using advanced computer-aided systems and commands and appropriate drafting peripheral systems, equipment and tools to develop detailed drawings. It also includes applying knowledge of electrical equipment design drawing methods, techniques, procedures and protocols and documenting design, storing and retrieving data, and producing related documentation for presentation of preliminary and final drafts for verification.

KS01-EG179A Electrical Detailed Drawings

Evidence shall show an understanding of electrical detailed drawings to an extent indicated by the following aspects:

T1 (Is the number correct?) Producing final drafts for verification encompassing:

- ☐ principles, purpose and concept of verification of drafting products encompassing: production of electrical drawings for verification by authorised persons, production of drawing sets, production of related documentation, presentations of final drafts
- ☐ processes and procedures related to the verification of final drafts by authorised persons encompassing: accuracy
- ☐ publication of verified electrical drawings

T2 Detailed electrical drawing production covering encompassing:

- ☐ distribution branch circuits and boards, services and load calculations; encompassing panels(HV/LV)/switch boards/motor control centres/final
- ☐ conductor/cable selection and calculations encompassing: electrical, data, communications
- ☐ overcurrent and overvoltage protection
- ☐ cable support systems; encompassing cable trays, trunking, conduits, ducts, guards, saddles, carriers, raceways/cavities, poles
- ☐ box and fitting fill requirements
- ☐ wiring devices and terminations
- ☐ distribution equipment; encompassing power circuit devices
- ☐ distribution system transformers; encompassing specialty transformers, power circuit devices
- ☐ lighting applications; encompassing lamps, ballasts, and components
- ☐ motors; encompassing functional controls, advanced motor controls, motor calculations, motor maintenance arrangements

hazardous areas encompassing: electrical equipment; classification of
· emergency standby systems; encompassing UPS/inverter and battery banks

- ☐ fire alarm systems
- ☐ high-voltage terminations/splices
- ☐ cable size selection for installation cable run
- ☐ cable sizes, voltage drops, conduit sizes, fault levels, fuse/circuit breaker (CB) sizes and working temperatures
- ☐ short circuit calculations

- ☐ earth loop impedance compliance test arrangements on the completed design
- ☐ touch potentials calculations
- ☐ cable schedules creation
- ☐ “single line” and “as built” drawings; encompassing three phase schematic colour

diagrams, marked up cable calculations, short circuit results, earth loop impedance results

- ☐ quantities parts list and drawings for tender drawings issued by electrical consultants/engineers
- ☐ coordination and discrimination studies
- ☐ Building Management Systems (BMS) encompassing: building information modelling and sustainable design
- ☐ fuse and CB trip curves plots and displays
- ☐ troubleshooting/fault finding

T3 Schematic component commands detailed encompassing:

- ☐ schematic symbols editor
- ☐ schematic editor
- ☐ components from lists
- ☐ connectors
- ☐ terminals; encompassing multiple level and jumpers
- ☐ circuits
- ☐ multiple phase circuits

T4 Schematic editing encompassing:

- ☐ advanced utilities
- ☐ copy catalogue and location
- ☐ values
- ☐ swapping and updating blocks
- ☐ using the auditing tools
- ☐ update and retag drawings

T5 Detailed panel layouts encompassing:

- ☐ detailed panel layouts creation
- ☐ din rail tool
- ☐ terminal strip editor
- ☐ detailed panel layout annotation
- ☐ detailed reports

T6 Digitising and scanning encompassing:

- ☐ drawings digitisation; encompassing tablet and software configuration, tablet and puck, grids setup and alignment marks for various size drawings, software parameters setting, hard copy drawings digitisation to tablet parameters
- ☐ digitised drawing editor, manipulation and save
- ☐ digitise and grid setups and alignment marks on a hard copy of a large drawing (e.g. A1)
- ☐ scanning devices and peripherals setup encompassing associated software usage, save (e.g. file formats for use other software applications) and management
- ☐ scanned image conversion to vector format, edit and save in file formats for use in CAD; encompassing importation of scanned images into CAD drawings in image formats for editing

EE302	Advanced Engineering Mathematics
-------	----------------------------------

This unit covers the application of advanced computational processes to solve energy sector engineering problems. It encompasses working safely, applying problem solving techniques, using a range of advanced mathematical processes, providing solutions to electrical/electronics engineering problems and justifying such solutions.

Note. Typical engineering problems are those encountered in meeting requirements in a design brief, meeting performance requirements and compliance standards, revising systems operating parameters and dealing with system malfunctions

KS01-EE127A Advanced Engineering Maths

Evidence shall show an understanding of advanced engineering maths to an extent indicated by the following aspects:

T1 Differential Calculus encompassing:

- ☐ basic concepts of differential calculus, limited to definition of the derivative of a function as the slope of a tangent line (the gradient of a curve); limits; basic examples from 1st principles; Notation and Results of derivative of $k.f(ax + b)$ where $f(x)=x$ to the power of n , $\sin x$, $\cos x$, $\tan x$, e to the power of x , $\ln x$.
- ☐ rules - derivative of sum and difference; product rule; quotient rule; chain rule (function of a function), limited to two rules for any given function, the 2nd derivative.
- ☐ applications - equations of tangents and normals; stationary points; turning points; and curve sketching; rates of change; rectilinear motion
- ☐ verbally formulated problems involving related rates and maxima: minima

T2 Integral Calculus encompassing:

- ☐ integration as the inverse operation to differentiation - results of the integral of $k.f(ax + b)$ where $f(x) = x$ to the power of n , $\sin x$, $\cos x$, $\sec^2 x$, e to the power of x , method of substitution, the definite integral.
- ☐ applications - areas between curves; rectilinear motion including displacement from acceleration and distance travelled; voltage and current relationship in capacitors and inductors and the like.

T3 Linear Algebra encompassing:

- ☐ matrices and inverse matrices;
- ☐ linear mapping,
- ☐ determinants,
- ☐ solution of linear equations.

T4 Vectors encompassing:

- ☐ geometrical representation,
- ☐ addition and scalar multiplication,
- ☐ dot and cross products,
- ☐ equations of lines and planes.

T5 Variables encompassing:

- ☐ graphs, level curves and surfaces
- ☐ partial derivatives; chain rule; directional derivative;
- ☐ maxima and minima.

T6 Sequences and Series encompassing:

- ☐ algebraic and Fourier series, convergence; Taylor's Theorem
- ☐ power series manipulation.

T7 Differential Equations encompassing:

- ☐ first order and separable linear equations
- ☐ second order linear equations.
- ☐ partial differential equations.
- ☐ numerical Techniques.

T8 Number encompassing:

- ☐ integer, irrational and complex numbers.
- ☐ number systems.
- ☐ arithmetic operations.
- ☐ accuracy and stability.

T9 Statistics encompassing:

- ☐ assembly, representation and analysis of data.
- ☐ fitting distributions to data.
- ☐ non-parametric statistics.
- ☐ tests of significance for means, variances and extreme values.
- ☐ correlation

EE303	Transmission Line
-------	-------------------

This unit covers diagnosing and rectifying faults in electrical energy transmission systems. The unit encompasses safe working practices, interpreting diagrams and technical data, applying knowledge of energy supply and transmission systems to logical fault finding processes, implementing fault rectification, safety and functional testing and reporting work activities and outcomes

- a) Overview of the transmission system including lines, buses, transformers and cables. Line/bus layouts including single and double switching, breaker and a half systems and HV crossing methods.
- b) The principles involved in high voltage a.c. transmission including tower types and configurations, choice of towers or poles (economic and environmental), insulator types and configuration, types of conductors, their configuration and standard nomenclature. Typical line spacing and ground clearances. Line ratings based on ambient temperature. Conductor terminating and clamping equipment including vibration damping principles and equipment.
- c) The principles involved in d.c. transmission including the economics, harmonic generation, VAR requirements and protection difficulties. Types of connections and transformer requirements. Advantages and disadvantages of d.c. transmission. Typical overseas systems. Likely (future) use in this country.
- d) The principles of operation, voltage and current range, breaking capacity and field of use of the following types of circuit breakers.
- bulk oil
 - small oil volume
 - air break
 - air blast
 - air puffer
 - vacuum and
 - SF6 (double pressure and puffer types).
- e) The types of isolators in use. Examples include duo-roll, blade and scissor type.
- f) Circuit breaker auxiliary systems including:
- high pressure air systems and air storage and handling processes
 - d.c. systems including battery types, charging and protection systems and earth fault detection systems
 - SF6 conditioning, storage and handling system
- g) The characteristics of lines and cables including the calculation of R, X and B for different arrangements of conductor. Typical values for actual lines. Transposition. Models based on line length. Voltage and line regulation. The transmission of power (P) and VARs (Q).
- h) Control of voltage. Conditions leading to voltage collapse and system disintegration. Effects on the system of high/low volts. Voltage control devices including:
- voltage regulators applied to generators and synchronous phase modifiers
 - electromagnetic voltage regulators
 - series and parallel capacitors
 - OLTC transformers and static Var compensations (SVCs)
- i) Range of devices covered by SVCs including:
- saturated reactor compensations (SRs)
 - thyristor controlled reactor compensators (TCRs)
 - combined TCR/TSCs and

production of wave-form distorting harmonics and control devices

j) Importance of the location in the system of voltage control devices

k) Use of graphical methods to calculate the size of Var regulating plant

l) Types of communication systems including telephone, power line carrier, dedicated cable, micro-wave links and fibreoptics. Quantities and signals to be communicated. Advantages and disadvantages of the various systems. Equipment requirements

m) Transient over-voltages in power systems. Switching and lightning overvoltages and their effect on different plant items. Transient over-voltage control and reduction using surge diverters, shield wires and CB are control. Insulation systems, insulation co-ordination, insulation grading in plant items, bushings and capacitor bushings

n) Factors leading to the generation of corona. Consequences of corona. Reduction of corona including conductor bundling, grading rings and conductor surface treatment

EE304	Power System Protection
-------	-------------------------

This unit covers developing engineering solutions to resolve problems with energy supply system protection. It encompasses working safely, apply extensive knowledge of energy supply system protection operation, protection devices and their application, gathering and analysing data, applying problem solving techniques, developing and documenting solutions and alternatives.

Note:

Typical protection problems are those encountered in meeting performance requirements and compliance standards, revising a protection operating parameters and dealing with protection malfunctions.

a) Protection scheme requirements

Requirements of a protection scheme

Note: Includes relationship to primary system design, purpose of protection, safety of persons, protection of plant, system instability, system break up, loss of customers, loss of revenue, protection zones, restricted schemes, unrestricted schemes, duplicate protection, local backup protection, remote backup protection, selectivity, discrimination, stability, sensitivity, reliability

Components of a protection scheme

Note: Includes current transformers, potential transformers, summation current transformers, interposing transformers, multitapped transformers, all-or-nothing relays, induction relays, balanced beam relays, directional relays, biased relays, solid state relays, microprocessor based relays, gas relays, thermal sensors, hardwired communication, powerline carriers systems, microwave systems, fibre optic systems, need for isolation, need for interfacing

Protection applied to buses

Note: Includes overload, differential, earth leakage, structure leakage, combined schemes, protection overlap

Protection applied to transformers

Note: Includes biased differential, gas, winding temperature, oil temperature

Protection applied to single/radial lines

Note: Includes overcurrent, earth leakage, slow earth leakage, distance, auto reclose, sectionalising, over voltage

Protection applied to interconnected lines

Note: Includes overcurrent, pilot wire, directional, directional overcurrent, current differential, phase comparison, current comparison, distance, impedance, admittance, offset

b) Discrete protection systems

Earth fault protection

Note: Includes master earth leakage schemes, sensitive earth fault relays and schemes, residual earth fault scheme, core balance earth fault scheme, frame/structure earth leakage scheme, time graded discrimination, backup protection

Overcurrent protection

Note: Includes feeder overcurrent protection, instantaneous overcurrent schemes, inverse timed overcurrent schemes, types and location of components of an overcurrent scheme, CT summation, time graded discrimination, backup protection

Alarms and controls

Note: Includes auxiliary relays, voltage regulating relays, line drop compensation, gas relay types, gas relay scheme operation and setting, over temperature schemes

c) Interdependent protection systems

Overcurrent and earth leakage intertripping, interlocking and blocking

Note:

Includes logic mapping, master control, electromechanical, electronic, shading coils

Pilot wire, phase comparison

Note: Includes opposed voltage schemes, circulating current schemes, location of components of a scheme, pilot supervisory techniques,

Load shedding, voltage control, parallel operation, load rejection

CB failure protection

Reclose systems

Note: Includes applications, single shot, multishot, blocking schemes, synchronisation checking

d) Complex protection systems

Distance

Note: Includes characteristics, electromechanical, electronic, impedance, mho, offset mho, switched schemes, non-switched schemes, blocking schemes, bus zone

Differential, transformer differential, bus overcurrent

Note: Includes principles, feeder protection, transformer protection, bias systems, harmonic restraint, CT connections, bus protection, low impedance schemes, high impedance schemes, bus overcurrent schemes, generator protection, CT connections, special considerations, digital systems

Types of revenue metering

Applications of SCADA

Complex protection systems for communications

Harmonic control

Point on wave switching

EE305	Power Transformer
-------	-------------------

This unit covers developing engineering solutions to resolve problems with energy supply system protection. It encompasses working safely, apply extensive knowledge of energy supply power transformer operation and their application, gathering and analysing data, applying problem solving techniques, developing and documenting solutions and alternatives.

Note.

Typical transformer problems are those encountered in meeting performance requirements and compliance standards, revising a transformer operating parameters and dealing with transformer malfunctions

a) Transformer construction and operating principles encompassing:
various types of lamination style and core construction used in single-phase, three-phase, double wound and auto transformers.
different winding styles/types used in transformers.
how input current is limited on no load and how power is transferred from primary to secondary when a load is connected.
using the transformation ratio to determine an unknown quantity of V, I, VA.
significance of nameplate data items.
operation of a transformer under load/no load conditions.
the reason any particular type of transformer is used in a specific application.
safety features specified in regulatory standards with respect to transformers.
safety features specified in regulatory standards with respect to isolating transformers.
basic insulation resistance, continuity and winding identification tests.

b) Transformer parameters encompassing:
the percentage impedance of a transformer by test.
percentage impedance of a transformer by calculation.

the equivalent circuit of a transformer.
calculation of voltage regulation.
losses that occur in a transformer.
tests to determine losses.
efficiency and state typical values.
the all day efficiency of a transformer.

c) Cooling methods encompassing:
methods of natural and forced cooling.
properties of transformer oil.
tests performed on transformer oil.
auxiliary equipment
the purpose and operation of the types of auxiliary equipment used on transformers

Note. Examples are bushings, explosion vents, surge diverters, tap changers, conservator, breathers and desiccants, gas relays, temperature indicators.

d) Instrument transformers encompassing:
construction of current transformers.
uses and ratings of current transformers.
construction of voltage transformers.
uses and ratings of voltage transformers.
safety techniques when using instrument transformers.

e) Transformer connections encompassing:
vector group of a transformer from a connection diagram.
connections of a three-phase transformer to create a particular vector group.
reasons for using the different vector groups.
purpose of tertiary windings.
consequences/effect of an incorrect connection.

f) Parallel operation encompassing:
polarity markings for the windings of a transformer.
conditions/restrictions for parallel operation of transformers.
calculation of loading on transformers operating in parallel.
connection of transformers in parallel to supply a common load.
the consequences/effect of an incorrect connection.

g) Harmonics in transformers encompassing:
how harmonics are generated in transformers.
problems caused by harmonics in transformers.
measurement of the harmonics in a transformer.
methods/equipment used to overcome harmonics in transformers.

h) High voltage isolation encompassing:
the term high voltage.
procedures for isolating high voltage apparatus.
regulations with respect to *access permits*.
clearances to be observed with respect to high voltages up to 33kV.

the term *'step'* and *'touch'* potential.

EE306	Electro-mechanical Control
-------	----------------------------

This unit covers solving problems in industrial control systems. The unit encompasses safe working practices, interpreting process and circuit diagrams, applying knowledge of industry controls to problem solving techniques, safety and functional testing and completing the necessary documentation.

Note.

Typical basic industrial control system problems are those encountered in meeting performance requirements and compliance standards, revising control operating parameters and dealing with control malfunctions.

KS01-EI120A

Industrial control systems

Evidence shall show an understanding of industrial control systems to an extent indicated by the following aspects:

Control amplifiers encompassing:

- ☐ Introduction
- ☐ Amplifier Operation
- ☐ Operational Amplifiers
- ☐ Operational Amplifier Configurations

Industrial transducers encompassing:

- ☐ Introduction
- ☐ SI Units
- ☐ Forms of Energy
- ☐ Transducer Terminology
- ☐ Temperature Measurement
- ☐ Force Measurement
- ☐ Speed Measurement

Positional Measurement

Industrial final control elements encompassing:

- ☐ Introduction
- ☐ Electromagnetic Devices
- ☐ Valves
- ☐ Solid State Switching Devices

Industrial control systems encompassing:

- ☐ Automatic Control
- ☐ Open Loop Control
- ☐ Closed Loop Control
- ☐ Control System Terminology
- ☐ Control System Evaluation
- ☐ Two Position Control
- ☐ Proportional Control (P)
- ☐ Proportional + Integral Control (P+I)
- ☐ Proportional + Derivative Control (P+D)
- ☐ Proportional + Integral + Derivative Control (P+I+D)

Industrial control loops and control signals encompassing:

- ☐ Introduction
- ☐ Control Loops
- ☐ Converters (D to A and A to D)
- ☐ Multiplexing

EE307	Energy Efficient Building Design
-------	----------------------------------

This unit covers evaluating energy used in buildings and developing and documenting strategies/methods to effectively reduce energy use without compromising occupancy standards. It encompasses working safely, setting up and conducting evaluation measurements and evaluating energy use from measured parameters.

T1 Climate and thermal comfort encompassing:

- ☐ characteristics of the different Australian climatic types.
- ☐ use of climatic data in published and electronic forms to extract the quantities relevant to energy efficient design.
- ☐ relationship between climate and comfort using bioclimatic or psychrometric charts.
- ☐ calculation of heating or cooling degree days or degree hours for various locations.
- ☐ calculation of thermal neutrality for a given location.

T2 Solar geometry and radiation encompassing:

- ☐ definition of the terms: declination, hour angle, zenith angle, azimuth and altitude angles, the equation of time.
- ☐ conversion of solar time to local time and vice versa.
- ☐ position of the sun and the length of shadows with the aid of algorithms, tables, sun charts or computer software.
- ☐ daily irradiation incident on a wall, window or roof of a given tilt and orientation.
- ☐ relative summer and winter irradiation of windows facing the cardinal orientations.

T3 Heat transfer encompassing:

- ☐ thermal processes of conduction, convection and radiation apply to the transfer of heat in buildings.
- ☐ calculation of the summer and winter U-values of building elements using tables and software.
- ☐ calculation of the infiltration heat transfer in a building.

T4 Glazing Systems encompassing:

- ☐ different types of glazing systems and their characteristics.
- ☐ different types of shading devices and the window orientations for which they are most appropriate.
- ☐ solar heat gain for different glazing types and angles of incidence
- ☐ calculation of the average daily irradiation of a window partly shaded by eaves, using computer software.
- ☐ calculation of the average daily heat gain through a window partly shaded by eaves.

T5 Insulation encompassing:

- ☐ different types of insulation and where they are used.
- ☐ how different types of insulation are installed in roofs, walls

and floors.

- ☐ determination of the minimum R-values of roof insulation for different locations using Australian Standard AS2627 or similar standards.

T6 Thermal mass encompassing:

- ☐ advantages and disadvantages of using substantial thermal mass in different climate types and for different heating and cooling regimes.
- ☐ where thermal mass can be located in a building.
- ☐ explain what is meant by the following terms: time lag, decrement factor, admittance, response factor.

T7 Comfort control strategies encompassing:

- ☐ interpretation of the usefulness of a design strategy with the aid of a psychrometric chart showing control potential zones for a particular location.
- ☐ selection of the most useful comfort control strategies for Australian climatic regions.

T8 Energy efficiency in buildings encompassing:

- ☐ determination of the direction of the following: both true and magnetic, north winter and summer sunrise, winter and summer sunset.
- ☐ solar access in summer and winter to various possible house locations on a site and room locations within the house.
- ☐ how vegetation can be used to both funnel and deflect wind.
- ☐ using cross ventilation as a cooling strategy.

T9 Thermal performance of a building encompassing:

- heating requirements of a building using the heating degree day or hour method.
- dynamic performance predicted by a computer simulation program such as NatHERS or BERS.

T10 Integration of active solar systems encompassing:

- active solar system types available which can provide hot water, space heating and cooling.
- the best location on the roof, and the optimum tilt and orientation of the collector panels.
- function of the main components of an air or water-based solar space heating system.
- schematic of the fluid circuit of an air or water- based space

heating system.

- main solar cooling system types.

T11 Energy rating schemes encompassing:

- differences in approach used by house energy rating schemes in Australia.
- energy performance of a number of houses using a computer simulation program such as NatHERS or BERS.
- other methods to reduce energy consumption within and outside a building including appliance efficiency, human behaviour changes, building management strategies and transportation minimisation.
- additional cost of energy efficiency measures and cost savings using life cycle cost or simple pay back methods according to Aust. Standard AS3595 and AS4536.

T12 Sustainable and safe building materials encompassing:

- common building materials and their embodied energy content.
- environmental impact of the production of various building materials.
- problems associated with the use or disposal of building materials.

EE308	Sustainability
-------	----------------

This unit covers developing strategies to address environmental and sustainability issues in the energy sector. It encompasses working safely, apply extensive knowledge of sustainable energy systems and components and their operating parameters, gathering and analysing data, applying problem solving techniques, developing and documenting alternatives solutions

KS01-EK132A

**Environmental and Sustainability
strategies**

Evidence shall show an understanding of greenhouse reduction strategies to an extent indicated by the following aspects:

T1 Principles of sustainability encompassing:

- ways in which ecosystems moderate climate. ways in which ecosystems purify and store water.
- ways in which ecosystems recycle waste.

T2 Problems in a sustainable world encompassing:

- changes to Australian forest cover since white settlement, and the resulting loss of ecosystem and human benefits.
- changes to Australia's soils since white settlement, and the resulting loss of ecosystem and human benefits.
- changes to Australia's waterways since white settlement, and the resulting loss of ecosystem and human benefits.
- place of environmental accounting in quantifying Australia's environmental losses.
- limits to Australia's population carrying capacity.

T3 Sustainability principles encompassing:

- principles within sustainability including: environmental accounting and economics; full cost pricing; triple bottom line ethic; ecologically sustainable development; greenhouse gas abatement; energy efficiency; resource and water use efficiency; life cycle costing; renewable energy substitution, cleaner production; waste minimisation, reuse and recycling; ecological footprint.

T4 Addressing the problem of global warming encompassing:

- ☐ greenhouse gases and their sources and quantities that contribute to global warming.
- ☐ global warming impacts for Australia for 2030 and 2070 predicted by CSIRO modelling.
- ☐ requirements to achieve stable atmospheric concentrations of greenhouse gases.
- ☐ ecologically and economically sustainable methods for achieving these stable concentrations.

T5 Greenhouse gas emissions profile encompassing:

- ☐ goals and principles of the National Greenhouse Strategy
- ☐ what a greenhouse gas inventory is, why it is required, and the sectors to which it applies
- ☐ uses to which the National Greenhouse Gas Inventory can be applied.

T6 Understanding and communicating climate change and its impacts encompassing:

- ☐ the possible impact of climate change in Australia.
- ☐ techniques for improving the understanding of climate change
- ☐ techniques for communicating to and educating the general

public on greenhouse gas induced climate change.

T7 Partnerships for greenhouse action encompassing:

- ☐ actions achievable by each level of government to implement the NGS.
- ☐ methods by which the community activity can be engaged in the reduction of greenhouse gas emissions.
- ☐ initiatives that can be undertaken by the private sector to reduce greenhouse gas emissions.
- ☐ advantages of international partnerships.
- ☐ emissions trading system.

T8 Efficient and sustainable energy use and supply encompassing:

- ☐ techniques for reducing the greenhouse intensity of energy supply.
- ☐ types of renewable energy sources suitable for use in Australia.
- ☐ methods and technique for improving end-use efficiency.

T9 Efficient transport and sustainable urban planning encompassing:

- ☐ how integrating land use and transport planning can assist the greenhouse problem.
- ☐ how each of the following can be used to mitigate greenhouse gas; travel demand and traffic management strategies; encouraging greater use of public transport, walking and cycling; freight and logistics systems; improving vehicle fuel efficiency and fuel technologies;

T10 Greenhouse sinks and sustainable land management encompassing:

- ☐ how enhancing greenhouse sinks and encouraging sustainable forestry and vegetation management can complement the AGS.
- ☐ how greenhouse gas emissions are obtained from agricultural production and describe techniques to mitigate the emissions.

T11 Models of greenhouse best practice in industrial processes and waste management encompassing:

- ☐ types and methods of reducing greenhouse gas emissions from industry.
- ☐ methods of reducing methane emissions from waste

treatment and disposal.

T12 Adaptation to climate change encompassing:

- ☐ salient points in each of the key sectors that require analysis and the strategies required in the need for adaptation to climate change

EE309

Project Management

Part 1 Project Management

This unit covers the management of large electrical projects involving design, modifications, installation, and/or maintenance of systems and equipment. The unit encompasses management of safety, budget variation, personnel, resources, critical path timelines and completion documentation.

KS01-EG169A Electrical project management

Evidence shall show an understanding of managing electrical projects to an extent indicated by the following aspects:

T1 Defining project parameters encompassing:

- ☐ Project scope
- ☐ Project stakeholders and clients
- ☐ Project phases and the relationship between phases

T2 Time management concepts and standard practices

T3 Financial management encompassing:

- ☐ Financial management concepts
- ☐ Standard practices for managing project finances
- ☐ Project budgets
- ☐ Costs
- ☐ variations and estimations
- ☐ Invoicing against project phases/deliverables
- ☐ Acquittals and the like

T4 Quality management concepts and practices

T5 Human Resource management concepts and practices within a project

T6 Communication management concepts and practices within a project

T7 Risk management and contingencies encompassing:

- ☐ Risk management concepts
- ☐ Internal risks
- ☐ External risks
- ☐ Contingencies
- ☐ Standard practices for managing risk within a project
- ☐ Risk minimisation
- ☐ Risk removal; and the like

T8 Procurement management concepts and practices

T9 Physical Resource management concepts and practices relating to equipment, technology, information and facilities

T10 Contracts encompassing:

- ☐ Contract format
- ☐ Contract content
- ☐ Interpreting contract clauses
- ☐ Legal obligations of contract parties
- ☐ Working to contract specifications
- ☐ Documentation accompanying contracts such as schedules and the like

T11 Performance assessment and continuous improvement

T12 Engineering ethics principles

T13 Customer/Client relations encompassing:

Importance of customer/client relations

- Interpersonal skills that enhance customer/client
- ☐ Dispute resolution
- ☐ Customer/client relations strategies

T14 Electrical industry sector customs and practice encompassing:

- ☐ Equipment procurement, cost/benefit analysis and performance testing
- ☐ Typical approaches to planning and management
- ☐ Successful planning techniques
- ☐ Best practice management methods and styles

Part 2 Project Planning

This unit covers development and documentation of large electrical project proposals, milestones and completions. The unit encompasses, establishing budgets, critical path analysis, development of workflow strategies, documenting, presenting and negotiating budgets and timelines.

KS01-EG170A Electrical project planning

Evidence shall show an understanding of planning projects and analyzing progress to an extent indicated by the following aspects:

T1 Project planning encompassing:

T2 Purpose of project planning Evidence shall show an understanding of managing electrical projects to an extent indicated by the following aspects:

T3 Defining project parameters encompassing:

- ☐ Project scope
- ☐ Project stakeholders and clients
- ☐ Project phases and the relationship between phases
- ☐ Time requirements and limitations
- ☐ Resource requirements and limitations
- ☐ Quality requirements and limitations

T4 Time management concepts and standard practices

T5 Financial management encompassing:

Financial management concepts

- Standard practices for managing project finances
- Project budgets
- Costs
- variations and estimations
- Invoicing against project phases/deliverables
- ☐ Acquittals and the like

T6 Quality management concepts and practices

T7 Human Resource management concepts and practices within a project

T8 Communication management concepts and practices within a project

T9 Risk management and contingencies encompassing:

- ☐ Risk management concepts
- ☐ Internal risks
- ☐ External risks
- ☐ Contingencies
- ☐ Standard practices for managing risk within a project
- ☐ Risk minimisation
- ☐ Risk removal; and the like

T10 Procurement management concepts and practices

T11 Physical Resource management concepts and practices relating to equipment, technology, information and facilities

T12 Contracts encompassing:

- ☐ Contract format
- ☐ Contract content
- ☐ Interpreting contract clauses
- ☐ Legal obligations of contract parties
- ☐ Working to contract specifications
- ☐ Documentation accompanying contracts such as schedules and the like

T13 Performance assessment and continuous improvement

T14 Engineering ethics principles

T15 Customer/Client relations encompassing:

- ☐ Importance of customer/client relations
- ☐ Interpersonal skills that enhance customer/client
- ☐ Dispute resolution
- ☐ Customer/client relations strategies

T16 Electrical industry sector customs and practice encompassing:

- ☐ Equipment procurement, cost/benefit analysis and performance testing

REQUIRED SKILLS AND KNOWLEDGE

- ☐ Typical approaches to planning and management
- ☐ Successful planning techniques
- ☐ Best practice management methods and styles
- ☐ Documents needed to plan a project
- ☐ Factors influencing sequence and restraints of project activities
- ☐ Critical path analysis covering graphical representation methods and methods of representing time/rates

T17 Critical path and project analysis encompassing:

- ☐ Purpose of critical path analysis
- ☐ Essential data
- ☐ Relational sequence of work activities
- ☐ Graphical representation methods
- ☐ Methods of representing time/rates
- ☐ Monitoring methods

T18 Electrical industry sector customs and practice encompassing:

- ☐ Equipment procurement, cost/benefit analysis and performance testing
- ☐ Typical approaches to planning and management
- ☐ Successful planning techniques
- ☐ Best practice management methods and styles

EE310	Engineering Officer Competency Report
-------	---------------------------------------

This unit covers complying and producing an energy sector report. It encompasses determining the safety requirements are met and all regulatory responsibilities are adhered to. The person competent in this unit must demonstrate an ability to identify information sources and collect and analyse and format information applicable to the electrotechnology industry and produce a report as required.

KS01-EE124A Energy sector detailed report writing

Evidence shall show an understanding of analysis, decision making and reporting as they apply to engineering work functions to an extent indicated by the following aspects:

T1 Communicating with personnel encompassing:

- ☐ Oral communications
- ☐ Written procedures and work instructions

T2 Communicating with suppliers

T3 Communicating with customers

T4 Purpose and extent of maintaining work activities records in an enterprise encompassing:

- ☐ Types of records for maintaining work activities in an enterprise
- ☐ Methods for recording and maintaining work records
- ☐ Work records required by regulation requirements
- ☐ Using basic computer functions encompassing:

- ☐ Starting up
- ☐ Selecting application
- ☐ Entering information
- ☐ Saving
- ☐ Printing

T5 Techniques of analysis encompassing:

- ☐ use of appropriate sampling techniques to collect data.
- ☐ types of data and classification.
- ☐ effective questionnaire design
- ☐ data collection errors.
- ☐ frequency tables.
- ☐ statistical diagrams – drawing and interpretation.
- ☐ the general shape of a frequency distribution.
- ☐ different types of diagrams.
- ☐ mean time between failures calculations

T6 Summary of statistics encompassing

- measures of central tendency
- measures of dispersion
- a 5-point summary for a given data set, box and whisker plot distribution
- ☐ data sets comparison using measures of centre and spread
- ☐ the effect of outliers on measures of centre and spread
- ☐ use computer programs or calculators to simplify calculations

T7 Correlation and regression encompassing:

- ☐ bivariate data and scatter diagrams.
- ☐ product-moment correlation coefficient calculation and interpretation.
- ☐ difference between causation and correlation.
- ☐ equations of regression lines from bivariate data with a calculator and line plotting on a scatter diagram.
- ☐ using the equation of regression to make predictions in practical situations.
- ☐ investigation of practical problems using correlation and regression.

T8 Investigation and reporting encompassing:

- ☐ presentation of a well formatted report with a clearly stated aim.
- ☐ using the internet to obtain relevant data.
- ☐ description of the statistical method and design chosen to meet the aim of the investigation.
- ☐ statistical analysis and results reporting.
- ☐ evaluation and interpretation of the results of the investigation.
- ☐ discussion of the investigation with reference to real world applications.
- ☐ chronology of the investigation.

CE 101	Mathematics (EE201)
---------------	----------------------------

This unit covers the application of computational processes to solve engineering problems. It encompasses working safely, applying problem solving techniques, using a range of mathematical processes, providing solutions to electrical/electronics engineering problems and justifying such solutions.

Note. Typical engineering problems are those encountered in meeting requirements in a design brief, meeting performance requirements and compliance standards, revising systems operating parameters and dealing with system malfunctions

KS01-EE126A Electrotechnology engineering maths

Evidence shall show an understanding of electrotechnology engineering maths to an extent indicated by the following aspects:

T1 Rational, irrational numbers and basic algebra

☐ simplification of expressions involving square roots and cube roots

☐ scientific and engineering notation

☐ evaluation of expressions using a calculator

☐ convert units of physical quantities using unity brackets

☐ substitute given values into formulae to find physical quantities

☐ manipulate algebraic expressions using mathematical operations in their correct order,

the laws of indices, expansion of brackets and collecting like terms

T2 Algebraic manipulation

- Factorise algebraic expressions using common factors
- Factorise quadratic expressions using trial and error on the factors of the coefficients
- Simplify algebraic fractions using common denominators and cancelling
- Solve simple one variable equations including algebraic fractions
- Find the quotient and remainder given a linear divisor.
- Transpose formulae to find a required variable.

T3 Laws of indices

- Conversion between decimal notation, scientific notation and engineering notation
- Laws of indices: positive /negative values, multiplication/division, fractional values, index equals zero
- Logarithmic laws: multiply/divide
- solution of exponential equations using logarithms, substitution and solution of relevant formulae involving exponents or logarithms
- Graphs of exponential functions, 10^x and e^x and the inverses $\log_{10}(x)$ and $\log_e(x)$ functions on log-linear graphs
- Convert numbers into scientific and engineering notation using the laws of indices
- Manipulate and simplify arithmetic and algebraic expressions using the laws of indices and logarithms
- Express logarithms as indices.
- Perform logarithmic operations.
- Determine logarithms and antilogarithms to base 10, using a scientific calculator.
- Determine logarithms and antilogarithms to base e, using a scientific calculator.
- Convert logarithmic values from base 10 to base e and vice versa.
- Sketch given functions on log-linear graphs

T4 Estimations, errors and approximations

- Errors in measurement
- Maximum probable error
- Show awareness of errors in measurement and of giving results in appropriate number of significant figures
- Use estimations and approximations to check the reasonableness of results.

T5 Plane figures – triangles and basic trigonometry

- Angles in a triangle
- Isosceles and equilateral triangles
- Congruent triangles
- Similar triangles
- Pythagoras' theorem
- Area of triangles
- Basic trigonometry functions
- Degrees, radians
- The ratios: sin, cos, tan, cosec, sec, cot.
- Inverse trig functions
- Sine and cosine rules

T6 Plane figures - quadrilaterals and circles

- Types and properties of quadrilaterals
- Areas and perimeters of regular quadrilaterals
- Lengths of arcs
- Angles in a circle - degrees
- Angles in a circle - radians
- Lengths of chord segments
- Tangents to circles
- Circumference and area of circles
- Names and characteristics of common polygons

T7 Graphs of Trigonometric functions

- Graph trigonometric functions and solve trigonometric equations.

- Simplify trigonometric expressions using trigonometric identities
- Convert angular measure in degrees to radians and vice versa
- Graph trigonometric functions including graphs of $y = \sin x$ and $y = \cos x$
- Using vocational applications of current or voltage as a function of time, consider changes in amplitude, consider changes in frequency.
- Examine relationships of frequency, period and angular velocity.
- Sketch graphs of the form $f(t) = a \sin \phi t$ and $f(t) = a \cos \phi t$, where a is the peak voltage or current, and ϕ is the angular velocity
- Solve graphically equations of the form $f(t) = a \sin \phi t$ and $f(t) = a \cos \phi t$

T8 Graphs of linear functions

- The number plane
- Gradient and x and y intercepts of a straight line
- Equation of a straight line length and mid-point of a straight line segment
- Function notation

T9 Simultaneous equations

- Graphical solutions
- Substitution
- Elimination
- Solve 2 linear simultaneous equations both algebraically and graphically.

T10 Matrices

- Perform the basic operations on matrices up to 3×3
- Manipulate matrix equations and expressions
- Recognise inverse and identity matrices up to 3×3 and use to solve systems of linear equations.
- Find determinants up to 3×3 and use to solve systems of linear equations.
- Solve problems involving more than two simultaneous equations.
- State the limitations of graphical methods of solution.
- Distinguish between a matrix and an array.
- Describe the null, diagonal and unit matrix
- Describe and identify a singular/non-singular matrix

T11 Quadratic functions

- Graphs of quadratic functions represented by parabolas and the significance of the leading coefficient.
- Graph quadratic functions and solve quadratic equations.
- Sketch and interpret the graphs of quadratic functions showing the significance of the leading coefficient and the zeros
- Solve quadratic equations by factoring or using quadratic formula
- Solve simultaneously linear and quadratic equations algebraically and geometrically
- Interpret verbally formulated problems involving quadratic and linear equations and solve.

T12 Exponential and logarithmic functions

- Transform non-linear functions (including exponential) to linear forms and plot data.
- Draw curves of best fit, interpolate data and estimate constants in suggested relationships.

□ Graph exponential and logarithmic functions and solve exponential and logarithmic equations.

□ Sketch the graphs of simple exponential and logarithmic functions showing behaviour for large and small values

T13 Vectors and Phasors

- The vector as an expression of magnitude and direction
- The vector sum of x and y values in terms of magnitude and direction
- Rectangular components of vectors in the form $x = r \cos \theta$ and $y = r \sin \theta$
- Rectangular-polar and polar-rectangular conversion
- Vector addition and subtraction
- Express rectangular components of vectors in the form $x = r \cos \theta$ and $y = r \sin \theta$

T14 Complex numbers

- Definitions and notation of complex numbers
- Complex numbers as vectors on an Argand diagram
- laws of complex numbers and apply the laws in suitable calculations.
- Plot complex numbers on the Argand plane.
- Express vectors as complex numbers and perform suitable calculations.
- Calculate the conjugate of a complex number.
- Using a calculator for rectangular-polar and polar-rectangular conversions.

CE 108 Electrical Principle

This unit covers determining correct operation of single source d.c. series, parallel and series-parallel circuits and providing solutions as they apply to various electrotechnology work functions. It encompasses working safely, problem solving procedures, including the use of voltage, current and resistance measuring devices, providing solutions derived from measurements and calculations to predictable problems in single and multiple path circuits.

Evidence shall show an understanding of electrical fundamentals and direct current multiple path circuits to an extent indicated by the following aspects:

T1 Basic electrical concepts encompassing:

- electrotechnology industry
- static and current electricity
- production of electricity by renewable and non renewable energy sources
- transportation of electricity from the source to the load via the transmission and distribution systems
- utilisation of electricity by the various loads
- basic calculations involving quantity of electricity, velocity and speed with relationship to the generation and transportation of electricity.

T2 Basic electrical circuit encompassing:

- symbols used to represent an electrical energy source, a load, a switch and a circuit protection device in a circuit diagram
- purpose of each component in the circuit
- effects of an open-circuit, a closed-circuit and a short-circuit
- multiple and sub-multiple units

T3 Ohm's Law encompassing:

- basic d.c. single path circuit.
- voltage and currents levels in a basic d.c. single path circuit.
- effects of an open-circuit, a closed-circuit and a short-circuit on a basic d.c. single path
- relationship between voltage and current from measured values in a simple circuit
- determining voltage, current and resistance in a circuit given any two of these quantities
- graphical relationships of voltage, current and resistance
- relationship between voltage, current and resistance

T4 Electrical power encompassing:

- relationship between force, power, work and energy
- power dissipated in circuit from voltage, current and resistance values
- power ratings of devices
- measurement electrical power in a d.c. circuit

□ effects of power rating of various resistors

T5 Effects of electrical current encompassing:

- physiological effects of current and the fundamental principles (listed in AS/NZS 3000) for protection against the this effect
- basic principles by which electric current can result in the production of heat; the production of magnetic fields; a chemical reaction
- typical uses of the effects of current
- mechanisms by which metals corrode
- fundamental principles (listed in AS/NZS3000) for protection against the damaging effects of current

T6 EMF sources energy sources and conversion electrical energy encompassing:

- basic principles of producing a emf from the interaction of a moving conductor in a magnetic field.
- basic principles of producing an emf from the heating of one junction of a thermocouple.
- basic principles of producing a emf by the application of sun light falling on the surface of photovoltaic cells
- basic principles of generating a emf when a mechanical force is applied to a crystal (piezo electric effect)
- principles of producing a electrical current from primary, secondary and fuel cells
- input, output, efficiency or losses of electrical systems and machines
- effect of losses in electrical wiring and machines
- principle of conservation of energy

T7 Resistors encompassing:

- features of fixed and variable resistor types and typical applications
- identification of fixed and variable resistors
- various types of fixed resistors used in the Electro technology Industry. e.g. wire-wound, carbon film, tapped resistors.
- various types of variable resistors used in the Electro technology Industry e.g. adjustable resistors: potentiometer and rheostat; light dependent resistor (LDR); voltage dependent resistor (VDR) and temperature dependent resistor (NTC, PTC).
- characteristics of temperature, voltage and light dependent resistors and typical applications of each power ratings of a resistor.
- power loss (heat) occurring in a conductor.
- resistance of a colour coded resistor from colour code tables and confirm the value by measurement.
- measurement of resistance of a range of variable' resistors under varying conditions of light, voltage, temperature conditions.
- specifying a resistor for a particular application.

T8 Series circuits encompassing:

- circuit diagram of a single-source d.c. 'series' circuit.
- Identification of the major components of a 'series' circuit: power supply; loads; connecting leads and switch
- applications where 'series' circuits are used in the Electro technology industry.
- characteristics of a 'series' circuit - connection of loads, current path, voltage drops, power dissipation and affects of an open circuit in a 'series' circuit.
- the voltage, current, resistances or power dissipated from measured or given values of any two of these quantities
- relationship between voltage drops and resistance in a simple voltage divider network.
- setting up and connecting a single-source series dc circuit
- measurement of resistance, voltage and current values in a single source series circuit
- effect of an open-circuit on a series connected circuit

T9 Parallel circuits encompassing:

- schematic diagram of a single-source d.c. 'parallel' circuit.
- major components of a 'parallel' circuit (power supply, loads, connecting leads and applications where 'parallel' circuits are used in the Electrotechnology industry).
- characteristics of a 'parallel' circuit. (load connection, current paths, voltage drops, power dissipation, affects of an open circuit in a 'parallel' circuit).
- relationship between currents entering a junction and currents leaving a junction
- relationship between branch currents and resistances in a two branch current divider network.
- calculation of the total resistance of a 'parallel' circuit.
- calculation of the total current of a 'parallel' circuit.
- Calculation of the total voltage and the individual voltage drops of a 'parallel' circuit.
- setting up and connecting a single-source d.c. parallel circuit
- resistance, voltage and current measurements in a single-source parallel circuit
- voltage, current, resistance or power dissipated from measured values of any of these quantities
- output current and voltage levels of connecting cells in parallel.

T10 Series/parallel circuits encompassing:

- schematic diagram of a single-source d.c. 'series/parallel' circuit.
- major components of a 'series/parallel' circuit (power supply, loads, connecting leads and switch)
- applications where 'series/parallel' circuits are used in the Electrotechnology industry.
- characteristics of a 'series/parallel' circuit. (load connection, current paths, voltage drops, power dissipation, affects of an open circuit in a 'series/parallel' circuit).
- relationship between voltages, currents and resistances in a bridge network.
- calculation of the total resistance of a 'series/parallel' circuit.
- calculation of the total current of a 'series/parallel' circuit.
- calculation of the total voltage and the individual voltage drops of a 'series/parallel' circuit.
- setting up and connecting a single-source d.c. series/ parallel circuit
- resistance, voltage and current measurements in a single-source d.c. series / parallel circuit
- the voltage, current, resistances or power dissipated from measured values of any two of these quantities

T11 Factors affecting resistance encompassing:

- four factors that affect the resistance of a conductor (type of material, length, cross-sectional area and temperature)
- affect the change in the type of material (resistivity) has on the resistance of a conductor.
- affect the change in 'length' has on the resistance of a conductor.
- affect the change in 'cross-sectional area' has on the resistance of a conductor.

[illegible]

- effects of resistance on the current-carrying capacity and voltage drop in cables.
- calculation of the resistance of a conductor from factors such as conductor length, cross-sectional area, resistivity and changes in temperature
- using digital and analogue ohmmeter to measure the change in resistance of different types of conductive materials (copper, aluminium, nichrome, tungsten) when those materials undergo a change in type of material length, cross-sectional area and temperature.

T12 Effects of meters in a circuit encompassing:

- selecting an appropriate meter in terms of units to be measured, range, loading effect and accuracy for a given application.
- measuring resistance using direct, volt-ammeter and bridge methods.

- instruments used in the field to measure voltage, current, resistance and insulation resistance and the typical circumstances in which they are used.
- hazards involved in using electrical instruments and the safety control measures that should be taken.
- operating characteristics of analogue and digital meters.
- correct techniques to read the scale of an analogue meters and how to reduce the 'parallax' error.
- types of voltmeters used in the Electrotechnology industry – bench type, clamp meter, Multimeter, etc.
- purpose and characteristics (internal resistance, range, loading effect and accuracy) of a voltmeter.
- types of voltage indicator testers. e.g. LED, neon, solenoid, volt-stick, series tester, etc. and explain the purpose of each voltage indicator tester.
- operation of various voltage indicator testers.
- advantages and disadvantages of each voltage indicator tester.
- various types of ammeters used in the Electrotechnology industry – bench, clamp meter, multimeter, etc.
- purpose of an ammeter and the correct connection (series) of an ammeter into a circuit.
- reasons why the internal resistance of an ammeter must be extremely low and the dangers and consequences of connecting an ammeter in parallel and/or wrong polarity.
- selecting an appropriate meter in terms of units to be measured, range, loading effect and accuracy for a given application
- connecting an analogue/digital voltmeter into a circuit ensuring the polarities are correct and take various voltage readings.
- loading effect of various voltmeters when measuring voltage across various loads.
- using voltage indicator testers to detect the presence of various voltage levels.
- connecting analogue/digital ammeter into a circuit ensuring the polarities are correct and take various current readings.

T13 Resistance measurement encompassing:

- Identification of instruments used in the field to measure resistance (including insulation resistance) and the typical circumstances in which they are used.
- the purpose of an Insulation Resistance (IR) Tester.
- the parts and functions of various analogue and digital IR Tester (selector range switch, zero ohms adjustment, battery check function, scale and connecting leads).
- reasons why the supply must be isolated prior to using the IR tester.
- where and why the continuity test would be used in an electrical installation.
- where and why the insulation resistance test would be used in an electrical installation.
- the voltage ranges of an IR tester and where each range may be used. e.g. 250 V d.c, 500 V d.c and 1000 V d.c
- AS/NZS3000 Wiring Rules requirements – continuity test and insulation resistance (IR) test.
- purpose of regular IR tester calibration.
- the correct methods of storing the IR tester after use
- carry out a calibration check on a IR Tester
- measurement of low values of resistance using an IR tester continuity functions.
- measurement of high values of resistance using an IR tester insulation resistance function.
- volt-ammeter (short shunt and long shunt) methods of measuring resistance.
- calculation of resistance values using voltmeter and ammeter reading (long and short shunt connections)
- measurement of resistance using volt-ammeter methods

T14 Capacitors and Capacitance encompassing:

- basic construction of standard capacitor, highlighting the: plates, dielectric and connecting leads
- different types of dielectric material and each dielectric's relative permittivity.

- identification of various types of capacitors commonly used in the Electrotechnology industry (fixed value capacitors -stacked plate, rolled, electrolytic, ceramic, mica and Variable value capacitors – tuning and trimmer)
- circuit symbol of various types of capacitors: standard; variable, trimmer and polarised
- terms: Capacitance (C), Electric charge (Q) and Energy (W)
- unit of: Capacitance (Farad), Electric charge (Coulomb) and Energy (Joule)
- factors affecting capacitance (the effective area of the plates, the distance between the plates and the type of dielectric) and explain how these factors are present in all circuits to some extent.
- how a capacitor is charged in a d.c. circuit.
- behaviour of a series d.c. circuit containing resistance and capacitance components. - charge and discharge curves

the term 'Time Constant' and its relationship to the charging and discharging of a capacitor.

- calculation of quantities from given information: Capacitance ($Q = VC$); Energy ($W = \frac{1}{2}CV^2$); Voltage ($V = Q/C$)
- calculation one time constant as well as the time taken to fully charge and discharge a given capacitor. ($\tau = RC$)
- connection of a series d.c. circuit containing capacitance and resistor to determine the time constant of the circuit

T15 Capacitors in Series and Parallel encompassing:

- hazards involved in working with capacitance effects and the safety control measures that should be taken.
- safe handling and the correct methods of discharging various size capacitors
- dangers of a charged capacitor and the consequences of discharging a capacitor through a person
- factors which determine the capacitance of a capacitor and explain how these factors are present in all circuits to some extent.
- effects of capacitors connected in parallel by calculating their equivalent capacitance.

CE 102 Physics (EE 204)

This unit covers the law of physics and how they apply to solving electrotechnology related problems. It encompasses working safely, knowledge of measurements of physical phenomena, linear and angular motion, harmonic motion, wave theory, optics, acoustics and heat capacity and transfer, use of measurement techniques, solving physics related problems and documenting justification for such solutions.

KS01-EE082A Electrotechnology engineering physics

Evidence shall show an understanding of electro engineering physics to an extent indicated by the following aspects:

T1 Measurement encompassing

- SI units in measurement of physical phenomena
- Uncertainty and tolerance

T2 Linear motion

T3 Angular motion

T4 Simple harmonic motion and vibration

T5 Wave theory

- Interference

- Diffraction

T6 Electromagnetic waves and propagation

T7 Optics

- Mirrors and lenses

□ Optical fibre

T8 Acoustics and ultrasonics

T9 Heat capacity and heat transfer

□ Fluid power

CE 109 Energy Efficient Building Design (EE309)

This unit covers evaluating energy used in buildings and developing and documenting strategies/methods to effectively reduce energy use without compromising occupancy standards. It encompasses working safely, setting up and conducting evaluation measurements and evaluating energy use from measured parameters.

T1 Climate and thermal comfort encompassing:

- characteristics of the different Australian climatic types.
- use of climatic data in published and electronic forms to extract the quantities relevant to energy efficient design.
- relationship between climate and comfort using bioclimatic or psychrometric charts.
- calculation of heating or cooling degree days or degree hours for various locations.
- calculation of thermal neutrality for a given location.

T2 Solar geometry and radiation encompassing:

- definition of the terms: declination, hour angle, zenith angle, azimuth and altitude angles, the equation of time.
- conversion of solar time to local time and vice versa.
- position of the sun and the length of shadows with the aid of algorithms, tables, sun charts or computer software.
- daily irradiation incident on a wall, window or roof of a given tilt and orientation.
- relative summer and winter irradiation of windows facing the cardinal orientations.

T3 Heat transfer encompassing:

- thermal processes of conduction, convection and radiation apply to the transfer of heat in buildings.
- calculation of the summer and winter U-values of building elements using tables and software.
- calculation of the infiltration heat transfer in a building.

T4 Glazing Systems encompassing:

- different types of glazing systems and their characteristics.
- different types of shading devices and the window orientations for which they are most appropriate.
- solar heat gain for different glazing types and angles of incidence
- calculation of the average daily irradiation of a window partly shaded by eaves, using computer software.
- calculation of the average daily heat gain through a window partly shaded by eaves.

T5 Insulation encompassing:

- different types of insulation and where they are used.
- how different types of insulation are installed in roofs, walls and floors
- determination of the minimum R-values of roof insulation for different locations using Australian Standard AS2627 or similar standards.

T6 Thermal mass encompassing:

- advantages and disadvantages of using substantial thermal mass in different climate types and for different heating and cooling regimes.
- where thermal mass can be located in a building.
- explain what is meant by the following terms: time lag, decrement factor, admittance, response factor.

T7 Comfort control strategies encompassing:

- interpretation of the usefulness of a design strategy with the aid of a psychrometric chart showing control potential zones for a particular location.
- selection of the most useful comfort control strategies for Australian climatic regions.

T8 Energy efficiency in buildings encompassing:

- determination of the direction of the following: both true and magnetic, north winter and summer sunrise, winter and summer sunset.
- solar access in summer and winter to various possible house locations on a site and room locations within the house.
- how vegetation can be used to both funnel and deflect wind.
- using cross ventilation as a cooling strategy.

T9 Thermal performance of a building encompassing:

- heating requirements of a building using the heating degree day or hour method.
- dynamic performance predicted by a computer simulation program such as NatHERS or BERS.

T10 Integration of active solar systems encompassing:

- active solar system types available which can provide hot water, space heating and cooling.
- the best location on the roof, and the optimum tilt and orientation of the collector panels.
- function of the main components of an air or water-based solar space heating system.
- schematic of the fluid circuit of an air or water-based space heating system.
- main solar cooling system types.

T11 Energy rating schemes encompassing:

- differences in approach used by house energy rating schemes in Australia.
- energy performance of a number of houses using a computer simulation program such as NatHERS or BERS.
- other methods to reduce energy consumption within and outside a building including appliance efficiency, human behaviour changes, building management strategies and transportation minimisation.
- additional cost of energy efficiency measures and cost savings using life cycle cost or simple pay back methods according to Aust. Standard AS3595 and AS4536.

T12 Sustainable and safe building materials encompassing:

- common building materials and their embodied

energy content.

□ environmental impact of the production of various building materials.

□ problems associated with the use or disposal of building materials.

EE102

Basic Electrical Fitting & Wiring

This unit covers fixing, securing and mounting techniques as apply in the various electrotechnology work functions. It encompasses the safe use of hand and portable power tools, safe lifting techniques, safe use of ladders and elevated platforms and the selection and safe application of fixing devices and supporting accessories/equipment.

KS01-EE105A Fixing and support devices/techniques

Evidence shall show an understanding of accessories and support and fixing device and methods and their use to an extent indicated by the following aspects:

T1. Device for securing and mounting electrical/electronic/instrumentation/refrigeration/ air-conditioning/telecommunications accessories for supporting, fixing and protecting wiring/cabling/piping and functional accessories to hollow walls encompassing:

□ types and safe application of devices for hollow wall fixing and support

□ methods/techniques used to fix/support to wood, hollow wall, masonry blocks, plasterboard, panelling

□ types and safe application of fixing devices used in the electrotechnology industry for wood and hollow wall structures (wood screws, coach bolts, self-tappers, self drilling, metal thread, hollow wall anchors, behind plaster brackets, stud brackets, plasterboard devices, toggle devices)

□ types of tools used for hollow wall fixing and supporting.

□ using various fixing methods to fix/support to hollow walls.

T2. Device for securing and mounting electrical/electronic/instrumentation/refrigeration/ air-conditioning/telecommunications accessories for supporting, fixing and protecting wiring/cabling/piping and functional accessories to solid walls encompassing:

□ types and safe application of devices used for solid wall fixing and support

□ methods/techniques used in to fix to masonry and concrete structures

□ fixing devices used in the electrotechnology industry for solid wall structures (wall-plugs, expanding concrete fixing devices, gas powered fixing tools, powder actuated fixing tools, loxins, dynabolts, chemical devices)

□ regulatory requirements for use of powder fixing tools.

□ hand and power tools used in fixing and supporting accessories

□ using various fixing methods to fix/support to solid walls

T3. Device for securing and mounting electrical/electronic/instrumentation/refrigeration/ air-conditioning/telecommunications accessories for supporting, fixing and protecting wiring/cabling/piping and functional accessories to metal fixing encompassing:

□ accessories that may be fixed to metal (saddle clips, conduits, brackets, switches)

□ techniques for fixing to metal

□ fixing devices: coach bolts, self-tappers, metal thread bolts, hollow wall anchors, rivets

□ fixing tools - spanners, screwdrivers, power screw drivers, pop riveters, files, reamers

□ OH&S issues related to drilling, cutting, eye protection, metal filings, swarf, noise

□ Using power drills, drill bits, change drill speeds.

□ Install a fixing device and accessory capable of supporting up to 20 kg on the metal plate.

T4. Securing and mounting electrical/electronic/instrumentation/refrigeration/ air-conditioning/telecommunications accessories for supporting, fixing and protecting wiring/cabling/piping and functional accessories using fixing adhesives and tapes encompassing:

□ types and safe application of using adhesives and tapes as fixing devices (load limits of different commercial products)

□ accessories that may be fixed using adhesives and tapes

- techniques for the application of adhesives and tapes
- tools used to apply and cut adhesives and tapes
- hazards and safety measures when working with adhesives and chemical fixing devices (fumes, cutting, eye protection, physical contact, hand protection, ingestion)

EE104	Electrical Equipments Safety Protection
-------	---

This unit covers the arrangement and termination of circuits, control and protection devices and systems for electrical installations operating at voltages up to 1,000 V a.c. or 1,500 V d.c. It encompasses knowledge and application of schemes for protection of persons and property, correct functioning, ensuring compatibility with the supply, arranging installation into circuits and selecting and arranging switchgear/controlgear and protective devices to meet compliance requirements and documenting arrangement decisions

KS01-EG063A Electrical installations — arrangement, control and protection

Evidence shall show an understanding of circuit arrangements, control and protection of electrical installations that comply with the Wiring Rules and Service Rules to an extent indicated by the following aspects:

T1 Safety principles to which electrical systems in building and premises shall comply.

- Safety principles are given in Part1 (Section 1) of the Wiring Rules AS/NZS 3000 with deemed-to-comply requirements given in Sections 2 to 8.
- Compliant methods for providing protection - include those for providing protection against direct and indirect contact; thermal effects; unwanted voltages; overcurrent; fault currents; overload; overvoltage; injury from mechanical movement.
- Requirements for installation design and selection of equipment - includes compliant protection arrangements; correct functioning; compatibility with supply; estimation of maximum demands; voltage drop considerations; arrangement of circuits and the like

T2 Circuit and control arrangements encompassing:

- reason for dividing electrical installations into circuits
- factors that shall be considered in determining the number and type of circuits required for an installation.
- daily and seasonal demand for lighting power, heating and other loads in a given installation.
- number and types of circuits required for a particular installation.
- diagrams/schedules of circuits for given installations.
- application and arrangements of SELV and PELV circuits
- application and arrangement of an isolated supply

T3 Hazards and risks in an electrical installation encompassing:

- effects on the human body of various levels of a.c. and d.c. current and duration of current flow for various current paths.
- risk of ignition of flammable materials due the thermal effects of current or electric arcs in normal service of an electrical installation.
- risk of injury from mechanical movement of electrically actuated equipment.
- Protection against direct contact (basic protection)
- acceptable methods
- use of extra-low voltage

T4 Protection against indirect contact encompassing:

- indirect contact with live parts of an electrical installation may occur.
- methods and devices that comply with the Wiring Rules for providing protection against indirect contact.
- components of the 'automatic disconnection of supply' method of protection against indirect contact.
- the terms 'touch voltage' and 'touch current'.
- the current path when a short circuit fault to exposed conductive parts of an appliance

occurs.

- protection against indirect contact is by the use of Class II equipment and by electrical separation.
- additional protection by use of Residual Current Devices (RCDs)
- protection against indirect contact by use of extra-low voltage and electrical separation.
- Protection requirements for damp situations.

T5 Earthing encompassing:

- the terms: earthed, earthed situation, earth electrode, equipotential bonding, multiple earthed neutral (MEN) system, protective earth-neutral (PEN) conductor, main earthing conductor, protective earthing (PE) conductor, functional earthing, MEN link.
- selection of minimum size-earthing conductor for a range of active conductor sizes and materials.
- parts of an earthing system and the purpose of each.
- typical arrangement for a MEN earthing system.
- arrangements of protective earthing conductors that comply with the Wiring Rules.
- requirements for equipotential bonding in a range of installation situations.
- Installation of a MEN earthing system for a single phase installation

T6 Protection against overload and short circuit current encompassing:

- overload current or fault currents in an electrical installation.
- equivalent circuit of an earth fault-loop
- level of fault current possible at a given point in an installation from the fault-loop impedance and data from the electricity distributor.
- methods and devices that comply with the Wiring Rules AS/NZS 3000 for providing protection against the damaging effects of overload and fault current
- requirements for co-ordination between protective devices and conductors
- requirements for co-ordination of protection devices for discrimination and back-up protection.

T7 Devices for automatic disconnection of supply encompassing:

- operating principles of thermal/magnet circuit breakers.
- operating principles of common types of fuses.
- operating principles of residual current devices (RCD).
- time/current curves tripping characteristics of various types of circuit breakers that comply with the requirements of the Wiring Rules.
- time/current curves fusing characteristics of various types of fuses that comply with the requirements of the Wiring Rules.
- time/current curves tripping characteristics of various types of RCDs that comply with the requirements of the Wiring Rules.
- factors in a fault loop that will affect the impedance of the circuit.
- maximum impedance of an earth fault-loop to ensure operating of a protection device.
- selecting a fuse for fault current limiting protection.
- drawing switchboard wiring arrangements of 2-pole RCDs, 4-pole RCDs, combination RCD/MCBs.

T8 Protection against over voltage and under voltage encompassing:

- causes of over voltage and how this may affect the electrical system.
- methods for protection against over voltage.
- causes of under voltage and how this may affect the electrical system.
- methods for protection against under voltage.

T9 Control of an electrical installation and circuits encompassing:

- switch types, current and voltage ratings and IP rating and where these apply.
- switching requirements for isolation, emergency, mechanical maintenance and functional control.

□ control arrangement for complete installations with and without safety services and an alternative supply.

T10 Switchboards / distribution boards encompassing:

- Purpose, types and applications.
- Physical and circuit arrangements for whole current and CT metering.
- Physical and circuit arrangements of main switches, circuit protection devices, fault-current limiters and metering equipment and other distributor equipment.
- compliance requirements (includes location and access, arc fault protection, identification, construction suitability, equipment marking, wiring, fire protection and arc-fault protection).

EE105	Electrical Installation Design
-------	--------------------------------

This unit covers selecting wiring systems and cables for electrical installations operating at voltages up to 1,000V a.c. or 1,500 V d.c. It encompass knowledge and application of wiring systems and cable types, selecting wiring system compatible with the installation conditions, selecting cables that comply with required current-carrying capacity and voltage drop and earth fault-loop impedance limitations, coordination between protective devices and conductors and documenting selection decisions

KS01-EG107A Electrical installation — cable selection and co-ordination

Evidence shall show an understanding of selecting cables and ensuring co-ordination between protection device and conductors in electrical installations that comply with the Wiring Rules, Selection of cables standards and Service Rules to an extent indicated by the following aspects:

T1 Performance requirements - design and safety encompassing:

- harmful effects against which the design of an electrical installation must provide protection.
- performance standards of a correctly functioning electrical installation.
- supply characteristics that shall be considered when designing an electrical installation.
- acceptable methods for determining the maximum demand in consumer's mains and sub-mains.
- AS/NZS 3000 requirements limiting voltage drop in an installation.
- reason for dividing electrical installations into circuits and the factors that shall determine their number and type.
- typical external factors that may damage an electrical installation and that shall be considered in the installation design.
- methods for protecting persons and livestock against direct and indirect contact with conductive parts and the typical application of each.
- acceptable methods of protection against the risks of ignition of flammable materials and injury by burns from the thermal effects of current, in normal service.
- likely sources of unwanted voltages and the methods for dealing with this potential hazard.
- acceptable methods for protecting persons and livestock against injury and property against damage from the effects of over current.
- requirement for protection against fault current.
- requirement for protection against the harmful effects of faults between live parts of circuits supplied at different voltages.
- need for protection against injury from mechanical movement and how this may be achieved.
- features of 'fire rated construction' and how the integrity of the fire rating can be maintained in relation to electrical installation.

T2 Final subcircuit arrangements encompassing:

- factors that shall be considered in determining the number and type of circuits required for an installation.

- daily and seasonal demand for lighting, power, heating and other loads in a given installation.
- number and types of circuits required for a particular installation.
- current requirements for given final subcircuits.
- layout/schedule of circuits for given installations.

T3 Factors affecting the suitability of wiring systems encompassing:

- wiring systems typically used with various construction methods and particular environments.
- installation conditions that may affect the current-carrying capacity of cables.
- external influences that may affect the current-carrying capacity and/or may cause damage to the wiring system.
- AS/NZS 3000 requirements for selecting wiring systems for a range of circuits, installation conditions and construction methods into which the wiring system is to be installed. Note: Wiring systems include cable enclosures, underground wiring, aerial wiring, catenary support, emergency systems, busbar trunking and earth sheath return.

T4 Maximum demand on consumer's mains/submains encompassing:

- acceptable methods for determining the maximum demand on an installation's consumer's mains and submains.
- maximum demand for the consumer's mains for given installations up to 400 A per phase.
- maximum demand for given submains.

T5 Cable selection based on current carrying capacity requirements encompassing:

- installation conditions for a range of wiring systems and applications.
- external influences that require the use of a derating factor.
- AS/NZS 3000 requirements for coordination of cables and protection devices.
- AS/NZS 3008 used to select conductor size based on the maximum current requirement for a given installation condition including any applicable derating factors.

T6 Cable selection based on voltage drop requirements encompassing:

- AS/NZS 3000 requirements for maximum voltage drop in an installation.
- relevant tables in AS/NZS 3008 for unit values of voltage drop.
- calculation of the expected voltage drop in a given circuit.
- selecting cables to satisfy voltage drop requirements in addition to current carrying capacity requirements.

T7 Cable selection based on fault loop impedance requirements encompassing:

- AS/NZS 3000 requirements for maximum fault loop impedance in an installation.
- relevant tables in AS/NZS 3008 to determine cable impedances.
- calculation of the expected fault loop impedance for a given circuit arrangement.
- selecting cables to satisfy fault loop impedance requirements in addition to current carrying capacity requirements and voltage drop requirements.

T8 Selecting protection devices encompassing:

- acceptable methods of protection against indirect contact.
- AS/NZS 3000 requirements for selecting methods and devices to protect against indirect contact for a range of installation types and conditions.
- coordination between conductors and protection devices to ensure the protection of cables from over heating due to over current.
- possible injuries to persons and livestock from hazards due to a short circuit.
- AS/NZS 3000 requirements for selecting devices to protect against overload current for a range of circuits and loads.
- AS/NZS 3000 requirements for selecting devices to protect against short-circuit current for a range of installation conditions.

T9 Selecting devices for isolation and switching encompassing:

- requirements for the provision of the isolation of every circuit in an electrical installation.
- need for protection against mechanical movement of electrically activated equipment.
- AS/NZS 3000 requirements for selecting devices for isolation and switching for a range of installations and conditions.

T10 Switchboards encompassing:

- AS/NZS 3000 and local supply authority requirements for switchboards.
- tariff structures for the supply of electricity.
- equipment installed at the main switchboards with capacities up to 400 A per phase.
- layout of a main switchboard for an installation supplied with single phase single tariff whole current metering.
- layout of a main switchboard for an installation supplied with single phase multiple tariff whole current metering.
- layout of a main switchboard for an installation supplied with multiphase single tariff whole current metering.
- layout of a main switchboard for an installation supplied with multiphase multiple tariff whole current metering.
- layout of a main switchboard for a multiple tenancy installation with whole current metering.
- layout of a main switchboard, including metering, for an installation supplied with three phase CT metering.
- local supply authority requirements for connection of an electrical installation to the electrical supply system

EE106	Advanced Electrical Wiring
-------	----------------------------

This unit covers the installation in building and premises of wiring enclosures, cable support systems, cables and accessories and designed to operate at voltages up to 1,000 V a.c. or 1,500 V d.c. It encompasses working safely and to installation standards, routing cables to specified locations, terminating cables and connecting wiring at accessories and completing the necessary installation documentation.

KS01-EG103A Installation of wiring systems

Evidence shall show an understanding of the installation of wiring systems that comply with standards to an extent indicated by the following aspects:

T1 Standards, codes and requirements applicable to the installation of wiring systems encompassing:

- Cables and methods of mechanical protection and support
- Protection against and from other services.
- Prohibited cable locations
- Building codes affecting the installation of cables in buildings, structures and premises (limitation on penetration of structural elements, maintenance of fire protection integrity, and wiring above suspected ceilings)
- Issues affecting electrical installations in heritage buildings and premises (limitation on penetration of structural and finished elements, accessing cable routes, types and colour of exposed accessories).

T2 Use of other installation standards called up by the Wiring Rules for special situations encompassing:

- standards that apply to Electromedical treatment areas.
- additional requirements for construction and demolition sites.
- Relocatable installations and their site supply
- additional requirements for caravan park.
- additional requirements for marinas and pleasure craft at low voltage.

□ additional requirements for shows and carnivals.

T3 Hazardous areas encompassing:

- Conditions that apply in an areas that require them to be classified as a 'Hazardous area'.
- Responsibility for classifying a hazardous area
- Awareness of standards called up by the Wiring Rules for selection of equipment and installations in Hazardous areas. (AS/NZS 3000 requirements for hazardous areas).

T4 Requirement for the installation of cables and accessories in damp situations and ELV installations encompassing:

- restricted zones around baths, showers, fixed water containers, pools, sauna heaters and fountains/water features for given installations.
- selecting equipment suitable for installation in given damp situations.
- voltage range that defines extra-low voltage.
- 'Separated extra-low voltage (SELV) system' and a 'Protected extra-low voltage (PELV) system'.
- AS/NZS 3000 requirements for selecting extra-low voltage systems and devices for a range of installations and conditions.

T5 Aerial cabling encompassing:

- Describe the types of aerial cabling.
- State the AS/NZS 3000 and local supply authority requirements for aerial cabling.
- Termination of aerial cables in accordance with AS/NZS 3000 and local requirements.
- installation of consumers mains for connection via overhead consumers terminals in accordance with AS/NZS 3000 and local requirements.
- Testing of installed cables compliance with Australian Standards

T6 Underground cabling encompassing:

- Describe permissible underground cabling systems.
- Identify other underground services.
- State the AS/NZS 3000 and local supply authority requirements for underground cabling.
- List the advantages and disadvantages of underground wiring systems
- selection of underground consumers mains in accordance with AS/NZS 3000 and local requirements

T7 Techniques for installing cables and wiring systems encompassing:

- Typical cable routes through buildings, structures and premises.
- Application of wiring accessories
- Drawing-in, placing and fixing of cables
- Cable and conductor terminations
- Maintaining fire rating integrity.
- Inspecting and testing installed and terminated cables to ensure they comply with continuity and insulation resistance and are safe to connect to the supply.

EE308	Sustainability
-------	----------------

This unit covers developing strategies to address environmental and sustainability issues in the energy sector. It encompasses working safely, apply extensive knowledge of sustainable energy systems and components and their operating parameters, gathering and analysing data, applying problem solving techniques, developing and documenting alternatives solutions

KS01-EK132A

**Environmental and
Sustainability
strategies**

Evidence shall show an understanding of greenhouse reduction strategies to an extent indicated by the following aspects:

T1 Principles of sustainability encompassing:

- ways in which ecosystems moderate climate. ways in which ecosystems purify and store water.
- ways in which ecosystems recycle waste.

T2 Problems in a sustainable world encompassing:

- changes to Australian forest cover since white settlement, and the resulting loss of ecosystem and human benefits.
- changes to Australia's soils since white settlement, and the resulting loss of ecosystem and human benefits.
- changes to Australia's waterways since white settlement, and the resulting loss of ecosystem and human benefits.
- place of environmental accounting in quantifying Australia's environmental losses.
- limits to Australia's population carrying capacity.

T3 Sustainability principles encompassing:

- principles within sustainability including: environmental accounting and economies; full cost pricing; triple bottom line ethic; ecologically sustainable development; greenhouse gas abatement; energy efficiency; resource and water use efficiency; life cycle costing; renewable energy substitution, cleaner production; waste minimisation, reuse and recycling; ecological footprint.

T4 Addressing the problem of global warming encompassing:

- greenhouse gases and their sources and quantities that contribute to global warming.
- global warming impacts for Australia for 2030 and 2070 predicted by CSIRO modelling.
- requirements to achieve stable atmospheric concentrations of greenhouse gases.
- ecologically and economically sustainable methods for achieving these stable concentrations.

T5 Greenhouse gas emissions profile encompassing:

- goals and principles of the National Greenhouse Strategy
- what a greenhouse gas inventory is, why it is required, and the sectors to which it applies
- uses to which the National Greenhouse Gas Inventory can be applied.

T6 Understanding and communicating climate change and its impacts encompassing:

- the possible impact of climate change in Australia.
- techniques for improving the understanding of climate change
- techniques for communicating to and educating the general

public on greenhouse gas induced climate change.

T7 Partnerships for greenhouse action encompassing:

- actions achievable by each level of government to implement the NGS.
- methods by which the community activity can be engaged in the reduction of greenhouse gas emissions.
- initiatives that can be undertaken by the private sector to reduce greenhouse gas emissions.
- advantages of international partnerships.
- emissions trading system.

T8 Efficient and sustainable energy use and supply encompassing:

- techniques for reducing the greenhouse intensity of energy supply.
- types of renewable energy sources suitable for use in Australia.
- methods and technique for improving end-use efficiency.

T9 Efficient transport and sustainable urban planning encompassing:

- how integrating land use and transport planning can assist the greenhouse problem.
- how each of the following can be used to mitigate greenhouse gas; travel demand and traffic management strategies; encouraging greater use of public transport, walking and cycling; freight and logistics systems; improving vehicle fuel efficiency and fuel technologies;

T10 Greenhouse sinks and sustainable land management encompassing:

- how enhancing greenhouse sinks and encouraging sustainable forestry and vegetation management can complement the AGS.
- how greenhouse gas emissions are obtained from agricultural production and describe techniques to mitigate the emissions.

T11 Models of greenhouse best practice in industrial processes and waste management encompassing:

- types and methods of reducing greenhouse gas emissions from industry.
- methods of reducing methane emissions from waste

treatment and disposal.

T12 Adaptation to climate change encompassing:

□ salient points in each of the key sectors that require analysis and the strategies required in the need for adaptation to climate change

ME 301/ CE 104 Fluid Dynamics

Body forces, compressible flow, Navier stroke equation, fluid energy equation, incompressible flow, turbulent flow, instantaneous & average velocity in turbulent flow, inviscid flow, boundary layer approximation.

CE 105 Hydraulic CE 106 Hydrology

Fluid, hydraulic jack, pressure head of fluid, total pressure in immersion surface, buoyancy, pressure gauge, condition of equilibrium, hydrodynamics, head of liquid, Bernaulli's theorem, Venturi meter, water jet, vortex, orifice, flow through orifice, Francis formula, triangular notch, trapezoidal notch, broad crest weir, friction & flow through pipes, flow through nozzle, turbine.

CE 106A Detailed construction & Building Construction Materials

Brick laying, bonding, junction, wall corner, joint arch, brick paving, brick steps, chimney, roof plumbing, eaves gutter, sprouting mitre, gutter joining, sprouting, external / internal angle making PVC angle, moulded angle, obtuse angle, return stop end, sprouting outlet , pvc outlet, joining sprouting bracket.

CE 104A Building Drawing

Scope, drawing paper, scale, instruments, terms, abbreviations, symbols, building geometry, plan, elevation, sections, re-production of drawings, lettering, perspective drawing, 3 dimensional drawing, drawing layout , setting out detailed drawing, detailed construction, joinery details, room schedule, door schedule, window schedule, hardware schedule, schedules of finishes, painting schedule, colour schedules, miscellaneous schedules, structural drawing, frame, RC, beam schedule, structural steel work, electrical drawing, drainage measured drawing, survey drawings, working drawing, alteration plan.

CE 110 Building Construction

Types of loads, beam, shear diagram, roof trusses, foundation engineering, standard penetration test, soil profile, bearing capacity analysis, retaining wall, footing, steel grades, fasteners, weld, truss applications, bracing tall buildings, wind connection for beam/ columns, brace bay, steel joist floors, roof systems, concrete joints, foundations, wall system, fastenings, timber trusses, timber decking, plank and beam frame, fabrication of structural timber, masonry walls, support condition for walls, stud wall construction, partitions, installation methods, floor systems, window / door structure, sand vibration control, roof insulation.

CE 103 Surveying

Art of measuring, slope correction, surveying instruments, level bench mark booking, observation reduce level, error reduction, change of point, HPC method, two peg test, grid level.

CE 106 Hydrology + ME 204 Fluid Mechanics

Axial flow reaction turbine, inward flow reaction turbine, hydrostatics, centre of pressure, Buoyancy, hydrodynamics, orifice, water turbines, venturi meters, weirs.

CE 107 Sanitation/ Water Supply

Basic principle of plumbing, water supply fittings, sanitary drainage system, storm drainage, compression joints, types of pipes, pipe fitting layout, piping installation, schematic wet column, ferrous metal pipes, piping supports, thermal expansion, hot water piping expansion loop, gate valve, globe valve, check valve, ball valve, plumbing fixture usage, basin sink installation, plumbing fitting diagram, plumbing pumping symbols, piping single line drawing, piping installation system, water circulation systems, piping layout for lot, roof drainage.

CE 112 Engineering Mechanics

- Hydraulic jack, stress/ strain , strength of materials, Hooke's law, stress due to thermal expansion, pressure vessel, rivet joints, bending of beams
- Vector, vector diagram, jig gear, reciprocating engine mechanism, framed structures, non coplanar forces, velocity acceleration , projectile, relative velocity, mass acceleration force, work/ power/ energy/ centripetal

acceleration

- Stress in beams, tension, hydraulics

CE 113 Structure 1

- Strength of materials, elongation, stress/ strain problems, impact stress.
- Mechanical properties of materials, stress, compound bars, torsion, moment of resistance, bending moment and shear force.

CE 114 Structure 2

- Members subject to bending, section moment capacity, member capacity of segments with full lateral restraint, design of webs, shear capacity of webs, interaction of shear and bending
- Design of intermediate transverse web stiffeners
- Members subject to axial compression
- Members subject to axial tension
- Members subject to combined actions.
- Fabrication, erection

Study sequence of structure

CE 113 Structure 1

CE 112 Engineering Mechanics

CE 114 Structure 2

CE 115 Estimating & Specification

- Principle of specification & estimation
- Overheads
- Profit
- Labour cost
- Preliminaries
- Labour constant
- Material motor transport
- Mechanical plant
- Excavator
- Earth work
- Brick work
- Roofing
- Carpentry
- Joinery
- Plumbing installation
- Electrical installation
- Plaster work
- Glazing
- Painting decoration
- Drainage
- Pro-rata rate
- Incentive scheme

CE 111A Road & Bridge

Bridge

Types of bridges, truss, cantilever bridge, arch bridge, suspension bridge, double deck bridge, iron brick bridge, iron brick bridge maintenance

Railways

- Alignment , centrifugal force, track

Road

Technical design, alignment, structural design, road pavement , road alignment, intersection points, final centre design work, technical assessment, final choice, time management plan, construction sequence, daily work planning, gang balancing, work control, site camping, hand tools, maintenance, storage, setting out traveller, earth work, embankment, earth work calculation, drainage, road surface drainage, erosion control, cut off drain, site location, work procedures.

ME 102 Engineering Thermodynamics

-Thermodynamic system, thermodynamic properties, quality of the working substances, thermodynamic processes, ideal gas, gas equation during a change of state, thermodynamic process for gas, vanderwaal gas equation, entropy, properties of steam, thermodynamic of working fluids
 -Gas problems, method of expansion/compression, first law of thermodynamics, throttling valve, second law of thermodynamics, third law of thermodynamics

ME 334 Air-conditioning & Refrigeration

- Refrigerant piping, evaporator, compressor, condenser, compressor-condenser circuit, tools
- Air-conditioning equipment, tubing, joining refrigeration piping
- Nitrogen circuit, system charging, electrical test instruments, control equipments, thermostat, compressor
- Control circuit equipment assembly, dual fuel furnace, humidification, comfort, ventilation duct, plenum system.
- Ventilation installation, ventilation fixtures, evaporator outlet temperature, assembly of units, capillary tube, installation of indoor / outdoor units.

EE308	Sustainability
-------	----------------

This unit covers developing strategies to address environmental and sustainability issues in the energy sector. It encompasses working safely, apply extensive knowledge of sustainable energy systems and components and their operating parameters, gathering and analysing data, applying problem solving techniques, developing and documenting alternatives solutions

KS01-EK132A Environmental and Sustainability strategies

Evidence shall show an understanding of greenhouse reduction strategies to an extent indicated by the following aspects:

T1 Principles of sustainability encompassing:

- ☐ ways in which ecosystems moderate climate. ways in which ecosystems purify and store water.
- ☐ ways in which ecosystems recycle waste.

T2 Problems in a sustainable world encompassing:

- ☐ changes to Australian forest cover since white settlement, and the resulting loss of ecosystem and human benefits.
- ☐ changes to Australia's soils since white settlement, and the resulting loss of ecosystem and human benefits.
- ☐ changes to Australia's waterways since white settlement, and the resulting loss of ecosystem and human benefits.
- ☐ place of environmental accounting in quantifying Australia's environmental losses.
- ☐ limits to Australia's population carrying capacity.

T3 Sustainability principles encompassing:

- ☐ principles within sustainability including: environmental accounting and economics; full cost pricing; triple bottom line ethic; ecologically sustainable development; greenhouse gas abatement; energy efficiency; resource and water use efficiency; life cycle costing; renewable energy substitution, cleaner production; waste minimisation, reuse and recycling; ecological footprint.

T4 Addressing the problem of global warming encompassing:

- ☐ greenhouse gases and their sources and quantities that contribute to global warming.
- ☐ global warming impacts for Australia for 2030 and 2070 predicted by CSIRO modelling.
- ☐ requirements to achieve stable atmospheric concentrations of greenhouse gases.
- ☐ ecologically and economically sustainable methods for achieving these stable concentrations.

T5 Greenhouse gas emissions profile encompassing:

- ☐ goals and principles of the National Greenhouse Strategy
- ☐ what a greenhouse gas inventory is, why it is required, and the sectors to which it applies
- ☐ uses to which the National Greenhouse Gas Inventory can be applied.

T6 Understanding and communicating climate change and its impacts encompassing:

- ☐ the possible impact of climate change in Australia.
- ☐ techniques for improving the understanding of climate change
- ☐ techniques for communicating to and educating the general

public on greenhouse gas induced climate change.

T7 Partnerships for greenhouse action encompassing:

- ☐ actions achievable by each level of government to implement the NGS.
- ☐ methods by which the community activity can be engaged in the reduction of greenhouse gas emissions.
- ☐ initiatives that can be undertaken by the private sector to reduce greenhouse gas emissions.
- ☐ advantages of international partnerships.
- ☐ emissions trading system.

T8 Efficient and sustainable energy use and supply encompassing:

- ☐ techniques for reducing the greenhouse intensity of energy supply.
- ☐ types of renewable energy sources suitable for use in Australia.
- ☐ methods and technique for improving end-use efficiency.

T9 Efficient transport and sustainable urban planning encompassing:

- ☐ how integrating land use and transport planning can assist the greenhouse problem.
- ☐ how each of the following can be used to mitigate greenhouse gas; travel demand and traffic management strategies; encouraging greater use of public transport, walking and cycling; freight and logistics systems; improving vehicle fuel efficiency and fuel technologies;

T10 Greenhouse sinks and sustainable land management encompassing:

- ☐ how enhancing greenhouse sinks and encouraging sustainable forestry and vegetation management can complement the AGS.
- ☐ how greenhouse gas emissions are obtained from agricultural production and describe techniques to mitigate the emissions.

T11 Models of greenhouse best practice in industrial processes and waste management encompassing:

- ☐ types and methods of reducing greenhouse gas emissions from industry.
- ☐ methods of reducing methane emissions from waste treatment and disposal.

T12 Adaptation to climate change encompassing:

- ☐ salient points in each of the key sectors that require analysis and the strategies required in the need for adaptation to climate change

Maths 101	Engineering Mathematics (EE201)
-----------	---------------------------------

This unit covers the application of computational processes to solve engineering problems. It encompasses working safely, applying problem solving techniques, using a range of mathematical processes, providing solutions to electrical/electronics engineering problems and justifying such solutions.

Note. Typical engineering problems are those encountered in meeting requirements in a design brief, meeting performance requirements and compliance standards, revising systems operating parameters and dealing with system malfunctions

KS01-EE126A Electrotechnology engineering maths

Evidence shall show an understanding of electrotechnology engineering maths to an extent indicated by the following aspects:

T1 Rational, irrational numbers and basic algebra

- ☐ simplification of expressions involving square roots and cube roots
- ☐ scientific and engineering notation
- ☐ evaluation of expressions using a calculator
- ☐ convert units of physical quantities using unity brackets
- ☐ substitute given values into formulae to find physical quantities
- ☐ manipulate algebraic expressions using mathematical operations in their correct order, the laws of indices, expansion of brackets and collecting like terms

T2 Algebraic manipulation

- ☐ Factorise algebraic expressions using common factors
- ☐ Factorise quadratic expressions using trial and error on the factors of the coefficients
- ☐ Simplify algebraic fractions using common denominators and cancelling
- ☐ Solve simple one variable equations including algebraic fractions
- ☐ Find the quotient and remainder given a linear divisor.
- ☐ Transpose formulae to find a required variable.

T3 Laws of indices

- ☐ Conversion between decimal notation, scientific notation and engineering notation
- ☐ Laws of indices: positive /negative values, multiplication/division, fractional values, index equals zero
- ☐ Logarithmic laws: multiply/divide
- ☐ solution of exponential equations using logarithms, substitution and solution of relevant formulae involving exponents or logarithms
- ☐ Graphs of exponential functions, 10^x and e^x and the inverses $\log_{10}(x)$ and $\log_e(x)$ functions on log-linear graphs
- ☐ Convert numbers into scientific and engineering notation using the laws of indices
- ☐ Manipulate and simplify arithmetic and algebraic expressions using the laws of indices and logarithms
- ☐ Express logarithms as indices.
- ☐ Perform logarithmic operations.

- Determine logarithms and antilogarithms to base 10, using a scientific calculator.
- Determine logarithms and antilogarithms to base e, using a scientific calculator.
- Convert logarithmic values from base 10 to base e and vice versa.
- Sketch given functions on log-linear graphs

T4 Estimations, errors and approximations

- Errors in measurement
- Maximum probable error
- Show awareness of errors in measurement and of giving results in appropriate number of significant figures
- Use estimations and approximations to check the reasonableness of results.

T5 Plane figures – triangles and basic trigonometry

- Angles in a triangle
- Isosceles and equilateral triangles
- Congruent triangles
- Similar triangles
- Pythagoras' theorem
- Area of triangles
- Basic trigonometry functions
- Degrees, radians
- The ratios: sin, cos, tan, cosec, sec, cot.
- Inverse trig functions
- Sine and cosine rules

T6 Plane figures - quadrilaterals and circles

- Types and properties of quadrilaterals
- Areas and perimeters of regular quadrilaterals
- Lengths of arcs
- Angles in a circle - degrees
- Angles in a circle - radians
- Lengths of chord segments
- Tangents to circles
- Circumference and area of circles
- Names and characteristics of common polygons

T7 Graphs of Trigonometric functions

- Graph trigonometric functions and solve trigonometric equations.
- Simplify trigonometric expressions using trigonometric identities
- Convert angular measure in degrees to radians and vice versa
- Graph trigonometric functions including graphs of $y = \sin x$ and $y = \cos x$
- Using vocational applications of current or voltage as a function of time, consider changes in amplitude, consider changes in frequency.
- Examine relationships of frequency, period and angular velocity.
- Sketch graphs of the form $f(t) = a \sin \phi t$ and $f(t) = a \cos \phi t$, where a is the peak voltage or current, and ϕ is the angular velocity
- Solve graphically equations of the form $f(t) = a \sin \phi t$ and $f(t) = a \cos \phi t$

T8 Graphs of linear functions

- The number plane
- Gradient and x and y intercepts of a straight line
- Equation of a straight line length and mid-point of a straight line segment
- Function notation

T9 Simultaneous equations

- Graphical solutions
- Substitution
- Elimination
- Solve 2 linear simultaneous equations both algebraically and graphically.

T10 Matrices

- Perform the basic operations on matrices up to 3×3
- Manipulate matrix equations and expressions
- Recognise inverse and identity matrices up to 3×3 and use to solve systems of linear equations.
- Find determinants up to 3×3 and use to solve systems of linear equations.
- Solve problems involving more than two simultaneous equations.
- State the limitations of graphical methods of solution.
- Distinguish between a matrix and an array.
- Describe the null, diagonal and unit matrix
- Describe and identify a singular/non-singular matrix

T11 Quadratic functions

- Graphs of quadratic functions represented by parabolas and the significance of the leading coefficient.
- Graph quadratic functions and solve quadratic equations.
- Sketch and interpret the graphs of quadratic functions showing the significance of the leading coefficient and the zeros
- Solve quadratic equations by factoring or using quadratic formula
- Solve simultaneously linear and quadratic equations algebraically and geometrically
- Interpret verbally formulated problems involving quadratic and linear equations and solve.

T12 Exponential and logarithmic functions

- Transform non-linear functions (including exponential) to linear forms and plot data.
- Draw curves of best fit, interpolate data and estimate constants in suggested relationships.

□ Graph exponential and logarithmic functions and solve exponential and logarithmic equations.

- Sketch the graphs of simple exponential and logarithmic functions showing behaviour for large and small values

T13 Vectors and Phasors

- The vector as an expression of magnitude and direction
- The vector sum of x and y values in terms of magnitude and direction
- Rectangular components of vectors in the form $x = r \cos \theta$ and $y = r \sin \theta$
- Rectangular-polar and polar-rectangular conversion
- Vector addition and subtraction
- Express rectangular components of vectors in the form $x = r \cos \theta$ and $y = r \sin \theta$

T14 Complex numbers

- Definitions and notation of complex numbers
- Complex numbers as vectors on an Argand diagram
- laws of complex numbers and apply the laws in suitable calculations.
- Plot complex numbers on the Argand plane.
- Express vectors as complex numbers and perform suitable calculations.
- Calculate the conjugate of a complex number.
- Using a calculator for rectangular-polar and polar-rectangular conversions.

ME 106	Electrical Circuits
--------	---------------------

This unit covers determining correct operation of single source d.c. series, parallel and series-parallel circuits and providing solutions as they apply to various electrotechnology work functions. It encompasses working safely, problem solving procedures, including the use of voltage, current and resistance measuring devices, providing solutions derived from measurements and calculations to predictable problems in single and multiple path circuits.

Evidence shall show an understanding of electrical fundamentals and direct current multiple path circuits to an extent indicated by the following aspects:

T1 Basic electrical concepts encompassing:

- ☐ electrotechnology industry
- ☐ static and current electricity
- ☐ production of electricity by renewable and non renewable energy sources
- ☐ transportation of electricity from the source to the load via the transmission and distribution systems
- ☐ utilisation of electricity by the various loads
- ☐ basic calculations involving quantity of electricity, velocity and speed with relationship to the generation and transportation of electricity.

T2 Basic electrical circuit encompassing:

- ☐ symbols used to represent an electrical energy source, a load, a switch and a circuit protection device in a circuit diagram
- ☐ purpose of each component in the circuit
- ☐ effects of an open-circuit, a closed-circuit and a short-circuit
- ☐ multiple and sub-multiple units

T3 Ohm's Law encompassing:

- ☐ basic d.c. single path circuit.
- ☐ voltage and currents levels in a basic d.c. single path circuit.
- ☐ effects of an open-circuit, a closed-circuit and a short-circuit on a basic d.c. single path
- ☐ relationship between voltage and current from measured values in a simple circuit
- ☐ determining voltage, current and resistance in a circuit given any two of these quantities
- ☐ graphical relationships of voltage, current and resistance
- ☐ relationship between voltage, current and resistance

T4 Electrical power encompassing:

- ☐ relationship between force, power, work and energy
- ☐ power dissipated in circuit from voltage, current and resistance values
- ☐ power ratings of devices
- ☐ measurement electrical power in a d.c. circuit
- ☐ effects of power rating of various resistors

T5 Effects of electrical current encompassing:

- ☐ physiological effects of current and the fundamental principles (listed in AS/NZS 3000) for protection against the this effect
- ☐ basic principles by which electric current can result in the production of heat; the production of magnetic fields; a chemical reaction
- ☐ typical uses of the effects of current
- ☐ mechanisms by which metals corrode
- ☐ fundamental principles (listed in AS/NZS3000) for protection against the damaging effects of current

T6 EMF sources energy sources and conversion electrical energy encompassing:

- ☐ basic principles of producing a emf from the interaction of a moving conductor in a magnetic field.
- ☐ basic principles of producing an emf from the heating of one junction of a thermocouple.
- ☐ basic principles of producing a emf by the application of sun light falling on the surface of photovoltaic cells
- ☐ basic principles of generating a emf when a mechanical force is applied to a crystal (piezo electric effect)
- ☐ principles of producing a electrical current from primary, secondary and fuel cells

- input, output, efficiency or losses of electrical systems and machines
- effect of losses in electrical wiring and machines
- principle of conservation of energy

T7 Resistors encompassing:

- features of fixed and variable resistor types and typical applications
- identification of fixed and variable resistors
- various types of fixed resistors used in the Electro technology Industry. e.g. wire-wound, carbon film, tapped resistors.
- various types of variable resistors used in the Electro technology Industry e.g. adjustable resistors: potentiometer and rheostat; light dependent resistor (LDR); voltage dependent resistor (VDR) and temperature dependent resistor (NTC, PTC).
- characteristics of temperature, voltage and light dependent resistors and typical applications of each power ratings of a resistor.
- power loss (heat) occurring in a conductor.
- resistance of a colour coded resistor from colour code tables and confirm the value by measurement.
- measurement of resistance of a range of variable' resistors under varying conditions of light, voltage, temperature conditions.
- specifying a resistor for a particular application.

T8 Series circuits encompassing:

- circuit diagram of a single-source d.c. 'series' circuit.
- Identification of the major components of a 'series' circuit: power supply; loads; connecting leads and switch
- applications where 'series' circuits are used in the Electro technology industry.
- characteristics of a 'series' circuit - connection of loads, current path, voltage drops, power dissipation and affects of an open circuit in a 'series' circuit.
- the voltage, current, resistances or power dissipated from measured or given values of any two of these quantities
- relationship between voltage drops and resistance in a simple voltage divider network.
- setting up and connecting a single-source series dc circuit
- measurement of resistance, voltage and current values in a single source series circuit
- effect of an open-circuit on a series connected circuit

T9 Parallel circuits encompassing:

- schematic diagram of a single-source d.c. 'parallel' circuit.
- major components of a 'parallel' circuit (power supply, loads, connecting leads and applications where 'parallel' circuits are used in the Electrotechnology industry.
- characteristics of a 'parallel' circuit. (load connection, current paths, voltage drops, power dissipation, affects of an open circuit in a 'parallel' circuit).
- relationship between currents entering a junction and currents leaving a junction
- relationship between branch currents and resistances in a two branch current divider network.
- calculation of the total resistance of a 'parallel' circuit.
- calculation of the total current of a 'parallel' circuit.
- Calculation of the total voltage and the individual voltage drops of a 'parallel' circuit.
- setting up and connecting a single-source d.c. parallel circuit
- resistance, voltage and current measurements in a single-source parallel circuit
- voltage, current, resistance or power dissipated from measured values of any of these quantities
- output current and voltage levels of connecting cells in parallel.

T10 Series/parallel circuits encompassing:

- schematic diagram of a single-source d.c. 'series/parallel' circuit.
- major components of a 'series/parallel' circuit (power supply, loads, connecting leads and

switch)

- applications where 'series/parallel' circuits are used in the Electrotechnology industry.
- characteristics of a 'series/parallel' circuit. (load connection, current paths, voltage drops, power dissipation, affects of an open circuit in a 'series/parallel' circuit).
- relationship between voltages, currents and resistances in a bridge network.
- calculation of the total resistance of a 'series/parallel' circuit.
- calculation of the total current of a 'series/parallel' circuit.
- calculation of the total voltage and the individual voltage drops of a 'series/parallel' circuit.
- setting up and connecting a single-source d.c. series/ parallel circuit
- resistance, voltage and current measurements in a single-source d.c. series / parallel circuit
- the voltage, current, resistances or power dissipated from measured values of any two of these quantities

T11 Factors affecting resistance encompassing:

- four factors that affect the resistance of a conductor (type of material, length, cross-sectional area and temperature)
- affect the change in the type of material (resistivity) has on the resistance of a conductor.
- affect the change in 'length' has on the resistance of a conductor.
- affect the change in 'cross-sectional area' has on the resistance of a conductor.

[illegible]

- effects of resistance on the current-carrying capacity and voltage drop in cables.
- calculation of the resistance of a conductor from factors such as conductor length, cross-sectional area, resistivity and changes in temperature
- using digital and analogue ohmmeter to measure the change in resistance of different types of conductive materials (copper, aluminium, nichrome, tungsten) when those materials undergo a change in type of material length, cross-sectional area and temperature.

T12 Effects of meters in a circuit encompassing:

- selecting an appropriate meter in terms of units to be measured, range, loading effect and accuracy for a given application.
- measuring resistance using direct, volt-ammeter and bridge methods.
- instruments used in the field to measure voltage, current, resistance and insulation resistance and the typical circumstances in which they are used.
- hazards involved in using electrical instruments and the safety control measures that should be taken.
- operating characteristics of analogue and digital meters.
- correct techniques to read the scale of an analogue meters and how to reduce the 'parallax' error.
- types of voltmeters used in the Electrotechnology industry - bench type, clamp meter, Multimeter, etc.
- purpose and characteristics (internal resistance, range, loading effect and accuracy) of a voltmeter.
- types of voltage indicator testers. e.g. LED, neon, solenoid, volt-stick, series tester, etc. and explain the purpose of each voltage indicator tester.
- operation of various voltage indicator testers.
- advantages and disadvantages of each voltage indicator tester.
- various types of ammeters used in the Electrotechnology industry - bench, clamp meter, multimeter, etc.
- purpose of an ammeter and the correct connection (series) of an ammeter into a circuit.
- reasons why the internal resistance of an ammeter must be extremely low and the dangers and consequences of connecting an ammeter in parallel and/or wrong polarity.
- selecting an appropriate meter in terms of units to be measured, range, loading effect

and accuracy for a given application

- connecting an analogue/digital voltmeter into a circuit ensuring the polarities are correct and take various voltage readings.
- loading effect of various voltmeters when measuring voltage across various loads.
- using voltage indicator testers to detect the presence of various voltage levels.
- connecting analogue/digital ammeter into a circuit ensuring the polarities are correct and take various current readings.

T13 Resistance measurement encompassing:

- Identification of instruments used in the field to measure resistance (including insulation resistance) and the typical circumstances in which they are used.
- the purpose of an Insulation Resistance (IR) Tester.
- the parts and functions of various analogue and digital IR Tester (selector range switch, zero ohms adjustment, battery check function, scale and connecting leads).
- reasons why the supply must be isolated prior to using the IR tester.
- where and why the continuity test would be used in an electrical installation.
- where and why the insulation resistance test would be used in an electrical installation.
- the voltage ranges of an IR tester and where each range may be used. e.g. 250 V d.c, 500 V d.c and 1000 V d.c
- AS/NZS3000 Wiring Rules requirements – continuity test and insulation resistance (IR) test.
- purpose of regular IR tester calibration.
- the correct methods of storing the IR tester after use
- carry out a calibration check on a IR Tester
- measurement of low values of resistance using an IR tester continuity functions.
- measurement of high values of resistance using an IR tester insulation resistance function.
- volt-ammeter (short shunt and long shunt) methods of measuring resistance.
- calculation of resistance values using voltmeter and ammeter reading (long and short shunt connections)
- measurement of resistance using volt-ammeter methods

T14 Capacitors and Capacitance encompassing:

- basic construction of standard capacitor, highlighting the: plates, dielectric and connecting leads
- different types of dielectric material and each dielectric's relative permittivity.
- identification of various types of capacitors commonly used in the Electrotechnology industry (fixed value capacitors -stacked plate, rolled, electrolytic, ceramic, mica and Variable value capacitors – tuning and trimmer)
- circuit symbol of various types of capacitors: standard; variable, trimmer and polarised
- terms: Capacitance (C), Electric charge (Q) and Energy (W)
- unit of: Capacitance (Farad), Electric charge (Coulomb) and Energy (Joule)
- factors affecting capacitance (the effective area of the plates, the distance between the plates and the type of dielectric) and explain how these factors are present in all circuits to some extent.
- how a capacitor is charged in a d.c. circuit.
- behaviour of a series d.c. circuit containing resistance and capacitance components. - charge and discharge curves

the term 'Time Constant' and its relationship to the charging and discharging of a capacitor.

- calculation of quantities from given information: Capacitance ($Q = VC$); Energy ($W = \frac{1}{2}CV^2$); Voltage ($V = Q/C$)
- calculation one time constant as well as the time taken to fully charge and discharge a given capacitor. ($\tau = RC$)
- connection of a series d.c. circuit containing capacitance and resistor to determine the time constant of the circuit

T15 Capacitors in Series and Parallel encompassing:

- hazards involved in working with capacitance effects and the safety control measures that should be taken.
- safe handling and the correct methods of discharging various size capacitors
- dangers of a charged capacitor and the consequences of discharging a capacitor through a person
- factors which determine the capacitance of a capacitor and explain how these factors are present in all circuits to some extent.
- effects of capacitors connected in parallel by calculating their equivalent capacitance.

This unit covers the law of physics and how they apply to solving electrotechnology related problems. It encompasses working safely, knowledge of measurements of physical phenomena, linear and angular motion, harmonic motion, wave theory, optics, acoustics and heat capacity and transfer, use of measurement techniques, solving physics related problems and documenting justification for such solutions.

ME 103	Engineering Mechanics (EE204)
--------	-------------------------------

KS01-EE082A Electrotechnology engineering physics

Evidence shall show an understanding of electro engineering physics to an extent indicated by the following aspects:

T1 Measurement encompassing

- SI units in measurement of physical phenomena
- Uncertainty and tolerance

T2 Linear motion

T3 Angular motion

T4 Simple harmonic motion and vibration

T5 Wave theory

- Interference

- Diffraction

T6 Electromagnetic waves and propagation

T7 Optics

- Mirrors and lenses

- Optical fibre

T8 Acoustics and ultrasonics

T9 Heat capacity and heat transfer

- Fluid power

EE 617 Building Electrical and Mechanical System Part 1 (EE309)

This unit covers evaluating energy used in buildings and developing and documenting strategies/methods to effectively reduce energy use without compromising occupancy standards. It encompasses working safely, setting up and conducting evaluation measurements and evaluating energy use from measured parameters.

T1 Climate and thermal comfort encompassing:

- characteristics of the different Australian climatic types.
- use of climatic data in published and electronic forms to extract the quantities relevant to energy efficient design.
- relationship between climate and comfort using bioclimatic or psychrometric charts.
- calculation of heating or cooling degree days or degree hours for various locations.
- calculation of thermal neutrality for a given location.

T2 Solar geometry and radiation encompassing:

- definition of the terms: declination, hour angle, zenith angle, azimuth and altitude angles, the equation of time.
- conversion of solar time to local time and vice versa.
- position of the sun and the length of shadows with the aid of algorithms, tables, sun charts or computer software.
- daily irradiation incident on a wall, window or roof of a given tilt and orientation.
- relative summer and winter irradiation of windows facing the cardinal orientations.

T3 Heat transfer encompassing:

- thermal processes of conduction, convection and radiation apply to the transfer of heat in buildings.
- calculation of the summer and winter U-values of building elements using tables and software.
- calculation of the infiltration heat transfer in a building.

T4 Glazing Systems encompassing:

- different types of glazing systems and their characteristics.
- different types of shading devices and the window orientations for which they are most appropriate.
- solar heat gain for different glazing types and angles of incidence
- calculation of the average daily irradiation of a window partly shaded by eaves, using computer software.
- calculation of the average daily heat gain through a window partly shaded by eaves.

T5 Insulation encompassing:

- different types of insulation and where they are used.
- how different types of insulation are installed in roofs, walls and floors

•
□ determination of the minimum R-values of roof insulation for different locations using Australian Standard AS2627 or similar standards.

T6 Thermal mass encompassing:

□ advantages and disadvantages of using substantial thermal mass in different climate types and for different heating and cooling regimes.

□ where thermal mass can be located in a building.

□ explain what is meant by the following terms: time lag, decrement factor, admittance, response factor.

T7 Comfort control strategies encompassing:

□ interpretation of the usefulness of a design strategy with the aid of a psychrometric chart showing control potential zones for a particular location.

□ selection of the most useful comfort control strategies for Australian climatic regions.

T8 Energy efficiency in buildings encompassing:

□ determination of the direction of the following: both true and magnetic, north winter and summer sunrise, winter and summer sunset.

□ solar access in summer and winter to various possible house locations on a site and room locations within the house.

□ how vegetation can be used to both funnel and deflect wind.

□ using cross ventilation as a cooling strategy.

T9 Thermal performance of a building encompassing:

□ heating requirements of a building using the heating degree day or hour method.

□ dynamic performance predicted by a computer simulation program such as NatHERS or BERS.

T10 Integration of active solar systems encompassing:

- active solar system types available which can provide hot water, space heating and cooling.
- the best location on the roof, and the optimum tilt and orientation of the collector panels.
- function of the main components of an air or water-based solar space heating system.
- schematic of the fluid circuit of an air or water-based space heating system.
- main solar cooling system types.

T11 Energy rating schemes encompassing:

- differences in approach used by house energy rating schemes in Australia.
- energy performance of a number of houses using a computer simulation program such as NatHERS or BERS.
- other methods to reduce energy consumption within and outside a building including appliance efficiency, human behaviour changes, building management strategies and transportation minimisation.
- additional cost of energy efficiency measures and cost savings using life cycle cost or simple pay back methods according to Aust. Standard AS3595 and AS4536.

T12 Sustainable and safe building materials encompassing:

This unit covers building materials and mounting techniques as apply in the various embodied energy content. It encompasses the safe use of hand and portable power tools, safe mounting techniques, safe use of ladders and elevated platforms and the selection and safe application of fixing devices and supporting accessories/equipment.

- problems associated with the use or disposal of building materials.

ME 105	Electrical Principle (EE102)
--------	------------------------------

KS01-EE105A Fixing and support devices/techniques

Evidence shall show an understanding of accessories and support and fixing device and methods and their use to an extent indicated by the following aspects:

T1. Device for securing and mounting electrical/electronic/instrumentation/refrigeration/ air-conditioning/telecommunications accessories for supporting, fixing and protecting wiring/cabling/piping and functional accessories to hollow walls encompassing:

- types and safe application of devices for hollow wall fixing and support
- methods/techniques used to fix/support to wood, hollow wall, masonry blocks, plasterboard, panelling
- types and safe application of fixing devices used in the electrotechnology industry for wood and hollow wall structures (wood screws, coach bolts, self-tappers, self drilling, metal thread, hollow wall anchors, behind plaster brackets, stud brackets, plasterboard devices, toggle devices)
- types of tools used for hollow wall fixing and supporting.

□ using various fixing methods to fix/support to hollow walls.

T2. Device for securing and mounting electrical/electronic/instrumentation/refrigeration/ air-conditioning/telecommunications accessories for supporting, fixing and protecting wiring/cabling/piping and functional accessories to solid walls encompassing:

- types and safe application of devices used for solid wall fixing and support
- methods/techniques used in to fix to masonry and concrete structures
- fixing devices used in the electrotechnology industry for solid wall structures (wall-plugs, expanding concrete fixing devices, gas powered fixing tools, powder actuated fixing tools, loxins, dynabolts, chemical devices)
- regulatory requirements for use of powder fixing tools.
- hand and power tools used in fixing and supporting accessories
- using various fixing methods to fix/support to solid walls

T3. Device for securing and mounting electrical/electronic/instrumentation/refrigeration/ air-conditioning/telecommunications accessories for supporting, fixing and protecting wiring/cabling/piping and functional accessories to metal fixing encompassing:

- accessories that may be fixed to metal (saddle clips, conduits, brackets, switches)
- techniques for fixing to metal
- fixing devices: coach bolts, self-tappers, metal thread bolts, hollow wall anchors, rivets
- fixing tools - spanners, screwdrivers, power screw drivers, pop riveters, files, reamers
- OH&S issues related to drilling, cutting, eye protection, metal filings, swarf, noise
- Using power drills, drill bits, change drill speeds.
- Install a fixing device and accessory capable of supporting up to 20 kg on the metal plate.

T4. Securing and mounting electrical/electronic/instrumentation/refrigeration/ air-conditioning/telecommunications accessories for supporting, fixing and protecting wiring/cabling/piping and functional accessories using fixing adhesives and tapes encompassing:

- types and safe application of using adhesives and tapes as fixing devices (load limits of different commercial products)
- accessories that may be fixed using adhesives and tapes
- techniques for the application of adhesives and tapes
- tools used to apply and cut adhesives and tapes
- hazards and safety measures when working with adhesives and chemical fixing devices (fumes, cutting, eye protection, physical contact, hand protection, ingestion)

This unit covers the application of advanced computational processes to solve energy sector engineering problems. It encompasses working safely, applying problem solving techniques, using a range of advanced mathematical processes, providing solutions to electrical/electronics engineering problems and justifying such solutions.

Note. Typical engineering problems are those encountered in meeting requirements in a design brief, meeting performance requirements and compliance standards, revising systems operating parameters and dealing with system malfunctions

Maths 403 Engineering-Mathematics (EE302)

Maths 302 Elementary-Linear-Algebra (EE302)

Maths 501 Linear Algebra-c-1 (EE302)

KS01-EE127A Advanced Engineering Maths

Evidence shall show an understanding of advanced engineering maths to an extent indicated by the following aspects:

T1 Differential Calculus encompassing:

- basic concepts of differential calculus, limited to definition of the derivative of a function as the slope of a tangent line (the gradient of a curve); limits; basic examples from 1st principles; Notation and Results of derivative of $k.f(ax + b)$ where $f(x)=x$ to the power of n , $\sin x$, $\cos x$, $\tan x$, e to the power of x , $\ln x$.
- rules - derivative of sum and difference; product rule; quotient rule; chain rule (function of a function), limited to two rules for any given function, the 2nd derivative.
- applications - equations of tangents and normals; stationary points; turning points; and curve sketching; rates of change; rectilinear motion
- verbally formulated problems involving related rates and maxima: minima

T2 Integral Calculus encompassing:

- integration as the inverse operation to differentiation - results of the integral of $k.f(ax + b)$ where $f(x) = x$ to the power of n , $\sin x$, $\cos x$, $\sec^2 x$, e to the power of x , method of substitution, the definite integral.
- applications - areas between curves; rectilinear motion including displacement from acceleration and distance travelled; voltage and current relationship in capacitors and inductors and the like.

T3 Linear Algebra encompassing:

- matrices and inverse matrices;
- linear mapping,
- determinants,
- solution of linear equations.

T4 Vectors encompassing:

- geometrical representation,
- addition and scalar multiplication,
- dot and cross products,
- equations of lines and planes.

T5 Variables encompassing:

- graphs, level curves and surfaces
- partial derivatives; chain rule; directional derivative;
- maxima and minima.

T6 Sequences and Series encompassing:

- algebraic and Fourier series, convergence; Taylor's Theorem
- power series manipulation.

T7 Differential Equations encompassing:

- first order and separable linear equations
- second order linear equations.
- partial differential equations.
- numerical Techniques.

T8 Number encompassing:

- integer, irrational and complex numbers.
- number systems.
- arithmetic operations.
- accuracy and stability.

T9 Statistics encompassing:

- assembly, representation and analysis of data.
- fitting distributions to data.
- non-parametric statistics.
- tests of significance for means, variances and extreme values.

□ correlation

Maths 301 Introductory Finite Difference Methods-for-pdes

The residue Theorem

Fourier Transform

Integral theorem of complex analysis with applications to the evaluation of real integral

Integral theorems – The green Theorem

Cauchy's integral theorem

Cauchy's residue theorem

EE624	Process Control System (EE116)
-------	--------------------------------

This unit covers solving problems in industrial control systems. The unit encompasses safe working practices, interpreting process and circuit diagrams, applying knowledge of industry controls to problem solving techniques, safety and functional testing and completing the necessary documentation.

Note.

Typical basic industrial control system problems are those encountered in meeting performance requirements and compliance standards, revising control operating parameters and dealing with control malfunctions.

KS01-EI120A

I n d u s t r i a l control systems

Evidence shall show an understanding of industrial control systems to an extent indicated by the following aspects:

Control amplifiers encompassing:

- Introduction
- Amplifier Operation
- Operational Amplifiers
- Operational Amplifier Configurations

Industrial transducers encompassing:

- Introduction
- SI Units
- Forms of Energy
- Transducer Terminology
- Temperature Measurement
- Force Measurement
- Speed Measurement

SKILLS AND KNOWLEDGE

- Positional Measurement

Industrial final control elements encompassing:

- Introduction
- Electromagnetic Devices
- Valves
- Solid State Switching Devices

Industrial control systems encompassing:

- ☐ Automatic Control
- ☐ Open Loop Control
- ☐ Closed Loop Control
- ☐ Control System Terminology
- ☐ Control System Evaluation
- ☐ Two Position Control
- ☐ Proportional Control (P)
- ☐ Proportional + Integral Control (P+I)
- ☐ Proportional + Derivative Control (P+D)
- ☐ Proportional + Integral + Derivative Control (P+I+D)

Industrial control loops and control signals encompassing:

- ☐ Introduction
- ☐ Control Loops
- ☐ Converters (D to A and A to D)
- ☐ Multiplexing

Mgt 501+ Mgt 503	Basic Management+ (EE309) Production & Operation Management
---------------------	--

Part 1 Project Management

This unit covers the management of large mechanical projects involving design, modifications, installation, and/or maintenance of systems and equipment. The unit encompasses management of safety, budget variation, personnel, resources, critical path timelines and completion documentation.

KS01-EG169A Project management

Evidence shall show an understanding of managing mechanical projects to an extent indicated by the following aspects:

T1 Defining project parameters encompassing:

- ☐ Project scope
- ☐ Project stakeholders and clients
- ☐ Project phases and the relationship between phases

T2 Time management concepts and standard practices

T3 Financial management encompassing:

- ☐ Financial management concepts
- ☐ Standard practices for managing project finances
- ☐ Project budgets
- ☐ Costs
- ☐ variations and estimations
- ☐ Invoicing against project phases/deliverables
- ☐ Acquittals and the like

T4 Quality management concepts and practices

T5 Human Resource management concepts and practices within a project

T6 Communication management concepts and practices within a project

T7 Risk management and contingencies encompassing:

- ☐ Risk management concepts
- ☐ Internal risks
- ☐ External risks
- ☐ Contingencies
- ☐ Standard practices for managing risk within a project

- ☐ Risk minimisation
- ☐ Risk removal; and the like

T8 Procurement management concepts and practices

T9 Physical Resource management concepts and practices relating to equipment, technology, information and facilities

T10 Contracts encompassing:

- ☐ Contract format
- ☐ Contract content
- ☐ Interpreting contract clauses
- ☐ Legal obligations of contract parties
- ☐ Working to contract specifications
- ☐ Documentation accompanying contracts such as schedules and the like

T11 Performance assessment and continuous improvement

T12 Engineering ethics principles

T13 Customer/Client relations encompassing:

Interpersonal skills that enhance customer/client

- ☐ Dispute resolution
- ☐ Customer/client relations strategies

T14 Mechanical industry sector customs and practice encompassing:

- ☐ Equipment procurement, cost/benefit analysis and performance testing
- ☐ Typical approaches to planning and management
- ☐ Successful planning techniques
- ☐ Best practice management methods and styles

Part 2 Project Planning

This unit covers development and documentation of large electrical project proposals, milestones and completions. The unit encompasses, establishing budgets, critical path analysis, development of workflow strategies, documenting, presenting and negotiating budgets and timelines.

KS01-EG170A Project planning

Evidence shall show an understanding of planning projects and analyzing progress to an extent indicated by the following aspects:

T1 Project planning encompassing:

T2 Purpose of project planning Evidence shall show an understanding of managing electrical projects to an extent indicated by the following aspects:

T3 Defining project parameters encompassing:

- ☐ Project scope
- ☐ Project stakeholders and clients
- ☐ Project phases and the relationship between phases
- ☐ Time requirements and limitations
- ☐ Resource requirements and limitations
- ☐ Quality requirements and limitations

T4 Time management concepts and standard practices

T5 Financial management encompassing:

- ☐ Invoicing against project phases/deliverables
- ☐ Acquittals and the like

T6 Quality management concepts and practices

T7 Human Resource management concepts and practices within a project

T8 Communication management concepts and practices within a project

T9 Risk management and contingencies encompassing:

- ☐ Risk management concepts
- ☐ Internal risks
- ☐ External risks
- ☐ Contingencies
- ☐ Standard practices for managing risk within a project
- ☐ Risk minimisation
- ☐ Risk removal; and the like

T10 Procurement management concepts and practices

T11 Physical Resource management concepts and practices relating to equipment, technology, information and facilities

T12 Contracts encompassing:

- ☐ Contract format
- ☐ Contract content
- ☐ Interpreting contract clauses
- ☐ Legal obligations of contract parties
- ☐ Working to contract specifications
- ☐ Documentation accompanying contracts such as schedules and the like

T13 Performance assessment and continuous improvement

T14 Engineering ethics principles

T15 Customer/Client relations encompassing:

- ☐ Importance of customer/client relations
- ☐ Interpersonal skills that enhance customer/client
- ☐ Dispute resolution
- ☐ Customer/client relations strategies

T16 Mechanical industry sector customs and practice encompassing:

- ☐ Equipment procurement, cost/benefit analysis and performance testing

REQUIRED SKILLS AND KNOWLEDGE

- ☐ Typical approaches to planning and management
- ☐ Successful planning techniques
- ☐ Best practice management methods and styles
- ☐ Documents needed to plan a project
- ☐ Factors influencing sequence and restraints of project activities
- ☐ Critical path analysis covering graphical representation methods and methods of representing time/rates

T17 Critical path and project analysis encompassing:

- ☐ Purpose of critical path analysis
- ☐ Essential data
- ☐ Relational sequence of work activities
- ☐ Graphical representation methods
- ☐ Methods of representing time/rates
- ☐ Monitoring methods

T18 Mechanical industry sector customs and practice encompassing:

- Equipment procurement, cost/benefit analysis and performance testing
- Typical approaches to planning and management
- Successful planning techniques
- Best practice management methods and styles

Mgt 505 Quality Management and Manufacturing Engineering

What Is Quality? Customer's Perspective, Dimensions of Quality: Manufactured Products, Dimensions of Quality:

Services, What Is Quality: Producer's Perspective, Meaning of Quality, Deming Wheel: PDCA Cycle, Quality

Tools, Flow Chart, Cause-and-Effect Diagram, Cause-and-Effect Matrix, Check Sheets and Histograms, Pareto

Analysis, TQM and QMS, Focus of Quality Management— Customers, Quality Management in the Supply Chain, Measuring Customer Satisfaction, Role of Employees in Quality Improvement, Quality Circles, Process (Quality)

Improvement Teams, Quality in Services, Quality Attributes in Services, Breakthrough Strategy: DMAIC,

Profitability, Cost of Quality, Prevention Costs, Appraisal Costs, Internal Failure Costs, External Failure Costs, Measuring and Reporting Quality Costs, Cost of Quality, Quality-Cost Relationship, Effect of Quality Management on

Productivity, Measuring Product Yield and Productivity, Computing Product Cost per Unit, Computing Product Yield

for Multistage Processes, Initial Batch Size For 100 Motors, Quality Productivity Ratio, ISO 9000, ISO 9000 Certification, Implications, and Registrars

ME 101 Applied Mathematics

-Constant acceleration, laws of motion, motion with constant acceleration, velocity-time graph, two dimensional motion, newton laws of motion, equilibrium, components of force, lever, fractional force,

-Centre of gravity, conservation of momentum, energy power, circular motion, motion in vertical circle.

ME 102 Engineering Thermodynamics

-Thermodynamic system, thermodynamic properties, quality of the working substances, thermodynamic processes, ideal gas, gas equation during a change of state, thermodynamic process for gas, vanderwaal gas equation, entropy, properties of steam, thermodynamic of working fluids

-Gas problems, method of expansion/compression, first law of thermodynamics, throttling valve, second law of thermodynamics, third law of thermodynamics

ME 104 Machine Principle

Driving machine, transmission machine, driven machines, rotating machines, machine mountings, principle of balancing, static balancing, dynamic balancing, selection of lubricants, methods of application of lubricants, properties of lubricants, bearings, copper lead alloy, rolling element bearing, linear bearing, fretting, V-belt drives, belt tension adjustment, chain drives, gear drives, shaft coupling types, clutches, method of alignment, O-rings, machine condition monitoring methods, safety gears.

ME 107 Heat Transfer

Principle of internal combustion engine, heat transfer in engine, cylinder heat flux and temperature, heat transfer equation in engine, boiling of coolant, exhaust valve, engine stroke, fuel combustion, products of combustion, ignition circuit, fuel supply lines in engine, fuel pumps, fuel injectors, fuel injection pump, fuel injection timing, fuel governor, governor control system.

ME 201 Introduction to fluid mechanics

- Nature of fluids, fluid as continuum, properties of fluids, viscosity, surface tension, compressibility, fluid statistics, pressure, pressure variation in static fluid, pressure & heat, moment of pressure.
- U tube manometer, buoyancy, basics of fluid flow, velocity field, types of flows, steady flow, unsteady flow, laminar flow, Bernoulli equation, application of Bernoulli equation.
- Discharge coefficients of nozzle, venturimeter, orifice meter, flow nozzle, pitot tube, flow control throttling, varying pump speeds.

ME 202 Introduction to Aerodynamics

- Definition and approaches of aerodynamics, centre of pressure and aerodynamic centre of air foil, airflow circulation, velocity potential, vortex flow, wind tunnel, finite wing theory, airfoil nomenclature
- Resultant force and moment acting on air foil, fundamental of inviscid compressible flow, one dimensional flow equation, quasi one dimensional flow, nozzle and diffuser flow,.
- Fundamental of viscous flow, wind tunnel, a few basic experiments.

ME 203 Control Engineering

ME 304 Non Linearity in Control System

- Feedback control structure, Laplace transform and transfer functions, state-space representation, interconnecting models in MATLAB, single pole transfer functions.
- Step response, two complex poles, effect of a zero, 3 pole transfer function, frequency response and their plotting, Bode diagram.
- Basic concept of feedback control, the closed loops, stability, steady state error, step response, stability.

ME 204 Engineering Fluid Mechanics

ME 301 Fluid Dynamics

Fluid particles, Body forces, compressible flow, incompressible flow, turbulent flow, inviscid flow, boundary layer approximation.

ME 205 Manufacturing Processes and Materials

- Non conventional machining processes, tool wear, tool characteristics, methods of monitoring tool wear, pneumatic method, acceptance sampling.
- Cutting test, electro-discharge machining, hard and soft automation, surface properties and applications, bored holes, integrated manufacturing systems, manufacturing machinery configuration.

ME 206 Introduction to turbo-machinery

- Simple turbine, meridional view, one dimension motion, velocity triangles in turbo machinery, simple analysis of wind turbines.
- Force on wind turbine blades, aerofoil operation & testing, wind turbine design, turbine power control, axial flow machines, radial and centrifugal flow machines, hydraulic turbines.
- Common design choices, turbo machine & system efficiency & reaction, dimensionless parameters for turbo

machinery, coefficients for hydraulic turbines, specific speed for turbines, hydraulic turbines, pelton wheel, analysis approach.

ME 207 Chemical Thermodynamics

Free energy diagram, variation of motor gibbs, liquid-liquid equilibrium, phase behaviour, condition for equilibrium, mole fraction of ethanol, temperature vs solid water + solid ethanol properties, liquid phases.

ME 208 Hydro Carbons

- Viscosity , Benzenes as a model compound, organic compounds, acoustic impedance, organic liquid , electrical properties of organic liquids, optical properties of organic liquids, physical properties of crude oil, densities & viscosities of crudes, viscosities of blended crude oils, coefficient of thermal expansion of crude oils.
- Acoustic impedance of crude oil, densities and viscosities, vehicle fuel pump, refinements of RVP. Thermal conductivity, physical properties of kerosenes, viscosity of kerosenes, kerosene as diluent for lubricating oil, diesel fuels, electrical conductivity of diesel fuel, heavy fuel oils, alcohol containing fuels, methanol, methanol-gasoline blends, ethanol-gasoline blends, bio-diesel fuels.

ME 209 Introduction to polymer science/ technology

Materials and process resources, manufacturing, heat shrinkable tubes, compounding mixing, polymer processing tube extrusion, crosslink , electron accelerator, tube expansion , polymers, elastomers, properties of polymers, composition of synthetic polymers, categories of polymers, basic molecule, synthetic polymers, properties of synthetic polymers, amorphous & semi crystalline, phase transition, polymer properties, crosslinking and elastic memory, fillers, additives for polymers, elastomers, overall product performance, test methods & specification, energy materials, anti tracking materials, material test method, tracking & erosion resistance test, mechanism of iron oxide, base polymer tracking resistance, track prone polymer, stress control, electrical switching behaviour.

ME 234 Wind Turbines

- Sitting of wind turbines, planning constraints, theory of wind energy ,conservation of momentum, wind turbine theory.
- Wind energy , environment, conversation energy, rated and actual power output, wind turbine types, components, anemometer.
- Speed measurement, energy & power in wind, software package

ME 305 Corrosion Prevention

Chemical effect on material, examples of corrosion, galvanic corrosion, intrinsic chemistry, coating, corrosion protection methods, polymer tracking resistance, corrosion in passivation materials, types of corrosion, stress corrosion cracking, carbon steels, concentration cell corrosion.

ME 302 Automation Robotics

- Optimization of production line, organization diagram, description of assembly and characteristics features, mechanisation, involvement of conveyor
- Assembly process, basic assembly scheme, proposal for automation, feeding storage parts, feeder design operation, method of re-filling.
- Operation assembly cell design, flexible mechanised assembly cell, , assembly line operation, investment calculation example.

ME 303 Computer Aided Design & Manufacturing

CAD/CAM System, comparison between different CAD systems, internet based computer design system, complement of data, milling of cylindrical hole, pro-engineered manufactured parts, machine tool co-ordinate system, operation set up, machining sequence program, drilling hole program, simulation program, program to calculate total machining time, reverse engineering, rapid prototyping, basic process, accurate processing, diagram for rapid prototyping techniques, other kinds of reverse engineering, kinds of materials for rapid prototyping.

ME 306 Theory of waves in materials

Equilibrium process, Claudius inequality, basic wave phenomena, wave equation, characteristics of waves, elastic volume and shear waves, vector field of displacement, approximation, convection of a disturbance in a pipe , diffusion of a wave in a pipe.

ME 334 Air-conditioning & Refrigeration

- Refrigerant piping, evaporator, compressor, condenser, compressor-condenser circuit, tools
- Air-conditioning equipment, tubing, joining refrigeration piping
- Nitrogen circuit, system charging, electrical test instruments, control equipments, thermostat, compressor

- Control circuit equipment assembly, dual fuel furnace, humidification, comfort, ventilation duct, plenum system.
- Ventilation installation, ventilation fixtures, evaporator outlet temperature, assembly of units, capillary tube, installation of indoor / outdoor units.

EE308	Sustainability
-------	----------------

This unit covers developing strategies to address environmental and sustainability issues in the energy sector. It encompasses working safely, apply extensive knowledge of sustainable energy systems and components and their operating parameters, gathering and analysing data, applying problem solving techniques, developing and documenting alternatives solutions

KS01-EK132A

Environmental and Sustainability strategies

Evidence shall show an understanding of greenhouse reduction strategies to an extent indicated by the following aspects:

T1 Principles of sustainability encompassing:

- ☐ ways in which ecosystems moderate climate. ways in which ecosystems purify and store water.
- ☐ ways in which ecosystems recycle waste.

T2 Problems in a sustainable world encompassing:

- ☐ changes to Australian forest cover since white settlement, and the resulting loss of ecosystem and human benefits.
- ☐ changes to Australia's soils since white settlement, and the resulting loss of ecosystem and human benefits.
- ☐ changes to Australia's waterways since white settlement, and the resulting loss of ecosystem and human benefits.
- ☐ place of environmental accounting in quantifying Australia's environmental losses.
- ☐ limits to Australia's population carrying capacity.

T3 Sustainability principles encompassing:

- ☐ principles within sustainability including: environmental accounting and economics; full cost pricing; triple bottom line ethic; ecologically sustainable development; greenhouse gas abatement; energy efficiency; resource and water use efficiency; life cycle costing; renewable energy substitution, cleaner production; waste minimisation, reuse and recycling; ecological footprint.

T4 Addressing the problem of global warming encompassing:

- ☐ greenhouse gases and their sources and quantities that contribute to global warming.
- ☐ global warming impacts for Australia for 2030 and 2070 predicted by CSIRO modelling.
- ☐ requirements to achieve stable atmospheric concentrations of greenhouse gases.
- ☐ ecologically and economically sustainable methods for achieving these stable concentrations.

T5 Greenhouse gas emissions profile encompassing:

- ☐ goals and principles of the National Greenhouse Strategy
- ☐ what a greenhouse gas inventory is, why it is required, and the sectors to which it applies
- ☐ uses to which the National Greenhouse Gas Inventory can be applied.

T6 Understanding and communicating climate change and its impacts encompassing:

- ☐ the possible impact of climate change in Australia.
- ☐ techniques for improving the understanding of climate change
- ☐ techniques for communicating to and educating the general

public on greenhouse gas induced climate change.

T7 Partnerships for greenhouse action encompassing:

- ☐ actions achievable by each level of government to implement the NGS.
- ☐ methods by which the community activity can be engaged in the reduction of greenhouse gas emissions.
- ☐ initiatives that can be undertaken by the private sector to reduce greenhouse gas emissions.
- ☐ advantages of international partnerships.
- ☐ emissions trading system.

T8 Efficient and sustainable energy use and supply encompassing:

- ☐ techniques for reducing the greenhouse intensity of energy supply.
- ☐ types of renewable energy sources suitable for use in Australia.
- ☐ methods and technique for improving end-use efficiency.

T9 Efficient transport and sustainable urban planning encompassing:

- ☐ how integrating land use and transport planning can assist the greenhouse problem.
- ☐ how each of the following can be used to mitigate greenhouse gas; travel demand and traffic management strategies; encouraging greater use of public transport, walking and cycling; freight and logistics systems; improving vehicle fuel efficiency and fuel technologies;

T10 Greenhouse sinks and sustainable land management encompassing:

- ☐ how enhancing greenhouse sinks and encouraging sustainable forestry and vegetation management can complement the AGS.
- ☐ how greenhouse gas emissions are obtained from agricultural production and describe techniques to mitigate the emissions.

T11 Models of greenhouse best practice in industrial processes and waste management encompassing:

- ☐ types and methods of reducing greenhouse gas emissions from industry.
- ☐ methods of reducing methane emissions from waste treatment and disposal.

T12 Adaptation to climate change encompassing:

- ☐ salient points in each of the key sectors that require analysis and the strategies required in the need for adaptation to climate change

ME 434 Mechatronics- Robotics

- Performance characteristics, industrial robot tests, position accuracy test, positioning & fixing robot, straight line measurement, transmission of energy, manipulator, interfacing link, end effector interfacing transmitter circuit, signal output condition, input signal circuitry.
- Remote operator station, input/ output signal parallelizing, application , dual gripper, safety joint, mechanical gripper, vacuum gripper, dual magnetic gripper, contact sensor, proximity sensor, non contact sensor, limit switch , program flow chart, thermocouple sensor.
- Robotic part transfer, robot palletizing, connection of network electronic circuit, list of components, robotic programs, velocity control code.

ME 534 Numerical Control

- Components of numerical control, flow diagram, assembly diagram, closed loop, numerical controlled lathe, types of numerical control systems, co-ordinate systems, two axis control, , Z axis control
- Incremental system, absolute system, zero shift system, BCD, ACSII code, Binary coded decimal system, sequence number, leading & trailing zero, suppression
- Feed rate, spindle speed, programming example
- Linear interpolation, circular interpolation, programmable Z depth, tool length compensation
- CNC machines, feed rate, spindle speed, circular interpolation, threading
- Threading numerical program, system subroutines
- CNC program example.

ME 634 Pneumatics

- Principle of pneumatics, force, pressure, flow & pressure drop, compressed air, vacuum pressure, atmospheric pressure, gas laws, Boyle's law, Charles's law, Concept of power transmission, Basic concept of Pneumatic system, Directional control valve.
- Pneumatic valve, valve mechanism , normally open/ close valve, spool/ poppet valve, valve conversion.
- Actuator control, time delay valve, cam roller, power valve, air motors, rotary actuator
- Pneumatic sensor, proximity sensor, control problem analysis, Pneumatic air vane governors

Mgt 503 Production & Operation Management

Analyze business operations using appropriate performance measures, such as flow time, throughput rate and capacity.

2. Propose business solutions in written and verbal forms for operations improvement and process design projects.
3. Identify inefficiency and ineffectiveness in business operations and propose adequate minor changes or major redesigns to improve the process.
4. Understand the theory and implementations of quality control activities for different industries.
5. Use computing software to determine optimal capacity under various situations in a process.
6. Practice team skills to organize a functioning team to analyze and improve business process.

Mgt 105 Quality Management and Manufacturing Engineering

Meaning of Quality?

Quality: Customer's Perspective?

ME 105 Electrical Principle

EE114	Electrical Power Principle
-------	----------------------------

KS01-EG006A Single and three-phase transformers

Evidence shall show an understanding of single and three phase transformers to an extent indicated by the following aspects:

T1 Transformer construction encompassing:

- ☐ types of lamination style and core construction used in single-phase, three phase, double wound, auto transformers and instrument transformers.
- ☐ identification of different winding styles/types used in transformers.
- ☐ methods used to insulate low and high voltage transformers.
- ☐ construction of transformer tanks for distribution transformers.
- ☐ transformer auxiliary equipment. (Bushings, surge-diverters, tap-changers, hot oil & winding indicators, breather, Buchholz relay and

conservator).

- ☐ function of transformer auxiliary equipment.
- ☐ types of information stated on transformer nameplates.
- ☐ application of transformers.
- ☐ performing basic insulation resistance, continuity and winding identification tests.

T2 Transformer operation encompassing:

- ☐ principles of mutual induction of a transformer.
- ☐ factors that determine the induced voltage in a transformer winding.
- ☐ determining the value of a transformers secondary voltage and current given one winding's electrical details and turns ratio.
- ☐ identification of voltage and current components of a phasor diagram for a transformer on no-load.
- ☐ principles of power transferred from the primary to secondary when a load is connected using a phasor diagram neglecting impedance drops.
- ☐ selecting transformers for specific application/s.
- ☐ safety features specified in AS/NZS3000 with respect to transformers and isolating transformers.

T3 Transformer losses, efficiency and cooling encompassing:

- ☐ power losses which occur in a transformer.
- ☐ tests which allow the power losses of a transformer to be determine.
- ☐ determination of transformer losses and efficiency using test results.

relationship between transformer cooling and rating.

- ☐ methods used for natural and forced cooling of transformers.
- ☐ properties of transformer oil.
- ☐ tests conducted on transformer oil.

T4 Transformer voltage regulation and percent impedance encompassing:

- ☐ voltage regulation as applicable to a transformer.
- ☐ reasons for voltage variation in the output of a transformer.
- ☐ determine the voltage regulation of a transformer from voltage and percentage impedance values.
- ☐ percentage impedance as applied to transformers.
- ☐ determine the percent impedance by using test results.
- ☐ determine percent impedance of a transformer by calculation.

T5 Parallel operation of transformers and transformer auxiliary equipment encompassing:

- ☐ determine polarity markings for an unidentified single phase double wound transformer.
- ☐ need for parallel operation of transformers.
- ☐ conditions/restrictions required before two transformers can be connected in parallel.
- ☐ connecting transformers in parallel to supply a single load (loading on transformers operating in parallel).
- ☐ the consequences/effect of an incorrect connection.

T6 Auto-transformers and instrument transformers encompassing:

- ☐ identification of auto-transformers, voltage transformers and current transformers from their winding diagrams.
- ☐ determining voltage and current in the windings of an auto-transformer by calculation.
- ☐ advantages and disadvantages of an auto-transformer.
- ☐ AS/NZS3000 requirements with respect to transformers.
- ☐ construction of voltage transformers.
- ☐ ratings of voltage transformers.
- ☐ construction of current transformers.
- ☐ ratings of current transformers.
- ☐ precautionary measures taken to connect and disconnect instrument transformers.
- ☐ connection diagrams for instrument transformers.
- ☐ applications for auto-transformers and instrument transformers.

ME 106 Electrical Circuits

EE101	DC Circuit Problems
-------	-------------------------------------

This unit covers determining correct operation of single source d.c. series, parallel and series-parallel circuits and providing solutions as they apply to various electrotechnology work functions. It encompasses working safely, problem solving procedures, including the use of voltage, current and resistance measuring devices, providing solutions derived from measurements and calculations to predictable problems in single and multiple path circuits.

Evidence shall show an understanding of electrical fundamentals and direct current multiple path circuits to an extent indicated by the following aspects:

T1 Basic electrical concepts encompassing:

- ☐ electrotechnology industry
- ☐ static and current electricity
- ☐ production of electricity by renewable and non renewable energy sources
- ☐ transportation of electricity from the source to the load via the transmission and distribution systems
- ☐ utilisation of electricity by the various loads
- ☐ basic calculations involving quantity of electricity, velocity and speed with relationship to the generation and transportation of electricity.

T2 Basic electrical circuit encompassing:

- ☐ symbols used to represent an electrical energy source, a load, a switch and a circuit protection device in a circuit diagram
- ☐ purpose of each component in the circuit
- ☐ effects of an open-circuit, a closed-circuit and a short-circuit
- ☐ multiple and sub-multiple units

T3 Ohm's Law encompassing:

- ☐ basic d.c. single path circuit.
- ☐ voltage and currents levels in a basic d.c. single path circuit.
- ☐ effects of an open-circuit, a closed-circuit and a short-circuit on a basic d.c. single path relationship between voltage and current from measured values in a simple circuit
- ☐ determining voltage, current and resistance in a circuit given any two of these quantities
- ☐ graphical relationships of voltage, current and resistance
- ☐ relationship between voltage, current and resistance

T4 Electrical power encompassing:

- ☐ relationship between force, power, work and energy
- ☐ power dissipated in circuit from voltage, current and resistance values
- ☐ power ratings of devices
- ☐ measurement electrical power in a d.c. circuit
- ☐ effects of power rating of various resistors

T5 Effects of electrical current encompassing:

- ☐ physiological effects of current and the fundamental principles (listed in AS/NZS 3000) for protection against the this effect
- ☐ basic principles by which electric current can result in the production of heat; the production of magnetic fields; a chemical reaction
- ☐ typical uses of the effects of current
- ☐ mechanisms by which metals corrode
- ☐ fundamental principles (listed in AS/NZS3000) for protection against the damaging effects of current

T6 EMF sources energy sources and conversion electrical energy encompassing:

- ☐ basic principles of producing a emf from the interaction of a moving conductor in a magnetic field.
- ☐ basic principles of producing an emf from the heating of one junction of a thermocouple.
- ☐ basic principles of producing a emf by the application of sun light falling on the surface of photovoltaic cells
- ☐ basic principles of generating a emf when a mechanical force is applied to a crystal

(piezo electric effect)

- ☐ principles of producing a electrical current from primary, secondary and fuel cells
- ☐ input, output, efficiency or losses of electrical systems and machines
- ☐ effect of losses in electrical wiring and machines
- ☐ principle of conservation of energy

T7 Resistors encompassing:

- ☐ features of fixed and variable resistor types and typical applications
- ☐ identification of fixed and variable resistors
- ☐ various types of fixed resistors used in the Electro technology Industry. e.g. wire-wound, carbon film, tapped resistors.
- ☐ various types of variable resistors used in the Electro technology Industry e.g. adjustable resistors: potentiometer and rheostat; light dependent resistor (LDR); voltage dependent resistor (VDR) and temperature dependent resistor (NTC, PTC).
- ☐ characteristics of temperature, voltage and light dependent resistors and typical applications of each
- ☐ power ratings of a resistor.
- ☐ power loss (heat) occurring in a conductor.
- ☐ resistance of a colour coded resistor from colour code tables and confirm the value by measurement.
- ☐ measurement of resistance of a range of variable' resistors under varying conditions of light, voltage, temperature conditions.
- ☐ specifying a resistor for a particular application.

T8 Series circuits encompassing:

- ☐ circuit diagram of a single-source d.c. 'series' circuit.
- ☐ Identification of the major components of a 'series' circuit: power supply; loads; connecting leads and switch
- ☐ applications where 'series' circuits are used in the Electro technology industry.
- ☐ characteristics of a 'series' circuit - connection of loads, current path, voltage drops, power dissipation and affects of an open circuit in a 'series' circuit.
- ☐ the voltage, current, resistances or power dissipated from measured or given values of any two of these quantities
- ☐ relationship between voltage drops and resistance in a simple voltage divider network.
- ☐ setting up and connecting a single-source series dc circuit
- ☐ measurement of resistance, voltage and current values in a single source series circuit
- ☐ effect of an open-circuit on a series connected circuit

T9 Parallel circuits encompassing:

- ☐ schematic diagram of a single-source d.c. 'parallel' circuit.
- ☐ major components of a 'parallel' circuit (power supply, loads, connecting leads and

· applications where 'parallel' circuits are used in the Electrotechnology industry.

- ☐ characteristics of a 'parallel' circuit. (load connection, current paths, voltage drops, power dissipation, affects of an open circuit in a 'parallel' circuit).
- ☐ relationship between currents entering a junction and currents leaving a junction
- ☐ relationship between branch currents and resistances in a two branch current divider network.
- ☐ calculation of the total resistance of a 'parallel' circuit.
- ☐ calculation of the total current of a 'parallel' circuit.
- ☐ Calculation of the total voltage and the individual voltage drops of a 'parallel' circuit.
- ☐ setting up and connecting a single-source d.c. parallel circuit
- ☐ resistance, voltage and current measurements in a single-source parallel circuit
- ☐ voltage, current, resistance or power dissipated from measured values of any of these quantities

- output current and voltage levels of connecting cells in parallel.

T10 Series/parallel circuits encompassing:

- schematic diagram of a single-source d.c. 'series/parallel' circuit.
- major components of a 'series/parallel' circuit (power supply, loads, connecting leads and switch)
- applications where 'series/parallel' circuits are used in the Electrotechnology industry.
- characteristics of a 'series/parallel' circuit. (load connection, current paths, voltage drops, power dissipation, affects of an open circuit in a 'series/parallel' circuit).
- relationship between voltages, currents and resistances in a bridge network.
- calculation of the total resistance of a 'series/parallel' circuit.
- calculation of the total current of a 'series/parallel' circuit.
- calculation of the total voltage and the individual voltage drops of a 'series/parallel' circuit.
- setting up and connecting a single-source d.c. series/ parallel circuit
- resistance, voltage and current measurements in a single-source d.c. series / parallel circuit
- the voltage, current, resistances or power dissipated from measured values of any two of these quantities

T11 Factors affecting resistance encompassing:

- four factors that affect the resistance of a conductor (type of material, length, cross-sectional area and temperature)
- affect the change in the type of material (resistivity) has on the resistance of a conductor.
- affect the change in 'length' has on the resistance of a conductor.
- affect the change in 'cross-sectional area' has on the resistance of a conductor.

effects of temperature change on the resistance of various conducting materials

- effects of resistance on the current-carrying capacity and voltage drop in cables.
- calculation of the resistance of a conductor from factors such as conductor length, cross-sectional area, resistivity and changes in temperature
- using digital and analogue ohmmeter to measure the change in resistance of different types of conductive materials (copper, aluminium, nichrome, tungsten) when those materials undergo a change in type of material length, cross-sectional area and temperature.

T12 Effects of meters in a circuit encompassing:

- selecting an appropriate meter in terms of units to be measured, range, loading effect and accuracy for a given application.
- measuring resistance using direct, volt-ammeter and bridge methods.
- instruments used in the field to measure voltage, current, resistance and insulation resistance and the typical circumstances in which they are used.
- hazards involved in using electrical instruments and the safety control measures that should be taken.
- operating characteristics of analogue and digital meters.
- correct techniques to read the scale of an analogue meters and how to reduce the 'parallax' error.
- types of voltmeters used in the Electrotechnology industry – bench type, clamp meter, Multimeter, etc.
- purpose and characteristics (internal resistance, range, loading effect and accuracy) of a voltmeter.
- types of voltage indicator testers. e.g. LED, neon, solenoid, volt-stick, series tester, etc. and explain the purpose of each voltage indicator tester.
- operation of various voltage indicator testers.
- advantages and disadvantages of each voltage indicator tester.
- various types of ammeters used in the Electrotechnology industry – bench, clamp meter, multimeter, etc.
- purpose of an ammeter and the correct connection (series) of an ammeter into a circuit.
- reasons why the internal resistance of an ammeter must be extremely low and the dangers and consequences of connecting an ammeter in parallel and/or wrong polarity.
- selecting an appropriate meter in terms of units to be measured, range, loading effect and accuracy for a given application
- connecting an analogue/digital voltmeter into a circuit ensuring the polarities are correct and take various voltage readings.
- loading effect of various voltmeters when measuring voltage across various loads.
- using voltage indicator testers to detect the presence of various voltage levels.
- connecting analogue/digital ammeter into a circuit ensuring the polarities are correct and take various current readings.

T13 Resistance measurement encompassing:

- Identification of instruments used in the field to measure resistance (including insulation resistance) and the typical circumstances in which they are used.
- the purpose of an Insulation Resistance (IR) Tester.
- the parts and functions of various analogue and digital IR Tester (selector range switch, zero ohms adjustment, battery check function, scale and connecting leads).
- reasons why the supply must be isolated prior to using the IR tester.
- where and why the continuity test would be used in an electrical installation.
- where and why the insulation resistance test would be used in an electrical installation.
- the voltage ranges of an IR tester and where each range may be used. e.g. 250 V d.c, 500 V d.c and 1000 V d.c
- AS/NZS3000 Wiring Rules requirements – continuity test and insulation resistance (IR) test.
- purpose of regular IR tester calibration.
- the correct methods of storing the IR tester after use
- carry out a calibration check on a IR Tester
- measurement of low values of resistance using an IR tester continuity functions.
- measurement of high values of resistance using an IR tester insulation resistance function.
- volt-ammeter (short shunt and long shunt) methods of measuring resistance.
- calculation of resistance values using voltmeter and ammeter reading (long and short shunt connections)
- measurement of resistance using volt-ammeter methods

T14 Capacitors and Capacitance encompassing:

- basic construction of standard capacitor, highlighting the: plates, dielectric and connecting leads
- different types of dielectric material and each dielectric's relative permittivity.
- identification of various types of capacitors commonly used in the Electrotechnology industry (fixed value capacitors -stacked plate, rolled, electrolytic, ceramic, mica and Variable value capacitors – tuning and trimmer)
- circuit symbol of various types of capacitors: standard; variable, trimmer and polarised
- terms: Capacitance (C), Electric charge (Q) and Energy (W)

- unit of: Capacitance (Farad), Electric charge (Coulomb) and Energy (Joule)
- factors affecting capacitance (the effective area of the plates, the distance between the plates and the type of dielectric) and explain how these factors are present in all circuits to some extent.
- how a capacitor is charged in a d.c. circuit.
- behaviour of a series d.c. circuit containing resistance and capacitance components. - charge and discharge curves

the term 'Time Constant' and its relationship to the charging and discharging of a capacitor.

- calculation of quantities from given information: Capacitance ($Q = VC$); Energy ($W = \frac{1}{2}CV^2$); Voltage ($V = Q/C$)
- calculation one time constant as well as the time taken to fully charge and discharge a given capacitor. ($\tau = RC$)
- connection of a series d.c. circuit containing capacitance and resistor to determine the time constant of the circuit

T15 Capacitors in Series and Parallel encompassing:

- hazards involved in working with capacitance effects and the safety control measures that should be taken.
- safe handling and the correct methods of discharging various size capacitors
- dangers of a charged capacitor and the consequences of discharging a capacitor through a person
- factors which determine the capacitance of a capacitor and explain how these factors are present in all circuits to some extent.
- effects of capacitors connected in parallel by calculating their equivalent capacitance.
- effects on the total capacitance of capacitors connected in series by calculating their equivalent capacitance.
- Connecting capacitors in series and/or parallel configurations to achieve various capacitance values.
- common faults in capacitors.
- testing of capacitors to determine serviceability.
- application of capacitors in the Electrotechnology industry.

ME 108 Principle of Engine

Principle of internal combustion engine, heat transfer in engine, cylinder heat flux & temperature, heat transfer equation in engine, boiling of coolant, exhaust valves, engine strokes, fuel combustion, product of combustion, ignition circuit, fuel supply lines in engine, fuel pump, fuel injectors, fuel injector, fuel injection pump, fuel injection timing, fuel governor, governor control system.

Mgt 104 Project Management

Part 1 Project Management

This unit covers the management of large electrical projects involving design, modifications, installation, and/or maintenance of systems and equipment. The unit encompasses management of safety, budget variation, personnel, resources, critical path timelines and completion documentation.

KS01-EG169A Business project management

Evidence shall show an understanding of managing electrical projects to an extent indicated by the following aspects:

T1 Defining project parameters encompassing:

- Project scope
- Project stakeholders and clients
- Project phases and the relationship between phases

T2 Time management concepts and standard practices

T3 Financial management encompassing:

- Financial management concepts
- Standard practices for managing project finances
- Project budgets
- Costs
- variations and estimations
- Invoicing against project phases/deliverables
- Acquittals and the like

T4 Quality management concepts and practices

T5 Human Resource management concepts and practices within a project

T6 Communication management concepts and practices within a project

T7 Risk management and contingencies encompassing:

- Risk management concepts
- Internal risks
- External risks
- Contingencies
- Standard practices for managing risk within a project
- Risk minimisation
- Risk removal; and the like

T8 Procurement management concepts and practices

T9 Physical Resource management concepts and practices relating to equipment, technology, information and facilities

T10 Contracts encompassing:

- Contract format

- Contract content
- Interpreting contract clauses
- Legal obligations of contract parties
- Working to contract specifications
- Documentation accompanying contracts such as schedules and the like

T11 Performance assessment and continuous improvement

T12 Engineering ethics principles

T13 Customer/Client relations encompassing:

- Interpersonal skills that enhance customer/client
- Dispute resolution
- Customer/client relations strategies

T14 **Business** sector customs and practice encompassing:

- Equipment procurement, cost/benefit analysis and performance testing
- Typical approaches to planning and management
- Successful planning techniques
- Best practice management methods and styles

Part 2 Project Planning

This unit covers development and documentation of large electrical project proposals, milestones and completions. The unit encompasses, establishing budgets, critical path analysis, development of workflow strategies, documenting, presenting and negotiating budgets and timelines.

KS01-EG170A Business project planning

Evidence shall show an understanding of planning projects and analyzing progress to an extent indicated by the following aspects:

T1 Project planning encompassing:

T2 Purpose of project planning Evidence shall show an understanding of managing electrical projects to an extent indicated by the following aspects:

T3 Defining project parameters encompassing:

- Project scope
- Project stakeholders and clients
- Project phases and the relationship between phases
- Time requirements and limitations
- Resource requirements and limitations
- Quality requirements and limitations

T4 Time management concepts and standard practices

T5 Financial management encompassing:

- Invoicing against project phases/deliverables
- Acquittals and the like

T6 Quality management concepts and practices

T7 Human Resource management concepts and practices within a project

T8 Communication management concepts and practices within a project

T9 Risk management and contingencies encompassing:

- Risk management concepts
- Internal risks
- External risks
- Contingencies
- Standard practices for managing risk within a project
- Risk minimisation
- Risk removal; and the like

T10 Procurement management concepts and practices

T11 Physical Resource management concepts and practices relating to equipment, technology, information and facilities

T12 Contracts encompassing:

- Contract format
- Contract content
- Interpreting contract clauses
- Legal obligations of contract parties

- Working to contract specifications
- Documentation accompanying contracts such as schedules and the like

T13 Performance assessment and continuous improvement

T14 **Business** ethics principles

T15 Customer/Client relations encompassing:

- Importance of customer/client relations
- Interpersonal skills that enhance customer/client
- Dispute resolution
- Customer/client relations strategies

T16 **Business** sector customs and practice encompassing:

- Equipment procurement, cost/benefit analysis and performance testing

Mgt 103 Operation Management

Mgt 503 Production & Operation Management

Analyze business operations using appropriate performance measures, such as flow time, throughput rate and capacity.

2. Propose business solutions in written and verbal forms for operations improvement and process design projects.

3. Identify inefficiency and ineffectiveness in business operations and propose adequate minor changes or major redesigns to improve the process.

4. Understand the theory and implementations of quality control activities for different industries.

5. Use computing software to determine optimal capacity under various situations in a process.

Mgt 107 Industrial Risk & Safety Assessment

This unit covers the mandatory requirements of persons in a supervisory role to implement and monitor an organisation's occupational health and safety policies, procedures and programs. It encompasses understanding an organisation's OHS obligations, providing safety information to staff, implementing and monitoring participative arrangements, safety procedures and training and maintaining safety records.

Occupational Health and Safety, supervisory responsibilities

Evidence shall show an understanding of OHS enterprise responsibilities to an extent indicated by the following aspects:

T1 Provisions of relevant occupational health and safety legislation

T2 Principles and practice of effective occupational health and safety management

T3 Workplace hazards, range and selection of control measures

T4 Organisational health and safety management systems and policies and procedures needed for legislative compliance

T5 Impact of characteristics and composition of the workforce on occupational health and safety management

T6 Relevance of occupational health and safety management to other organisational management policies, procedures and systems.

T7 Analysis of entire work environment and judge occupational health and safety interventions

T8 Analysis of relevant workplace data

T9 Ability to assess resources needed for risk control

Mgt 501 Communication Skills & Management Leadership

- Effective communication skills
- Perspective of communication skill
- Elements of communication
- Communication styles
- Basic listening skills
- Effective written communication
- Management briefs

- Perspective on organization
- Leadership
- Understanding individuals
- Group work
- Motivation
- Goal setting
- Communication in leadership & group

Mgt 102 Performance Management

- Introductions and Learning Objectives
- Performance Management Defined (Elements of a Performance Mgmt System, Benefits of an Annual Performance Development Plan, The Performance Mgmt Timeline)
- Setting “SMART” Annual Objectives
- Roles of Manager and Direct Report in the Performance Development Plan
- Coaching Direct Reports During the
- Performance Management Cycle
- Effective Listening Skills
- Monitoring Performance and Conducting Interim Meetings
- Preparation for and Conducting the
- Annual Review Meeting
- Handling Challenging Situations
- Action Plan, Summary and Evaluation

Part 1 Project Management

This unit covers the management of large mechanical projects involving design, modifications, installation, and/or maintenance of systems and equipment. The unit encompasses management of safety, budget variation, personnel, resources, critical path timelines and completion documentation.

KS01-EG169A Project management

Evidence shall show an understanding of managing mechanical projects to an extent indicated by the following aspects:

T1 Defining project parameters encompassing:

- Project scope
- Project stakeholders and clients
- Project phases and the relationship between phases

T2 Time management concepts and standard practices

T3 Financial management encompassing:

- Financial management concepts
- Standard practices for managing project finances
- Project budgets
- Costs
- variations and estimations
- Invoicing against project phases/deliverables
- Acquittals and the like

T4 Quality management concepts and practices

T5 Human Resource management concepts and practices within a project

T6 Communication management concepts and practices within a project

T7 Risk management and contingencies encompassing:

- Risk management concepts
- Internal risks
- External risks
- Contingencies
- Standard practices for managing risk within a project
- Risk minimisation
- Risk removal; and the like

T8 Procurement management concepts and practices

T9 Physical Resource management concepts and practices relating to equipment, technology, information and facilities

T10 Contracts encompassing:

- Contract format
- Contract content
- Interpreting contract clauses
- Legal obligations of contract parties
- Working to contract specifications
- Documentation accompanying contracts such as schedules and the like

T11 Performance assessment and continuous improvement

T12 Engineering ethics principles

T13 Customer/Client relations encompassing:

Interpersonal skills that enhance customer/client

- Dispute resolution
- Customer/client relations strategies

T14 Mechanical industry sector customs and practice encompassing:

- Equipment procurement, cost/benefit analysis and performance testing
- Typical approaches to planning and management
- Successful planning techniques
- Best practice management methods and styles

Part 2 Project Planning

This unit covers development and documentation of large electrical project proposals, milestones and completions. The unit encompasses, establishing budgets, critical path analysis, development of workflow strategies, documenting, presenting and negotiating budgets and timelines.

KS01-EG170A Project planning

Evidence shall show an understanding of planning projects and analyzing progress to an extent indicated by the following aspects:

T1 Project planning encompassing:

T2 Purpose of project planning Evidence shall show an understanding of managing electrical projects to an extent indicated by the following aspects:

T3 Defining project parameters encompassing:

- Project scope
- Project stakeholders and clients
- Project phases and the relationship between phases
- Time requirements and limitations
- Resource requirements and limitations
- Quality requirements and limitations

T4 Time management concepts and standard practices

T5 Financial management encompassing:

- Invoicing against project phases/deliverables
- Acquittals and the like

T6 Quality management concepts and practices

T7 Human Resource management concepts and practices within a project

T8 Communication management concepts and practices within a project

T9 Risk management and contingencies encompassing:

- Risk management concepts
- Internal risks
- External risks
- Contingencies
- Standard practices for managing risk within a project
- Risk minimisation
- Risk removal; and the like

T10 Procurement management concepts and practices

T11 Physical Resource management concepts and practices relating to equipment, technology, information and facilities

T12 Contracts encompassing:

- Contract format
- Contract content
- Interpreting contract clauses
- Legal obligations of contract parties
- Working to contract specifications
- Documentation accompanying contracts such as schedules and the like

T13 Performance assessment and continuous improvement

T14 Engineering ethics principles

T15 Customer/Client relations encompassing:

- Importance of customer/client relations
- Interpersonal skills that enhance customer/client
- Dispute resolution
- Customer/client relations strategies

T16 Mechanical industry sector customs and practice encompassing:

- Equipment procurement, cost/benefit analysis and performance testing

REQUIRED SKILLS AND KNOWLEDGE

- Typical approaches to planning and management
- Successful planning techniques
- Best practice management methods and styles
- Documents needed to plan a project
- Factors influencing sequence and restraints of project activities
- Critical path analysis covering graphical representation methods and methods of representing time/rates

T17 Critical path and project analysis encompassing:

- Purpose of critical path analysis
- Essential data
- Relational sequence of work activities
- Graphical representation methods
- Methods of representing time/rates
- Monitoring methods

T18 Mechanical industry sector customs and practice encompassing:

- Equipment procurement, cost/benefit analysis and performance testing
- Typical approaches to planning and management
- Successful planning techniques
- Best practice management methods and styles

Contents

Mgt 201 Customer Service Management

- Internal & external customers,
- customer focused organization
- Customer-Centric Organization
- Customer Service Environment.
- Delivery Systems,
- Good Customer Service,
- Effective Communication Skills,
- Telephone Skills & Written Communication,
- Dealing with Difficult Behaviour

Mgt 202 Change Management

- Change management approach,
- Managing Change,
- Drivers of Change Model,
- Business Imperative,
- Organizational Imperatives,
- Cultural Imperatives ,
- Employee Behaviour related .

Mgt 203 Inventory & Budget Management

- Budget ,
- Budgeting,
- Budgeting Process.,
- Budget Management. & Budget activities.,
- importance , requirement & purpose of budgeting.,
- Forecast of Income and Expenditure & Tool for decision making.,

- Business Plan.
- cash flow forecasting.,
- organization budget.

Mgt 204 Continuous Improvement Management

- Successful organisations of the future,
- methodology for continuous improvement of project team ,
- consulting and training contexts,
- completeness of approach,
- Quality Management Systems.,
- Strategy for the organization.
- Process of continuous improvement for organization.,
- Structure for the project team,
- the roles of facilitator,
- elements for continuous improvement.

Mgt 205 Office Management

- Role of an office,
- important functions of an office,
- requirements of an ideal office,
- various functions of an office,
- various types of offices,
- scope of Office Management.
- Organising an Office.,
- office accommodation,
- office location,
- layout of an office, filing system,
- indexing,
- Mechanisation,
- Desktop Publishing

Mgt 206 Work-based Training Management

- Role of workplace facilitator.,
- workplace learning activities,
- assessing learner at workplace,
- support required for workplace learner,
- work-based learning,
- mentoring.,
- work-based learning

Mgt 207 Business Letter Writing

- Grammar,
- business letter format,
- writing practice,
- business communication.

Mgt 208 Safety Management

- Benefits of OHS, Operational Responsibilities,
- Workplace Health Issues,
- workplace hazards
- Substance Abuse,
- Job-related Stress,
- Workplace Health Programs,

- Drug Testing Programs.
- Workplace Safety Issues,
- General Duty Standard of employee,
- Personal Protective Equipment ,
- OHS auditing,
- OHS Risk Management.

Mgt 209 Risk Management

- Aspects of Risk Management,
- Predictions for risk,
- Types of Risk,
- risk impact on decision making.
- Risk Source Classification Approach,
- Natural System, Human risks ,
- Political risks and Cultural risks,
- Primary Reasons of Failure,
- Resistance to Manage Risk,
- Methods for Treating Risk,
- important in risk management,
- Derivatives and hedging, risk reduction.

Mgt 210 Professional Development Management

- Work Priorities ,
- SWOT Analysis,
- Professional Development,
- Multisource (360-degree) Feedback,
- Executive Coaching,
- professional development plan.
- Work performance.

Mgt 211 Leadership

- Types of leadership ,
- New Model of Leadership,
- manager and leader,
- competencies of a leader.

Mgt 212 Preparing Portfolios

- Portfolio preparation techniques,
- portfolio contents,
- types of portfolios,
- portfolio quality,
- contents of job search portfolio.

Mgt 213 Conflict Management

- Meaning of . Conflict
- dispute
- Emotions in Conflict Management
- Positive affect in Negotiation
- Negative affect in Negotiation.
- Forms of resolving conflict (Alternative Dispute Resolution)
- Kinds of Adjudication.
- Components of Mastery of Environment?

- conflict blue print.
- Conflict Diagnosis
- Steps in Conflict Diagnosis.

	Programs	Page
1	Course Structure	2
2	Professional Diploma in Engineering Program Structure	3
3	Professional Diploma in Engineering (Electrical)	22
4	Professional Diploma in Engineering (Civil)	74
5	Professional Diploma in Engineering (Mechanical)	96
6	Professional Diploma in Engineering (Civil-Building Services) Professional Diploma in Engineering (Mechanical-Mechatronics)	109
7	Diploma & Advanced Diploma in Engineering Programs	109
8	Supporting courses programs	110

COURSE STRUCTURE

Year	Course	Total Credit Point
	Entry –Year 10	
	Year 11—Bridging Program	
	Year 12-- Certificate in Pre-vocational Studies	
1	Diploma in Engineering (Electrical/Civil/Mechanical)	30
	Award- Diploma in Engineering	30
2	Advanced Diploma in Engineering (Electrical/Civil/Mechanical)	30
	Award- Advanced Diploma in Engineering	60
3+4	Professional Diploma in Engineering (Electrical/Civil/Mechanical/Mechatronics/Building Services) (Electrical/Civil/Mechanical with Renewable Energy)	60
	Award-Professional Diploma in Engineering	120
	Total years spent after Year 10	6 Years

- The entry qualification for IQY Technical College's courses is Year 12 (International) Standard.
- The students who have completed Year 10 Examination require the Year 11+12 Level bridging study before commencing the major programs.
- Year 11+12 is standardized with Australian NSW Year 12 curriculum.

Please refer [_http://www.highlightcomputer.com/y712lessons.htm](http://www.highlightcomputer.com/y712lessons.htm) for details

IQY Technical College's Professional Diploma in Engineering Curriculum

Professional Diploma in Engineering Programs of IQY Technical College are designed at the same standard of relevant Bachelor of Engineering degrees.. Although the word "Bachelor of Engineering" is utilized, the award of IQY Technical College is Professional Diploma in Engineering.

Bachelor of Engineering (Electrical)

Bachelor of Engineering (Civil)

Bachelor of Engineering (Mechanical)

Bachelor of Engineering (Civil-Building Services)

Bachelor of Engineering (Mechanical-Mechatronics)

Bachelor of Applied Science (Information Technology)

Year (4) Part 1 BE (Mechanical + General Related Subjects) (15pt)

BAE 601 Computer Programming(3 pt)
BAE 602 Computer Network (1 pt)
BAE 603 Software Engineering (3 pt)
BAE 605 Engineering Management 5 pt
BAE 606 Building Service Electrical & Mechanical Engineering (3 pt)

Year (4) Part 2

Bachelor of Engineering (Mechanical) Specialization (13 pt)

BAE311 Plant Engineering (2 pt)

BAE312 Design Engineering (2 pt)

BAE313 Environmental Control (2 pt)

BAE314 Mechanical Power Generation (2 pt)

BAE315 Materials Engineering (2 pt) Part 1 Part 2

BAE 608 Engineering Competency Demonstration Report Writing (3 pt)

Elective (3pt)

Subjects
BAE513 Production Technology
BAE611 Maintenance Engineering
BAE612 Engineering Metallurgy

Total point for Year 3+Year 4 Part ½+Elective = 60 pt

Advanced Diploma in Mechanical Engineering= 60 pt

Total credit points= 120 pt

The renewable energy subjects can be substituted for some subjects

Renewable Energy Subjects

View <http://www.highlightcomputer.com/BEElectricalNew.pdf> for the Professional Diploma in Engineering Combined with Renewable Energy Subjects

View <http://www.highlightcomputer.com/re.pdf> for detailed contents

Professional Diploma in Mechanical Engineering with Renewable Energy

Common Year 3

1. BAE 401 Advanced Engineering Mathematics (9 pt)
2. BAE 402 Calculus (3 pt)
3. BAE 403 Engineering Mechanics (1 pt)
4. BAE 404 Engineering Materials & Thermodynamics (3 pt)
5. RE001- Foundation Studies in Renewable Energy and Sustainability (2 pt)
6. RE003- Solar and Thermal Energy Systems (2 pt)
7. RE004- Energy Storage Systems (2 pt)
8. RE005- Renewable Energy Resource Analysis (2 pt)
9. RE006- Wind Energy Conversion Systems (2 pt)
10. RE010-Engineering Materials (2 pt)
11. RE012a-Electrical Engineering Part 1 (2pt)
12. RE016-Design& Management (BAE508) (2 pt)

Total points for Year 3-(32 Pt)

YEAR 4 (Specialized)

1. RE011a-Civil & Mechanical Engineering Part 1 (2 pt)
(Assessment- Study Report)
2. RE011b-Civil & Mechanical Engineering Part 2a (2 pt)
(Assessment- Study Report)
3. BAE 606 Building Service Electrical & Mechanical Engineering (2 pt)
4. BAE311 Plant Engineering (2 pt)
5. BAE314 Mechanical Power Generation (2 pt)

6. BAE315 Materials Engineering (2 pt) Part 1 Part 2 (2 pt)
7. BAE511 Air-conditioning & Refrigeration Part 1 (2 pt)
8. BAE512 Building Service Water Supply System (2 pt)
9. BAE613 Mechanical Instrumentation Process(2 pt)
10. BAE614 Machine Design (2 pt)
11. RE007- Energy System Efficiency(2 pt)
12. BAE 601 Computer Programming(2 pt)

Total points for Year 4-(24 Pt)

Common Graduating Units (Year 5)

- 13 BAE 605 Engineering Management (4 pt)
- 14 BAE 608 Engineering Competency Demonstration Report

Total points for Year 3+4+ Final graduating subjects = 32+28+4= 60 pt

Professional Diploma/ Bachelor of Engineering (Civil-Building Services)

STAGE (3) BASIC ELECTRICAL & ELECTRONICS ENGINEERING (18 Pt)

REFER DIPLOMA/ADVANCED DIPLOMA IN ELECTRICAL ENGINEERING DETAILED CONTENTS

EE101 DC Circuit Problems

EE102 Basic Electrical Fitting& Wiring

EE103 Basic Electrical Drafting

EE104 Electrical Equipments Safety Protection

EE105 Electrical Installation Design

EE107 Electrical Equipments

EE106 Advanced Electrical Wiring

EE108 Electrical Fault Finding

EE109 Electrical Control Circuits

EE111 Electromagnetism & Basic Electrical Machines

EE112 Alternating Current Principle

EE113 Electrical Fundamental

EE115 Basic Analogue & Digital Electronics

EE116 Process Control System

EE117 Solar Electrical System

EE119 Electrical Risk Assessment

EE120 Electrical Contracting& Specifications

EE308 Sustainability

STAGE (4 A) ADVANCED MECHANICAL ENGINEERING STUDY (6Pt)

REFER DIPLOMA/ADVANCED DIPLOMA IN MECHANICAL ENGINEERING DETAILED CONTENTS

ME 102 Engineering Thermodynamics
 ME 109 Engineering Drawing
 ME 107 Heat Transfer
 ME 201 Introduction to Fluid Mechanics
 ME 204 Engineering Fluid Mechanics
 ME 301 Fluid Dynamics

STAGE (4B)ADVANCED ELECTRICAL & ELECTRONICS ENGINEERING STUDY

(ADVANCED DIPLOMA) (4 pt)

REFER DIPLOMA/ADVANCED DIPLOMA IN ELECTRICAL ENGINEERING DETAILED CONTENTS

EE201 Engineering Mathematics
 EE204 Engineering Physics
 EE302 Advanced Engineering Mathematics
 EE307 Energy Efficient Building Design

STAGE (5)BACHELOR OF APPLIED ENGINEERING (BUILDING SERVICE) DEGREE (32 pt)

Subjects
BAE 401 Advanced Engineering Mathematics
BAE 402 Calculus
BAE 403 Engineering Mechanics
BAE 404 Engineering Materials & Thermodynamics
BAE 508 Industrial Engineering & Industrial Management

BAE 601 Computer Programming
BAE 605 Engineering Management
BAE 606 Building Service Electrical & Mechanical Engineering
BAE 609 Design Project

Professional Diploma/ Bachelor of Engineering (Mechanical-Mechatronics)

Advanced Diploma of Mechanical Engineering)

REFER DIPLOMA/ADVANCED DIPLOMA IN ELECTRICAL ENGINEERING DETAILED CONTENTS

REFER DIPLOMA/ADVANCED DIPLOMA IN MECHANICAL ENGINEERING DETAILED CONTENTS

(1) **ME104** Principle of Machine

(2)EE624 Process Control

EE115 Basic Analogue& Digital Electronics

EE116 Process Control System

(3)ME 334 Airconditioning and Refrigeration

(4) ME202 Aerodynamics

(5) ME 302 Automation-and-Robotics

(6) ME 303 Computer Aided Design and Manufacturing

(7) ME 234 Wind Turbines

(8) ME 201 Introduction to Fluid Mechanics

(9) ME 204 Engineering Fluid Mechanics +

ME 301 Fluid Dynamics

(10) ME 206 Introduction to Turbo Machinery

(11)ME 205 Manufacturing Processes & Materials

(12) ME 207 Chemical Thermodynamics

(13)ME 208 Hydrocarbons

(14) ME 634 Pneumatics

(15) ME 203 Control

(16) ME 534 Numerical Control

(17) ME 434 Mechtronics-Robotics

(18)EE 617 Building Electrical and Mechanical System

(19)EE105 Electrical Installation Design

EE107 Electrical Equipments

EE105 Electrical Installation Design

EE107 Electrical Equipments

(20)EE106 Advanced Electrical Wiring

(21) EE116 Process Control

(22) EE117 Solar Electrical System

(23) EE119 Electrical Risk Assessment

EE120 Electrical Contracting

(24) ME 109 Engineering Drawing

EE301 Advanced Electrical Drafting

(25) EE121 Electronics Power Control Devices

(26) EE206 AC

(27) EE207 DC

(28)EE202 Electrical Circuits

(29)EE203 Three Phase Power Circuits

(30) ME 305 Corrosion Prevention

(31) ME 306 Theory-of-waves-in- materials

Degree Level

Subjects
BAE 401 Advanced Engineering Mathematics

BAE 402 Calculus
BAE 403 Engineering Mechanics
BAE 404 Engineering Materials & Thermodynamics
BAE 405 Advanced Circuit Analysis
BAE 406 Electro-mechanics
BAE 408 Analogue & Digital Electronics
BAE 502 Linear System
BAE 503 Control System
BAE 507 Electro-mechanical Energy Conversion
BAE 508 Industrial Engineering & Industrial Management
BAE 601 Computer Programming
BAE 602 Computer Network
BAE 603 Software Engineering
BAE 604 Telecommunication Engineering
BAE 605 Engineering Management
BAE 606 Building Service Electrical & Mechanical Engineering

Professional Diploma/Bachelor of Engineering (Electrical)

BAE 401 Advanced Engineering Mathematics (9 pt)

Subject Objective	This subject provides knowledge of mathematical methods needed for engineering problem solving
Learning outcome	The students develop both their thinking and problem solving skills. Topics covered are: vector, functions of a complex variable; algebra, differential equations, mathematical distribution, and applications of mathematics in engineering calculations.
Credit Point	9
Hours	216 Hrs
Assessment	Assignment/ Final Examination/Online MCQ Test

Contents

An Introduction to theory of complex variables

Complex numbers

Functions

Differentiability

Integration in the complex plane

Integral theorems

Power series

Introduction of rational functions of trigonometric functions.

Continuous distribution

Exponential distribution

Normal distribution

Gamma distribution

Convergence in distribution

F distribution

Discrete distribution

Binomial distribution

Poisson distribution

Elementary linear algebra

Algebra in F^n Example problems

Geometric meaning of vectors

Geometric meaning of vector addition
 Distance between points in \mathbb{R}^n Length of vector
 Geometric meaning of scalar multiplication
 Dot product
 Cross product
 System of equation geometry
 System of equation – Algebraic operation
 Matrice arithmetic
 Determinants –Basic technique & properties

Integration and differential equations

List of integrals
 Introduction to background
 Theorem of integration
 Improper integrals
 Improper integral problems
 Integration of rational functions
 Differential equations
 First order ordinary differential equations
 Homogenous equations
 The general linear equations

Random variables

Simple introduction examples
 Problems
 Frequency and distribution functions in 1 dimension

Mathematical modelling preliminary

Introduction
 Discrete time model

Maths 301 Introduction to Complex Variables

The residue Theorem
 Fourier Transform
 Integral theorem of complex analysis with applications
 to the evaluation of real integral
 Introduction
 Integral theorems – The green Theorem
 Cauchy's integral theorem
 Cauchy's residue theorem

Maths 302 Elementary Linear Algebra

A formula for the inverse
 Cramer's rule
 Example 6.2.3 , 6.2.4 , 6.2.6, 6.2.7
 Rank of a matrix

Example 8.2.9 , 8.2.10, 8.3.3 , 8.3.5, 8.3.6, 8.3.7, 8.3.8

Linear independence and bases

Linear transformation

Constructing the matrix of a linear transformation

Linear programming

Maths 401 Continuous Distribution

χ^2 Distribution

F Distribution

F Distribution & “t” Distribution

Estimation of parameters

Maths 402 Discrete Distribution

Geometric distribution

Pascal distribution

Negative binomial distribution

Hyper geometric distribution

Maths 303 Essential Engineering Mathematics

Vectors and matrices

Functions and limits , Example problems

Calculation of one variable (Part 1) Differentiation,

Calculation of one variable (Part 1) Integration,

Calculus of many variables,

Ordinary differential equations,

Complex function theory

Maths 501 Introduction to probability

Theoretical background

Playing card

Binomial distribution

Lotto Example

Conditional probabilities –Baye’s formula

Maths 501 Linear algebra and matrices

Linear transformation matrices

Definition 2.1.1 to 2.1.3

i, j Entry of product Definition 2.1.8

Rank of matrices

Row operations

Maths 502 Introductory Finite Difference Method for PDE

Partial differential equations. Example problems

Taylor theorem
Iterative solution methods
Jacobi Iteration
Gauss Seidel Iteration
Successive Relaxation method

Maths 601 Random Variables

Theoretical results
Frequencies and distribution (1 dimension)
Function of random variables

BAE 402 Calculus (3 pt)

Subject Objective	This subject provides knowledge of calculus methods needed for engineering applications.
Learning outcome	The students develop both their thinking and problem solving skills. Topics covered are: vector calculus; functions of a complex variable; partial differential equations and boundary value problems; the concepts of quantum mechanics and Schrödinger's equation; and applications of mathematics in engineering calculations.
Credit Point	3
Hours	72
Assessment	Assignment/ Test/ Online MCQ Test

Contents

Calculus 1 a .pdf

Differentiation, Example problems

Integration, Example problems

Simple differential equations, Example problems

Calculus 2 a .pdf

Integration of trigonometric polynomials

Complex decomposition of a fraction between two polynomials

Chain rule

Calculation of the directional derivatives

An overview of integration in the plane and in the space

Line integrals

Surface integral

Green's theorem in the plane

Calculus 2b 1.pdf

The range of functions in several variables

Line integral

Space integral

Line integral

Calculus 3b. pdf

Power series method in solution of problems, Example problems

Calculus 3C 1. pdf

Sequence in general

Calculus 4C 1. pdf

Sum function of Fourier series

Maths 303 Engineering Mathematics

Introduction and background

Integration of rational functions

Integration of trigonometric functions

Differential equations

Maths 403 Second Order Differential Equations

Power series solutions

Bessel equations and Bessel functions

Legendre polynomials

Differential equations

BAE 403 Engineering Mechanics (1 pt)

Subject Objective	This subject builds on and brings together the concepts introduced in the Mathematical and Physical Modelling subjects and in Introduction to Mechanical and Mechatronics Engineering.
Learning outcome	It is intended to provide students with a comprehensive overview of elementary mechanics, and lay the basis for further work in this area in later subjects. In particular, material discussed in this subject is taken further in Machine Dynamics and Mechanics of Solids subjects in subsequent stages.
Credit Point	1
Hours	24 Hr of Lecture+ 48 Hr of Tutorials
Assessment	Assignment/ Test/ Online MCQ Test

Contents

Stress Example
 Stress lectures
 Strain All examples
 Strain lessons
 Mechanical properties of materials
 Mechanical properties of materials
 Axial members
 Axial members
 Torsion of shaft
 Torsion of shaft
 Symmetric bending of beams
 Symmetric bending of beams
 Deflection of symmetric beams
 Deflection of symmetric beams
 Stress transformation
 Stress transformation
 Strain transformation
 Strain transformation
 Design and failure
 Design and failure
 Stability of columns
 Stability of columns
 Newton motion

 One dimensional motion

Simple harmonic motion

Damped oscillation

$$X(t) = A e^{-\gamma t/l} \cos(\omega t - \delta_r)$$

Rotating reference frame equations

Modern Mechanics Part 1

Modern Mechanics Part 2

Modern Mechanics Part 3

Modern Mechanics Part 4

Modern Mechanics Part A

Modern Mechanics Part B

Modern Mechanics Part C

ME 301 Applied Mathematics

Kinematics

Projectiles

Forces

Resistance forces

Resolving forces

Rigid bodies

Centre of gravity

Momentum

Energy

Circular motion

Gravitation and planetary motion

The language of vectors

BAE 404 Engineering Materials & Thermodynamics (3 pt)

Subject Objective	<p><u>Thermodynamics</u></p> <p>The objectives of this subject are to develop a fundamental understanding of applied thermodynamics in an engineering perspective, Strength of materials</p> <p><u>Strength of materials</u></p> <p>This subject draws on, and brings together, the knowledge and skills developed in earlier subjects such as Fundamentals of Mechanical Engineering, Chemistry and Materials Science, and Mechanics of Solids.</p>
Learning outcome	<p><u>Thermodynamics</u></p> <p>Use thermodynamics effectively in the practice of engineering, lay the groundwork for subsequent studies in the fields related to energy systems and increase an awareness and emphasis on energy resources and environmental issues.</p> <p><u>Strength of Materials</u></p> <p>It also prepares students for the more dedicated design subjects to come and exposes them to practical aspects of mechanical engineering design. The objectives are that students should be able to: understand, describe and use the methodology of modelling material properties and behaviour; understand and describe the fundamental differences in the behaviour of different types of materials; understand and describe how and why things fail; realise the importance of material selection in engineering design; predict, or design to avoid, failure given the material, environment and loading conditions; and use analytical skills in stress analysis and knowledge of material properties in mechanical design..</p>
Credit Point	3

Assessment	Assignment/ Test/ Online MCQ Test

Contents

Heat Transfer. pdf

- (1) Heat transfer mode Example problems
- (2) Conduction Example problems
- (3) Convection Example problems
- (4) Radiation Example problems
- (5) Heat Exchanger Example problems

Theory of waves in materials.pdf

Materials-Preliminary
 Materials- Basic mechanical properties
 Basic wave phenomena
 Harmonic waves
 Elastic volume and shear waves
 Rayleigh Elastic waves

Engineering Thermodynamics

General definition
 Thermodynamics-Working fluids
 Laws of Thermodynamics
 Worked Example 3.1 to 3.25

ME434 Wind Turbines

Wind Energy

Theory of wind energy

Wind turbine types and components

Wind energy measurement, Wheel encoder Worked

ME634 Pneumatics

Principle of pneumatics
 Linear actuators
 Flow control
 Pneumatics sensors
 Pneumatics symbols

BAE 405 Advanced Circuit Analysis (3 pt)

Subject Objective	In this subject students are assumed to have knowledge of basic devices such as ideal and real voltage and current sources and loads; resistors; capacitors, inductors and coupled coils; diodes and operational amplifiers.
Learning outcome	To have basic circuit analysis skills such as Kirchhoff's current and voltage laws, Thevenin's and Norton's theorems, mesh and nodal analysis, symmetry, circuit transformation and superposition. Using this understanding as a starting point, the subject introduces the basic theoretical models that underpin signals and system analysis
Credit Point	3
Hours	72
Assessment	Assignment/ Test/ Online MCQ Test/ Online Simulated Practical

Contents

DC Circuit Analysis

Circuit Theory

Modulators

Analog, digital signals , electric current, power summary

Circuit analysis, electric potential, electric power, sign convection, electric source, Kirchoffs' law

Circuit elements, characteristics KCL, KVL

Resistor (Series, parallel, wheatstone bridge, Nodal analysis

Nodal analysis, mesh analysis

Superposition theorem, Thevenin's theorem, Norton theorem, Maximum power transfer theorem,

Operational amplifier

Inverting amplifier circuit, Summing amplifier, Differential amplifier

Capacitor, Op-amp integrator, stored energy

Mutual inductance, time constant, transient

Transient response of 1 st order circuit, RL transient analysis, sequential switching

RC/RL Circuit , Propagation, Delay, DRAM

Semi conductor

PN Junction diode

Light emitting diode

MOSFET

Digital signal

CMOS Digital circuit

Combinational logic circuits

Flip flops

Propagation delay in timing diagram

Integrated circuit fabrication

Device isolation methods

Interconnected resistance and capacitance

Transistor scaling
 Integrated circuit design for application in communications
 Small signal amplifiers
 Network noise intermodulation distortion
 CAD for noise analysis
 Snsors & Detectors
 Low noise design methodology
 Oscillators
 Modulators and demodulators
Concepts in Electrical Circuit
 Circuit theorem
 Sinusoids & phasors
 Frequency response

EE303 Engineering Circuit Analysis

Basic circuits

Basic Nodal and Mesh analysis

Linear and Superposition/ Source Transformation

RL/ RC Circuits

RLC Circuits

Sinusoidal steady state analysis

AC Power Circuit Analysis

Polyphase Circuits

Magnetically coupled circuits

Complex Frequency / Laplace Transform

Laplace Transform

Circuit analysis in “ S “ domain

Pole/ Zero constellation

Frequency Response

Two ports network

Fourier Circuit Analysis

Use of symmetry theory

EE404 Electrical Measurement (1 pt)

Measurement of inductance and capacitance

Measurement of resistance

Magnetic measurement

High voltage measurement and testing

Location of cable fault

Measurement of power

Measurement of energy

BAE 406 Electro-mechanics (2 pt)

Subject Objective	The objectives of this subject are to consolidate fundamental knowledge of electric and magnetic fields; electric and magnetic circuits; how electric, magnetic and electromagnetic energy are interchanged;
Learning outcome	To model an electromechanical automation system using DC and AC motors and simulate its performance in open-loop and closed-loop control. Students also acquire skills in working with machines and equipment at normal mains supply voltage, in power instrumentation and control, PLCs and in experimental design and recording. Technical and theoretical content is expected to be acquired by students to the levels of 'know' (essential), 'familiar' (can solve problems if required) and 'aware' (have read/seen). Laboratory skills, ranging from electrical safety, measurements, design validation and experimental verification are an important focus of this subject.
Credit Point	2
Hours	48
Assessment	Assignment/ Test/ Online MCQ Test/ Online simulated Practical

Contents

Electro-mechanic -1.0.1 Scope of application

1.1 Electro-magnetic theory

1.1.1a Magnetic field system, Table 1.1

1.1.1.b Electric field system Table 1.2

Lumped electro-mechanical elements

Lumped parameter-electro-mechanic

Rotating machines

Lumped parameter-electro mechanical dynamics

EE 502 Electrical Machines

DC Generator, Example problems

DC Motors, Example problems

Efficiency & heating of electrical machines, Example problems

Three phase transformer, Example problems

Three phase induction motors, Example problems

Synchronous generators, Example problems

Synchronous motors, Example problems

Basic of industrial motor control, Example problems

ME 301 Machine Principle

Rotating machines
Machinery mounting
Balancing
Bearing
Power transmission

BAE 407 Advanced Electro-magnetics Field & Materials (1 pt)

Subject Objective	The objectives of this subject are to consolidate fundamental knowledge of electric and magnetic fields; electric and magnetic materials
Learning outcome	To understand how electric, magnetic and electromagnetic energy are interchanged.
Credit Point	1
Hours	24 + Tutorial 2 hr/ week
Assessment	Assignment/ Test/ Online MCQ Test

Contents

Electric field
 Electrostatic potential
 Dipole and quadrature pole movements
 Batteries, resistors, ohm laws
 Capacitors
 Magnetic effect of an electric current
 Force on current in a magnetic field
 Electro-dynamics of moving bodies
 Magnetic potential
 Electro-magnetic Induction
 Dimensions
 Properties of magnetic materials
 Alternating current
 Laplace transform
 Maxwell Equation
 CGS Electricity & Magnetism
 Magnetic dipole movement
 Outlines
 Electric field
 Electrostatic Energy
 Laplace's equation (1)
 Laplace's equation (2)
 Remarks on units
 Green's functions
 Multipole expansion
 Electro-static in matter
 Boundary condition
 Magneto statics (1)
 Magneto statics (2)
 Macroscopic magneto statics
 Maxwell's equation
 DISC movement
 Electro-magnetic plane waves
 Reflection & refraction

Casual relation between D & E
 Wave guides and load cavities
 Electromagnetic radiation and scattering (1)
 Electromagnetic radiation and scattering (2)
 Scattering by small di-electric sphere
 Electro-magnetism
 Electro magnetic fields and moving charges
 Multipole expansion
 Magnetic constants and materials
 Ampere law
 Brief history of electro magnetism
 Gauss's law
 Numerical solutions to Laplace's equation
 Small current loop
 Curvilinear co-ordinate system
 Problems
 Dielectric tensors and constants
 Analytic solution to Laplace equation
 Magnetostatic boundary condition
 Electrostatic boundary condition
 Electromagnetic field
 The gradient vector
 Maxwell's equation

 Electro-magnetic wave propagation
BAE 407 Advanced Electro-magnetic Field & Materials
Electro dynamics
 Introduction to electro statics
 Boundary value problems in electro statics (1)
 Boundary value problems in electro statics (2)
 Multi-poles Macroscopic media –Dielectrics
 Static and stationary magnetic fields
 Maxwell's equations
 Plane wave and wave propogation
 Wave guides and cavities
 Radiation
 The special theory of relativity
 Particles and field dynamics
 Charged particle collisions-Energy loss, Scattering
 Radiation by moving charges

BAE 407 Advanced Electro-magnetic Field& Materials

 EMFT book.pdf
 Summary of electro statics
 Potential
 Electro-magnetics waves
 Classical optics
 Conservation Law

Conservation Law
Conservation Law
Generic wave
Electromagnetic waves in vacuum
Electromagnetic waves in matter
Electromagnetic waves in conductor
Electromagnetic waves propagation
Electromagnetic waves field
Wave guides
Electromagnetic waves radiation
Electro-dynamics

EE407 Electro-magnetism

Di-electric materials and capacitance
Transmission Lines
Maxwell's equations and electro-magnetic waves

Electrostatics

Di-electric

Transmission Line

Maxwell Equation

BAE 408 Analogue & Digital Electronics (5 pt)

Subject Objective	<p><u>Analogue</u></p> <p>The main objective of this subject is to familiarise students with basic electronic circuits, mainly with op-amps as active elements, and their applications.</p> <p><u>Digital</u></p> <p>The objectives of this subject are to enable students to master the fundamentals of digital and programmable electronic circuits and their engineering applications; master the hardware architecture of a typical small computer system; and understand the principles of low-level programming and gain an ability to write simple assembly code.</p>
Learning outcome	<p><u>Analogue</u></p> <p>By the end of the subject, students should have acquired reasonable proficiency in the analysis of basic electronic circuits and be able to build and test circuits in the laboratory. Particular emphasis is placed on the practical, hands-on aspect of electronics to provide a solid foundation of working knowledge for basic analog electronic circuits using op-amps. Laboratory work is a significant proportion of in-class delivery so as to make students proficient in circuit construction, testing, troubleshooting and to give them a sound knowledge of the use of test instruments. Another objective is to show that practical electronic applications are relevant to other engineering and technical disciplines and may often be placed within a wider social or commercial context.</p> <p><u>Digital</u></p> <p>Students are introduced to the basics of concurrent and real-time application programming. Topics include digital sequential circuits; state diagram and its application in the design of digital circuits; basic hardware architectures of the digital computer in terms of its building blocks; how hardware integrates with software at the machine level; low-level language programming; internal architecture and design of a typical register-based central processing unit and a main memory subsystem, and their interdependence; concepts of computer system buses, as well as different types of input and output devices; interrupts; input and output; micro-controller theory; and hardware interfacing design techniques.</p>

Discrete Fourier Transform
Butterworth Low Pass Filter
Butterworth High Pass Filter
Image restoration / Noise analysis

BAE 501 Advanced Power Systems & Power Transmission Networks (3pt)

Subject Objective	The subject introduces the basic methods used in the analysis and design of electric power networks.
Learning outcome	Its purpose is to give students a working knowledge of modern power system theory and practice. Techniques introduced in earlier circuit analysis subjects are further developed and applied to power system problems.
Credit Point	3
Hours	72
Assessment	Assignment/ Test/ Online MCQ Test/Online simulated practicals

Contents

Principle of Power System

Source of energy
 Steam power station
 Hydro power station
 Diesel power station
 Nuclear power station
 Gas turbine power station
 Variable load on power station
 Interconnected grid system
 Economic of power generation
 Importance of high load factor
 Tariffs
 PF improvement
 Supply system
 Mechanical design of OH line
 Corona
 Sag
 Electrical design of OH line
 Performance of transmission line
 Line generalised constants
 UG cable
 Capacitance in 3 core cable
 Distribution system
 DC Distribution
 DC System
 AC Distribution
 Voltage control
 Introduction to switch gear
 Circuit breaker
 Fuse
 Relays

Protection transformers
Substation

Advanced Power System –Power Transmission Network

Consequence of power quality
Power quality & applications
Power quality analysis
Power quality monitoring
Management, control and automation of power quality
improvement

Electrical generation and distribution system and power quality disturbances

Integration of hybrid distribution units in power grid
Optimal location and control of multi hybrid model based wind shunt facts to enhance
power quality
Power quality and voltage sags indices in electrical power systems.

Power Transmission Line

AASR Conductors

Fault calculation in line

Electrical Power Distribution in Industry & Transmission (Electrical Distribution Engineering)

Planning & design
Electrical design
Mechanical design (Over head)
Mechanical design (Under ground)
Metering
Conductor inductance & capacitance

Power Transmission and Practical Power Distribution

Electric power system
Percentage and per unit quantities
Circuit constants
Assemblies of power system components
Power circuit stability

BAE 502 Linear System (1 pt)

Subject Objective	This subject presents the theoretical basis for system analysis and gives students skills in using the techniques to design components of linear control systems..
Learning outcome	<p>To do the design and implementation of part of a control/communication system</p> <p>To apply their knowledge to a real-life problem. Topics include signal types and their representation in the time and frequency domains; modelling systems with differential or difference equations and transforms of the equations; signal operations and processing; the relationship between discrete and continuous quantities and the mathematical techniques applicable to each; the effects of feedback; time and frequency domain performance of systems; system stability; and control design techniques and simple communication systems. Through learning activities students also gain study skills, including academic literacy skills, and an appreciation of the different fields of practice of engineering and the interdisciplinary nature of engineering.</p>
Credit Point	1
Hours	24
Assessment	Assignment/ Test/ Online MCQ Test

Contents

Controllability of linear control system
 Finite dimensional linear control system
 Linear partial differential equations
 Introduction to intelligent control system with high degrees of autonomy
 Overview of field

Control system

System identification
 Digital and analog
 System metrics
 System modelling
 Classical control
 Transform
 Transfer functions
 Sampled data system
 System delays
 Poles and zeros
 Modern control
 State space equation
 Linear system solution

BAE 503 Control System (4 pt)

Subject Objective	The objective of this subject is to enable students to model with validation control systems and to analyse, design and implement both analog and digital controllers so that the controlled systems conform with given specifications
Learning outcome	<p>Emphasis is placed on laboratory work, the theoretical content of the subject being only that required to produce successful designs.</p> <p>To work on reduced scale models of actual industrial processes. The equipment is based upon experience gained with authentic control applications and is suitably modified for student use.</p> <p>To follow the usual sequence adopted in industry, i start with the calibration of transducers and actuators leading on to dynamic response testing, physical modelling, model verification and finally to controller design, implementation and testing.</p>

Hours	96
Assessment	Assignment/ Test/ Online MCQ Test/ Programmable Control Program software applications
	<p>Topics include linear and nonlinear modelling of control systems using Newton's rules, analogous networks or Lagrangian techniques; linearisation and development of linear, time-invariant transfer functions; development of lead-lag compensators or PID controllers using classical control design techniques such as root locus, Bode gain and phase diagrams, Nyquist plots and Nichols chart; development of state-variable equations from differential equations; development of state-variable feedback controllers and state observers; open-loop pulse transfer functions and discrete-time state models; discretisation using backward difference, bilinear, step-invariance or pole-zero mapping; development of digital PID controllers, deadbeat controllers and discrete-time state-variable feedback controllers; describing functions and limit cycles for nonlinear control systems; and the development of linear controllers for nonlinear systems using describing function techniques.</p>

Contents

Gain
 Block diagram
 Feedback control loop
 Bode plot
 Nichol chart
Stability
 Stability
 Routh Hurwitz Criterion, Root Locus

Nyquist Criterion
 State Space Stability
Controllers & Compensators
 Controllability & Observability
 System Specifications
 Controllers, Compensators
 Z - Transform

Non Linear Control Applications

Application of input/ output linearization
 Non linear control for 2 stages PF correction converter
 Non linear observer based control allocation

Control Engineering MATLAB

Transfer functions and their responses
 Frequency response/ Plotting
 Closed loop control
 Controller design

Feedback and Control System

Introduction to linearized dynamic model
 Transfer function model of physical systems
 Transient performance / S- Plane
 Feedback system modelling / Performance
 Dynamic compensation of feedback system

PID Control

Application of PID controllers in motor drive system

Applications of Non Linear Control

Introduction
 Phase plane method

Process Control

Analog Signal Conditioning
 Digital Signal Conditioning
 Final Control
 Discrete State Control
 Controller Principle

Analog Controller
Digital Controller
Control Loop Characteristics

Numerical Control

Introduction to numerical control machinery
Numerical control system
Programming co-ordinates
Two axis programming
Three axis programming
Maths for numerical control programming

BAE 504 Power System Analysis (1 pt)

Subject Objective	The primary objective of this subject is the development of a working knowledge of power systems analysis and design.
Learning outcome	Emphasis is placed on the derivation of equivalent circuits, mathematical models of devices and the system, and on methods of analysis and measurement. Material covered includes electricity supply chain building blocks, system analysis, real/reactive power and load flow analysis, dynamic and transient stability.
Credit Point	1
Hours	24
Assessment	Assignment/ Test/ Online MCQ Test

Contents

Overview
 Real & Reactive power injected bus
 Classification of buses
 Classification of buses
 Preparation of data for load flow
 Load flow by Gauss Seidel method
 Updating load bus voltage
 Updating PV bus voltage
 Convergence of the algorithm
 Solution of a set of non linear equation by Newton Raphson method
 Load flow by Newton Raphson method
 Load flow algorithm
 Formation of Jacobian matrix
 Formation of Jacobian matrix
 Solution of Newton Raphson load flow
 Load flow results
 Load flow results
 Load flow programs in MATHLAB
 Forming Y bus matrix
 Gauss Seidel Load Flow
 Solving non linear equation using Newton Raphson method
 Newton Raphson load flow

Power System Analysis

Transformer
 Transmission line model
 Gauss Seidel Algorithm
 Newton Raphson Iteration
 DC Power Flow Algorithm
 Modelling
 Transient Stability

Power System Analysis

Power Apps Transient Stability validation document for single pole open/ close simulation (Power flow analysis + FAULT ANALYSIS + Power system dynamics and Stability)

Static Analysis
Introduction
Network model
Active & reactive power flow
Nodal formation of power flow problem
Basic power flow problem
Solution of power flow problems
Fault analysis
Power system dynamics and stability
Synchronous machine model
The swing equation
Power swing in simple system
Oscillation in multi machine system
Voltage stability
Control of reactive power voltage

BAE 505 Power System Optimization (1 pt)

Subject Objective	The primary objective of this subject is the development of a working knowledge of optimal power systems operation.
Learning outcome	The subject aims to provide students with a knowledge and understanding of elements of the supply chain and how they function in the National Electricity Market; demand-side management options including smart meters; load forecasting and optimal load scheduling for secure energy supply and use; protection schemes for transmission and distribution networks; communications in power systems, including communication media, architectures, automation, standards, protocols and security; and basic design, connection and standards of current and voltage instrument transformers for protection and metering applications.
Credit Point	1
Hours	24
Assessment	Assignment/ Test/ Online MCQ Test

Contents

Introduction
 Power Flow Analysis
 Classic Economic Dispatch
 Linear programming method
 Mathematical model of economic dispatch
 Linear programming model
 Optimization of power system performance using facts devices
 Optimization of dynamical system

Matrix Eigen Value Method

BAE 506 Power System Stability & Protection (2 pt)

Subject Objective	The primary objective of this subject is the development of a working knowledge of power systems operation and protection. The subject aims to provide students with a knowledge and
Learning outcome	To provide the understanding of elements of the supply chain and how they function in transmission and distribution networks; communications in power systems, basic design, connection and standards of current and voltage instrument transformers for protection and metering applications.
Credit Point	2
Hours	48
Assessment	Assignment/ Test/ Online MCQ Test/ Simulated Online Practical

Contents

Transient in RL circuit
 Symmetrical fault
 Transient in RL circuit
 DC Source
 AC Source
 Faults in AC Circuit
 Short circuit in unloaded synchronous generator
 Symmetrical faults in power system
 Calculation of fault current using Z bus matrix
 Circuit breaker selection
 Symmetrical components & representation of faulted network
 Overview
 Overview
 Real & reactive power
 Real & reactive power
 Orthogonal Transformation
 Sequence circuit for star load
 Sequence circuit for delta load
 Sequence circuit for synchronous generator
 Sequence circuit for symmetrical transmission line
 Sequence circuit for transformer
 Star/ Star Connected Transformer
 Delta/Delta Connected Transformer
 Star/ Delta Connected Transformer
 Sequence Network
 Un- symmetrical Faults
 Introduction
 Single line to ground fault
 Line to line fault
 Two lines to ground fault
 Fault current computation using sequence network

Transient Stability

Introduction

Power angle relationship

Swing equation

Equal area criterion

Equal area criterion

Multi machine stability

Oscillation in “ S “ Two areas System

Compensation of power transmission

Introduction

Ideal shunt compensator

Improving voltage profile

Improving power angle characteristics

Improving stability margin

Improving damping power oscillations

Ideal series compensator

Impact of series compensator for voltage profile

Improving power angle characteristics

Improving power angle characteristics

Alternate mode to voltage injection

Alternate mode to voltage injection

Comparison of two modes of operation

Power flow control and power swing damping

Power System Protection

Different types of relays and settings

- Technical feasibility of various options
- Cost of options
- Type of transmission AC/DC
- Number of circuits
- Conductor type
- Transmission loss
- Reactive power support requirements
- Reliability
- Quality of power supply
- Stability aspects of the interconnected system
- Operational planning
- Short circuit levels and breaker requirements
- over voltages and control
- Insulation coordination at substations
- Substation arrangements at the end of line, including switching arrangements.

- Insulation requirements.
- Protection, monitoring, control and automation requirements
- Study of harmonics where needed [as in case of HVDC or when a terminating station is close to sources of harmonics]
- Basic and Detailed engineering related to transmission towers, routes, substations

Philosophy of protective relaying

Fundamental of relaying

Current/ voltage/directional/ differential relay

Distance relaying

Pilot wire relay

Carrier current relay

Voltage transformer

Relay response

Generator protection

Transformer protection

Busbar protection

Line protection

Line protection with distance relay

Line protection with pilot relay

Power system stability

Power system stability Guidelines

Power system stability guidelines for determination and report

Direct stability analysis of electric power system using energy functions

Power system stability –New opportunity for control

Typical power quality and harmonic measurement plots

Robust power system stabilizer design using particle swarm optimisation techniques

Harmonic analysis

Power Quality

Power quality

Electrical protection for power system

Substation automation

Introduction to power quality

Harmonic model of transformer

Substation automation

Modelling analysis of synchronous machines

Life time reduction

Power system modelling under non sinusoidal condition

Impact of power quality on reliability

Role of filters in power system

BAE 507 Electro-mechanical Energy Conversion (2 pt)

Subject Objective	The objectives of this subject are to enable students to: acquire an understanding of the nature of power semiconductor devices and their control and use in switch-mode;
Learning outcome	To understand the arrangement and topology of the circuits in which switch-mode devices are used; appreciate the use of power electronic circuits in high-power applications such as motor drives; be aware of the electromagnetic interference problems associated with power electronic systems; use commercial software for the rigorous circuit analysis of real power electronic systems; analysis and design circuits to meet specific specifications; and fabricate basic power electronic circuits such as a chopper.
Credit Point	2
Hours	48
Assessment	Assignment/ Test/ Online MCQ Test/ Simulated online practical

Contents

Basic semiconductor physics
 PN Junction semiconductor
 Power switching devices
 Electrical rating of switching devices
 Cooling
 Load/ switch communication
 Driving semiconductor & thyristor
 Protecting diode / Thyristor/ Transistors
 Switching circuit energy recovery
 Series , parallel devices operation protection
 Naturally commutating converter
 AC Voltage Regulator
 DC choppers
 Power inverters
 Switched mode & resonant DC-DC power supplies
 Capacitors
 Soft magnetic materials
 Resistors

Motor Control Electronics

AC Induction motor control
 Motor control MCU
 Networking for motor control system
 DC motor control design
 Motor control electronic devices
 Power semi conductors

Mechatronics/ Robotics

Robotics Application
Robotic Gears
Interfacing
Robotic Sensors
Communication

BAE 508 Industrial Engineering & Industrial Management (1 pt)

Subject Objective	To work effectively in industry as middle level managers
Learning outcome	To acquire the introductory skills in business information system, engineering management, supervision, quality control, manufacturing management , human resources management, budgeting, operation and managerial decision making.
Credit Point	1
Hours	24
Assessment	Assignment/ Test/ Online MCQ Test

Contents

Effective management decision making

Introduction

Business Information System

Defining Information System

Acquiring Information System

Developing Information System

Managing Human Resources in 21 Century

Human resources Management

Management Basics

The Manager's Job

Planning in Organization

Operation Management

Operation Strategy

Work System Design

Project Management

Inventory Management

Quality Management

Leadership in Quality Management

Strategic Quality Management

Implementing Quality Management

Strategic Financial Management

Finance An Overview

Capital Budgeting

Equity Valuation & Cost of Capital

Strategic Management

The Basic of Strategy

The Levels of formulation of strategy

External analysis

Internal analysis

Strategy implementation

Understanding organization part 1

Organization structure

Organization culture

Managing behaviour

Effective leadership

Part (2) Competency Units

Mgt 501 Basic Management & Communication Skills (1 pt)

Textbook – Mgt 501 Management Basics

Chapter (1) Management basics

Chapter (3) Planning

Chapter (5) Organizing

Chapter (6) Organizing the organization

Chapter (7) Leading

Textbook—Mgt501 Management Briefs

Chapter (2) Leadership

Chapter (5) Motivation

BAE 601 Computer Programming (3 pt)

Subject Objective	This subject provides basic skills in Java/ C/C++/C# programming and software design,
Learning outcome	<p>To acquire the skill practice in object-oriented (OO) programming concepts, data flow, control flow, arrays, and the basics of sorting and searching algorithms.</p> <p>To illustrate a design process using a set of design notations and design rules, and shows how to develop a correct, readable and reusable solution from a problem specification.</p>
Credit Point	3
Hours	72
Assessment	Assignment/ Test/ Online MCQ Test/ Programming software application

Contents

Part (1) Overview Knowledge of the subject

Select any of the following textbooks

- C Programming
- C++ Programming
- C# Programming
- Object Oriented Programming
- C Programming in Linux

IT 401 Object Oriented Programming (1 pt)

IT 402 Structured Programming (1 pt)

IT 403 Visual Basic Programming (1 pt)

BAE 602 Computer Network (1 pt)

Subject Objective	The objectives of this subject are to introduce students to the basic concepts and terminology used in telecommunication networks and a system-level view of network operation.
Learning outcome	To understand the evolution of telecommunication networks; services and applications (voice, video, data, location-based services, multimedia, gaming, etc.); network protocols (TCP/IP, OSI); transmission and switching basics; transmission media; access networks; PSTN; internet (dial up, broadband, ISP); network security; mobile networks (2G, 2.5G, 3G, 4G); data networks (LANs, wireless LANs, WANs, SANs, PANs, enterprise networks); VoIP networks; and convergence in telecommunication networks, next generation networks (NGN) and digital identity in networks.
Credit Point	1
Hours	24
Assessment	Assignment/ Test/ Online MCQ Test

Contents

Computer Network
 Peer to peer networking
 Client server networking
 Network hardware
 Network cable
 Hub
 Wired network
 Wireless network card
 Firewall
 Wiring the network
 Wiring the network
 Running the network program
 Viewing network connection
 Network set up on additional computers
 Viewing network connection

Introduction
 Network model
 Data and signals
 Data and signals
 Data rate limit
 Performance
 Digital transmission
 Digital transmission
 Analog transmission
 Analog transmission

Bandwidth utilization/ Multiplexing/
Spreading
Bandwidth utilization/ Multiplexing/
Spreading
Transmission media
Error detection & correction
Error detection and correction
Defining needs
Area covered
Organization information requirement
System VS Procedure
Types of systems
What are the systems?
Infrastructure
Support system
Data mart
Organizational structure
Planning for system development
System design
Security of information system
Risk management

BAE 603 Software Engineering (2 pt)

Subject Objective	This subject introduces students to the fundamentals of contemporary software engineering.
Learning outcome	<p>To overview of the agile and non-agile software engineering principles, methods, tools and techniques is presented. Current trends and challenges in the practice of software engineering are explored.</p> <p>To apply contemporary agile requirements analysis, planning, architecture, design, implementation and testing practices to software engineering project work in small teams.</p>
Credit Point	2
Hours	48
Assessment	Assignment/ Test/ Online MCQ Test/ Software Design Practice

Contents

Introduction
 Software process
 Feasibility study
 Project management
 Documentation, Requirement analysis
 Requirement specification
 Business/ Legal aspect
 Source code management
 Formal specification
 Object oriented design 1
 Object oriented design 2
 Object oriented design 3
 System Architecture 1
 System Architecture 2
 System Architecture 3
 Design for utility
 Performance of computer system
 Coding standard/ Tools for designing 1
 Dependable system 1 Reliability
 Dependable system 2 Validation
 Law aspect
 Risks in software engineering
 Software engineering as engineering

Nano Technology

What is Nano technology?
 Motivation for Nano technology
 Scaling laws
 Nano technology

BAE 604 Telecommunication Engineering (2 pt)

Subject Objective	On completion of this subject, students have learned the skills to systematically analyse network operations and performance, and also have the ability to appreciate approaches in designing communication and computer networks.
Learning outcome	To understand the communication architecture. To provide the necessary background in understanding operations of TCP/IP, the mostly widely implemented protocol stack in computer networks, on a layer-by-layer basis.
Credit Point	2
Hours	48
Assessment	Assignment/ Test/ Online MCQ Test

Contents

Communication fundamental
 Information & bandwidth
 Amplitude modulation transmission
 Amplitude modulation reception
 Single side banded communication
 Frequency modulation –Transmission
 Frequency modulation –Reception
 Communication Techniques
 Communication Receivers
 Pulse Modulation
 Code transmission
 ISDN
 Transmission lines
 Wave propagation
 Antenna
 Fibre optics

Data Communication

Overview of data communication
 Data terminals
 Message and transmission channels
 Asynchronous modems and interfaces
 Synchronous modem and digital transmission
 Protocol and error control

Electronics Telecommunication

RF Transmission
 Transmission Lines & Antennas, Video signals

BAE 605 Engineering Management (5 pt)

Subject Objective	To work effectively in industry as middle level managers
Learning outcome	To acquire the advanced skills in business information system, engineering management, supervision, quality control, manufacturing management , human resources management, budgeting, operation and managerial decision making.
Credit Point	5
Hours	120
Assessment	Assignment/ Test/ Online MCQ Test+ Submission of engineering design project (Minor thesis)

Part (1) Overview Knowledge of the subject

Completion of BAE 508 Overview also completes BAE 605 Overview

Part (2) Competency Units

Mgt 502 Operation Management (1 pt)

Mgt 503 Production & Operation Management (1 pt)

Mgt 504 Project Management (1 pt)

Mgt 505 Quality Management and Manufacturing Engineering (1 pt)

Mgt 506 Strategic Financial Management (1 pt)

Mgt 502 Operation Management (1 pt)

Product design and process selection

Total quality management

JIT & Lean System

Capacity planning

Mgt 503 Production & Operation Management (1 pt)

Planning production

Managing inventories-Material requirement planning

Manufacturing

Dealing with technology and design

Operation strategy

Mgt 504 Project Management (1 pt)

Project management

Project organization

Project plan

Progress& performance measurement

Risk management

Documentation/ Audit/ Closure

Mgt 505 Quality Management and Manufacturing Engineering (1 pt)

Background

Why quality management

Standards and models

Progress& performance measurement

Strategic quality management

Documentation/ Audit/ Closure

Mgt 506 Strategic Financial Management (1 pt)

Capital budgeting

Treatment of uncertainty

Debt valuation and cost of capital

Capital gathering & cost of capital

BAE 606 Building Service Electrical & Mechanical Engineering

(2 pt)

Subject Objective	To work effectively in M & E Engineer in building construction & building service industry
Learning outcome	To understand the methods of building construction To understand aircondition & refrigeration systems. To design the water supply system for building To design fire protection, building automation systems
Credit Point	2
Hours	48
Assessment	Assignment/ Test/ Online MCQ Test/ Building service design project.

Contents

Building Construction 1

Making building
 Foundations
 Wood
 Interior finish for wood light frame construction
 Wall types
 Concrete construction

Air-conditioning & Refrigeration

Controlling the temperature of mass
 Electric heat
 Humidification
 Air-conditioning –Cooling / Comfort
 Air-distribution & Balance
 Reference Tables

Sanitation & Water Supply

Design of onsite sanitation system
 Hydraulic design of sewers

Building Electrical & Mechanical System Part 1

Climate comfort and design strategies
 Thermal control

Designing for heating cooling
Large building HVAC system
Water and basic design
Water supply
Water and waste
Fire protection
Fire protection
Illumination
Lighting design
Signal system

Airconditioning and Refrigeration

Theory of heat
Solar heat
Humidification
Air-conditioning-Cooling
Air-distribution & Balance
Air-conditioning Calculation worksheets

BAE 607 Radio Wave Propagation & Microwave Techniques (2 pt)

Subject Objective	This subject presents the theoretical basis for system analysis and gives students skills in using the techniques to design components of communication systems.
Learning outcome	io understand radio & microwave signal types and their representation in the time and frequency domains; modelling systems with differential or difference equations and transforms of the equations; design of antenna, propagation principle
Credit Point	2
Hours	48
Assessment	Assignment/ Test/ Online MCQ Test

Contents

Radio Wave Propagation

Introduction to radio wave propagation
 Propagation features/ Overviews
 Electromagnetic waves, Prpagation through atmosphere
 Antenna
 Radio wave propagation fundamentals
 Antennas and propagation
 Mobile radio propagation
 Propagation
 Wave propagation
 Radio navigation
 Wireless communication

Microwave Technique

Microwave antenna and radio wave propagation
 Distributed element circuit analysis techniques
 Matching networks
 Couplers, combiners, dividers
 Mixers
 Gain and stability
 Noise
 Electromagnetism and RF Propagation
 Antenna Fundamental
 Communication system
 RF Safety

 Rain attenuation of microwave and milli-meter wave signals

 Design of microwave filters (Vol 1)

Mechanically & magnetically tunable microwave filters
Design of microwave filters (Vol 1)
General applications of filter structure in microwave engineering
Properties of some common microwave filter elements

BAE 608 Professional Engineer Competency Demonstration Report

- The students will have to write Engineering Competency Demonstration Report based on their academic study and work experiences gained after completion of academic study.
- Competency Demonstration Report is voluntarily to be submitted. It prepares the students to have the necessary skills to gain the membership of Engineers Australia later.
- The outlines of Competency Demonstration Report will be provided to the students after completion of the last course work subject.

BAE421 Building Construction Engineering

Subject Objective	<p>To understand the methods of design, construct, maintain, inspect and manage private and public work projects</p> <p>To understand the effects of environments on the properties and performance of construction materials</p>
Learning outcome	<p>To have a basic understanding of construction materials, in relation to their production, properties, testing and application. The main objectives of this subject are to help students acquire fundamental knowledge of the production, physical and engineering properties of construction materials;</p> <p>To understand the construction techniques, methods, schedules & application of construction materials in building construction.</p> <p>To be familiarize with rules, regulations and industrial standards related to building construction.</p>
Credit Point	4
Hours	96
Assessment	Assignment/ Test/ Online MCQ Test/ Building Design Practice Online simulation

Contents

- Basic skills
- Isometric drawing
- Retaining walls & Post footings
- Stair
- Doors & Windows
- Trusses
- Buildings
- Collar truss
- Howe truss

- Timber
- Steel
- Brick masonry
- Timber
- Brick-nogging
- Steel
- Reinforced concrete
- Floor plans
- Foundation plan
- Cross section
- Front elevation
- Back elevation
- Left side elevation
- Right elevation
- Culverts
- Bridges
- Buildings
- Pipe culvert
- Box culvert
- Slab culvert
- Deck and girder bridge
- Half top plan of culvert
- Half bottom plan of culvert
- Cross section of culvert
- Longitudinal section of culvert

- Elevation of culvert
- Mix Design
- Permissible water cement ratio

BAE422 Estimating (2 pt)

Subject Objective	To understand the methods of costing, material requirement planning in building construction
Learning outcome	To perform the costing, estimating, rate analysis, to interpret the construction drawings & determine the bills and quantities of construction materials.
Credit Point	2
Hours	48
Assessment	Assignment/ Test/ Online MCQ Test

Contents

- Preliminary estimates
- Detailed estimating
 - Culverts
 - Bridges
 - Buildings
 - Roads
- Analysis of rates
- Detailed Estimating
- Buildings
- Up to plinth level
- Above plinth level
- Culverts
- Bridges
- Roads
- Earthworks

- Analysis of Rates
- Total workdone
- Material and labour requirements
- Estimated cost
- Actual PAE or CCE or RFT
- Complete items
- Quantity
- Measurements
- Content calculation
- Rates
- Buildings
- Above plinth level
- Culverts
- Analysis of rates

BAE423 Fluid Mechanics (2 pt)

Subject Objective	This subject aims to enable students to: understand key concepts and fundamental principles, together with the assumptions made in their development, pertaining to fluid behaviour, both in static and flowing conditions; deal effectively with practical engineering situations, including the analysis and design of engineering systems and devices involving fluids and flow; appreciate possible applications and links to other disciplines; and engage in further specialised study or research..
Learning outcome	The subject also aims to enhance interests in fluid phenomena and applications. Topics include: fluid properties and statics; conservation laws of mass, momentum and energy; flow in pipes; external flow (lift and drag); boundary layers; flow measurements; and environmental fluid mechanics
Credit Point	2
Hours	48
Assessment	Assignment/ Test/ Online MCQ Test

Contents

- *Methods of Application of water*
- *Water Logging, Drainage, land reclamation and irrigation management*
- *Theoretical Concepts of Boundary Layer, Surface Roughness, Velocity Distribution*
- *Gradually varied flow*
- **Scale Model in Hydraulic Engineering**
- Surface irrigation methods
- Subsurface irrigation methods
- Sprinkler irrigation
- Drip or trickle irrigation
- Flooding Methods
- *Wild or uncontrolled Flooding*
- *Controlled Flooding*
- *Flooding from field channels*
- *Border strip methods*

- *Check method*
- *Basin method*
- *Zig-zag method*
- Furrow Method
- Contour Farming

BAE424 Reinforced Concrete (2 pt)

Subject Objective	To have knowledge of structural design, including the behaviour and design of reinforced concrete (RC) and, to a lesser extent, of prestressed concrete (PSC) elements as parts of overall structures.
Learning outcome	This subject builds on the knowledge of statics, solid mechanics and structural analysis of indeterminate structures that the students have learnt in the previous structural strand subjects. Students learn about the behaviour and design of RC beams, slabs and columns and PSC beams, for both serviceability and strength. Initially, the students are introduced to the Limit State Design philosophy of Australian Standards for structural design and to the material properties of concrete, reinforcement and prestressing steel used for design. RC topics include uncracked section analysis of beams, cracked section analysis of beams (linear-elastic, Desayi-Krishnan, ultimate) for strength and design for strength to AS3600, serviceability design of beams, ductility of singly and doubly reinforced sections, design for shear, T-beams, approximate analysis and design of one-way, two-way slabs and flat slabs/plates, columns (interaction diagrams and slenderness effects), pad footings, cantilever retaining walls and reinforcement detailing. PSC beam topics include history, uncracked section analysis, equivalent loads, load-balancing, cracked section analysis (linear-elastic and ultimate), design for bending, shear, transfer, anchorage.
Credit Point	2
Hours	48
Assessment	Assignment/ Test/ Online MCQ Test

Contents

- Design of Concrete Structures
- FUNDAMENTALS OF FLEXURAL BOND
- Source of bond strength
- Bond Stress Based on Simple Cracked Section Analysis
- Actual Distribution of Flexural Bond Stress
- Development Length
- Factors influencing Development Length
- ACI CODE PROVISION FOR DEVELOPMENT OF TENSION REINFORCEMENT
- ANCHORAGE OF TENSION BARS BY HOOKS
- Development Length and Modification Factors for Hooked Bars

- ANCHORAGE REQUIREMENTS FOR WEB REINFORCEMENT
- Special Requirements near the Point of Zero Moment
- Structural Integrity Provisions

BAE425+525 Timber Engineering (2 pt)

Subject Objective	To have knowledge of structural design, including the behaviour and design of timber structures in construction engineering.
Learning outcome	This subject builds on the knowledge of statics, solid mechanics and structural analysis of indeterminate structures that the students have learnt in the previous structural strand subjects. Students learn about the behaviour and design of timber beams, slabs and columns for both serviceability and strength. Initially, the students are introduced to the Limit State Design philosophy of Australian Standards for structural design and to the material properties of timber and seasoning the timbers used for design.
Credit Point	2
Hours	48
Assessment	Assignment/ Test/ Online MCQ Test

Contents

- Bending Stress and Deflection of Wood Joists
- Shearing Stress Caused by Stationary Concentrated Load
- Shearing Stress Caused by Moving Concentrated Load
- Strength of Deep Wooden Beams
- Design of a Wood-Plywood Beam
- Determining the Capacity of a Solid Column
- Design of a Solid Wooden Column
- Investigation of a Spaced Column
- Compression on an Oblique Plane
- Design of a Notched Joint
- Allowable Lateral Load on Nails
- Capacity of Lag Screws

- Design of a Bolted splice
- Investigation of a Timber-Connector Joint

BAE521 Road & Bridge (2 pt)

Subject Objective	To have knowledge of structural design, including the behaviour and design of road & bridge structures in construction engineering.
Learning outcome	<p>This subject builds on the knowledge of statics, solid mechanics and structural analysis of indeterminate structures that the students have learnt in the previous structural strand subjects.</p> <p>Students learn about the behaviour and design of road, bridge, slabs and columns in bridge for both serviceability and strength. Initially, the students are introduced to the Limit State Design philosophy of Australian Standards for structural design and to the material properties of road & bridge construction</p>
Credit Point	2
Hours	48
Assessment	Assignment/ Test/ Online MCQ Test

Contents

- Hydraulic Design of Bridge
- The establishment of afflux levels
- Back water levels
- Long Contraction
- Yarnell's empirical equation
- The limiting values of σ
- Skewed bridges
- Discharge computation
- Scour depth under the bridge
- Scour around bridge piers
- Scour protection works around bridge piers
- Road bridge

BAE522 Rock Mechanics (2 pt)

+

BAE523 Soil Mechanics (2 pt)

Subject Objective	The aim of this subject is to develop students' technical competence in the analysis of soil masses and of structures associated with the soil. The analysis of footings, retaining walls and soil slopes are examples.
Learning outcome	By completing this subject, students should be able to understand the concept of failure in soil and apply it to the analysis of soil masses; critically appraise a problem in order to decide which particular analysis should be used; identify the limitations of their analyses and carry out appropriate solution validation; be responsible for the analysis component of a design team; study the relevant literature and learn to apply new or more complex methods of analysis; and carry out fieldwork in association with subsurface investigations. Topics include introduction to geotechnical design – criteria, codes, engineering judgment; site investigation – planning, fieldwork, techniques; shallow foundations – types, bearing capacity theories, retaining structures; earth pressure theories – Rankine and Coulomb, analysis of gravity walls, cantilever walls, braced excavations; deep foundations – types, load-carrying capacity, settlement, group behaviour, lateral loading; slope stability – failure mechanisms, infinite slopes, rotational failure, remedial measures; and soil improvement – compaction, soil stabilisation, dewatering, preloading.
Credit Point	4
Hours	96
Assessment	Assignment/ Test/ Online MCQ Test/ Design Project

Contents

- Soil
- Soil Mechanics
- Geotechnical Engineering

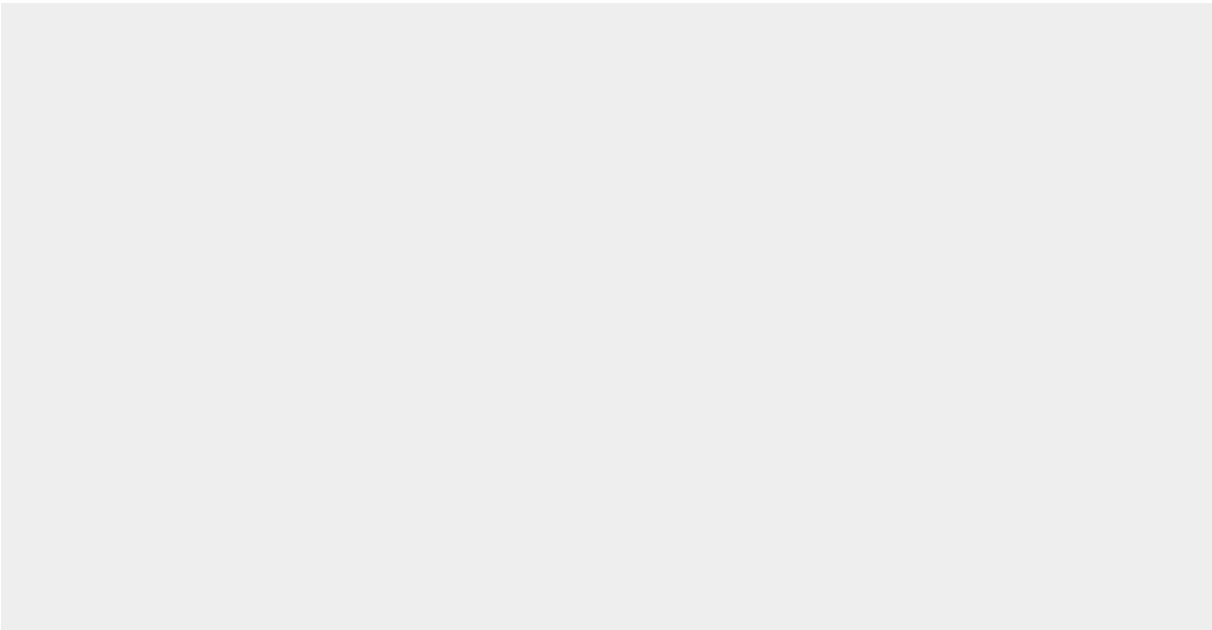

- Subsoil Exploration
- Testing (In-situ Tests & Laboratory Tests)
- SPT, CPT, Vane Shear Test
- Moisture content
- Index Properties Tests (LL, PL, SL)
- Grain Size Distribution Test (Sieve Analysis& Hydrometer)
- Specific Gravity
- Shear Strength Tests (Tri-axial Compression:, Direct Shear, Unconfined Compression:)
- Compaction test, CBR Test
- Consolidation Test, Permeability Test

BAE 523A Environmental Engineering

Subject Objective	Increasingly biological principles are being integrated as part of engineered systems to create innovative and effective design solutions. This subject teaches fundamental chemical, physical and biological principles which can be used to analyse data and formulate design solutions to environmental problems particularly related to water quality.
Learning outcome	To understand hydrology, soils, ecosystems, material balances, nutrient cycles, risk and water quality engineering. The way this knowledge is utilised by engineers for ecosystem restoration and engineered treatment systems is examined.
Credit Point	2
Hours	48
Assessment	Assignment/ Test/ Online MCQ Test

Contents

- Distribution of water
- Requirement for good distribution system
- METHOD OF DISTRIBUTION
- Gravity System
- Combined gravity and pumping system
- Pumping system
- PRESSURE IN DISTRIBUTION MAINS
- SYSTEM OF WATER SUPPLY
- CONTINUOUS SYSTEM
- INTERMITTENT SYSTEM
- DRAWBACKS OF INTERMITTENT SYSTEM
- DISTRIBUTION RESERVOIR
- CAPACITY OF DISTRIBUTION RESERVOIR
- **Mac Donald's equation**
- DETERMINATION OF STORAGE CAPACITY

- Hydrograph method
 - Mass curve method
 - HEAD LOSS DUE TO FRICTION
 - Darcy Weisbach formula
 - Hazen William formula
 - Manning's formula
 - Combined Darcy Weisbach and Colebrook White formula
 - LAYOUT OF DISTRIBUTION SYSTEM
 - Dead end system or Tree system
 - Grid iron system or Reticular system
 - Circular system or ring system
 - Radial system
 - ANALYSIS OF PRESSURE IN DISTRIBUTION SYSTEM
 - Equivalent pipe method
 - Hardy cross method
- 

BAE621 Structural Engineering (3 pt)

Subject Objective	This subject covers methods and concepts which are fundamental to the analysis of linear elastic structural frameworks.
Learning outcome	Students learn how load bearing structures respond to the actions of directly applied loads as well as environmental effects such as temperature and foundation settlements. Topics covered include: computing deformations in plane frames using the principle of virtual work; the analysis of statically indeterminate structures using both, the force method as well as the method of moment distribution; and how to establish influence lines and how to use them in finding maximum load effects. A brief introduction to non-linear analysis of structures is also given.
Credit Point	3
Hours	72 hr
Assessment	Assignment/ Test/ Online MCQ Test/ Structural Design

Contents

- DESIGN OF A SLAB BRIDGE
- FOUNDATION SETTLEMENTS
- Major problems with soil settlement analysis
- Settlement classification
- Immediate settlement& consolidation settlement
- Stresses in soil mass
- Approximate method (2:1 slope)
- Boussinesq's method
- Westergaard's method

BAE623 Surveying & Traffic Engineering (2 pt)

Subject Objective	<p>Surveying</p> <p>The objectives of this subject are to enable students to: become competent in the theory and practice of basic surveying skills.</p> <p>Traffic Engineering</p> <p>To understand the transportation planning principles & methods</p>
Learning outcome	<p>Surveying</p> <p>To be able to use basic surveying equipment such as levels and theodolites and perform the calculations and reductions of observations associated with such equipment; be aware of the likely errors that may occur during observations and of methods to eliminate or minimise such errors; be competent in making distance measurements accurately over short distances using tapes and wires and be aware of the advantages of modern developments in this field such as Electronic Distance-measuring Equipment; be able to perform a simple traverse and associated calculations to find the misclose and proportional accuracy, and the bearing and distance of one missing line; understand and be able to perform relevant calculations for the engineering applications of surveying (horizontal curves, vertical curves, and areas and volumes); and be aware of field techniques used to enable preparation of a detail and contour plan. The stadia method is discussed in class and is used as a data-gathering tool in a practical exercise. The applications of modern computer programs to reduce data for and the plotting of detail and contour plans are introduced. Services of professional surveyors are explained, as are engineering situations where surveyors must be engaged.</p> <p>Traffic Engineering</p> <p>To applt the transportation planning principles & methods in land transport & airport runway designs.</p>
Credit Point	2
Hours	48
Assessment	Assignment/ Test/ Online MCQ Test

Contents

Surveying

Topics include: use of equipment such as levels, theodolites and tapes and wires; calculations related to this equipment, as well as traversing, horizontal curve setting out,

design of vertical curves, areas and volumes and stadia and contouring; modern developments in surveying; and the role of the professional surveyor.

Traffic Engineering

- Airport Runway Orientation
- Wind Rose Diagram
- Highway Pavement Performance
- Traffic
- Roadbed Soils (Sub grade Material)
- Materials of Construction
- Environment
- Drainage
- Reliability
- Transportation Engineering
- Transportation Planning
- Urban Transportation Planning
- Urban Transportation Planning Process
- Coding and Zoning
- Inventory Studies
- Travel Studies
- Forecasts for the Horizontal Year
- Trip General Analysis
- Trip Distribution Analysis
- Modal Split Analysis
- Network Assignment Analysis
- Evaluation

BAE624 Water Supply , Sanitation & Finishing (2 pt)

Subject Objective	This subject provides civil and environmental engineering students with a detailed knowledge of: (i) water pollution control objectives, (ii) the design of potable water and sewage treatment processes, (iii) sewerage and water reticulation systems, (iv) total water cycle management, and (v) the advanced technologies used in the upgrading of water and wastewater treatment plants, desalination and water and biosolids re-use.
Learning outcome	At the completion of this subject, students understand: public health and environmental objectives in water supply and wastewater disposal; the design concepts for drinking water and sewage treatment plants; sewerage systems and water reticulation systems; and new technologies developed to meet the new water quality and water re-use objectives.
Credit Point	2
Hours	48
Assessment	Assignment/ Test/ Online MCQ Test

Contents

- Water Quality
- Dissolved Oxygen
- BOD (Biochemical Oxygen Demand)
- COD (Chemical Oxygen Demand)
- Water Sampling
- Requirements for good Sampling Procedure

BAE622 Architecture (3 pt)

Refer any architecture text book , study & prepare the report on practical application problem given by the tutor.

Professional Diploma/ Bachelor of Engineering (Mechanical)

Year (3)

GENERAL APPLIED ENGINEERING (MECHANICAL) DEGREE

Subjects
<u>BAE 401 Advanced Engineering Mathematics</u>
<u>BAE 402 Calculus</u>
<u>BAE 403 Engineering Mechanics</u>
<u>BAE 404 Engineering Materials & Thermodynamics</u>
<u>BAE 507 Electro-mechanical Energy Conversion</u>
<u>BAE 508 Industrial Engineering & Industrial Management</u>

The detailed contents of the above subjects can be found under Professional Diploma/ Bachelor of Engineering (Electrical)

BAE511 Air-conditioning & Refrigeration

Subject Objective	The Heating, Ventilation, Air Condition and Refrigeration Technology or HVAC/R Program is designed to provide hands-on training on the same equipment used by business and industry. In addition, this program is designed to provide the students with the necessary skills required to become a state licensed independent business owner/contractor or for employment in the industry as a technician in residential, commercial, and/or industrial air conditioning, refrigeration and heating.
Learning outcome	Students will have an opportunity to learn various HVAC/R processes that will provide the basic preparation for entry-level jobs in the field of air conditioning, refrigeration, and heating with the initial focus placed on troubleshooting and service. In addition, they will learn the fundamentals of HVAC/R through hands-on training in (1) Theory of temperature control, (2) Electronics, (3) Design and construction of HVAC equipment, (4) Installation, (5) Maintenance, and (6) Repair. As students advance through the program, related topics of indoor air quality, load calculation, system design, and industry code standards will also be covered.
Credit Point	2
Hours	48
Assessment	Assignment/ Test/ Online MCQ Test/ Design Project

Contents

- Heat transfer by Conduction
- Convection
- Radition
- Thermal Conductivity, k
- Boundary and Initial Conditions
- Properties and state
- The System
- Internal energy (U)
- Enthalpy (H)
- Work (W)
- Heat (Q)
- Specific Heat Capacity (c)

- Heat Engine
- The characteristic equation of a perfect gas
- Expansion processes
- Adiabatic process
- Isothermal Process

BAE613 Mechanical Instrumentation Process

Subject Objective	This subject aims to extend students' competence in the design of engineered systems and components, as well as familiarising them with modern design approach methodologies.
Learning outcome	While the emphasis is on realistic engineering-team/client/boss interactions, need exploration, project development and delivery, this subject draws heavily on the expertise the students have developed up until this stage of the course. Furthermore, the subject aims to enhance and polish students' capabilities in dealing with human-centric aspects of the design process.
Credit Point	2
Hours	48
Assessment	Assignment/ Test/ Online MCQ Test/ PLC Program Project

Contents

- Problem-solving Methodology
- Matlab Environment
- Initializing Variables
- Data Format
- Printing Matrices
- Useful Commands and Functions
- Fundamental Engineering Computations
- Two-Dimensional Arrays and Matrices
- Variational Method
- Collational Method
- Subdomain Method
- Galerkin's Method
- Least Square Method

BAE614 Machine Design

Subject Objective	The objectives of this subject are to give students an understanding of the kinematics and dynamics of rigid bodies in general planar motion, which is typically encountered in design and analysis of mechanical systems, and an elementary understanding of the vibration of mechanical systems, in particular the dynamic behaviour of single-degree-of-freedom mechanical systems with various damping and applied forces.
Learning outcome	Students should be able to: model problems in rigid body planar and spatial kinematics and rigid body planar dynamics; understand energy methods in contrast to direct applications of Newton's second law of motion for setting up a model; understand the physics of a problem formulated from a real mechanical system; appreciate the role of vibration in machines and structures in the engineering world; understand the procedures required to evaluate a vibration problem; and analyse the dynamic response of single-degree-of-freedom mechanical systems. The subject also covers the concept of a rigid body, full nomenclature used in kinematics, two-body velocity equations and velocity diagrams of planar motion; two-body acceleration equations and acceleration diagram; three-body velocity equations and acceleration equations including Coriolis acceleration term; angular velocity acceleration equations including three-dimensional problems; $F=ma$ applied to a rigid-body-dynamics, significance of 'centre of mass', the 'moment' relationship ($M=Ia$, etc.); angular momentum, conservation of angular momentum (general case, centre of mass moving, no 'fixed' point); linear and angular impulse problems; energy methods for general planar motion; elementary principles of vibration theory, free vibration of undamped single-degree-of-freedom system; free decay vibration of damped single-degree-of-freedom system; and the forced vibration of single-degree-of-freedom system.
Credit Point	2
Hours	48
Assessment	Assignment/ Test/ Online MCQ Test
TOPICS	Topics covered include the mechanical design process, graphical presentation of engineering ideas and components, computer-aided design, engineering materials and processes and aspects of engineering knowledge. A prototype design-and-build project is a major component of this subject
<u>Specific Contents</u>	<ul style="list-style-type: none"> • Balancing , Forces, Cam Profile • Resultant Effects of Engine, V-Engine Mechanism • Arrangement to balance the primary moment (C.W) • FORCES IN ENGINE, Inertia Forces and D'Alembert's Principle

BAE512 Building Service Water Supply System

Subject Objective	This subject provides mechanical engineering students with a detailed knowledge of: (i) building water supply control objectives, (ii) the design of potable water supply processes & piping system mechanical design.
Learning outcome	At the completion of this subject, students understand: public health and environmental objectives in water the design concepts for water supply piping design
Credit Point	2
Hours	48
Assessment	Assignment/ Test/ Online MCQ Test

Contents

- Pressure loss in pipe
- Pressure loss in pipet by loss coefficient method
- Pressure loss in pipe by Equivalent Length Method
- To find the duct pipe by Equal Friction Method
- To find the duct pipe by Balance Capacity Method
- Design the piping system

BAE311 Plant Engineering (2 pt)

Subject Objective	The objectives of this subject are to: have an understanding of the behaviour of linear (or approximately linear) dynamic systems that are typically encountered in the practice of mechanical engineering; and gain an understanding of how such systems can be controlled, or have their dynamics altered, so as to achieve desired outcomes.
Learning outcome	<p>Topics covered include:</p> <ul style="list-style-type: none"> dynamic models: component block diagram, laplace transform, undamped free and forced vibration of SDOF systems, damped free and forced vibration of SDOF systems, resonance and beats, logarithmic decrement, response under the harmonic motion of the base, coupled-tank systems, vibration of 2DOF systems, vibration isolation, vibration absorbers Matlab and Simulink dynamic response: system modelling diagrams, poles and zeros, effect of pole locations, first order systems, second order systems, effects of zeros and additional poles, stability basic properties of feedback: the basic equations of control, control of steady-state error, PID control, pole placement method the root-locus design method: root-locus of a basic feedback systems, dynamic compensation, examples control system implementation and introduction to advanced control systems.
Credit Point	2
Hours	48
Assessment	Assignment/ Test/ Online MCQ Test

Contents

- *Three Degree of freedom*
 - (a) **Newton's method**
 - (b) **Mechanical Impedance method**
 - (c) **Influence coefficients**
 - (d) **Matrix method**

- (e) **Holzer method**
- (f) **Matrix Iteration method**

- **INTRODUCTION TO CONTROL SYSTEM**
- **DIFFERENTIAL EQUATIONS**
- **LINEARIZATION OF A NON-LINEAR FUNCTION**
- **MODELLING OF CONTROL SYSTEMS**
- **FREQUENCY RESPONSE METHODS**
- **Stability**

BAE312 Design Engineering (Manufacturing) (2 pt)

This unit is the same as

BAE621 Structural Engineering (3 pt)

The following contents can be added for manufacturing process

Subject Objective	The objectives of this subject are to: explain and provide examples of manufacturing processes involved in casting, forming machining and joining of materials; identify and describe the manufacturing process by which products are made of different materials: metals, polymers, ceramics and composites; demonstrate improved technical written and graphical communication skills by completion of specified laboratory reports and site visit reports; and demonstrate basic problem-solving skills relating to manufacturing and production.
Learning outcome	Students learn the processes and materials available, as well as a competent and practical approach to evaluating, selecting and recognising the connections between the materials/processes and engineering design
Credit Point	2
Hours	48
Assessment	Assignment/ Test/ Online MCQ Test

Contents

All contents in structural engineering

PLUS

- The design and manufacturing processing of products in various environments ranging from low volume to high volume and with various levels of capital investment in the manufacturing system.
- The modern concepts of quality management, including Taguchi methods, after looking at process quality control and its origins.
- Modern metrology equipment and methods are treated in a similar manner: modern equipment and methods and their origins.
- The computer systems on manufacturing. Firstly, students gain some experience with manufacturing in a CAD/CAM environment.
- Industrial robots in environments such as fabrication, welding and assembly. Topics such as: CIM, CAPP, JIT, GT, FMS, MRP, Toyota and Kanban are introduced in a project environment

BAE313 Environmental Control (2 pt)

This unit is the same as

[BAE 523A Environmental Engineering](#)

BAE314 Mechanical Power Generation (2 pt)

Subject Objective	This subject aims to develop students' fundamental knowledge and understanding of the dynamics of various mechanical power generation systems;
Learning outcome	To provide students with knowledge and skills in vibration testing and data acquisition; facilitate students' in-depth learning of the theory and methods, including modelling, modal analysis, system identification and numerical approaches; familiarise students with techniques and data acquisition system used in vibration testing, measurement, signal processing for determining the dynamic characteristics of a physical system; and enable students to apply the learnt methods to real world applications which include vehicle suspension design, vibration analysis and condition monitoring of rotating machines & application of PLC control system
Credit Point	2
Hours	48
Assessment	Assignment/ Test/ Online MCQ Test

Contents**Mechanical**

Basic vibration theory for the analysis of two or more degrees of freedom multi-body mechanical systems, basic topics on widely-used engineering measurements, data acquisitions, spectrum analysis, signal processing and their applications in vibration control and machine condition monitoring.

PLC

- **PLC Basics**
- **PLC Structure**
- **PLC in Comparison with Other Control Systems**
- **PLC's CPU**
- **PLC's Memory**
- **PLC in Comparison with Other Control Systems**
- **PLC's CPU**
- **PLC's Memory**
- **Programming Devices**
- **Programming Languages**

- **Instruction Set**
 - **Typical Combinations of Languages**
 - **Basic Symbols**
 - **Elementary Logic Circuit**
 - **PLC's Functions**
 - **Industrial Programming**
 - **PLC PRACTICE**
 - **Selection of PLC**
 - **Types of I/O & Capacity Needed**
-
- **Control System Basic**
 - **Sequence Control**
 - **Automatic Control**
 - **Terms of Sequence Control**
 - **Basic Knowledge on Contacts**
-
- **INDUSTRIAL MACHINE CONTROLS**

BAE315 Materials Engineering (2 pt)

Subject Objective	Mechanical engineers design, construct, maintain, inspect and manage private and public work projects. The common materials used in construction engineering applications and construction are concrete, steel, timber and masonry. It is essential for mechanical engineers to have a basic understanding of these construction materials, in relation to their production, properties, testing and application.
Learning outcome	To help students acquire fundamental knowledge of the production, physical and engineering properties of construction materials; understand the effects of environments on the properties and performance of these materials; familiarise themselves with the relevant engineering standards and other specifications and standards, in relation to the requirements and testing methods and interpretation of test results; improve analytical and communication skills by presenting test reports; select material in relation to specified requirements; and develop an awareness of the use of waste materials in construction.
Credit Point	2
Hours	48
Assessment	Assignment/ Test/ Online MCQ Test

Contents

- Load, Stress and Strain, Hook's law ,
- Principal of Superposition
- Tensile Test , Factor of Safety
- Strain Energy, Resilience
- Impact Loads
- Varying Cross-section and Loads
- Strain Energy , Resilience
- Compound Bars
- Temperature Stresses

1. Requirements, variability, selection and standards relating to use of construction materials
2. Steels: production, types, usage, mechanical properties and testing and failure modes

Elective (2 pt)

Subjects
BAE513 Production Technology
BAE611 Maintenance Engineering
BAE612 Engineering Metallurgy

- Dictionary
- Text file
- Binary files
- Object serialization
- Lottery
- Expression

ICT 403 Professional Programming (2) Object Oriented

object-oriented-programming-using-c-sharp

- Introduction to object oriented programming
- Unified Modelling Language (UML)
- Inheritance & Method Overriding

- Object rules & the importance of polymorphism
- Overloading
- Object oriented software analysis and design
- Generic collection & how to serialize them
- C# development tools
- Creating & using exceptions
- Agile programming
- Case studies

ICT 404 Professional Programming (3) Java

object-oriented-programming-using-java

- Introduction to object oriented programming
- Unified Modelling Language (UML)
- Inheritance & Method Overriding
- Object rules & the importance of polymorphism
- Overloading
- Object oriented software analysis and design
- Collection framework
- Java development tools
- Creating & using exception
- Agile programming
- Case study

ICT 405 Professional Practice (1) Network

This competency standard unit covers develop services for network clients for emails, internet access, shared resources and the like. It encompasses safe working practices, installing and configuring Domain Name Server (DNS), email servers, Dynamic Host Configuration Protocol (DHCP), remote access servers, Network Address Translation (NAT), directory services, Authentication Servers and documenting development activities.

Essential knowledge and associated skills

This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and developing network services.

The extent of the essential knowledge and skills required is given Volume 2 Part 2, Clauses

- **Network infrastructure**

Evidence shall show an understanding of network infrastructure to an extent indicated by the following aspects:

- a. Domain Name Service (DNS) encompassing
 - DNS Server Service
 - Root name server
 - Configuring zones
 - a. *Note:* Examples include configuring for dynamic updates and delegating zone for DNS
 - Caching – only server
 - DNS client
 - Testing DNS Server service
 - Manually creating DNS source
 - Managing and monitoring DNS
- b. Dynamic Host Configuration Protocol (DHCP)
 - Installation of DHCP Server Service
 - DHCP scopes, superscopes and multicast scopes
 - DHCP – DNS integration
 - Active Directory™
 - Managing and monitoring DHCP
- c. Network Infrastructure encompassing
 - Configuring and troubleshooting remote access
 - a. *Note:* Examples include remote access policy, configuration of remote access profile, Virtual Private Network (VPN), multi link connection, routing and remote access for DHCP
 - Managing and monitoring remote access
 - Remote access security
 - *Note.* Examples include authentication protocols, encryption protocols and access policy
- d. Network Protocols encompassing
 - Installation, configuration and troubleshooting of network protocols
 - a. *Note:* Examples include Transmission Control Protocol / Internet Protocol (TCP/IP), NWLink and network bindings
 - Configure TCP/IP packets
 - Configuring and troubleshooting network protocol security and IP Security (IPSec)
 - Managing and monitoring network traffic
- e. Internet Naming Services in a network encompassing
 - Installation, configuring and troubleshooting
 - Configuring Internet Naming Services replication
 - Configuring an application networking interface
 - Managing and monitoring Internet Naming Services
- f. IP Routing encompassing
 - Installation, configuring and troubleshooting of IP routing protocols
 - a. *Note:* This includes updating routing tables, and implementing demand-dial routing
 - Managing and monitoring IP routing
 - a. *Note:* This includes border routing, internal routing and IP routing protocols
- g. Network Address Translation (NAT) encompassing
 - Installing Internet connection sharing

- Installing NAT
- Configure NAT properties and interfaces
- h. Certificate Services encompassing
 - Installing and configuring Certificate Authority
 - Issuing and revoking certificates
 - Removing the Encrypted File System recovery keys

- **Directory services**

Evidence shall show an understanding of directory services to an extent indicated by the following aspects:

- a. Installing and configuring directory services encompassing
 - Installing forests, trees and domains including automatic domain controller
 - Creating sites, subnets, site links and connection objects
 - Configuring server objects including site membership and global catalogue designation
 - Transferring of operations master roles
 - Verification and troubleshooting of directory services installation
 - Implementation of and organisational unit structure
- b. Domain Name Service (DNS) for directory services encompassing
 - Installation and configuration of DNS for directory services
 - a. *Note:* Examples are integration with existing DNS infrastructure, configuration of zones for dynamic and secure dynamic updates and creation and configuration of DNS records
 - Management, monitoring and troubleshooting of DNS
- c. Change and Configuration Management encompassing
 - Implementing and troubleshooting Group Policy
 - a. *Note:* Examples are Group Policy Object (GPO), linking to an existing GPO, delegation of administrative control of Group Policy, filtering of Group Policy settings by using security groups and modification of Group Policy prioritisation
 - Managing and troubleshooting user environments using Group Policy
 - Configuring directory services to support Remote Installation Services (RIS) including configuration of RIS options and security.
- d. Components of a directory service infrastructure encompassing
 - Management of directory objects
 - a. *Note:* Examples are moving objects, publishing resources in the directory service infrastructure, location of objects in the directory service infrastructure, creation and management of objects manually and by scripting, access control of objects and delegation of administrative control
 - Monitoring, optimisation and troubleshooting of the directory services infrastructure performance and replication
 - Backup and restoring directory services infrastructure
 - a. *Note:* Examples are authoritative and non authoritative restoration of directory services, restoration from systems failure and the seizing of operations master roles

- e. Security encompassing
 - Applying security policies using Group Policy
 - Creating, analysing and security modification by using Security Configuration and Analysis snap-in and the Security Templates snap-in
 - Implementation of an audit policy
- f. Monitoring and analysing security events

Multi-layer switched networks

Evidence shall show an understanding of multi-layer switched networks to an extent indicated by the following aspects:

a) Campus network design encompassing:

- o core layer
- o distribution layer
- o access layer
- o selection of appropriate devices
- o defining workgroups

b) Managing Redundant Links encompassing:

- o Spanning Tree Protocol (STP)
- o Controlling STP in redundant environments
- o STP in Virtual Local Area Network (VLAN) environments
- o Configuring redundant routing protocols for a fault-tolerant routing

Note. An example is Hot Standby routing protocol (HSRP)

c) Fast layer 2 services encompassing:

- o Fast Ethernet
- o Trunking
- o Fast Ether channels

- o Gigabit services

- d) Inter VLAN Routing encompassing:
 - o Hardware vs. Software switching
 - o Overview of fast switching technologies
 - o Elements of a multi-layer switch
 - o Configuring multi-layer switches

- e) Multicast encompassing:
 - o Multi-cast group management
 - o Configuring multi-cast control at layer 2
 - o Configuring multi-cast control at layer 3

- f) Controlling Access to the Campus Network

- g) Managing Network Traffic

ICT 406 Professional Practice (2) Website

This unit covers installation, set up, implementation and provision of on-going support of web services. It encompasses working safely, installing and administering server software and databases, server side scripting, configuring access and security and documenting work activities.

Development, implementation and testing HTML pages with at least four of the following features:

Relative and absolute links, images and table formatting

Cascaded styles sheets

Forms	
New browser windows	
Validation of form data	
<u>Development, implementation and testing of server scripting for database access with at least four of the following features:</u>	
Form data input response	
Form data processing	
Database access	
Output of database table contents	
Insertion of table data to database	
Installation and administration of key features of Web and Web application servers	
	Programming elements
Evidence shall show an understanding of the programming elements to an extent indicated by the following aspects:	
a) Algorithm Design encompassing:	
o Problem Definition	
o Steps in Problem-Solving	
o Modular Design	
o Top-Down Design	
o Flow-Charts and Structured Programming	
o Pseudo-Code	
o Filtering allowable Data Input	

- o Using standard Input & Output methods
- o Object-Oriented Design (brief intro.)
- o Documentation Rationale
- o Acceptable Documentation Method

- b) Machine-Code, Assemblers and Compilers
- c) Brief History of Languages & Limitations
- d) Parameters of different programming languages encompassing:
 - o Constants and variables
 - o Data types and declarations
 - o Logical flow control
 - o Detecting breaches of structure
 - o Documentation instruction examples
 - o Procedures and function calls
 - o Parameter-passing
 - o Local and global variables
 - o Object-oriented methods
 - o Classes and objects,
 - o encapsulation and inheritance.
 - o Visual programming methods
 - o General-purpose program libraries

e) Data structures encompassing:

- o Records
- o Arrays
- o File Input/output

f) Testing and validation encompassing:

- o Sequencing the process
- o Inconsistencies detection

Note, An examples is comparing code to documentation, commonly called —Desk-Checking'.

- o Test data selection
- o Modular testing & debug
- o Problems with using

Client side programming

Evidence shall show an understanding of client side programming them to an extent indicated by the following aspects:

a) Client server architecture

b) Hyper Text Markup Language (HTML) encompassing:

- o Forms
- o Table
- o Cascading style sheets

c) Hyper Text Markup Language (HTML) scripting encompassing:

- o Exposed object model

- o Events and event handling
- o Objects methods, properties, events
- o Window, document, form, and form elements
- o String object, methods, properties
- o Form field validation

Note: Examples of scripting language are JavaScript and Visual Basic (VB) Script

d) Extendable Markup Language (XML) encompassing:

- o Syntax
- o Structure (well formed XML)
- o Schemas
- o Transformations
- o Parsing Document Object Model (DOM) and Simple API (SAX)
- o Scripting to Document Object Model (DOM)

e) Extendible Stylesheet Language (XSL) generating HTML from XML

f) Wireless thin client programming

Note. Examples include Java2 Micro Edition (JEME), Mobile Information Device Profile (MIDP), Windows CE and Palm OS

- g) Consideration for system architecture
- h) Configurations and profile overview

	Server scripting
Evidence shall show an understanding of server scripting the to an extent indicated by the following aspects:	

- a) Client server architecture
- b) Web and Application Servers
- c) Server scripting languages e.g. JSP, ASP, PHP, Perl
- d) Server script Tags
- e) Integrating script with HTML
- f) Server script object model
- g) Request, Response, Session, Application
- h) Using server objects
- i) Server components
- j) Using components in server scripts
- k) Scope of server components e.g. session, page, application
- l) Component get / set methods
- m) Deploying server components
- n) Advanced server scripting concepts

Database access

Evidence shall show an understanding of database access to an extent indicated by the following aspects:

a) Relational Databases encompassing:

- o Tables, keys, design rules and normalisation
- o Database management utilities

Note. Example include MSSQL, MYSQL and Access

b) Structural query language (SQL) queries encompassing:

- o Select, insert, update and delete processes
- o Application of conditionals `__where`, `__distinct` and `__like`
- o Create and dropping tables

c) Data Base connectivity components encompassing:

- o Drivers, data sources
- o Database connectivity component loading
- o Query connection and execution
- o ResultSets / RecordSets
- o Rows, columns, cursors, concurrency, pooling
- o Iterating through ResultSets / RecordSets

Note. Example include ODBC, JDBC, ADO

	Web applications and services
Evidence shall show an understanding of web servers to an extent indicated by the following aspects:	
a) Comparison of HTTP servers and platforms	

Note. Examples include IIS and Apache

b) Comparison of Application servers and platforms

Note. Examples include J2EE / tomcat, .NET

c) HTTP Servers encompassing:

- o Installation requirements and methods
- o Security configuration
- o Content publishing and security

d) WEB application technologies encompassing:

- o Server installation and deployment
- o Security

e) Server scripting technologies encompassing:

- o WEB application installation and deployment
- o Application server administration

f) Web services overview encompassing:

- o WEB services XML, API, RPC
- o XML API processing
- o XML DOM
- o SOAP (simple object access protocol)
- o WEB Services Security

ICT 407 Artificial Intelligence

- Paths to artificial intelligent
- Agents and environment
- Framework for agents environment
- Agent oriented programming languages
- Net logo development
- Movement, Behaviour & Decision making
- Terms of movement
- Animated mapping simulation Embodiment
- Reactive versus cognitive agents
- Emergence, Self organization
- Adaptibility evolution
- Communication
- Search behaviour
- Reasoning rules and logic
- Knowledge & reasoning using decision trees
- Intelligence
- Design objectives for artificial intelligence
- Computer problem solving ability

Bachelor of Business

Year 1 Refer Diploma in Management Detailed Contents

Year 2 Refer Diploma & Advanced Diploma in Information Technology Detailed Contents

YEAR (3)

Bachelor of Business (E-Business & Management)

The learning system will be based on self study. Read the given references study materials and prepare the project work. You need to read the books in English.

The following units common to MBA course are to be studied.

[Mgt 301 Electronics Business](#)

[Mgt 302 Information Security](#)

[Mgt 303 Management Information System](#)

[Mgt 304 Electronics Commerce](#)

[Mgt 305 Quantitative Methods for Management](#)

[Mgt 306 Human Resources Management](#)

[Mgt 307 Marketing Management](#)

[Mgt 308 Artificial Intelligence](#)

To assess Level 3, you need to write the report of 10 pages each on what you have learnt in the unit.

YEAR (4)

Mgt 401 Management Project

Mgt 402 Electronics Business Project

Mgt 301 Electronics Business

- Project Objective
- Business Capabilities
- Benefits
- Deliverables & Dependencies
- Costs
- Financial Appraisal
- Timescales & Milestones
- Success Criteria
- Risks
- the impacts of electronic commerce
- drivers and inhibitors of electronic commerce from the perspective of the CEOs
- the impacts of Electronic Commerce on the Industry Supply Chain
- Electronic Commerce Maturity Model

Mgt 302 Information Security

	Fundamentals of network security
Evidence shall show an understanding of fundamentals of network security to an extent indicated by the following aspects:	
a) Network Security fundamentals	
b) Securing Perimeter Routers	
c) Access Control Lists (ACLs)	
d) Router Authentication, Authorisation and Accounting (AAA) Security	

- e) Intrusion Detection
- f) Internet Protocol (IP) Security
- g) Virtual Private Network (VPN)
- h) Firewalls
- i) Translations and Connections
- j) Access Control Lists for Firewalls
- k) AAA and Firewalls
- l) Intrusion
- m) Intrusion Detection Systems (IDS)
- n) Firewall Failover and System Maintenance
- o) Firewall VPN's
- p) Firewall Device Management

- ❑ Introduction of Computer Networks and Internet :
 - ❖ Overview of the Internet, client/server program, circuit switching, packet switching, physical media, queuing delay and packet loss, TCP/IP Service models, Internet Protocol Stack (Layers)
- ❑ Application Layer :
 - ❖ Service requirements, WWW, HTTP, FTP, Electronic Mail, Domain Name System, Socket programming
- ❑ Transport Layer
 - ❖ Service models, Multiplexing/Demultiplexing, Connection-less transport (UDP), Principles of reliable data transfer, Connection-oriented transport (TCP), TCP congestion control
- ❑ Network Layer :
 - ❖ Routing and forwarding, IP(The Internet Protocol) IPv4, IPv6 ,Routing algorithms, Routing in the Internet, Multicast
- ❑ Link Layer and Local Area Networks :
 - ❖ Link layer services, Error detection and correction, Multiple Access Protocols, Link layer addressing, Ethernet, Hubs and switches, Point-to-Point Protocol
- ❑ understand principles of network security:
 - ❖ cryptography and its *many* uses beyond “confidentiality”
 - ❖ authentication
 - ❖ message integrity
 - ❖ key distribution

- ❖ security in practice:
- ❖ firewalls
- ❖ security in application, transport, network, link layers
- ❖ key distribution
- ❖ security in practice:
- ❖ firewalls
- ❖ security in application, transport, network, link layers

Mgt 303 Management Information System (MIS)

- The role of information system
- Hardware & software in enterprise
- Database management system
- Business Telecommunication system
- Communication network
- Network application
- Contemporary mobile service
- Examples of information systems
- Management of MIS
- Managing the Digital Firm
- Emergence of the Digital Firm
- The business information value chain
- A Business Perspective on Information Systems
- Variation in returns on information technology investment
- Sociotechnical Systems
- New Options for Organizational Design:
- The Digital Firm and the Collaborative Enterprise
- Redesigned workflow for insurance underwriting
- The Challenges of Information Systems: Key Management issues

Mgt 304 Electronics Commerce

- **Types of E-commerce**
- **Understanding E-commerce: Organizing Themes**
- **E-commerce Business Models and Concepts**
- **The Internet and World Wide Web: E-commerce Infrastructure**
- **Building an E-commerce Web Site**

- **Online Security and Payment Systems**
- **Marketing Communications**
- **E-commerce Marketing Concepts**
- **Ethical, Social, and Political Issues in E-commerce**
- **Online Retail and Services**
- **E-commerce Business Models and Concepts**
- **The Internet and World Wide Web: E-commerce Infrastructure**
- **Security and Encryption**
- **E-commerce Payment Systems**
- **E-commerce Marketing Communications**
- **Ethical, Social, and Political Issues in E-commerce**
- **Online Service Industries**
- **Supply Chain Management and Collaborative Commerce**
- **Auctions, Portals, and Communities**
- **Online Content and Media**
- **Social Networks, Auctions, and Portals**
- **Online Content Providers: Digital Media**
-

Mgt 305 Quantitative Methods for Management

- Research approach
- Data source
- Qualitative method
- Quantitative Methods
- Experiment research & observation
- Questionnaires survey
- Sampling
- Survey analysis
- Statistical analysis
- Writing research report

- Prescriptive Process Models
- Agile Development

Mgt 306 Human Resources Management

- Meeting Present and Emerging Strategic Human Resource Challenges
- **Managing Work Flow and Conducting Job Analysis**
- Understanding Equal Opportunity and the Legal Environment
- Managing Diversity
- Recruiting and Selecting Employees
- Appraising and Managing Performance
- Rewarding Performance
- Managing Compensation

Mgt 307 Marketing Management

- Company (Distributor) background (e.g. brief history, nature of business, etc.)
- Marketing objective(s) on the Chosen product/service
- S.W.O.T Analysis
- Target customers
- Product Positioning in the market
- Describe the current marketing mix:
 - Product
 - Pricing
 - Distribution
 - Marketing Communications (Promotion)
- overall competitive strategy
- planning the details of the marketing mix.
- sales& marketing materials
- understanding of company's competitors
- Marketing Recommendations for improvement
- marketing strategies

Mgt 308 Artificial Intelligence

This is the same as

ICT 407	Artificial Intelligence
-------------------------	---

Mgt 401 Management Project

Mgt 402 Electronics Business Project

Two reports one for Management for (Mgt 303+Mgt 305+Mgt 306) & another for Electronics Business + Marketing (Mgt 301+Mgt 302+Mgt 304+Mgt 307+Mgt 308) subjects are required to be presented.

Each should contain 4000 to 6000 words of how you pursue the study in Management,, Marketing, Electronics Business subjects should be described.

The project should contain management plans, business plan & performance, task, job procedures IT integration etc of the topics of your choices.

IQY Technical College ၏ Engineering Work Studies သင်တန်းများ

(သင်တန်းကြေး--ကျပ်၅သောင်းOnline)

Dip EI (Diploma in Electrical Installations)--- (Course Number 106689EI)

EEM201+EEM202+EEM203+EEM206+EEM208

- EEM201-Principle of Electricity
- EEM202-Electrical Knowledge
- EEM203-Electrical safety
- EEM206-Electrical Wiring
- EEM208-Electrical Installation Design

Dip M& E (Diploma in Mechanical and Electrical Services)--- (Course Number 106689ME)

- MEM204-.Airconditioning
- MEM205-Ventilation
- MEM207/EEM201-Principle of Electricity
- MEM208/EEM203-Electrical safety
- MEM209 Automation and Control
- CEM201-Sanitation

Professional Certificate in Hotel Construction (Course Number 206689HC)

- Hotel Restaurants and Bar
- Restaurant Design Principles.
- Building Control
- Building Technology Electrical Mechanical System
- Fire Safety Engineering
- Materials for Civil & Construction Engineers
- Building Construction
- Building Services
- Estimating
- Electrical Wiring Commercial
- Detailing
- Air Distribution in Buildings
- Building Systems For Interior Designers

IQY Technical College Unit/ Subject Coding

IQY QF Level	Year	Course	Coding
1	1	Certificate/Diploma	1xxxx
			2xxxx
2	2	Advanced Diploma	3xxxx
3	3+4	Bachelors degree	4xxxx
			5xxxx
			6xxxx
4	5+6	Bachelors (Hons)	6xxxx
		Graduate Diploma/Masters	7xxxx
5	7+8+9	Doctorate	6XXXX
			7xxxx
			8xxxx

Advanced Diploma in Engineering Practice (Myanmar Language) (27764)

Pre-requisite

Completion of Diploma in General Engineering OR Experience OR Completion of Certificate Level courses

Credit

Total 60 credits Each 5 Credits

Civil Engineering

CEM202-Estimating

CEM203-Drawing

CEM204-.Construction

CEM205-.Iron work

CEM206-Welding

CEM207/ EEM201-Principle of Electricity

CEM208/EEM202-Electrical Knowledge

CEM209/EEM203-Electrical safety

CEM210/MEM204-.Airconditioning

CEM211/MEM205-Ventilation

CEM21- Brick Laying Practice

[Learning Record to submit for credit for each unit](#)

Mechanical Engineering

MEM201-Principle of Engine

MEM202-.Auto Electronics

MEM203-.Auto Electricity

MEM204-.Airconditioning

MEM205-Ventilation

MEM206-Welding

MEM207/EEM201-Principle of Electricity

MEM208/EEM203-Electrical safety

MEM209-Automation and Control

MEM210-Mechatronics

MEM211/ CEM205-.Iron work

MEM212/ CEM203-Drawing

[Learning Record to submit for credit for each unit](#)

Electrical Engineering

EEM201-Principle of Electricity

EEM202-Electrical Knowledge

EEM203-Electrical safety

EEM204-Electrical Works

EEM205-AC and DC Electricity and Electronics

EEM206-Electrical Wiring

EEM207-Fault Finding

EEM208-Electrical Installation Design

EEM210- Advanced Electrical Power Principle

EEM211-Power Transmission and Distribution

Elective

EEM212 / MEM203-.Auto Electricity
OR

EEM213/ MEM204-.Airconditioning

[Learning Record to submit for credit for each unit](#)

Please note that the students who complete the entire course in Myanmar Language must attend 1 year bridging program in English to continue the degree program.

Diploma/ Advanced Diploma in Air-conditioning and Refrigeration Engineering

www.iqytechnicalcollege.com/advdipare.htm

Diploma in Air-conditioning and Refrigeration Engineering

30 credits- Each -6 credits x 5 units

MEM204-.Airconditioning

MEM205-Ventilation

MEM207/EEM201-Principle of Electricity

MEM208/EEM203-Electrical safety

MEM209 Automation and Control

Advanced Diploma in Air-conditioning and Refrigeration Engineering

Each 3 units x 10= 30 credits+ Two Practical Units

EE201 Engineering Mathematics

EE204 Engineering Physics

EE111 Electro-magnetism and Basic Electrical Machines

ME106 Electrical Circuits

ME334 Air-conditioning & Refrigeration

ME102 Engineering Thermodynamics

ME107 Heat Transfer

RE003 Solar and Thermal Energy System

BAE511 Air-conditioning and Refrigeration (Advanced)

BAE606 Building Service Electrical and Mechanical Engineering

PC8 Air-conditioning and Refrigeration Basic Servicing

PC10 Electrical Machine Winding

Advanced Diploma in Electro-Mechanical and Construction Engineering

Pre-requisite

- THS –Diploma in General Engineering & Drafting OR ITC/THS- 5 Years experience
- Non year 10 passed matured workers
-

Delivery and Assessment

- Online Live Lessons+ Assignment
- Pay the fees and submit the assignment to receive transcripts
- On completion of all, the award will be issued.

Core Units (6 Credits points per unit x 10 = 60 Credits)

- ADEMC201-Sustainability and Electrical Practice
- ADEMC202-Engineering Practice
- ADEMC203-Design and Technology
- ADEMC204-General Electrical Engineering
- ADEMC205-General Civil Engineering and Construction
- ADEMC206-General Mechanical Engineering
- ADEMC207-Mathematics,Physics and Chemistry
- ADEMC208-Engineering Materials
- ADEMC209-Engineering Management
- ADMEC210-Workshop Practice and Safety

Advanced Diploma of Rural Development Engineering

www.highlightcomputer.com/adrde.htm

www.highlightcomputer.com/adrde.pdf

Objective of the course

This course aims to provide the necessary skills required for people in rural areas to perform the followings

- Agricultural Foods Production and Animal Handling
- Building Construction, Drawing, Water Supply, Road and Bridge Construction, Irrigation
- Electrical Supply & Solar Electrical Supply System
- Hydraulics
- Machine Repair, Welding and Machining
- Water Chemical Treatment
- Transportation & Logistics

Course Structure

The course consists of Civil, Electrical and Mechanical Engineering principle together with Transportation, Logistics and Agricultural Foods Production.

Outcome of the course

After having completed this course, the attenders can perform rural developmental engineering basic works in their regions.

Detailed Structure of the course

Credit Points- 60 points to complete Advanced Diploma of Rural Development. Diploma and Certificate in Rural Development can be awarded upon completion of the specific units.

List of Subjects

Advanced Certificate in Rural Development Engineering (16 Credits)

(MVTC Level (3) (Course Number MVTC301)

CE106 Brick Laying, Sprouting and Gutter Construction (4 Points)

CE104 Construction Drawing (4 Points)

CE110 Building Construction (4 Points)

CE107 Water Supply (4 Points)

Diploma in Rural Development (32 Credits)

(MVTC Level (4) (Course Number MVTC401)

All units in Certificate in Rural Development (16 Credits)

CE111 Road Bridge and Irrigation System Construction (4 Points)

MVTC13PC9 Electrical Wiring (4 Points)

MVTC201Agriculture+MVTC202Animal Handling(4 Points)

MVTC204 Water Chemical Treatment (4 Points)

Advanced Diploma in Rural Development (60Credits)

(MVTC Level (5) (Course Number MVTC501)

All units in Diploma in Rural Development

RE002 Grid Connected Power System (4 Points) together with EE101 DC Circuits+EE112 AC Circuits

EE118 Electrical Supply System (4 Points)

ME108 Principle of Engine+MVTC13PC7 Engine Repairs (4 Points)

ME201 Hydraulics (4 Points)

MVTC13PC6 Welding+MVTC13PC5FittingMachining (4 Points)

MVTC209 Transport Logistics (4 Points)

Mgt101 Management Studies (4 Points)

ADVANCED STUDY

The candidates who have successfully completed Advanced Diploma of Rural Development Engineering can continue the study in Professional Diploma/ Bachelor of Applied Engineering/ Bachelor of Engineering Technology in Electrical Engineering or Civil Engineering or Mechanical Engineering or Mechatronics Engineering or Renewable Energy Engineering and Bachelor of Management Programs at St Clements University or STC Technological University.

Advanced Diploma in Information Technology (Course Outline)

	St Clements+ Highlight Course	Pt				Australian IT Diploma Course
THEORETICAL TRAINING						
ICT 201	Organisational Behaviour	5			BSBWOR502B BSBMGT516A BSBSUS501A	Ensure team effectiveness Facilitate continuous improvement Develop workplace policy and procedures for sustainability
ICT 202	Information Systems Principles and Networking	5	BAE602		ICANWK516A ICANWK532A ICANWK614A	Determine best-fit topology for a local network Identify and resolve network problems Manage IT security
ICT 203	Information Systems, Analysis and Design	5	BAE602	2	ICAPRG602A ICAICT509A ICAICT603A ICAICT608A ICAPMG606A ICAICT713A	Manage the development of technical solutions from business specifications Gather data to identify business requirements Manage the use of appropriate development methodologies Interact with clients on a business level Manage IT project quality Manage IT services
ICT 204	Advanced Programming	5	BAE601		ICAPRG527A ICAPRG501A ICAPRG505A	Apply intermediate object-oriented language skills Apply advanced object-oriented language skills Build advanced user interface
ICT 205	Project Work	5	BAE602	Core	ICAPRG506A	Manage copyright, ethics and privacy in an IT environment
ICT 206	WORK PERFORMANCE ASSESSMENT			Core	ICAPMG601A	Establish IT project governance
				Core	ICAPMG602A	*Manage IT project initiation
				Core	ICAPMG603A	*Manage IT project planning
				Core	ICAPMG604A	*Manage IT project delivery
	Total	30		Core	ICAPMG605A	*Manage IT project closure

32115 Advanced Diploma in General Engineering and Drafting (with Basic Business and IT)

For the students who have not passed Year 10/ University Entrance Examination.

Tutoring for the university entrance examination level subjects are concurrently provided

Unit number & Points	Unit name	Credit Points
EE201G	Mathematics	3 Pt
EE204G	Physics	3 Pt
ME 207G	Chemistry	3 Pt
EE101	DC Circuit Problems	3 Pt
EE102	Basic Electrical Fitting & Wiring /MVTC 213-PC9 Certificate in Electrical Wiring	3 Pt
EE103	Basic Electrical Drafting / MVTC 213-PC9Certificate in Electrical Wiring	3 Pt
EE105	Electrical Installation Design / MVTC 213-PC9Certificate in Electrical Wiring	3 Pt
EE110	Computer Applications	3 Pt
CE 106A	Detailed Construction & Building Construction Materials/MVTC213 PC1 Certificate in Brick Laying and Masonry	3 Pt
CE 104 A	Building Drawing/ MVTC213 PC1 Certificate in Brick Laying and Masonry	3 Pt

CE 110	Building Construction/MVTC213 PC3 Certificate in Building Construction	3 Pt
CE 107	Sanitation-and-Water-supply/MVTC213 PC2 Certificate in Plumbing	3 Pt
EE107	Electrical Equipment / MVTC 213-PC9Certificate in Electrical Wiring	3 Pt
ME103	Engineering Mechanics	3 Pt
ME 108	Principles of Engines/ PC 7-Certificate in Engine Operation & Basic Servicing	3 Pt
MVTC213 PC5	Certificate in Fitting and Machining	3 Pt
Mgt101G	Business and Management Principle	3 Pt
EE104	Electrical Equipment Safety Protection	3 Pt
Mgt207G	Business Letter Writing/ Business English	3 Pt
EE109	Electrical Control Circuits /MVTC213 PC15 Certificate in Basic Electronics	3 Pt
	Total	60 Pt

The students who complete this course can continue to the study in Advanced Diploma in Electrical/ Civil/ Mechanical Engineering Courses.

The students who do not want to do engineering can do only Mgt101G, Mgt207G and EE110 and then attend Advanced Diploma in Management (OR) Advanced Diploma in Information Technology.

Agricultural Engineering (67443321)

Professional Diploma in Agricultural Engineering Bachelor of Agricultural Engineering

Preliminary Course

Diploma in General Engineering

(First 6 months)(Foundation Year)

FE101 Engineering Mathematics (for Mathematics 1)

FE102 Engineering Physics (For Physics 1)

FE103 Engineering Workshop

FE104 Engineering Drawing (For Technical Drawing)

FE105 Sustainability

Diploma in Agricultural Engineering

YEAR 1

6 credits/ unit x 5=30 Credits

AGRE101 Chemistry (For General Chemistry) (6 Credit)

To complete Chemistry

AGRE 102 Statistics (For Basic Statics) (6 Credit)

AGRE 103 Botany (For Botany) (6 Credit)

(To complete Science)

AGRE 104 Computer (For Computer) (6 Credit)

(To complete Software Design)

AGRE105 Culture Plants (for Morphology of Culture Plants 1+2) (6 Credit)

This subject consists of the following units taken from Australian Agricultural Training Package

AHCNSY306 Implement a propagation plan

AHCNSY306 မျိုးပွား ဖြန့်ဖြူးရေးအစီအစဉ်ကိုအကောင်အထည်ဖော်ပါ

V55

AHCORG403 Manage organic soil improvement

AHCORG403 အော်ဂဲနစ်မြေဆီလွှာတိုးတက်မှုကိုစီမံပါ

V56

AHCPCM301 Implement a plant nutrition program

AHCPCM301 အပင်အာဟာရအစီအစဉ်ကိုအကောင်အထည်ဖော်ပါ

V57

AHCPCM302 Provide information on plants and their culture

AHCPCM302 အပင်များနှင့်၎င်းတို့၏သဘာဝအကြောင်းသတင်းအချက်အလက်ပေးပါ

V58

AHCPCM304 Report on health and condition of trees

AHCPCM304 သစ်ပင်၏ကျန်းမာရေးနှင့်အခြေအနေ

V59

The students will need to do internet research for the activities given by teachers

Reference Textbook

The students will need to submit 20 pages study report by reading the reference book.

Advanced Diploma in Agricultural Engineering

YEAR 2

6 credits/ unit x 5=30 Credits

AGRE201 Analytical Chemistry (for Analytical Chemistry)(6 credits)

ECh11011	Engineering Chemistry I

The students will need to submit 20 pages study report by reading the reference book.

AGRE202 Organic Chemistry (for Organic Chemistry) (6 credits)

ChE 11001	Organic Chemistry
-----------	-------------------

The students will need to submit 20 pages study report by reading the reference book.

AGRE203/CE115 Estimating (Civil Engineering) (6 credits)

BAE 644-Estimating

BAE 690-Mechanical Estimating

AGRE204 Meterology (6 credits)

Textbook

The students will need to submit 20 pages study report by reading the reference book.

AGRE205 General Civil Engineering for Agriculture (6 credits)

As part of Agricultural Engineering, the students are required to complete some units
Diploma in Civil Engineering at Year 2

CE105 Hydraulics

CE-106 Brick Laying

CE107 Sanitation Water Supply

Professional Diploma in Agricultural Engineering Technology
Bachelor of Technology (Agricultural Engineering)

YEAR 3

6 credits/ unit x 5=30 Credits

AGRE301 Agriculture of Garden Plants (for Agriculture of Garden Plants) (6 credits)

This subject consists of the following units taken from Australian Agricultural Training Package

AHCPHT306 ဟင်းသီးဟင်းရွက်သီးနှံများစိုက်ပျိုးပါ

V63

AHCPHT307 - Prepare raw materials and compost feedstock

AHCPHT307 - ကုန်ကြမ်းများနှင့်မွေးမြူရေးပစ္စည်းများပြင်ဆင်ပါ

V64

AHCPHT310 Coordinate horticultural crop harvesting

AHCPHT310 ဟင်းသီးဟင်းရွက်သီးနှံရိတ်သိမ်းမှုညှိနှိုင်းဆောင်ရွက်သည်

V65

The students will need to do internet research for the activities given by teachers

Reference Textbook

- horti2008

from the following link

The students will need to submit 20 pages study report by reading the reference book.

AGRE302 Agriculture of Plantation Plants, Plant Feeding & Plant Protection for (Agriculture of Plantation Plants, Plant Feeding & Plant Protection) (6 credits)

This subject consists of the following units taken from Australian Agricultural Training Package

AHCPGD301 Implement a plant establishment program

AHCPGD301 စက်ရုံတည်ထောင်ခြင်းအစီအစဉ်ကိုအကောင်အထည်ဖော်ပါ

V60

AHCPHT303 Implement a post-harvest program

AHCPHT303 ရိတ်သိမ်းချိန်လွန်အစီအစဉ်ကိုအကောင်အထည်ဖော်ပါ

V61

AHCPHT305 Regulate crops

AHCPHT305 ကောက်ပဲသီးနှံများကိုထိန်းညှိပါ

V62

AHCPHT306 Establish horticultural crops

AHCPMG301 Control weeds

AHCPMG301 ထိန်းချုပ်မှုပေါင်းပင်

V66

AHCPMG302 Control plant pests, diseases and disorders

AHCPMG302 စက်ရုံပိုးမွှားများ၊ ရောဂါများနှင့်ရောဂါများကိုထိန်းချုပ်သည်

V67

AHCPMG305 Survey pests

AHCPMG305 ပိုးမွှားစစ်တမ်း

V68

AHCSS00027 Agricultural Chemical Skill Set.

AHCSS00027 စိုက်ပျိုးရေးဓာတုကျွမ်းကျင်မှုသတ်မှတ်။

V70

AHCSS00074 Agricultural Chemical Skill Set.

AHCSS00074 စိုက်ပျိုးရေးဓာတုကျွမ်းကျင်မှုအစုံ။

V71

AHCWHS301 Contribute to work health and safety processes

AHCWHS401 Maintain work health and safety processes.

AHCWHS401 အလုပ်ကျွန်းမာရေးနှင့်ဘေးကင်းရေးလုပ်ငန်းစဉ်များကိုထိန်းသိမ်းပါ။

V72

The students will need to do internet research for the activities given by teachers

Reference Textbook

- AgriculturalProducts&YouPPT
- Gardening_pleasures

from the following link

The students will need to submit 20 pages study report by reading the reference book.

AGRE303 Agricultural Economy (for Agricultural Economy)

Read

- GlobalTrendsInAgriculture
- HumanNeeds&FoodProducts
- Conservation_on_private_land

from the following link

The students will need to submit 20 pages study report by reading the reference book.

AGRE303 Food Science and Technology (6 credits)

Read

- CareersinFoodSciencePPT
- HumanNeeds&FoodProducts
- Sustainable Agriculture

from the following link

Video

Read any two textbooks
from the following link

The students will need to submit 20 pages study report by reading the reference book.

AGRE304 Agricultural Ecology (6 credits)

Read

- Agriculture_and_Ecosystems-Lesson

from the following link

The students will need to submit 20 pages study report by reading the reference book.

AGRE305 Plant Physiology (6 credits)

Read

The students will need to submit 20 pages study report by reading the reference book.

Professional Diploma in Agricultural Engineering

Bachelor of Engineering (Agricultural Engineering)

YEAR 4

6 credits/ unit x 5=30 Credits

AGRE401 Agricultural Water and Drainage (6 Credits)

CPCPCM3022A Weld polyethylene and polypropylene pipes using fusion method

CPCPCM3023A Fabricate and install non-ferrous pressure piping

CPCPCM4012A Estimate and cost work

CPCPDR2021A Locate and clear blockages.

CPCPDR2022A - Install domestic treatment plants

CPCPDR2023A Maintain effluent disinfection systems

CPCPDR2024A Install stormwater and sub-soil drainage systems

CPCPDR2025A Drain work site

CPCPDR2026A Install prefabricated inspection openings and enclosures

CPCPDR3021A Plan layout of a residential sanitary drainage system

CPCPDR3022A - Install below ground sanitary drainage systems.

CPCPDR3023A - Install on-site disposal systems

CPCPFS3031A - Fabricate and install fire hydrant and hose reel systems

CPCPSN3025A Install pre-treatment facilities.

CPCPWT3020A - Connect and install storage tanks to a domestic water supply

CPCPWT3021A Set out and install water services.

CPCPWT3022A - Install and adjust water service controls and devices.

CPCPWT3023A - Install and commission water heating systems

CPCPWT3025A Install water pumpset

CPCPWT3027A Connect irrigation systems from drinking water supply

CPCPWT4011B Design and size heated and cold water services and systems.

RIICBS208D Conduct road maintenance operations

RIICBS303D - Conduct materials transfer vehicle operations

RIICCM201D - Carry out measurements and calculations

RIICCM202D – Identify, locate and protect underground services

RIICCM203D - Read and interpret plans and job specifications

RIICCM205D Carry out manual excavation

RIICCM206D - Support plant operations

RIICCM207D - Spread and compact materials manually

RIICCM208D Carry out basic levelling.

RIICCM209D Carry out concrete work.

RIICCM210D - Install trench support

RIICCM211D - Erect and dismantle temporary fencing and gates

RIICCM301D Construct and dismantle fences and gates

RIICPL301D Install water mains pipelines

RIICPL302D Install stormwater systems

RIICPL303D Install sewer pipelines

RIICRC203D Install sub-soil drainage.

RIICRC204D Install and maintain roadside fixtures.

RIICRC208D - Lay pipes

RIICRC301D Maintain drainage system

RIICRC304D Maintain sealed road

The students will need to submit 20 pages study report by viewing the reference videos

Read

- water_sampling
- Water sampling and analysis
- Surface water sampling methods and analysis

from the following link

(Note when you Unzip, some files need to be skipped)

The students will need to submit 20 pages study report by reading the reference book

AGRE402 General Zootechnics (6 Credits)

This subject consists of the following units taken from Australian Agricultural Training Package

Video

Read

- Animal Handling and Transport

from the following link

The students will need to submit 20 pages study report by reading the reference book

AGRE403 Agricultural Mechanisation

As part of this subject, the students will need to do some Mechanical Units

ME101 Applied Mechanics

ME108 Principle of Engine

ME103 Engineering Mechanics

ME104 Machine Principle

ME106 Electrical Principle

ME102+107 Engineering Thermodynamics

ME334 Airconditioning and Refrigeration

ME234 Wind Energy Conversion System

Read

- Agricultural_Process_Engineering

from the following link

The students will need to submit 20 pages study report by reading the reference book

AGRE403 Soil Knowledge (6 Credits)

AHCSOL401 Sample soils and interpret results

AHCSOL401 မြေဆီလွှာကိုနမူနာယူပြီးရလဒ်များကိုဘာသာပြန်ပါ

V69

Read

- Conservation_on_private_land

from the following link

The students will need to submit 20 pages study report by reading the reference book

AGRE404 Brand Management (6 Credits)

As part of this subject, the students will need to study some units from Diploma in Management Program

Study

- Mgt101 Management ,
- Mgr105 Quality Management

BAE608 Engineering Competency Demonstration Report (6 Credits)

The Institution of Professional Engineers Myanmar

- 2 Selection of Examination (or) Assignment -Electrical, Civil, Mechanical, ICT based on Electrical, Civil, Mechanical, ICT subjects in Advanced Diploma in Electro-mechanical and Construction Engineering to determine the discipline of BTech degree.
- 3 Work experience submission to confer Bachelor of Technology (Special) degree.
- 4 Completion of Year 3 in BE Program for the students who completed Advanced Diploma in Electrical Engineering, Advanced Diploma in Civil Engineering, Advanced Diploma in Mechanical Engineering, Advanced Diploma in ICT Engineering,

Assignment Submission , one of the following ways

1. Messenger—to be advised
2. E mail —iqytechnicalcollege@gmail.com
3. Personal No 307(B) Thura 2 Street, 9 Ward, South Okkalapa , Yangon on Saturday, Sunday

BACHELOR OF APPLIED ENGINEERING (ELECTRICAL)

Pre-requisite

Advanced Diploma in Electrical Engineering

ASSESSMENT

The learning and assessment system involves two parts

- (1) Completion of the course works- submission of the assignments (Theory/ Practical/ Calculations) for the competency units of the subject
(Grading—Complete or Incomplete)
- (2) Completion of the course works- submission of the assignments Theory/ Practical/ Calculations) for the over all knowledge of the subject
(Grading—Complete or Incomplete)
- (3) Sitting the final test for the subject by either online or paper based test- -Grading—In accordance with St Clements University Higher Education School-Niue Students Handbook.

The following is the list of the subjects and competency units

BACHELOR OF APPLIED ENGINEERING (ELECTRICAL)

Subjects	Points	Competency Units
BAE 401 Advanced Engineering Mathematics	9	Maths 301 Introduction to Complex Variables (1 pt) Maths 302 Elementary Linear Algebra (1 pt) Maths 401 Continuous Distributions (1 pt) Maths 402 Discrete Distributions (1 pt) Maths 403 Engineering Mathematics (1 pt) Maths 501 Introduction to Probability(1 pt) Maths 501 Linear Algebra & Matrices (1 pt) Maths 502 Finite Difference Methods for Partial Differential Equations & Mathematical Modelling (1 pt) Maths 601 Random Variables (1 pt)
BAE 402 Calculus	3	Maths 304 Integration and Differential Equations. (1 pt) Maths 403 Second Order Ordinary Differential Equations

		(1 pt) Maths 303 Engineering Mathematics (1 pt)
BAE 403 Engineering Mechanics	1	ME 301 Applied Mathematics (1 pt)
BAE 404 Engineering Materials & Thermodynamics	3	ME 334 Engineering Thermodynamics (1 pt) ME 434 Wind Turbines (1 pt) ME 634 Pneumatics (1 pt)

Bachelor of Applied Engineering (Electrical+Electronics) with Certificate IV in Electrical & Electronics Trade Studies

www.electricaldiploma2013.zoomshare.com/files/BAppEngElectricalElectronics.htm

Course Development Ideas, Brief Description of the subjects & Resources Links

This is a course that combines the trade skills, para-professional and professional competencies in electrical and electronics engineering.

Today industry demands the multi-skilled professionals. Especially in electro-technology industry, the graduates need to be equipped with multiple skills.

This course combines the Electrical & Electronics Trade Skills, Engineering Associate Competencies & Engineering Technologists Competencies.

Bachelor of Applied Engineering is designed to be equivalent to Engineering Technologist Degree.

The program consists of three level of electrical & electronics engineering competencies

Stage 1-- Year 1 is composed of Electrical & Electronics Trade Units.

The relevant electro-technology training package units are combined up to the stage of pre-capstone assessment level in electrical trades as well as theoretical part of telecommunication cabler competencies. The award after the Year 1 is Certificate IV in Electrical & Electronic Trade Studies.

Stage 2-Year 2 is composed of Advanced Diploma level Electrical & Electronic Training Package units. It is designed to train the students with both electrical and electronic engineering skills and knowledge at engineering associates level.

After the Year 2, the students can be graduated with Advanced Diploma in Applied Engineering (Electrical & Electronics)

Stage 3- Year 3 & 4 is composed of the degree level electrical and electronic engineering units. The study is a combined studies of electrical power, electronics, computer programming, computer networking, control system, building services engineering and renewable energy.

At the Advanced Diploma level, electro-technology training package units are referred as detailed contents. But the packaging is based on the study areas.

For example, the unit GE2 Electrical Machine is composed of several electro-technology training package units at trades & technician level related to electric machineries.

Program Objectives

Certificate IV in Electrical & Electronics Trade Studies

One year Certificate IV in Electrical & Electronics Trade Studies is designed to train the students to work as Engineering Trades Persons (Electrical/Electronics) in wide ranges of electrical & electronic industries

It is designed to provide the following competencies.

- Breadth, depth and complexity of knowledge and competencies would cover selecting, adapting and transferring skills and knowledge to Australian environments and providing technical advice and some leadership in resolution of specified problems. This would be applied across a range of roles in a variety of contexts with some complexity in the extent and choice of options available.
- Performance of a defined range of skilled operations, usually within a range of broader related activities involving known routines, methods and procedures, where some discretion and judgement is required in the selection of equipment, services or contingency measures and within known time constraints.
- Applications may involve some responsibility for others. Participation in teams including group or team coordination may be involved.
- Distinguishing Features of Learning Outcomes
- Do the competencies enable an individual with this qualification to:
 - demonstrate some relevant theoretical knowledge
 - apply a range of well-developed skills
 - apply known solutions to a variety of predictable problems
 - perform processes that require a range of well-developed skills where some discretion and judgement is required
 - interpret available information, using discretion and judgement
 - take responsibility for own outputs in work and learning
 - take limited responsibility for the output of others
- Breadth, depth and complexity of knowledge and competencies would cover a broad range of varied activities or application in a wider variety of contexts most of which are complex and non-routine. Leadership and guidance are involved when organising activities of self and others as well as contributing to technical solutions of a non-routine or contingency nature.
- Performance of a broad range of skilled applications including the requirement to evaluate and analyse current practices,

- develop Australian criteria and procedures for performing current practices and provision of some leadership and guidance to others in the application and planning of the skills.
- Applications involve responsibility for, and limited organisation of, others.
- Distinguishing Features of Learning Outcomes
- Do the competencies enable an individual with this qualification to:
 - demonstrate understanding of a broad knowledge base incorporating some theoretical concepts
 - apply solutions to a defined range of unpredictable problems
 - identify and apply skill and knowledge areas to a wide variety of contexts, with depth in some areas
 - identify, analyse and evaluate information from a variety of sources
 - take responsibility for own outputs in relation to specified quality standards
- take limited responsibility for the quantity and quality of the output of others.

Diploma/ Advanced Diploma in Applied Engineering (Electrical+ Electronics)

Two years Advanced Diploma in Applied Engineering (Electrical & Electronics) is designed to train the students to work as Engineering Associates Technicians in wide ranges of electrical & electronic industries to perform a wide range of functions within engineering enterprises and engineering teams.

It is designed to provide the following competencies.

- To be closely familiar with standards and codes of practice, and to become expert in their interpretation and application to a wide variety of situations.
- To develop very extensive experience of practical installations, and may well be more knowledgeable than Professional Engineers or Engineering Technologists on detailed aspects of plant and equipment that can contribute very greatly to safety, cost or effectiveness in operation.
- To develop high levels of expertise in aspects of design and development processes. These might include, for example, the use of advanced software to perform detailed design of structures, mechanical components and systems, manufacturing or process plant, electrical and electronic equipment, information and communications systems, and so on.
- To do the construction of experimental or prototype equipment.
- To develop detailed practical knowledge and experience complementing the broader or more theoretical knowledge of others.

Bachelor Applied Engineering (Electrical+ Electronics)

Four years Bachelor of Applied Engineering (Electrical & Electronics) is designed to train the students to work as Engineering Technologists in wide ranges of industries.

The training is designed to provide expertise to the students which may be at a high level, and fully equivalent to that of a Professional Engineer. That is designed

- to exercise the same breadth of perspective as Professional Engineers, or carry the same wide-ranging responsibilities for stakeholder interactions, for system integration, and for synthesising overall approaches to complex situations and complex engineering problems.
- to possess for a strong understanding of practical situations and applications, with the intellectual challenge of keeping abreast of leading-edge developments as a specialist in a technology domain and how these relate to established practice. For this purpose Engineering Technologists need a strong understanding of scientific and engineering principles and a well-developed capacity for analysis.
- to apply current and emerging technologies, often in new contexts; or with the application of established principles in the development of new practice.
- To contribute to the advancement of technology.
- to take responsibility for engineering projects, services, functions and facilities within a technology domain, for specific interactions with other aspects of an overall operating context and for managing
- to contribute the specialist work to a broader engineering system or solution. In these roles, Engineering
- to focus on sustainable solutions and practices which optimise technical, social, environmental and economic outcomes within the technology domain and over a whole systems life cycle.
- to have an intimate understanding of the standards and codes of practice that underpin the technology domain and ensure that Technology Outcomes comply with statutory requirements. Engineering Technologists are required to interact effectively with Professional Engineers and Engineering Associates, with other professionals, tradespersons, clients, stakeholders and society in general, to ensure that technology outcomes and developments fully integrate with the overall system and context.
- to ensure that all aspects of a technological product, or operation are soundly based in theory and fundamental principle.
- to understand how new developments relate to their specific field of expertise.
- to interpret technological possibilities, to investigate interfaces, limitations, consequences, costs and risks.

Credit Points

To be relevant to International Standard Credit Points system, the credit points for the studies are arranged as follows

Stage	Year	Course	Credit Points
1	1	Certificate IV in Electrical & Electronics Trade Studies	30
2	2	Diploma/ Advanced Diploma in Applied Engineering (Electrical+ Electronics)	30

Total points after Advanced Diploma			60
3	3	Bachelor Applied Engineering (Electrical+ Electronics) Part 1	30
3	4	Bachelor Applied Engineering (Electrical+ Electronics) Part 2	30
Total points after Bachelor of Applied Engineering			120

Time allocations & detailed credit arrangement for each unit at degree level

More detailed developments are required.

Structures of the units

GE-General Engineering IE-Intermediate Engineering

BAE-Bachelor of Applied Engineering

Year 1 Certificate IV in Electrical & Electronics Trades

Semester 1

IE6	Principle of Electricity
IE13	Workshop
GE14	Fitting & Machining
GE16	Engineering Drawing I
GE1	Electrical Wiring (EE) Part 1
GE27	Machine Principle(ME)
IE3	Material Science
GE6	Occupational Health & Safety

Semester 2

GE1	Electrical Wiring Part 2
IE23	Industrial Computer System
GE13	Principle of Engine
IE31	Introduction to Renewable Energy Technology
GE18	Air-conditioning & Refrigeration (ME)
GE2	Electrical Machine (EE)
GE8	Electronics (EE)
IE32	Telecommunication Cabling & Installation

Year 2- Diploma/Advanced Diploma in Applied Engineering -(Electrical & Electronics)

Semester 1-

Diploma in Engineering Technology-(Electrical & Electronics)

IE1	Engineering Mathematics
IE2	Engineering Physics
IE7+ IE8	Electrical Circuit (EE)
GE10	Industrial Electronics (EE)
GE3	Electrical Distribution (EE)
GE9	Process Control (EE/ME)
GE11	Programmable Logic Controller (EE/ME)
IE15	Advanced Engineering Design & Project Work
IE27	Control Concept

Semester 2-

Advanced Diploma in Engineering Technology-(Electrical & Electronics)

IE4	Advanced Engineering Mathematics
GE34	Engineering Business Management
GE4	Power System Operation (EE)
GE5	Power System Protection
GE20	Computer Networking (EE)

GE26	Energy Efficient Building Design
IE10	Transmission Line (EE)
GE7	Project Management (EE/CE/ME)

Year 3 - Bachelor of Applied Engineering -(Electrical & Electronics) Part 1

Semester 1-

BAE 401	Higher Engineering Mathematics
BAE 402	Calculus
GE12	Photovoltaic Solar Electrical System
GE24	Manufacturing Management (ME)
IE24	Microprocessor
IE28	Electronic Signal & System
IE29	Electrical Estimating

Semester 2-

IE34	Electricity Supply Industrial Skills
IE16	Power System Analysis-Fault Calculation
GE19	Computer Programming (EE/CE/ME)
IE26	Electrical Communication Fundamental
BAE 405	Advanced Circuit Analysis
BAE 406	Electro-mechanics
BAE 407	Advanced Electro-magnetics Field & Materials
BAE 408	Analogue & Digital Electronics

Year 4 - Bachelor of Applied Engineering -(Electrical & Electronics) Part 2

Semester 1-

- Professional Studies (Part 1)

IE33	Hybrid Energy System
IE18	Building services
BAE 502	Linear System
BAE 503	Control System
BAE 504	Power System Analysis
BAE 505	Power System Optimization
BAE 507	Electro-mechanical Energy Conversion

Semester 2-

- Professional Studies (Part 2)

BAE 508	Industrial Engineering & Industrial Management
BAE 603	Software Engineering
BAE 607	Radio Wave Propagation & Microwave Techniques

	PLUS Other elective BAE units at level 5 & 6
	Design Project

IQY Technical College သည် Bachelor of Engineering (Rural Development) Engineering (online) Course အသစ်ကို Year 10/ THS/ITC အောင်များ အတွက်ထပ်မံဖွင့်မည်။ စိုက်ပျိုးရေး၊မွေးမြူရေး၊ဆောက်လုပ်ရေး၊လျှပ်စစ်၊ ကျေးလက်ရေဖြန့်ဖြူးရေး၊နေစွမ်းအင်မှလျှပ်စစ်ထုတ်လုပ်ရေး၊နေစွမ်းအင်သုံးရေခဲ စက်ဘာသာများပါဝင်သည်။

MVTC601-Professional Diploma of Rural Development Engineering

(Bachelor of Engineering-Rural Development Engineering)
BE(RDE)

(STC Technological University)

Advanced Diploma of Rural Development Engineering

Objective of the course

This course aims to provide the necessary skills required for people in rural areas to perform the followings

- Agricultural Foods Production and Animal Handling
- Building Construction, Drawing, Water Supply, Road and Bridge Construction, Irrigation
- Electrical Supply & Solar Electrical Supply System
- Hydraulics
- Machine Repair, Welding and Machining
- Water Chemical Treatment
- Transportation & Logistics

Course Structure

The course consists of Civil, Electrical and Mechanical Engineering principle together with Transportation, Logistics and Agricultural Foods Production.

Outcome of the course

After having completed this course, the attenders can perform rural developmental engineering basic works in their regions.

Detailed Structure of the course

Credit Points- 60 points to complete Advanced Diploma of Rural Development. Diploma and Certificate in Rural Development can be awarded upon completion of the specific units.

List of Subjects

Year 1

Advanced Certificate in Rural Development Engineering (16 Credits)

(MVTC Level (3) (Course Number MVTC301)

CE106 Brick Laying, Sprouting and Gutter Construction (4 Points)

CE104 Construction Drawing (4 Points)

CE110 Building Construction (4 Points)

CE107 Water Supply (4 Points)

Diploma in Rural Development (32 Credits)

(MVTC Level (4) (Course Number MVTC401)

All units in Certificate in Rural Development (16 Credits)

CE111 Road Bridge and Irrigation System Construction (4 Points)

MVTC13PC9 Electrical Wiring (4 Points)

MVTC201Agriculture+MVTC202Animal Handling(4 Points)

MVTC204 Water Chemical Treatment (4 Points)

Year 2

Advanced Diploma in Rural Development (60Credits)

(MVTC Level (5) (Course Number MVTC501)

All units in Diploma in Rural Development

RE002 Grid Connected Power System (4 Points) together with EE101 DC Circuits+EE112 AC Circuits

EE118 Electrical Supply System (4 Points)

ME108 Principle of Engine+MVTC13PC7 Engine Repairs (4 Points)

ME201 Hydraulics (4 Points)

MVTC13PC6 Welding+MVTC13PC5 Fitting Machining (4 Points)

MVTC209 Transport Logistics (4 Points)

Mgt101 Management Studies (4 Points)

(Bachelor of Engineering-Rural Development Engineering)

BE(RDE)

(STC Technological University)

TOTAL 21 Units at 60 Credit points

Entry requirement AGTI/ City & Guild Diploma

YEAR 3

Professional Diploma in Engineering (Year 3)

www.iqytechnicalcollege.com/profdipengg.htm

1 BAE 401 Advanced Engineering Mathematics (3 pt)

2 BAE 402 Calculus (3 pt)

3 BAE 403 Engineering Mechanics (3 pt)

4 BAE 404 Engineering Materials & Thermodynamics (3 pt)

5. BAE421 Building Construction Engineering (3 pt)

6. BAE422 Estimating (3 pt)

7. BAE423 Fluid Mechanics (3 pt)

- 8. BAE424 Reinforced Concrete (3 pt)
- 9. BAE 523A Environmental Engineering (3 pt)
- 10. BAE621 Structural Engineering (3 pt)
- 11. RE012a-Electrical Engineering Part 1(2 pt)
- 12. RE016-Design & Management (3 pt)

Professional Diploma/BE (Rural Development)

(Total 12 units) (Each 2 Credit points)

Year 4

- 13. RE013-Electrical Machines (3 pt)
- 14. BAE 501 Advanced Power Systems & Power Transmission Networks
Rural Electrical Power Supply System (3 pt)
- 15. RE001- Foundation Studies in Renewable Energy and Sustainability (2 pt)
- 16. RE003- Solar and Thermal Energy Systems (3 pt)
- 17. RE004- Energy Storage Systems(3 pt)
- 18. RE010-Engineering Materials(3 pt)
- 19. BAE 604 Telecommunication Engineering (3 pt)
Rural Telecommunication System
- 20. BAE511 Air-conditioning & Refrigeration (3 pt)
Solar Powered Refrigeration for Rural Area

Engineering Competency Demonstration Report

21.BAE608 Engineering Competency Demonstration Report (2 credit points)

Engineering Handbook Applications

DIPLOMA IN CIVIL ENGINEERING

Pre-requisite

Trade Certificate or Certificate in Civil Engineering/ Building / Brick Laying/ Carpentry /Surveying etc or work experience.

ASSESSMENT (DIPLOMA)

Completion of the course works- submission of the assignments Theory/ Practical/ Calculations) for the over all knowledge of the subject
(Grading—Complete or Incomplete)

BACHELOR OF APPLIED ENGINEERING (BUILDING SERVICE)

Pre-requisite

Diploma in Civil Engineering

ASSESSMENT

The learning and assessment system involves two parts

(1) Part (1)

Completion of the course works- submission of the assignments Theory/ Practical/ Calculations) for the over all knowledge of the subject
(Grading—Complete or Incomplete)

(2) Completion of the course works- submission of the assignments (Theory/ Practical/ Calculations) for the competency units of the subject (Grading—Complete or Incomplete)

(3) Part (2)

Sitting the final test for the subject by either online or paper based test- -Grading—In accordance with St Clements University Higher Education School-Niue Students Handbook.

STAGE (1) DIPLOMA IN CIVIL ENGINEERING (Each 2.5 Credits) (30 Pt)

Certificate in Construction Studies

CE 106A Detailed Construction & Building Construction Materials

CE 104 A Building Drawing

CE 101 Mathematics

CE 102 Physics

CE 108 Electrical Principle

DIPLOMA IN CIVIL ENGINEERING

CE 104 Fluid Dynamics

CE 105 Hydraulic

CE 106 Hydrology

CE 107 Sanitation-and-Water-supply

CE 109 Energy Efficient Building Design

CE 110 Building Construction

EE102 Basic Electrical Fitting & Wiring

Year (2) Advanced Diploma in Civil Engineering Program(30 pt) (Each 2.5 pt)

YEAR (2) SEMESTER (1)

CE103-Surveying

CE111A-Road+Bridges

CE113 Structure 1

CE114 Structure 2

CE115 Estimating & Specification

YEAR (2) SEMESTER (2)

EE104 Electrical Equipments Safety Protection

EE105 Electrical Installation Design

ME 102 Engineering Thermodynamics

ME 334 Airconditioning and Refrigeration

EE106 Advanced Electrical Wiring

CE 111 Engineering Mechanics+ ME 301 Applied Mathematics

EE308 Sustainability

Year (3) Part 1 ADVANCED GENERAL CIVIL ENGINEERING DEGREE LEVEL

Subjects	Points	Competency Units	Page
BAE 401 Advanced Engineering Mathematics	9	Maths 301 Introduction to Complex Variables (1 pt) Maths 302 Elementary Linear Algebra (1 pt) Maths 401 Continuous Distributions (1 pt) Maths 402 Discrete Distributions (1 pt) Maths 403 Engineering Mathematics (1 pt) Maths 501 Introduction to Probability(1 pt) Maths 501 Linear Algebra & Matrices (1 pt) Maths 502 Finite Difference Methods for Partial Differential Equations & Mathematical Modelling (1 pt) Maths 601 Random Variables (1 pt)

BAE 404 Engineering Materials & Thermodynamics	3	ME 334 Engineering Thermodynamics (1 pt) ME 434 Wind Turbines (1 pt) ME 634 Pneumatics (1 pt)	
BAE 508 Industrial Engineering & Industrial Management	1	Mgt 501 Basic Management & Communication Skills (1 pt)	
Total Credit points in this group	17 pt		

Year (3) Part 2 ADVANCED GENERAL CIVIL ENGINEERING DEGREE LEVEL (18 Pt)

BAE421 Building Construction Engineering (4 pt)

BAE422 Estimating (2 pt)

BAE423 Fluid Mechanics (2 pt)

BAE424 Reinforced Concrete (2 pt)

BAE425 Timber Engineering (2 pt)

BAE521 Road & Bridge (2 pt)

BAE522 Rock Mechanics (2 pt)

BAE523 Soil Mechanics (2 pt)

TOTAL 35 Pt

Year (4) Part 1

BAE 601 Computer Programming	3	IT 401 Object Oriented Programming (1 pt) IT 402 Structured Programming (1 pt) IT 403 Visual Basic Programming (1 pt)
BAE 605 Engineering Management	5	Mgt 502 Operation Management (1 pt) Mgt 503 Production & Operation Management (1 pt) Mgt 504 Project Management (1 pt) Mgt 505 Quality Management and Manufacturing Engineering (1 pt) Mgt 506 Strategic Financial Management (1 pt)
BAE 606 Building Service Electrical & Mechanical Engineering	2	EE 617 Building Electrical and Mechanical System (1 pt) ME 334 Airconditioning and Refrigeration (1 pt) CE 301 Building Construction (Optional) CE 301 Conceise Hydroulics (Optional)
BAE 609 Design Project	3	
Total Credit points in this group	13 Pt	

Year (4) Part 1

(12 Pt)

BAE621 Structural Engineering (3 pt)

BAE623 Surveying & Traffic Engineering (2 pt)

BAE624 Water Supply , Sanitation & Finishing (2 pt)

BAE 608 Engineering Competency Demonstration Report Writing (2pt)

SELF STUDY

BAE622 Architecture (3 pt)

TOTAL 25 pt

DIPLOMA IN MECHANICAL ENGINEERING

Pre-requisite

Trade Certificate or Certificate in Mechanical Engineering/ Fitting /Machining/Welding/Auto Mechanic etc or work experience.

ASSESSMENT (DIPLOMA)

Completion of the course works- submission of the assignments Theory/ Practical/ Calculations) for the over all knowledge of the subject
(Grading—Complete or Incomplete)

BACHELOR OF ENGINEERING (MECHANICAL)

Pre-requisite

Diploma in Mechanical Engineering

ASSESSMENT

The learning and assessment system involves two parts

(1) Part (1)

Completion of the course works- submission of the assignments Theory/ Practical/ Calculations) for the over all knowledge of the subject
(Grading—Complete or Incomplete)

(2) Completion of the course works- submission of the assignments (Theory/ Practical/ Calculations) for the competency units of the subject (Grading—Complete or Incomplete)

(3) Part (2)

Sitting the final test for the subject by either online or paper based test- -Grading—In accordance with St Clements University Higher Education School-Niue Students Handbook.

Year (1)

Certificate in Mechanical Engineering (Each 1.5 Credits) (15 Pt)

Unit Number	Unit Name	Credit Points
Maths 101	Engineering Mathematics	1.5
ME 101	Applied Mathematics	1.5
ME 102	Engineering Thermodynamics	1.5
ME 103	Engineering Mechanics	1.5
ME 104	Machine Principle	1.5
ME 105	Electrical Principle	1.5
ME 106	Electrical Circuits	1.5
ME 107	Heat Transfer	1.5
ME 108	Principle of Engines	1.5
ME201	Introduction to Fluid Mechanics	1.5
	Total	15

Diploma in Mechanical Engineering (Each 1.5 Credits) (15 Pt)

ME 202 Introduction to Aero Dynamics

ME 203 Control Engineering

ME 204 Engineering Fluid Mechanics

ME 205 Manufacturing Processes-and-Materials

ME 206 Introduction to Turbo Machinery

ME 207 Chemical Thermodynamics

ME 208 Hydrocarbons

ME 209 Introduction-to-polymer-science-and-technology

ME 234 Wind Turbines

Mgt 501 Basic Management

Year (2)

Advanced Diploma in Mechanical Engineering (Each 1.5 Credits) (30 Pt)

Mathematics

Maths 403 Engineering-Mathematics

Maths 301 Introductory Finite Difference Methods-for-pdes

Maths 302 Elementary-Linear-Algebra

Maths 303 Introductory Finite Volume Methods-for-pdes

Maths 501 Linear Algebra-c-1

Mechanical Engineering

ME 301 Fluid Dynamics

ME 302 Automation-and-Robotics

ME 303 Computer Aided Design and Manufacturing

ME 304 Introduction to Nonlinearity-in-control-systems

ME 305 Corrosion Prevention

PROFESSIONAL DIPLOMA IN SCHOOL & VOCATIONAL EDUCATION)

(BACHELOR OF EDUCATION (SCHOOL & VOCATIONAL EDUCATION)

www.highlightcomputer.com/bedschoolvet.htm

This course aims to provide the teacher education theories and practical applications in school and vocational education classes.

Principles of teaching , learning , training and assessment are combined with instruction design methodologies and knowledge related to learning environment.

Modern learning technologies and technology in classroom contexts are added..

Teachers who are working in voluntary schools can be provided with necessary teaching and training knowledge to work as qualified teachers by attending this course.

Pre-requisite

Degree Holders	Non Degree Holders
<ul style="list-style-type: none">• Bachelor Degree & Teaching Experiences	<ul style="list-style-type: none">• Completion of Year 11+12 (Certificate in General & Vocational Education Level 4) PLUS• Completion of Diploma level qualification in Engineering, IT & Management courses of IQY Technical College & other vocational colleges/schools

Course structure

This course integrates Diploma in Teaching Practice , Teaching Practicum and Advanced study in Education to achieve 120 credit points required to get Professional Diploma in School & Vocational Education .awarded by IQY Technical College (Authorized Training Centre of Singapore Institute of Engineering Technologists, Member of ASEAN Federation of Engineering Organizations)

The universities (STC Technological University & St Clements University) affiliated to IQY Technical College award Bachelor of Education (School & Vocational Education) to holders of Professional Diploma in School & Vocational Education.

Year 1/2

Diploma in Teaching Practice (60 credits)

jointly taught by (STC Technological University/St Clements University)

Singapore Institute of Engineering Technologists/ IQY Technical College)

List of Subjects for Teaching Practice

ED101P Teaching Support (5 Credits)

ED102P Application of Information Technology in School Education (5 Credits)

ED103P Classroom Management (5 Credits)

ED104P Teaching Portfolio (5 Credits)

ED105P Inclusive Teaching (5 Credits)

ED106P Subject Area Knowledge (5 Credits)

ED107 Theory of Education, Educational Technology & Teaching Practice

(15 Credits)

ED107A-Theory of Education (ED101) (Slide 1 to 60 Principle of Learning)
ED107B-Education Technology (ED102) (Slide 61 to 100)
ED107C-Teaching Practice (ED103 Classroom Management) (Slide 101 to 140)
ED107D-Lesson Planning (ED104 Teaching Portfolio)(Slide 241 to 300)
ED107E-Teaching& Learning (Slide 141 to 160+ Slide 200 to 240)
ED107F-Inclusive Teaching (ED105 Inclusive Teaching Slide 161 to 200)
ED107G-Evaluation& Assessment (Slide 301 to 320)

ED108 Curriculum Study , Teaching & Learning (15- Credits)

Interpreting Curriculums

Study Sequence for Graduates

ED106 Subject Area Knowledge (Present Degree)

Part (1) Theory Training & Assignment (Certificate in Teaching Practice)

ED107 Theory of Education, Educational Technology & Teaching Practice

(15 Credits)

ED108 Curriculum Study , Teaching & Learning (15 Credits)

Part (2) Teaching Practice Portfolio Presentation (Diploma in Teaching Practice)

ED101P Teaching Support (5 Credits)

ED102P Application of Information Technology in School Education (5 Credits)

ED103P Classroom Management (5 Credits)

ED104P Teaching Portfolio (5 Credits)

ED105P Inclusive Teaching (5 Credits)

Study Sequence for Experienced Teachers

ED106 Subject Area Knowledge (Present Degree)

Part (1) Theory Training & Assignment (Certificate in Teaching Practice)

ED107 Theory of Education, Educational Technology & Teaching Practice

(15 Credits)

ED108 Curriculum Study , Teaching & Learning (15 Credits)

Part (2) Teaching Practice Portfolio Presentation (Diploma in Teaching Practice)

The following subjects can be exempted by presenting the reference letter from the school.

ED101 Teaching Support (5 Credits)

ED103 Classroom Management (5 Credits)

ED105 Inclusive Teaching (5 Credits)

The following subject needs to be studied

ED102 Application of Information Technology in School Education (5 Credits)

Teaching portfolio needs to be presented for the following subject

ED104 Teaching Portfolio(5 Credits)

REFERENCE EDUCATION THEORIES

ED 101 Theory of Education (5 Credits)

ED 102 Education Technology (5 Credits)

ED 103 Teaching Practice (5 Credits)

ED 104 Lesson Planning (5 Credits)

ED 105 Principle of Learning (5 Credits)

ED 106 Interpreting Curriculums (5 Credits)

GROUP (1) CURRICULUM SUBJECTS

ED437 Teaching Skills (5 Credit Points)

- **ED431-Critical Thinking**

www.highlightcomputer.com/ED431CriticalThinking.pptx

VIDEOS

<https://youtu.be/Cekuc04E2xM>

Assessment

-

Assignment

Refer your textbooks, select one chapter and write the followings

- the main purpose, the key question, the most important information, the main references or conclusions, the key idea, the main assumptions of the material, the implications, and the main point of view.
- Prepare one assessment requiring critical thinking by the students.
- Do internet research by using www.google.com and type Socratic questioning then submit the examples of Socratic questions.

- **ED431-Reflection& Evaluation (Day 2)**

www.highlightcomputer.com/ED431ReflectionEvaluation.pptx

VIDEO

https://youtu.be/Ezre_83QIfE

Assessment

Assignment

Write the lesson plan on how will you provide Problem Based Learning & Self Reflection for a group of students

Write one significant event in your class teaching and write down your own plan how to improve your teaching.

- **ED431-Teaching and learning strategies (Day 3)**

www.highlightcomputer.com/ED431Teachinglearningstrategies.pptx

VIDEO

https://youtu.be/gMJi_3CSDq0

Assessment

Assignment

- Outline 3 teaching strategies that you prefer to apply in your teaching and discuss the good points and bad points. Also write how to improve them for best teaching and learning

ED438 Assessment & Feedback (5 Credit Points)

ED432A-assessment principles+ED432B-constructive feedback+

Lessons

Down load and study the following power point slides and answer the questions

www.highlightcomputer.com/ED432ABC.pptx

VIDEO

<https://youtu.be/CIi1k4NECoQ>

Assessment

Assignment

ED432A-assessment principles

Provide three assessment evidences that you use in teaching.

ED432B-constructive feedback

Provide three assessment feedbacks that you provide to your students

ED439 Fostering Students' Learning (5 Credit Points)

ED433H-consequences for student learning+ED433I-improving students learning+ED433J-different ways of thinking about university teaching+ED433K-identify problems and issues

Lessons

Down load and study the following power point slides and answer the questions

www.highlightcomputer.com/ED433HIJK.pptx

VIDEO

<https://youtu.be/F2gUlg4qBho>

Assessment

Assignment

Provide one task that you want your students to do critical thinking.

Write one learning outcome of the lesson that you are teaching & provide your plan how to teach, facilitate & assess the students to reach that outcome

ED434H-reflect critically on and evaluate own teaching+ED434J-reflecting on learning from formal learning programs

Lessons

Down load and study the following power point slides and answer the questions

www.highlightcomputer.com/ED434HIJK.pptx

VIDEO

<https://youtu.be/wIbNCUXxlMI>

Assessment

Assignment

Write a plan how will you maximize the effectiveness of teaching & learning for your students

ED 402A Educational Leadership & Change Management for School Education (10 CP)

ASSIGNMENT

Down load the following file

www.highlightcomputer.com/MgtAdvDip.zip

Read the contents in "Mgt 211" and answer the followings.

- Q1. How does leadership relate to management?
- Q2. Explain Instructional leadership
- Q3. Explain Transformational leadership
- Q4. Explain Moral leadership
- Q5. Explain Participative leadership
- Q6. Explain Managerial leadership
- Q7. Explain Contingent leadership
- Q8. Explain New Model of Leadership
- Q9. Compare manager and leader.
- Q10. What are the competencies of a leader?
- Q11. What type of leadership is preferred by you and provide the reason.

<http://yourlisten.com/Kyaw.Naing/day-10-session-1>

ASSIGNMENT

Based on your classroom experience, write the factors important for class room environment.

Project

Prepare a project plan how to develop a school that will provide the education for needy students.

GROUP (2) TEACHING PRACTICE SUBJECTS

ED440 Science Teaching (5 credits)

Review the Science Teaching Videos in the following links

<http://www.highlightcomputer.com/y712lessons.htm#A>

<http://www.highlightcomputer.com/y910.htm>

Then develop your own teaching plan which combines e-Learning strategies. Your plan should contain

- Written notes to be given to students
- The lessons to be explained to the students
- Exercises to be given to the students
- Time frame and detailed teaching plan

ED441 Mathematics Teaching (5 credits)

Review the Mathematics Teaching Videos in the following links

<http://www.highlightcomputer.com/y712lessons.htm#A>

<http://www.highlightcomputer.com/y910.htm>

Then develop your own teaching plan which combines e-Learning strategies. Your plan should contain

- Written notes to be given to students
- The lessons to be explained to the students
- Exercises to be given to the students
- Time frame and detailed teaching plan

ED442 Technology Teaching (5 credits)

Review the Technology Teaching Videos in the following links

<http://www.highlightcomputer.com/y712lessons.htm#A>

<http://www.highlightcomputer.com/y910.htm>

Then develop your own teaching plan which combines e-Learning strategies. Your plan should contain

- Written notes to be given to students
- The lessons to be explained to the students
- Exercises to be given to the students
- Time frame and detailed teaching plan

BE Industrial Engineering

First year

Teaching period	Subject title	Credit points
ICT103	Programming for Engineers and Scientists	15
FE101	Number Systems and Linear Algebra	15
FE102	Principles of Physics A	15
ADMEC203	Engineering Design and Problem Solving	15
ME303	Computer Aided Design	15
EE201/EE302	Calculus and Differential Equations	15
EE101/113/202	Introduction to Electrical and Electronic Engineering	15
ME101	Mechanics of Solids	15

Second year

Teaching period	Subject title	Credit points
BAE401	Vector Calculus	15
ADMEC203	Ideas to Innovation	15
RE010	Engineering Materials	15
ME201	Fluid Mechanics	15
BAE312	Systems Modelling	15
RE001/RE005	Sustainability and Renewable Energy Design	15

Teaching period	Subject title	Credit points
BAE508	Engineering Enterprise	15
BAE402	Engineering Probability and Statistics	15

Third year

Teaching period	Subject title	Credit points
BAE503	Control Systems	15
BAE408	Digital Electronics and Controllers	15
EE306/EE624	Measurement and Instrumentation	15
BAE614	Mechanical Component Design	15
BAE672-ME-EE Course	Systems Engineering	15
BAE404/ME102/ME107	Thermodynamics	15
BAE608	Engineering Design Project	30

Fourth year

Teaching period	Subject title	Credit points
BAE605	Engineering Project	30
Elective EE/CE/ME		

Teaching period	Subject title	Credit points
BAE608	Engineering Major Project	60
internship	Work Integrated Learning	60
BAE606	Integrated Building Design	15
Mgt307	Commercialising Innovation	15
BAE682 (ME Mech)	Design for Manufacture	15
BAE691 (ME Mech)	Robotic Systems Design	15

Bachelor of Engineering Management

To complete Bachelor of Engineering Managements, the following units are required to complete. Total Credit points= 120

	Units	Credit Points
Part 1	<u>General Management</u>	
	Mgt 101 Management	5
	Mgt 102 Performance Management	5
	Mgt 104 Project Management	5
	Mgt 105 Quality Management	5
	Mgt 106 Financial Management	5
	Mgt107 Industrial Risk & Safety Management	5
Part 2	<u>Leadership & Management</u>	
	Mgt 202 Change Management	5
	Mgt 203 Inventory & Budget Management	5
	Mgt 204 Continuous Improvement Management	5
	Mgt 208 Safety Management	5
	Mgt 209 Risk Management	5
	Mgt 211 Leadership	5
	Mgt 213 Conflict Management	5
Part 3	<u>Engineering & Information Management</u>	
	Mgt 210 Professional Development Management	5

	ME 303 Computer Aided Design and Manufacturing	5

Professional Diploma/ BE (Special Program) for Experienced Site Engineers

This course is designed to provide formal engineering degree qualification for experienced engineers with relevant engineering diploma by combining their engineering experience and relevant BE level higher education studies.

It has total 120 credit points in which 60 credits points is awarded for engineering diploma and the remaining points are to be assessed on work experience, training and higher education studies.

Pre-requisite

- AGTI (3 Years) with minimum 7 Years experience
- Other engineering diplomas/ certificates with non engineering degrees such as BSc/BA/BEcon /BSc(IT) etc and minimum 10 years experience
- Matured age engineers/ technicians
- Marine Engineers (MOT Second Class)

Arrangement of study

B Tech- Completion of Part 2 + 3 Stream 1 or Stream 2—for Experienced +Non Experience Engineers

B E- Completion of Part 1+2+3 Stream 1 or Stream 2-for Only Experienced Engineers

PART (1)- Entry Qualification and Experience Assessment

ENG601- Engineering Studies

AGTI Certificate / Relevant Engineering Diplomas(60 Credits)

ENG602-Engineering Applications

Work Experience Curriculum Vitae (10 Credits)

ENG603-Engineering Practicals

Engineering Practice Report or Experience Portfolio (10 Credits)

BAE705 Engineering Competency Development

Other degree OR Appropriate Self Study Record

Continuing Professional Development

(10 Credits)

PART (2)- Degree Level Studies in General Engineering and Management

Degree Level Study Part 1-Engineering Mathematics+Materials+Mechanic Seminars (4 days)

BAE401 Engineering Mathematics

BAE402 Calculus

RE010 Engineering Materials

BAE403 Engineering Mechanics (10 Credits)

Study Record

<http://www.iqytechnicalcollege.com/studyrecordmyanmar.pdf>

Degree Level Study Part 2 -Engineering Management Seminars (2 days)

BAE508 Management

BAE605 Engineering Management (10 Credits)

Study Record

<http://www.iqytechnicalcollege.com/studyrecordmyanmar.pdf>

PART (3)- Degree Level Studies in Higher Engineering

Stream 1-Combined Studies

(To be supported by Live Online Lectures)

Stream 2-Discipline Studies-

(Personal Attendance or Self study Online)

Stream (1)- Combined studies-

- Professional Diploma/BE (Electrical and Renewable Energy Engineering)
 - Professional Diploma/BE (Civil and Renewable Energy Engineering)
 - Professional Diploma/BE (Mechanical and Renewable Energy Engineering)
- Which will depend on the discipline of AGTI/ Engineering Diploma

Degree Level Study Part 3 -Engineering Subjects Seminars (4 days)

5 subjects at BE Final Level (10 Credits)

- RE505- Green Building Design (3 credits)
- RE016A-Design & Management (4 credits)

- BAE 523A Environmental Engineering (1 credit)
- RE003- Solar and Thermal Energy Systems (1 credit)
- RE004- Energy Storage Systems (1 credit)

Stream (2)- Discipline studies

- Professional Diploma/BE (Electrical)
 - Professional Diploma/BE (Civil)
 - Professional Diploma/BE (Mechanical)
- Which will depend on the discipline of AGTI/ Engineering Diploma

Degree Level Study -Engineering Subjects Seminars (4 days)

3 or 4 subjects at BE Final Level (10 Credits)

Civil

PART (3)- Degree Level Studies in Higher Engineering

Stream 1-Combined Studies

(To be supported by Live Online Lectures)

Stream 2-Discipline Studies-

(Personal Attendance or Self study Online)

Stream (1)- Combined studies-

- Professional Diploma/BE (Electrical and Renewable Energy Engineering)
 - Professional Diploma/BE (Civil and Renewable Energy Engineering)
 - Professional Diploma/BE (Mechanical and Renewable Energy Engineering)
- Which will depend on the discipline of AGTI/ Engineering Diploma

Degree Level Study Part 3 -Engineering Subjects Seminars (4 days)

5 subjects at BE Final Level (10 Credits)

- RE505- Green Building Design (3 credits)
- RE016A-Design & Management (4 credits)

- BAE 523A Environmental Engineering (1 credit)
- RE003- Solar and Thermal Energy Systems (1 credit)
- RE004- Energy Storage Systems (1 credit)

Stream (2)- Discipline studies

- Professional Diploma/BE (Electrical)
 - Professional Diploma/BE (Civil)
 - Professional Diploma/BE (Mechanical)
- Which will depend on the discipline of AGTI/ Engineering Diploma

Degree Level Study -Engineering Subjects Seminars (4 days)

3 or 4 subjects at BE Final Level (10 Credits)

Specialized Professional Software Applications- Open Studies

Diploma in Work Studies/ Advanced Diploma in Work Studies/ Bachelor of Work Studies

This course is structured as linking Skills Recognition and Bridging of work experiences and training in vocational practice other than engineering to academic qualifications at Diploma/ Advanced Diploma and Bachelors degree levels.

This course is prepared and taught by IQY Technical College/ Myanmar Vocational Training Collaboration/ STC Technological University and St Clements University Myanmar College.

အင်ဂျင်နီယာလုပ်ငန်းမဟုတ်သောအခြားအသက်မွေးဝမ်းကျောင်းအလုပ်အကိုင်အကြံပြုနှင့်လေ့ကျင့်သင်ကြားမှုများကိုအထက်တန်းပညာရေးနှင့်တက္ကသိုလ်ပညာရေးပူးပေါင်းပြီး Diploma/ Advanced Diploma/ Bachelors သို့ များရရှိစေရန် IQY Technical College/ Myanmar Vocational Training Collaboration/ STC Technological University/ St Clements University Myanmar College တို့က စီစဉ်သင်ကြားသည်။

Diploma in Work Studies (30 credits)

Outcome

On completion of this course, the candidates will be able to effectively provide vocational work services to the customers.

ဤသင်တန်းပြီးပါကစားသုံးသူတို့ ကိုလိုအပ်သောအလုပ်များလုပ်ပေးနိုင်မည်။

Course Structure (သင်ရိုးဖွဲ့ စည်းပုံ)

It consists of compulsory work-based unit and elective units

WS101 Vocational Studies (10 credits)

- Vocational Experience and/ or completion of Vocational Training and studies at other schools and training centres

WS102 Safety Training (5 credits)

WS103 English (5 credits)

WS104 Myanmar Vocational Training Certificate (10 credits)

Optional

WS105 Myanmar

Advanced Diploma in Work Studies (30 credits)

Outcome

On completion of this course, the candidates will be able to effectively organize and manage the services needed by the customers.

ဤသင်တန်းပြီးပါကစားသုံးသူတို့ ကိုလိုအပ်သောအလုပ်များလုပ်ပေးသောလုပ်ငန်းကိုထိရောက်စွာ စီမံခန့်ခွဲနိုင်မည်။

Course Structure

It consists of credit transfer from Diploma in Work Studies, compulsory work-based unit and compulsory theory studies units.

Credit Transfer Completion of Diploma in Work Studies (30 Credit Points)

Mgt 101 Management (5 Credit points)

Mgt 201 Customer Service Management (5 Credit points)

Mgt 203 Inventory & Budget Management (5 Credit points)

Mgt 208 Safety Management (5 Credit points)

Mgt 211 Leadership in Humanitarian Works (5 Credit points)

WS 201 Business Plan and Work Record (5 Credit points)

Total Credits = 60 (5 Credit points)

Bachelor of Work Studies (60 credits)

Outcome

On completion of this course, the candidates will be able to effectively set up the strategic tasks and judge the nature of humanities services needed by the customers

ဤသင်တန်းပြီးပါကစားသုံးသူတို့ ကိုလိုအပ်သောအလုပ်များလုပ်ပေးသောလုပ်ငန်းကိုထိရောက်စွာ စီမံခန့်ခွဲနိုင်မည်သာမကလုပ်ငန်းမဟာဗျူဟာချမှတ်ရန်ခြံ့ချိန်ကြံဆစွမ်းရည်လဲရရှိမည်။

Course Structure

It consists of credit transfer from Advanced Diploma in work Studies, compulsory self study unit compulsory theory studies units and a Work based project

Credit transfer

Completion of Diploma in Work Studies (60 Credit Points)

BWS 401 Advanced Work Studies (Individualized Unit) (10 Credits)

Total Credits 120

Sample Structure (သင်ရိုးဖွဲ့ စည်းပုံနမူနာ)

Garment Factory Worker (အထည်ချုပ်လုပ်ငန်းအလုပ်သမားသို့ မဟုတ်အထည်ချုပ်သင်တန်းဆင်းသူ)

WS101 Vocational Studies (10 credits)

By submitting work experience or Certificate issued by other training school, WS101 will be given credits

အလုပ်အတွေ့ အကြုံတင်ပြခြင်းသို့ မဟုတ်အခြားသင်တန်းဆင်းလက်မှတ်တင်ပြခြင်းဖြင့်

WS101 Vocational Studies (10 credits)ရရှိမည်။

Study at IQY (အောက်ပါတို့ ကို IQY တွင်တက်ရန်

WS102 Safety Training (5 credits), WS103 English (5 credits)

WS104 Myanmar Vocational Training Certificate (10 credits)

ပြီးစီးပါက Diploma in Work Studies (Garment) ရရှိပြီး Advanced Diploma/ Bachelors

Degree ဆက်တက်နိုင်မည်။ When completed, Diploma in Work Studies (Garment) will

be awarded and then can proceed to Advanced Diploma in Work Studies (Garment) and Bachelor of Work Studies (Garment).

WS104 Myanmar Vocational Training Certificate (10 credits)

CERTIFICATE IN AGRICULTURE FOOD PRODUCTION (MVTC201)

CERTIFICATE IN ANIMALS HANDLING (MVTC202)

CERTIFICATE IN BUSINESS (MVTC203)

CERTIFICATE IN LABORATORY WATER OPERATIONS (MVTC204)

CERTIFICATE IN COMMUNITY SERVICE (MVTC205)

CERTIFICATE IN PROPERTIES SERVICES (MVTC206)

CERTIFICATE IN PERFORMING (MVTC207)

CERTIFICATE IN PUBLIC SAFETY (MVTC208)

CERTIFICATE IN LOGISTICS (MVTC209)

As Myanmar Vocational Training Certificate is designed with the study resources for the above vocational areas, the workers who are working in other vocational areas can study ADEMC203-Design and Technology (Year 12 Level) Subjects as tertiary preparation.

မြန်မာ့အသက်မွေးဝမ်းကျောင်းပညာလေ့ကျင့်ရေးလက်မှတ်ကိုအထက်ပါလုပ်ငန်းများအတွက်စီစဉ်ထားသည့်အဆိုပါဘာသာများသည်အလုပ်နှင့်မသက်ဆိုင်ပါက ADEMC203-Design and Technology (Year 12 Level) ကိုအထက်တန်းပညာရေးပေါင်းကူးအဖြစ်သင်နိုင်သည်။

BWS/BSc-Engg /Prof Dip Engg Sc (Course 5066689)

THS/ITC/ Year 10 မှဝင်သူများသည်အောက်ပါအစီအစဉ်အတိုင်းတက်ရမည်။

Year 1

Diploma in General Engineering and Certificate in Tertiary Preparation (First 6 months)

Diploma in Electrical/Mechanical/Civil Engineering (Myanmar Version) (Second 6 months)

Associate Degree in Work Studies-Engineering

Year 2

Advanced Diploma in Electrical/Mechanical/Civil Engineering Part 1+Associate Degree of Work Studies in Engineering (Course 332256)

Year 3

BTech/BE ဆက်မတက်နိုင်ပါက Bachelor of Work Studies-Engineering /Professional Diploma in Work Studies-Engineering ကို Year 3 တွင်အခမဲ့တက်ကာဘွဲ့ရယူနိုင်မည်။

အလုပ်အတွေ့အကြုံတစ်နှစ်ရှိပါက Bachelor of Work Studies-Engineering ကို Bachelor of Science-Engineering (Professional Diploma in Engineering Science) သို့ CV (Curriculum Vitae) တင်ပြပြီးအဆင့်မြှင့်နိုင်သည်။

Certificate in Financial Management

Financial Management is an important aspect in Business Management. This course does not train the students to become accountants but it trains the students to understand the financial statements of the company & to assess the financial situation of the company & will be able to perform the financial management.

By doing this course, the students will be able to

- Explain how accounting information assists in making decisions.
- Describe the components of the balance sheet.
- Analyze business transactions and relate them to changes in the balance sheet.
- Compare features of proprietorships, partnerships, and corporations
- Explain how income is measured using both the accrual basis and cash basis accounting methods.
- Use the concepts of recognition, matching, and cost recovery to record revenues and expenses.
- Prepare an income statement and show how it is related to the balance sheet.
- Prepare a statement of cash flows and show how it differs from an income statement.
- Use double-entry accounting.
- Analyze and journalize transactions.
- Post journal entries to the ledgers.
- Prepare and use a trial balance.
- Correct erroneous journal entries and describe how errors affect accounts.
- Use T-accounts to analyze accounting relationships.
- Explain how computers have transformed processing of accounting data
- Explain the concept of the statement of cash flows.
- Classify activities affecting cash as operating, investing, or financing activities.
- Use the direct method to measure cash flow.
- Determine cash flows from income statement and balance sheet accounts.
- Use the indirect method to calculate cash flows from operations.
- Relate depreciation to cash flows provided by operating activities.
- Reconcile net income to cash provided by operating activities.
- Adjust for gains and losses from fixed asset sales and debt extinguishments in the statement of cash flows.
- Use the T-account approach to prepare the statement of cash flows.

Completion of this course can be given the credit in Mgt 106 Financial Management subject in Diploma in Management Course.

YEAR (1)

Diploma of Management

Mgt 101 Management
Mgt 102 Performance Management
Mgt 103 Operation Management
Mgt 105 Quality Management
Mgt 106 Financial Management
Mgt 108 Computer Application in
Management

Mgt 107 Industrial Risk & Safety
Assessment
Mgt 104 Project Management

YEAR (2)

Advanced Diploma of Information Technology Management

Study the following units

ICT 103 Applied Programming

ICT 105 Systems Analysis and Programs

ICT 106 Software Engineering

ICT 202 Information Systems Principles and Networking

ICT 203 Information Systems, Analysis and Design

ICT 204 Advanced Programming

ICT 104 Program Projects

Mgt 501 Communication Skills & Management Leadership

Study BAE 508 Industrial Engineering & Industrial Management . You need to read the books in English.

(Focus on Mgt 501 Communication Skills & Mgt 501 Basic Management)

& do the exercises assigned by teacher.

YEAR (3)

Bachelor of Business (E-Business & Management)

The learning system will be based on self study. Read the given references study materials and prepare the project work. You need to read the books in English.

The following units common to MBA course are to be studied.

Mgt 301	Electronics Business
Mgt 302	Information Security
Mgt 303	Management Information System
Mgt 304	Electronics Commerce
Mgt 305	Quantitative Methods for Management
Mgt 306	Human Resources Management
Mgt 307	Marketing Management
Mgt 308	Artificial Intelligence

To assess Level 3, you need to write the report of 10 pages each on what you have learnt in the unit.

YEAR (4)

Mgt 401 Management Project

Mgt 402 Electronics Business Project

Two reports one for Management for (Mgt 303+Mgt 305+Mgt 306) & another for Electronics Business + Marketing (Mgt 301+Mgt 302+Mgt 304+Mgt 307+Mgt 308) subjects are required to be presented.

Each should contain 4000 to 6000 words of how you pursue the study in Management,, Marketing, Electronics Business subjects should be described.

The project should contain management plans, business plan & performance, task, job procedures IT integration etc of the topics of your choices.

Certificate/ Diploma in Computer Aided Engineering

Dip CAE

Topics

- ETAB
- REVIT
- Auto CAD
- Smart Plant
- Staad
- CAD WROX
- ELECTRICAL CAD
- TEKLA
- CNC
- Master CAM
- CAM

Online Training

Advanced Diploma in Engineering Design

www.highlightcomputer.com/dipenggdesign.pdf

This course trains the students to work as Engineering Design Drafters in Electrical, Civil & Mechanical Engineering Design and Construction.

The graduates of the courses satisfy the academic requirement for Associate Membership (Engineering Technician) of Singapore Institute of Engineering Technologists

The students can follow three strands

- Mechanical
- Civil
- Electrical

to complete the program

Pre-requisite

Completion of

Diploma in Engineering (Design & Drafting) or other diploma level relevant qualifications

Course 31115 Advanced Diploma in Mechanical Engineering Design

Total 30 Credit points. Each unit has 3 credit points. Total 10 units (Accumulated credit 60 points with Diploma in Engineering (Design & Drafting))

- ME 205 Manufacturing Processes-and-Materials & ME 303 Computer Aided Design and Manufacturing
- ME101 Applied Mathematics & CE113 Structure 1
- ME102 Engineering Thermodynamics
- ME201 Fluid Mechanics
- ME104 Machine Principle
- ME 234 Wind Turbines
- ME 334 Airconditioning and Refrigeration
- ME109 Engineering Drawing
- ME110 Mechanical Engineering Design Software Applications

Note-

The students who have completed Computer Aided Design training related to Mechanical design at affiliated educational establishment will be given advanced standing for the following units

- ME109 Engineering Drawing
- ME110 Mechanical Engineering Design Software Applications

Further Course-

The graduates of this course can continue Advanced Diploma in Mechanical Engineering which is recognized by Singapore Institute of Engineering Technologists as satisfying the academic requirement for Member /Fellow (Engineering Technologists)

Course 31015 Advanced Diploma in Civil Engineering Design

Total 30 Credit points. Each unit has 3 credit points. Total 10 units (Accumulated credit 60 points with Diploma in Engineering (Design & Drafting))

- CE111A-Road+Bridges
- ME101 Applied Mathematics & CE113 Structure 1
- ME201 Fluid Mechanics
- CE 109 Energy Efficient Building Design
- CE106A (Part 1) Detailed Construction & Building Construction Materials
- CE106A (Part 2) Brick Laying & Sprouting & Guttering
- CE115 Estimating & Specification
- ME 334 Airconditioning and Refrigeration
- CE104B Building Drawing Advanced
- CE120 Civil Engineering Design Software Applications

Note-

The students who have completed Computer Aided Design training related to Civil design at affiliated educational establishment will be given advanced standing for the following units

- CE104B Building Drawing Advanced
- CE120 Civil Engineering Design Software Applications

Further Course-

The graduates of this course can continue Professional Diploma in Civil Engineering which is recognized by Singapore Institute of Engineering Technologists as satisfying the academic requirement for Member /Fellow (Engineering Technologists).

Course 30915 Advanced Diploma in Electrical Engineering Design

- Total 30 Credit points. Each unit has 3 credit points. Total 10 units (Accumulated credit 60 points with Diploma in Engineering (Design & Drafting))

- CE 109/EE307 Energy Efficient Building Design & ME 334 Airconditioning and Refrigeration
- ME101 Applied Mathematics & CE113 Structure 1
- EE117 Solar Electrical System
- EE103B Advanced Electrical Drafting
- EEE306 Electro-mechanical Control & EE121 Electronic Power Control Devices
- EE202 Electrical Circuits & EE112 Alternating Current Principle
- EE118 Electrical Energy Supply System
- EE111 Electro-magnetism & Basic Electrical Machines
- EE110 Computer Applications in Electrical Design

Note-

The students who have completed Computer Aided Design training related to Electrical design at affiliated educational establishment will be given advanced standing for the following units

- EE103B Advanced Electrical Drafting
- EE110 Computer Applications in Electrical Design

Further Course-

The graduates of this course can continue Professional Diploma in Electrical Engineering which is recognized by Singapore Institute of Engineering Technologists as satisfying the academic requirement for Member /Fellow (Engineering Technologists).

Diploma in Vocational Education & Training, Diploma in Technical Teaching (Training, Assessment & Learning Management)
Diploma in Engineering Education (YTU)

www.highlightcomputer.com/ProfDipTechTchg.pdf

Objective of the course

This Diploma in Engineering Education/Professional Diploma in Technical Teaching (Training, Assessment & Learning Management) is designed as Teachers Education Professional Development for teachers in Government Technical Colleges , Technological Universities and other Vocational Education and Training Institutions in Myanmar to upgrade their skills and knowledge in training and assessment, curriculum design and development, management of technical training institutions, adult and vocational education and training ,assessment validation and current accreditation rules and requirements of Myanmar Engineering Council as well as current training and assessment practices of overseas industrialized countries.

Learning Outcomes

After completion of the levels of the training programs, the students should be able to

- Understand adult learning principles in technical education and training contexts
- Apply the skills in training, assessment, course development, curriculum development, learning management and management of technical training institutions.
- Understand the accreditation requirements of Myanmar Engineering Council in accredited engineer, technologist and technician education & prepare for the compliance processes.
- Understand the technology, science and mathematics teaching & educational pedagogies principles of outcome based education and effectively utilize them in the workplace
- Provide effective work-based learning & career development for the working people in industries and apply the various ways of assessing the competences

Components of the course

- Educational theories ,educational technology, teaching and learning, teaching and measuring.
- Lesson planning, interpreting curriculums, class room management, instruction and assessment design, training principle, competency based training and assessment integrated the competencies of Australian Training and Assessment (TAE40110) course
- Management of educational establishment in line with the accreditation requirements of Myanmar Engineering Council by customizing the competencies in Australian Vocational Education and Training Diploma (TAE50111) to be relevant to the requirements of Myanmar Vocational Education and Training .
- Postgraduate level educational knowledge related to Learning Technology, Technology in classrooms, educational leadership, leadership and change management , computer supported learning and distance education,
- Teaching practicum preparation at different levels of training

Level	Course	Abbreviation	Pre-requisite	Target Group
1	Diploma in Vocational Education & Training (Certificate in Vocational Education & Training for completion of certain subjects)	Dip VET	Degree/Diploma /Certificate In relevant professional/vocational areas	Vocational Education Teachers in various training courses
2	Diploma in Technical Teaching	Dip Tech Tchg	Diploma in Vocational Education & Training	Government Technical College Teachers
3	Diploma in Engineering Education	Dip Engg Ed	Diploma in Technical Teaching	Technological University Teachers
4	Diploma in Engineering Education (Specialist Discipline)	Dip Engg Ed (Specialist Area)	Diploma in Engineering Education	Technological University Teachers with specialized teaching in specific area of study.

Training & Assessment System Overview

Level	Course	2 weeks workshop (Assessment based on participation in workshop sessions)	Teaching Experience Assessment +Teaching Portfolio Assessment (Individual Assessment-During/After two weeks workshop) (The candidates can submit their portfolios)	Self study & Assignment Assessment (Individual Assessment)
1	Diploma in Vocational Education & Training (Certificate in Vocational Education & Training for completion of certain subjects)	ED120-Part (2A) Basic Teaching Practicum Preparation ED121-Part (2B) Training & Assessment Practice (Day 1 to 6 Session 3 s)	ED 103 Teaching Practice ED 104 Lesson Planning ED 106 Interpreting Curriculums ED 107 Teaching & Learning ED 201 Class Room Management & Teaching	ED 101 Theory of Education ED 102 Education Technology

Level	Course	2 weeks workshop (Assessment based on participation in workshop sessions)	Teaching Experience Assessment +Teaching Portfolio Assessment (Individual Assessment- During/After two weeks workshop)	Self study & Assignment Assessment (Individual Assessment)
2	Diploma in Technical Teaching	ED 202 Curriculum & Design ED 405 Training Principle ED220-Part (2) Vocational Education & Training Practice (Diploma in Vocational Education & Training TAE50111) (All session 3s)	ED 206 Designing Instructions & Assessment	ED 401 Adult Learning Technology ED 205 Teaching & Measuring ED411-Engineering Education (1)
3	Diploma in Engineering Education	ED 301 Educational Policy (Myanmar Engineering Council Accreditation Requirements) ED309 Educational Communication ED311 Outcome based Education ED320-Part (2) Myanmar Engineering Council's Accreditation Compliance Practice (All Sessions 1/2/3)	ED301P- Curriculum design for accreditation compliance ED302P-Overall accreditation and compliance practice	ED 402 Educational Leadership ED 308 Change Management ED 407 Learning Environment ED412 Engineering Education (2)

Level	Course	2 weeks workshop (Assessment based on participation in workshop sessions)	Teaching Experience Assessment +Teaching Portfolio Assessment (Individual Assessment- During/After two weeks workshop)	Self study & Assignment Assessment (Individual Assessment)
4	Diploma in Engineering Education (Specialist Discipline)		ED 308 Computer Supported Learning & Distance Education ED310 Learning Technology I & II ED312 Technology in Classrooms	ED 304 Maths Teaching ED 305 Science Teaching ED 306 Technology Teaching ED 404 Educational Research (Part 2) ED413 Engineering Education (3)

Study Areas & Levels of Training

Level 1-Educational Theories , Teaching Pedagogies & Training and Assessment Practice

Part (1) Educational Theoretical Subjects

- ED 101 Theory of Education
- ED 102 Education Technology
- ED 103 Teaching Practice
- ED 104 Lesson Planning
- ED 105 Principle of Learning
- ED 106 Interpreting Curriculums
- ED 107 Teaching & Learning
- ED 201 Class Room Management & Teaching

ED120-Part (2A) Basic Teaching Practicum Preparation

ED101P-Teaching Support

ED102P- Application of Information Technology in School /Vocational Education

ED103P- Classroom Management

ED104P- Teaching Portfolio

ED105P- Inclusive Teaching

ED106P- Subject Area Knowledge

ED107P- Theory of Education, Educational Technology & Teaching Practice

ED107PA-Theory of Education

ED107PB-Education Technology

ED107PC-Teaching Practice

ED107PD-Lesson Planning

ED108P- Curriculum Study , Teaching & Learning

ED108PA-Principle of Learning

ED108PB-Interpreting Curriculums

ED108PC-Teaching & Learning

- ED111P Learning Program Design & Development Practice
(TAEDES401A Design and develop learning programs)
- ED112P Assessing the needs of trainees
(TAEDES402A Use training packages and accredited courses to meet client needs Delivery)
- ED113P Group based learning
(TAEDEL401A Plan, organise and deliver group-based learning)
- ED114P Workplace Assessment
(TAEDEL402A Plan, organise and facilitate learning in the workplace Assessment)
- ED115P Assessment Planning
(TAEASS401B Plan assessment activities and processes)
- ED116P Competency Assessment
(TAEASS402B Assess competence)
- ED117P Assessment Validation
(TAEASS403B Participate in assessment validation)
- ED118P Work skills Instruction
(TAEDEL301A Provide work skill instruction)
- ED119P Educational Presentation
(BSBCMM401A Make a presentation)(TAEASS301B Contribute to assessment

Level 2-Adult Vocational Education

Part (1) Adult Vocational Education Theoretical Subjects

- ED 401 Adult Learning Technology
- ED 202 Curriculum & Design
- ED 205 Teaching & Measuring
- ED 206 Designing Instructions & Assessment
- ED 405 Training Principle
- ED411-Engineering Education (1)

ED220-Part (2) Vocational Education & Training Practice (Diploma in Vocational Education & Training TAE50111)

- ED201P-Advanced Assessment Practice
(TAEASS501A: Provide advanced assessment practice)
- ED202P-Assessment Development
(TAEASS502B: Design and develop assessment tools)
- ED203P-Training Facilitation
(TAEDEL502A: Provide advanced facilitation practice)
- ED204P-Learning Strategies
(TAEDES501A: Design and develop learning strategies)
- ED205P- Language Literacy & Numeracy
(TAEELN401A: Address adult language, literacy and numeracy skills)
- ED206P-Continuing Professional Development
(TAEPPD501A: Maintain and enhance professional practice)
- ED207P Learning Resources Design & Development
(TAEDES502A: Design and develop learning resources)
- ED208P Organizational Training Needs Analysis
(TAETAS501B: Undertake organisational training needs analysis)
- ED 404 Educational Research (Part 1)
(TAERES501A: Apply research to training and assessment practice)
- ED209P- Training Program Evaluation
(TAEDES505A: Evaluate a training program)

Level 3-Training Authorities Accreditation Compliance

Part (1) Educational Leadership Subjects

- ED 402 Educational Leadership
- ED 301 Educational Policy (Myanmar Engineering Council Accreditation Requirements)
- ED 308 Change Management
- ED309 Educational Communication
- ED 407 Learning Environment
- ED311 Outcome based Education
- ED412 Engineering Education (2)

- ED301P- Curriculum design for accreditation compliance
- ED302P-Overall accreditation and compliance practice

Level 4-Specialized Teaching Areas

- ED 308 Computer Supported Learning & Distance Education
- ED 304 Maths Teaching
- ED 305 Science Teaching
- ED 306 Technology Teaching
- ED 404 Educational Research (Part 2)
- ED310 Learning Technology I & II
- ED312 Technology in Classrooms
- ED413 Engineering Education (3)

Diploma in Engineering Education

The following units can be added to Diploma in Technical Teaching to award Diploma in Engineering Education

ED411-Engineering Education Part 1

ED412-Engineering Education Part 2

ED413-Engineering Education Part 3

CURRICULUM

Level 1-Educational Theories , Teaching Pedagogies & Training and Assessment Practice

ED101 Theory of Education

Objective-

This unit provided the concept of education to enable the learners to understand the complex system of education by developing an understanding at different levels, inner workings of the individual learner, thinking processes and motivation & apply in practical teaching

Outcomes

- to understand all the different levels of education at the same time,
- to see personal learning and national legislation
- to build an understanding of education at all of these different levels.

Contents

Education theory, Modelling, Classroom Management, Equality of opportunity, Learning & Teaching, Quality Assurance, Theory into practice.

Instruction Reference Textbook-

Theory of Education.pdf by David A Turner + Lecture slides

Assessment

Assignments = 100% (4 assignments with 25% each)

ED 102 Education Technology

Objective-

This unit provide the knowledge to include reference to the use of technology for instruction, training, learning, or teaching. In practice, definitions serve to focus the interest of associations of individuals by emphasizing a particular scope of interest.

Outcomes

- To design, development, utilization, management, and evaluation
- To provide instructional technology,” “instructional systems design,” and “instructional media
- To do the design and development of instruction and instructional resources using education technologies

Contents

Active Learning, Alternative Assessment, Adult Learners, Analysis, Assistive Technology, Cognitive Apprenticeship, Computer-Assisted Instruction

Instruction Reference Textbook-

Education Technology - An Encyclopedia Edited by Ann Kovalchick and Kara Dawson+ Lecture slides
Assessment

Assignments = 100% (7 assignments)

ED 103 Teaching Practice

Objective-

To use developmental process for reflecting on and improving one's teaching; and as an evaluative product for personnel decisions such as tenure, promotion, or a teaching

Outcomes

- To provide different sources of evidence of teaching performance.
- To contribute important information about teaching performance
- To collect variety of sources of information related to teaching
- To reflect more of teaching's intellectual substance and complexity.
- To make teaching more visible through their demonstration of a variety of teaching-related activities.
- To place the initiative for reflecting on and evaluating teaching in the hands of faculty.
- To give the individual an opportunity to think about own teaching —
- To change priorities or teaching strategies as needed, and to reflect about future

Contents

Meaning of Teaching Portfolio, Why Prepare a Teaching Portfolio? ,How Does One Develop a Teaching Portfolio? ,Preparing Portfolio ,Shaping the Final Portfolio ,Keeping Your Portfolio Up to Date ,Assembling an Electronic Portfolio ,Portfolio evaluation.

Instruction Reference Textbook-

Lecture slides

Teaching-portfolio (University of South Australia)

Assessment

Assignments = 100% Portfolio Assessment

ED 104 Lesson Planning

Objective-

This unit provides the methods to apply thought-stimulating examples teaching & learning techniques to be applied in training design and delivery to apply the various techniques and strategies in training design and presentation, that will stick! Specific strategies.

Outcomes

- To create trainings that are fun and memorable.
- To write learner-based trainings that guarantee success for each learner performance.
- To develop learning activities that match the need, learning style, and level of understanding of the participants.
- To use learning strategies that encourage learners to build on their experiences.
- To plan ongoing training activities that evaluate learner mastery during the entire learning event.
- To design blended and accelerated learning strategies that strengthen learning transfer back on the job.
- To identify methods that accurately measure training results.

Contents

Introducing planning, Needs, aims and objectives ANALYSIS OF NEEDS ,THE RATIONALE OF OBJECTIVES ,WRITING YOUR LEARNING OBJECTIVES ,SETTING A VARIETY OF OBJECTIVES , Learning, SKILLS, TECHNIQUES AND METHODS ,JUDGEMENT AND DECISION-MAKING,THE PLACE OF EMOTIONAL EDUCATION,PLANNING FOR THEORETICAL LEARNING,PLANNING FOR LEARNING FROM THE CONCRETE,PLANNING FOR REFLECTIVE LEARNING,PLANNING FOR ACTIVE LEARNING,PLANNING PROGRESSION FROM PRIOR LEARNING,PLANNING FUTURE PROGRESSION,CROSS-CURRICULAR LINKS,DIFFERENTIATION,PLANNING LISTENING ACTIVITIES,PLANNING SPEAKING ACTIVITIES,PLANNING WHOLE CLASS DISCUSSION,PLANNING READING,PLANNING TO DEVELOP COMPREHENSION,TEACHING PUPILS TO LEARN FROM WHOLE BOOKS,PLANNING WRITING,TEACHING ABOUT SUBJECT DISCOURSE ,Pedagogy, TASK ANALYSIS ,A SUCCESSFUL LESSON STRUCTURE ,PLANNING PRACTICE SESSIONS

Instruction Reference Textbook-

Lecture slides

Instructional Design for Action Learning By GERI M C ARDLE

100 Ideas for Lesson Planning – By Anthony Haynes

Read the above textbooks and prepare three lesson plans

Assessment

Assignments = 100% (Assessment of three lesson plans)

ED 105 Principle of Learning

Objective-

To understand the memory concept & apply it in effective teaching and learning.

Outcomes

- To demonstrate the principle of learning
- To understand the principle of control memory
- To understand the principle of Inhibition
- To apply the Principle of Adaptive Specialization as It Applies to Learning and Memory

Contents

FORMATION OF MEMORIES, ORGANIZATION OF MEMORIES, CONSOLIDATION OF MEMORIES, CONTROL OF MEMORIES, ADAPTIVE SPECIALIZATION OF MEMORIES

Instruction Reference Textbook-

Lecture slides

Principle of learning & memory Edited by Rainer H. Kluwe, Gerd Liier and Frank Räsler

Assessment

Assignments = 100% (5 Assignments of 20% each)

ED 106 Interpreting Curriculums

Objective-

To interpret the curriculum & develop the detailed lesson plans in teaching process.

Outcomes

- To interpret the curriculum presented to teachers;
- To adopt the curriculum;

- To understand the curriculum assimilated by learners; and
- To evaluate curriculum.

Contents

KINDS OF CURRICULUM, ORIENTATIONS TO CURRICULUM, ORIENTATIONS TO CURRICULUM, TYPES OF CURRICULUM, Competency Curriculum, LEVELS OF CURRICULUM, STAGES OF THE PROCESS, CURRICULUM PLANNING, CURRICULUM DESIGN, CURRICULUM DEVELOPMENT- PHASES, CURRICULUM DEVELOPMENT. IMPLEMENTATION OF THE CURRICULUM, CURRICULUM EVALUATION, CURRICULAR CHANGES

Instruction Reference Textbook-

Lecture slides

CURRICULUM DESIGN AND DEVELOPMENT-1.pdf

THE CURRICULUM by Cecilia Braslavsky 1

Assessment

Assessment = 100% (Assess as part of Learning outcomes & curriculum development tasks in Residential Workshop session)

ED 107 Teaching & Learning

Objective-

This unit provides new and experienced faculty in all disciplines with practical, tested strategies for addressing all major aspects of college and university teaching, from planning a course through assigning final grades. Graduate student instructors and teaching assistants will also benefit from the foundational knowledge and research findings described in this unit.

Outcomes

- To addresses planning: designing a new course or revising an existing one, creating a syllabus, preparing for the class, and managing classroom conduct and decorum.
- To respond to a Changing Student Body,
- To do “ Discussion Strategies, ” provides ideas for leading a productive discussion, framing challenging questions, and encouraging student participation, both in class and online.
- To explore aspects of the lecture in the Large-Enrolment Course, ” method: preparing and delivering effective lectures, engaging students and providing for student participation, and maintaining instructional quality with limited resources.
- To find the Alternatives and Supplements to Lectures and Discussion,
- To Enhance Students ’ Learning and Motivation, ” provides research -based approaches to helping students become more confident, independent, and self - motivated learners. Informal ways to assess learning and the use of mobile

- To Strengthen Students ' Writing and Problem-Solving Skills, ”

Contents

RESPONDING TO A CHANGING STUDENT BODY ,DISCUSSION STRATEGIES ,THE LARGE-ENROLLMENT COURSE ,Maintaining Instructional Quality with Limited Resources ,ENHANCING STUDENTS' LEARNING AND MOTIVATION ,STRENGTHENING STUDENTS' WRITING AND,PROBLEM-SOLVING SKILLS ,TESTING AND GRADING,PRESENTATION TECHNOLOGIES ,EVALUATION TO IMPROVE TEACHING,TEACHING OUTSIDE THE CLASSROOM ,FINISHING UP

Tools for teaching by Barbara Gross Davis

Assessment

Experience Assessment = 100% (Assessed on Formal Teaching experience record for the teachers being employed by Government Technical Colleges & Technological Universities)

Separate assessment system is applied for pre-service teacher trainees.

ED 201 Class Room Management & Teaching

Objective-

To define classroom management, explain the relationship between classroom management and discipline, and describe the concept of “culturally responsive classroom management”

Outcomes

1. To describe the characteristics of an effective teacher
2. To explain why reflection on teaching is so important for teacher growth
3. To describe the reflective decision making model of teaching
4. To identify important factors that affect instructional decision making
- 5.To contrast the characteristics of authoritative, authoritarian, and permissive teachers
- 6.To identify the ongoing tasks involved in classroom management and to explain how each contributes to a well-functioning learning environment

Contents

Assessment

Experience Assessment = 100% (Assessed on Formal Teaching experience record for the teachers being employed by Government Technical Colleges & Technological Universities)

Separate assessment system is applied for pre-service teacher trainees.

Level 2-Adult Vocational Education

ED 401 Adult Learning Technology

Objective-

This unit provides and skills and the roles of training developers and instructional designers who are responsible for analysing training needs and designing training solutions and products to meet workplace capability requirements, and evaluating the effectiveness of adult training programs.

Outcomes

To provide the guidance and advice to trainers and assessors, promoting innovative practices, e.g. e-learning, and in researching and incorporating best practice in training and assessment into training programs and products.

Contents

- Learner-Centered Teaching and the Use of Technology
- Effective Teaching with Technology in Adult Education
- Adult Learners and Their Development in the Information Society
- Supporting Lifelong Learning and Flexicurity Policies
- Adult Learning Principles as the Foundation for Innovative Technology Applications in Business and Higher Education Venues
- The Role of Learning Styles and Technology
- Innovative Instructional Strategies with the Use of Technology for Adult Learners
- Integrating Adult Learning and Technology for Effective Education:
- Strategic Approaches
- Comparing the Principles of Adult Learning with Traditional Pedagogical Teaching in Relation to the Use of Technology:

- Provide Training through instruction and demonstration of work skills
- Facilitate work-based learning
- Group based delivery
- Design and develop learning programs
- Foster and promote an inclusive learning culture
- Ensure a safe and healthy learning environment
- Individual learning
- Language Literacy & Numeracy

Lecture Slides

Adult Learning Technology by Victor C.X. Wang

Assessment

Participation in Educational Support Workshop sessions=100%

(Assess as part of Learning outcomes & curriculum development tasks in Residential Workshop session)

ED 202 Curriculum & Design

Objective-

To provide theoretical consideration for the twenty-first century curriculum, & technological and pedagogical innovations influencing curriculum renewal together with sustainable practice in technology-rich environments.

Outcomes

- To address theoretical foundations for the development of curricula.
- To explore the pedagogical options available to higher education instructors
- To explore new ways of accessing and connecting content to multimodal forms
- To examine how curriculum design needs to be influenced by the effective development of virtual collaborative learning environments
- To devise more adaptive, educationally focused teaching and learning

Contents

Curriculum Design for the Twenty-First Century, Online Collaboration: Coordinating Technology, Strategies for Collaborative Learning, Designing a Virtual Collaborative Learning Environment, Curriculum Design as Applied to Virtual Collaborative, Course Evaluation, Creating Curriculum Within the Context of an Enterprise, Teaching Instructional Design, Online education examples.

Instruction Reference Textbook-

Lecture Slides

Curriculum Models for the 21st Century Using Learning Technologies in Higher Education

Assessment

Participation in Educational Support Workshop sessions=100%

(Assess as part of Learning outcomes & curriculum development tasks in Residential Workshop session)

ED 205 Teaching & Measuring

Objective-

To apply adaptive expertise, creative thinking, metacognition, and teamwork in teaching and measuring task

Outcomes

To apply Adaptability, Adaptive expertise, Adaptive problem solving, Communication, Creative thinking , Decision making , Metacognition, Situation awareness & Teamwork

Contents

Cognitive Readiness, A Model for Instruction and Assessment of Cognitive Readiness, The Development and Assessment of Cognitive Readiness: Lessons Learned from K-12 Education, Cognitive Readiness for Solving Equations . Cognitive Readiness Applications, Creative Thinking Abilities: Measures for Various Domains, Using Analogies as a Basis for Teaching Cognitive Readiness . Simulation Assessment of Cognitive Readiness . Assessing Cognitive Readiness in a Simulation- Based Training Environment, Software Support for Teaching and Measuring Cognitive Readiness, Cognitive Readiness for Complex Team Performance, Impact of Individual Game-Based Training on Team Cognitive Readiness

Instruction Reference Textbook-

Teaching and Measuring Cognitive Readiness by Harold F. O'Neil • Ray S. Perez • Eva L. Baker

Assessment

Participation in Educational Support Workshop sessions=100%

(Assess as part of Learning outcomes & curriculum development tasks in Residential Workshop session)

ED 206 Designing Instructions & Assessment

Objective-

To deconstruct the broad-sweeping goals of the standards and transform them into unit plan objectives (more specific) and daily instructional objectives

Outcomes

To entails a logical progression from (1) content area standards to (2) modified standards to

(3) unit plan objectives to (4) daily instructional objectives in an understandable sequence of increasing specificity

Contents

Deconstructing the Standards ,Writing Unit and Daily Instructional Objectives , Writing True–False and Completion, Items and Matching Exercises ,Writing Multiple-Choice Items ,Writing Short-Answer and Essay Items .Performance-Based Assessment ,Portfolios

Instruction Reference Textbook-

Lecture Slides

Designing Elementary Instructions & Assessments

By John L. Badgett Edwin P . Christmann

Assessment

Participation in Educational Support Workshop sessions=100%

(Assess as part of Learning outcomes & curriculum development tasks in Residential Workshop session)

ED 405 Training Principle

Objective-

To provide numerous techniques, designs, case examples, and tips for designing and facilitating training that is participant centred, brain-friendly, and experiential

Outcomes

- To explore all aspects of training.
- To promote an active approach to training
- To provide a practical handbook of techniques

Contents

INTRODUCING ACTIVE TRAINING, DESIGNING AN ACTIVE TRAINING PROGRAM, Assessing Training Needs, Developing Active Training Objectives, Creating Opening Exercises, Preparing Brain-Friendly Lectures, Using

Experiential Learning Approach, Designing Active Training Activities, Sequencing Active Training Activities, Planning Active Training Programs, Blending Technology into Active Training, CONDUCTING AN ACTIVE TRAINING PROGRAM, Beginning an Active Training Program, Gaining Leadership of the Training Group, Giving Presentations and Leading Discussions, facilitating Structured Activities and Promoting Team Learning, Concluding an Active Training Program, EXTENDING THE VALUE OF AN ACTIVE TRAINING PROGRAM, Evaluating an Active Training Program

Instruction Reference Textbook-

Lecture Slides

Active Training by Mel Silberman

Assessment

Participation in Educational Support Workshop sessions=100%

(Assess as part of Learning outcomes & curriculum development tasks in Residential Workshop session)

ED411-Engineering Education (1)

Objective-

To design the engineering educational programs and teaching programs by applying multi disciplinary approaches by combining technological aspects

Outcomes

- To attain the strategies to promote the engineering education
- To apply technological concepts in engineering teaching support system
- To develop the quality work-based learning system
- To write Sociological Rationale of a design curriculum
- To find the strategies to improve the communication skills of engineers
- To design the computer server for engineering education program

Contents

- Pre-university Outreach: Encouraging Students to Consider Engineering Careers
- The ASTutE Tutorial Assistant: Efficient, Accessible and Interactive
- Learning at Work within the Ford Motor Company
- Using Rubrics to Assess the Development of CDIO
- Syllabus Personal and Professional Skills and Attributes at the 2.x.x Level*
- Quality Assurance Issues Relating to the Delivery of Work Based Learning Programmes*

- The Role of Work-Based Learning Methodologies in the 21 st Century
- Development of Life-Long Engineering Education in the 21 st Century
- Traits Analysis and Influences on High Performing Students in Mechanical Education
- The Construction of an Instructional Quality System for Industrial Technology Education
- Design Hegemony: an Exploration of Hegemony in the Curriculum and Instruction of Industrial Design Education
- The Engineering Mechanics Interactive Lecture Series: Oligomedia Resources for Computer-Based Learning

Assessment

Questions & answers

Level 3-Training Authorities Accreditation Compliance

ED 402 Educational Leadership

Objective-

This course provides the educators with skills to take an active and creative approach to their personal and professional development. While it may be of most interest to those in middle or senior education management, it is also designed to help teachers, governors and those in organizations allied with education.

Outcomes

To attain the competencies in

- Leading and managing
- Changing and learning
- Undertake Tasks and responsibilities

Instruction Reference Textbook-

**Educational leadership and learning Practice, policy and research
by Sue Law and Derek Glover**

Contents

- The context for educational leadership
- Developing leadership and management effectiveness
- Managing ourselves and leading others
- Motivating and managing others
- Leading effective teams
- Effective communication
- Organizational cultures

- Managing change and creating opportunities
- Educational improvement, inspection and effectiveness
- Leading and managing in learning organizations
- Managing staff and promoting quality
- Managing resources and finance
- Managing stakeholder relationships and partnerships
- Leading and managing for professional development

Assessment

Assignments = 100%

ED 301 Educational Policy (Myanmar Engineering Council Accreditation Requirements)

Objective-

This course provides the educators with Myanmar Engineering Council Laws, Rules, Regulations, Accreditation Requirements, Accreditation Practices, procedures related to accreditation of engineering courses and engineering professionals in Myanmar to enable them to design, develop and teach the engineering programs accredited by Myanmar Engineering Council.

Outcomes

- To understand Myanmar Engineering Council Accreditation Rules & Regulations related to accreditation of Government Technical Colleges & Technological Universities in Myanmar.
- Get the information & knowledge on Current issues related to international & Myanmar Engineering profession.
- Participate in hand on practice workshop focussing on curriculum development & collecting and preparing the materials for accreditation by Myanmar Engineering Council Engineering Accreditation Committee & taking part in mock accreditation sessions.

Contents

- Overview of Myanmar Engineering Council Law, Regulation, Accreditation Principles
- Examples of marine engineers competency assessment in Myanmar/ in line with International Certification standards & explore the way to apply the similar competency based training in other engineering areas
- Requirement of Myanmar Engineering Council & how to design the curriculum to address the learning outcomes
- Discussing the programme structure and course contents(MEng C)
- Discussing the programme delivery and assessment methods

- Assessment Validation Guide of Myanmar Engineering Council
- Educational Resources Development in line with Myanmar Engineering Council Requirements
- Curriculum design for accreditation compliance
- Overall accreditation and compliance practice
- Preparation for self accreditation report
- Engineering Accreditation Plan

Instruction Reference Textbook-

1. Accreditation Manual
2. Graduate Attributes & Terminology.pptx
3. SAR.pptx
4. EngineerCouncilRegulation
5. Policy - Qualifications Policy POL11 v4
6. Myanmar Engineering Council Law
7. Policies for Accreditation of Programs
8. Time line,EAC Code,Guidelines,Fees

Assessment

Assignments = Participation in workshop sessions

ED 308 Change Management

Objective-

The unit involves candidates in leading a complete cycle of the change process. This process falls into three phases that correspond broadly to the elements of competency.

- i. Preparing for change
- ii. Planning for change
- iii. Implementing and evaluating change

Outcomes

- To provide leadership and support to others within the organization
- To manage change more effectively
- To develop educational business skills
- To analyse work practice and context, and make improvements
- To contribute to innovation and capacity building in the organization.

Contents

- Leadership issues Raising achievement
- The Leadership of Change
- A shift from management to leadership
- How not to do change management
- Managing change and transition

Instruction Reference Textbook-

Lecture Slides

Leadership+ Change Management DVD

Assessment Assignment-100%

ED309 Educational Communication

Objective-

This program uses methods of the social sciences, encompassing both qualitative and quantitative approaches to the study of communication and education. It asks in particular how education and other social systems change under the impact of new media

Outcomes

- Reflect on the historical effects of media and on the cultural uses of developments such as face-to-face speech, writing, printing, photography, film, radio, television, computers, and networked multimedia;
- Use anthropological and linguistic methods to study how the diverse forms of communication, literacy, information processing, and cognition condition educational practice; and
- Explore positive and negative effects of media on social relations and develop strategies for using information and communication technologies to improve conditions of education and life.

Contents

- Creating a production that communicates your message
- Digital Design
- Great Looking Presentations
- Planning

- Technical Papers related to effectiveness of ICT in education
- Access and equity issues
- Educational Communication Portfolio Presentation

Instruction Reference Textbook-

Lecture Slides

ED309 Educational Communication Assignment Tasks-806A Modified (Worked Examples)

Assignment

Assignments = Portfolio Assessment- 100%

ED 407 Learning Environment

Objective-

The objective of this unit is to give the candidate an understanding of the conceptualisation, historical development, assessment, determinants and effects of classroom learning environments.

Outcomes

- To review classroom learning environment for effective educational setting
- To prepare effective educational setting for teaching and learning
- To understand the students' behaviour in the classroom and the cause of the behaviour
- To effectively use the teaching and learning strategies for keeping the good learning environment in the class
- To perform educational survey task on learning environment assessment.

Contents

- Background information about the fields of school and classroom environment
- Outcomes and environment; evaluation of educational innovations
- Quantitative and qualitative methods
- Teachers' use of classroom and school environment instruments in practical attempts to improve their own classrooms and schools.
- Current trends and future desirable directions in research on educational environments.

Instruction Reference Textbook-

Assessment

Assignments = 100%

Action Research Project

ED311 Outcome based Education

Objective-

At the end of this training, participants will be able to understand:

- ☐ Outcome-Based Education (OBE)
- ☐ Programme Education Objectives (PEO'S),

Outcomes

Programme Outcomes (PO's), Course Outcomes (CO) and Performance Indicators

- ☐ Bloom's Learning Taxonomy
- ☐ Assessment and Evaluation Methods
- ☐ Continual Quality Improvement Process

Contents

- ☐ The Origins of Outcome Based Education
- ☐ *Approaches to OBE*
- ☐ *OBE Process*
- ☐ Educational Process - Stakeholders
- ☐ Educational Process – Lecturers' Roles
- ☐ Educational Process - References
- ☐ OBE Model Hierarchy
- ☐ Characteristics of OBE curricula
- ☐ *Types of Teaching/Learning Delivery Activities*
- ☐ *OBE Delivery*
- ☐ Continual Quality Improvement (CQI)
- ☐ Essentials for OBE's success
- ☐ Essentials Components of OBE

- ☐ Different Levels of Outcomes
- ☐ Development of Programme Education Objectives
- ☐ CHARACTERISTICS OF GOOD OUTCOME STATEMENTS
- ☐ Course Development
- ☐ ENGINEERING EDUCATION
BLOOM'S TAXONOMY
- ☐ DOMAINS of LEARNING OUTCOMES
- ☐ Assessment in OBE
- ☐ Continual Quality Improvement (CQI)

Final OBE Training at Myanmar July 2014. by **Ir. Professor Academician Dato' Dr. HT Chuah**
President of FEIAP

Assessment

Participation in workshop & presenting the portfolios

ED412 Engineering Education (2)

Objective-

To design the international standard engineering education program by applying total quality management

Outcomes

- To have the knowledge and skills in total quality management
- To foster the cross border co-operation
- To interface the school to engineering programs

Contents

- Secondary School-University Interface: Science and Engineering
- The Educational Process
- Quality Engineering Education: Student Skills and Experience
- The Web as a Tool for Supporting Student Learning
- Develop a Long-Term Plan to Overcome Skills Shortage
- Cross border engineering practice

- Cross-cultural Skills for engineers

Instruction Reference Textbook-

Lecture Slides

ED412 File

Assessment

Assignments = 100% (Two assignments of 50% each)

Level 4-Specialized Teaching Areas

ED 308 Computer Supported Learning & Distance Education

Objective-

This unit provides the skills related to contribute to the central questions of how students can learn collaboratively using the new technologies, the problems that can be expected, and the benefits that may ensue. The various ways to examine how computer supported group work differs from face-to-face group work, and the implications for both educators and students are provided.

Outcomes

- ☐ To offer assessment of e-learning with the hope of offering ideas in terms of practical guide and points of good practices, while addressing potential pitfalls to avoid.
- ☐ To be aware of what constitutes good and effective e-learning practices and how to design them for specific contexts and audiences in the global information
- ☐ Innovative uses of e-learning, Addressing various divides in e-learning, user centred focus in e-learning, special considerations in e-learning and development economy.

Contents

- ☐ Computer-Supported Collaborative Learning in Higher Education:
- ☐ An Introduction
- ☐ Online Group Projects: Preparing the Instructors to Prepare the Students
- ☐ Time, Place and Identity in Project Work on the Net
- ☐ The Collective Building of Knowledge in Collaborative Learning Environments
- ☐ Collaboration or Cooperation
- ☐ Analyzing Small Group
- ☐ Interactions in Educational Environments
- ☐ Mapping Perceived Socio-Emotive Quality of Small-Group Functioning
- ☐ A Constructivist Framework for Online Collaborative Learning:
- ☐ Adult Learning and Collaborative Learning Theory
- ☐ The Real Challenge of Computer-Supported Collaborative Learning
- ☐ Use and Mis-Use of Technology for Online, Asynchronous, Collaborative Learning
- ☐ The Personal and Professional Learning Portfolio
- ☐ An Online Environment for Mentoring, Collaboration, and Publication
- ☐ Problems and Opportunities of Learning Together in a Virtual Learning Environment
- ☐ Web-Based Learning by Tele-Collaborative Production in Engineering Education

- ☐ Relational Online Collaborative Learning Model
- ☐ Online, Offline and In-Between: Analyzing Mediated-Action

Computer Supported Learning by Tim S. Roberts

Assessment

Assignments = 100%

ED 304 Maths Teaching

Objective-

This unit provides the skills to the teachers to act as mechanisms for communicating an approach to mathematics education that is eclectic and embracing, respectful and engaging, reflective and, ultimately, educational.

Outcomes

To provide the methods to the educators in class teaching to provide the students with conceptual understanding of mathematics content through modelling or interpretation of representations,

- computational fluency,
- problem solving through application of the content.

Contents

- Strategies for Vocabulary Development
- Strategies for Using Manipulatives
- Strategies for Teaching Procedures
- Strategies for Understanding Problem Solving
- Strategies for Using Mathematical Games
- Strategies for Assessing
- Mathematical Thinking

Instruction Reference Textbook-

Lecture Slides

- ☐ Multiple Perspectives on Mathematics Teaching and Learning Edited by Jo Boaler
- ☐ Strategies for Teaching Mathematics by *Deborah V. Mink*

Assessment

Assignments = 100%

ED 305 Science Teaching

Objective-

This unit provide the teaching pedagogy in science that effectively enable the teacher to transfer what they learn in our courses into their own classroom practices.

Outcomes

- To shine a spotlight on important work that science teacher educators are doing with teachers and youth
- To describe the professional purposes and benefits realized when they, as science teacher educators, arranged opportunities to teach children or adolescents.
- To utilize model teaching lessons in class room practice

Contents

- Pedagogical Content Knowledge
- Teaching & learning Through experience
- Teaching examples

Instruction Reference Textbook-

Lecture Slides

- Understanding and Developing Science Teachers' Pedagogical Content Knowledge
By John Loughran
- Science Teacher Educators as K-12 Teachers edited by Michael Dias • Charles J. Eick, Laurie Brantley-Dias

Assessment

Assignments = 100%

ED 306 Technology Teaching

Objective-

This unit provides the teaching idea for teaching students with unique opportunities to develop a range of process skills such as critical and creative thinking skills in addition to their practical skills, through undertaking authentic tasks of real purpose.

Outcomes

- To link philosophy and educational issues in my daily work
- To help teachers to improve the teaching by means of the insights that philosophy of technology offers.

Contents

- Philosophy of technology:
- Technological artifacts
- Technological knowledge
- Technological processes
- Technology and the nature of humans
- Ethics and aesthetics of technology
- Learners' philosophies of technology
- Reconceptualizing technology through education
- Practical issues in teaching about technology

Instruction Reference Textbook-

Teaching about Technology by MARC J. DE VRIES

Assessment

Assignments = 100%

ED 404 Educational Research

Objective-

This unit describes the performance outcomes, skills and knowledge required to undertake research into educational theory and apply this research to improve current training and assessment practice.

This unit typically applies to those who need to develop skills in research in order to apply educational theory to improve current and future training and assessment practice

Outcomes

- Prepare research brief relating to training and assessment practice
- Conduct research in training and assessment practice
- Investigate and apply educational theory to the research
- Report on application of educational theory to training and assessment practice
- Review entire process

Contents

Qualitative Research and Public Policy

- Multilevel Analysis in Higher Education Research: A Multidisciplinary Approach .
- Conducting Multi-paradigm Inquiry in the Study of Higher Education Organization and Governance: Transforming
- Research Perspectives on Colleges and Universities

- Examining Pathways to and Through the Community College for Youth and Adults
- Review of the Theories Developed to Describe the Process of College Persistence and Attainment

Instruction Reference Textbook-

Lecture Slides

Higher Education: Handbook of Theory and Research

Published under the Sponsorship of the Association for Institutional Research (AIR) and the Association for the Study of Higher Education (ASHE)

Assessment

Assignments = 100%

Prepare & submit one educational research paper.

ED310 Learning Technology I & II

Objective-

On completion of this unit you should be able to demonstrate your achievement of the following learning outcomes:

All participants will be competent, confident and professional users of e-Learning system in teaching

Outcomes

To use e-Learning tools to:

- improve their own professional productivity,
- improve their preparation for classes and teaching generally and
- improve their ability to use and integrate IT appropriately within the classroom

Contents

The Syllabus:

The unit consists of five inter-related modules:

- 1. Module 1: Getting Started and IT Empowerment and Teaching**
 - a. Unit Introduction
- 2. Module 2: IT and Education:**
 - a. The Hype and the Reality
 - b. Multimedia in Education

3. Module 3: Ghosts of Schooling Past, Present and Future

- a. Technology and the Whole Curriculum
- b. Technology as a Classroom Tool
- c. Creating an active learning Environment

4. Module 4: Making the World Wide Web Work for You

- a. The Tools of the Trade
- b. Using the internet for information

5. Module 5: Technology in Your Classroom

- a. Classroom Applications of the
- b. WWW
- c. Educational Software
- d. Ideas, Approaches, Tools and Tricks
- e. Integration
- f. Early Learning and Primary

Tuition Pattern:

This unit is provided as an online unit. All tuition is provided through the online course website. The length of the unit is one semester (12 weeks); however, some students will finish sooner, and some may require additional time to complete it. While the weekly time commitment will vary from student to student, most should allow approximately 10 hours per week total study time for the unit.

Assessment

Two assignments= 100%

ED312 Technology in Classrooms

Objective-

To provide use of technology in educational context by combining with teaching and learning principle, educational leadership skills and educational leadership skills.

Outcomes

On completion of this unit you should be able to demonstrate your achievement of the following learning outcomes:

Upon completion, the participant;

1. Through the use of professional based portfolios will design, implement and evaluate the use of IT, multimedia and the Internet in their own classrooms
2. Using the skills and knowledge developed within the unit, conduct research of the use on learning technologies within the areas of;
 - a. Learning technologies and Developing Leadership Skills in Technology
 - b. Assessing and Changing IT Learning EnvironmentsTeaching and Learning Principles for Technology-Rich Classrooms

Contents The unit consists of 2 inter-related sections:

1. **Section 1**
 - a. Conduct independent research in one of the following
 - i. Developing Leadership Skills in Technology
 - ii. Assessing and Changing IT Learning Environments
 - iii. Teaching and Learning Principles for Technology-Rich Classrooms
2. **Section 2**
 - a. The development of two Portfolios
 - i. "Classroom" based portfolio that demonstrates the use and integration of educational technology in your classroom or workplace.
 - ii. "Personal" based portfolio that provides the student with the opportunity to demonstrate the use and educational practice in professional practice.

ED413 Engineering Education (3)

Objective-

This unit provides the engineering educators with engineering ethical issues, New pedagogy , Industrial co-operation & Lifelong learning and Strategic Planning skills in engineering education

Outcomes

Design the engineering programs by taking account on emphasizing in engineering ethics & by utilizing innovative new teaching pedagogies

Contents

- Engineering ethics
- Engineering teaching pedagogies
- New training and work-based approach
- Strategies planning in engineering education

Instruction Reference Textbook-

- ED413 Par1 Ethics
- ED413 Part2 New pedagogy , Industrial co-operation & Lifelong learning
- ED413 Part3 Strategic Planning in Engineering Education
- ED413 Part4 Training & Work-based Approach

Assessment

Assignments = Project 100%

RESOURCES

ASSESSMENT FOR THE SUBJECTS IN PART 1 OF THE LEVELS

The students will have to write 20 pages study report for each of the subjects outlined in the Part 1 of any level .

The report general needs to include

- Book review- Review on each chapter of the book highlighting the key concepts, points, key theory & practical application concepts
- Own idea on how to apply those concepts in real practical applications.
- Examples of curriculum designs that use the concepts & knowledge expressed in those books (If any)
- Your comment on each book

The book references for the subjects can be downloaded from the following links by entering the given password. The detailed instruction will be given in subject study guides. Some of the units can be assessed in residential training workshops.

Password- to be given

ASSESSMENT FOR THE SUBJECTS IN PART 2 OF THE LEVELS

Follow the specific assessment instruction provided for the units in Part 2 of the levels

ASSIGNMENT

Prepare the portfolios for your section/ department to comply with Myanmar Engineering Council's Accreditation Requirements.

Level 4-Specialized Teaching Areas

The students will have to write 20 pages study report for each of the subjects outlined in the Part 1 of any level .

The report needs to include

- Book review- Review on each chapter of the book highlighting the key concepts, points, key theory & practical application concepts
- Own idea on how to apply those concepts in real practical applications.
- Examples of curriculum designs that use the concepts & knowledge expressed in those books (If any)
- Your comment on each book

The book references for the subjects can be downloaded from the following links by entering the given password.

Password- to be given

Diploma in Vocational Education & Training, Diploma in Technical Teaching (Training, Assessment & Learning Management)
Diploma in Engineering Education (YTU)

www.highlightcomputer.com/ProfDipTechTchg.pdf

Objective of the course

This Diploma in Engineering Education/Professional Diploma in Technical Teaching (Training, Assessment & Learning Management) is designed as Teachers Education Professional Development for teachers in Government Technical Colleges , Technological Universities and other Vocational Education and Training Institutions in Myanmar to upgrade their skills and knowledge in training and assessment, curriculum design and development, management of technical training institutions, adult and vocational education and training ,assessment validation and current accreditation rules and requirements of Myanmar Engineering Council as well as current training and assessment practices of overseas industrialized countries.

Learning Outcomes

After completion of the levels of the training programs, the students should be able to

- Understand adult learning principles in technical education and training contexts
- Apply the skills in training, assessment, course development, curriculum development, learning management and management of technical training institutions.
- Understand the accreditation requirements of Myanmar Engineering Council in accredited engineer, technologist and technician education & prepare for the compliance processes.
- Understand the technology, science and mathematics teaching & educational pedagogies principles of outcome based education and effectively utilize them in the workplace
- Provide effective work-based learning & career development for the working people in industries and apply the various ways of assessing the competences

Components of the course

- Educational theories ,educational technology, teaching and learning, teaching and measuring.
- Lesson planning, interpreting curriculums, class room management, instruction and assessment design, training principle, competency based training and assessment integrated the competencies of Australian Training and Assessment (TAE40110) course
- Management of educational establishment in line with the accreditation requirements of Myanmar Engineering Council by customizing the competencies in Australian Vocational Education and Training Diploma (TAE50111) to be relevant to the requirements of Myanmar Vocational Education and Training .
- Postgraduate level educational knowledge related to Learning Technology, Technology in classrooms, educational leadership, leadership and change management , computer supported learning and distance education,
- Teaching practicum preparation at different levels of training

Level	Course	Abbreviation	Pre-requisite	Target Group
1	Diploma in Vocational Education & Training (Certificate in Vocational Education & Training for completion of certain subjects)	Dip VET	Degree/Diploma /Certificate In relevant professional/ vocational areas	Vocational Education Teachers in various training courses
2	Diploma in Technical Teaching	Dip Tech Tchg	Diploma in Vocational Education & Training	Government Technical College Teachers
3	Diploma in Engineering Education	Dip Engg Ed	Diploma in Technical Teaching	Technological University Teachers
4	Diploma in Engineering Education (Specialist Discipline)	Dip Engg Ed (Specialist Area)	Diploma in Engineering Education	Technological University Teachers with specialized teaching in specific area of study.

Training & Assessment System Overview

Level	Course	2 weeks workshop (Assessment based on participation in workshop sessions)	Teaching Experience Assessment +Teaching Portfolio Assessment (Individual Assessment- During/After two weeks workshop) (The candidates can submit their portfolios)	Self study & Assignment Assessment (Individual Assessment)
1	Diploma in Vocational Education & Training (Certificate in Vocational Education & Training for completion of certain subjects)	ED120-Part (2A) Basic Teaching Practicum Preparation ED121-Part (2B) Training & Assessment Practice (Day 1 to 6 Session 3 s)	ED 103 Teaching Practice ED 104 Lesson Planning ED 106 Interpreting Curriculums ED 107 Teaching & Learning ED 201 Class Room Management & Teaching	ED 101 Theory of Education ED 102 Education Technology

Level	Course	2 weeks workshop (Assessment based on participation in workshop sessions)	Teaching Experience Assessment +Teaching Portfolio Assessment (Individual Assessment- During/After two weeks workshop)	Self study & Assignment Assessment (Individual Assessment)
2	Diploma in Technical Teaching	ED 202 Curriculum & Design ED 405 Training Principle ED220-Part (2) Vocational Education & Training Practice (Diploma in Vocational Education & Training TAE50111) (All session 3s)	ED 206 Designing Instructions & Assessment	ED 401 Adult Learning Technology ED 205 Teaching & Measuring ED411-Engineering Education (1)
3	Diploma in Engineering Education	ED 301 Educational Policy (Myanmar Engineering Council Accreditation Requirements) ED309 Educational Communication ED311 Outcome based Education ED320-Part (2) Myanmar Engineering Council's Accreditation Compliance Practice (All Sessions 1/2/3)	ED301P- Curriculum design for accreditation compliance ED302P-Overall accreditation and compliance practice	ED 402 Educational Leadership ED 308 Change Management ED 407 Learning Environment ED412 Engineering Education (2)

Level	Course	2 weeks workshop (Assessment based on participation in workshop sessions)	Teaching Experience Assessment +Teaching Portfolio Assessment (Individual Assessment- During/After two weeks workshop)	Self study & Assignment Assessment (Individual Assessment)
4	Diploma in Engineering Education (Specialist Discipline)		ED 308 Computer Supported Learning & Distance Education ED310 Learning Technology I & II ED312 Technology in Classrooms	ED 304 Maths Teaching ED 305 Science Teaching ED 306 Technology Teaching ED 404 Educational Research (Part 2) ED413 Engineering Education (3)

Study Areas & Levels of Training

Level 1-Educational Theories , Teaching Pedagogies & Training and Assessment Practice

Part (1) Educational Theoretical Subjects

- ED 101 Theory of Education
- ED 102 Education Technology
- ED 103 Teaching Practice
- ED 104 Lesson Planning
- ED 105 Principle of Learning
- ED 106 Interpreting Curriculums
- ED 107 Teaching & Learning
- ED 201 Class Room Management & Teaching

ED120-Part (2A) Basic Teaching Practicum Preparation

ED101P-Teaching Support

ED102P- Application of Information Technology in School /Vocational Education

ED103P- Classroom Management

ED104P- Teaching Portfolio

ED105P- Inclusive Teaching

ED106P- Subject Area Knowledge

ED107P- Theory of Education, Educational Technology & Teaching Practice

ED107PA-Theory of Education

ED107PB-Education Technology

ED107PC-Teaching Practice

ED107PD-Lesson Planning

ED108P- Curriculum Study , Teaching & Learning

ED108PA-Principle of Learning

ED108PB-Interpreting Curriculums

ED108PC-Teaching & Learning

ED121-Part (2B) Training & Assessment Practice (Certificate IV in Training & Assessment TAE40110)

- ED111P Learning Program Design & Development Practice
(TAEDES401A Design and develop learning programs)
- ED112P Assessing the needs of trainees
(TAEDES402A Use training packages and accredited courses to meet client needs Delivery)
- ED113P Group based learning
(TAEDEL401A Plan, organise and deliver group-based learning)
- ED114P Workplace Assessment
(TAEDEL402A Plan, organise and facilitate learning in the workplace Assessment)
- ED115P Assessment Planning
(TAEASS401B Plan assessment activities and processes)
- ED116P Competency Assessment
(TAEASS402B Assess competence)
- ED117P Assessment Validation
(TAEASS403B Participate in assessment validation)
- ED118P Work skills Instruction
(TAEDEL301A Provide work skill instruction)
- ED119P Educational Presentation
(BSBCMM401A Make a presentation)(TAEASS301B Contribute to assessment

Level 2-Adult Vocational Education

Part (1) Adult Vocational Education Theoretical Subjects

- ED 401 Adult Learning Technology
- ED 202 Curriculum & Design
- ED 205 Teaching & Measuring
- ED 206 Designing Instructions & Assessment
- ED 405 Training Principle
- ED411-Engineering Education (1)

ED220-Part (2) Vocational Education & Training Practice (Diploma in Vocational Education & Training TAE50111)

- ED201P-Advanced Assessment Practice
(TAEASS501A: Provide advanced assessment practice)
- ED202P-Assessment Development
(TAEASS502B: Design and develop assessment tools)
- ED203P-Training Facilitation
(TAEDEL502A: Provide advanced facilitation practice)
- ED204P-Learning Strategies
(TAEDES501A: Design and develop learning strategies)
- ED205P- Language Literacy & Numeracy
(TAEELN401A: Address adult language, literacy and numeracy skills)
- ED206P-Continuing Professional Development
(TAEPPD501A: Maintain and enhance professional practice)
- ED207P Learning Resources Design & Development
(TAEDES502A: Design and develop learning resources)
- ED208P Organizational Training Needs Analysis
(TAETAS501B: Undertake organisational training needs analysis)
- ED 404 Educational Research (Part 1)
(TAERES501A: Apply research to training and assessment practice)
- ED209P- Training Program Evaluation
(TAEDES505A: Evaluate a training program)

Level 3-Training Authorities Accreditation Compliance

Part (1) Educational Leadership Subjects

- ED 402 Educational Leadership
- ED 301 Educational Policy (Myanmar Engineering Council Accreditation Requirements)
- ED 308 Change Management
- ED309 Educational Communication
- ED 407 Learning Environment
- ED311 Outcome based Education
- ED412 Engineering Education (2)

- ED301P- Curriculum design for accreditation compliance
- ED302P-Overall accreditation and compliance practice

Level 4-Specialized Teaching Areas

- ED 308 Computer Supported Learning & Distance Education
- ED 304 Maths Teaching
- ED 305 Science Teaching
- ED 306 Technology Teaching
- ED 404 Educational Research (Part 2)
- ED310 Learning Technology I & II
- ED312 Technology in Classrooms
- ED413 Engineering Education (3)

Diploma in Engineering Education

The following units can be added to Diploma in Technical Teaching to award Diploma in Engineering Education

ED411-Engineering Education Part 1

ED412-Engineering Education Part 2

ED413-Engineering Education Part 3

CURRICULUM

Level 1-Educational Theories , Teaching Pedagogies & Training and Assessment Practice

ED101 Theory of Education

Objective-

This unit provided the concept of education to enable the learners to understand the complex system of education by developing an understanding at different levels, inner workings of the individual learner, thinking processes and motivation & apply in practical teaching

Outcomes

- to understand all the different levels of education at the same time,
- to see personal learning and national legislation
- to build an understanding of education at all of these different levels.

Contents

Education theory, Modelling, Classroom Management, Equality of opportunity, Learning & Teaching, Quality Assurance, Theory into practice.

Instruction Reference Textbook-

Theory of Education.pdf by David A Turner + Lecture slides

Assessment

Assignments = 100% (4 assignments with 25% each)

ED 102 Education Technology

Objective-

This unit provide the knowledge to include reference to the use of technology for instruction, training, learning, or teaching. In practice, definitions serve to focus the interest of associations of individuals by emphasizing a particular scope of interest.

Outcomes

- To design, development, utilization, management, and evaluation
- To provide instructional technology,” “instructional systems design,” and “instructional media
- To do the design and development of instruction and instructional resources using education technologies

Contents

Active Learning, Alternative Assessment, Adult Learners, Analysis, Assistive Technology, Cognitive Apprenticeship, Computer-Assisted Instruction

Instruction Reference Textbook-

Education Technology - An Encyclopedia Edited by Ann Kovalchick and Kara Dawson+ Lecture slides
Assessment

Assignments = 100% (7 assignments)

ED 103 Teaching Practice

Objective-

To use developmental process for reflecting on and improving one's teaching; and as an evaluative product for personnel decisions such as tenure, promotion, or a teaching

Outcomes

- To provide different sources of evidence of teaching performance.
- To contribute important information about teaching performance
- To collect variety of sources of information related to teaching
- To reflect more of teaching's intellectual substance and complexity.
- To make teaching more visible through their demonstration of a variety of teaching-related activities.
- To place the initiative for reflecting on and evaluating teaching in the hands of faculty.
- To give the individual an opportunity to think about own teaching —
- To change priorities or teaching strategies as needed, and to reflect about future

Contents

Meaning of Teaching Portfolio, Why Prepare a Teaching Portfolio? ,How Does One Develop a Teaching Portfolio? ,Preparing Portfolio ,Shaping the Final Portfolio ,Keeping Your Portfolio Up to Date ,Assembling an Electronic Portfolio ,Portfolio evaluation.

Instruction Reference Textbook-

Lecture slides

Teaching-portfolio (University of South Australia)

Assessment

Assignments = 100% Portfolio Assessment

ED 104 Lesson Planning

Objective-

This unit provides the methods to apply thought-stimulating examples teaching & learning techniques to be applied in training design and delivery to apply the various techniques and strategies in training design and presentation, that will stick! Specific strategies.

Outcomes

- To create trainings that are fun and memorable.
- To write learner-based trainings that guarantee success for each learner performance.
- To develop learning activities that match the need, learning style, and level of understanding of the participants.
- To use learning strategies that encourage learners to build on their experiences.
- To plan ongoing training activities that evaluate learner mastery during the entire learning event.
- To design blended and accelerated learning strategies that strengthen learning transfer back on the job.
- To identify methods that accurately measure training results.

Contents

Introducing planning, Needs, aims and objectives ANALYSIS OF NEEDS ,THE RATIONALE OF OBJECTIVES ,WRITING YOUR LEARNING OBJECTIVES ,SETTING A VARIETY OF OBJECTIVES , Learning, SKILLS, TECHNIQUES AND METHODS ,JUDGEMENT AND DECISION-MAKING,THE PLACE OF EMOTIONAL EDUCATION,PLANNING FOR THEORETICAL LEARNING,PLANNING FOR LEARNING FROM THE CONCRETE,PLANNING FOR REFLECTIVE LEARNING,PLANNING FOR ACTIVE LEARNING,PLANNING PROGRESSION FROM PRIOR LEARNING,PLANNING FUTURE PROGRESSION,CROSS-CURRICULAR LINKS,DIFFERENTIATION,PLANNING LISTENING ACTIVITIES,PLANNING SPEAKING ACTIVITIES,PLANNING WHOLE CLASS DISCUSSION,PLANNING READING,PLANNING TO DEVELOP COMPREHENSION,TEACHING PUPILS TO LEARN FROM WHOLE BOOKS,PLANNING WRITING,TEACHING ABOUT SUBJECT DISCOURSE ,Pedagogy, TASK ANALYSIS ,A SUCCESSFUL LESSON STRUCTURE ,PLANNING PRACTICE SESSIONS

Instruction Reference Textbook-

Lecture slides

Instructional Design for Action Learning By GERI M C ARDLE

100 Ideas for Lesson Planning – By Anthony Haynes

Read the above textbooks and prepare three lesson plans

Assessment

Assignments = 100% (Assessment of three lesson plans)

ED 105 Principle of Learning

Objective-

To understand the memory concept & apply it in effective teaching and learning.

Outcomes

- To demonstrate the principle of learning
- To understand the principle of control memory
- To understand the principle of Inhibition
- To apply the Principle of Adaptive Specialization as It Applies to Learning and Memory

Contents

FORMATION OF MEMORIES, ORGANIZATION OF MEMORIES, CONSOLIDATION OF MEMORIES, CONTROL OF MEMORIES, ADAPTIVE SPECIALIZATION OF MEMORIES

Instruction Reference Textbook-

Lecture slides

Principle of learning & memory Edited by Rainer H. Kluwe, Gerd Liier and Frank Räsler

Assessment

Assignments = 100% (5 Assignments of 20% each)

ED 106 Interpreting Curriculums

Objective-

To interpret the curriculum & develop the detailed lesson plans in teaching process.

Outcomes

- To interpret the curriculum presented to teachers;
- To adopt the curriculum;

- To understand the curriculum assimilated by learners; and
- To evaluate curriculum.

Contents

KINDS OF CURRICULUM, ORIENTATIONS TO CURRICULUM, ORIENTATIONS TO CURRICULUM, TYPES OF CURRICULUM, Competency Curriculum, LEVELS OF CURRICULUM, STAGES OF THE PROCESS, CURRICULUM PLANNING, CURRICULUM DESIGN, CURRICULUM DEVELOPMENT- PHASES, CURRICULUM DEVELOPMENT. IMPLEMENTATION OF THE CURRICULUM, CURRICULUM EVALUATION, CURRICULAR CHANGES

Instruction Reference Textbook-

Lecture slides

CURRICULUM DESIGN AND DEVELOPMENT-1.pdf

THE CURRICULUM by Cecilia Braslavsky 1

Assessment

Assessment = 100% (Assess as part of Learning outcomes & curriculum development tasks in Residential Workshop session)

ED 107 Teaching & Learning

Objective-

This unit provides new and experienced faculty in all disciplines with practical, tested strategies for addressing all major aspects of college and university teaching, from planning a course through assigning final grades. Graduate student instructors and teaching assistants will also benefit from the foundational knowledge and research findings described in this unit.

Outcomes

- To addresses planning: designing a new course or revising an existing one, creating a syllabus, preparing for the class, and managing classroom conduct and decorum.
- To respond to a Changing Student Body,
- To do “ Discussion Strategies, ” provides ideas for leading a productive discussion, framing challenging questions, and encouraging student participation, both in class and online.
- To explore aspects of the lecture in the Large-Enrolment Course, ” method: preparing and delivering effective lectures, engaging students and providing for student participation, and maintaining instructional quality with limited resources.
- To find the Alternatives and Supplements to Lectures and Discussion,
- To Enhance Students ’ Learning and Motivation, ” provides research -based approaches to helping students become more confident, independent, and self - motivated learners. Informal ways to assess learning and the use of mobile

- To Strengthen Students ' Writing and Problem-Solving Skills, ”

Contents

RESPONDING TO A CHANGING STUDENT BODY ,DISCUSSION STRATEGIES ,THE LARGE-ENROLLMENT COURSE ,Maintaining Instructional Quality with Limited Resources ,ENHANCING STUDENTS' LEARNING AND MOTIVATION ,STRENGTHENING STUDENTS' WRITING AND,PROBLEM-SOLVING SKILLS ,TESTING AND GRADING,PRESENTATION TECHNOLOGIES ,EVALUATION TO IMPROVE TEACHING,TEACHING OUTSIDE THE CLASSROOM ,FINISHING UP

Lecture slides

Tools for teaching by Barbara Gross Davis

Assessment

Experience Assessment = 100% (Assessed on Formal Teaching experience record for the teachers being employed by Government Technical Colleges & Technological Universities)

Separate assessment system is applied for pre-service teacher trainees.

ED 201 Class Room Management & Teaching

Objective-

To define classroom management, explain the relationship between classroom management and discipline, and describe the concept of “culturally responsive classroom management”

Outcomes

1. To describe the characteristics of an effective teacher
2. To explain why reflection on teaching is so important for teacher growth
3. To describe the reflective decision making model of teaching
4. To identify important factors that affect instructional decision making
- 5.To contrast the characteristics of authoritative, authoritarian, and permissive teachers
- 6.To identify the ongoing tasks involved in classroom management and to explain how each contributes to a well-functioning learning environment

Contents

Assessment

Experience Assessment = 100% (Assessed on Formal Teaching experience record for the teachers being employed by Government Technical Colleges & Technological Universities)

Separate assessment system is applied for pre-service teacher trainees.

Level 2-Adult Vocational Education

ED 401 Adult Learning Technology

Objective-

This unit provides and skills and the roles of training developers and instructional designers who are responsible for analysing training needs and designing training solutions and products to meet workplace capability requirements, and evaluating the effectiveness of adult training programs.

Outcomes

To provide the guidance and advice to trainers and assessors, promoting innovative practices, e.g. e-learning, and in researching and incorporating best practice in training and assessment into training programs and products.

Contents

- Learner-Centered Teaching and the Use of Technology
- Effective Teaching with Technology in Adult Education
- Adult Learners and Their Development in the Information Society
- Supporting Lifelong Learning and Flexicurity Policies
- Adult Learning Principles as the Foundation for Innovative Technology Applications in Business and Higher Education Venues
- The Role of Learning Styles and Technology
- Innovative Instructional Strategies with the Use of Technology for Adult Learners
- Integrating Adult Learning and Technology for Effective Education:
- Strategic Approaches
- Comparing the Principles of Adult Learning with Traditional Pedagogical Teaching in Relation to the Use of Technology:

- Provide Training through instruction and demonstration of work skills
- Facilitate work-based learning
- Group based delivery
- Design and develop learning programs
- Foster and promote an inclusive learning culture
- Ensure a safe and healthy learning environment
- Individual learning
- Language Literacy & Numeracy

Lecture Slides

Adult Learning Technology by Victor C.X. Wang

Assessment

Participation in Educational Support Workshop sessions=100%

(Assess as part of Learning outcomes & curriculum development tasks in Residential Workshop session)

ED 202 Curriculum & Design

Objective-

To provide theoretical consideration for the twenty-first century curriculum, & technological and pedagogical innovations influencing curriculum renewal together with sustainable practice in technology-rich environments.

Outcomes

- To address theoretical foundations for the development of curricula.
- To explore the pedagogical options available to higher education instructors
- To explore new ways of accessing and connecting content to multimodal forms
- To examine how curriculum design needs to be influenced by the effective development of virtual collaborative learning environments
- To devise more adaptive, educationally focused teaching and learning

Contents

Curriculum Design for the Twenty-First Century, Online Collaboration: Coordinating Technology, Strategies for Collaborative Learning, Designing a Virtual Collaborative Learning Environment, Curriculum Design as Applied to Virtual Collaborative, Course Evaluation, Creating Curriculum Within the Context of an Enterprise, Teaching Instructional Design, Online education examples.

Instruction Reference Textbook-

Lecture Slides

Curriculum Models for the 21st Century Using Learning Technologies in Higher Education

Assessment

Participation in Educational Support Workshop sessions=100%

(Assess as part of Learning outcomes & curriculum development tasks in Residential Workshop session)

ED 205 Teaching & Measuring

Objective-

To apply adaptive expertise, creative thinking, metacognition, and teamwork in teaching and measuring task

Outcomes

To apply Adaptability, Adaptive expertise, Adaptive problem solving, Communication, Creative thinking , Decision making , Metacognition, Situation awareness & Teamwork

Contents

Cognitive Readiness, A Model for Instruction and Assessment of Cognitive Readiness, The Development and Assessment of Cognitive Readiness: Lessons Learned from K-12 Education, Cognitive Readiness for Solving Equations . Cognitive Readiness Applications, Creative Thinking Abilities: Measures for Various Domains, Using Analogies as a Basis for Teaching Cognitive Readiness . Simulation Assessment of Cognitive Readiness . Assessing Cognitive Readiness in a Simulation- Based Training Environment, Software Support for Teaching and Measuring Cognitive Readiness, Cognitive Readiness for Complex Team Performance, Impact of Individual Game-Based Training on Team Cognitive Readiness

Instruction Reference Textbook-

Teaching and Measuring Cognitive Readiness by Harold F. O'Neil • Ray S. Perez • Eva L. Baker

Assessment

Participation in Educational Support Workshop sessions=100%

(Assess as part of Learning outcomes & curriculum development tasks in Residential Workshop session)

ED 206 Designing Instructions & Assessment

Objective-

To deconstruct the broad-sweeping goals of the standards and transform them into unit plan objectives (more specific) and daily instructional objectives

Outcomes

To entails a logical progression from (1) content area standards to (2) modified standards to

(3) unit plan objectives to (4) daily instructional objectives in an understandable sequence of increasing specificity

Contents

Deconstructing the Standards ,Writing Unit and Daily Instructional Objectives , Writing True–False and Completion, Items and Matching Exercises ,Writing Multiple-Choice Items ,Writing Short-Answer and Essay Items .Performance-Based Assessment ,Portfolios

Instruction Reference Textbook-

Lecture Slides

Designing Elementary Instructions & Assessments

By John L. Badgett Edwin P . Christmann

Assessment

Participation in Educational Support Workshop sessions=100%

(Assess as part of Learning outcomes & curriculum development tasks in Residential Workshop session)

ED 405 Training Principle

Objective-

To provide numerous techniques, designs, case examples, and tips for designing and facilitating training that is participant centred, brain-friendly, and experiential

Outcomes

- To explore all aspects of training.
- To promote an active approach to training
- To provide a practical handbook of techniques

Contents

INTRODUCING ACTIVE TRAINING, DESIGNING AN ACTIVE TRAINING PROGRAM, Assessing Training Needs, Developing Active Training Objectives, Creating Opening Exercises, Preparing Brain-Friendly Lectures, Using

Experiential Learning Approach, Designing Active Training Activities, Sequencing Active Training Activities, Planning Active Training Programs, Blending Technology into Active Training, CONDUCTING AN ACTIVE TRAINING PROGRAM, Beginning an Active Training Program, Gaining Leadership of the Training Group, Giving Presentations and Leading Discussions, facilitating Structured Activities and Promoting Team Learning, Concluding an Active Training Program, EXTENDING THE VALUE OF AN ACTIVE TRAINING PROGRAM, Evaluating an Active Training Program

Instruction Reference Textbook-

Active Training by Mel Silberman

Assessment

Participation in Educational Support Workshop sessions=100%

(Assess as part of Learning outcomes & curriculum development tasks in Residential Workshop session)

ED411-Engineering Education (1)

Objective-

To design the engineering educational programs and teaching programs by applying multi disciplinary approaches by combining technological aspects

Outcomes

- To attain the strategies to promote the engineering education
- To apply technological concepts in engineering teaching support system
- To develop the quality work-based learning system
- To write Sociological Rationale of a design curriculum
- To find the strategies to improve the communication skills of engineers
- To design the computer server for engineering education program

Contents

- Pre-university Outreach: Encouraging Students to Consider Engineering Careers
- The ASTutE Tutorial Assistant: Efficient, Accessible and Interactive
- Learning at Work within the Ford Motor Company
- Using Rubrics to Assess the Development of CDIO
- Syllabus Personal and Professional Skills and Attributes at the 2.x.x Level*
- Quality Assurance Issues Relating to the Delivery of Work Based Learning Programmes*

- The Role of Work-Based Learning Methodologies in the 21 st Century
- Development of Life-Long Engineering Education in the 21 st Century
- Traits Analysis and Influences on High Performing Students in Mechanical Education
- The Construction of an Instructional Quality System for Industrial Technology Education
- Design Hegemony: an Exploration of Hegemony in the Curriculum and Instruction of Industrial Design Education
- The Engineering Mechanics Interactive Lecture Series: Oligomedia Resources for Computer-Based Learning
- The Sociological Rationale of the Industrial Design Curriculum
- Achieving Advances and New Developments in Engineering and Technological Education
- Important Considerations in Improving the Acquisition of Communication Skills by Engineers
- Client-Server and Gateway Systems for Remote Control in Engineering Education
- The Development of Online Conference Management Tools as a Student Project*
- Co-operation across Disciplines in Engineering Education Using Technical and Scientific Computing Environments

Assessment

Questions & answers

Level 3-Training Authorities Accreditation Compliance

ED 402 Educational Leadership

Objective-

This course provides the educators with skills to take an active and creative approach to their personal and professional development. While it may be of most interest to those in middle or senior education management, it is also designed to help teachers, governors and those in organizations allied with education.

Outcomes

To attain the competencies in

- Leading and managing
- Changing and learning
- Undertake Tasks and responsibilities

Instruction Reference Textbook-

**Educational leadership and learning Practice, policy and research
by Sue Law and Derek Glover**

Contents

- The context for educational leadership
- Developing leadership and management effectiveness
- Managing ourselves and leading others
- Motivating and managing others
- Leading effective teams
- Effective communication
- Organizational cultures

- Managing change and creating opportunities
- Educational improvement, inspection and effectiveness
- Leading and managing in learning organizations
- Managing staff and promoting quality
- Managing resources and finance
- Managing stakeholder relationships and partnerships
- Leading and managing for professional development

Assessment

Assignments = 100%

ED 301 Educational Policy (Myanmar Engineering Council Accreditation Requirements)

Objective-

This course provides the educators with Myanmar Engineering Council Laws, Rules, Regulations, Accreditation Requirements, Accreditation Practices, procedures related to accreditation of engineering courses and engineering professionals in Myanmar to enable them to design, develop and teach the engineering programs accredited by Myanmar Engineering Council.

Outcomes

- To understand Myanmar Engineering Council Accreditation Rules & Regulations related to accreditation of Government Technical Colleges & Technological Universities in Myanmar.
- Get the information & knowledge on Current issues related to international & Myanmar Engineering profession.
- Participate in hand on practice workshop focussing on curriculum development & collecting and preparing the materials for accreditation by Myanmar Engineering Council Engineering Accreditation Committee & taking part in mock accreditation sessions.

Contents

- Overview of Myanmar Engineering Council Law, Regulation, Accreditation Principles
- Examples of marine engineers competency assessment in Myanmar/ in line with International Certification standards & explore the way to apply the similar competency based training in other engineering areas
- Requirement of Myanmar Engineering Council & how to design the curriculum to address the learning outcomes
- Discussing the programme structure and course contents(MEng C)
- Discussing the programme delivery and assessment methods

- Assessment Validation Guide of Myanmar Engineering Council
- Educational Resources Development in line with Myanmar Engineering Council Requirements
- Curriculum design for accreditation compliance
- Overall accreditation and compliance practice
- Preparation for self accreditation report
- Engineering Accreditation Plan

Instruction Reference Textbook-

1. Accreditation Manual
2. Graduate Attributes & Terminology.pptx
3. SAR.pptx
4. EngineerCoulcilRegulation
5. Policy - Qualifications Policy POL11 v4
6. Myanmar Engineering Council Law
7. Policies for Accreditation of Programs
8. Time line,EAC Code,Guidelines,Fees

Assessment

Assignments = Participation in workshop sessions

ED 308 Change Management

Objective-

The unit involves candidates in leading a complete cycle of the change process. This process falls into three phases that correspond broadly to the elements of competency.

- i. Preparing for change
- ii. Planning for change
- iii. Implementing and evaluating change

Outcomes

- To provide leadership and support to others within the organization
- To manage change more effectively
- To develop educational business skills
- To analyse work practice and context, and make improvements
- To contribute to innovation and capacity building in the organization.

Contents

- Leadership issues Raising achievement
- The Leadership of Change
- A shift from management to leadership
- How not to do change management
- Managing change and transition

Instruction Reference Textbook-

Lecture Slides

Leadership+ Change Management DVD

Assessment Assignment-100%

ED309 Educational Communication

Objective-

This program uses methods of the social sciences, encompassing both qualitative and quantitative approaches to the study of communication and education. It asks in particular how education and other social systems change under the impact of new media

Outcomes

- Reflect on the historical effects of media and on the cultural uses of developments such as face-to-face speech, writing, printing, photography, film, radio, television, computers, and networked multimedia;
- Use anthropological and linguistic methods to study how the diverse forms of communication, literacy, information processing, and cognition condition educational practice; and
- Explore positive and negative effects of media on social relations and develop strategies for using information and communication technologies to improve conditions of education and life.

Contents

- Creating a production that communicates your message
- Digital Design
- Great Looking Presentations
- Planning

- Technical Papers related to effectiveness of ICT in education
- Access and equity issues
- Educational Communication Portfolio Presentation

Instruction Reference Textbook-

Lecture Slides

ED309 Educational Communication Assignment Tasks-806A Modified (Worked Examples)

Assignment

Assignments = Portfolio Assessment- 100%

ED 407 Learning Environment

Objective-

The objective of this unit is to give the candidate an understanding of the conceptualisation, historical development, assessment, determinants and effects of classroom learning environments.

Outcomes

- To review classroom learning environment for effective educational setting
- To prepare effective educational setting for teaching and learning
- To understand the students' behaviour in the classroom and the cause of the behaviour
- To effectively use the teaching and learning strategies for keeping the good learning environment in the class
- To perform educational survey task on learning environment assessment.

Contents

- Background information about the fields of school and classroom environment
- Outcomes and environment; evaluation of educational innovations
- Quantitative and qualitative methods
- Teachers' use of classroom and school environment instruments in practical attempts to improve their own classrooms and schools.
- Current trends and future desirable directions in research on educational environments.

Instruction Reference Textbook-

Assessment

Assignments = 100%

Action Research Project

ED311 Outcome based Education

Objective-

At the end of this training, participants will be able to understand:

- ☐ Outcome-Based Education (OBE)
- ☐ Programme Education Objectives (PEO'S),

Outcomes

Programme Outcomes (PO's), Course Outcomes (CO) and Performance Indicators

- ☐ Bloom's Learning Taxonomy
- ☐ Assessment and Evaluation Methods
- ☐ Continual Quality Improvement Process

Contents

- ☐ The Origins of Outcome Based Education
- ☐ *Approaches to OBE*
- ☐ *OBE Process*
- ☐ Educational Process - Stakeholders
- ☐ Educational Process – Lecturers' Roles
- ☐ Educational Process - References
- ☐ OBE Model Hierarchy
- ☐ Characteristics of OBE curricula
- ☐ *Types of Teaching/Learning Delivery Activities*
- ☐ *OBE Delivery*
- ☐ Continual Quality Improvement (CQI)
- ☐ Essentials for OBE's success
- ☐ Essentials Components of OBE

- ☐ Different Levels of Outcomes
- ☐ Development of Programme Education Objectives
- ☐ CHARACTERISTICS OF GOOD OUTCOME STATEMENTS
- ☐ Course Development
- ☐ ENGINEERING EDUCATION
BLOOM'S TAXONOMY
- ☐ DOMAINS of LEARNING OUTCOMES
- ☐ Assessment in OBE
- ☐ Continual Quality Improvement (CQI)

Final OBE Training at Myanmar July 2014. by **Ir. Professor Academician Dato' Dr. HT Chuah**
President of FEIAP

Assessment

Participation in workshop & presenting the portfolios

ED412 Engineering Education (2)

Objective-

To design the international standard engineering education program by applying total quality management

Outcomes

- To have the knowledge and skills in total quality management
- To foster the cross border co-operation
- To interface the school to engineering programs

Contents

- Secondary School-University Interface: Science and Engineering
- The Educational Process
- Quality Engineering Education: Student Skills and Experience
- The Web as a Tool for Supporting Student Learning
- Develop a Long-Term Plan to Overcome Skills Shortage
- Cross border engineering practice

- Cross-cultural Skills for engineers

Instruction Reference Textbook-

Lecture Slides

ED412 File

Assessment

Assignments = 100% (Two assignments of 50% each)

Level 4-Specialized Teaching Areas

ED 308 Computer Supported Learning & Distance Education

Objective-

This unit provides the skills related to contribute to the central questions of how students can learn collaboratively using the new technologies, the problems that can be expected, and the benefits that may ensue. The various ways to examine how computer supported group work differs from face-to-face group work, and the implications for both educators and students are provided.

Outcomes

- ☐ To offer assessment of e-learning with the hope of offering ideas in terms of practical guide and points of good practices, while addressing potential pitfalls to avoid.
- ☐ To be aware of what constitutes good and effective e-learning practices and how to design them for specific contexts and audiences in the global information
- ☐ Innovative uses of e-learning, Addressing various divides in e-learning, user centred focus in e-learning, special considerations in e-learning and development economy.

Contents

- ☐ Computer-Supported Collaborative Learning in Higher Education:
- ☐ An Introduction
- ☐ Online Group Projects: Preparing the Instructors to Prepare the Students
- ☐ Time, Place and Identity in Project Work on the Net
- ☐ The Collective Building of Knowledge in Collaborative Learning Environments
- ☐ Collaboration or Cooperation
- ☐ Analyzing Small Group
- ☐ Interactions in Educational Environments
- ☐ Mapping Perceived Socio-Emotive Quality of Small-Group Functioning
- ☐ A Constructivist Framework for Online Collaborative Learning:
- ☐ Adult Learning and Collaborative Learning Theory
- ☐ The Real Challenge of Computer-Supported Collaborative Learning
- ☐ Use and Mis-Use of Technology for Online, Asynchronous, Collaborative Learning
- ☐ The Personal and Professional Learning Portfolio
- ☐ An Online Environment for Mentoring, Collaboration, and Publication
- ☐ Problems and Opportunities of Learning Together in a Virtual Learning Environment
- ☐ Web-Based Learning by Tele-Collaborative Production in Engineering Education

- ☐ Relational Online Collaborative Learning Model
- ☐ Online, Offline and In-Between: Analyzing Mediated-Action

Computer Supported Learning by Tim S. Roberts

Assessment

Assignments = 100%

ED 304 Maths Teaching

Objective-

This unit provides the skills to the teachers to act as mechanisms for communicating an approach to mathematics education that is eclectic and embracing, respectful and engaging, reflective and, ultimately, educational.

Outcomes

To provide the methods to the educators in class teaching to provide the students with conceptual understanding of mathematics content through modelling or interpretation of representations,

- computational fluency,
- problem solving through application of the content.

Contents

- Strategies for Vocabulary Development
- Strategies for Using Manipulatives
- Strategies for Teaching Procedures
- Strategies for Understanding Problem Solving
- Strategies for Using Mathematical Games
- Strategies for Assessing
- Mathematical Thinking

Instruction Reference Textbook-

Lecture Slides

- ☐ Multiple Perspectives on Mathematics Teaching and Learning Edited by Jo Boaler
- ☐ Strategies for Teaching Mathematics by *Deborah V. Mink*

Assessment

Assignments = 100%

ED 305 Science Teaching

Objective-

This unit provide the teaching pedagogy in science that effectively enable the teacher to transfer what they learn in our courses into their own classroom practices.

Outcomes

- To shine a spotlight on important work that science teacher educators are doing with teachers and youth
- To describe the professional purposes and benefits realized when they, as science teacher educators, arranged opportunities to teach children or adolescents.
- To utilize model teaching lessons in class room practice

Contents

- Pedagogical Content Knowledge
- Teaching & learning Through experience
- Teaching examples

Instruction Reference Textbook-

Lecture Slides

- Understanding and Developing Science Teachers' Pedagogical Content Knowledge
By John Loughran
- Science Teacher Educators as K-12 Teachers edited by Michael Dias • Charles J. Eick, Laurie Brantley-Dias

Assessment

Assignments = 100%

ED 306 Technology Teaching

Objective-

This unit provides the teaching idea for teaching students with unique opportunities to develop a range of process skills such as critical and creative thinking skills in addition to their practical skills, through undertaking authentic tasks of real purpose.

Outcomes

- To link philosophy and educational issues in my daily work
- To help teachers to improve the teaching by means of the insights that philosophy of technology offers.

Contents

- Philosophy of technology:
- Technological artifacts
- Technological knowledge
- Technological processes
- Technology and the nature of humans
- Ethics and aesthetics of technology
- Learners' philosophies of technology
- Reconceptualizing technology through education
- Practical issues in teaching about technology

Instruction Reference Textbook-

Lecture Slides

Teaching about Technology by MARC J. DE VRIES

Assessment

Assignments = 100%

ED 404 Educational Research

Objective-

This unit describes the performance outcomes, skills and knowledge required to undertake research into educational theory and apply this research to improve current training and assessment practice.

This unit typically applies to those who need to develop skills in research in order to apply educational theory to improve current and future training and assessment practice

Outcomes

- Prepare research brief relating to training and assessment practice
- Conduct research in training and assessment practice
- Investigate and apply educational theory to the research
- Report on application of educational theory to training and assessment practice
- Review entire process

Contents

Qualitative Research and Public Policy

- Multilevel Analysis in Higher Education Research: A Multidisciplinary Approach .
- Conducting Multi-paradigm Inquiry in the Study of Higher Education Organization and Governance: Transforming
- Research Perspectives on Colleges and Universities

- Examining Pathways to and Through the Community College for Youth and Adults
- Review of the Theories Developed to Describe the Process of College Persistence and Attainment

Instruction Reference Textbook-

Lecture Slides

Higher Education: Handbook of Theory and Research

Published under the Sponsorship of the Association for Institutional Research (AIR) and the Association for the Study of Higher Education (ASHE)

Assessment

Assignments = 100%

Prepare & submit one educational research paper.

ED310 Learning Technology I & II

Objective-

On completion of this unit you should be able to demonstrate your achievement of the following learning outcomes:

All participants will be competent, confident and professional users of e-Learning system in teaching

Outcomes

To use e-Learning tools to:

- improve their own professional productivity,
- improve their preparation for classes and teaching generally and
- improve their ability to use and integrate IT appropriately within the classroom

Contents

The Syllabus:

The unit consists of five inter-related modules:

- 1. Module 1: Getting Started and IT Empowerment and Teaching**
 - a. Unit Introduction
- 2. Module 2: IT and Education:**
 - a. The Hype and the Reality
 - b. Multimedia in Education

3. Module 3: Ghosts of Schooling Past, Present and Future

- a. Technology and the Whole Curriculum
- b. Technology as a Classroom Tool
- c. Creating an active learning Environment

4. Module 4: Making the World Wide Web Work for You

- a. The Tools of the Trade
- b. Using the internet for information

5. Module 5: Technology in Your Classroom

- a. Classroom Applications of the
- b. WWW
- c. Educational Software
- d. Ideas, Approaches, Tools and Tricks
- e. Integration
- f. Early Learning and Primary

Tuition Pattern:

This unit is provided as an online unit. All tuition is provided through the online course website. The length of the unit is one semester (12 weeks); however, some students will finish sooner, and some may require additional time to complete it. While the weekly time commitment will vary from student to student, most should allow approximately 10 hours per week total study time for the unit.

Assessment

Two assignments= 100%

ED312 Technology in Classrooms

Objective-

To provide use of technology in educational context by combining with teaching and learning principle, educational leadership skills and educational leadership skills.

Outcomes

On completion of this unit you should be able to demonstrate your achievement of the following learning outcomes:

Upon completion, the participant;

1. Through the use of professional based portfolios will design, implement and evaluate the use of IT, multimedia and the Internet in their own classrooms
2. Using the skills and knowledge developed within the unit, conduct research of the use on learning technologies within the areas of;
 - a. Learning technologies and Developing Leadership Skills in Technology
 - b. Assessing and Changing IT Learning EnvironmentsTeaching and Learning Principles for Technology-Rich Classrooms

Contents The unit consists of 2 inter-related sections:

1. **Section 1**
 - a. Conduct independent research in one of the following
 - i. Developing Leadership Skills in Technology
 - ii. Assessing and Changing IT Learning Environments
 - iii. Teaching and Learning Principles for Technology-Rich Classrooms
2. **Section 2**
 - a. The development of two Portfolios
 - i. "Classroom" based portfolio that demonstrates the use and integration of educational technology in your classroom or workplace.
 - ii. "Personal" based portfolio that provides the student with the opportunity to demonstrate the use and educational practice in professional practice.

ED413 Engineering Education (3)

Objective-

This unit provides the engineering educators with engineering ethical issues, New pedagogy , Industrial co-operation & Lifelong learning and Strategic Planning skills in engineering education

Outcomes

Design the engineering programs by taking account on emphasizing in engineering ethics & by utilizing innovative new teaching pedagogies

Contents

- Engineering ethics
- Engineering teaching pedagogies
- New training and work-based approach
- Strategies planning in engineering education

Instruction Reference Textbook-

- ED413 Par1 Ethics
- ED413 Part2 New pedagogy , Industrial co-operation & Lifelong learning
- ED413 Part3 Strategic Planning in Engineering Education
- ED413 Part4 Training & Work-based Approach

Assessment

Assignments = Project 100%

RESOURCES

ASSESSMENT FOR THE SUBJECTS IN PART 1 OF THE LEVELS

The students will have to write 20 pages study report for each of the subjects outlined in the Part 1 of any level .

The report general needs to include

- Book review- Review on each chapter of the book highlighting the key concepts, points, key theory & practical application concepts
- Own idea on how to apply those concepts in real practical applications.
- Examples of curriculum designs that use the concepts & knowledge expressed in those books (If any)
- Your comment on each book

The book references for the subjects can be downloaded from the following links by entering the given password. The detailed instruction will be given in subject study guides. Some of the units can be assessed in residential training workshops.

Password- to be given

ASSESSMENT FOR THE SUBJECTS IN PART 2 OF THE LEVELS

Follow the specific assessment instruction provided for the units in Part 2 of the levels

ASSIGNMENT

Prepare the portfolios for your section/ department to comply with Myanmar Engineering Council's Accreditation Requirements.

Level 4-Specialized Teaching Areas

The students will have to write 20 pages study report for each of the subjects outlined in the Part 1 of any level .

The report needs to include

- Book review- Review on each chapter of the book highlighting the key concepts, points, key theory & practical application concepts
- Own idea on how to apply those concepts in real practical applications.
- Examples of curriculum designs that use the concepts & knowledge expressed in those books (If any)
- Your comment on each book

The book references for the subjects can be downloaded from the following links by entering the given password.

Password- to be given

Preparation for Teaching Practice & TVET Teacher Training (Introductory 2 weeks course)

Course Outline

This two weeks course is designed as Technical Teacher Education Professional Development course for teachers working at Government Schools, Private Schools, TVET Centres, Voluntary Schools as well as Government Technological Universities and Technical Colleges to effectively design, teach and assess the quality learning programs at upper secondary, TVET and tertiary technical education sectors..

Aim of the course

To provide the training to the technical education teachers to understand and apply the principles of secondary and adult & vocational education outcome based education, competency based training. compliance with Qualification & Training Authority-such as Ministry of Education/TVET Council etc , Educational Regulations and Standards by taking part in intensive workshop focussing on curriculum development and assessment documents portfolio preparations for meeting the relevant educational standards.

Outcome of the course

After completion of this course, the participant will be able to

- Understand the objective of National Education Strategic Plan 2016 to 2021 of Myanmar.
- Understand and utilize the principle & features of Outcome based education & critical thinking
- Understand the Technical & Vocational Education, Work based Learning and Competency based training & assessments tasks.
- Acquire the knowledge on Competency based education and training and training packages being used in industrialized countries (Examples of Australian Standard Competency based vocational education & training system.
- Get the information & knowledge on Current issues related to international & Myanmar TVET .
- Participate in hand on practice workshop focussing on curriculum development & collecting and preparing the materials for educational quality control tasks.

- Explore the School , Technical ,Adult & Vocational Educational Literatures, Textbooks, References & Resources, e-Learning, Learning Technology & Technology in classroom resources knowledge sharing.
- Certificate/Diploma of Teaching Practice & Certificate/Diploma of Vocational Education & Training will be issued.

Target Group

- TVET Teachers, Voluntary School Teachers, Government & Private Vocational / Engineering Education Teachers.

Arrangement of attendances

- It will be teacher professional development course for various Government & Non Government Schools and Colleges. The attenders should seek the appropriate permission from their employments.

Place of the course

- Appropriate training venue arranged by Myanmar Vocational Training Collaboration and its partnered organization: Welfare Evolvment & Development Organization

Course Duration

12 days (Mondays to Saturdays) (December 2017)(The exact date will be provided)

Requirements

The participants will need to bring the documents related to teaching plan, curriculum, course materials or reference notes that they are using in teaching. Access to laptop/computer will be required for the participants. Teaching aids such as white board , computer & Overhead Projector will be required to show the slides. It will be better to access Internet.

Sessions , trainers and facilitators

Day	Session 1 9 to 10:30AM	Tea break	Session 2 11 to 12:30 Noon	Lunch break 12:30 to 1:30 PM	Session 3 1:30 to 3:30PM (The extended time up to 5PM can be taken up to the duration of workshop & group works)

Diploma in Intermediate Science (Australian Year 12 Equivalent)

Course 107777

Entry Qualifications

Year 10 Pass, Year 10 Not Passed, THS Pass, ITC

Study System

- Online self study
- Self arrangement with home tuition teacher
- IQY Technical College can connect the students to home tutors
- Examination in every December. Examination fees Ks10,000

Outcome

Diploma in Intermediate Science will be issued by Australian Registered IQY Technical College if the examination is passed. (Pass Mark 50)

Then IQY Professional Diploma in Technological Science/ Bachelor of Science (Technology) of STC Technological University

Or

Can use Diploma in Intermediate Science (issued by Australian Registered IQY Technical College) to attend the other foreign universities

Note

Myanmar Year 10 Pass can not attend the foreign universities. High School to be re-attended.. This is why we design the Diploma in Intermediate Science (Year 12 Equivalent)

အလယ်အလတ်သိပ္ပံဒီပလိုမာ (သြစတြေးလျ ၁၂ တန်းအဆင့်)

ဝင်ခွင့်အရည်အချင်းများ

Year 10 Pass, Year 10 မ Pass၊ THS Pass, ITC

လေ့လာမှုစနစ်

•အွန်လိုင်းကိုယ်ပိုင်လေ့လာမှု

•အိမ်မှာကျူရှင်ဆရာဆရာမနှင့်သင်ခြင်း

• IQY နည်းပညာကောလိပ်သည်ကျောင်းသားများကိုအိမ်ကျူရှင်ဆရာဆရာမနှင့်များနှင့်ဆက်သွယ်

ပေးမည် ။

•ဒီဇင်ဘာလတိုင်းတွင်စာမေးပွဲ။ စာမေးပွဲကြေး ကျပ်၁၀,၀၀၀

ရလဒ်

အလယ်အလတ်သိပ္ပံဒီပလိုမာကိုစာမေးပွဲအောင်ပြီးပါကဩစတြေးလျ မှတ်ပုံတင် IQY နည်းပညာကောလိပ်မှ အလယ်အလတ်သိပ္ပံဒီပလိုမာ (ဩစတြေးလျ ၁၂ တန်းအဆင့်)

ထုတ်ပေးလိမ့်မည်။(အောင်မှတ်၅၀) ထို့နောက် IQY နည်းပညာသိပ္ပံဘွဲ့ဒီဂရီ / STC နည်းပညာတက္ကသိုလ်မှသိပ္ပံဘွဲ့ (နည်းပညာ) တက်နိုင်သည်။

သို့မဟုတ် အခြားနိုင်ငံခြားတက္ကသိုလ်များသို့တက်ရောက်ရန် ၁၂ တန်းအဆင့် ဒီပလိုမာကို (ဩစတြေးလျမှတ်ပုံတင်ထားသော IQY နည်းပညာကောလိပ်မှထုတ်ပေးမည်။

Form253 Diploma in Intermediate Science (Dip ISc)

www.iqytechnicalcollege.com/Form253dipisc.htm

Exam Centres

Yangon ,Mandalay ,Pyay ,Shan State

St Clements University Certificate/ Diploma / Advanced Diploma in Electrical Engineering

Course + Credit Outlines

YEAR 1 Certificate in Electrical Engineering 15 credits

	<u>SEMESTER (1)</u>	<u>Credits</u>
EE101	DC Circuit Problems	1
EE102	Basic Electrical Fitting & Wiring	1
EE103	Basic Electrical Drafting	1
EE104	Electrical Equipments Safety Protection	2
EE105	Electrical Installation Design	1
EE106	Advanced Electrical Wiring	1
EE107	Electrical Equipments	1
EE108	Electrical Fault Finding	1
EE109	Electrical Control Circuits	1
EE110	Computer Applications	1
EE111	Electromagnetism & Basic Electrical Machines	2
EE112	Alternating Current Principle	2
		15 Credits
	Diploma in Electrical Engineering 30 credits	<u>Credits</u>
	<u>SEMESTER (2)</u>	
EE113	Electrical Fundamental	2
EE114	Electrical Power Principle	1
EE115	Basic Analogue & Digital Electronics	2
EE116	Process Control System	3
EE117	Solar Electrical System	1
EE118	Electrical Energy Supply System	3
EE119	Electrical Risk Assessment	1
EE120	Electrical Contracting & Specification	1
EE121	Electronics Power Control Device	1
		30 Credits

	Advanced Diploma in Electrical Engineering 60 credits	<u>Credits</u>
	<u>SEMESTER (1)</u>	
EE201	Engineering Mathematics	1
EE202	Electrical Circuits	1
EE203	Three Phase Power Circuits	1
EE204	Engineering Physics	1
EE205	Electrical Power System	2
EE206	AC Machines	2
EE207	DC Machine	1
EE208	Operational Amplifiers	2
EE209	Analogue Electronics	1

	<u>SEMESTER (2)</u>	
EE301	Advanced Electrical Drafting	1
EE302	Advanced Engineering Mathematics	2
EE303	Transmission Line	2
EE304	Power System Protection	2
EE305	Power Transformer	2
EE306	Electro-mechanical Control	2
EE307	Energy Efficient Building Design	2
EE308	Sustainability	1
EE309	Project Management	2
EE310	Engineering Officer Competency Report	2
		30 Credits

(Stage 1) DIPLOMA IN CIVIL ENGINEERING (Each 2.5 Credits) (30 Pt)

Certificate in Construction Studies

CE 106A Detailed Construction & Building Construction Materials

CE 104 A Building Drawing

CE 101 Mathematics (EE201)

CE 102 Physics (EE204)

CE 108 Electrical Principle

DIPLOMA IN CIVIL ENGINEERING

CE 104 Fluid Dynamics

CE 105 Hydraulic

CE 106 Hydrology

CE 107 Sanitation-and-Water-supply

CE 109 Energy Efficient Building Design (EE309)

CE 110 Building Construction

EE102 Basic Electrical Fitting & Wiring

Stage (2) Advanced Diploma in Civil Engineering Program (30 pt) (Each 5 pt)

YEAR (2)

CE103-Surveying

CE111A-Road+Bridges

CE113 Structure 1

CE114 Structure 2

CE115 Estimating & Specification

CE 112 Engineering Mechanics+ ME 301 Applied Mathematics

YEAR (2) ADDITIONAL COURSES

EE104 Electrical Equipments Safety Protection

EE105 Electrical Installation Design

ME 102 Engineering Thermodynamics

ME 334 Airconditioning and Refrigeration

[EE106 Advanced Electrical Wiring](#)

[CE 112 Engineering Mechanics+ ME 301 Applied Mathematics](#)

[EE308 Sustainability](#)

Certificate in Teaching Support/ Diploma in Teaching Practice Program for Voluntary School Staff and Teachers (St Clements Technological University)

စေတနာ့ဝန်ထမ်းကျောင်းဆရာထောက်ကူပြုသူများအတွက်လက်မှတ်ဒီပလိုမာဘွဲ့ အစီအစဉ် (စိန့်.ကလီးမင့်နည်းပညာတက္ကသိုလ်)

Teachers of the voluntary schools and school supports can get the following qualifications awarded by St Clements Technological University Scholarship Program by presenting their experiences.

စေတနာ့ဝန်ထမ်းကျောင်းဆရာထောက်ကူပြုသူများသည်အတွေ့အကြုံများကိုတင်ပြပြီး စိန့်.ကလီးမင့်နည်းပညာတက္ကသိုလ်၏ပညာသင်ဆုအစီအစဉ်ဖြင့်လက်မှတ်ဒီပလိုမာဘွဲ့များရယူနိုင်သည်။

YEAR (1)

Certificate in Teaching Support

- Ed101 Teaching Support
- Ed102 Application of Information Technology in School Education

Diploma in Teaching Practice

The students can complete the following units to complete Diploma in Teaching Practice

အောက်ပါတို့ကိုဆက်လက်ပြီးပါက Diploma in Teaching Practice ရရှိမည်။

- Ed103 Classroom Management
- Ed104 Teaching Portfolio
- Ed105 Inclusive Teaching
- Ed106 Subject Area Knowledge
- Ed107 Theory of Education, Educational Technology & Teaching Practice
 - Ed107A-Theory of Education
 - Ed107B-Education Technology
 - Ed107C-Teaching Practice
 - Ed107D-Lesson Planning
- Ed108 Curriculum Study , Teaching & Learning
 - Ed108A-Principle of Learning
 - Ed108B-Interpreting Curriculums
 - Ed108C-Teaching & Learning

Process (နည်းလမ်းစဉ်)

Fill the scholarship application form & submit it to the university through kyawnaing225@yahoo.com ပညာသင်ဆုအစီအစဉ်လျှောက်လွှာကိုဖြည့်ပြီး kyawnaing225@yahoo.com မှတစ်ဆင့်စိန့်.ကလီးမင့်နည်းပညာတက္ကသိုလ်သို့ ပို့ရန်။

Submit the evidences/ do the study to complete the units

အတွေ့အကြုံများကိုတင်ပြရန်၊ ဘာသာရပ်များလေ့လာရန်။

Ed101-Teaching Support

The students need to provide the following information to complete Ed 101 Teaching Support in English or in Myanmar.

Ed101 ပြီးစီးရန်အောက်ပါတို့ကိုတင်ပြရမည်။ (အင်္ဂလိပ် သို့မဟုတ် မြန်မာ ဘာသာဖြင့်တင်ပြနိုင်သည်)

(၁)ကျောင်းသားအမည်-

Name of student

(၂)လုပ်အားပေးခဲ့သောကျောင်း

Name of the school where you have volunteered.

(၃)ထမ်းဆောင်ခဲ့သောတာဝန်များကိုအောက်ပါအတိုင်းဖြည့်သွင်းရန်-

Records of the duties performed are to be written in the following aspects.

၁။ ကျောင်းခေါ်ချိန်မည်သို့မှတ်သနည်း။

How do you record the students' attendances?

၂။ ကျောင်းစည်းကမ်းထိန်းသိမ်းရေးကိုမည်သို့ဆောင်ရွက်သနည်း။

How do you maintain the school disciplines?

၃။ ဆရာများစာသင်ကြားရေးအဆင်ပြေစေရန်သင်မည်သို့ဆောင်ရွက်သနည်း။

How do you support the teachers in their teaching?

၄။ စာသင်ကြားရေးထောက်ကူပြုပစ္စည်းများကိုမည်သို့စီစဉ်ဆောင်ရွက်သနည်း။

How do you arrange the teaching support materials?

၅။ ကျောင်းမှတ်တမ်းများကိုမည်သို့ ထိန်းသိမ်းသနည်း။

How do you maintain the school records?

၆။ စာသင်ကြားရေးထောက်ကူပြုပစ္စည်းများတိုးပွားရေးကိုမည်သို့ဆောင်ရွက်သနည်း။

What do you perform in development of teaching resources?

၇။ ကျောင်းသားများကိစ္စနှင့်ပတ်သက်၍မိဘများ၊ ရပ်ကွက်လူထုများနှင့်မည်သို့ဆက်

သွယ်ဆောင်ရွက်သနည်း။

How do you communicate with the parents and community regarding the students matters?

Ed102 Application of Information Technology in School Education

Ed102 ပြီးစီးရန်အောက်ပါတို့ကိုတင်ပြရမည်။ (အင်္ဂလိပ် သို့မဟုတ် မြန်မာ ဘာသာဖြင့်တင်ပြနိုင်သည်)

The followings must be completed to complete Ed 102 in English or in Myanmar.

အခြေခံကွန်ပျူတာအသုံးပြုခြင်း

Basic Computer Applications

- Word
- Excel
- Internet
- E-mail

The students who have completed Ed101 and Ed102 will be awarded Certificate in Teaching Support by St Clements Technological University.

Ed101, Ed102 ပြီးစီးပါက St Clements Technological University (စိန့်.ကလီးမင်းနည်းပညာတက္ကသိုလ်)မှ Certificate in Teaching Support လက်မှတ်အပ်နှင်းမည်။

Diploma in Teaching Practice

The students can complete the following units to complete Diploma in Teaching Practice

အောက်ပါတို့ကိုဆက်လက်ပြီးစီးပါက Diploma in Teaching Practice ရရှိမည်။

- Ed103 Classroom Management
- Ed104 Teaching Portfolio
- Ed105 Inclusive Teaching
- Ed106 Subject Area Knowledge
- Ed107 Theory of Education, Educational Technology & Teaching Practice
 - Ed107A-Theory of Education
 - Ed107B-Education Technology
 - Ed107C-Teaching Practice
 - Ed107D-Lesson Planning
- Ed108 Curriculum Study , Teaching & Learning
 - Ed108A-Principle of Learning
 - Ed108B-Interpreting Curriculums
 - Ed108C-Teaching & Learning
 - Ed108D-Teaching Elementary

အောက်ပါတို့ကိုဆက်လက်ပြီးအင်္ဂလိပ်ဘာသာဖြင့်သင်ယူနိုင်သည်။

Bachelor of Teaching (Year 2) & Bachelor of Education (Year 3+4) can be studied in English.

Diploma in Teaching Practice

Ed103 Classroom Management

The students need to provide the following information to complete Ed103 Classroom Management in English or in Myanmar.

Ed103 ပြီးစီးရန်အောက်ပါတို့ကိုတင်ပြရမည်။ (အင်္ဂလိပ် သို့မဟုတ် မြန်မာ ဘာသာဖြင့်တင်ပြနိုင်သည်)

- စာသင်ကြားရေးအချိန်ဇယားရေးဆွဲခြင်း။
Timetabling
- ကျောင်းသားအုပ်စုခွဲခြင်း။
Grouping the students
- စာသင်ကြားရေးထောက်ပံ့ပစ္စည်းများပြုလုပ်ခြင်း။
Making the teaching & learning support resources
- စာမေးပွဲစစ်ဆေးခြင်း။
Arranging the examinations
- ကျောင်းဖွဲ့စည်းမှုတွင်ပါဝင်ခြင်း။
Participation in organizing of the school
- ကျောင်းကော်မတီအစည်းအဝေးများတက်ရောက်ခြင်း။
Attending & participating in school committee meetings.

Ed104 Teaching Portfolio

The students need to provide the following information to complete Ed104 Teaching Portfolio in English or in Myanmar.

Ed104 ပြီးစီးရန်အောက်ပါတို့ကိုတင်ပြရမည်။ (အင်္ဂလိပ် သို့မဟုတ် မြန်မာ ဘာသာဖြင့်တင်ပြနိုင်သည်)

- သင်ခန်းစာများကိုမသင်ကြားခင်ကြိုတင်စီစဉ်သောအထောက်အထား
Evidences of lesson planning
- သင်ခန်းစာခေါင်းစဉ်
Title of lesson
- သင်ခန်းစာနိဒါန်း
Lesson introduction
- သင်ခန်းစာအစအဆုံးပို့ချချက်
Lesson delivery from the beginning to the end.
- သင်ခန်းစာနိဂုံး
Conclusion of lesson

- လေ့ကျင့်ခန်းများ
Exercises
- စစ်ဆေးမည့်အစီအစဉ်
Plan to assess the exercises
- ကျောင်းသားများတင်ပြသော လေ့ကျင့်ခန်းများပြီးစီးမှုနမူနာ
Students' work samples

Ed105 Inclusive Teaching

The students need to provide the following information to complete Ed105 Inclusive Teaching in English or in Myanmar.

Ed105 ပြီးစီးရန်အောက်ပါတို့ကိုတင်ပြရမည်။ (အင်္ဂလိပ် သို့မဟုတ် မြန်မာ ဘာသာဖြင့်တင်ပြနိုင်သည်)

- ကျောင်းသားတိုင်းသင်ကြားမှုရရှိရန်စီစဉ်ပုံ။
How do you plan to enable every student to learn the lessons?
- တတ်သိမှုနှေးသော ကျောင်းသားတိုင်းသင်ကြားမှုရရှိရန်စီစဉ်ပုံ။
How do you plan to enable slow learning student to learn the lessons?
- ချို့တဲ့နွမ်းပါးသော ကျောင်းသားတိုင်းသင်ကြားမှုရရှိရန်စီစဉ်ပုံ။
How do you plan to enable every student from poor economic background to learn the lessons?
- မသန်စွမ်းသော ကျောင်းသားတိုင်းသင်ကြားမှုရရှိရန်စီစဉ်ပုံ။
How do you plan to enable students with disability to learn the lessons?
- ကျား/မ အသက်အရွယ်မခွဲခြားဘဲ ကျောင်းသားတိုင်းသင်ကြားမှုရရှိရန်စီစဉ်ပုံ။
How do you plan to enable students regardless of gender, marital status and ages to learn the lessons?

Ed106 Subject Area Knowledge

- ပြီးစီးခဲ့သောဘွဲ့လက်မှတ်များတင်ပြရန်။
Submit the degree/ diploma/ certificate that you have obtained previously
- E-Learning သင်ခန်းစာများ တင်ပြရန်။
Submit the E-Learning lessons.

Ed107 Theory of Education, Educational Technology & Teaching Practice
Ed108 Curriculum Studies , Teaching & Learning

အောက်ပါအင်္ဂလိပ် + မြန်မာ ဘာသာဖြင့်သင်ကြားသော ပါဝါပွိုင့်သင်ခန်းစာများကိုအီလက်ထရောနစ်စာသင်စနစ်ဖြင့်လေ့လာသင်ကြားပြီးလေ့ကျင့်ခန်းများကိုတင်ပြရန်၊သင်ခန်းစာများကိုသီးသန့်ပေးမည်။

The following English +Myanmar Powerpoint lessons are to be studied by E-Learning and exercises are to be submitted.

The lessons will be given separately.

- Ed107 Teaching Theory & Practice
 - Ed107A-Theory of Education
 - Ed107B-Education Technology
 - Ed107C-Teaching Practice
 - Ed107D-Lesson Planning
- Ed108 Curriculum Studies , Teaching & Learning
 - Ed108A-Principle of Learning
 - Ed108B-Interpreting Curriculums
 - Ed108C-Teaching & Learning

ဗြိတိန် St Clements Technological University (စိန် .ကလီးမင်းနည်းပညာတက္ကသိုလ်)မှ Diploma in Teaching Practice ရရှိမည်။

When all units are completed, Diploma in Teaching Practice will be awarded by St Clements Technological University.

YEAR 2+3

Bachelor of Teaching course outline (Only study in English medium of instruction will be available)

ED 201 Class Room Management & Teaching
 ED 202 Curriculum & Design
 ED 203 K-12 Education
 ED 204 School & Vocational Education
 ED 205 Teaching & Measuring
 ED 206 Designing Instructions & Assessment
 ED 207 Teacher Education
 ED 208 Inclusive Education
 ED 301 Educational Policy

+

Any two units from the ED 302 to ED 307

ED 302 English Teaching
 ED 303 Humanities Teaching
 ED 304 Mathematics Teaching
 ED 305 Science Teaching
 ED 306 Technology Teaching
 ED 307 Business Teaching

+

ED 308 Computer Supported Learning & Distance Education

Total 120 points= 5 credit points x 12 units= 60 points+ 60 points for completion of Diploma in Teaching Practice

YEAR 4

Bachelor of Education (School & Vocational Education) course outline
(Only study in English medium of instruction will be available)

ED 401 Adult Learning Technology

ED 402 Educational Leadership

ED 403 School Culture

ED 404 Educational Research

ED 405 Training Principle

ED 406 Educational Policy

ED 407 Learning Environment

ED 408 Middle & High School Teaching

Each unit 5 points x 8 units = 40 points

Total credit points for Bed = 160 points

Diploma in Engineering (Drafting & Design) (30 Credit Points)

Unit No	Unit Name	Credit point
EE201G	Mathematics	2
EE204G	Physics	2
ME 207G	Chemistry	2
EE101	DC Circuit Problems	1
EE102	Basic Electrical Fitting & Wiring	1
EE103	Basic Electrical Drafting	1
EE105	Electrical Installation Design	1
EE110	Computer Applications	1
CE 106A	Detailed Construction & Building Construction Materials	2
CE 104 A	Building Drawing	2
CE 110	Building Construction	2
CE 107	Sanitation-and-Water-supply	2
EE107	Electrical Equipments	1
ME103	Engineering Mechanics	1
ME 108	Principles of Engines	1
EE113	Electrical Fundamental	1
EE106	Advanced Electrical Wiring	2
EE104	Electrical Equipments Safety Protection	1
EE120	Electrical Contracting & Specification—Business Aspect	2
EE109	Electrical Control Circuits	2
	Total Points	30

Career

Advanced Diploma/ Professional Diploma in

- Engineering Design
- Electrical Engineering (OR)
- Civil Engineering (OR)
- Mechanical Engineering (OR)
- Renewable Energy Engineering (OR)
- Other engineering disciplines.

BTech+BE courses are divided into the parts. The student who need to pay three equal instalments. Arrangement of teachers/ fees need to be arranged on Part 1/ 2/ 3 basics. Each part will take 4 months.

If the student pays the fees for part 1, he or she can attend part 1 and upon completion, the Statement/ Transcript will be issued for completion of part 1. Proceed to Part 2 will depend on fees payment. Copying lessons into Students USB/ Hard drive will depend on payment of fees. Only copy for the part that was paid for.

Manager will need to check students progress and fees payment and work with teacher to request me to issue the progress transcript.

No dividing of fees and part in Diploma and Advanced Diploma courses.

Please refer <http://www.highlightcomputer.com/iqyadministration.htm>

Form 7A -Student' s work and progress transcript submission

Form 7B -Student' s payment record

Form 7C Final Qualification issued check list

And prepare the checking system documents.

WS3001A	Management Theory
WS3001B	Project
WS3001C	Work Experience

Diploma Advanced Diploma and Bachelor of Work Studies-Animal Handling and Live Stock

WS101	Vocational Studies
WS102	Safety Training
WS103	English
MVTC20	CERTIFICATE IN ANIMALS HANDLING
Y1112S	Science (Optional)
Y1112Ch	Chemistry (Optional)
WS200A	Animal Diseases
WS200B	Animal Foods
WS200C	Community Cooperation
WS200D	Fish Farming
WS200E	Live Stock Techniques
WS3009A	Scientific Terminology
WS3009B	Township Disaster Management
WS3009C	Live Stock Knowledge
WS3001A	Management Theory
WS3001B	Project

Diploma Advanced Diploma and Bachelor of Work Studies-Sales and Marketing

WS101	Vocational Studies
WS102	Safety Training
WS103	English
MVTC20	CERTIFICATE IN BUSINESS
WS200A	Anti Corruption Studies
WS200B	Company Business Ethics
WS200C	Employing Person with Disability
WS3010A	Money Management for shopkeepers
WS3010B	Anti Human Trafficking in Small Businesses
WS3010C	Right and Responsibility in Business Operation

WS3001A	Management Theory
WS3001C	Work Experience

Diploma Advanced Diploma and Bachelor of Work Studies-Handyman Properties Services

WS101	Vocational Studies
WS102	Safety Training
WS103	English
MVTC20	CERTIFICATE IN PROPERTIES SERVICES
Y1112S	Science
Y1112Ph	Physics
Y1112Ch	Chemistry
Y1112M	Mathematics
WS200A	Concrete Structure
WS200B	Safety Control
WS200C	Bridge Maintenance
WS3011A	Bitumen
WS3011B	Cement
WS3011C	Deformed Bars
WS3001B	Project
WS3001C	Work Experience

Diploma Advanced Diploma and Bachelor of Work Studies-Performing

WS101	Vocational Studies
WS102	Safety Training
WS103	English
MVTC20	CERTIFICATE IN PERFORMING
WS202A	Dancing
WS202B	Zumba
WS202C	Multilingual Education
WS3001A	Management Theory
WS3001B	Project

WS3001C	Work Experience
---------	-----------------

**Diploma Advanced Diploma and Bachelor of Work Studies-Rural
Development and Water Operations**

WS101	Vocational Studies
WS102	Safety Training
WS103	English
MVTC20	CERTIFICATE IN LABORATORY WATER OPERATIONS
Y1112S	Science
Y1112Ph	Physics
Y1112Ch	Chemistry
Y1112M	Mathematics
WS203A	Mine Environmental safety
WS203B	Water Sanitation

Master of Engineering (Civil) High Rise Building Construction

(240 Credits) (Course 8011121)

Masters of Engineering (Civil- High Rise Building Construction) program is for recent graduates who have completed their BE degrees.

It will include the following 12 subjects of 10 credits each.

This program will be delivered entirely in English .

Graduate Diploma in Engineering (180 credits)

Completion of the compulsory 6 subjects will earn Graduate Diploma in Engineering (60 credits at Masters level +120 Credits for Bachelors degree level total 180credits. Completion of two or more units can earn Graduate Certificate in Engineering.

List of Subjects (Compulsory)

- (1)BAE6011 High Rise Building Construction Project
- (2) BAE6012 High Rise Building Construction Method
- (3) BAE6013 Design of High Rise Building
- (4)BAE6014 High Rise Building Structure
- (5)BAE6015 Scheduling Building Construction
- (6)BAE6016 Fire Safety in High Rise Building

List of Subjective (Civil Engineering Subjects)

- (7) BAE650 Steel Design
- (8) BAE 643-Earthquake Resistant Structure
- (9) BAE 634-Building Construction
- (10) BAE 637-Composite Structure of Steel& Concrete
- (11) BAE 636-Building Technology Electrical Mechanical System
- (12) BAE 644-Estimating

Assessment

The candidates will need to submit the study report

Read the e Book , view the lecture videos and write 20 pages study report for each of the subjects outlined below.

- The report needs to include
- Book review- Review on each chapter of the book highlighting the key concepts, key formula, key theory & practical application concepts
- Own idea on how to apply those concepts in real practical applications.
- Examples of engineering designs that use the concepts & knowledge expressed in those books (If any)
- Your comment on each book

ADVANCED DIPLOMA AND BACHELOR OF WORK STUDIES (VOCATIONAL STUDIES)
Course 456678/556678

656678B

Bachelor of Science (Engineering)

- Bachelor of Work Studies(Engineering)+ Software Studies Part 2

Graduate Diploma in Geographic Information Systems (Grad Dip GIS)(6886650)

Course Feature

This course introduces students to the 'building blocks' of GIS systems, including data structures, relational databases, spatial queries and analysis. The focus then moves on to sources of spatial data including Global Positioning System (GPS), operational systems such as smartcard ticketing and transaction data along with web-based sources highlighting both the potential and challenges associated with integrating each data source within a GIS environment. The unit is hands-on involving learning how to use the latest GIS software to analyse several problems of interest using real 'big data' sources and to communicate the results in a powerful and effective way. These include identifying potential demand for new services or infrastructure, creating a delivery and scheduling plan for a delivery firm or examining the behaviour of travellers or consumers over time and locations

Pre-requisite

Any Bachelors degree

Mode of Learning

Online/ English/ Video Lessons/ Readers/ Submission of study report

Subjects (Total 80 credits) (Each 8 credits)

- GIS601-PrinciplesGIS
- GIS602-Principle of GPS
- GIS603-Relational databases
- GIS604-Smartcard-Ticketing-
- GIS605 Spatial data system
- GIS606 Spatial queries and analysis
- GIS607 SpatialDecisionMaking0
- GIS608 Building Block of GIS
- GIS609 integrating data source within a GIS environment
- GIS610 Large spatial datasets analysis
- GIS Software

Graduate Diploma of Engineering Practice (Civil)

STAGE (3) ADVANCED GENERAL CIVIL ENGINEERING (18 Pt)

BAE421 Building Construction Engineering (4 pt)

BAE422 Estimating (2 pt)

BAE423 Fluid Mechanics (2 pt)

BAE424 Reinforced Concrete (2 pt)

BAE425 Timber Engineering (2 pt)

BAE521 Road & Bridge (2 pt)

BAE522 Rock Mechanics (2 pt)

BAE523 Soil Mechanics (2 pt)

STAGE (4 A) ADVANCED SPECIALIZED CIVIL ENGINEERING STUDY (6Pt)

BAE621 Structural Engineering (3 pt)

BAE622 Architecture (3 pt)

STAGE (4B) ADVANCED SPECIALIZED CIVIL ENGINEERING STUDY (4Pt)

BAE623 Surveying & Traffic Engineering (2 pt)

BAE624 Water Supply , Sanitation & Finishing (2 pt)

Graduate Diploma of Engineering Practice (Civil)

STAGE (3) ADVANCED GENERAL CIVIL ENGINEERING (18 Pt)

Graduate Diploma of Engineering Practice (Computer Control Engineering)

This one year course with 30 credit points trains the BSc & BCTech graduates and final year students to work as computer control system technicians and engineers in various industries. It consists of electrical engineering units, electronic engineering units, analogue and digital principles, process control system, programmable control, computer aided control and instrumentation, linear system and modern control system units.

Pre-requisites

BSc or BC Tech , Final years

Contents

Group (1)	Group (2)
EE101 DC Circuit Problems EE103 Basic Electrical Drafting EE107 Electrical Equipments EE109 Electrical Control Circuits EE112 Alternating Current Principle EE113 Electrical Fundamental EE206 AC Machines EE207 DC Machines EE202 Electrical Circuits	EE115 Basic Analogue and Digital Electronics EE121 Electronic Power Control Devices EE208 Operational Amplifier EE209 Analogue Electronics EE301 Advanced Electrical Drafting EE117 Solar Electrical System
The students study the power points containing the explanations in English + Myanmar Languages, do & submit theoretical & simulated practicals. Tutoring support by electronics teachers.	The students study the power points containing the explanations in English + Myanmar Languages, do & submit theoretical & simulated practicals. Tutoring support by electronics teachers.

The students who successfully complete Group 1 & 2 will receive Graduate Certificate in Engineering Practice (Electrical & Electronic)

Group (3)	Group (4) University post graduate level
ME203 Control Engineering ME534 Numerical Control ME434 Mechatronics and Robotics EE624 Process Control ME302 Automation & Robotics	BAE408 Analogue and Digital Electronics BAE502 Linear System BAE503 Control System
The students study the power points containing the explanations in English + Myanmar Languages, Study the text books in Myanmar language & enrich the knowledge by reading the references in English Do & submit theoretical & simulated practicals. Tutoring support by electronics teachers.	The students study the power points containing the explanations in English + Myanmar Languages, do & submit theoretical & simulated practicals. Tutoring support by electronics teachers.

The students who successfully complete Group 3 & 4 will receive Graduate Diploma of Engineering Practice (Computer Control Engineering)

GRADUATE DIPLOMA OF ENGINEERING PRACTICE (MECHANICAL)

[IQY Technical College/ St Clements University Humanities Study Programs](#)

www.highlightcomputer.com/HumanitiesCoursesOutline.pdf

The objective of Humanities Studies program is to provide formal academic study and recognition for community workers, social service workers and volunteers who are performing the humanitarian works.

Entry Requirement

No formal requirement but working in humanitarian service is needed. But those without university entrance qualifications may need to attend our basic education studies.

Course Structure

- Diploma in Humanities Studies (Dip HS) (30 Credit Points) (IQY Course 37001)
- Advanced Diploma in Humanities Studies (Adv Dip HS) (60 Credit Points) (IQY Course 47001)
- Professional Diploma in Humanities Studies (Prof Dip HS) (120 Credit Points) (IQY Course 67001) which can be convertible to St Clements University's Bachelor of Humanities Studies (BHS)
- Master of Humanities Studies (MHS) (St Clements University) (240 Credits)
- Professional Doctorate of Humanities Studies (DHS) (St Clements University) (360 Credits)

[Diploma in Humanities Studies \(Dip HS\) \(30 Credit Points\)](#)

Outcome-

On completion of this course, the candidates will be able to effectively provide humanities services needed by the community.

Course Structure

It consists of compulsory work-based unit and elective units

Compulsory

HS101- Humanitarian Work Record (15Points)

Presenting own diary of humanities work for minimum of three months or work reference

ELECTIVES

The following streams can be selected to complete Diploma in Humanities Studies

[STREAM \(1\) -PEOPLE SERVICE STREAM \(Select any one\)](#)

[CERTIFICATE IN COMMUNITY SERVICE \(MVTC205\)](#)

[\(FOODS SERVICE/HEALTH SERVICES/LIBRARY SERVICES/AGE CARE/CHILD CARE\)](#)
(15 points)

CERTIFICATE IN PUBLIC SAFETY (MVTC208) (15 points)

CERTIFICATE IN AGRICULTURE FOOD PRODUCTION (MVTC201) (15 points)

STREAM (2)-COMMUNITY CONSTRUCTION STREAM

Select any one (15 points)

PC 1-Certificate in Bricklaying & Masonry

PC 2-Certificate in Plumbing

PC 3-Certificate in Building Construction

PC 4-Certificate in Gutter Construction

PC 5-Certificate in Fitting & Machining

PC 6-Certificate in Welding

PC 7-Certificate in Engine Operation & Basic Servicing

PC 8-Certificate in Air-conditioning & Refrigeration Basic Servicing

PC 9-Certificate in Electrical Wiring

PC 10-Certificate in Electrical Machine Winding

STREAM (3)- VOLUNTARY TEACHING STREAM

ED107 Theory of Education, Educational Technology & Teaching Practice

(15 Credits)

Advanced Diploma in Humanities Studies (Dip HS) (60 Credit Points)

Outcome

On completion of this course, the candidates will be able to effectively organize and manage the humanities services needed by the community.

Course Structure

It consists of credit transfer from Diploma in Humanities Studies, compulsory work-based unit and compulsory theory studies units.

Credit Transfer

Completion of Diploma in Humanities Studies (30 Credit Points)

Compulsory Work-based Unit

HS201-Humanitarian Organizing Work Record (5 points)

Presenting own diary of organizing humanities work or work reference in additional to minimum of 3 months humanitarian work experience.

Compulsory theory studies units.

The following management units need to be studied

Mgt 101 Management (5 points)

Mgt 201 Customer Service Management (Humanitarian Customer Service) (5 points)

Mgt 203 Inventory & Budget Management (Humanitarian Service Organization Budget Control) (5 points)

Mgt 208 Safety Management in Humanitarian Works-(5 Points)

Mgt 211 Leadership in Humanitarian Works (5 Points)

Professional Diploma in Humanities Studies (Dip HS) (120 Credit Points)

Outcome

On completion of this course, the candidates will be able to effectively set up the strategic tasks and judge the nature of humanities services needed by the community.

Course Structure

It consists of credit transfer from Advanced Diploma in Humanities Studies, compulsory self study unit compulsory theory studies units and a humanities project

Credit transfer

Completion of Diploma in Humanities Studies (60 Credit Points)

Compulsory self study unit

HS301-Professional Studies of Humanities (20 Credits)

It is an open unit. The student will need to study the literatures in Human Right, Democracy. History, Political Science, Philosophy, . They can read the books, online publications , attend the public talk, take part in online discussions etc and prepare a report on what they read, believe, accept on humanitarian issues.

They can freely present their views , comments and judgement.

The assessment will not be based on same or different views between student and assessor. It will only be based on how the student can do the study, what is accepted and believed and how well the arguments can be presented.

The report needs to include references sources as well and it can be written in any language. (For Myanmar, it can be written in Myanmar or English)

Compulsory theory studies

ED431-Critical Thinking (10 Credits)

Mgt 305 Quantitative Methods for Managers (10 Credits)

Mgt 306 Human Resources Management (10 Credits)

HS302- Humanities Work Project (10 Credits)

Humanities Project is to be written

The candidate needs to investigate the needs of the community and prepare the work plan to do the humanities project work such as building a school, digging the water well, disaster relief work.

They need to answer the questions regarding

- Why this task is important for the community
- Who will get the benefit
- What kinds of tasks need to be provided
- Who will do the job
- What materials , resources will be required
- How to provide the safety
- Time plan to complete the task
- Materials requirement and budgetary issues and how to raise the funding
- How to collaborate with local and other people / organizations
- How to assess the project completion
- How to determine the effectiveness and quality of the project outcome
- What lesson that you learnt from the project and conclusion

The project report needs to answer the above questions, record of project works, data, photos and references will need to be attached.

It should be 5 to 10 pages . Without community project but presentation of intensive portfolio 57001 Professional Diploma in Humanities Studies can be issued but to proceed to Masters , such project must be submitted for qualifying.

Bachelor of Humanities Studies (BHS) (St Clements University)

(Credit Transfer)

The graduates of Professional Diploma in Humanities Studies can pay degree registration fees and present the Professional Diploma in Humanities Studies to St Clements University's academic board to issue Bachelor of Humanities Studies (BHS)

Master of Humanities Studies (MHS) (St Clements University) (240 Credits)

Professional Doctorate of Humanities Studies (DHS) (St Clements University)
(360 Credits)

The graduates of Bachelor of Humanities Studies (BHS) can continue the studies on research method and prepare a thesis to complete Master of Humanities Studies (MHS)

St Clements University will also guide the additional studies as required.

They can contribute the literatures in St Clements University's Academic Journal, present the seminars, write the dissertation, defend the dissertation to complete Professional Doctorate of Humanities Studies

Final Thesis for Master and Dissertation for Doctorate

HUM 601 Research Method

HUM 602 Thesis

HUM 601 Research Method

This course guides the student, step by step, through the research process, from problem selection through writing up results. It provides all of the basics necessary to complete a research project in any discipline.

Outline. The following aspects are reflected in this course:

What is research?

Tools of research

The problem: the heart of the research process

Review of the related literature

Planning your research design

Writing the research proposal

Qualitative research

Historical research

Descriptive research

Experimental and causal - comparative designs

Statistical techniques for analyzing quantitative data

Technical details: style, format, and organization of the research report

Masters Research Proposal

Synopsis: Research students are expected to present a written research proposal within three months after commencement. The proposal is handed in to the study leader.

Assessors of this proposal are selected by the faculty for their understanding of the field and the research involved. The purpose of a research is to set out a plan for conducting the research and writing the dissertation within the available time. It should take account of the availability and guidance of the study leader.

The starting point for a research proposal is the topic, which is the field of interest in which the research is to be carried out. In introducing the topic, the proposal should clarify the field that it falls into and the specific part of that field which the research will explore.

It should clarify why the topic is of interest and importance, and how the proposed research will contribute to the field of knowledge or profession. The proposal should clarify the research questions, ensuring that these are specific and answerable.

It is important to show how these questions relate to the topic, and how they will advance the student's contribution. The proposal should detail the research to be carried out, and clarify the research methods, the timeframe and the reasons for selecting particular methods.

Where a period of literature review or research should precede any empirical research, this should be factored in as part of the research. It is important to estimate any periods of field research and to flag their duration and cost in your research proposal.

HUM 602 Thesis

Humanities Studies Thesis for Masters and Dissertation for Doctorate

Candidates need to complete a 60000-words dissertation (in Myanmar or English) and a 3000-words executive portfolio (in English).

This program requires the candidates to complete a thesis as part of the assessment for the Master of Humanities Studies degree and a dissertation for Doctor of Humanities Studies.

Doing a thesis / dissertation means that instead of knowledge and information being presented and following a prescribed route for answering questions, candidates are thrust into an active role of managing an investigation into a topic area. This means researching and discovering things for themselves.

They will have to set their own targets and parameters, pose their own central research questions and decide on the appropriate sources of information to support the research. It therefore requires the use of the higher-level cognitive skills of analysis, synthesis and evaluation. Candidates may choose an area of particular interest to them within the scope of course title.

Doctoral dissertation

A dissertation is an individual effort and the candidate, academic tutor and the course professor will work together on constructing an approved topic (research question) and methodologies.

Humanities Dissertation Defence for doctorate

It is expected of Doctoral candidates to defend their thesis by means of a colloquium (academic discussion). The purpose of the meeting is for the candidates to convince a panel of experts in the

field of the dissertation how well they have done in the conducting of their research study and the preparation of their dissertation

Candidates need to complete all course assessments with the results of Grade B+ or above.

IQY Technical College Masters Degree Programs

Myanmar Version _____ English Version List of EE/CE/ME/RE/ICT Subjects

IQY Technical College သည် STC Technological University/ St Clements University/ IPTEM Technological University များ၏ Masters Degree များကို Engineering, Information Technology, Management, Humanities, Education လေ့လာမှုများအတွက်လည်းသင်ပါသည်။

Masters Degree in Engineering ကိုအောက်ပါအစီအစဉ်၌ခွဲထားပါသည်။

1. Master of Engineering Practice
2. Master of Engineering Science
3. Master of Engineering

Master of Engineering Practice သည်အလုပ်အတွေ့ အကြုံရှိအင်ဂျင်နီယာများအတွက်ဖြစ်သည်။

IQY Year 4 Professional Diploma/BE ပြီးသူများအတွက်ဘွဲ့ ရအင်ဂျင်နီယာလေ့ကျင့်ရေး (Year 5/6

Graduate Engineer Training) တွင်ပါဝင်သောဘာသာများကိုလည်းထဲသွင်းထားသည်။

Electrical/Civil/Mechanical /Renewable Energy သာမကအခြားလိုင်းများအတွက်လည်းသင်သည်။

Course Work 8 Subjects (Graduate Diploma in Engineering Practice) + Project (BAE709) (For Master of Engineering Practice) ပြီးရန်လိုသည်။

Self study online program ဖြစ်ပြီး Assignment/ Project /Study Report/ Analysis/ Experience Presentation/ Design Works /Job Record Presentation စသည်တို့ ကိုအဓိကထားသည်။

Master of Engineering Practice ပြီးသူတို့သည် 5 Years Experience ရှိပါက The Society of Professional Engineers (UK and International) ၏ Member (MSPE-UK & International) နှင့်

Professional Engineer (UK and International) (PEng(UK and International)) လျှောက်နိုင်သည်။

Master of Engineering Practice is for experienced engineers . It will include the following subjects of 10 credits each

- BAE 701 Engineering Fundamental
- BAE 702 Engineering Management
- BAE 703 Leadership & Human Resources Management
- BAE 704 Risk Management & Industrial Safety

- BAE 705 Engineering Competency Development
- BAE 706 Engineering Report Writing
- BAE 707 Engineering Ethics
- BAE 708 Engineering Knowledge

Completion of the above subjects will earn Graduate Diploma in Engineering Practice (80 credits at Masters level +120 Credits for Bachelors degree level total 200 credits. Completion of two or more units can earn Graduate Certificate in Engineering.

The candidate will need to do BAE 709 Engineering Design Project of 40 credits to complete Master of Engineering Practice of 240 credits.

Master of Engineering Science/Master of Engineering

သည် ကျောင်းဆင်းစ BE များ၊အလုပ်အတွေ့ အကြုံမရှိသေးသောအင်ဂျင်နီယာများ အတွက် ဖြစ်သည်။ Electrical, Civil. Mechanical အတွက် 24 Subjects အခြားလိုင်းများအတွက်သင် ရိုးပါအတိုင်းပြီးစီးက Master of Engineering Science ရမည်။ထို့ နောက် Thesis (BAE709A) ပြီးစီးက Master of Engineering ရမည်။

Self study online program ဖြစ်ပြီးပျမ်းမျှတစ်လလျှင်တစ်ဘာသာနည်းဖြင့် 20 pages လေ့လာမှု၊ အစီရင်ခံစာကိုဘာသာတိုင်းအတွက်ရေးသားတင်ပြရမည်။

လေ့လာမှုအစီရင်ခံစာတွင်အောက်ပါတို့ ပါဝင်ရမည်။

- နေ့စွဲ၊လေ့လာသောအခန်းများ၊
- အဓိကအချက်များ၊အခြေခံသဘောတရား၊ဆက်စပ်မှုများ၊ညီမျှခြင်း၊ဖော်မြူလာ၊ပုံများ၊
- လက်တွေ့ သုံးခြင်းများ၊
- Powerpoint ပုံစံတင်ပြသောအနှစ်ချုပ်မှတ်စုများ။
- ကိုယ်ပိုင်ထင်မြင်ယူဆသုံးသပ်ချက်များ။

There are 24 units in Masters Program, the candidate will need to complete one unit per month so that the whole program will be completed within 24 months. (120 credits at Masters level and 120 Credits for Bachelors degree total 240 credits) to complete Master of Engineering Science, then submit the thesis to complete Master of Engineering.

Completion of the 12 subjects will earn Graduate Diploma in Engineering Practice (60 credits at Masters level +120 Credits for Bachelors degree level total 180 credits. Completion of two or more units can earn Graduate Certificate in Engineering.

ELECTRICAL

Part 1 Course Work

Any 24 subjects can be selected .

- (1) BAE 658-Real-time Systems
- (2) BAE 665-Fabrication Engineering at the Micro and Nanoscale
- (3) BAE 655-Wireless Communications.
- (3A) BAE 671-Satellite Communications and Navigation Systems
- (4) BAE 665-Embedded Digital Signal Processing Systems
- (5)BAE 657-Advanced Electromagnetics Applications
- (6)BAE 676-Failure Analysis
- (7)BAE 673-Frequency Stability
- (8) MEE11-High Speed A-D Converters
- (9) MEE2-Advanced Electric Power Engineering
- MEE9-Handbook of Power System Engineering-.pdf (11.57MB)
- (10)MEE12-Iterative Learning Control
- (11) BAE 664-Distributed Generation in Power System
- (12) BAE 675-Nanoelectronics
- (13) MEE1-Electric Distribution Systems
- (14) BAE 674-Intelligent Systems
- (15) MEE13-Non linear control

- (16) BAE 656-Advanced Digital Signal Processing and Noise Reduction**
- (17) BAE 677-Photovoltaic Systems**
- (18) BAE 660-Control Engineering**
- (19) BAE 659-Computer-aided Control Systems**
- (20) MEE7-EMI Filter Design**
- (21) BAE 661-Design of Electrical Services for Buildings**
- (22) BAE 670-Power System Engineering**
- (23) MEE10-High Performance Control of AC Drives**
- (24) BAE 667-Industrial Control System**
- (25) MEE14-System Engineering Concepts**
- (26) MEE6-Electronics+Power Electronics+Opto Electronics+Microwave+Radar**
- (27) BAE 666-Generating Electricity in a Carbon Constrained World**
- (28) BAE 669-Power Electronics and Instrumentation Engineering**
- (29) BAE 663-Advanced Digital Electronics**
- (30) MEE8-Flexible Power Transmission**
- (31) BAE 668-Photonics**
- (32) MEE3-Electric Power Transmission System Engineering**
- (33) BAE 672-Industrial& System Engineering**
- (34) MEE5-Electro Optics**
- (35) MEE4-Electricity Power Generation**
- (36) BAE 662-Design of Rotating Electrical Machines**

Part 2 Thesis

BAE709A Master of Engineering Thesis

CIVIL

Part 1 Course Work

All 24 subjects must be completed.

- (1) BAE 654-Theory & Design of Bridges
- (2)BAE 653-Surveying
- (3) BAE 652-Structural Analysis
- (4) BAE 649-Soil & Rock Mechanic
- (5)BAE 651-Strom & Waste Water
- (6) BAE 650-Steel Design.pdf
- (7) BAE 648-Railways Bridges
- (8)BAE 646 Highway Engineering
- (9) BAE 647-Piling Engineering
- (10) BAE 645-Geotechnics
- (11) BAE 642-Design of Reinforce Concrete
- (12) BAE 644-Estimating
- (13) BAE 643-Earthquake Resistant Structure
- (14) BAE 638-Construction Drawing
- (15)BAE 641-Construction Site Planning
- (16) BAE 640-Construction Mathematics.
- (17) BAE 639-Construction Materials
- (18) BAE 634-Building Construction
- (19) BAE 637-Composite Structure of Steel & Concrete
- (20) BAE 636-Building Technology Electrical Mechanical System
- (21) BAE 635-Building Survey
- (22) BAE 633-Bridge Construction
- (23) BAE 632-Architectural Design
- (24) BAE 631-Advanced Concrete Technology

Part 2 Thesis

BAE709A Master of Engineering Thesis

MECHANICAL

Part 1 Course Work

Any 24 subjects to be completed.

- (1) BAE 694-Control Engineering
- (2) BAE 682-Assembly Automation & Product Design
- (3) BAE 688-Manufacturing & Management.
- (4) BAE 692-Metallurgy
- (5) BAE 689A-Mechanical Design
- (6) BAE 686-Electro-Mechanical Manufacturing Process
- (7) BAE 683-Material engineering
- (8) BAE 693-Piping System
- (9) BAE 689B-Mechanical Design
- (10) BAE 625- Structural Engineering Mechanics
- (11) BAE 696-Specification Development
- (12) BAE 698-Thermal Engineering
- (13) BAE 699-Rotating Machinery Vibration
- (14) BAE 678A-Machine Design
- (15) BAE 684-Computerised Engine Control
- (16) BAE 678B-Machine Design
- (17) BAE 685-Electric Vehicle Technology
- (18) BAE 695-Random Vibration
- (19) BAE 691-Mechatronics
- (20) BAE 680-Quality Control
- (21) BAE 690-Mechanical Estimating
- (22) BAE 679- Materials Science
- (23) BAE 681- Welding Engineering.
- (24) BAE 679-Composite Materials & Joining Technology
- (25) BAE 687-Lasers in Manufacturing
- (26) BAE 697-Structural Foundation Design

Part 2 Thesis

BAE709A Master of Engineering Thesis

RENEWABLE ENERGY

Part 1 Course Work

The following 10 subjects to be completed.

Each 10 credits and total 100 credits to get Graduate Diploma

(1) RE511- Sustaining Earth Energy resources

(2) RE510- Water Conservation

(3) RE509- Applied Photovoltaics

(4) RE508- Solar Hydrogen Energy System

(5) RE507- Offshore Wind Turbines Part 1

RE507- Offshore Wind Turbines Part 2

(6) RE505- Green Building Design

(7) RE504- Engineering Solution for Sustainability

(8) RE503- Energy Management in Industrial and Commercial Facilities

(9) RE502- Biomass Gasification

(10) RE 501-Control of Solar Energy System

INFORMATION TECHNOLOGY

Part 1 Course Work

The following 8 subjects to be completed

Each 10 credits, total 80 credits to complete Graduate Diploma

(1) Programming (ICT 601)

(2) E-Commerce (ICT 602)

(3) Multimedia Systems (ICT 604)

(4) Database Systems (ICT 502)

(5) Applied Computing I (ICT 505)

(6) Applied Computing (ICT 506)

(7) Software Engineering (ICT 603).zip (90.71MB)

The following two Electrical (Computer) subjects must be completed

Each 5 credits. Two combined units 10 credits

(8) BAE658 Real Time Systems + BAE 674 Intelligent Systems

BAE 658-Real-time Systems

BAE 674-Intelligent Systems

Part 2 Thesis

BAE709B Master of Applied Science (Information Technology) Thesis

ENGLISH VERSION

(1) Master of Engineering Practice (240 credits, 120 credits for BE degree)

Master of Engineering Practice is for experienced engineers . It will include the following subjects of 10 credits each

- BAE 701 Engineering Fundamental
- BAE 702 Engineering Management
- BAE 703 Leadership & Human Resources Management
- BAE 704 Risk Management & Industrial Safety
- BAE 705 Engineering Competency Development
- BAE 706 Engineering Report Writing
- BAE 707 Engineering Ethics
- BAE 708 Engineering Knowledge

Completion of the above subjects will earn Graduate Diploma in Engineering Practice (80 credits at Masters level +120 Credits for Bachelors degree level total 200 credits. Completion of two or more units can earn Graduate Certificate in Engineering.

The candidate will need to do Engineering Design Project of 40 credits to complete Master of Engineering Practice of 240 credits

(2) Master of Engineering (240 credits, 120 credits for BE degree)

Masters of Engineering program is for recent graduates who have completed their BE degrees.

It will include the following 24 subjects of 5 credits each

The students will have to write 20 pages study progress report for each of the subjects outlined below.

The report needs to include

- Date and chapters that the candidate reads (The student will need to read the book
- at least 4 days per week)

- Highlight the key concepts, key formula, key theory & practical application concepts .
- Notes of the topic that you read.
- Key diagrams, formula, problem solutions
- Powerpoint slides to express the key topics

There are 24 units in Masters Program, the candidate will need to complete one unit per month so that the whole program will be completed within 24 months. (120 credits at Masters level and 120 Credits for Bachelors degree total 240 credits) to complete Master of Engineering Science, then submit the thesis to complete Master of Engineering.

Completion of the 12 subjects will earn Graduate Diploma in Engineering Practice (60 credits at Masters level +120 Credits for Bachelors degree level total 180 credits. Completion of two or more units can earn Graduate Certificate in Engineering.

LIST OF SUBJECTS

Please see above

Diploma in Doctorate Studies (DDS)

IQY Diploma in Doctorate Studies is an academic award consisting of Research Studies and Writing Thesis Dissertation at 360 Credit points in which 240 Credit points are allocated for Masters Degree level academic qualifications and / or comparable professional experiences.

The candidates who have completed MAE 601 Research Method (30 Points) and their thesis proposal are accepted will be awarded IQY Master Diploma in Research Studies (270 Credit Points).

The candidates who have completed MAE602 Thesis (30 Points) but have not submitted it to St Clements University will be awarded IQY Diploma in Doctorate Studies (300 Credit Points)

Only St Clements University will confer the Doctoral Degree while IQY Technical College will provide the facilitation and successful candidates will be issued with BAE801 Thesis Dissertation Assessment and Defence (60 Points) when the success is notified by St Clements University. In the case of failure to meet the quality of dissertation, St Clements University's Diploma in Doctorate Studies or other relevant award can be issued and Doctorate degree award fees will not be charged.

IQY Technical College will issue Letter of Congratulation for having been successful in PhD.

Doctoral Research Studies

IQY Master Diploma in Research Studies

Dissertation for Doctorate

MAE 601 Research Method (30 Points)

MAE602 Thesis (30 Points)

[http://www.filefactory.com/file/111r1k0ftawt/n/11.Research+Thesis_\(ICT_605\).zip](http://www.filefactory.com/file/111r1k0ftawt/n/11.Research+Thesis_(ICT_605).zip)

BAE801 Thesis Dissertation Assessment and Defence (60 Points)

MAE601 Research Method

This course guides the student, step by step, through the research process, from problem selection through writing up results. It provides all of the basics necessary to complete a research project in any discipline.

Outline. The following aspects are reflected in this course:

What is research?

Tools of research

The problem: the heart of the research process

Review of the related literature

Planning your research design

Writing the research proposal

Qualitative research

Historical research

Descriptive research

Experimental and causal - comparative designs

Statistical techniques for analyzing quantitative data

Technical details: style, format, and organization of the research report

Doctoral Research Proposal

Synopsis: Research students are expected to present a written research proposal within three months after commencement. The proposal is handed in to the study leader.

Assessors of this proposal are selected by the faculty for their understanding of the field and the research involved. The purpose of a research is to set out a plan for conducting the research and writing the dissertation within the available time. It should take account of the availability and guidance of the study leader.

The starting point for a research proposal is the topic, which is the field of interest in which the research is to be carried out. In introducing the topic, the proposal should clarify the field that it falls into and the specific part that field which the research will explore.

It should clarify why the topic is of interest and importance, and how the proposed research will contribute to the field of knowledge or profession. The proposal should clarify the research questions, ensuring that these are specific and answerable.

It is important to show how these questions relate to the topic are, and how they will advance the student's contribution. The proposal should detail the research to be carried out, and clarify the research methods, the timeframe and the reasons for selecting particular methods.

Where a period of literature review or research should precede any empirical research, this should be factored in as part of the research. It is important to estimate any periods of field research and to flag their duration and cost in your research proposal.

MAE 602 Thesis

Thesis Dissertation for Doctorate

Candidates need to complete a 60000-words dissertation (in Myanmar or English) and a 3000-words executive portfolio (in English).

This program requires the candidates to complete a thesis as part of the assessment for the Doctorate

Doing a thesis / dissertation means that instead of knowledge and information being presented and following a prescribed route for answering questions, candidates are thrust into an active role of managing an investigation into a topic area. This means researching and

discovering things for themselves.

They will have to set their own targets and parameters, pose their own central research questions and decide on the appropriate sources of information to support the research. It therefore requires the use of the higher-level cognitive skills of analysis, synthesis and evaluation. Candidates may choose an area of particular interest to them within the scope of course title.

BAE801 Thesis Dissertation Assessment and Defence (60 Points)

Doctoral dissertation

A dissertation is an individual effort and the candidate, academic tutor and the course professor will work together on constructing an approved topic (research question) and methodologies.

Dissertation Defence for doctorate

It is expected of Doctoral candidates to defend their thesis by means of a colloquium (academic discussion). The purpose of the meeting is for the candidates to convince a panel of experts in the field of the dissertation how well they have done in the conducting of their research study and the preparation of their dissertation

Candidates need to complete all course assessments with the results of Grade B+ or above.

IQY-GGO Group Practical Training Advertisement

IQY Technical College နှင့် GGO Group တို့ ပူးပေါင်း၍အင်ဂျင်နီယာလက်တွေ့ လုပ်ငန်းများကို Site များတွင်လေ့ကျင့်သင်ကြားပေးမည်။

လက်တွေ့ နှင့်သက်ဆိုင်သောစာများကို IQY Technical College မှကိုယ်တိုင်တက်နှင့် Online စံနစ်ဖြင့်သင်ပေးပြီး GGO Group မှကျွမ်းကျင်သူများအင်ဂျင်နီယာများက Site များတွင်လေ့ ကျင့်သင်ကြားပေးမည်။

ကျွမ်းကျင်လုပ်သားအဆင့်-Electrical/ Civil/ Construction/ Mechanical/ Telecommunication

လက်တွေ့ များအတွက် Diploma in Engineering Trades Practice

နည်းပညာရှင်အဆင့်- Electrical/ Civil/ Construction/ Mechanical/ Telecommunication

လက်တွေ့ များအတွက် Advanced Diploma in Engineering Trades Practice

အင်ဂျင်နီယာအဆင့်- Electrical/ Civil/ Construction/ Mechanical/ Telecommunication

MASTER OF SCIENCE (RENEWABLE ENERGY) LEARNING SUPPORT WEBSITE

Part (1) Preliminary Course

ENERGY101A FOUNDATION STUDIES IN RENEWABLE ENERGY AND SUSTAINABILITY

Course Outline

In this subject you will learn about the areas of renewable energy technologies and sustainability. You will develop foundation knowledge relating to:

- Defining sustainability and renewable energy
- Non-technical issues in sustainability and renewable energy
- Energy basics efficiency and calculations
- Solar energy systems
- Wind energy systems
- Hydro energy systems
- Biomass energy systems
- Ocean energy systems
- Principles of sustainable living
- Moving to a sustainable economy.

Prescribed Texts:

Mackay, D.J.C. 2008, *Sustainable Energy without the Hot Air*, UIT, Cambridge, England

Study Guide

WEEK NO:	TOPICS AND ACTIVITIES
Orientation Week	Orientation activities Review of syllabus and assessment activities.
Week 1	<ul style="list-style-type: none"> • Introduction to the Subject. • The cause of Climate Change. • Global and Australian Figures. • Climate Change - The Impacts and the imperative for change. Reading List: <ul style="list-style-type: none"> • <i>Sustainable Energy Without the Hot air</i>, pp. 5-18 • <i>ZCA Stationary Energy Plan</i>, pp. 2-3
Week 2	<ul style="list-style-type: none"> • Energy use in Australia. • Energy conversion and efficiency. • Primary, Secondary and End Use energy. Reading List: <ul style="list-style-type: none"> • Dept. of Energy Resources and Tourism, <i>Energy in Australia 2012</i>, pp. 15-28
Week 3	<ul style="list-style-type: none"> • Coal, Oil, Gas and Nuclear Energy Systems. Reading List: <ul style="list-style-type: none"> • Course notes
Week 4	<ul style="list-style-type: none"> • Solar Energy Systems – The Solar Resource – Photovoltaics. Reading List: <ul style="list-style-type: none"> • <i>Sustainable Energy Without the Hot air</i>, pp. 38-49
Week 5	Field Trip <ul style="list-style-type: none"> • Solar Energy Systems - Solar Hot Water, Solar Air conditioning and Solar Thermal Electricity. Reading List: <ul style="list-style-type: none"> • <i>Sustainable Energy Without the Hot air</i>, pp. 38-49 • <i>ZCA Solar Thermal Power Basics and Solar Thermal Power fact sheets</i>
Week 6	<ul style="list-style-type: none"> • Wind Energy Systems – size of the resource, principles of operation, World and Australian wind energy. Reading List: <ul style="list-style-type: none"> • <i>Sustainable Energy Without the Hot air</i>, pp. 32-34, 186-189 • <i>Clean Energy Council Fact sheet on Wind Energy</i> Assessment 1 due: Individual written report - 10%
Week 7	
Week 8	<ul style="list-style-type: none"> • Hydro Energy Systems – size of the resource, principles of operation, World and Australian Hydro energy. Reading List:

WEEK NO:	TOPICS AND ACTIVITIES
	<ul style="list-style-type: none"> • <i>Sustainable Energy Without the Hot air</i>, pp. 55-56 and pp. 190-194 • <i>Clean Energy Council Fact sheet on Hydro Electricity</i> <p>Assessment 2 due: Written report on field trip - 5%</p>
Week 9	<ul style="list-style-type: none"> • Biomass • Geothermal <p>Reading List</p> <ul style="list-style-type: none"> • <i>Clean Energy Council Fact sheet on Geothermal Energy</i> • <i>Clean Energy Council Fact sheet on Bio Energy</i> • <i>Sustainable Energy Without the Hot air</i>, pp. 96-99
Week 10	<ul style="list-style-type: none"> • Ocean Energy – Wave and tidal <p>Reading List:</p> <ul style="list-style-type: none"> • <i>Sustainable Energy Without the Hot air</i>, pp. 73-75; pp. 81-87; pp. 307-321 • <i>Clean Energy Council Fact sheet on Marine Energy</i>
Week 11	<ul style="list-style-type: none"> • The imperative for Sustainability • Moving to Renewable Energy <p>Reading List:</p> <ul style="list-style-type: none"> • <i>Less is More</i>, pp. 205-235
Week 12	<ul style="list-style-type: none"> • Sustainable Building Design • Sustainable Food and Farming <p>Reading List:</p> <ul style="list-style-type: none"> • <i>Sustainable Energy Without the Hot air</i>, pp. 76-80 • www.yourhome.gov.au <i>Technical Manual</i>, pp. 69-127
Week 13	<ul style="list-style-type: none"> • Sustainable Transport • Sustainable Mining and Manufacturing <p>Reading List:</p> <ul style="list-style-type: none"> • <i>Sustainable Energy Without the Hot air</i>, pp. 29-31; 35-37; 118-139; 88-95 and 322-326 • <i>ZCA Stationary Energy Plan</i>, pp. 16-19 <p>Assessment 3 due: Collaborative written report – 30%</p> <p>Assessment 4: Presentation based on collaborative written report – 10%</p>
Week 14	Study Week
Week 15	<p>Examination Week B:</p> <p>Assessment 5: Written examination - 45%</p>

AEEGY 101A Grid Connected Photovoltaics Power System

Course

Outline

In this subject you will learn the basics about photovoltaics and grid design. You will develop knowledge and applied skills relating to:

- Solar geometry
- Solar radiation terms and measurements
- Photovoltaic cell and module characteristics
- Manufacture of photovoltaic modules
- Photovoltaic array design and characteristics
- Effects of tilt, orientation, temperature and shading
- Workplace health and safety standards, Australian and industry standards
- Inverter principles and requirements for grid-connected inverters in Australia
- Inverter and Array matching
- Wiring, Protection and Earthing
- Metering and Tariff arrangements
- Installation and Commissioning
- Maintenance.

AEEGY 102A Solar and Thermal Energy Systems

Course Outline

In this subject you will learn about solar and thermal energy systems. You will develop specialised knowledge and applied skills relating to:

- Solar energy utilisation - introduction and overview
- Heating load calculations
- Thermal environment – solar radiation, shading and energy conservation
- Solar collectors
- Collector requirements for some specific applications
- Thermal energy storage
- Solar cooling
- Mechanical Power generation
- Sizing of heating, cooling and mechanical power generation components
- Ancillary equipment
- Equipment specification and installation
- Performance analysis.

AEEGY 201A Energy Storage System

Course Outline

In this subject you will learn about energy storage systems. You will develop specialised knowledge and skills relating to:

- The need for and benefits of energy storage technologies
 - Current energy storage technologies and their application
 - Environmental impacts and benefits of energy storage systems
 - Designing an energy storage system for specific engineering applications
 - Costing and payback of energy storage systems
 - Designing and building a small scale energy storage system.
-

AEEGY202A Renewable Energy Resources Analysis

Course Outline

In this subject you will learn about renewable energy resource analysis. You will develop specialised knowledge and skills relating to:

- National and international trends in renewable energy resource analysis
- Energy history
- Australian Renewable Energy reserves
- Energy and power conversion
- Behavioural trends and misconceptions
- Power Cycles
- Oil, coal and natural gas
- Solar photovoltaics
- Solar thermal
- Wind Energy
- Hydro-power
- Bio-mass
- Geo-thermal
- Ocean energy
- Hydrogen Economy
- Limitations in existing infrastructure.

AEEGY 203A Wind Energy Conversion System

Course Outline

In this subject you will learn about wind energy conversion systems. You will develop specialised knowledge and skills relating to:

- Introduction to wind as a natural resource
- Energy, power and wind
- Wind characteristics
- Data acquisition methods
- Site characteristics
- Correlation, wind and site
- Predicting energy output
- Turbines, types and construction
- Wind Energy Conversion Systems (WECS) sizing
- Retrospective performance.

AEEGY 204 A Energy Efficiency

[Course Outline](#)

In this subject you will learn about the efficiency of energy systems. You will develop specific knowledge and skills relating to:

- Energy conversion efficiencies of conventional and renewable energy systems
- Energy auditing
- Economic and environmental benefits of energy efficiency
- Energy efficiency of various energy loads
- Cogeneration (CHP)
- Pros and cons of distributed generation in terms of energy efficiency
- Ways to improve energy efficiency at the generation point and in the distribution system
- Ways to improve energy efficiency at the load points.

Part (2) Qualified (1) Course

ENMAT 101A Engineering Materials & Processes

Course Outline

In this subject you will learn about the structure, properties and usage of a variety of materials used in engineering applications. You will develop specialised knowledge relating to:

- Material structure and properties
- Mechanical properties
- Metals - ferrous and non-ferrous
- Polymers
- Ceramics
- Composites, concrete, other
- Basic destructive testing
- Steel – FeC (Iron/Carbon), heat treatment
- Casting - perm/non-perm
- Forming - hot, cold
- Processes - PowderM, welding, Rapid Proto
- Polymer processes - IM, BM, extrus, thermoset, composites
- Joining - fasteners, weld, non-fusion
- Corrosion
- Surface treatments - plating, coatings, peening, anodising
- Non-destructive testing
- Quality assurance and control, certified testing, safety, materials safety data sheets (MSDS)
- Economic and environmental issues - production/recycling.

Study Guide

WEEK	LECTURES / EXAMINATIONS	LABORATORY	QUIZ
Orientation Week	Orientation activities Review of syllabus and assessment activities. Laboratory orientation. Academic Foundations: Note taking; study skills; introduction to conducting research.		
Week 1	Lecture (2 hrs): Readings: Ch 1: Engineering materials; Ch 2: Properties of materials.	Laboratory 1 (2 hrs): Hardness test	
Week 2	Lecture (2 hrs): Readings: Ch 3: Mechanical testing; Ch 4: The crystal structure of metals.	Laboratory 2 (2 hrs): Tensile Test	
Week 3	Lecture (2 hrs): Readings: Ch 5: Casting process; Ch 6: Mechanical deformation of metals; Ch 7: The mechanical shaping of metals.	Laboratory 3 (2 hrs): Metal Casting	10101
Week 4	Lecture (2 hrs): Readings: Ch 8: Alloys; Ch 9: Equilibrium diagrams; Ch 10: Practical microscopy	Laboratory 4 (2 hrs): Microscopy, Weld samples	10102
Week 5	Lecture (2hrs): Readings: Ch 11: Iron and steel; Ch 12: The heat-treatment of plain-carbon steels	Laboratory 5 (2 hrs): Torsion, Bending Tests	10103
Week 6	Lecture (2hrs): Readings: Ch 13: Alloy steels; Ch 14: The surface hardening of steels; Ch 15: Cast iron.	Laboratory 6 (2 hrs): Heat Treatment	
Week 7	Examination Week A: Assessment 2: Short answer test on content from weeks 1 to 5 (Ch 1 to Ch 15) 15%	Assessment 3 due: Portfolio of Laboratory Reports 1, 2, 3 & 4 - 15%	
Week 8	Lecture (2hrs): Readings: Ch 16: Copper and its alloys; Ch 17: Aluminium and its alloys; Ch 18: Other non-ferrous metals and their alloys.	Laboratory 7 (2 hrs): Polymer tensile test,	10105

WEEK	LECTURES / EXAMINATIONS	LABORATORY	QUIZ
Week 9	Lecture (2hrs): Readings: Ch 19: Plastics materials and rubbers; Ch 20: Properties of plastics.	Site Visit: e.g. Rolling Mill, Materials process/testing	
Week 10	Lecture (2hrs): Readings: Ch 21: Ceramics; Ch 22: Glasses; Ch 23: Composite materials.	Demo: Epoxy FRC, thermoforming	10106
Week 11	Lecture (2hrs): Readings: Ch 24: Fibre-reinforced composite materials; Ch 25: Methods of joining materials.	Laboratory 8 (2 hrs): Dye, Mag, Ultrasound	10104
Week 12	Lecture (2hrs): Readings: Ch 26: Causes of failure; NDT; Material Standards.	Laboratory 9 (2 hrs): Product Study	10107
Week 13	Lecture (2 hrs): Readings: Ch 27 Choice of Materials and Processes; Design. Economic, Environmental, Social Issues.	Assessment 4 due: Collaborative Report (Product Study) 15%	10108
Week 14	Study Week		
Week 15	Examination Week B: Assessment 5: Written examination: 30%	Assessment 3 due: Portfolio of Laboratory Reports 5, 6, 7, 8 & 9 - 15%

ENELE 101A Principle of Electrical Engineering

Course Outline

In this subject you will learn about basic principles of electrical engineering. You will develop a range of foundation knowledge and skills relating to:

- Notation and units
- Circuit topologies

Direct current (DC) circuit principles:

- Voltage, current, power, resistance, conductance
- Ohm's Law; Kirchhoff voltage and current laws
- Series and parallel configurations
- Linearity and Superposition
- Thévenin and Norton equivalent circuits (simple cases)
- Nodal and mesh analysis (simple cases)
- Maximum power transfer
- Capacitors
- Passive and switched resistor-capacitor (RC) circuits
- Inductors
- Passive and switched resistor-inductor (RL) circuits
- Diodes

Alternating current (AC) circuit principles:

- Amplitude, frequency and phase
- Voltage
- Current and power in resistors, inductors & capacitors
- Time domain analysis of ac circuits
- Review of complex numbers
- Phasors and phasor notation
- Complex impedance and admittance
- Thévenin and Norton equivalents (simple cases)
- AC power (real, reactive, complex)
- Root-mean-square (RMS) values
- Maximum power transfer.

Study Guide

WEEK NO:	TOPICS AND ACTIVITIES
Orientation Week	Orientation activities Review of syllabus and assessment activities.
Week 1	Introduction to DC Circuits Reading List: Chapter 1 Sections: 1.1 – 1.5 Chapter 2 Sections: 2.1 – 2.6 & 2.9 Text: Dorf, R & Svoboda, J, 2010, <i>Introduction to Electric Circuits</i> , 8 th Edn, John Wiley & Sons, Hoboken, NJ.
Week 2	Kirchhoff Voltage & Current Laws Reading List: Chapter 3 Sections: 3.1 – 3.6 & 3.10 Text: Dorf, R & Svoboda, J, 2010, <i>Introduction to Electric Circuits</i> , 8 th Edn, John Wiley & Sons, Hoboken, NJ.
Week 3	Node & Mesh Analysis Reading List: Chapter 4 Sections: 4.1 – 4.3, 4.5, 4.6, 4.8, 4.13 Text: Dorf, R & Svoboda, J, 2010, <i>Introduction to Electric Circuits</i> , 8 th Edn, John Wiley & Sons, Hoboken, NJ.
Week 4	Superposition Principle & Source Transformation Thévenin & Norton Equivalent DC Circuits Reading List: Chapter 5 Sections: 5.1 – 5.6 & 5.11 Text: Dorf, R & Svoboda, J, 2010, <i>Introduction to Electric Circuits</i> , 8 th Edn, John Wiley & Sons, Hoboken, NJ.
Week 5	Capacitors & Inductors Reading List: Chapter 7 Sections: 7.1 – 7.8 & 7.13 Text: Dorf, R & Svoboda, J, 2010, <i>Introduction to Electric Circuits</i> , 8 th Edn, John Wiley & Sons, Hoboken, NJ.
Week 6	Passive & Switched RL & RC Circuits Reading List: Chapter 8 Sections: 8.1 – 8.4, 8.6 & 8.12 Text: Dorf, R & Svoboda, J, 2010, <i>Introduction to Electric Circuits</i> , 8 th Edn, John Wiley & Sons, Hoboken, NJ.
Week 7	Examination Week A: Assessment 1: Written examination - 25%

WEEK NO:	TOPICS AND ACTIVITIES
Week 8	Diodes in DC Circuits Introduction to AC Circuits Reading List: Chapter 10 Sections: 10.1 & 10.2 Text: Dorf, R & Svoboda, J, 2010, <i>Introduction to Electric Circuits</i> , 8 th Edn, John Wiley & Sons, Hoboken, NJ.
Week 9	AC Steady-State Analysis Reading List: Chapter 10 Sections: 10.3 & 10.4 Text: Dorf, R & Svoboda, J, 2010, <i>Introduction to Electric Circuits</i> , 8 th Edn, John Wiley & Sons, Hoboken, NJ.
Week 10	Complex Numbers & Phasor Notation Reading List: Chapter 10 Sections: 10.5 – 10.6 & 10.11 Text: Dorf, R & Svoboda, J, 2010, <i>Introduction to Electric Circuits</i> , 8 th Edn, John Wiley & Sons, Hoboken, NJ.
Week 11	Impedance & Admittance Thevenin & Norton Equivalent AC Circuits Reading List: Chapter 10 Section: 10.7 & 10.10 Text: Dorf, R & Svoboda, J, 2010, <i>Introduction to Electric Circuits</i> , 8 th Edn, John Wiley & Sons, Hoboken, NJ. Assessment 2 Due: Portfolio and/or written report on practicum work and experiments (Laboratory Workbook) – 25%
Week 12	AC Power Reading List: Chapter 11 Sections: 11.1 – 11.6 Text: Dorf, R & Svoboda, J, 2010, <i>Introduction to Electric Circuits</i> , 8 th Edn, John Wiley & Sons, Hoboken, NJ.
Week 13	Power Superposition & Maximum Power Reading List: Chapter 11 Sections: 11.7 – 11.8 Text: Dorf, R & Svoboda, J, 2010, <i>Introduction to Electric Circuits</i> , 8 th Edn, John Wiley & Sons, Hoboken, NJ.
Week 14	Study Week
Week 15	Examination Week B: Assessment 3: Written examination – 50%

ENELE201A Advanced Electrical Engineering

Course Outline

In this subject you will build on basic engineering knowledge gained in previous sub and develop further knowledge and skills relating to electrical engineering:

Circuit analysis:

- DC and AC Network theorems (Kirchhoff's, Superposition)
- Resonance
- Magnetically coupled circuits

Communications and signalling processing and applications:

- Analogue and digital communications principles
- Filters
- Amplifiers and attenuators
- Communication protocols

Analogue and digital communication systems and control circuits:

- Telemetry and monitoring systems
- Control systems and applications.

ENELE202A Principle of Electrical Machines

Course Outline

In this subject you will learn basic principles of electrical machinery. You will develop specialised knowledge and skills relating to:

Transformers:

- Transformer Principles and Construction
- Efficiency
- Impedance
- Equivalent circuit
- Polarity
- Vector groups
- Parallel operations
- Special Transformers (Auto and Instrument etc)

Induction Motors:

- Principle of Induction Motor
- Construction and operation of Squirrel Cage Induction Motors (SCIM) and Wound Rotor Induction Motors (WRIM)
- Operation and characteristics
- Induction Generator
- Single Phase Induction Motor

Synchronous Machines:

- Principles of operation
- Characteristics
- Motors
- Alternators

DC Machines:

- Principles of operation
- Shunt Series Compound Machines
- Characteristics

Single Phase and Special Motors:

- Split Phase motor
- Capacitor Start/Run motor

- Shaded Pole motor
- Universal motor
- Hysteresis motor
- Stepper motors
- Brushless DC motors
- Permanent magnet motors
- Variable reluctance motors
- Stepper motors
- Brushless DC motors

Electronic Control of Motors

- DC Motors
- AC Motors.

ENELE 203A Electronics and Power Control

Course Outline

In this subject you will learn about electronics and power control. You will develop specialised knowledge and skills relating to:

Semiconductors, diodes, transistors and integrated circuits:

- Semiconductor materials and junctions
- Diode construction, operation, ratings and applications
- Transistor construction, operation, ratings and applications
- Integrated circuit construction, operation, ratings and applications especially as related to operational amplifiers

Linear regulated dc power supplies:

- Basic power supplies (ac to dc and dc to dc), circuits and applications
- Regulation requirements and applications

Switching power control circuits:

- Basic types, operation
- Critical issues, solutions and applications

Digital electronics

- Digital logic, circuits and power control applications

Power Inverters (DC to AC):

- Basic types, operation
 - Critical issues, solutions and applications.
-

ENPRA101A Engineering Practice

Course Outline

In this subject you will learn about the practices of an engineering professional within a multidisciplinary framework. You will develop basic knowledge and skills relating to electrical and other engineering specialisations, including:

Introduction to the Regulatory System:

- Electricity Act
- Electricity Regulation Australian
- Standards State Regulators
- Workplace Health and Safety
- Engineers Code of Ethics

Drawings And Specifications:

- Drawing Interpretation
- Overview of Computer Aided Design (CAD)
- Writing a Specification

Generation and Distribution:

- Generating Plant
- Transmission Grid
- Substations

Fasteners and Fastening Methods:

- Methods of securing electrical equipment to various surfaces

Wiring Systems:

- Load Calculations
- Max. Demand
- Cables and Systems
- AS3008

Control and Protection:

- Earthing
- Protection for safety
- Faults and overloads
- Protective devices and methods

Illumination:

Part (4) Final Thesis

Res 601 Research Method

MAE 602 Thesis

[http://www.filefactory.com/file/1l1r1k0ftawt/n/11.Research+Thesis_\(ICT_605\).zip](http://www.filefactory.com/file/1l1r1k0ftawt/n/11.Research+Thesis_(ICT_605).zip)

This course guides the student, step by step, through the research process, from problem selection through writing up results. It provides all of the basics necessary to complete a research project in any discipline.

Outline. The following aspects are reflected in this course:

- What is research?

- Tools of research

- The problem: the heart of the research process

- Review of the related literature

- Planning your research design

- Writing the research proposal

- Qualitative research

- Historical research

- Descriptive research

- Experimental and causal - comparative designs

- Statistical techniques for analyzing quantitative data

- Technical details: style, format, and organization of the research report

Masters Research Proposal

Synopsis: Research students are expected to present a written research proposal within three months after commencement. The proposal is handed in to the study leader. Assessors of this proposal are selected by the faculty for their understanding of the field and the research involved. The purpose of a research is to set out a plan for conducting the research and writing the dissertation within the available time. It should take account of the availability and guidance of the study leader. The starting point for a research proposal is the topic, which is the field of interest in which the research is to be carried out. In introducing the topic, the proposal should clarify the field that it falls into and the specific part of that field which the research will explore. It should clarify why the topic is of interest and importance, and how the proposed research will contribute to the field of knowledge or profession. The proposal should clarify the research questions, ensuring that these are specific and answerable. It is important to show how these questions relate to the topic, and how they will advance the student's contribution. The proposal should detail the research to be carried out, and clarify the research methods, the timeframe and the reasons for selecting particular methods. Where a period of literature review or research should precede any empirical research, this should be factored in as part of the research. It is important to estimate any periods of field research and to flag their duration and cost in your research proposal.

MAE 601 Professional Engineering Practice

MENG6003 Selective I: management subject (45 hrs) 3 credits

MENG6004 Selective II: management subject (45 hrs) 3 credits

Res 601 Research Method

MENG6005 Quantitative Methods and Statistics (45 hrs) 3 credits

MAE 602 Thesis

Engineering Project/Thesis 24 credits

Candidates need to complete a 6000-words engineering dissertation (in Myanmar or English) and a 3000-words executive portfolio (in English).

This program requires the candidates to complete a dissertation as part of the assessment for the MSc (RE) degree. Doing a thesis means that instead of knowledge and information being presented and following a prescribed route for answering questions, candidates are thrust into an active role of managing an investigation into a topic area. This means researching and discovering things for themselves. They will have to set their own targets and parameters, pose their own central research questions and decide on the appropriate sources of information to support the research. It therefore requires the use of the higher-level cognitive skills of analysis, synthesis and evaluation. Candidates may choose an area of particular interest to them within the scope of course title. A dissertation is an individual effort and the candidate, academic tutor and the course professor will work together on constructing an approved topic (research question) and methodologies.

Engineering Dissertation Defense 9 credits

It is expected of Master's candidates to defend their thesis by means of a colloquium doctum (academic discussion). The purpose of the meeting is for the candidates to convince a panel of experts in the field of the dissertation how well they have done in the conducting of their research study and the preparation of their dissertation

Program Total Credits 48 credits

Candidates need to complete all course assessments with the results of Grade B+ or above.

IQY Master Diploma in Engineering Study Program

(240 credits including 120 Credits for Professional Diploma/ BE degree/ City & Guild Level 6 Diploma)

(St Clements University -Master of Applied Engineering)

PART (A) IQY Master Diploma in Engineering Part 1- 80 credits

(St Clements University's Graduate Diploma in Applied Engineering)

(STC Technological University Graduate Diploma in Engineering)

<http://www.highlightcomputer.com/GraduateDiplomaEngineeringPractice.htm>

BAE 701 Engineering Fundamental 10 Credits

The candidates need to down load the textbooks from given link

For every topic, you need to write the short note on what you understand, formula, summary, outlines and at least 2 problems solution (Please note, each problem is solved in short form, you need to clearly reproduce them by step by step)

After having done all above tasks, BAE 701 Engineering Fundamental will be completed.

BAE 702 Engineering Management 10 Credits

See the given site

View the videos, down load the lessons, study and then do the exercises.

BAE 703 Leadership & Human Resources Management 10 Credits

See the given site

View the videos, down load the lessons, study and then do the exercises,

BAE 704 Risk Management & Industrial Safety 10 Credits

See the given site

View the videos, down load the lessons, study and then do the exercises,

BAE 705 Engineering Competency Development 10 Credits

See the given site

View the videos, down load the lessons, study and then do the exercises,

Assignment

During your study

- List the subjects that you have learnt in your study at college/ university
- List the subjects that you have achieved the good mark and explain why and how you got it
- List the subjects that you just marginally passed and explain why it happened
- List the practical tasks that you have done at college/ university
- List any reference books, tuition classes, practical books that you have read at college/ university

After Graduation

- If you are working, provide your CV that shows the detailed of your employment
- If you have not worked, list any training, engineering books , online websites, online videos etc that you study

Your future plan

- Provide an outline what you want to be, what training you will attend, what practical tasks you will do. If you have already attended the trainings and courses, provide the certificates

BAE705 will be completed when you have done the above tasks

BAE 706 Engineering Report Writing 10 Credits

Study the given report format.

You need to read one news paper article or web information or if you can , visit a practical work site and then write a report by following steps

- Title
- Brief description of topics
- Contents
- Detailed information
- Reference data, photos, tables, diagrams to be inserted
- Conclusion
- Reference list

BAE706 will be completed when you have done the above tasks

BAE 707 Engineering Ethics 10 Credits

Society of Professional Engineers-UK

<http://www.professionalengineers-uk.org/index.php/the-society/code-of-professional-conduct>

Code of Professional Conduct

All individuals registered as Professional Engineers and those aspiring to become registered Professional Engineers shall deliver services in accordance with the Society's Code of Professional Conduct and shall:

1. Competence

a) only undertake professional tasks for which they are competent and will at all times exercise all reasonable professional skill and care to prevent avoidable danger to health or safety and the creation of adverse impacts on the environment.

b) maintain and broaden their knowledge, experience and competence and encourage others to do so.

2. Integrity

a) treat all persons fairly with respect and without bias

b) avoid where possible real or perceived conflict of interest and advise affected parties should such conflicts arise.

c) observe the proper duties of confidentiality owed to appropriate parties.

d) discharge their professional duties with integrity, impartiality and objectivity and have no involvement with any form of bribery.

3. Responsibility

a) accept appropriate responsibility for work carried out under their supervision.

b) assess relevant risks and liability and, if appropriate, have in force appropriate liability insurances.

c) notify the Society within 28 days:

- if convicted of a criminal offence other than parking fines or convictions for exceeding the speed limit:
- upon becoming bankrupt or disqualified as a Company Director:
- if they are removed from the membership of another professional body as the result of a matter relating to conduct.

d) notify the Society of any significant violation of the Code of Conduct by any Professional Engineer on the register or any aspiring member seeking to gain access to the register.

4. Information

a) co-operate with the Society and provide such information as may be requested to facilitate any investigation into the conduct of any Professional Engineer on the register or any aspiring member seeking to gain access to the register.

5. Relationships

a) have due regard to their duty of care to clients and not take advantage of any client or potential client for whatever cause or reason in obtaining and carrying out instructions.

b) put all terms of engagement in writing and state the fees to be charged; whenever practicable, these should be issued to the client before a project is begun.

c) inform his/her client immediately if it appears that his/her estimate as to the total fees to be charged is likely to be or will be exceeded.

d) take care not to mislead a client as to the range of services that a quoted fee is intended to cover and the amount of future fees which may be involved.

Note in respect of relationships: Any Professional Engineer on the register or any aspiring member seeking to gain access to the register shall not:

- accept a professional assignment if he/she is aware or has reasonable cause to suspect that another member is acting for the client in respect of the same assignment, until either the first contract has been determined by the client, or the other member has consented to him acting.
- induce a client to agree to pay sums of money which are not justified by reference to the work which the member has carried out or has been instructed to carry out.
- offer or give any fee, commission, discount or other inducement (financial or otherwise) to a third party in return for the introduction of clients or particular professional assignments unless, before entering into a legally binding agreement

with that client he/she makes full disclosure to the relevant client of the nature or amount of such fee, commission, discount or inducement and the name of the person or persons to whom such fee, commission, discount or inducement was offered or given.

6. Practice

a) Ensure that in respect of any firm in which he/she is or is held out to be a sole proprietor, partner or a director or through which he/she practises or conducts business:

- the composition (list of partners or directors) is clearly stated on all appropriate documentation and that where there has been a material alteration to the composition, all clients of the firm or company are notified of the change promptly;
- the style or title does not adversely reflect upon his/her professional status as a Professional Engineer and the dignity and reputation of the engineering profession;
- the name is not misleading or liable to cause confusion with the public, nor does it imply any partnership arrangement with or endorsement of services by the Society.

b) Titles associated with the registration of Professional Engineers such as "PEng" and "PEng(UK)" and membership of the Society such as "Fellow of the Society of Professional Engineers", "Member of the Society of Professional Engineers", and all others relating to membership of the Society of Professional Engineers, and the designations FSPE, MSPE, Hon.FSPE, Hon.MSPE shall only be used or authorised to be used in connection with a partnership or company

- in the name of any partnership in which such member practises provided all the member's partners are similarly entitled to use the Title and designatory letters
- to describe the name of any company provided only that all the shareholders and/or members of such company and all the directors of such company are similarly entitled to use the Title.
- to describe the name of a firm or business which is not a partnership or company in which he/she practises provided such use of the Title does not give the impression that any other person or persons with whom such member is carrying on business or whom such member employs or with whom such member is associated in any way is entitled to use the same Relevant Title or, if the impression referred to is given, such other person or persons is or are similarly entitled to use the Title.

7. Managerial responsibility

a) In addition to the responsibilities referred to in the Rules of Professional Conduct, but subject to the following, any Professional Engineer on the register or any aspiring member seeking to gain access to the register shall be prima facie

responsible, as a matter of professional conduct, for the acts or omissions including, in particular, breach of any of the provisions of the Articles and Bye-Laws of the Society or these Rules of Professional Conduct of:

- any firm in which the member is, or holds him/herself out to be, or allows him/herself to be held out as a partner, or any firm which the member allows to use his/her name and/or style and title or designatory letters in any of its advertisements, publicity material or notepaper; and
- any company of which he/she is a director or any co-director of that company or any company which the member allows to use his/her name and/or style and title or designatory letters in any of its advertisements, publicity material or notepaper.

b) If any Professional Engineer on the register or any aspiring member seeking to gain access to the register is able to show that, without default on his/her part, he/she was not aware, and there was no reason for him to be aware at the time of any breach of these provisions by any firm or company referred to above and he/she had, prior to the breach, taken all reasonable steps to ensure that such a breach would not occur, then he/she shall not be in breach of this Rule.

8 Publicity and Advertising

a) Any Professional Engineer on the register or any aspiring member seeking to gain access to the register may publicise his/her services or permit another person to do so, but in doing so the member must have due regard to the standards set by the Advertising Standards Authority and any standards set by any other regulatory or governmental authority in relation to advertising and ensure that any publicity for which he/she is in any way responsible is neither inaccurate nor misleading.

b) In all advertising, publicity material or public statements for which any Professional Engineer on the register or any aspiring member seeking to gain access to the register is in any way responsible, he/she shall avoid all claims of superiority over, or critical comparisons of, the services provided by other engineers and shall avoid any direct comparison of fees and charges levied by other engineers.

c) Any Professional Engineer on the register or any aspiring member seeking to gain access to the register may only refer to the name of a client in any advertising, publicity material or public statement if the prior written consent of that client is first obtained.

d) Advertisements or other publicity material issued by any Professional Engineer on the register or any aspiring member seeking to gain access to the register or

by a firm in which they are held out to be a partner or director or a company through which they practise or conducts their business may state (subject to compliance with any other relevant regulations or legal requirements) either expressly or implied that they, the firm or the company (as the case may be) offers expertise or specialist advice in relation to a particular field of engineering provided only that this is the case.

ASSIGNMENT

From newspaper, journal, internet, online chatting groups, show one event that signify the breach of engineering ethics such as use of substandard materials, breach of safety law, breach of fair practice, attempt to monopolizing , use of law and authority for safeguarding own benefits or personal associates , depressing others and highlight how engineering ethics are breached.

BAE 708 Engineering Knowledge 10 Credits

See the given site

From the list of the subject, select two subjects, ask me to send the e-Book. Then you have to do the followings

The students will have to write 20 pages study report for each of the subjects outlined below.

The report needs to include

☐ Book review- Review on each chapter of the book highlighting the key concepts, key formula, key theory & practical application concepts

☐ Own idea on how to apply those concepts in real practical applications.

☐ Examples of engineering designs that use the concepts & knowledge expressed in those books (If any)

☐ Your comment on each book

BAE708 will be completed when you have done the above tasks

PART (B) IQY Master Diploma in Engineering Part 2- (40 credits)

(St Clements University's Master of Applied Engineering)

(STC Technological University Master of Engineering)

BAE709-Design Project (40 credits)

You need to do a supervised design. In this unit, Singapore Institute of Engineering Technologists can provide the supervised design which is a part of Professional Engineers (UK) Assessment. If you do not want to apply for part of Professional Engineers (UK), IQY Technical College itself will provide design supervision that you can later use it to apply for Professional Engineers (UK)

See the given links for required engineering handbooks

You can ask the teacher to send you the e-Books if you want to use it for your selected design

IQY Master Diploma in Applied Science (Information Technology)

(240 credits including 120 Credits for Professional Diploma/ BE degree/ City & Guild Level 6 Diploma)

Master of Applied Science (Information Technology)

(St Clements University)

(240 credits including 120 Credits for Professional Diploma/ BE degree/ City & Guild Level 6 Diploma)

Follow the instructions in

<http://www.highlightcomputer.com/MAppSCIT.pdf>

The candidates will need to request the e-book for study

IQY Master Diploma in Renewable Energy Engineering

Master of Applied Engineering (St Clements University)

Master of Engineering (Renewable Energy)(STC Technological University)

(240 credits including 120 Credits for Professional Diploma/ BE degree/ City & Guild Level 6 Diploma)

Follow the instructions in

<http://www.highlightcomputer.com/MScRE.pdf>

The candidates will need to request the e-book for study

ADDITIONAL COURSE

Doctoral Research Studies

IQY Master Diploma in Research Studies

http://www.highlightcomputer.com/Master_of_Engineering.pdf

Only St Clements University will confer the Doctoral Degree while IQY Technical College will provide the joint supervision.

Dissertation for Doctorate

MAE 601 Research Method

MAE602 Thesis

[http://www.filefactory.com/file/111r1k0ftawt/n/11.Research+Thesis_\(ICT_605\).zip](http://www.filefactory.com/file/111r1k0ftawt/n/11.Research+Thesis_(ICT_605).zip)

MAE601 Research Method

This course guides the student, step by step, through the research process, from problem selection through writing up results. It provides all of the basics necessary to complete a research project in any discipline.

Outline. The following aspects are reflected in this course:

What is research?

Tools of research

The problem: the heart of the research process

Review of the related literature

Planning your research design

Writing the research proposal

Qualitative research

Historical research

Descriptive research

Experimental and causal - comparative designs

Statistical techniques for analyzing quantitative data

Technical details: style, format, and organization of the research report

Doctoral Research Proposal

Synopsis: Research students are expected to present a written research proposal within three months after commencement. The proposal is handed in to the study leader.

Assessors of this proposal are selected by the faculty for their understanding of the field and the research involved. The purpose of a research is to set out a plan for conducting the research and writing the dissertation within the available time. It should take account of the availability and guidance of the study leader.

The starting point for a research proposal is the topic, which is the field of interest in which the research is to be carried out. In introducing the topic, the proposal should clarify the field that it falls into and the specific part that field which the research will explore.

It should clarify why the topic is of interest and importance, and how the proposed research

will contribute to the field of knowledge or profession. The proposal should clarify the research questions, ensuring that these are specific and answerable.

It is important to show how these questions relate to the topic are, and how they will advance the student's contribution. The proposal should detail the research to be carried out, and clarify the research methods, the timeframe and the reasons for selecting particular methods.

Where a period of literature review or research should precede any empirical research, this should be factored in as part of the research. It is important to estimate any periods of field research and to flag their duration and cost in your research proposal.

MAE 602 Thesis

Thesis Dissertation for Doctorate

Candidates need to complete a 60000-words dissertation (in Myanmar or English) and a 3000-words executive portfolio (in English).

This program requires the candidates to complete a thesis as part of the assessment for the Doctorate

Doing a thesis / dissertation means that instead of knowledge and information being presented and following a prescribed route for answering questions, candidates are thrust into an active role of managing an investigation into a topic area. This means researching and discovering things for themselves.

They will have to set their own targets and parameters, pose their own central research questions and decide on the appropriate sources of information to support the research. It therefore requires the use of the higher-level cognitive skills of analysis, synthesis and evaluation. Candidates may choose an area of particular interest to them within the scope of course title.

Doctoral dissertation

A dissertation is an individual effort and the candidate, academic tutor and the course professor will work together on constructing an approved topic (research question) and methodologies.

Dissertation Defence for doctorate

It is expected of Doctoral candidates to defend their thesis by means of a colloquium (academic discussion). The purpose of the meeting is for the candidates to convince a panel of experts in the field of the dissertation how well they have done in the conducting of their research study and the preparation of their dissertation

Candidates need to complete all course assessments with the results of Grade B+ or above.

Pre-requisites

Year 10 to 12

Year 1-Diploma in Renewable Energy Engineering

List of subjects (Total 30 credits)

RE001- Foundation Studies in Renewable Energy and Sustainability

RE002- Grid Connected Photovoltaic Power Systems

RE003- Solar and Thermal Energy Systems

RE004- Energy Storage Systems

RE005- Renewable Energy Resource Analysis

RE006- Wind Energy Conversion Systems

RE007- Energy System Efficiency

Year 2 Advanced Diploma in Electro-Mechanical Engineering (Renewable Energy Construction) (Total 60 Credits)

Semester (1)

RE008-Mathematics & Physics (I)

RE009-Mathematics & Physics (II)

RE010-Engineering Materials

RE011-Civil & Mechanical Engineering

Semester (2)

RE012-Electrical Engineering

RE013-Electrical Machines

RE014-Electronics Control

RE015-Electrical Project

Final Project

RE016-Design & Management

Year 3+4 Bachelor of Applied Engineering Technology(Renewable Energy Engineering)

(2 points / unit x 15 units = 30 points)

Year 3

RE101 Mathematics 1A (MATH1131)

RE102 Mathematics 1B (MATH1231)

RE103 Physics 1A (PHYS1121)

RE104 Physics 1B (PHYS1221)

RE105 Engineering Design (ENGG1000)

RE106 Electronics & Telecomm Engineering (1)
(ELEC1111)

RE107 Sustainable Energy (SOLA1070)

Year 4

RE201	Electronics & Telecomm Engineering (2) (ELEC1111)
RE202	Numerical Methods & Statistics (MATH2089)
RE203	Engineering Materials and Chemistry (MATS1101)
RE204	Project in PV and Solar Energy (SOLA2051)
RE205	Sustainable & Renewable. Energy. Technology (SOLA2053)
RE206	Introduction to Electronics Devices (SOLA2060)
RE207	Applied Photo Voltaics (SOLA2540)
RE208	Project Presentation

Bachelor of Engineering (Renewable Energy Engineering)
(2 points / unit x 15 units = 60 points+ Thesis)

Year 5

RE301	Low Energy Buildings and PV (SOLA3010)
RE302	PV Technology & Manufacturing (SOLA3020)
RE303	Software Engineering (COMP3111)
RE304	Analogue Electronics (ELEC2133)
RE305	Power Electronics (ELEC4614)
RE306	Electromagnetic Engineering (ELEC3115)
RE307	Circuits and Signals (ELEC2134)
RE308	Control Systems (ELEC3114)

Year 6

RE401	Fluid Mechanics (MMAN2600)
RE402	Thermodynamics (MMAN2700)
RE403	Computational Fluid Dynamics (MECH9620)
RE404	Strategic Leadership & Ethics (ELEC4122)
RE405	Grid-Connect PV System (SOLA4012)
RE406	Wind Energy Converters (SOLA5053)
RE407	Semiconductor Devices (SOLA5055)
RE408	Thesis

Total 120 Points + Thesis for award of Professional Diploma/Bachelor of Engineering (Renewable Energy Engineering)

ASSESSMENT MODE- Submission of Study Records/ Assignments/ Test in some subjects/ Project , Thesis

Diploma/ Advanced Diploma in Marine Engineering + Professional Diploma in Engineering (Marine & Mechanical) Bachelor of Engineering (Marine & Mechanical)

Objective

The course prepares students for careers in

- Marine and Offshore Engineering - the selection, deployment and commissioning of machinery, machinery systems and operational systems for merchant and naval vessels plus offshore floating and fixed vessels/structures. Building on core fundamental engineering units, this degree specialises in associated mechanical and mechanical-electrical power generation, machinery and operational systems.

Diploma/ Advanced in Marine Engineering is 30 to 60 credit points diploma. Depending on the amount of study, the graduates can achieve Diploma or Advanced Diploma in Marine Engineering

The students who completed this diploma can proceed to third year and fourth year of Professional Diploma in Mechanical Engineering and can be graduated with Professional Diploma in Marine and Mechanical Engineering OR BE(Marine & Mechanical)

Please see

<http://www.highlightcomputer.com/BEwithRE.pdf>

http://www.highlightcomputer.com/Dip_Mar_E_Course_outline.pdf

Diploma/ Advanced Diploma in Automotive Engineering

Professional Diploma in Engineering (Automotive & Mechanical) Bachelor of Engineering (Automotive & Mechanical)

Diploma/ Advanced in Automotive Engineering is 30 to 60 credit points diploma. Depending on the amount of study, the graduates can achieve Diploma or Advanced Diploma in Automotive Engineering

The students who completed this diploma can proceed to third year and fourth year of Professional Diploma in Mechanical Engineering and can be graduated with Professional Diploma in Automotive and Mechanical Engineering OR BE(Automotive& Mechanical)

Please see

<http://www.highlightcomputer.com/BEwithRE.pdf>

http://www.highlightcomputer.com/Dip_AE_Course_Outline.pdf

Professional Diploma in Engineering (Naval Architecture) Bachelor of Engineering (Naval Architecture)

Objective

The course prepares students for careers in

Naval Architecture - the shipbuilding industry, high-speed ferry industry, marine consultancy firms and in government in areas of commercial shipping, transport policy and administration and in the insurance sector.

Learning Outcomes

1. NavArch: Rationally apply comprehensive knowledge of the fundamental principles underpinning maritime engineering, with advanced knowledge of **ocean vehicle design, hydrodynamics, ship structures, and/or on-board systems and equipment** specific to the naval architecture discipline, using creativity, critical thinking and judgement.

OceanEng: Rationally apply comprehensive knowledge of the fundamental principles underpinning maritime engineering, with advanced knowledge of **the design of offshore to coastal installations, subsea platforms and additional equipment and techniques for operations in the maritime environment** specific to the ocean engineering discipline, using creativity, critical thinking and judgement.

MarOffEng: Rationally apply comprehensive knowledge of the fundamental principles underpinning maritime engineering, with advanced knowledge of **the design, procurement and installation of mechanical, electrical and thermal systems**, specific to the marine and offshore engineering discipline, using creativity, critical thinking and judgement.

2. Apply knowledge of research principles and management methods to devise, plan and execute a piece of engineering research with limited supervision.

3. Apply problem solving, design and decision-making methodologies to identify complex problems in both the maritime and wider engineering fields and to formulate innovative solutions with intellectual independence.

4. NavArch: Apply abstraction and analysis to complex problems specific to **ship design and construction industries and the wider maritime sector** whilst concurrently considering the implications of the solution in a global and sustainable context using appropriate engineering methods and tools.

OceanEng: Apply abstraction and analysis to complex problems specific to **the design and development of offshore, subsea and coastal infrastructure and operations in the wider maritime sector** whilst concurrently considering the implications of the solution in a global and sustainable context using appropriate engineering methods and tools.

MarOffEng: Apply abstraction and analysis to complex problems specific to **the maritime engineering industries** whilst concurrently considering the implications of the solution in a global and sustainable context using appropriate engineering methods and tools.

5. Demonstrate a high level of communication skills in professional practice and articulate complex knowledge, by written and oral means, to specialist and nonspecialist audiences; including clients, multi-disciplinary and multi-cultural project teams and stakeholders.
6. Demonstrate entrepreneurship and creativity, professional accountability and ethical conduct through the application of design, research and project management techniques while concurrently displaying an awareness of professional engineering practice.
7. Review personal performance, demonstrate independent initiatives and leadership as a means of managing continuing professional development, wellbeing and lifelong learning through engagement with stakeholders, colleagues and members of other professions.

Program of study

To qualify for the Professional Diploma/Bachelor of Engineering (Naval Architecture)

a student must complete 120 Credits

GENERAL STUDIES- 60 Credits

ENGR1204-Electronics (6pt)-----BAE405/408(EE)

ENGR1401 Professional Skills (2 pt)-----BAE608 (ME Yr 4)

ENGR1201 Electronics

Topic Description	<p>Electronics provides students with an understanding of basic electronics. It includes:</p> <ol style="list-style-type: none">1. Digital Electronics: digital design concepts, number systems and signed numbers, combinational logic and design, minimisation of logic expressions, hazards, sequential logic and design, finite state machines2. Analog Electronics: circuit variables and elements, simple resistive circuits, techniques of circuit analysis3. Microprocessors: introduction to microprocessors, sensors and motors, microprocessor programming4. Workshop Practice: bonding methods, soldering and flux, planning and designing electronic equipment, printed circuit boards and microelectronics
Educational Aims	<p>This topic aims</p> <ol style="list-style-type: none">1. To provide students with a thorough understanding of the principles of combinational and sequential digital logic2. To develop the fundamental theoretical and practical skills required to carry out the design and analysis of digital electronic circuits3. To introduce the elements and basic operation of a microprocessor4. To introduce the manufacture and processes of thick and thin film microelectronics, printed circuit boards, and surface mount packages, the processes, practice, and assessment of soldering, component mounting and other connection methods, and fire safety
Expected Learning Outcomes	<p>At the completion of this topic, students are expected to be able to:</p> <ol style="list-style-type: none">1. Analyse, design and construct simple digital circuits2. Analyse, design and construct simple finite state machines3. Understand and apply basic principles of electric circuit theory4. Understand and use electrical components and instruments5. Have knowledge and understanding of microprocessors, motors and sensors6. Write simple programs for a microcontroller7. Have knowledge and understanding of microelectronics, printed circuit boards and surface mount technology8. Perform and assess electronics assembly tasks, such as soldering and wiring

ENGR1401 Professional Skills

Topic Description	This topic provides an introduction to engineering with a focus on the role of the engineering team in providing a range of products and services. The initiation, planning and development of engineering projects including such subjects as feasibility studies, design and performance specifications, construction, testing and evaluation, operation and maintenance of engineering systems and the optimum use of resources. Aside from technical considerations, the topic will consider the social, economic, political, environmental and ethical issues related to engineering projects as well as the relevant communication and interpersonal skills.
Educational Aims	The aim of this topic is to introduce students to the general nature of engineering and the core professional practices associated with an engineering project. The topic is to develop an understanding of the nature of engineering a range of transferable skills and knowledge including engineering project planning, feasibility and design, oral and written communication skills, meeting procedures, and the ability to work as a group.
Expected Learning Outcomes	<p>At the completion of the topic, students are expected to be able to:</p> <ol style="list-style-type: none">1. Understand the role of engineers in society and the purposes of engineering projects2. Understand the basic processes involved in engineering planning and design3. Apply systems concepts and elementary optimisation theory to the modelling of engineering processes4. Use decision theory and basic economic analysis for the evaluation of engineering projects5. Work effectively in a group on a complex problem6. Demonstrate an ability to apply scientific and engineering methodology7. Work effectively as part of a team, in project formulation and the execution of feasibility studies8. Have taken account of environmental and social issues and the human factor in analysing and designing engineering or other complex systems9. Understand the principles of sustainable development10. Have a basic competency in the use of word processors, spreadsheets, graphics packages and project management software11. Use a style guide, write a report, present a set of logically related ideas in spoken and written form, implement appropriate meeting procedures, and prepare and deliver a seminar

ENGR1711 Engineering Design

Topic Description	Initiation, planning and development of engineering projects including such subjects as feasibility studies, design and performance specifications, creativity, decision theory, construction, testing and evaluation, operation, maintenance and sustainability of engineering systems and the optimum use of resources. Social, economic, political, international and environmental issues related to engineering projects. Drawing and documentation standards, theory and practice, including design and modelling software.
Educational Aims	This topic introduces students to the general nature of and the core professional practices associated with engineering design in the context of engineering projects, with emphasis on the social, economic, political, international and environmental issues. The topic also develops skills in drawing and documentation.
Expected Learning Outcomes	At the completion of the topic, students are expected to be able to: <ol style="list-style-type: none">1. Appreciate the role of engineers in society and the purposes of engineering projects2. Understand the basic processes involved in engineering planning and design3. Apply systems concepts and elementary optimisation theory to the modelling of engineering processes4. Use decision theory and basic economic analysis for the evaluation of engineering projects5. Identify and consider the social, economic, political, international and environmental dimensions of an engineering project6. Apply the principles of sustainable development7. Use software tools for engineering drawing, modelling and documentation

ENGR1721 Engineering Programming

Topic Description	The topic is intended as a first course in programming for students who intend to major in engineering. It aims to introduce students to the basic tools and techniques of software development and engineering packages such as Matlab. The topic will cover the following material: the structure of a program, sequence, selection, iteration, assignment and expressions, arrays, operations, input and output, and principles of design and development, testing, and maintenance.
Educational Aims	The topic aims to help develop: <ol style="list-style-type: none">1. An understanding of the nature of programming2. The ability to read, comprehend and write simple programs3. The application of appropriate development tools4. An appreciation of the process by which software systems are developed, including their specification, design, implementation, testing and maintenance
Expected Learning Outcomes	At the completion of this topic, students are expected to be able to: < <ol style="list-style-type: none">1. Demonstrate that they can comprehend basic program control constructs of sequence, selection, and iteration2. Demonstrate that they can use programming development environments and tools within a defined context3. Demonstrate that they can read pseudo-code and translate it into a readable, working program

- | | |
|--|---|
| | 4. Demonstrate that they know the basics of testing and debugging |
| | 5. Demonstrate that they can apply programming principles to solve domain-specific problems |

ENGR1722 Engineering Physics and Materials

Topic Description	<p>Engineering Materials:</p> <ol style="list-style-type: none"> 1. Atomic structure and bonding 2. Structure of metals, ceramics, polymers and composites 3. Material properties 4. Application of Materials 5. Economic, environmental, and societal Issues <p>Electromagnetism:</p> <ol style="list-style-type: none"> 1. Electric charge and electric field 2. Electric potential 3. Electric current and resistance 4. Magnetism 5. Introduction to Electromagnetic waves
Educational Aims	<p>This topic aims to provide students with:</p> <ol style="list-style-type: none"> 1. A basic understanding of the underlying science and the engineering performance of materials used in engineering applications 2. An understanding of the fundamental principles of electromagnetism
Expected Learning Outcomes	<p>At the completion of this topic, students are expected to be able to:</p> <ol style="list-style-type: none"> 1. Understand the classification, structure and application of materials 2. Evaluate the mechanical properties of materials with regards to elastic and plastic deformation 3. Understand the economic, environmental, and societal Issues related to materials use 4. Understand and communicate the basic principles of electromagnetism 5. Apply the concepts of electromagnetism for solving engineering problems

ENGR1732 Engineering Mechanics

Topic Description	<p>Statics: Force Vectors (vector operations, vector addition of forces, addition of a system of coplanar forces, Cartesian vectors, addition of Cartesian vectors, position vectors, force vector directed along a line, dot product); Force System Resultants (moment of a force, scalar and vector formulations, principle of moments, moment of a force about a specified axis, moment of a couple, simplification of a force and couple system); Equilibrium of a Rigid Body (equilibrium and free-body diagrams 2D/3D, equations of equilibrium (2D/3D), two- and three-force members); Dry Friction (theory of dry friction, equilibrium, impending motion, motion, characteristics of dry friction, problems involving dry friction).</p> <p>Particle Dynamics: Kinematics (rectilinear kinematics: continuous motion, general curvilinear motion - rectangular components, motion of a projectile); Kinetics - Force and Acceleration (Newton's 2nd Law of Motion, equation of motion for a system of particles, equation of motion - rectangular coordinates), Work and Energy (work of a force, principle of work and energy for a system of particles, power and efficiency, conservative forces and potential energy, conservation of energy); Impulse and Momentum (principle of linear impulse and momentum, conservation of linear momentum, impact).</p>
Educational Aims	<p>This topic is a fundamental topic upon which most of the later year engineering topics build. This topic aims to ensure that the students understand both basic laws as they apply to static and dynamic mechanical systems and the theory and laws applicable to fundamental electrical circuits.</p>
Expected Learning Outcomes	<p>At the completion of this topic, students are expected to be able to:</p> <ol style="list-style-type: none">1. Understand concepts of static force systems (machines and structures)2. Understand in depth the skills to analyse these force systems and the physical meaning of force and moment equilibrium3. Acquire the skill to draw free-body diagrams and apply the equations of equilibrium for 2D and 3D rigid bodies4. Understand the characteristics of dry friction and how to analyse problems involving dry friction5. Understand the dynamic properties of particles and rigid bodies6. Write the relevant equations of motion associated with Force, Torque and Acceleration, Work and Energy, Impulse and Momentum7. Solve engineering problems dealing with the static and dynamical motion of particles subject to forces and accelerations

MATH1121 Mathematics 1A

Topic Description	<p>This topic together with MATH1122 Mathematics 1B is designed for students who have studied SACE Stage 2 Mathematics and who wish to proceed to a degree in any discipline which requires higher level mathematics. It is the standard prerequisite for all higher level topics in mathematics that require knowledge of first year mathematics.</p> <p>The material covered includes: functions, limits and continuity, differential calculus, computation of derivatives, the chain rule, Intermediate Value and Mean Value Theorems. Applications to graphing, rates of change, maxima and minima. Complex numbers, Euler's formula, complex exponential. Three-dimensional analytic geometry, matrices, systems of linear equations, vectors, equations of lines and planes.</p>
Educational Aims	<p>This topic introduces the basic concepts and techniques of differential calculus, complex numbers, linear algebra, systems of equations and matrices and provides the foundation for all areas requiring first year university mathematics. Intensive hands-on approach in the workshops aims to provide the students the essential skills in mathematical manipulations within the context of the course. The topic aims to develop a modelling and problem solving approach to mathematics and its applications through an appropriate combination of the underlying concepts and the facility of mathematical software.</p>
Expected Learning Outcomes	<p>At the completion of the topic, students are expected to be able to:</p> <ol style="list-style-type: none">1. Understand the key concepts which underlie single-variable differential calculus and linear algebra2. Be familiar with the basic facilities available in Maple mathematical software3. Use problem solving, critical and reasoning abilities

MATH1122 Mathematics 1B

Topic Description	<p>This topic is a continuation of material of MATH1121 Mathematics 1A and together with MATH1121 Mathematics 1A is intended to provide access to all higher level mathematics topics which require knowledge of standard first year mathematics. The emphasis is on a modelling approach to mathematics and its applications within a coherent framework.</p> <p>The material covered includes elementary transcendental functions. Integral calculus, fundamental theorem of the calculus, standard techniques of integration including substitution, parts, partial fractions, application to motion, arclength, area, volumes and solids of revolution, Taylor polynomials, series, power series, introduction to elementary differential equations, simple harmonic motion. Systems of linear equations, Gaussian elimination, matrix algebra and determinants.</p>
Educational Aims	<p>This topic is a continuation of the material of MATH1121 Mathematics 1A. This topic develops the properties of elementary transcendental functions and introduces key ideas and applications of integral calculus, matrix algebra and linear algebra.</p>
Expected Learning Outcomes	<p>At the completion of this topic, students are expected to be able to:</p> <ol style="list-style-type: none">1. Have a knowledge of the basic properties of the elementary transcendental functions2. Understand and apply the key ideas and methods of integral calculus3. Understand and analyse the relation between differential and integral calculus

	<ol style="list-style-type: none"> 4. Understand and apply key ideas from linear and matrix algebra to the solution of systems of linear equations 5. Develop further skills in the use of computational technology 6. Have enhanced problem solving, critical and reasoning abilities 7. Appreciate the historical context underlying the development of modern mathematical principles and ideas 8. Have an informed appreciation of the wide applicability of integral calculus and matrix algebra in other areas of Science and Engineering
--	--

ENGR2703 Mechanical Practice Certificate

Topic Description	The topic covers exposure and practice in common mechanical and materials techniques including occupational health and safety, heat treatment, gas metal arc welding, manual metal arc welding, fabrication techniques, gas tungsten arc welding, machining techniques, marking off and hand tools.
Educational Aims	To give students an understanding of, practice in and an understanding of the safety requirements of common mechanical engineering techniques.
Expected Learning Outcomes	At the completion of this topic, students are expected to be able to have received training on OH&S and practical skills essential to being a mechanical engineer, specifically heat treatment, gas metal arc welding, manual metal arc welding, fabrication techniques, gas tungsten arc welding, machining techniques, marking off and hand tools.

ENGR2711 Engineering Mathematics

Assumed Knowledge	An understanding of fundamental concepts of calculus and linear algebra.
Topic Description	First order ODE (Existence and uniqueness, separable, exact equations), linear ODE (Existence and Uniqueness, constant coefficient homogenous, variable coefficient homogenous, constant coefficient nonhomogeneous), boundary value problems. Vectors and the geometry of Space, dot and cross product, equations of lines and planes; Vector Functions, derivatives and integrals of vector functions, velocity and acceleration in space; Partial Derivatives, tangent planes and approximation, chain rule, directional derivatives, maximum and minimum values. Double and Triple Integrals. Vector Fields, Line integrals. Curl and Divergence, Stokes' Theorem. The Divergence Theorem.
Educational Aims	This topic equips the students with the skills needed to solve mathematical problems with several variables, linear systems, and differential equations. These provide the mathematical pre-requisites that the student needs for the second and higher year Engineering topics. The focus is on the application of the mathematical ideas to Engineering problems.
Expected Learning Outcomes	<p>At the completion of the topic, students are expected to be able to:</p> <ol style="list-style-type: none"> 1. Understand and be able to apply Multivariate Calculus to Engineering problems 2. Understand and be able to apply Differential Equations to Engineering problems

ENGR2722 Analysis of Engineering Systems

Topic Description	Review of linear systems, vector spaces, orthogonality, eigenvalues and eigenvectors, linear transformations. Continuous and discrete time signals, unit impulse and unit step signals, impulse response, step response, linear time invariant (LTI) systems, convolution, correlation, system transfer function, frequency response, Fourier transform, DFT (Discrete Fourier Transform), Periodic signals, Fourier series, Nyquist frequency, sampling theorem, aliasing, Laplace transform, bilinear transfer functions, magnitude and phase responses, Bode plots.
Educational Aims	This topic is an introduction to the concepts and theories of linear algebra and signal analysis and their application to engineering systems.
Expected Learning Outcomes	At the completion of this topic, students are expected to be able to: <ol style="list-style-type: none">1. Understand Linear Algebra and Signal Analysis from a Mathematical perspective2. Be able to apply Linear Algebra and Signal Analysis to Engineering problems

ENGR2741 Mechanics and Structures

Topic Description	Principles of Statics (Review); Centre of Gravity, Centroid and Moment of Inertia; Distributed Forces; Stress and Strain; Mechanical Properties of Materials: Ductile/Brittle Materials, Hooke's Law, Poisson's Ratio; Axial load; Torsion; Bending: Shear Force and Bending Moment Diagrams; Stress Concentrations; Transverse Shear; Combined Loadings; Transformation of Stress and Strain: Mohr's Circle; Design of Beams and Shafts.
Educational Aims	This topic gives students an understanding of the basic statics concepts associated with engineering mechanics and structures.
Expected Learning Outcomes	At the completion of this topic, students are expected to be able to: <ol style="list-style-type: none">1. Develop and employ principles of Statics in solving problems2. Learn how to determine centroids and moment of inertias and how to find resultant of distributed loadings3. Understand concepts of stress, strain and mechanical properties of materials4. Analyse axial, torsional, bending, transverse stresses and their combinations in structures and machine components5. Calculate in-plane stresses and strains, their orientations and transformations through Mohr's circle, and calculate principal stresses and strains6. Develop methods for designing beams to resist both bending and shear loads; prismatic and fully stressed beam designs

ENGR2751 Fluid Mechanics

Topic Description	Fluid Mechanics: Fluid properties; Hydrostatics; One dimensional flow of incompressible fluids; Continuity, momentum and energy equations; Laminar and turbulent flows in pipes and ducts; free surface and channel flows; hydraulic jump; weir and waterfall; Dimensional analysis; Flow measurements and fluid machinery.
Educational Aims	This topic aims to ensure that the students understand the following: <ol style="list-style-type: none">1. Modelling the flows of fluids2. Measurements of the flows of fluids3. Heat transferred to and from a fluid
Expected Learning	At the completion of this topic, students are expected to be able to:

Outcomes	<ol style="list-style-type: none"> 1. Understand the basic properties of gases and liquids 2. Write the relevant equations of motion for fluids in pipes and channels 3. Solve simple flow problems 4. Understand how flow measurements are made in practice 5. Understand the flows in pumps and turbines
-----------------	---

ENGR2771 Dynamics

Topic Description	<ol style="list-style-type: none"> 1. Particle dynamics: Curvilinear motion, Force and acceleration, Work and Energy, Impulse and Momentum 2. Rigid body dynamics: Planar Kinematics, Force, Torque and Acceleration, Work and Energy, Linear and Angular Impulse and Momentum 3. Vibrations
Educational Aims	This topic aims to ensure that the students understand Kinematics and Kinetics as applied to particles and rigid bodies; and vibration.
Expected Learning Outcomes	<p>At the completion of this topic, students are expected to be able to:</p> <ol style="list-style-type: none"> 1. Understand the dynamic properties of particles and rigid bodies 2. Write the relevant equations of motion associated with Force, Torque and Acceleration, Work and Energy, Impulse and Momentum 3. Understand the creation and effects of vibration

ENGR2776 Hydrostatics

Topic Description	Geometry of surface vessels; Tabular methods of integration; Mass addition, removal and transfer; Elementary principle of transverse intact stability; Heeling moments and angles, and free surface effects; Inclining experiment; Elementary principles of trim; The Intact Stability Booklet; partially-afloat condition; Damage stability.
Educational Aims	<p>This topic aims to ensure that the students understand the following:</p> <ol style="list-style-type: none"> 1. Fundamentals of hydrostatics and concepts of statical stability, and trim of intact and damaged vessels 2. Introduction to the practical implications and applications of hydrostatic concepts 3. Generation of all relevant stability criteria data required for both design development and operational purposes 4. Introduction and development of a working knowledge of stability regulations
Expected Learning Outcomes	<p>At the completion of the topic, students are expected to be able to:</p> <ol style="list-style-type: none"> 1. Calculate hydrostatic data for any floating structure and predict the influence of geometric parameters on a vessel's stability characteristics 2. Interpret a vessel's response to any loading condition from lever and moment curves 3. Calculate and assess a vessel's damage stability response 4. Undertake an inclining experiment according to industry best practice

ENGR3781 Elements of Shipboard Safety (ESS) Certificate

Topic Description	Course content: <ol style="list-style-type: none">1. Elements of fire prevention on board the vessel2. Theory of combustion and methods of extinguishing fire3. Practical training in the use of portable fire fighting appliances4. Practical training in launching, boarding and survival in an inflatable life raft, including man overboard procedures5. Elements of accident prevention as they apply to the shipboard work place, particularly as they apply to falls, working in close proximity to machinery and moving objects, confined spaces, personal protective equipment and hygiene
Educational Aims	To ensure that students understand basic safety requirements when on board a vessel.
Expected Learning Outcomes	Understand the elements of fire prevention on board the vessel, including the theory of combustion and methods of extinguishing fire. Practical training in the use of portable fire fighting appliances. Practical training in launching, boarding and survival in an inflatable life raft, including man overboard procedures. Elements of accident prevention.

PHYS2712 Thermodynamics and Energy Systems

Topic Description	<ol style="list-style-type: none">1. Concepts and Definitions of Thermodynamics2. Energy and the First Law of Thermodynamics3. Properties of Substances4. Ideal and Real Gases5. Control Volume Analysis Using Energy6. The Second Law of Thermodynamics7. Entropy and Entropy Balance for Closed Systems and Control Volumes; Cycle Processes8. Thermodynamic Equilibrium9. Phase Diagrams10. Vapour Power Systems11. Gas Power Systems12. Refrigeration and Heat Pump Systems
Educational Aims	In this topic students will learn the fundamentals of Thermodynamics. The students will learn how to apply the concepts to solve experimental problems. Students will learn how to apply the fundamental principles of thermodynamics to predict the behaviour of energy systems and properly design required energy systems.
Expected Learning Outcomes	At the completion of this topic, students are expected to be able to: <ol style="list-style-type: none">1. Demonstrate the understanding of the concepts of Thermodynamics and to apply them to experiments2. Understand how solids, liquids and gases behave under different temperature and pressure conditions

	<ol style="list-style-type: none"> 3. Apply thermodynamic concepts to energy systems 4. Analyse thermodynamic cycles such as power and refrigeration cycles 5. Apply the concepts of Thermodynamics to laboratory experiments
--	--

ENGR2766 Ship Design and Construction

Topic Description	<p>DESIGN: Vessel Types. Design Process & Constraints. Design Analyses & Techniques. Hull Form. Introduction to Propulsor Options. Introduction to Prime Mover Options. Introduction to Structural Systems. Primary Deck Machinery and Installation Considerations. Terminologies and Definitions.</p> <p>CONSTRUCTION: Environmental Framework: Commercial, industrial, legal and regulatory aspects of the ship production industry. Assembly Methodologies: Historical, current and alternative methods adopted in the construction of steel and aluminium vessels. Modular and parallel production methods. Composite Vessel Production: Materials and construction methods for composite vessels and components. Dimensional Control: Referencing moulded dimensions. Symbolologies of structural and working drawings. Construction, Launching and Repair Facilities: Shipyard facilities, arrangement and strategic equipment, launching and docking methods. Fabrication Technologies: Cutting, welding and forming technologies. Production and Quality Management: Introduction to the requirement and tools available for production co-ordination and quality assurance.</p>
Educational Aims	<ol style="list-style-type: none"> 1. To provide an introduction to issues influencing a vessel's design 2. To introduce certain fundamental aspects of the rational and engineering approach to marine design 3. Establish an understanding of the considerations essential in the determination of hull characteristics, general arrangement and requisite systems 4. To provide the student with an understanding of the overall philosophy and techniques involved in the manufacture of ships and the context in which the processes are carried out 5. To provide practical experience with commercial surface modelling software and illustrate the scope of Computer Aided Design And Manufacture
Expected Learning Outcomes	<p>At the completion of the topic, students are expected to be able to:</p> <ol style="list-style-type: none"> 1. Demonstrate a basic knowledge of regulatory, practical and economic constraints on design and production of an ocean vehicle 2. Develop a concept design based on an appraisal of operational requirements via a clearly structured and rational process 3. Identify issues regarding the methodology and efficiency of production for any particular vessel and recognise the concepts of ship production system design and main hardware elements of shipyards 4. Effectively combine the use of conventional design tools with naval architecture design software to produce a limited set of design drawings and models in accordance with industry standards and codes of practice

ENGR2768 Offshore Engineering

Topic Description	<p>Marine Sciences - a) Meteorology: regional weather systems and seasonal variations. Global pressure, air mass movement and circulation patterns. Prediction of local weather. Storms and tropical cyclones. b) Physical Oceanography: ocean structure, physical and chemical properties. Global ocean circulations, tides, waves, winds and currents. Marine resources - mineral, biological and energy. c) Marine Geology: geomorphology of the ocean floors, margins and shelves. Sedimentation and origins of hydrocarbons and minerals in the oceans. Formation and classification of coastal regions</p> <p>Ocean Renewable Energy - Renewable energy systems - wave power, wind power, thermal power and tidal power.</p> <p>Marine Transportation - Environmental forces and voyage planning. Introduction to work vessels and offshore structures. Structures - loading, stability and ballast control. Load-out and sea-transport of modules. Loads during transit and sea-fastening design. Operational codes and practices.</p> <p>Construction and Installation - Installation of fixed, floating and subsea structures. Lifting operations and mooring systems. Diving and ROV operations. Maintenance and repair of offshore installations. Removal and salvage of offshore production facilities. Risk assessment and management on offshore operations and on structures.</p>
Educational Aims	<p>The aim of this unit is to provide students with general skills and knowledge on the range of engineering operational activities in the offshore sector. The scope of the unit encompasses the essential theories of marine science and basic knowledge to plan and manage marine operations, including offshore installation, inspection and maintenance.</p>
Expected Learning Outcomes	<p>At the completion of this topic, students are expected to be able to:</p> <ol style="list-style-type: none">1. Demonstrate a fundamental knowledge of marine geology, physical oceanography and marine meteorology and its applications to a range of offshore technical problems2. Describe the equipment, technology and methods that are fundamental to common offshore engineering activities3. Apply scientific knowledge to solve a range of engineering problems4. Understand the differences between designing and building offshore structures from terrestrial structures

Master of Engineering (St Clements University) together with Professional Diploma in Engineering

This program is designed as Practical Engineers and Technicians who are working in Industries without BE/BTech Qualifications but possesses the experience and need the formal qualification papers.

On completion of this program, the graduates will receive the followings

- Professional Diploma in Engineering (IQY Technical College)
- Master Diploma in Engineering (IQY Technical College)
- Bachelor of Engineering (STC Technological University)
- Master of Engineering (St Clements University)

Entry Requirements

- Any Diploma/ Degree other than BE/BTech/AGTI

Study Stage 1

Teaching plan for Advanced Diploma/ Professional Diploma in Engineering . The detailed contents can be flexibility negotiated between the candidate and supervisor that the candidate is allowed to choose the most relevant contents for their work.

The subjects can be chosen from the following link

<http://www.iqytechnicalcollege.com/offeredcourses.htm>

On completion of Stage 1, Professional Diploma in Engineering (IQY Technical College) and Bachelor of Engineering (STC Technological University) will be issued.

Specific Discipline-

Based on the subjects that you chose, the appropriate discipline will be written on your testamur which will be sent electronically and you need to download/ print in colour and laminate it.

The list of graduates will also be expressed on our IQY website

Study Stage 2 Part A

IQY Master Diploma in Engineering

(240 credits including Bachelor Degree 120 credits)

(St Clements University -Master of Applied Engineering)

(STC Technological University-Master of Engineering)

Study Program

PART (A) IQY Master Diploma in Engineering Part 1-

(St Clements University's Graduate Diploma in Applied Engineering)

(STC Technological University Graduate Diploma in Engineering) (80 credits at 10 credits/ unit)

Download from given link

BAE 701 Engineering Fundamental

Download from given link

The candidates need to download the following textbooks

Electrical

Download from given link

Then study **Section 4-Electrical Engineering (PDF File Page 885)**

For every topic, you need to write the short note on what you understand, formula, summary, outlines and at least 2 problems solution (Please note, each problem is solved in short form, you need to clearly reproduce them by step by step)

Mechanical

Then study **Section 3-Mechanical Engineering (PDF File Page 307)**

For every topic, you need to write the short note on what you understand, formula, summary, outlines and at least 2 problems solution (Please note, each problem is solved in short form, you need to clearly reproduce them by step by step)

Civil

Download from given link

Section 1-Civil Engineering (PDF File Page 7)

Section 6- Water & Waste Water Engineering (PDF File Page 1041)

Section 7-Environmental Engineering (PDF File Page 1078)

For every topic, you need to write the short note on what you understand, formula, summary, outlines and at least 2 problems solution (Please note, each problem is solved in short form, you need to clearly reproduce them by step by step)

Telecommunication

Myanmar Text Books

DTE301M Part A-Network Management-Telecom Circuit Analysis

Download from given link

DTE301M Part B-Network Management-Telecommunication Network Analysis-LC Calculation

Download from given link

DTE303M Part A-Telecom Engg-Line Communication Theory Part 1

Download from given link

DTE303M Part B-Telecom Engg-Line Communication Theory Part 2

Download from given link

DTE306-Wireless Communication

Download from given link

For every topic, you need to write the short note on what you understand, formula, summary, outlines and at least 2 problems solution (Please note, each problem is solved in short form, you need to clearly reproduce them by step by step)

After having done all above tasks, BAE 701 Engineering Fundamental will be completed.

Renewable Energy Engineering

BAE701 and BAE708 can be concurrently completed , the list of units that you need to study will be advised. You need to study at least one unit for BAE701 and at least one unit for BAE708

Reference links

Download from given link

BAE701

For every topic, you need to write the short note on what you understand, formula, summary, outlines and at least 2 problems solution (Please note, each problem is solved in short form, you need to clearly reproduce them by step by step)

After having done all above tasks, BAE 701 Engineering Fundamental will be completed.

BAE708

From the list of the subject, select two subjects, ask me to send the e-Book. Then you have to do the followings

The students will have to write 20 pages study report for each of the subjects outlined below. The report needs to include

- ☐ Book review- Review on each chapter of the book highlighting the key concepts, key formula, key theory & practical application concepts

- ☐ Own idea on how to apply those concepts in real practical applications.

- ☐ Examples of engineering designs that use the concepts & knowledge expressed in those books (If any)

- ☐ Your comment on each book

ICT Engineering

BAE701 and BAE708 can be concurrently completed , the list of units that you need to study will be advised. You need to study at least one unit for BAE701 and at least one unit for BAE708

Reference links

Download from given link

View the videos, download the lessons, study and then do the exercises in

[Exercises Download Link](#)

Download from given link

BAE 703 Leadership & Human Resources Management

See the site

Download from given link

View the videos, download the lessons, study and then do the exercises in

[Exercises Download Link](#)

Study Guide

Download from given link

Download from given link

BAE 704 Risk Management & Industrial Safety

Download from given link

View the videos, download the lessons, study and then write an essay

“How I will assess the risks in my workplace” You can write 3 to 5 pages.

BAE 705 Engineering Competency Development

Download from given link

View the videos, download the lessons, study

Assignment

During your study

- List the subjects that you have learnt in your study at college/ university
- List the subjects that you have achieved the good mark and explain why and how you got it
- List the subjects that you just marginally passed and explain why it happened
- List the practical tasks that you have done at college/ university
- List any reference books, tuition classes, practical books that you have read at college/ university

After Graduation

- If you are working, provide your CV that shows the detailed of your employment
- If you have not worked, list any training, engineering books, online websites, online videos etc that you study

Your future plan

- Provide an outline what you want to be, what training you will attend, what practical tasks you will do. If you have already attended the trainings and courses, provide the certificates

BAE705 will be completed when you have done the above tasks

BAE 706 Engineering Report Writing

Study Download from given link

You need to read one news paper article or web information or if you can, visit a practical work site and then write a report by following steps

- Title
- Brief description of topics

- Contents
- Detailed information

BAE706 will be completed when you have done the above tasks

BAE 707 Engineering Ethics

Society of Professional Engineers-UK

<http://www.professionalengineers-uk.org/index.php/the-society/code-of-professional-conduct>

Code of Professional Conduct

All individuals registered as Professional Engineers and those aspiring to become registered Professional Engineers shall deliver services in accordance with the Society's Code of Professional Conduct and shall:

1. Competence

- only undertake professional tasks for which they are competent and will at all times exercise all reasonable professional skill and care to prevent avoidable danger to health or safety and the creation of adverse impacts on the environment.
- maintain and broaden their knowledge, experience and competence and encourage others to do so.

2. Integrity

- treat all persons fairly with respect and without bias
- avoid where possible real or perceived conflict of interest and advise affected parties should such conflicts arise.
- observe the proper duties of confidentiality owed to appropriate parties.
- discharge their professional duties with integrity, impartiality and objectivity and have no involvement with any form of bribery.

3. Responsibility

a) accept appropriate responsibility for work carried out under their supervision.

b) assess relevant risks and liability and, if appropriate, have in force appropriate liability insurances.

c) notify the Society within 28 days:

- if convicted of a criminal offence other than parking fines or convictions for exceeding the speed limit:
- upon becoming bankrupt or disqualified as a Company Director:
- if they are removed from the membership of another professional body as the result of a matter relating to conduct.

d) notify the Society of any significant violation of the Code of Conduct by any Professional Engineer on the register or any aspiring member seeking to gain access to the register.

4. Information

a) co-operate with the Society and provide such information as may be requested to facilitate any investigation into the conduct of any Professional Engineer on the register or any aspiring member seeking to gain access to the register.

5. Relationships

a) have due regard to their duty of care to clients and not take advantage of any client or potential client for whatever cause or reason in obtaining and carrying out instructions.

b) put all terms of engagement in writing and state the fees to be charged; whenever practicable, these should be issued to the client before a project is begun.

c) inform his/her client immediately if it appears that his/her estimate as to the total fees to be charged is likely to be or will be exceeded.

d) take care not to mislead a client as to the range of services that a quoted fee is intended to cover and the amount of future fees which may be involved.

Note in respect of relationships: Any Professional Engineer on the register or any aspiring member seeking to gain access to the register shall not:

- accept a professional assignment if he/she is aware or has reasonable cause to suspect that another member is acting for the client in respect of the same assignment, until either the first contract has been determined by the client, or the other member has consented to him acting.
- induce a client to agree to pay sums of money which are not justified by reference to the work which the member has carried out or has been instructed to carry out.
- offer or give any fee, commission, discount or other inducement (financial or otherwise) to a third party in return for the introduction of clients or particular professional assignments unless, before entering into a legally binding agreement

with that client he/she makes full disclosure to the relevant client of the nature or amount of such fee, commission, discount or inducement and the name of the person or persons to whom such fee, commission, discount or inducement was offered or given.

6. Practice

a) Ensure that in respect of any firm in which he/she is or is held out to be a sole proprietor, partner or a director or through which he/she practises or conducts business:

- the composition (list of partners or directors) is clearly stated on all appropriate documentation and that where there has been a material alteration to the composition, all clients of the firm or company are notified of the change promptly;
- the style or title does not adversely reflect upon his/her professional status as a Professional Engineer and the dignity and reputation of the engineering profession;
- the name is not misleading or liable to cause confusion with the public, nor does it imply any partnership arrangement with or endorsement of services by the Society.

b) Titles associated with the registration of Professional Engineers such as "PEng" and "PEng(UK)" and membership of the Society such as "Fellow of the Society of Professional Engineers", "Member of the Society of Professional Engineers", and all others relating to membership of the Society of Professional Engineers, and the designations FSPE, MSPE, Hon.FSPE, Hon.MSPE shall only be used or authorised to be used in connection with a partnership or company

- in the name of any partnership in which such member practises provided all the member's partners are similarly entitled to use the Title and designatory letters
- to describe the name of any company provided only that all the shareholders and/or members of such company and all the directors of such company are similarly entitled to use the Title.
- to describe the name of a firm or business which is not a partnership or company in which he/she practises provided such use of the Title does not give the impression that any other person or persons with whom such member is carrying on business or whom such member employs or with whom such member is associated in any way is entitled to use the same Relevant Title or, if the impression referred to is given, such other person or persons is or are similarly entitled to use the Title.

7. Managerial responsibility

a) In addition to the responsibilities referred to in the Rules of Professional Conduct, but subject to the following, any Professional Engineer on the register or any aspiring member seeking to gain access to the register shall be prima facie responsible, as a matter of professional conduct, for the acts or omissions including, in particular, breach of any of the provisions of the Articles and Bye-Laws of the Society or these Rules of Professional Conduct of:

- any firm in which the member is, or holds him/herself out to be, or allows him/herself to be held out as a partner, or any firm which the member allows to use his/her name and/or style and title or designatory letters in any of its advertisements, publicity material or notepaper; and
- any company of which he/she is a director or any co-director of that company or any company which the member allows to use his/her name and/or style and title or designatory letters in any of its advertisements, publicity material or notepaper.

b) If any Professional Engineer on the register or any aspiring member seeking to gain access to the register is able to show that, without default on his/her part, he/she was not aware, and there was no reason for him to be aware at the time of any breach of these provisions by any firm or company referred to above and he/she had, prior to the breach, taken all reasonable steps to ensure that such a breach would not occur, then he/she shall not be in breach of this Rule.

8 Publicity and Advertising

a) Any Professional Engineer on the register or any aspiring member seeking to gain access to the register may publicise his/her services or permit another person to do so, but in doing so the member must have due regard to the standards set by the Advertising Standards Authority and any standards set by any other regulatory or governmental authority in relation to advertising and ensure that any publicity for which he/she is in any way responsible is neither inaccurate nor misleading.

b) In all advertising, publicity material or public statements for which any Professional Engineer on the register or any aspiring member seeking to gain access to the register is in any way responsible, he/she shall avoid all claims of superiority over, or critical comparisons of, the services provided by other engineers and shall avoid any direct comparison of fees and charges levied by other engineers.

c) Any Professional Engineer on the register or any aspiring member seeking to gain access to the register may only refer to the name of a client in any advertising, publicity material or public statement if the prior written consent of that client is first obtained.

d) Advertisements or other publicity material issued by any Professional Engineer on the register or any aspiring member seeking to gain access to the register or by a firm in which they are held out to be a partner or director or a company through which they practise or conducts their business may state (subject to compliance with any other relevant regulations or legal requirements) either expressly or implied that they, the firm or the company (as the case may be) offers expertise or specialist advice in relation to a particular field of engineering provided only that this is the case.

ASSIGNMENT

From newspaper, journal, internet, online chatting groups, show one event that signify the breach of engineering ethics such as use of substandard materials, breach of safety law, breach of fair practice, attempt to monopolizing , use of law and authority for safeguarding own benefits or personal associates , depressing others and highlight how engineering ethics are breached.

From the list of the subject, select two subjects, ask me to send the e-Book. Then you have to do the followings

The students will have to write 20 pages study report for each of the subjects outlined below.

The report needs to include

☐ Book review- Review on each chapter of the book highlighting the key concepts, key formula, key theory & practical application concepts

☐ Own idea on how to apply those concepts in real practical applications.

☐ Examples of engineering designs that use the concepts & knowledge expressed in those books (If any)

☐ Your comment on each book

Study Stage 2 Part B

PART (B) IQY Master Diploma in Engineering Part 2-

(St Clements University's Master of Applied Engineering)

(STC Technological University Master of Engineering

BAE709 Design Project (40 Credits)

You need to do a supervised design. In this unit, Singapore Institute of Engineering Technologists can provide the supervised design which is a part of Professional Engineers (UK) Assessment. If you do not want to apply for part of Professional Engineers (UK), IQY Technical College itself will provide design supervision that you can later use it to apply for Professional Engineers (UK)

Alternate Routes for 'Mature Candidates become FSIET & MSPE, PEng(UK)

■ By Design (6-hours open-book Exam)

- [Exam Fee per Design Paper per sitting : S\$160]
- The following main disciplines will be available:
 - Civil Engineering Design
 - Electrical Engineering Design
 - Mechanical Engineering Design
 - Chemical Engineering Design
 - Industrial Engineering Design

■ By Individual Project (3 – 6 months)

- . On a chosen topic to be approved by Joint ICES-SIET Membership Committee.
- . Length : About 10,000 words.
- . To be supervised by Supervisor approved by Joint ICES-SIET Membership Committee.
- . **Project Supervision Fee** : S\$500 (5 x 2 hours = 10 hours of face-to-face counselling).
- . **Project Assessment Fee** : S\$200

The followings are required engineering handbooks

Doctoral Research Studies

IQY Master Diploma in Research Studies

Download from given link

Only St Clements University will confer the Doctoral Degree while IQY Technical College will provide the joint supervision.

Dissertation for Doctorate

MAE 601 Research Method

MAE602 Thesis

[http://www.filefactory.com/file/111r1k0ftawt/n/11.Research+Thesis_\(ICT_605\).zip](http://www.filefactory.com/file/111r1k0ftawt/n/11.Research+Thesis_(ICT_605).zip)

MAE601 Research Method

This course guides the student, step by step, through the research process, from problem selection through writing up results. It provides all of the basics necessary to complete a research project in any discipline.

Outline. The following aspects are reflected in this course:

What is research?

Tools of research

The problem: the heart of the research process

Review of the related literature

Planning your research design

Writing the research proposal

Qualitative research

Historical research

Descriptive research

Experimental and causal - comparative designs

Statistical techniques for analyzing quantitative data

Technical details: style, format, and organization of the research report

Doctoral Research Proposal

Synopsis: Research students are expected to present a written research proposal within three months after commencement. The proposal is handed in to the study leader.

Assessors of this proposal are selected by the faculty for their understanding of the field and the research involved. The purpose of a research is to set out a plan for conducting the research and writing the dissertation within the available time. It should take account of the availability and guidance of the study leader.

The starting point for a research proposal is the topic, which is the field of interest in which the research is to be carried out. In introducing the topic, the proposal should clarify the field that it falls into and the specific part that field which the research will explore.

It should clarify why the topic is of interest and importance, and how the proposed research will contribute to the field of knowledge or profession. The proposal should clarify the research questions, ensuring that these are specific and answerable.

It is important to show how these questions relate to the topic are, and how they will advance the student's contribution. The proposal should detail the research to be carried out, and clarify the research methods, the timeframe and the reasons for selecting particular methods.

Where a period of literature review or research should precede any empirical research, this should be factored in as part of the research. It is important to estimate any periods of field research and to flag their duration and cost in your research proposal.

MAE 602 Thesis

Thesis Dissertation for Doctorate

Candidates need to complete a 60000-words dissertation (in Myanmar or English) and a 3000-words executive portfolio (in English).

This program requires the candidates to complete a thesis as part of the assessment for the Doctorate

Doing a thesis / dissertation means that instead of knowledge and information being presented and following a prescribed route for answering questions, candidates are thrust into an active role of managing an investigation into a topic area. This means researching and discovering things for themselves.

They will have to set their own targets and parameters, pose their own central research questions and decide on the appropriate sources of information to support the research. It therefore requires the use of the higher-level cognitive skills of analysis, synthesis and evaluation. Candidates may choose an area of particular interest to them within the scope of course title.

Doctoral dissertation

A dissertation is an individual effort and the candidate, academic tutor and the course professor will work together on constructing an approved topic (research question) and methodologies.

Dissertation Defence for doctorate

It is expected of Doctoral candidates to defend their thesis by means of a colloquium (academic discussion). The purpose of the meeting is for the candidates to convince a panel of experts in the field of the dissertation how well they have done in the conducting of their research study and the preparation of their dissertation

Candidates need to complete all course assessments with the results of Grade B+ or above.

IQY TECHNICAL COLLEGE

STC TECHNOLOGICAL UNIVERSITY

ST CLEMENTS UNIVERSITY MYANMAR COLLEGE

IPEM TECHNOLOGICAL UNIVERSITY

MASTERS DEGREE LEARNING SUPPORT

There are two types of Masters Programs in Engineering

1. [Master of Engineering Practice](#)
2. [Master of Engineering](#)

(1) Master of Engineering Practice (240 credits, 120 credits for BE degree)

Master of Engineering Practice is for experienced engineers . It will include the following subjects of 10 credits each

- BAE 701 Engineering Fundamental
- BAE 702 Engineering Management
- BAE 703 Leadership & Human Resources Management
- BAE 704 Risk Management & Industrial Safety
- BAE 705 Engineering Competency Development
- BAE 706 Engineering Report Writing
- BAE 707 Engineering Ethics
- BAE 708 Engineering Knowledge

Completion of the above subjects will earn Graduate Diploma in Engineering Practice (80 credits at Masters level +120 Credits for Bachelors degree level total 200 credits. Completion of two or more units can earn Graduate Certificate in Engineering.

The candidate will need to do Engineering Design Project of 40 credits to complete Master of Engineering Practice of 240 credits

The followings are study instruction

Form 15

IQY Master Diploma

BAE701 to 708, you will complete the Graduate Diploma

Then submit the design project to complete the Masters

From the above links, textbooks can be downloaded. Choose Civil Engineering

[Form 45 St Clements University Master of Engineering for Non standard Entry Study Support](#)

The following link shows the example of the tasks that you need to do

[Form 46 Master Diploma Civil Worked Example](#)

The following link contains the Masters Course References.

[Form 18](#)

Master Diploma resources

(1) Master of Engineering (Professional Engineering)

(240 credits, 120 credits for BE degree)

Masters of Engineering (Professional Engineering) program is for recent graduates who have completed their BE degrees.

It will include the following 24 subjects of 5 credits each

The students will have to write 20 pages study progress report for each of the subjects outlined below.

The report needs to include

- Date and chapters that the candidate reads (The student will need to read the book
- at least 4 days per week)

- Highlight the key concepts, key formula, key theory & practical application concepts .
- Notes of the topic that you read.
- Key diagrams, formula, problem solutions
- Power point slides to express the key topics

There are 24 units in Masters of Engineering (Professional Engineering) Program, the candidate will need to complete one unit per month so that the whole program will be completed within 24 months. (120 credits at Masters level and 120 Credits for Bachelors degree total 240 credits).

As Master of Professional Engineering is delivered entirely in English and very intensive program, to encourage the students to earn the Graduate Diploma and Masters degree, the following arrangements are also made.

Graduate Diploma in Engineering (140 credits)

Completion of the compulsory 4 subjects will earn Graduate Diploma in Engineering (20 credits at Masters level +120 Credits for Bachelors degree level total 140 credits. Completion of two or more units can earn Graduate Certificate in Engineering.

Master of Engineering Science

Completion of the compulsory 6 subjects will earn Master of Engineering Science (30 credits at Masters level +120 Credits for Bachelors degree level total 150 credits.

Master of Engineering

Completion of the compulsory 6 subjects PLUS project (30 credits) will earn Master of Engineering (60 credits at Masters level +120 Credits for Bachelors degree level total 180 credits.

Master of Engineering from SCPU School of Engineering registered in Switzerland

Please note that the candidates who want to get the Master of Engineering from SCPU School of Engineering registered in Switzerland must complete

Masters of Engineering (Professional Engineering) by either studying the lectures of entire English medium of language instruction or self study in provided textbooks written in English which they need to do self study and submit the study report.

Electrical Compulsory Subjects

- BAE 655-Wireless Communications
- BAE656 Advanced Digital Signal Processing
- BAE 670-Power System Engineering
- BAE 661-Design of Electrical Services for Buildings
- BAE 677-Photovoltaic Systems
- BAE 660-Control Engineering

The above subjects will be provide with English and Myanmar Instructions and guidance. The candidates can choose the other subjects from the available subjects but they are entire English medium of instruction or self study in provided textbooks written in English which they need to do self study and submit the study report.

Instead of doing the project, the following options are also open for the students.

Option (1) Self study or two more subjects

The students can select choose two more subjects from the available subjects in same discipline or other discipline , follow the entire English medium of instruction or self study in provided textbooks written in English which they need to do self study and submit the study report.

Option (2) Complete any two of the following subjects by submitting the assignments

- BAE 702 Engineering Management
- BAE 703 Leadership & Human Resources Management
- BAE 704 Risk Management & Industrial Safety
- BAE 707 Engineering Ethics

Civil Compulsory Subjects

BAE 631-Advanced Concrete Technology

BAE 634-Building Construction

BAE 636-Building Technology Electrical Mechanical System (BAE661-Design of Electrical Services for Buildings)

BAE 650-Steel Design

BAE 635-Building Survey

BAE 644-Estimating

The above subjects will be provide with English and Myanmar Instructions and guidance. The candidates can choose the other subjects from the available subjects but they are entire English medium of instruction or self study in provided textbooks written in English which they need to do self study and submit the study report.

Instead of doing the project, the students can select choose two more subjects from the available subjects in same discipline or other discipline , follow the entire English medium of instruction or self study in provided textbooks written in English which they need to do self study and submit the study report.

Mechanical Compulsory Subjects

BAE 678A/B-Machine Design

BAE 689A/B-Mechanical Design

BAE 698-Thermal Engineering

BAE 694-Control Engineering

BAE 699-Rotating Machinery Vibration

BAE 690-Mechanical Estimating

The above subjects will be provide with English and Myanmar Instructions and guidance. The candidates can choose the other subjects from the available subjects but they are entire English medium of instruction or self study in provided textbooks written in English which they need to do self study and submit the study report.

Instead of doing the project, the students can select choose two more subjects from the available subjects in same discipline or other discipline , follow the entire English medium of instruction or self study in provided textbooks written in English which they need to do self study and submit the study report.

Professional report/ Project/ Presentation/ Practical based design project

Master of Information Technology

This degree is designed for the experienced professionals who wish to develop their skills and knowledge as Information Technology professionals.

Graduate Diploma in Information Technology

Compulsory Modules

ICT 501 Programming in Visual C++ PLUS ICT 507 Visual Computing

ICT 502 Database Systems

ICT 503 Business System Development

ICT 504 Business Data Communications

ICT 505 Applied Computing I

ICT 506 Applied Computing II PLUS ICT 508 Object-Oriented Analysis & Design

Master of Science (Information Technology)

Electives

ICT 601 Programming in Java

ICT 602 E-Commerce

ICT 603 Software Engineering

ICT 604 Multimedia Systems

ICT 605 IT Management **Project/Thesis**

A written report between 10,000 – 12,000 words that covers both theory & practical knowledges of the above units.

To qualify for a MSc.IT degree, a student must take and pass 10 modules from the above list of modules, 6 modules are compulsory and the rest are electives.

Additionally, the student must undertake and pass a research-based or work-related project.

Master of Information Technology

This degree is designed for the experienced professionals who wish to develop their skills and knowledge as Information Technology professionals.

Graduate Diploma in Information Technology

Compulsory Modules

ICT 501 Programming in Visual C++ PLUS ICT 507 Visual Computing

ICT 502 Database Systems

ICT 503 Business System Development

ICT 504 Business Data Communications

ICT 505 Applied Computing I

ICT 506 Applied Computing II PLUS ICT 508 Object-Oriented Analysis & Design

Master of Science (Information Technology)

Electives

ICT 601 Programming in Java

ICT 602 E-Commerce

ICT 603 Software Engineering

ICT 604 Multimedia Systems

ICT 605 IT Management **Project/Thesis**

A written report between 10,000 – 12,000 words that covers both theory & practical knowledges of the above units.

To qualify for a MSc.IT degree, a student must take and pass 10 modules from the above list of modules, 6 modules are compulsory and the rest are electives.

Additionally, the student must undertake and pass a research-based or work-related project.

Master of Management

This program has been developed to fulfill the needs for those who are seeking a degree at the master's level and whom wish to specialize in a particular field of endeavor not usually available as a study option.

The main scope of this program is to emphasize the usual administrative aspects of management at the appropriate master's degree level. The Master of Management is today a professional degree and one of the most popular degree programs in the managerial or administrative fields of endeavor.

Our program has been designed to focus on major study areas of management and administration. The core courses forming the basis of the degree program equips the student with the usual fundamental aspects of management and administration applicable to the master's degree level.

The Graduate Diploma course section is common to all the majors and students must continue a masters study after completion of Graduate Diploma.

Graduate Diploma in Management (8 units)

Mgt 501 Organizational Change Management

Mgt 502 Strategic Plans Development & Implementation

Mgt 503 Leadership in Organization

Mgt 504 Innovation & Continuous Improvement

Mgt 505 Risk Management

Mgt 506 Knowledge & Information Management

Mgt 507 Human Resources Management & Strategic Planning

Graduate Diploma in Architectural Engineering Course Work

To complete the Graduate Diploma in Engineering, the students will have to complete 12 units with each 8 credit points totalling 96 credit points.

By adding Masters thesis of 24 credit points, they will complete 120 credit points . Total credit points for Masters degree is (Bachelor degree 120 credit points+ Graduate Diploma+ Masters degree 120 credit points Total 240 Credit points).

Graduate Diploma is pre-requisite for Masters degree.

Follow the instruction for Professional Diploma in Civil Engineering

www.highlightcomputer.com/profdipcivilengg.htm

Then complete the architecture units

<http://www.highlightcomputer.com/turesources.htm#i>

Also refer the followings which are not included in the above link.

- Professional Diploma in Civil and Architectural Engineering will be awarded , if 4 Architecture units are completed. 80 points at 20 points each
- Professional Diploma in Civil Engineering and Professional Diploma in Architectural I Engineering will be awarded if 6 Architecture units are completed. (120 points at 20 points each)
- If 8 Architecture Units are completed , Graduate Diploma in Architectural Engineering will be awarded (160 points at 20 points each)
- If 12 Architecture Units are completed , Master Diploma in Architectural Engineering will be awarded (ME-Architecture award by STC Technological University) (240 points)

Year 4 BE (Architectural Engineering)

AchE401 Architecture Theory

AchE402 Architectural Design

AchE403 Building Construction

AchE404 Building Services

AchE405 Construction Materials

AchE406 Sustainable Building Design

AchE407 Architectural Drafting

AchE408 Construction Quantity Surveying

Year 5 BE/ME(Year) (Architectural Engineering)

AchE501 Architectural Management

AchE502 Interior Design

AchE503 Green Building Design

AchE504 Construction Contract

AchE505 Solar Architecture & Smart House Design

AchE506 Architecture Commercial Design

AchE507 Urban Design

AE508 Landscape Design

Year 6 BE/ME (Year 2) (Architectural Engineering)

AchE601 Architectural Design & Ethics

AchE602 Building Survey & Reporting

AchE603 Building Control Systems

AchE604 Sustainable Architecture

AchE605 Details Design

AchE606 Outdoor Structure Design

Course Work Plan

The students will have to write 20 pages study report for each of the subjects outlined below.

The report needs to include

- Book review- Review on each chapter of the book highlighting the key concepts, key formula, key theory & practical application concepts
- Own idea on how to apply those concepts in real practical applications.
- Examples of engineering designs that use the concepts & knowledge expressed in those books (If any)
- Your comment on each book

BAE 655-Wireless Communications

BAE 656-Advanced Digital Signal Processing

BAE 657-Advanced Electromagnetics

BAE 658-Real-time Systems

BAE 659-Computer-aided Control Systems

BAE 660-Control Engineering

BAE 661-Design of Electrical Services for Buildings

BAE 662-Design of Rotating Electrical Machines

BAE 663-Digital Electronics

BAE 664-Distributed Generation in Power System

BAE 665-Embedded Digital Signal Processing Systems

BAE 666- Low Emission Electricity Generation

BAE 667-Industrial Control System

BAE 668-Photonics

BAE 669-Power Electronics and Instrumentation Engineering

BAE 670-Power System Engineering

BAE 671-Satellite Communications and Navigation Systems

BAE 672-Industrial & System Engineering

BAE 673-Frequency Stability

BAE 674-Intelligent Systems

BAE 675-Nanoelectronics

BAE 676-Failure Analysis

BAE 677-Photovoltaics System

Graduate Diploma in Chemical Engineering Course Work

Professional Diploma (BE)/ Master Diploma (ME) in Chemical Engineering /Metallurgy/Petroleum

Follow the instruction for Professional Diploma in Chemical Engineering

<http://www.highlightcomputer.com/profdipchemengg.htm>

Then do specialized additional studies in Metallurgy/ Explosion Protection/ Petroleum

Based on the units selection and amount of studies, the following qualifications can be issued

Professional Diploma/ Master Diploma in Metallurgical Engineering and Petroleum Engineering

- Professional Diploma in Chemical and Metallurgical Engineering will be awarded , if 4 Metallurgy units are completed. 80 points at 20 points each
- Professional Diploma in Chemical Engineering and Professional Diploma in Metallurgical Engineering will be awarded if 6 Metallurgy units are completed. (120 points at 20 points each)
- If 8 Metallurgy Units are completed , Graduate Diploma in Metallurgical Engineering will be awarded (160 points at 20 points each)
- If 12 Metallurgy Units are completed , Master Diploma in Metallurgical Engineering will be awarded (ME-Metallurgical award by STC Technological University) (240 points)
- Professional Diploma in Chemical and Petroleum Engineering will be awarded , if 4 Petroleum units are completed. (80 points at 20 points each)
- Professional Diploma in Chemical Engineering and Professional Diploma in Petroleum Engineering will be awarded if 6 Petroleum units are completed. (120 points at 20 points each)
- If 8 Petroleum Units are completed , Graduate Diploma in Petroleum Engineering will be awarded (160 points at 20 points each)
- If 12 Petroleum Units are completed , Master Diploma in Metallurgical Engineering will be awarded (ME-Petroleum award by STC Technological University) (240 points at 20 points each)

Graduate Diploma & Master Diploma in Chemical Engineering

- Graduate Diploma in Chemical Engineering will be awarded if the following additional units are completed
 1. PE 41014+42014+Natural Gas Processing-PE 51024Natural Gas Engineering
 2. PE 21002+22002-Drilling Fluids

3. Met507 Explosive Engineering

From <http://www.highlightcomputer.com/profdiphazardous.htm>

4. BAE 637E Hazardous Chemical Management
5. BAE 638E Environmental Engineering in Hazardous Areas
6. BAE 636 E Hazardous Area Inspection
7. BAE 634 Explosion Protection
8. BAE 633E Hazardous Area Safety Audits (160 points at 20 points each)

Then complete Chemical Engineering Thesis to complete Master Diploma in Chemical Engineering (ME-Chemical)

Course Work Plan

The students will have to write 20 pages study report for each of the subjects outlined below.

The report needs to include

- Book review- Review on each chapter of the book highlighting the key concepts, key formula, key theory & practical application concepts
- Own idea on how to apply those concepts in real practical applications.
- Examples of engineering designs that use the concepts & knowledge expressed in those books (If any)
- Your comment on each book

Master Diploma in Education/ Master of Education

IQY Technical College/ St Clements University/

STC Technological University

www.highlightcomputer.com/medcourse.htm

Course Overview

This program is designed to develop and support the careers of teachers who are teaching professionals, educational administrators, researchers and policymakers.

The students can choose to complete your course with units of study that suit your interests from our field offerings which are engineering education and school and vocational education.

Graduate Attributes

Demonstrate expert, specialised and technical knowledge in broad educational areas of pedagogy, assessment and curriculum designed to address the needs of diverse learners across a range of educational contexts related to engineering education or school and vocational education.

Demonstrate an advanced understanding of theory and practice in specialised disciplines within the field of education in national and/or international contexts in engineering education or school and vocational education.

Analyse critically, reflect on and synthesise information to solve complex problems in the educational field

Conduct independent research and inquiry, involving theoretical conceptualisation, innovative ideas and personal initiative in engineering education or school and vocational education

Demonstrate professional leadership through interpreting and communicating pedagogical knowledge and professional skills to specialist and non-specialist audiences in engineering education or school and vocational education.

Admission requirement

Admission to candidature for the Master of Education requires:

- a Bachelor of Education , or Bachelor degree and working as teacher or equivalent qualification or the completion of postgraduate studies, or professional experience .

Course Structure

The course consists of 240 credit points in which 120 credit points is given for Bachelors degree

Stream 1- Engineering Education

ED431 Student Learning and Teaching Approaches(15 cp)

ED432 Course Design and Assessment(15 cp)

ED433 Scholarly Teaching and Learning Project(15 cp)

ED434 Reflective Academic Practice(15 cp)

ED436 Management for Education(15 cp)

ED413 Engineering Education Part 3 (15 cp)

ED404 Educational Research(15 cp)

ED435 Governance of University (15 cp)

Total	120 cp
Bachelors degree	120 cp
TOTAL	240 cp

Stream 2-School and Vocational Education

ED431 Student Learning and Teaching Approaches(15 cp)

[ED432](#) Course Design and Assessment(15 cp)

[ED433](#) Scholarly Teaching and Learning Project(15 cp)

[ED434](#) Reflective Academic Practice(15 cp)

ED436 Management for Education (15 cp)

ED404 Educational Research(15 cp)

Any Two Electives

ED304 Maths Teaching (15 cp)

ED305 Science Teaching (15 cp)

ED306 Technology Teaching(15 cp)

ED308 Computer Supported Learning Distance Education (15 cp)

Total	120 cp
Bachelors degree	120 cp
TOTAL	240 cp

Professional Certificate in Medical Data System (Course Number-4889008)

Objective- To effectively manage data system in medical records

Pre-requisite- MBBS/ BDS/ B Pharm

Contents ICT409 Hospital Data System

- Hospital Data System (Reader)
- Database Management System for Hospital (Reader)

Videos

- Hospital Database Analysis Design
- Hospital Management System Data Entry
- Hospital website and appointment system
- Hospital Management System Doctor Log in
- Hospital Management System with PHP
- Hospital Management System in PHP

Part 1 - Practical Application Tutorials- Hospital Data System

Award- Professional Certificate in Medical Data System

An introduction about hospital Database

SQL [39 exercises with solution]

[An editor is available at the bottom of the page to write and execute the scripts.]

Sample Database: hospital

1. Write a query in SQL to find all the information of the nurses who are yet to be registered.

- 2.** Write a query in SQL to find the name of the nurse who are the head of their department.
- 3.** Write a query in SQL to obtain the name of the physicians who are the head of each department.
- 4.** Write a query in SQL to count the number of patients who taken appointment with at least one physician
- 5.** Write a query in SQL to find the floor and block where the room number 212 belongs to
- 6.** Write a query in SQL to count the number available rooms
- 7.** Write a query in SQL to count the number of unavailable rooms.
- 8.** Write a query in SQL to obtain the name of the physician and the departments they are affiliated with
- 9.** Write a query in SQL to obtain the name of the physicians who are trained for a special treatement
- 10.** Write a query in SQL to obtain the name of the physicians with department who are yet to be affiliated
- 11.** Write a query in SQL to obtain the name of the physicians who are not a specialized physician
- 12.** Write a query in SQL to obtain the name of the patients with their physicians by whom they got their preliminary treatement
- 13.** Write a query in SQL to find the name of the patients and the number of physicians they have taken appointment
- 14.** Write a query in SQL to count number of unique patients who got an appointment for examination room C
- 15.** Write a query in SQL to find the name of the patients and the number of the room where they have to go for their treatment
- 16.** Write a query in SQL to find the name of the nurses and the room scheduled, where they will assist the physicians.

- 17.** Write a query in SQL to find the name of the patients who taken the appointment on the 25th of April at 10 am, and also display their physician, assisting nurses and room no.
- 18.** Write a query in SQL to find the name of patients and their physicians who does not require any assistance of a nurse
- 19.** Write a query in SQL to find the name of the patients, their treating physicians and medication.
- 20.** Write a query in SQL to find the name of the patients who taken an advanced appointment, and also display their physicians and medication
- 21.** Write a query in SQL to find the name and medication for those patients who did not take any appointment
- 22.** Write a query in SQL to count the number of available rooms in each block
- 23.** Write a query in SQL to count the number of available rooms in each floor
- 24.** Write a query in SQL to count the number of available rooms for each block in each floor.
- 25.** Write a query in SQL to count the number of unavailable rooms for each block in each floor.
- 28.** Write a query in SQL to obtain the name of the patients, their block, floor, and room number where they are admitted.
- 29.** Write a query in SQL to obtain the nurses and the block where they are booked for attending the patients on call.
- 30.** Write a query in SQL to make a report which will show -
- a) name of the patient,
 - b) name of the physician who is treating him or her,
 - c) name of the nurse who is attending him or her,
 - d) which treatment is going on to the patient,
 - e) the date of release,
 - f) in which room the patient has admitted and which floor and block the room belongs to respectively.

- 31.** Write a SQL query to obtain the names of all the physicians performed a medical procedure but they are not certified to perform
- 32.** Write a query in SQL to obtain the names of all the physicians, their procedure, date when the procedure was carried out and name of the patient on which procedure have been carried out but those physicians are not certified for that procedure.
- 33.** Write a query in SQL to obtain the name and position of all physicians who completed a medical procedure with certification after the date of expiration of their certificate
- 34.** Write a query in SQL to obtain the name of all those physicians who completed a medical procedure with certification after the date of expiration of their certificate, their position, procedure they have done, date of procedure, name of the patient on which the procedure had been applied and the date when the certification expired
- 35.** Write a query in SQL to obtain the names of all the nurses who have ever been on call for room 122.
- 36.** Write a query in SQL to Obtain the names of all patients who has been prescribed some medication by his/her physician who has carried out primary care and the name of that physician
- 37.** Write a query in SQL to obtain the names of all patients who has been undergone a procedure costing more than \$5,000 and the name of that physician who has carried out primary care
- 38.** Write a query in SQL to Obtain the names of all patients who had at least two appointment where the nurse who prepped the appointment was a registered nurse and the physician who has carried out primary care
- 39.** Write a query in SQL to Obtain the names of all patients whose primary care is taken by a physician who is not the head of any department and name of that physician along with their primary care physician

MASTER OF SCIENCE (RENEWABLE ENERGY COURSE OUTLINE)

Part (1) Preliminary Course

RE001- Foundation Studies in Renewable Energy and Sustainability
RE002- Grid Connected Photovoltaic Power Systems
RE003- Solar and Thermal Energy Systems
RE004- Energy Storage Systems
RE005- Renewable Energy Resource Analysis
RE006- Wind Energy Conversion Systems
RE007- Energy System Efficiency

Part (2) Qualified (1) Course

Semester (1)

RE008-Mathematics & Physics (I)
RE009-Mathematics & Physics (II)
RE010-Engineering Materials
RE011-Civil & Mechanical Engineering

Semester (2)

RE012-Electrical Engineering
RE013-Electrical Machines
RE014-Electronics Control
RE015-Electrical Project
RE016-Design & Management

Part (3) Qualified (2) Course

RE 501-Control of Solar Energy System
RE502- Biomass Gasification
RE503- Energy Management in Industrial and Commercial Facilities
RE504- Engineering Solution for Sustainability
RE505- Green Building Design
RE506- Low Emission Power Generation Technologies
RE507- Offshore Wind Turbines
RE508- Solar Hydrogen Energy System
RE509- Applied Photovoltaics
RE510- Water Conservation
RE511- Sustaining Earth Energy resource

A written report between 10,000 – 12,000 words that covers both theory & practical knowledge of the above units.

Part (4) Final Thesis

Res 601 Research Method
MAE 602 Thesis

This course guides the student, step by step, through the research process, from problem selection through writing up results. It provides all of the basics necessary to complete a research project in any discipline.

Outline. The following aspects are reflected in this course:

What is research?

Tools of research

The problem: the heart of the research process

Review of the related literature

Planning your research design

Writing the research proposal

Qualitative research

Historical research

Descriptive research

Experimental and causal - comparative designs

Statistical techniques for analyzing quantitative data

Technical details: style, format, and organization of the research report

Masters Research Proposal

Synopsis: Research students are expected to present a written research proposal within three months after commencement. The proposal is handed in to the study leader.

Assessors of this proposal are selected by the faculty for their understanding of the field and the research involved. The purpose of a research is to set out a plan for conducting the research and writing the dissertation within the available time. It should take account of the availability and guidance of the study leader.

The starting point for a research proposal is the topic, which is the field of interest in which the research is to be carried out. In introducing the topic, the proposal should clarify the field that it falls into and the specific part that field which the research will explore. It should clarify why the topic is of interest and importance, and how the proposed research will contribute to the field of knowledge or profession. The proposal should clarify the research questions, ensuring that these are specific and answerable.

It is important to show how these questions relate to the topic are, and how they will advance the student's contribution. The proposal should detail the research to

be carried out, and clarify the research methods, the timeframe and the reasons for selecting particular methods. Where a period of literature review or research should precede any empirical research, this should be factored in as part of the research. It is important to estimate any periods of field research and to flag their duration and cost in your research proposal.

Res 601 Research Method

MENG6005 Quantitative Methods and Statistics (45 hrs) 3 credits

MAE 602 Thesis

Engineering Project/Thesis 24 credits

Candidates need to complete a 60000-words engineering dissertation (in Myanmar or English) and a 3000-words executive portfolio (in English).

This program requires the candidates to complete a dissertation as part of the assessment for the MSc (RE) degree. Doing a thesis means that instead of knowledge and information being presented and following a prescribed route for answering questions, candidates are thrust into an active role of managing an investigation into a topic area. This means researching and discovering things for themselves. They will have to set their own targets and parameters, pose their own central research questions and decide on the appropriate sources of information to support the research. It therefore requires the use of the higher-level cognitive skills of analysis, synthesis and evaluation. Candidates may choose an area of particular interest to them within the scope of course title. A dissertation is an individual effort and the candidate, academic tutor and the course professor will work together on constructing an approved topic (research question) and methodologies.

Engineering Dissertation Defense 9 credits

It is expected of Master's candidates to defend their thesis by means of a colloquium doctum (academic discussion). The purpose of the meeting is for the candidates to convince a panel of experts in the field of the dissertation how well they have done in the conducting of their research study and the preparation of their dissertation

Program Total Credits 48 credits

Candidates need to complete all course assessments with the results of Grade B+ or above.

MASTER OF SCIENCE (RENEWABLE ENERGY COURSE OUTLINE)

Part (1) Preliminary Course

RE001- Foundation Studies in Renewable Energy and Sustainability
RE002- Grid Connected Photovoltaic Power Systems
RE003- Solar and Thermal Energy Systems
RE004- Energy Storage Systems
RE005- Renewable Energy Resource Analysis
RE006- Wind Energy Conversion Systems
RE007- Energy System Efficiency

Part (2) Qualified (1) Course

Semester (1)

RE008-Mathematics & Physics (I)

Master of Science (Computer Network) (Each 10 credits) (70883)

Bachelor of Applied Science (Network)- 120 Credits

Master of Applied Science (Network)- 120 Credits

Total 240 credits

PART (1) Course Work in Graduate Diploma in Computer Network Level

(60 credits) (Each 10 credits)

ICTN701 APNET Content Management System

ICTN702 CISCO Certified Design Associate

ICTN703 CISCO Certified Network Associate

ICTN704 CISCO Firewall

ICTN705 CISCO LAN Switching Configuration

ICTN706 Computer Architecture and Security

PART (2) Course Work in Masters Level

(40 credits) (Each 10 credits)

Select 4 units

ICTN707 Computer Systems

ICTN708 Python Network Programming

ICTN709 Microsoft.NET Framework

ICTN710 Enterprise Network Monitoring

ICTN711 Parallel Computer Architecture

ICTN712 Cloud Computing

The students will have to write 20 pages study report for each of the subjects outlined below.

The report needs to include

- Book review- Review on each chapter of the book highlighting the key concepts, key points, key theory & practical application concepts in IT.
- Own idea on how to apply those concepts in real practical applications.

- Examples of IT system designs that use the concepts & knowledge expressed in those books (If any)
- Your comment on each book

Master of Applied Science Work Example

[http://www.iqytechnicalcollege.com/Master Diploma in Information Technology-Worked Sample Report on IT Topics.pdf](http://www.iqytechnicalcollege.com/Master%20Diploma%20in%20Information%20Technology-Worked%20Sample%20Report%20on%20IT%20Topics.pdf)

PART (3) Master Project in Computer Network

(20 credits)

The candidate needs to write the project report for one topic mutually selected by the candidate and supervisor

REPORT GUIDE

<http://www.mongroupsydney1.com/Report.pdf>

Part (4) Master of Engineering (Computer Network) (70884)

Complete the following units after completion of Master of Applied Science (Computer Network) Each 10 credits

BAE 702 Engineering Management

BAE 703 Leadership & Human Resources Management

BAE 704 Risk Management & Industrial Safety

BAE 705 Engineering Competency Development

BAE 706 Engineering Report Writing

BAE 707 Engineering Ethics

Total Credits 320 Credits

Self Study Online CPD Courses

www.highlightcomputer.com/onlinecpdcourses.htm

To enrol these course , follow the steps

1. Pay the fees (First course is Kyats 30000, then Kyats 10000 per additional course) . Deposit into the following account

Daw Hla Myat Mon –Account Numbner 020-33-500265-2 (Yoma Bank) and attached the evidence of deposit to this application form

2. Fill the online form. (Without evidence of fund deposit, no reply will be made.)

<http://www.emailmeform.com/builder/form/H7zdPO8n8K6EBIG>

3. Then , we will send you the download links to download the e-Books

4. We will send you CPD Course Attendance Certificate electronically.

5. Each course has 20 CPD Hours.

6. They are self study courses. No needs to submit the assessment tasks

7. The list of the CPD course attenders are not included in IQY Technical College Graduates List but the authenticity of issued IQY CPD Certificates can be enquired by emailing to iqytechnicalcollege@gmail.com
