d) notify the Society of any significant violation of the Code of Conduct by any Professional Engineer on the register or any aspiring member seeking to gain access to the register.

4. Information

a) co-operate with the Society and provide such information as may be requested to facilitate any investigation into the conduct of any Professional Engineer on the register or any aspiring member seeking to gain access to the register.

5. Relationships

a) have due regard to their duty of care to clients and not take advantage of any client or potential client for whatever cause or reason in obtaining and carrying out instructions.

b) put all terms of engagement in writing and state the fees to be charged; whenever practicable, these should be issued to the client before a project is begun.

c) inform his/her client immediately if it appears that his/her estimate as to the total fees to be charged is likely to be or will be exceeded.

d) take care not to mislead a client as to the range of services that a quoted fee is intended to cover and the amount of future fees which may be involved.

Note in respect of relationships: Any Professional Engineer on the register or any aspiring member seeking to gain access to the register shall not:

- accept a professional assignment if he/she is aware or has reasonable cause to suspect that another member is acting for the client in respect of the same assignment, until either the first contract has been determined by the client, or the other member has consented to him acting.
- induce a client to agree to pay sums of money which are not justified by reference to the work which the member has carried out or has been instructed to carry out.
- offer or give any fee, commission, discount or other inducement (financial or otherwise) to a third party in return for the introduction of clients or particular professional assignments unless, before entering into a legally binding agreement

with that client he/she makes full disclosure to the relevant client of the nature or amount of such fee, commission, discount or inducement and the name of the person or persons to whom such fee, commission, discount or inducement was offered or given.

6. Practice

a) Ensure that in respect of any firm in which he/she is or is held out to be a sole proprietor, partner or a director or through which he/she practises or conducts business:

- the composition (list of partners or directors) is clearly stated on all appropriate documentation and that where there has been a material alteration to the composition, all clients of the firm or company are notified of the change promptly;
- the style or title does not adversely reflect upon his/her professional status as a Professional Engineer and the dignity and reputation of the engineering profession;
- the name is not misleading or liable to cause confusion with the public, nor does it imply any partnership arrangement with or endorsement of services by the Society.

b) Titles associated with the registration of Professional Engineers such as "PEng" and "PEng(UK)" and membership of the Society such as "Fellow of the Society of Professional Engineers", "Member of the Society of Professional Engineers", and all others relating to membership of the Society of Professional Engineers, and the designations FSPE, MSPE, Hon.FSPE, Hon.MSPE shall only be used or authorised to be used in connection with a partnership or company

- in the name of any partnership in which such member practises provided all the member's partners are similarly entitled to use the Title and designatory letters
- to describe the name of any company provided only that all the shareholders and/or members of such company and all the directors of such company are similarly entitled to use the Title.
- to describe the name of a firm or business which is not a partnership or company in which he/she practises provided such use of the Title does not give the impression that any other person or persons with whom such member is carrying on business or whom such member employs or with whom such member is associated in any way is entitled to use the same Relevant Title or, if the impression referred to is given, such other person or persons is or are similarly entitled to use the Title.

7. Managerial responsibility

a) In addition to the responsibilities referred to in the Rules of Professional Conduct, but subject to the following, any Professional Engineer on the register or any aspiring member seeking to gain access to the register shall be prima facie

responsible, as a matter of professional conduct, for the acts or omissions including, in particular, breach of any of the provisions of the Articles and Bye-Laws of the Society or these Rules of Professional Conduct of:

- any firm in which the member is, or holds him/herself out to be, or allows him/herself to be held out as a partner, or any firm which the member allows to use his/her name and/or style and title or designatory letters in any of its advertisements, publicity material or notepaper; and
- any company of which he/she is a director or any co-director of that company or any company which the member allows to use his/her name and/or style and title or designatory letters in any of its advertisements, publicity material or notepaper.

b) If any Professional Engineer on the register or any aspiring member seeking to gain access to the register is able to show that, without default on his/her part, he/she was not aware, and there was no reason for him to be aware at the time of any breach of these provisions by any firm or company referred to above and he/she had, prior to the breach, taken all reasonable steps to ensure that such a breach would not occur, then he/she shall not be in breach of this Rule.

8 Publicity and Advertising

a) Any Professional Engineer on the register or any aspiring member seeking to gain access to the register may publicise his/her services or permit another person to do so, but in doing so the member must have due regard to the standards set by the Advertising Standards Authority and any standards set by any other regulatory or governmental authority in relation to advertising and ensure that any publicity for which he/she is in any way responsible is neither inaccurate nor misleading.

b) In all advertising, publicity material or public statements for which any Professional Engineer on the register or any aspiring member seeking to gain access to the register is in any way responsible, he/she shall avoid all claims of superiority over, or critical comparisons of, the services provided by other engineers and shall avoid any direct comparison of fees and charges levied by other engineers.

c) Any Professional Engineer on the register or any aspiring member seeking to gain access to the register may only refer to the name of a client in any advertising, publicity material or public statement if the prior written consent of that client is first obtained.

d) Advertisements or other publicity material issued by any Professional Engineer on the register or any aspiring member seeking to gain access to the register or

by a firm in which they are held out to be a partner or director or a company through which they practise or conducts their business may state (subject to compliance with any other relevant regulations or legal requirements) either expressly or implied that they, the firm or the company (as the case may be) offers expertise or specialist advice in relation to a particular field of engineering provided only that this is the case.

ASSIGNMENT

From newspaper, journal, internet, online chatting groups, show one event that signify the breach of engineering ethics such as use of substandard materials, breach of safety law, breach of fair practice, attempt to monopolizing , use of law and authority for safeguarding own benefits or personal associates , depressing others and highlight how engineering ethics are breached.

BAE 708 Engineering Knowledge 10 Credits

See the given site

From the list of the subject, select two subjects, ask me to send the e-Book. Then you have to do the followings

The students will have to write 20 pages study report for each of the subjects outlined below.

The report needs to include

☐ Book review- Review on each chapter of the book highlighting the key concepts, key formula, key theory & practical application concepts

☐ Own idea on how to apply those concepts in real practical applications.

☐ Examples of engineering designs that use the concepts & knowledge expressed in those books (If any)

☐ Your comment on each book

BAE708 will be completed when you have done the above tasks

PART (B) IQY Master Diploma in Engineering Part 2- (40 credits)

(St Clements University's Master of Applied Engineering)

(STC Technological University Master of Engineering)

BAE709-Design Project (40 credits)

You need to do a supervised design. In this unit, Singapore Institute of Engineering Technologists can provide the supervised design which is a part of Professional Engineers (UK) Assessment. If you do not want to apply for part of Professional Engineers (UK), IQY Technical College itself will provide design supervision that you can later use it to apply for Professional Engineers (UK)

See the given links for required engineering handbooks

You can ask the teacher to send you the e-Books if you want to use it for your selected design

IQY Master Diploma in Applied Science (Information Technology)

(240 credits including 120 Credits for Professional Diploma/ BE degree/ City & Guild Level 6 Diploma)

Master of Applied Science (Information Technology)

(St Clements University)

(240 credits including 120 Credits for Professional Diploma/ BE degree/ City & Guild Level 6 Diploma)

Follow the instructions in

<http://www.highlightcomputer.com/MAppSCIT.pdf>

The candidates will need to request the e-book for study

IQY Master Diploma in Renewable Energy Engineering

Master of Applied Engineering (St Clements University)

Master of Engineering (Renewable Energy)(STC Technological University)

(240 credits including 120 Credits for Professional Diploma/ BE degree/ City & Guild Level 6 Diploma)

Follow the instructions in

<http://www.highlightcomputer.com/MScRE.pdf>

The candidates will need to request the e-book for study

ADDITIONAL COURSE

Doctoral Research Studies

IQY Master Diploma in Research Studies

http://www.highlightcomputer.com/Master_of_Engineering.pdf

Only St Clements University will confer the Doctoral Degree while IQY Technical College will provide the joint supervision.

Dissertation for Doctorate

MAE 601 Research Method

MAE602 Thesis

[http://www.filefactory.com/file/111r1k0ftawt/n/11.Research+Thesis_\(ICT_605\).zip](http://www.filefactory.com/file/111r1k0ftawt/n/11.Research+Thesis_(ICT_605).zip)

MAE601 Research Method

This course guides the student, step by step, through the research process, from problem selection through writing up results. It provides all of the basics necessary to complete a research project in any discipline.

Outline. The following aspects are reflected in this course:

What is research?

Tools of research

The problem: the heart of the research process

Review of the related literature

Planning your research design

Writing the research proposal

Qualitative research

Historical research

Descriptive research

Experimental and causal - comparative designs

Statistical techniques for analyzing quantitative data

Technical details: style, format, and organization of the research report

Doctoral Research Proposal

Synopsis: Research students are expected to present a written research proposal within three months after commencement. The proposal is handed in to the study leader.

Assessors of this proposal are selected by the faculty for their understanding of the field and the research involved. The purpose of a research is to set out a plan for conducting the research and writing the dissertation within the available time. It should take account of the availability and guidance of the study leader.

The starting point for a research proposal is the topic, which is the field of interest in which the research is to be carried out. In introducing the topic, the proposal should clarify the field that it falls into and the specific part that field which the research will explore.

It should clarify why the topic is of interest and importance, and how the proposed research

will contribute to the field of knowledge or profession. The proposal should clarify the research questions, ensuring that these are specific and answerable.

It is important to show how these questions relate to the topic are, and how they will advance the student's contribution. The proposal should detail the research to be carried out, and clarify the research methods, the timeframe and the reasons for selecting particular methods.

Where a period of literature review or research should precede any empirical research, this should be factored in as part of the research. It is important to estimate any periods of field research and to flag their duration and cost in your research proposal.

MAE 602 Thesis

Thesis Dissertation for Doctorate

Candidates need to complete a 60000-words dissertation (in Myanmar or English) and a 3000-words executive portfolio (in English).

This program requires the candidates to complete a thesis as part of the assessment for the Doctorate

Doing a thesis / dissertation means that instead of knowledge and information being presented and following a prescribed route for answering questions, candidates are thrust into an active role of managing an investigation into a topic area. This means researching and discovering things for themselves.

They will have to set their own targets and parameters, pose their own central research questions and decide on the appropriate sources of information to support the research. It therefore requires the use of the higher-level cognitive skills of analysis, synthesis and evaluation. Candidates may choose an area of particular interest to them within the scope of course title.

Doctoral dissertation

A dissertation is an individual effort and the candidate, academic tutor and the course professor will work together on constructing an approved topic (research question) and methodologies.

Dissertation Defence for doctorate

It is expected of Doctoral candidates to defend their thesis by means of a colloquium (academic discussion). The purpose of the meeting is for the candidates to convince a panel of experts in the field of the dissertation how well they have done in the conducting of their research study and the preparation of their dissertation

Candidates need to complete all course assessments with the results of Grade B+ or above.

Milestones of IQY Technical College and International recognition of IQY and IPEM

Year	Progress
2007	Plan Myanmar Vocational Training
2012 August	Engage St Clements University and sign the MOU between st Clements University and Highlight Computer Group
2012 December	Initial engagement to form Highlight Computer Group and St Clements University Education Programmes in Myanmar
2013	Taught the first batch of Bachelor of Applied Engineering class in Sydney as well as provide IT Diploma Training to the students of Niue Island for St Clements University. Taught IT degree students in Myanmar Provided e-Learning resources to Mother's Ambition Voluntary School of NLD Education Network and Myanmar Buddhist Voluntary Schools
2014	Establish IQY Technical College of Highlight Computer Group. Signed MOU with Singapore Institute of Engineering Technologists Provided Engineering degree Online teaching to students of Fiji , Myanmar and other countries
2015 December	Provided engineering education to teachers of Myanmar Technological Universities at Myanmar Engineering Societies
2016	Provided engineering education courses to teachers of Myanmar Technological Universities Establish the Institution of Professional Engineers Myanmar
2017	Provided Engineering degree Online teaching to International Students Establish IQY Learning Centre at No 307B Thura 2 Street, 9 Ward, South Okkalapa, Yangon, Myanmar Organize the first physical attendance class for Myanmar students at No 307B Thura 2 Street, 9 Ward, South Okkalapa, Yangon, Myanmar. Establish St Clements University Myanmar College
2018	The Institution of Professional Engineers Myanmar joined International Federation of Engineering Education Societies-IFEES Expand IQY Teaching programs in Myanmar to provide THS, GTI Graduates. First IQY / STC Technological University, St Clements University Myanmar College Graduation at Gandamar Hall, in Yangon Establish IQY Mandalay Technical College Achieve the accreditation by The Society of Professional Engineers International
2019	The Institution of Professional Engineers Myanmar NSW/Australia Chapter is registered with NSW Government of Australia Establish Pyay Technical Institute (IQY Pyay) Expand IQY Teaching programs in Myanmar to provide THS, GTI Graduates. Introduce IQY Vocational Programs, Education and Humanities Studies Programmes. Second IQY / STC Technological University, St Clements University Myanmar College Graduation at Sedona Hotel in Myanmar

	Partnership between IPEM and The Institute of Computer Engineers of The Philippines
2020	<p>IQY Technical College is registered with Australian Security and Investment Commission</p> <p>Establish IPEM Technological University</p> <p>Expand IQY Online Teaching for many vocational training</p> <p>Introduced IQY E-Learning, Online and Offline Programmes.</p> <p>Establish IQY Centres in Turkey, Fiji and Oman</p> <p>Expand IQY Practical Programmes.</p>

2021	<p>IQY Technical College is divided into divisions and faculties. http://www.iqytechnicalcollege.com/collegedivisions.htm Law, Vocational Education, Arts and Science, Archaeologist U Myint Aung School of Myanmar Literature, Medicine, IQY Primary School, IQY Secondary School, IQY Technical High School and IQY International Divisions are added.</p> <p>International Professional and Vocational Support Programs including migration support services are added.</p> <p>Dr Mon School of English and Spring Revolution Education Support Programs are added.</p>

EDUCATIONAL ACCREDITATION

Promoting Myanmar Engineering Profession

CERTIFICATE OF AFFILIATION

This is to certify that

IQY Technical College

is an affiliated educational institution to provide the education programs accredited and recognised by The Institution of Professional Engineers Myanmar.

According to the agreement between The Institution of Professional Engineers Myanmar and the affiliated educational institution, the affiliated educational institution is required to the tasks related to sustainability and development of The Institution of Professional Engineers Myanmar and maintain it's academic integrity and quality.

Date: 25 April 2018

Affiliation Record Number: A1/2018

Signed

Registrar

The Institution of Professional Engineers Myanmar

CERTIFICATE OF PARTNERSHIP

Institution of Professional Engineers Myanmar

and

Institute of Computer Engineers of the
Philippines – Singapore Chapter (ICpEP–SG)

AGREED TO DEVELOP A FRAMEWORK OF COLLABORATION IN THE FIELD OF INFORMATION TECHNOLOGY, ENGINEERING, CROSS DOMAIN DEVELOPMENT,
APPLIED RESEARCH, PUBLICATION, CERTIFICATION AND INDUSTRY PRACTICES.

SIGNED THIS 12TH AUGUST 2019 AT ICpEP-SINGAPORE OFFICE, REPUBLIC OF SINGAPORE

DR. RYAN EVANGELISTA, ISP
PRESIDENT, ICpEP-SG

DR. KYAW NAING
PRESIDENT, IPeM

Founded 1980

Certificate of Recognition

This is to certify that

Advanced Diploma in Engineering

(awarded by IQY Technical College)

Is recognized by SIET as satisfying its academic requirement for the membership grade of **Member (MSIET)** according to Clause 4(e)(iii) of SIET's Constitution.

MSIET with the required academic qualification and working experience is eligible for registration as **Asean Technician (AT)** with the **Asean Engineering Register (AER)**.

[Website: www.afeo.org]

Prof (Dr) Sam Man Keong

CEng, FIET, MICE, MCIOB,

FCABE, CBuildE, CEnv, FCQI, CQP, CMath, MIMA, CSci.

SIET-Accreditation & Examination Board

Date of Valid : 1 February 2020 (valid Until 31 January 2024)

Founded 1980

Certificate of Recognition

This is to certify that

Diploma in Engineering

(awarded by IQY Technical College)

Is recognized by SIET as satisfying its academic requirement for the membership grade of **Associate Member (AMSIET)** according to Clause 4(f)(iii) of SIET's Constitution.

Prof (Dr) Sam Man Keong

CEng, FIET, MICE, MCIOB,

Promoting Myanmar Engineering Profession

GRADUATE MEMBERSHIP CERTIFICATE

The holders of IQY Technical College Diplomas are recognized as Graduate Members of The Institution of Professional Engineers Myanmar (IPEM) in the respective grades in the following table.

Professional Diploma in Engineering (Year 4)	Graduate Member (Professional)
Professional Diploma in Engineering Technology (Year 3)	Graduate Member (Technologist)
Advanced Diploma in Engineering (Year 2)	Graduate Member (Technical)
Professional Diploma in ICT (Year 4)	Graduate Member (ICT Professional)
Advanced Diploma in ICT (Year 2)	Graduate Member (ICT Technical)
Professional Diploma in Management (Year 4)	Graduate Member (Management Professional)
Advanced Diploma in ICT (Year 2)	Graduate Member (Management)
Graduate Diploma and Master Diploma in Engineering	Graduate Member (Postgraduate)
Graduate Diploma and Master Diploma in ICT	Graduate Member (Postgraduate)
Graduate Diploma and Master Diploma in Management	Graduate Member (Postgraduate Management)
Diploma in Doctoral Studies in Engineering/ICT	Graduate Member (Doctorate)
Diploma in Doctoral Studies in Management	Graduate Member (Doctorate)
Diploma in General Engineering	Associate
Certificate in all IQY Technical College courses	Affiliate
Diploma in IQY Technical College courses other than Engineering, ICT and Management	Affiliate

In the following table, fill your name, ID number and grade of membership appropriate to your classification of your IQY Technical College diploma.

Name	
ID Number	
Membership Grade	

Maung Oo
Registrar

This certificate is not valid without listing of the holders in graduates list at

Certificate of Incorporation as an Association

This is to certify

**THE INSTITUTION OF PROFESSIONAL
ENGINEERS MYANMAR NSW AUSTRALIA
CHAPTER INCORPORATED**

is registered as an incorporated association in New South Wales
under the *Associations Incorporation Act 2009*

Registration Number **INC1901087**

Date of Incorporation **20 August 2019**

Issued by NSW Fair Trading on 20 August 2019

Rod Stowe
Commissioner
NSW Fair Trading

Extracted from ASIC's database at AEST 17:01:36 on 16/02/2020

Business Name Summary	
Name:	IQY TECHNICAL COLLEGE
Registration Number:	
Registered State:	
Registration Date:	16/02/2020
Status:	Registered
Type:	Business Names
Regulator:	Australian Securities & Investments Commission

Founded 1980

新加坡工程专家协会
Singapore Institute of Engineering Technologists

SIET – Approved Training Centre

This is to certify that

Advanced Diplomas in Engineering
(in all engineering disciplines)

awarded by

IQY Technical College
(Myanmar)

are recognized by SIET as satisfying its academic requirement for the membership grade of **Member** (MSIET) according to clause 4(e)(iii) of SIET's Constitution.

This approval is valid for a period of FIVE years from the date of approval subject to the compliance of terms and conditions as specified by SIET's Executive Council.

Prof (Dr) Sam Man Keong,
CEng, FIET, MICE, MCIQB, FSIET(F)
Chairman,
SIET's Accreditation & Examination Board
Date of Approval: 24 June 2017

IVETA (USA) recognized IQY+STCTU Work Studies-Engineering Programs
2L for Bachelors degree (Self study Online) OR 5L for Some assistance by
Teacher

456678A/556678EN

Advanced Diploma/ Bachelor of Work Studies(Engineering-
Electrical/Civil/Mechanical/Others)

- 6 Subjects-Advanced Diploma
- 12 Subjects Bachelor of Work studies

Curriculum

The same discipline subjects—Specialized discipline will on award

Mixture of discipline subjects—General Engineering on award

- GE1 Electrical Wiring (EE)
- GE2 Electrical Machine (EE)
- GE3 Electrical Distribution (EE)
- GE4 Power System Operation (EE)
- GE5 Power System Protection
- GE6 Occupational Health & Safety
- GE7 Project Management (EE/CE/ME)
- GE8 Electronics (EE)
- GE9 Process Control (EE/ME)
- GE10 Industrial Electronics (EE)
- GE11 Programmable Logic Controller (EE/ME)
- GE12 Photovoltaic Solar Electrical System
- GE13 Principle of Engine(ME)
- GE14 Fitting & Machining (ME)
- GE15 Building Construction (CE)

- GE16 Engineering Drawing I (EE/CE/ME)
- GE17 Pipe Fitting (CE/ME)
- GE18 Air-conditioning & Refrigeration (ME)
- GE19 Computer Programming (EE/CE/ME)
- GE20 Computer Networking (EE)
- GE21 Welding (ME)
- GE22 Painting & Decoration (CE)
- GE23 Pneumatics (CE/ME)
- GE24 Manufacturing Management (ME)
- GE25 Surveying (CE)
- GE26 Energy Efficient Building Design
- GE27 Machine Principle (ME)
- GE28 Hydraulic (CE/ME)
- GE29 Materials & Corrosion Prevention (CE/ME)
- GE30 Bricklaying (CE)
- GE31 Sprouting & Guttering (CE)
- GE32 Electronic Security Installation
- GE33 Explosion Protection
- GE34 Engineering Business Management

- BTech/BE Conversion

- IE1 Engineering Mathematics
- IE2 Engineering Physics
- IE3 Material Science
- IE4 Advanced Engineering Mathematics
- IE5 Mechanical Science
- IE6 Principle of Electricity
- IE7 Electrical Circuit I (EE)
- IE8 Electrical Circuit II (EE)
- IE9 Advanced Building Construction (CE)
- IE10 Transmission Line (EE)
- IE11 Electrical & Mechanical Engineering Work Experience
- IE12 Civil Engineering Work Experience
- IE13 Advanced Workshop
- IE15 Advanced Engineering Design & Project Work
- IE16 Power System Analysis-Fault Calculation
- IE17 Power Line Design

- IE18 Building services
- IE19 PCB Design
- IE20 Maths References
- IE21 Electrical Principle
- IE22 Co-generation
- IE23 Industrial Computer System
- IE24 Microprocessor
- IE25 Power System Fundamental
- IE26 Electrical Communication Fundamental
- IE27 Control Concept
- IE28 Electronic Signal & System
- IE29 Electrical Estimating
- IE30 Electronic Workbench
- IE31 Introduction to Renewable Energy Technology
- IE32 Telecommunication Cabling & Installation
- IE33 Hybrid Energy System
- IE34 Electricity Supply Industrial Skills

新加坡工程专家协会
Singapore Institute of Engineering Technologists

SIET – Approved Training Centre

This is to certify that

IQY Technical College – Myanmar
(a Subsidiary of Highlight Computer Group)

*a private school in Myanmar
is recognized by SIET to recruit suitably qualified students &
graduates to join SIET as members
and
to provide teaching programmes leading to **Diplomas in
Engineering (Year 1)** as satisfying its academic requirement as
Associate Member (AMSIET), **Advanced Diplomas in
Engineering (Year 2)** as satisfying its academic requirement as
Member (MSIET), and **Professional Diplomas in Engineering
(Years 3 & 4)** as satisfying its academic requirement
as **Fellow (FSIET)** subject to compliance of terms and conditions
as specified in the signed MOU.*

*This approval is valid for a period of five (5) years from the date of
approval and is renewable on expiry.*

Dr Sam Man Keong, CEng, FIET
Chairman,
SIET – Accreditation & Exam Board
Date : 5 April 2014

The Society of Professional Engineers

(International)

The Society of Engineers UK (1854), The Society of Professional Engineers (UK) (1969)

Re established as The Society of Professional Engineers International in 2018

www.thespeukinternational.org

Certificate of Recognition

The following qualifications awarded by IQY Technical College are recognized as meeting the educational and academic qualifications requirement for registration as engineer of The Society of Professional Engineers International.

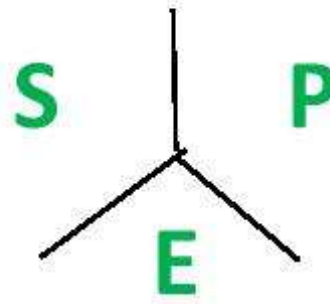

Qualification	Registration Category
IQY Advanced Diploma in Engineering (2 Years Qualification with Year 12 Entry)	Graduate Technical Engineer (Graduate Engineering Technician)
IQY Professional Diploma in Engineering Technology (3 Years Qualification with Year 12 Entry)	Graduate Technologist Engineer (Graduate Engineering Technologist)
IQY Professional Diploma in Engineering (4 Years Qualification with Year 12 Entry)	Graduate Professional Engineer

The issue of certificate to individual candidate will be executed in collaboration with The Institution of Professional Engineers Myanmar which supervises The IQY Technical College.

Peter Prasad
Chief Executive

The Society of Professional Engineers (International) was established as Society of Professional Engineers (UK and International) by International Member Professional Engineers (UK) of Former Society of Professional Engineers (UK) on 28th April ,2018 and the name was changed to current name on 8th February 2019. All PEng(UK) Certificates issued by former SPE(UK) continue to be valid and regarded as Life Membership.

**The Society of
Professional Engineers**
(UK and International)

Certificate of Affiliation

This is to certify that

IQY Technical College, Myanmar

Having satisfied the requirements of the

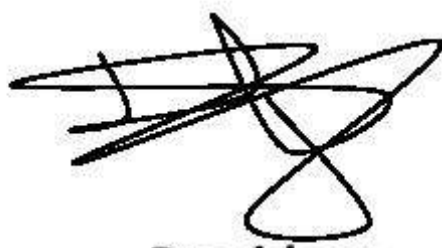

Registration Council as a

Training Organization

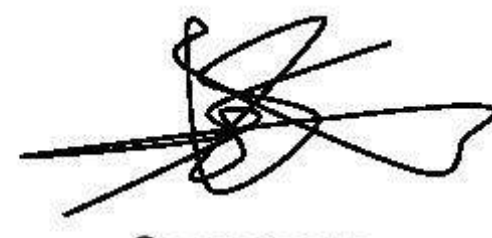

(with Dr Kyaw Naing as Chief Training Officer)

on 7th May 2018 and is entitled to teach the academic programs for

Education Requirement of Professional Engineer (UK and International)

President

Secretary

Change of Chief Training Officer must be notified to SPE-UK & International.

Pre-requisites

Year 10 to 12

Year 1-Diploma in Renewable Energy Engineering

List of subjects (Total 30 credits)

RE001- Foundation Studies in Renewable Energy and Sustainability

RE002- Grid Connected Photovoltaic Power Systems

RE003- Solar and Thermal Energy Systems

RE004- Energy Storage Systems

RE005- Renewable Energy Resource Analysis

RE006- Wind Energy Conversion Systems

RE007- Energy System Efficiency

Year 2 Advanced Diploma in Electro-Mechanical Engineering (Renewable Energy Construction) (Total 60 Credits)

Semester (1)

RE008-Mathematics & Physics (I)

RE009-Mathematics & Physics (II)

RE010-Engineering Materials

RE011-Civil & Mechanical Engineering

Semester (2)

RE012-Electrical Engineering

RE013-Electrical Machines

RE014-Electronics Control

RE015-Electrical Project

Final Project

RE016-Design & Management

Year 3+4 Bachelor of Applied Engineering Technology(Renewable Energy Engineering)

(2 points / unit x 15 units = 30 points)

Year 3

RE101 Mathematics 1A (MATH1131)

RE102 Mathematics 1B (MATH1231)

RE103 Physics 1A (PHYS1121)

RE104 Physics 1B (PHYS1221)

RE105 Engineering Design (ENGG1000)

RE106 Electronics & Telecomm Engineering (1)
(ELEC1111)

RE107 Sustainable Energy (SOLA1070)

Year 4

RE201	Electronics & Telecomm Engineering (2) (ELEC1111)
RE202	Numerical Methods & Statistics (MATH2089)
RE203	Engineering Materials and Chemistry (MATS1101)
RE204	Project in PV and Solar Energy (SOLA2051)
RE205	Sustainable & Renewable. Energy. Technology (SOLA2053)
RE206	Introduction to Electronics Devices (SOLA2060)
RE207	Applied Photo Voltaics (SOLA2540)
RE208	Project Presentation

Bachelor of Engineering (Renewable Energy Engineering)
(2 points / unit x 15 units = 60 points+ Thesis)

Year 5

RE301	Low Energy Buildings and PV (SOLA3010)
RE302	PV Technology & Manufacturing (SOLA3020)
RE303	Software Engineering (COMP3111)
RE304	Analogue Electronics (ELEC2133)
RE305	Power Electronics (ELEC4614)
RE306	Electromagnetic Engineering (ELEC3115)
RE307	Circuits and Signals (ELEC2134)
RE308	Control Systems (ELEC3114)

Year 6

RE401	Fluid Mechanics (MMAN2600)
RE402	Thermodynamics (MMAN2700)
RE403	Computational Fluid Dynamics (MECH9620)
RE404	Strategic Leadership & Ethics (ELEC4122)
RE405	Grid-Connect PV System (SOLA4012)
RE406	Wind Energy Converters (SOLA5053)
RE407	Semiconductor Devices (SOLA5055)
RE408	Thesis

Total 120 Points + Thesis for award of Professional Diploma/Bachelor of Engineering (Renewable Energy Engineering)

ASSESSMENT MODE- Submission of Study Records/ Assignments/ Test in some subjects/ Project , Thesis

ONLINE ENROLMENT

<http://www.iqytechnicalcollege.com/enrolment.htm>

Diploma/ Advanced Diploma in Marine Engineering + Professional Diploma in Engineering (Marine & Mechanical) Bachelor of Engineering (Marine & Mechanical)

Objective

The course prepares students for careers in

- Marine and Offshore Engineering - the selection, deployment and commissioning of machinery, machinery systems and operational systems for merchant and naval vessels plus offshore floating and fixed vessels/structures. Building on core fundamental engineering units, this degree specialises in associated mechanical and mechanical-electrical power generation, machinery and operational systems.

Diploma/ Advanced in Marine Engineering is 30 to 60 credit points diploma. Depending on the amount of study, the graduates can achieve Diploma or Advanced Diploma in Marine Engineering

The students who completed this diploma can proceed to third year and fourth year of Professional Diploma in Mechanical Engineering and can be graduated with Professional Diploma in Marine and Mechanical Engineering OR BE(Marine & Mechanical)

Please see

<http://www.highlightcomputer.com/BEwithRE.pdf>

http://www.highlightcomputer.com/Dip_Mar_E_Course_outline.pdf

Diploma/ Advanced Diploma in Automotive Engineering

Professional Diploma in Engineering (Automotive & Mechanical) Bachelor of Engineering (Automotive & Mechanical)

Diploma/ Advanced in Automotive Engineering is 30 to 60 credit points diploma. Depending on the amount of study, the graduates can achieve Diploma or Advanced Diploma in Automotive Engineering

The students who completed this diploma can proceed to third year and fourth year of Professional Diploma in Mechanical Engineering and can be graduated with Professional Diploma in Automotive and Mechanical Engineering OR BE(Automotive& Mechanical)

Please see

<http://www.highlightcomputer.com/BEwithRE.pdf>

http://www.highlightcomputer.com/Dip_AE_Course_Outline.pdf

Professional Diploma in Engineering (Naval Architecture) Bachelor of Engineering (Naval Architecture)

Objective

The course prepares students for careers in

Naval Architecture - the shipbuilding industry, high-speed ferry industry, marine consultancy firms and in government in areas of commercial shipping, transport policy and administration and in the insurance sector.

Learning Outcomes

1. NavArch: Rationally apply comprehensive knowledge of the fundamental principles underpinning maritime engineering, with advanced knowledge of **ocean vehicle design, hydrodynamics, ship structures, and/or on-board systems and equipment** specific to the naval architecture discipline, using creativity, critical thinking and judgement.

OceanEng: Rationally apply comprehensive knowledge of the fundamental principles underpinning maritime engineering, with advanced knowledge of **the design of offshore to coastal installations, subsea platforms and additional equipment and techniques for operations in the maritime environment** specific to the ocean engineering discipline, using creativity, critical thinking and judgement.

MarOffEng: Rationally apply comprehensive knowledge of the fundamental principles underpinning maritime engineering, with advanced knowledge of **the design, procurement and installation of mechanical, electrical and thermal systems**, specific to the marine and offshore engineering discipline, using creativity, critical thinking and judgement.

2. Apply knowledge of research principles and management methods to devise, plan and execute a piece of engineering research with limited supervision.

3. Apply problem solving, design and decision-making methodologies to identify complex problems in both the maritime and wider engineering fields and to formulate innovative solutions with intellectual independence.

4. NavArch: Apply abstraction and analysis to complex problems specific to **ship design and construction industries and the wider maritime sector** whilst concurrently considering the implications of the solution in a global and sustainable context using appropriate engineering methods and tools.

OceanEng: Apply abstraction and analysis to complex problems specific to **the design and development of offshore, subsea and coastal infrastructure and operations in the wider maritime sector** whilst concurrently considering the implications of the solution in a global and sustainable context using appropriate engineering methods and tools.

MarOffEng: Apply abstraction and analysis to complex problems specific to **the maritime engineering industries** whilst concurrently considering the implications of the solution in a global and sustainable context using appropriate engineering methods and tools.

5. Demonstrate a high level of communication skills in professional practice and articulate complex knowledge, by written and oral means, to specialist and nonspecialist audiences; including clients, multi-disciplinary and multi-cultural project teams and stakeholders.
6. Demonstrate entrepreneurship and creativity, professional accountability and ethical conduct through the application of design, research and project management techniques while concurrently displaying an awareness of professional engineering practice.
7. Review personal performance, demonstrate independent initiatives and leadership as a means of managing continuing professional development, wellbeing and lifelong learning through engagement with stakeholders, colleagues and members of other professions.

Program of study

To qualify for the Professional Diploma/Bachelor of Engineering (Naval Architecture)

a student must complete 120 Credits

GENERAL STUDIES- 60 Credits

ENGR1204-Electronics (6pt)-----BAE405/408(EE)

ENGR1401 Professional Skills (2 pt)-----BAE608 (ME Yr 4)

ENGR1711 Engineering Design (2 pt) -----BAE614 (ME Yr 4)

ENGR1721 Engineering Programming (2 pt)-----BAE601 (ME Yr 4)

ENGR1722Engineering Physics and Materials (4 pt)-----RE010+ EE204 (EE Adv Dip)

ENGR1732 Engineering Mechanics (4 pt)-----ME103 (Adv Dip ME) / BAE403 (Common Yr 3 BE)

MATH1121 Mathematics 1A (4 pt)----- EE201/302 (EE Adv Dip)

MATH1122 Mathematics 1B (2 pt)----- BAE401(Common Yr 3 BE)

ENGR2703 Mechanical Practice Certificate (6 pt) PC5 Certificate in Fitting/Machining, PC6 Certificate in Welding/ PC8 Certificate in Air-conditioning Refrigeration & Basic Servicing

ENGR2711 Engineering Mathematics (2 pt) -----BAE402 (Common Yr 3)

ENGR2722 Analysis of Engineering Systems (6 pt)----BAE502/BAE50 (Linear System+ Control System) (EE)/ME203 (Adv Dip ME)

ENGR2741 Mechanics and Structures (4 pt)-----RE011a/b Civil & Mechanical Engineering (Mechanical/Civil) (Common Yr 3 BE)

ENGR2751 Fluid Mechanics (2 pt units)-----BAE423 Fluid Mechanics (Civil)

ENGR2771 Dynamics (2 pt)-----BAE614 (ME Yr 4)

ENGR2776 Hydrostatics (2 pt) -----ME201 (Adv Dip ME)

ENGR3781 Elements of Shipboard Safety (ESS) Certificate (4 units) MarE106 (Dip Mar E)

Mgt505 Quality Management

NArch 509 Ship Propulsion

NArch 602 Ship Construction (Naval Architecture) Project 20 Credits

Detailed Contents

ENGR1201 Electronics

Topic Description	<p>Electronics provides students with an understanding of basic electronics. It includes:</p> <ol style="list-style-type: none">1. Digital Electronics: digital design concepts, number systems and signed numbers, combinational logic and design, minimisation of logic expressions, hazards, sequential logic and design, finite state machines2. Analog Electronics: circuit variables and elements, simple resistive circuits, techniques of circuit analysis3. Microprocessors: introduction to microprocessors, sensors and motors, microprocessor programming4. Workshop Practice: bonding methods, soldering and flux, planning and designing electronic equipment, printed circuit boards and microelectronics
Educational Aims	<p>This topic aims</p> <ol style="list-style-type: none">1. To provide students with a thorough understanding of the principles of combinational and sequential digital logic2. To develop the fundamental theoretical and practical skills required to carry out the design and analysis of digital electronic circuits3. To introduce the elements and basic operation of a microprocessor4. To introduce the manufacture and processes of thick and thin film microelectronics, printed circuit boards, and surface mount packages, the processes, practice, and assessment of soldering, component mounting and other connection methods, and fire safety
Expected Learning Outcomes	<p>At the completion of this topic, students are expected to be able to:</p> <ol style="list-style-type: none">1. Analyse, design and construct simple digital circuits2. Analyse, design and construct simple finite state machines3. Understand and apply basic principles of electric circuit theory4. Understand and use electrical components and instruments5. Have knowledge and understanding of microprocessors, motors and sensors6. Write simple programs for a microcontroller7. Have knowledge and understanding of microelectronics, printed circuit boards and surface mount technology8. Perform and assess electronics assembly tasks, such as soldering and wiring

ENGR1401 Professional Skills

Topic Description	This topic provides an introduction to engineering with a focus on the role of the engineering team in providing a range of products and services. The initiation, planning and development of engineering projects including such subjects as feasibility studies, design and performance specifications, construction, testing and evaluation, operation and maintenance of engineering systems and the optimum use of resources. Aside from technical considerations, the topic will consider the social, economic, political, environmental and ethical issues related to engineering projects as well as the relevant communication and interpersonal skills.
Educational Aims	The aim of this topic is to introduce students to the general nature of engineering and the core professional practices associated with an engineering project. The topic is to develop an understanding of the nature of engineering a range of transferable skills and knowledge including engineering project planning, feasibility and design, oral and written communication skills, meeting procedures, and the ability to work as a group.
Expected Learning Outcomes	<p>At the completion of the topic, students are expected to be able to:</p> <ol style="list-style-type: none">1. Understand the role of engineers in society and the purposes of engineering projects2. Understand the basic processes involved in engineering planning and design3. Apply systems concepts and elementary optimisation theory to the modelling of engineering processes4. Use decision theory and basic economic analysis for the evaluation of engineering projects5. Work effectively in a group on a complex problem6. Demonstrate an ability to apply scientific and engineering methodology7. Work effectively as part of a team, in project formulation and the execution of feasibility studies8. Have taken account of environmental and social issues and the human factor in analysing and designing engineering or other complex systems9. Understand the principles of sustainable development10. Have a basic competency in the use of word processors, spreadsheets, graphics packages and project management software11. Use a style guide, write a report, present a set of logically related ideas in spoken and written form, implement appropriate meeting procedures, and prepare and deliver a seminar

ENGR1711 Engineering Design

Topic Description	Initiation, planning and development of engineering projects including such subjects as feasibility studies, design and performance specifications, creativity, decision theory, construction, testing and evaluation, operation, maintenance and sustainability of engineering systems and the optimum use of resources. Social, economic, political, international and environmental issues related to engineering projects. Drawing and documentation standards, theory and practice, including design and modelling software.
Educational Aims	This topic introduces students to the general nature of and the core professional practices associated with engineering design in the context of engineering projects, with emphasis on the social, economic, political, international and environmental issues. The topic also develops skills in drawing and documentation.
Expected Learning Outcomes	At the completion of the topic, students are expected to be able to: <ol style="list-style-type: none">1. Appreciate the role of engineers in society and the purposes of engineering projects2. Understand the basic processes involved in engineering planning and design3. Apply systems concepts and elementary optimisation theory to the modelling of engineering processes4. Use decision theory and basic economic analysis for the evaluation of engineering projects5. Identify and consider the social, economic, political, international and environmental dimensions of an engineering project6. Apply the principles of sustainable development7. Use software tools for engineering drawing, modelling and documentation

ENGR1721 Engineering Programming

Topic Description	The topic is intended as a first course in programming for students who intend to major in engineering. It aims to introduce students to the basic tools and techniques of software development and engineering packages such as Matlab. The topic will cover the following material: the structure of a program, sequence, selection, iteration, assignment and expressions, arrays, operations, input and output, and principles of design and development, testing, and maintenance.
Educational Aims	The topic aims to help develop: <ol style="list-style-type: none">1. An understanding of the nature of programming2. The ability to read, comprehend and write simple programs3. The application of appropriate development tools4. An appreciation of the process by which software systems are developed, including their specification, design, implementation, testing and maintenance
Expected Learning Outcomes	At the completion of this topic, students are expected to be able to: < <ol style="list-style-type: none">1. Demonstrate that they can comprehend basic program control constructs of sequence, selection, and iteration2. Demonstrate that they can use programming development environments and tools within a defined context3. Demonstrate that they can read pseudo-code and translate it into a readable, working program

- | | |
|--|---|
| | 4. Demonstrate that they know the basics of testing and debugging |
| | 5. Demonstrate that they can apply programming principles to solve domain-specific problems |

ENGR1722 Engineering Physics and Materials

Topic Description	<p>Engineering Materials:</p> <ol style="list-style-type: none"> 1. Atomic structure and bonding 2. Structure of metals, ceramics, polymers and composites 3. Material properties 4. Application of Materials 5. Economic, environmental, and societal Issues <p>Electromagnetism:</p> <ol style="list-style-type: none"> 1. Electric charge and electric field 2. Electric potential 3. Electric current and resistance 4. Magnetism 5. Introduction to Electromagnetic waves
Educational Aims	<p>This topic aims to provide students with:</p> <ol style="list-style-type: none"> 1. A basic understanding of the underlying science and the engineering performance of materials used in engineering applications 2. An understanding of the fundamental principles of electromagnetism
Expected Learning Outcomes	<p>At the completion of this topic, students are expected to be able to:</p> <ol style="list-style-type: none"> 1. Understand the classification, structure and application of materials 2. Evaluate the mechanical properties of materials with regards to elastic and plastic deformation 3. Understand the economic, environmental, and societal Issues related to materials use 4. Understand and communicate the basic principles of electromagnetism 5. Apply the concepts of electromagnetism for solving engineering problems

ENGR1732 Engineering Mechanics

Topic Description	<p>Statics: Force Vectors (vector operations, vector addition of forces, addition of a system of coplanar forces, Cartesian vectors, addition of Cartesian vectors, position vectors, force vector directed along a line, dot product); Force System Resultants (moment of a force, scalar and vector formulations, principle of moments, moment of a force about a specified axis, moment of a couple, simplification of a force and couple system); Equilibrium of a Rigid Body (equilibrium and free-body diagrams 2D/3D, equations of equilibrium (2D/3D), two- and three-force members); Dry Friction (theory of dry friction, equilibrium, impending motion, motion, characteristics of dry friction, problems involving dry friction).</p> <p>Particle Dynamics: Kinematics (rectilinear kinematics: continuous motion, general curvilinear motion - rectangular components, motion of a projectile); Kinetics - Force and Acceleration (Newton's 2nd Law of Motion, equation of motion for a system of particles, equation of motion - rectangular coordinates), Work and Energy (work of a force, principle of work and energy for a system of particles, power and efficiency, conservative forces and potential energy, conservation of energy); Impulse and Momentum (principle of linear impulse and momentum, conservation of linear momentum, impact).</p>
Educational Aims	<p>This topic is a fundamental topic upon which most of the later year engineering topics build. This topic aims to ensure that the students understand both basic laws as they apply to static and dynamic mechanical systems and the theory and laws applicable to fundamental electrical circuits.</p>
Expected Learning Outcomes	<p>At the completion of this topic, students are expected to be able to:</p> <ol style="list-style-type: none">1. Understand concepts of static force systems (machines and structures)2. Understand in depth the skills to analyse these force systems and the physical meaning of force and moment equilibrium3. Acquire the skill to draw free-body diagrams and apply the equations of equilibrium for 2D and 3D rigid bodies4. Understand the characteristics of dry friction and how to analyse problems involving dry friction5. Understand the dynamic properties of particles and rigid bodies6. Write the relevant equations of motion associated with Force, Torque and Acceleration, Work and Energy, Impulse and Momentum7. Solve engineering problems dealing with the static and dynamical motion of particles subject to forces and accelerations

MATH1121 Mathematics 1A

Topic Description	<p>This topic together with MATH1122 Mathematics 1B is designed for students who have studied SACE Stage 2 Mathematics and who wish to proceed to a degree in any discipline which requires higher level mathematics. It is the standard prerequisite for all higher level topics in mathematics that require knowledge of first year mathematics.</p> <p>The material covered includes: functions, limits and continuity, differential calculus, computation of derivatives, the chain rule, Intermediate Value and Mean Value Theorems. Applications to graphing, rates of change, maxima and minima. Complex numbers, Euler's formula, complex exponential. Three-dimensional analytic geometry, matrices, systems of linear equations, vectors, equations of lines and planes.</p>
Educational Aims	<p>This topic introduces the basic concepts and techniques of differential calculus, complex numbers, linear algebra, systems of equations and matrices and provides the foundation for all areas requiring first year university mathematics. Intensive hands-on approach in the workshops aims to provide the students the essential skills in mathematical manipulations within the context of the course. The topic aims to develop a modelling and problem solving approach to mathematics and its applications through an appropriate combination of the underlying concepts and the facility of mathematical software.</p>
Expected Learning Outcomes	<p>At the completion of the topic, students are expected to be able to:</p> <ol style="list-style-type: none">1. Understand the key concepts which underlie single-variable differential calculus and linear algebra2. Be familiar with the basic facilities available in Maple mathematical software3. Use problem solving, critical and reasoning abilities

MATH1122 Mathematics 1B

Topic Description	<p>This topic is a continuation of material of MATH1121 Mathematics 1A and together with MATH1121 Mathematics 1A is intended to provide access to all higher level mathematics topics which require knowledge of standard first year mathematics. The emphasis is on a modelling approach to mathematics and its applications within a coherent framework.</p> <p>The material covered includes elementary transcendental functions. Integral calculus, fundamental theorem of the calculus, standard techniques of integration including substitution, parts, partial fractions, application to motion, arclength, area, volumes and solids of revolution, Taylor polynomials, series, power series, introduction to elementary differential equations, simple harmonic motion. Systems of linear equations, Gaussian elimination, matrix algebra and determinants.</p>
Educational Aims	<p>This topic is a continuation of the material of MATH1121 Mathematics 1A. This topic develops the properties of elementary transcendental functions and introduces key ideas and applications of integral calculus, matrix algebra and linear algebra.</p>
Expected Learning Outcomes	<p>At the completion of this topic, students are expected to be able to:</p> <ol style="list-style-type: none">1. Have a knowledge of the basic properties of the elementary transcendental functions2. Understand and apply the key ideas and methods of integral calculus3. Understand and analyse the relation between differential and integral calculus

	<ol style="list-style-type: none"> 4. Understand and apply key ideas from linear and matrix algebra to the solution of systems of linear equations 5. Develop further skills in the use of computational technology 6. Have enhanced problem solving, critical and reasoning abilities 7. Appreciate the historical context underlying the development of modern mathematical principles and ideas 8. Have an informed appreciation of the wide applicability of integral calculus and matrix algebra in other areas of Science and Engineering
--	--

ENGR2703 Mechanical Practice Certificate

Topic Description	The topic covers exposure and practice in common mechanical and materials techniques including occupational health and safety, heat treatment, gas metal arc welding, manual metal arc welding, fabrication techniques, gas tungsten arc welding, machining techniques, marking off and hand tools.
Educational Aims	To give students an understanding of, practice in and an understanding of the safety requirements of common mechanical engineering techniques.
Expected Learning Outcomes	At the completion of this topic, students are expected to be able to have received training on OH&S and practical skills essential to being a mechanical engineer, specifically heat treatment, gas metal arc welding, manual metal arc welding, fabrication techniques, gas tungsten arc welding, machining techniques, marking off and hand tools.

ENGR2711 Engineering Mathematics

Assumed Knowledge	An understanding of fundamental concepts of calculus and linear algebra.
Topic Description	First order ODE (Existence and uniqueness, separable, exact equations), linear ODE (Existence and Uniqueness, constant coefficient homogenous, variable coefficient homogenous, constant coefficient nonhomogeneous), boundary value problems. Vectors and the geometry of Space, dot and cross product, equations of lines and planes; Vector Functions, derivatives and integrals of vector functions, velocity and acceleration in space; Partial Derivatives, tangent planes and approximation, chain rule, directional derivatives, maximum and minimum values. Double and Triple Integrals. Vector Fields, Line integrals. Curl and Divergence, Stokes' Theorem. The Divergence Theorem.
Educational Aims	This topic equips the students with the skills needed to solve mathematical problems with several variables, linear systems, and differential equations. These provide the mathematical pre-requisites that the student needs for the second and higher year Engineering topics. The focus is on the application of the mathematical ideas to Engineering problems.
Expected Learning Outcomes	<p>At the completion of the topic, students are expected to be able to:</p> <ol style="list-style-type: none"> 1. Understand and be able to apply Multivariate Calculus to Engineering problems 2. Understand and be able to apply Differential Equations to Engineering problems

ENGR2722 Analysis of Engineering Systems

Topic Description	Review of linear systems, vector spaces, orthogonality, eigenvalues and eigenvectors, linear transformations. Continuous and discrete time signals, unit impulse and unit step signals, impulse response, step response, linear time invariant (LTI) systems, convolution, correlation, system transfer function, frequency response, Fourier transform, DFT (Discrete Fourier Transform), Periodic signals, Fourier series, Nyquist frequency, sampling theorem, aliasing, Laplace transform, bilinear transfer functions, magnitude and phase responses, Bode plots.
Educational Aims	This topic is an introduction to the concepts and theories of linear algebra and signal analysis and their application to engineering systems.
Expected Learning Outcomes	At the completion of this topic, students are expected to be able to: <ol style="list-style-type: none">1. Understand Linear Algebra and Signal Analysis from a Mathematical perspective2. Be able to apply Linear Algebra and Signal Analysis to Engineering problems

ENGR2741 Mechanics and Structures

Topic Description	Principles of Statics (Review); Centre of Gravity, Centroid and Moment of Inertia; Distributed Forces; Stress and Strain; Mechanical Properties of Materials: Ductile/Brittle Materials, Hooke's Law, Poisson's Ratio; Axial load; Torsion; Bending: Shear Force and Bending Moment Diagrams; Stress Concentrations; Transverse Shear; Combined Loadings; Transformation of Stress and Strain: Mohr's Circle; Design of Beams and Shafts.
Educational Aims	This topic gives students an understanding of the basic statics concepts associated with engineering mechanics and structures.
Expected Learning Outcomes	At the completion of this topic, students are expected to be able to: <ol style="list-style-type: none">1. Develop and employ principles of Statics in solving problems2. Learn how to determine centroids and moment of inertias and how to find resultant of distributed loadings3. Understand concepts of stress, strain and mechanical properties of materials4. Analyse axial, torsional, bending, transverse stresses and their combinations in structures and machine components5. Calculate in-plane stresses and strains, their orientations and transformations through Mohr's circle, and calculate principal stresses and strains6. Develop methods for designing beams to resist both bending and shear loads; prismatic and fully stressed beam designs

ENGR2751 Fluid Mechanics

Topic Description	Fluid Mechanics: Fluid properties; Hydrostatics; One dimensional flow of incompressible fluids; Continuity, momentum and energy equations; Laminar and turbulent flows in pipes and ducts; free surface and channel flows; hydraulic jump; weir and waterfall; Dimensional analysis; Flow measurements and fluid machinery.
Educational Aims	This topic aims to ensure that the students understand the following: <ol style="list-style-type: none">1. Modelling the flows of fluids2. Measurements of the flows of fluids3. Heat transferred to and from a fluid
Expected Learning	At the completion of this topic, students are expected to be able to:

Outcomes	<ol style="list-style-type: none"> 1. Understand the basic properties of gases and liquids 2. Write the relevant equations of motion for fluids in pipes and channels 3. Solve simple flow problems 4. Understand how flow measurements are made in practice 5. Understand the flows in pumps and turbines
-----------------	---

ENGR2771 Dynamics

Topic Description	<ol style="list-style-type: none"> 1. Particle dynamics: Curvilinear motion, Force and acceleration, Work and Energy, Impulse and Momentum 2. Rigid body dynamics: Planar Kinematics, Force, Torque and Acceleration, Work and Energy, Linear and Angular Impulse and Momentum 3. Vibrations
Educational Aims	This topic aims to ensure that the students understand Kinematics and Kinetics as applied to particles and rigid bodies; and vibration.
Expected Learning Outcomes	<p>At the completion of this topic, students are expected to be able to:</p> <ol style="list-style-type: none"> 1. Understand the dynamic properties of particles and rigid bodies 2. Write the relevant equations of motion associated with Force, Torque and Acceleration, Work and Energy, Impulse and Momentum 3. Understand the creation and effects of vibration

ENGR2776 Hydrostatics

Topic Description	Geometry of surface vessels; Tabular methods of integration; Mass addition, removal and transfer; Elementary principle of transverse intact stability; Heeling moments and angles, and free surface effects; Inclining experiment; Elementary principles of trim; The Intact Stability Booklet; partially-afloat condition; Damage stability.
Educational Aims	<p>This topic aims to ensure that the students understand the following:</p> <ol style="list-style-type: none"> 1. Fundamentals of hydrostatics and concepts of statical stability, and trim of intact and damaged vessels 2. Introduction to the practical implications and applications of hydrostatic concepts 3. Generation of all relevant stability criteria data required for both design development and operational purposes 4. Introduction and development of a working knowledge of stability regulations
Expected Learning Outcomes	<p>At the completion of the topic, students are expected to be able to:</p> <ol style="list-style-type: none"> 1. Calculate hydrostatic data for any floating structure and predict the influence of geometric parameters on a vessel's stability characteristics 2. Interpret a vessel's response to any loading condition from lever and moment curves 3. Calculate and assess a vessel's damage stability response 4. Undertake an inclining experiment according to industry best practice

ENGR3781 Elements of Shipboard Safety (ESS) Certificate

Topic Description	Course content: <ol style="list-style-type: none">1. Elements of fire prevention on board the vessel2. Theory of combustion and methods of extinguishing fire3. Practical training in the use of portable fire fighting appliances4. Practical training in launching, boarding and survival in an inflatable life raft, including man overboard procedures5. Elements of accident prevention as they apply to the shipboard work place, particularly as they apply to falls, working in close proximity to machinery and moving objects, confined spaces, personal protective equipment and hygiene
Educational Aims	To ensure that students understand basic safety requirements when on board a vessel.
Expected Learning Outcomes	Understand the elements of fire prevention on board the vessel, including the theory of combustion and methods of extinguishing fire. Practical training in the use of portable fire fighting appliances. Practical training in launching, boarding and survival in an inflatable life raft, including man overboard procedures. Elements of accident prevention.

PHYS2712 Thermodynamics and Energy Systems

Topic Description	<ol style="list-style-type: none">1. Concepts and Definitions of Thermodynamics2. Energy and the First Law of Thermodynamics3. Properties of Substances4. Ideal and Real Gases5. Control Volume Analysis Using Energy6. The Second Law of Thermodynamics7. Entropy and Entropy Balance for Closed Systems and Control Volumes; Cycle Processes8. Thermodynamic Equilibrium9. Phase Diagrams10. Vapour Power Systems11. Gas Power Systems12. Refrigeration and Heat Pump Systems
Educational Aims	In this topic students will learn the fundamentals of Thermodynamics. The students will learn how to apply the concepts to solve experimental problems. Students will learn how to apply the fundamental principles of thermodynamics to predict the behaviour of energy systems and properly design required energy systems.
Expected Learning Outcomes	At the completion of this topic, students are expected to be able to: <ol style="list-style-type: none">1. Demonstrate the understanding of the concepts of Thermodynamics and to apply them to experiments2. Understand how solids, liquids and gases behave under different temperature and pressure conditions

	<ol style="list-style-type: none"> 3. Apply thermodynamic concepts to energy systems 4. Analyse thermodynamic cycles such as power and refrigeration cycles 5. Apply the concepts of Thermodynamics to laboratory experiments
--	--

ENGR2766 Ship Design and Construction

Topic Description	<p>DESIGN: Vessel Types. Design Process & Constraints. Design Analyses & Techniques. Hull Form. Introduction to Propulsor Options. Introduction to Prime Mover Options. Introduction to Structural Systems. Primary Deck Machinery and Installation Considerations. Terminologies and Definitions.</p> <p>CONSTRUCTION: Environmental Framework: Commercial, industrial, legal and regulatory aspects of the ship production industry. Assembly Methodologies: Historical, current and alternative methods adopted in the construction of steel and aluminium vessels. Modular and parallel production methods. Composite Vessel Production: Materials and construction methods for composite vessels and components. Dimensional Control: Referencing moulded dimensions. Symbolologies of structural and working drawings. Construction, Launching and Repair Facilities: Shipyard facilities, arrangement and strategic equipment, launching and docking methods. Fabrication Technologies: Cutting, welding and forming technologies. Production and Quality Management: Introduction to the requirement and tools available for production co-ordination and quality assurance.</p>
Educational Aims	<ol style="list-style-type: none"> 1. To provide an introduction to issues influencing a vessel's design 2. To introduce certain fundamental aspects of the rational and engineering approach to marine design 3. Establish an understanding of the considerations essential in the determination of hull characteristics, general arrangement and requisite systems 4. To provide the student with an understanding of the overall philosophy and techniques involved in the manufacture of ships and the context in which the processes are carried out 5. To provide practical experience with commercial surface modelling software and illustrate the scope of Computer Aided Design And Manufacture
Expected Learning Outcomes	<p>At the completion of the topic, students are expected to be able to:</p> <ol style="list-style-type: none"> 1. Demonstrate a basic knowledge of regulatory, practical and economic constraints on design and production of an ocean vehicle 2. Develop a concept design based on an appraisal of operational requirements via a clearly structured and rational process 3. Identify issues regarding the methodology and efficiency of production for any particular vessel and recognise the concepts of ship production system design and main hardware elements of shipyards 4. Effectively combine the use of conventional design tools with naval architecture design software to produce a limited set of design drawings and models in accordance with industry standards and codes of practice

ENGR2768 Offshore Engineering

Topic Description	<p>Marine Sciences - a) Meteorology: regional weather systems and seasonal variations. Global pressure, air mass movement and circulation patterns. Prediction of local weather. Storms and tropical cyclones. b) Physical Oceanography: ocean structure, physical and chemical properties. Global ocean circulations, tides, waves, winds and currents. Marine resources - mineral, biological and energy. c) Marine Geology: geomorphology of the ocean floors, margins and shelves. Sedimentation and origins of hydrocarbons and minerals in the oceans. Formation and classification of coastal regions</p> <p>Ocean Renewable Energy - Renewable energy systems - wave power, wind power, thermal power and tidal power.</p> <p>Marine Transportation - Environmental forces and voyage planning. Introduction to work vessels and offshore structures. Structures - loading, stability and ballast control. Load-out and sea-transport of modules. Loads during transit and sea-fastening design. Operational codes and practices.</p> <p>Construction and Installation - Installation of fixed, floating and subsea structures. Lifting operations and mooring systems. Diving and ROV operations. Maintenance and repair of offshore installations. Removal and salvage of offshore production facilities. Risk assessment and management on offshore operations and on structures.</p>
Educational Aims	<p>The aim of this unit is to provide students with general skills and knowledge on the range of engineering operational activities in the offshore sector. The scope of the unit encompasses the essential theories of marine science and basic knowledge to plan and manage marine operations, including offshore installation, inspection and maintenance.</p>
Expected Learning Outcomes	<p>At the completion of this topic, students are expected to be able to:</p> <ol style="list-style-type: none">1. Demonstrate a fundamental knowledge of marine geology, physical oceanography and marine meteorology and its applications to a range of offshore technical problems2. Describe the equipment, technology and methods that are fundamental to common offshore engineering activities3. Apply scientific knowledge to solve a range of engineering problems4. Understand the differences between designing and building offshore structures from terrestrial structures

Master of Engineering Legal Practice/ Master Diploma in Engineering Legal Practice (7766554)

Master of Engineering Legal Practice course with 240 credits is designed for Engineers to apply the knowledge and skills of Law in their engineering project, commercial business matters and dispute resolutions.

It also develops the skills of Third Party Verifiers.

It contains of 4 parts

Part 1-Engineering Practice in Legal Context (30 credits)

Part 2-Non Destructive Testing and Third Party Verifying (90 Credits)

Part 3- Business and Commercial Law Studies (60 Credits)

Part 4-Industrial Laws (60 Credits)

Pre-requisite

Advanced Diploma in Engineering/ BEngSc/BTech/BE degrees.

Award

Master of Engineering Legal Practice by IPEMTU Degree College by co-operating with

Phoe Phyu School of Law , IQY Technical College, STC Technological University and The Institution of Professional Engineers Myanmar.

IPEMTU Degree College is business name registered with ASIC (Australian Securities and Investment Commission) and it is an education branch of The Institution of Professional Engineers Myanmar (IPEM) NSW Australia Chapter registered with NSW Government of Australia and The Institution of Professional Engineers Myanmar which is a Member of International Federation of Engineering Education Societies (IFEES) and affiliated to The Society of Professional Engineers International and Singapore Institute of Engineering Technologists.

- The students who have achieved 60 credits can be issued with Diploma in Engineering Legal Practice provided that they must complete at least 10 credits from Part 3 and 10 credits from Part 4
- The students who have achieved 120 credits can be issued with Bachelor of Engineering Legal Practice & Professional Diploma in Engineering Legal Practice provided that they must complete at least 20 credits from Part 3 and 20 credits from Part 4

Part 1-Engineering Practice in Legal Context

(To be taught by IQY Technical College) (30 credits at 10 credits/ subject)

1.BAE605 Engineering Project Management

2. BAE 704 Risk Management & Industrial Safety

3.BAE 707 Engineering Ethics

Part 2-Non Destructive Testing and Third Party Verifying (90 credits)

(To be taught by IQY Technical College)

<http://www.iqytechnicalcollege.com/thirdparty.htm>

- Professional Engineer Support (10 Credits)
- Professional Engineers References (10 Credits)
- Engineering Fundamental References (10 Credits)

- Professional Engineers Theory Support (10 Credits)
- Professional Engineers Practical Support (10 Credits)
- Graduate Capstone
- Engineering Standard (10 Credits)

www.highlightcomputer.com/NDT.htm

- Non Destructive Testing (10 Credits)

(2) Submit minimum one to maximum three case study report related to failures in engineering construction, project, plant, equipment or systems. (20 credits)

www.iqytechnicalcollege.com/verifiercasestudy.pdf

Part 3- Business and Commercial Law Studies

(To be taught by Phoe Phyu School of Law) (60 credits) (10 credits/ subject)

1. Technology and Cyber Law(LLM718)
2. Intellectual Property Law(LLM719)
3. International Competition and Consumer Rights Law(LLM720)
4. International Commercial Dispute Resolution and Litigation(LLM717)
5. Principles of International Commercial Contracts and Payments(LLM722)
6. Business Law (LLM719)

Part 4-Industrial Laws (60 credits)

(Self studies on provided Myanmar Language Law books)

To be supervised by IQY Technical College

10. Work Place Laws Studies (20 Credits)

WS3018E Shop and Office Place Law

WS3018A Environmental Assessment

WS2018E Factory-Act Amended

11. Laws related to employee affairs (20 Credits)

WS2018A Amended-Law-for-Leave-and-Holiday-Law

WS2018B Employment Contract

WS2018C Equal Employment Right

WS2018D Factory Work

WS2018F Code of Conduct

WS3018B Payment Laws

12. Laws related to worker compensation (20 Credits)

WS3018BC Second-Dispute-Settlement-Law

WS3018D Worker Compensation

WS2018G Human Right

Master of Engineering (St Clements University) together with Professional Diploma in Engineering

This program is designed as Practical Engineers and Technicians who are working in Industries without BE/BTech Qualifications but possesses the experience and need the formal qualification papers.

On completion of this program, the graduates will receive the followings

- Professional Diploma in Engineering (IQY Technical College)
- Master Diploma in Engineering (IQY Technical College)
- Bachelor of Engineering (STC Technological University)
- Master of Engineering (St Clements University)

Entry Requirements

- Any Diploma/ Degree other than BE/BTech/AGTI

Study Stage 1

Teaching plan for Advanced Diploma/ Professional Diploma in Engineering . The detailed contents can be flexibility negotiated between the candidate and supervisor that the candidate is allowed to choose the most relevant contents for their work.

The subjects can be chosen from the following link

<http://www.iqytechnicalcollege.com/offeredcourses.htm>

On completion of Stage 1, Professional Diploma in Engineering (IQY Technical College) and Bachelor of Engineering (STC Technological University) will be issued.

Specific Discipline-

Based on the subjects that you chose, the appropriate discipline will be written on your testamur which will be sent electronically and you need to download/ print in colour and laminate it.

The list of graduates will also be expressed on our IQY website

Study Stage 2 Part A

IQY Master Diploma in Engineering

(240 credits including Bachelor Degree 120 credits)

(St Clements University -Master of Applied Engineering)

(STC Technological University-Master of Engineering)

Study Program

PART (A) IQY Master Diploma in Engineering Part 1-

(St Clements University's Graduate Diploma in Applied Engineering)

(STC Technological University Graduate Diploma in Engineering) (80 credits at 10 credits/ unit)

Download from given link

BAE 701 Engineering Fundamental

Download from given link

The candidates need to download the following textbooks

Electrical

Download from given link

Then study **Section 4-Electrical Engineering (PDF File Page 885)**

For every topic, you need to write the short note on what you understand, formula, summary, outlines and at least 2 problems solution (Please note, each problem is solved in short form, you need to clearly reproduce them by step by step)

Mechanical

Then study **Section 3-Mechanical Engineering (PDF File Page 307)**

For every topic, you need to write the short note on what you understand, formula, summary, outlines and at least 2 problems solution (Please note, each problem is solved in short form, you need to clearly reproduce them by step by step)

Civil

Download from given link

Section 1-Civil Engineering (PDF File Page 7)

Section 6- Water & Waste Water Engineering (PDF File Page 1041)

Section 7-Environmental Engineering (PDF File Page 1078)

For every topic, you need to write the short note on what you understand, formula, summary, outlines and at least 2 problems solution (Please note, each problem is solved in short form, you need to clearly reproduce them by step by step)

Telecommunication

Myanmar Text Books

DTE301M Part A-Network Management-Telecom Circuit Analysis

Download from given link

DTE301M Part B-Network Management-Telecommunication Network Analysis-LC Calculation

Download from given link

DTE303M Part A-Telecom Engg-Line Communication Theory Part 1

Download from given link

DTE303M Part B-Telecom Engg-Line Communication Theory Part 2

Download from given link

DTE306-Wireless Communication

Download from given link

For every topic, you need to write the short note on what you understand, formula, summary, outlines and at least 2 problems solution (Please note, each problem is solved in short form, you need to clearly reproduce them by step by step)

After having done all above tasks, BAE 701 Engineering Fundamental will be completed.

Renewable Energy Engineering

BAE701 and BAE708 can be concurrently completed , the list of units that you need to study will be advised. You need to study at least one unit for BAE701 and at least one unit for BAE708

Reference links

Download from given link

BAE701

For every topic, you need to write the short note on what you understand, formula, summary, outlines and at least 2 problems solution (Please note, each problem is solved in short form, you need to clearly reproduce them by step by step)

After having done all above tasks, BAE 701 Engineering Fundamental will be completed.

BAE708

From the list of the subject, select two subjects, ask me to send the e-Book. Then you have to do the followings

The students will have to write 20 pages study report for each of the subjects outlined below. The report needs to include

- ☐ Book review- Review on each chapter of the book highlighting the key concepts, key formula, key theory & practical application concepts

- ☐ Own idea on how to apply those concepts in real practical applications.

- ☐ Examples of engineering designs that use the concepts & knowledge expressed in those books (If any)

- ☐ Your comment on each book

ICT Engineering

BAE701 and BAE708 can be concurrently completed , the list of units that you need to study will be advised. You need to study at least one unit for BAE701 and at least one unit for BAE708

Reference links

Download from given link

Download from given link

BAE 704 Risk Management & Industrial Safety

Download from given link

View the videos, download the lessons, study and then write an essay

“How I will assess the risks in my workplace” You can write 3 to 5 pages.

BAE 705 Engineering Competency Development

Download from given link

View the videos, download the lessons, study

Assignment

During your study

- List the subjects that you have learnt in your study at college/ university
- List the subjects that you have achieved the good mark and explain why and how you got it
- List the subjects that you just marginally passed and explain why it happened
- List the practical tasks that you have done at college/ university
- List any reference books, tuition classes, practical books that you have read at college/ university

After Graduation

- If you are working, provide your CV that shows the detailed of your employment
- If you have not worked, list any training, engineering books, online websites, online videos etc that you study

Your future plan

- Provide an outline what you want to be, what training you will attend, what practical tasks you will do. If you have already attended the trainings and courses, provide the certificates

BAE705 will be completed when you have done the above tasks

BAE 706 Engineering Report Writing

Study Download from given link

You need to read one news paper article or web information or if you can, visit a practical work site and then write a report by following steps

- Title
- Brief description of topics

- Contents
- Detailed information
- Reference data, photos, tables, diagrams to be inserted
- Conclusion
- Reference list

BAE706 will be completed when you have done the above tasks

BAE 707 Engineering Ethics

Society of Professional Engineers-UK

<http://www.professionalengineers-uk.org/index.php/the-society/code-of-professional-conduct>

Code of Professional Conduct

All individuals registered as Professional Engineers and those aspiring to become registered Professional Engineers shall deliver services in accordance with the Society's Code of Professional Conduct and shall:

1. Competence

- only undertake professional tasks for which they are competent and will at all times exercise all reasonable professional skill and care to prevent avoidable danger to health or safety and the creation of adverse impacts on the environment.
- maintain and broaden their knowledge, experience and competence and encourage others to do so.

2. Integrity

- treat all persons fairly with respect and without bias
- avoid where possible real or perceived conflict of interest and advise affected parties should such conflicts arise.
- observe the proper duties of confidentiality owed to appropriate parties.
- discharge their professional duties with integrity, impartiality and objectivity and have no involvement with any form of bribery.

3. Responsibility

- a) accept appropriate responsibility for work carried out under their supervision.
- b) assess relevant risks and liability and, if appropriate, have in force appropriate liability insurances.
- c) notify the Society within 28 days:
 - if convicted of a criminal offence other than parking fines or convictions for exceeding the speed limit:
 - upon becoming bankrupt or disqualified as a Company Director:
 - if they are removed from the membership of another professional body as the result of a matter relating to conduct.
- d) notify the Society of any significant violation of the Code of Conduct by any Professional Engineer on the register or any aspiring member seeking to gain access to the register.

4. Information

- a) co-operate with the Society and provide such information as may be requested to facilitate any investigation into the conduct of any Professional Engineer on the register or any aspiring member seeking to gain access to the register.

5. Relationships

- a) have due regard to their duty of care to clients and not take advantage of any client or potential client for whatever cause or reason in obtaining and carrying out instructions.
 - b) put all terms of engagement in writing and state the fees to be charged; whenever practicable, these should be issued to the client before a project is begun.
 - c) inform his/her client immediately if it appears that his/her estimate as to the total fees to be charged is likely to be or will be exceeded.
 - d) take care not to mislead a client as to the range of services that a quoted fee is intended to cover and the amount of future fees which may be involved.
- Note in respect of relationships: Any Professional Engineer on the register or any aspiring member seeking to gain access to the register shall not:

- accept a professional assignment if he/she is aware or has reasonable cause to suspect that another member is acting for the client in respect of the same assignment, until either the first contract has been determined by the client, or the other member has consented to him acting.
- induce a client to agree to pay sums of money which are not justified by reference to the work which the member has carried out or has been instructed to carry out.
- offer or give any fee, commission, discount or other inducement (financial or otherwise) to a third party in return for the introduction of clients or particular professional assignments unless, before entering into a legally binding agreement

with that client he/she makes full disclosure to the relevant client of the nature or amount of such fee, commission, discount or inducement and the name of the person or persons to whom such fee, commission, discount or inducement was offered or given.

6. Practice

a) Ensure that in respect of any firm in which he/she is or is held out to be a sole proprietor, partner or a director or through which he/she practises or conducts business:

- the composition (list of partners or directors) is clearly stated on all appropriate documentation and that where there has been a material alteration to the composition, all clients of the firm or company are notified of the change promptly;
- the style or title does not adversely reflect upon his/her professional status as a Professional Engineer and the dignity and reputation of the engineering profession;
- the name is not misleading or liable to cause confusion with the public, nor does it imply any partnership arrangement with or endorsement of services by the Society.

b) Titles associated with the registration of Professional Engineers such as "PEng" and "PEng(UK)" and membership of the Society such as "Fellow of the Society of Professional Engineers", "Member of the Society of Professional Engineers", and all others relating to membership of the Society of Professional Engineers, and the designations FSPE, MSPE, Hon.FSPE, Hon.MSPE shall only be used or authorised to be used in connection with a partnership or company

- in the name of any partnership in which such member practises provided all the member's partners are similarly entitled to use the Title and designatory letters
- to describe the name of any company provided only that all the shareholders and/or members of such company and all the directors of such company are similarly entitled to use the Title.
- to describe the name of a firm or business which is not a partnership or company in which he/she practises provided such use of the Title does not give the impression that any other person or persons with whom such member is carrying on business or whom such member employs or with whom such member is associated in any way is entitled to use the same Relevant Title or, if the impression referred to is given, such other person or persons is or are similarly entitled to use the Title.

7. Managerial responsibility

a) In addition to the responsibilities referred to in the Rules of Professional Conduct, but subject to the following, any Professional Engineer on the register or any aspiring member seeking to gain access to the register shall be prima facie responsible, as a matter of professional conduct, for the acts or omissions including, in particular, breach of any of the provisions of the Articles and Bye-Laws of the Society or these Rules of Professional Conduct of:

- any firm in which the member is, or holds him/herself out to be, or allows him/herself to be held out as a partner, or any firm which the member allows to use his/her name and/or style and title or designatory letters in any of its advertisements, publicity material or notepaper; and
- any company of which he/she is a director or any co-director of that company or any company which the member allows to use his/her name and/or style and title or designatory letters in any of its advertisements, publicity material or notepaper.

b) If any Professional Engineer on the register or any aspiring member seeking to gain access to the register is able to show that, without default on his/her part, he/she was not aware, and there was no reason for him to be aware at the time of any breach of these provisions by any firm or company referred to above and he/she had, prior to the breach, taken all reasonable steps to ensure that such a breach would not occur, then he/she shall not be in breach of this Rule.

8 Publicity and Advertising

a) Any Professional Engineer on the register or any aspiring member seeking to gain access to the register may publicise his/her services or permit another person to do so, but in doing so the member must have due regard to the standards set by the Advertising Standards Authority and any standards set by any other regulatory or governmental authority in relation to advertising and ensure that any publicity for which he/she is in any way responsible is neither inaccurate nor misleading.

b) In all advertising, publicity material or public statements for which any Professional Engineer on the register or any aspiring member seeking to gain access to the register is in any way responsible, he/she shall avoid all claims of superiority over, or critical comparisons of, the services provided by other engineers and shall avoid any direct comparison of fees and charges levied by other engineers.

c) Any Professional Engineer on the register or any aspiring member seeking to gain access to the register may only refer to the name of a client in any advertising, publicity material or public statement if the prior written consent of that client is first obtained.

d) Advertisements or other publicity material issued by any Professional Engineer on the register or any aspiring member seeking to gain access to the register or by a firm in which they are held out to be a partner or director or a company through which they practise or conducts their business may state (subject to compliance with any other relevant regulations or legal requirements) either expressly or implied that they, the firm or the company (as the case may be) offers expertise or specialist advice in relation to a particular field of engineering provided only that this is the case.

ASSIGNMENT

From newspaper, journal, internet, online chatting groups, show one event that signify the breach of engineering ethics such as use of substandard materials, breach of safety law, breach of fair practice, attempt to monopolizing , use of law and authority for safeguarding own benefits or personal associates , depressing others and highlight how engineering ethics are breached.

Master Diploma resources

Download from given link

From the list of the subject, select two subjects, ask me to send the e-Book. Then you have to do the followings

The students will have to write 20 pages study report for each of the subjects outlined below.

The report needs to include

☐ Book review- Review on each chapter of the book highlighting the key concepts, key formula, key theory & practical application concepts

☐ Own idea on how to apply those concepts in real practical applications.

☐ Examples of engineering designs that use the concepts & knowledge expressed in those books (If any)

☐ Your comment on each book

Study Stage 2 Part B

PART (B) IQY Master Diploma in Engineering Part 2-

(St Clements University's Master of Applied Engineering)

(STC Technological University Master of Engineering

BAE709 Design Project (40 Credits)

You need to do a supervised design. In this unit, Singapore Institute of Engineering Technologists can provide the supervised design which is a part of Professional Engineers (UK) Assessment. If you do not want to apply for part of Professional Engineers (UK), IQY Technical College itself will provide design supervision that you can later use it to apply for Professional Engineers (UK)

Alternate Routes for 'Mature Candidates become FSIET & MSPE, PEng(UK)

■ By Design (6-hours open-book Exam)

- [Exam Fee per Design Paper per sitting : S\$160]
- The following main disciplines will be available:
 - Civil Engineering Design
 - Electrical Engineering Design
 - Mechanical Engineering Design
 - Chemical Engineering Design
 - Industrial Engineering Design

■ By Individual Project (3 – 6 months)

- . On a chosen topic to be approved by Joint ICES-SIET Membership Committee.
- . Length : About 10,000 words.
- . To be supervised by Supervisor approved by Joint ICES-SIET Membership Committee.
- . **Project Supervision Fee** : S\$500 (5 x 2 hours = 10 hours of face-to-face counselling).
- . **Project Assessment Fee** : S\$200

The followings are required engineering handbooks

Only St Clements University will confer the Doctoral Degree while IQY Technical College will provide the joint supervision.

Dissertation for Doctorate

MAE 601 Research Method

MAE602 Thesis

[http://www.filefactory.com/file/111r1k0ftawt/n/11.Research+Thesis_\(ICT_605\).zip](http://www.filefactory.com/file/111r1k0ftawt/n/11.Research+Thesis_(ICT_605).zip)

MAE601 Research Method

This course guides the student, step by step, through the research process, from problem selection through writing up results. It provides all of the basics necessary to complete a research project in any discipline.

Outline. The following aspects are reflected in this course:

What is research?

Tools of research

The problem: the heart of the research process

Review of the related literature

Planning your research design

Writing the research proposal

Qualitative research

Historical research

Descriptive research

Experimental and causal - comparative designs

Statistical techniques for analyzing quantitative data

Technical details: style, format, and organization of the research report

Doctoral Research Proposal

Synopsis: Research students are expected to present a written research proposal within three months after commencement. The proposal is handed in to the study leader.

Assessors of this proposal are selected by the faculty for their understanding of the field and the research involved. The purpose of a research is to set out a plan for conducting the research and writing the dissertation within the available time. It should take account of the availability and guidance of the study leader.

The starting point for a research proposal is the topic, which is the field of interest in which the research is to be carried out. In introducing the topic, the proposal should clarify the field that it falls into and the specific part that field which the research will explore.

It should clarify why the topic is of interest and importance, and how the proposed research will contribute to the field of knowledge or profession. The proposal should clarify the research questions, ensuring that these are specific and answerable.

It is important to show how these questions relate to the topic are, and how they will advance the student's contribution. The proposal should detail the research to be carried out, and clarify the research methods, the timeframe and the reasons for selecting particular methods.

Where a period of literature review or research should precede any empirical research, this should be factored in as part of the research. It is important to estimate any periods of field research and to flag their duration and cost in your research proposal.

MAE 602 Thesis

Thesis Dissertation for Doctorate

Candidates need to complete a 60000-words dissertation (in Myanmar or English) and a 3000-words executive portfolio (in English).

This program requires the candidates to complete a thesis as part of the assessment for the Doctorate

Doing a thesis / dissertation means that instead of knowledge and information being presented and following a prescribed route for answering questions, candidates are thrust into an active role of managing an investigation into a topic area. This means researching and discovering things for themselves.

They will have to set their own targets and parameters, pose their own central research questions and decide on the appropriate sources of information to support the research. It therefore requires the use of the higher-level cognitive skills of analysis, synthesis and evaluation. Candidates may choose an area of particular interest to them within the scope of course title.

Doctoral dissertation

A dissertation is an individual effort and the candidate, academic tutor and the course professor will work together on constructing an approved topic (research question) and methodologies.

Dissertation Defence for doctorate

It is expected of Doctoral candidates to defend their thesis by means of a colloquium (academic discussion). The purpose of the meeting is for the candidates to convince a panel of experts in the field of the dissertation how well they have done in the conducting of their research study and the preparation of their dissertation

Candidates need to complete all course assessments with the results of Grade B+ or above.

IQY TECHNICAL COLLEGE

STC TECHNOLOGICAL UNIVERSITY

ST CLEMENTS UNIVERSITY MYANMAR COLLEGE

IPEM TECHNOLOGICAL UNIVERSITY

MASTERS DEGREE LEARNING SUPPORT

There are two types of Masters Programs in Engineering

1. [Master of Engineering Practice](#)
2. [Master of Engineering](#)

(1) Master of Engineering Practice (240 credits, 120 credits for BE degree)

Master of Engineering Practice is for experienced engineers . It will include the following subjects of 10 credits each

- BAE 701 Engineering Fundamental
- BAE 702 Engineering Management
- BAE 703 Leadership & Human Resources Management
- BAE 704 Risk Management & Industrial Safety
- BAE 705 Engineering Competency Development
- BAE 706 Engineering Report Writing
- BAE 707 Engineering Ethics
- BAE 708 Engineering Knowledge

Completion of the above subjects will earn Graduate Diploma in Engineering Practice (80 credits at Masters level +120 Credits for Bachelors degree level total 200 credits. Completion of two or more units can earn Graduate Certificate in Engineering.

The candidate will need to do Engineering Design Project of 40 credits to complete Master of Engineering Practice of 240 credits

The followings are study instruction

Form 15

IQY Master Diploma

BAE701 to 708, you will complete the Graduate Diploma

Then submit the design project to complete the Masters

From the above links, textbooks can be downloaded. Choose Civil Engineering

[Form 45 St Clements University Master of Engineering for Non standard Entry Study Support](#)

The following link shows the example of the tasks that you need to do

[Form 46 Master Diploma Civil Worked Example](#)

The following link contains the Masters Course References.

[Form 18](#)

Master Diploma resources

(1) Master of Engineering (Professional Engineering)

(240 credits, 120 credits for BE degree)

Masters of Engineering (Professional Engineering) program is for recent graduates who have completed their BE degrees.

It will include the following 24 subjects of 5 credits each

The students will have to write 20 pages study progress report for each of the subjects outlined below.

The report needs to include

- Date and chapters that the candidate reads (The student will need to read the book
- at least 4 days per week)

- Highlight the key concepts, key formula, key theory & practical application concepts .
- Notes of the topic that you read.
- Key diagrams, formula, problem solutions
- Power point slides to express the key topics

There are 24 units in Masters of Engineering (Professional Engineering) Program, the candidate will need to complete one unit per month so that the whole program will be completed within 24 months. (120 credits at Masters level and 120 Credits for Bachelors degree total 240 credits).

As Master of Professional Engineering is delivered entirely in English and very intensive program, to encourage the students to earn the Graduate Diploma and Masters degree, the following arrangements are also made.

Graduate Diploma in Engineering (140 credits)

Completion of the compulsory 4 subjects will earn Graduate Diploma in Engineering (20 credits at Masters level +120 Credits for Bachelors degree level total 140 credits. Completion of two or more units can earn Graduate Certificate in Engineering.

Master of Engineering Science

Completion of the compulsory 6 subjects will earn Master of Engineering Science (30 credits at Masters level +120 Credits for Bachelors degree level total 150 credits.

Master of Engineering

Completion of the compulsory 6 subjects PLUS project (30 credits) will earn Master of Engineering (60 credits at Masters level +120 Credits for Bachelors degree level total 180 credits.

Master of Engineering from SCPU School of Engineering registered in Switzerland

Please note that the candidates who want to get the Master of Engineering from SCPU School of Engineering registered in Switzerland must complete

Masters of Engineering (Professional Engineering) by either studying the lectures of entire English medium of language instruction or self study in provided textbooks written in English which they need to do self study and submit the study report.

Electrical Compulsory Subjects

- BAE 655-Wireless Communications
- BAE656 Advanced Digital Signal Processing
- BAE 670-Power System Engineering
- BAE 661-Design of Electrical Services for Buildings
- BAE 677-Photovoltaic Systems
- BAE 660-Control Engineering

The above subjects will be provide with English and Myanmar Instructions and guidance. The candidates can choose the other subjects from the available subjects but they are entire English medium of instruction or self study in provided textbooks written in English which they need to do self study and submit the study report.

Instead of doing the project, the following options are also open for the students.

Option (1) Self study or two more subjects

The students can select choose two more subjects from the available subjects in same discipline or other discipline , follow the entire English medium of instruction or self study in provided textbooks written in English which they need to do self study and submit the study report.

Option (2) Complete any two of the following subjects by submitting the assignments

- BAE 702 Engineering Management
- BAE 703 Leadership & Human Resources Management
- BAE 704 Risk Management & Industrial Safety
- BAE 707 Engineering Ethics

Civil Compulsory Subjects

BAE 631-Advanced Concrete Technology

BAE 634-Building Construction

BAE 636-Building Technology Electrical Mechanical System (BAE661-Design of Electrical Services for Buildings)

BAE 650-Steel Design

BAE 635-Building Survey

BAE 644-Estimating

The above subjects will be provide with English and Myanmar Instructions and guidance. The candidates can choose the other subjects from the available subjects but they are entire English medium of instruction or self study in provided textbooks written in English which they need to do self study and submit the study report.

Instead of doing the project, the students can select choose two more subjects from the available subjects in same discipline or other discipline , follow the entire English medium of instruction or self study in provided textbooks written in English which they need to do self study and submit the study report.

Mechanical Compulsory Subjects

BAE 678A/B-Machine Design

BAE 689A/B-Mechanical Design

BAE 698-Thermal Engineering

BAE 694-Control Engineering

BAE 699-Rotating Machinery Vibration

BAE 690-Mechanical Estimating

The above subjects will be provide with English and Myanmar Instructions and guidance. The candidates can choose the other subjects from the available subjects but they are entire English medium of instruction or self study in provided textbooks written in English which they need to do self study and submit the study report.

Instead of doing the project, the students can select choose two more subjects from the available subjects in same discipline or other discipline , follow the entire English medium of instruction or self study in provided textbooks written in English which they need to do self study and submit the study report.

Professional Engineer Support

Master of Professional Engineering Practice

(120 Credits)

6688901

Course Objective

This course aims to provide both engineering fundamental knowledge and engineering application practice for Professional Engineer.

Contents

BAE701S Engineering Fundamental (16 Credits)

BAE 708S Engineering Knowledge (16 Credits)

BAE 705S Engineering Competency Development(16 Credits)

BAE 706S Engineering Report Writing(16 Credits)

BAE 707S Engineering Ethics(16 Credits)

BAE709 Design Project (40 Credits)

Assessment

Professional report/ Project/ Presentation/ Practical based design project

Master of Information Technology

This degree is designed for the experienced professionals who wish to develop their skills and knowledge as Information Technology professionals.

Graduate Diploma in Information Technology

Compulsory Modules

ICT 501 Programming in Visual C++ PLUS ICT 507 Visual Computing

ICT 502 Database Systems

ICT 503 Business System Development

ICT 504 Business Data Communications

ICT 505 Applied Computing I

ICT 506 Applied Computing II PLUS ICT 508 Object-Oriented Analysis & Design

Master of Science (Information Technology)

Electives

ICT 601 Programming in Java

ICT 602 E-Commerce

ICT 603 Software Engineering

ICT 604 Multimedia Systems

ICT 605 IT Management **Project/Thesis**

A written report between 10,000 – 12,000 words that covers both theory & practical knowledges of the above units.

To qualify for a MSc.IT degree, a student must take and pass 10 modules from the above list of modules, 6 modules are compulsory and the rest are electives.

Additionally, the student must undertake and pass a research-based or work-related project.

Graduate Diploma in Architectural Engineering Course Work

To complete the Graduate Diploma in Engineering, the students will have to complete 12 units with each 8 credit points totalling 96 credit points.

By adding Masters thesis of 24 credit points, they will complete 120 credit points . Total credit points for Masters degree is (Bachelor degree 120 credit points+ Graduate Diploma+ Masters degree 120 credit points Total 240 Credit points).

Graduate Diploma is pre-requisite for Masters degree.

Follow the instruction for Professional Diploma in Civil Engineering

www.highlightcomputer.com/profdipcivilengg.htm

Then complete the architecture units

<http://www.highlightcomputer.com/turesources.htm#i>

Also refer the followings which are not included in the above link.

- Professional Diploma in Civil and Architectural Engineering will be awarded , if 4 Architecture units are completed. 80 points at 20 points each
- Professional Diploma in Civil Engineering and Professional Diploma in Architectural I Engineering will be awarded if 6 Architecture units are completed. (120 points at 20 points each)
- If 8 Architecture Units are completed , Graduate Diploma in Architectural Engineering will be awarded (160 points at 20 points each)
- If 12 Architecture Units are completed , Master Diploma in Architectural Engineering will be awarded (ME-Architecture award by STC Technological University) (240 points)

Year 4 BE (Architectural Engineering)

AchE401 Architecture Theory

AchE402 Architectural Design

AchE403 Building Construction

AchE404 Building Services

AchE405 Construction Materials

AchE406 Sustainable Building Design

AchE407 Architectural Drafting

AchE408 Construction Quantity Surveying

Year 5 BE/ME(Year) (Architectural Engineering)

AchE501 Architectural Management

AchE502 Interior Design

AchE503 Green Building Design

AchE504 Construction Contract

AchE505 Solar Architecture & Smart House Design

AchE506 Architecture Commercial Design

AchE507 Urban Design

AE508 Landscape Design

Year 6 BE/ME (Year 2) (Architectural Engineering)

AchE601 Architectural Design & Ethics

AchE602 Building Survey & Reporting

AchE603 Building Control Systems

AchE604 Sustainable Architecture

AchE605 Details Design

AchE606 Outdoor Structure Design

Course Work Plan

The students will have to write 20 pages study report for each of the subjects outlined below.

The report needs to include

- Book review- Review on each chapter of the book highlighting the key concepts, key formula, key theory & practical application concepts
- Own idea on how to apply those concepts in real practical applications.
- Examples of engineering designs that use the concepts & knowledge expressed in those books (If any)
- Your comment on each book

BAE 655-Wireless Communications

BAE 656-Advanced Digital Signal Processing

BAE 657-Advanced Electromagnetics

BAE 658-Real-time Systems

BAE 659-Computer-aided Control Systems

BAE 660-Control Engineering

BAE 661-Design of Electrical Services for Buildings

BAE 662-Design of Rotating Electrical Machines

BAE 663-Digital Electronics

BAE 664-Distributed Generation in Power System

BAE 665-Embedded Digital Signal Processing Systems

BAE 666- Low Emission Electricity Generation

BAE 667-Industrial Control System

BAE 668-Photonics

BAE 669-Power Electronics and Instrumentation Engineering

BAE 670-Power System Engineering

BAE 671-Satellite Communications and Navigation Systems

BAE 672-Industrial & System Engineering

BAE 673-Frequency Stability

BAE 674-Intelligent Systems

BAE 675-Nanoelectronics

BAE 676-Failure Analysis

BAE 677-Photovoltaics System

Graduate Diploma in Chemical Engineering Course Work

Professional Diploma (BE)/ Master Diploma (ME) in Chemical Engineering /Metallurgy/Petroleum

Follow the instruction for Professional Diploma in Chemical Engineering

<http://www.highlightcomputer.com/profdipchemengg.htm>

Then do specialized additional studies in Metallurgy/ Explosion Protection/ Petroleum

Based on the units selection and amount of studies, the following qualifications can be issued

Professional Diploma/ Master Diploma in Metallurgical Engineering and Petroleum Engineering

- Professional Diploma in Chemical and Metallurgical Engineering will be awarded , if 4 Metallurgy units are completed. 80 points at 20 points each
- Professional Diploma in Chemical Engineering and Professional Diploma in Metallurgical Engineering will be awarded if 6 Metallurgy units are completed. (120 points at 20 points each)
- If 8 Metallurgy Units are completed , Graduate Diploma in Metallurgical Engineering will be awarded (160 points at 20 points each)
- If 12 Metallurgy Units are completed , Master Diploma in Metallurgical Engineering will be awarded (ME-Metallurgical award by STC Technological University) (240 points)
- Professional Diploma in Chemical and Petroleum Engineering will be awarded , if 4 Petroleum units are completed. (80 points at 20 points each)
- Professional Diploma in Chemical Engineering and Professional Diploma in Petroleum Engineering will be awarded if 6 Petroleum units are completed. (120 points at 20 points each)
- If 8 Petroleum Units are completed , Graduate Diploma in Petroleum Engineering will be awarded (160 points at 20 points each)
- If 12 Petroleum Units are completed , Master Diploma in Metallurgical Engineering will be awarded (ME-Petroleum award by STC Technological University) (240 points at 20 points each)

Graduate Diploma & Master Diploma in Chemical Engineering

- Graduate Diploma in Chemical Engineering will be awarded if the following additional units are completed
 1. PE 41014+42014+Natural Gas Processing-PE 51024Natural Gas Engineering
 2. PE 21002+22002-Drilling Fluids

3. Met507 Explosive Engineering

From <http://www.highlightcomputer.com/profdiphazardous.htm>

4. BAE 637E Hazardous Chemical Management
5. BAE 638E Environmental Engineering in Hazardous Areas
6. BAE 636 E Hazardous Area Inspection
7. BAE 634 Explosion Protection
8. BAE 633E Hazardous Area Safety Audits (160 points at 20 points each)

Then complete Chemical Engineering Thesis to complete Master Diploma in Chemical Engineering (ME-Chemical)

Course Work Plan

The students will have to write 20 pages study report for each of the subjects outlined below.

The report needs to include

- Book review- Review on each chapter of the book highlighting the key concepts, key formula, key theory & practical application concepts
- Own idea on how to apply those concepts in real practical applications.
- Examples of engineering designs that use the concepts & knowledge expressed in those books (If any)
- Your comment on each book

Graduate Diploma in Civil Engineering Course Work

To complete the Graduate Diploma in Engineering, the students will have to complete 12 units with each 8 credit points totalling 96 credit points.

By adding Masters thesis of 24 credit points, they will complete 120 credit points . Total credit points for Masters degree is (Bachelor degree 120 credit points+ Graduate Diploma+ Masters degree 120 credit points Total 240 Credit points).

Graduate Diploma is pre-requisite for Masters degree.

Graduate Diploma in Mechanical Engineering Course Work

To complete the Graduate Diploma in Engineering, the students will have to complete 12 units with each 8 credit points totalling 96 credit points.

By adding Masters thesis of 24 credit points, they will complete 120 credit points . Total credit points for Masters degree is (Bachelor degree 120 credit points+ Graduate Diploma+ Masters degree 120 credit points Total 240 Credit points).

Graduate Diploma is pre-requisite for Masters degree.

Course Work Plan

The students will have to write 20 pages study report for each of the subjects outlined below.

The report needs to include

- Book review- Review on each chapter of the book highlighting the key concepts, key formula, key theory & practical application concepts
- Own idea on how to apply those concepts in real practical applications.
- Examples of engineering designs that use the concepts & knowledge expressed in those books (If any)
- Your comment on each book

BAE 625- Structural Engineering Mechanics

BAE 678A/B-Machine Design

BAE 707 Engineering Ethics

Society of Professional Engineers-UK

<http://www.professionalengineers-uk.org/index.php/the-society/code-of-professional-conduct>

Code of Professional Conduct

All individuals registered as Professional Engineers and those aspiring to become registered Professional Engineers shall deliver services in accordance with the Society's Code of Professional Conduct and shall:

1. Competence

- a) only undertake professional tasks for which they are competent and will at all times exercise all reasonable professional skill and care to prevent avoidable danger to health or safety and the creation of adverse impacts on the environment.
- b) maintain and broaden their knowledge, experience and competence and encourage others to do so.

2. Integrity

- a) treat all persons fairly with respect and without bias
- b) avoid where possible real or perceived conflict of interest and advise affected parties should such conflicts arise.
- c) observe the proper duties of confidentiality owed to appropriate parties.
- d) discharge their professional duties with integrity, impartiality and objectivity and have no involvement with any form of bribery.

3. Responsibility

- a) accept appropriate responsibility for work carried out under their supervision.
- b) assess relevant risks and liability and, if appropriate, have in force appropriate liability insurances.
- c) notify the Society within 28 days:
 - if convicted of a criminal offence other than parking fines or convictions for exceeding the speed limit:
 - upon becoming bankrupt or disqualified as a Company Director:
 - if they are removed from the membership of another professional body as the result of a matter relating to conduct.
- d) notify the Society of any significant violation of the Code of Conduct by any Professional Engineer on the register or any aspiring member seeking to gain access to the register.

4. Information

- a) co-operate with the Society and provide such information as may be requested to facilitate any investigation into the conduct of any Professional

Engineer on the register or any aspiring member seeking to gain access to the register.

5. Relationships

a) have due regard to their duty of care to clients and not take advantage of any client or potential client for whatever cause or reason in obtaining and carrying out instructions.

b) put all terms of engagement in writing and state the fees to be charged; whenever practicable, these should be issued to the client before a project is begun.

c) inform his/her client immediately if it appears that his/her estimate as to the total fees to be charged is likely to be or will be exceeded.

d) take care not to mislead a client as to the range of services that a quoted fee is intended to cover and the amount of future fees which may be involved.

Note in respect of relationships: Any Professional Engineer on the register or any aspiring member seeking to gain access to the register shall not:

- accept a professional assignment if he/she is aware or has reasonable cause to suspect that another member is acting for the client in respect of the same assignment, until either the first contract has been determined by the client, or the other member has consented to him acting.
- induce a client to agree to pay sums of money which are not justified by reference to the work which the member has carried out or has been instructed to carry out.
- offer or give any fee, commission, discount or other inducement (financial or otherwise) to a third party in return for the introduction of clients or particular professional assignments unless, before entering into a legally binding agreement

with that client he/she makes full disclosure to the relevant client of the nature or amount of such fee, commission, discount or inducement and the name of the person or persons to whom such fee, commission, discount or inducement was offered or given.

6. Practice

a) Ensure that in respect of any firm in which he/she is or is held out to be a sole proprietor, partner or a director or through which he/she practises or conducts business:

- the composition (list of partners or directors) is clearly stated on all appropriate documentation and that where there has been a material alteration to the composition, all clients of the firm or company are notified of the change promptly;
- the style or title does not adversely reflect upon his/her professional status as a Professional Engineer and the dignity and reputation of the engineering profession;
- the name is not misleading or liable to cause confusion with the public, nor does it imply any partnership arrangement with or endorsement of services by the Society.

b) Titles associated with the registration of Professional Engineers such as “PEng” and “PEng(UK)” and membership of the Society such as “Fellow of the Society of Professional Engineers”, “Member of the Society of Professional Engineers”, and all others relating to membership of the Society of Professional Engineers, and the designations FSPE, MSPE, Hon.FSPE, Hon.MSPE shall only be used or authorised to be used in connection with a partnership or company

- in the name of any partnership in which such member practises provided all the member’s partners are similarly entitled to use the Title and designatory letters
- to describe the name of any company provided only that all the shareholders and/or members of such company and all the directors of such company are similarly entitled to use the Title.
- to describe the name of a firm or business which is not a partnership or company in which he/she practises provided such use of the Title does not give the impression that any other person or persons with whom such member is carrying on business or whom such member employs or with whom such member is associated in any way is entitled to use the same Relevant Title or, if the impression referred to is given, such other person or persons is or are similarly entitled to use the Title.

7. Managerial responsibility

a) In addition to the responsibilities referred to in the Rules of Professional Conduct, but subject to the following, any Professional Engineer on the register or any aspiring member seeking to gain access to the register shall be prima facie responsible, as a matter of professional conduct, for the acts or omissions including, in particular, breach of any of the provisions of the Articles and Bye-Laws of the Society or these Rules of Professional Conduct of:

- any firm in which the member is, or holds him/herself out to be, or allows him/herself to be held out as a partner, or any firm which the member allows to use his/her name and/or style

and title or designatory letters in any of its advertisements, publicity material or notepaper;
and

- any company of which he/she is a director or any co-director of that company or any company which the member allows to use his/her name and/or style and title or designatory letters in any of its advertisements, publicity material or notepaper.

b) If any Professional Engineer on the register or any aspiring member seeking to gain access to the register is able to show that, without default on his/her part, he/she was not aware, and there was no reason for him to be aware at the time of any breach of these provisions by any firm or company referred to above and he/she had, prior to the breach, taken all reasonable steps to ensure that such a breach would not occur, then he/she shall not be in breach of this Rule.

8 Publicity and Advertising

a) Any Professional Engineer on the register or any aspiring member seeking to gain access to the register may publicise his/her services or permit another person to do so, but in doing so the member must have due regard to the standards set by the Advertising Standards Authority and any standards set by any other regulatory or governmental authority in relation to advertising and ensure that any publicity for which he/she is in any way responsible is neither inaccurate nor misleading.

b) In all advertising, publicity material or public statements for which any Professional Engineer on the register or any aspiring member seeking to gain access to the register is in any way responsible, he/she shall avoid all claims of superiority over, or critical comparisons of, the services provided by other engineers and shall avoid any direct comparison of fees and charges levied by other engineers.

c) Any Professional Engineer on the register or any aspiring member seeking to gain access to the register may only refer to the name of a client in any advertising, publicity material or public statement if the prior written consent of that client is first obtained.

d) Advertisements or other publicity material issued by any Professional Engineer on the register or any aspiring member seeking to gain access to the register or by a firm in which they are held out to be a partner or director or a company through which they practise or conducts their business may state (subject to compliance with any other relevant regulations or legal requirements) either expressly or implied that they, the firm or the company (as

the case may be) offers expertise or specialist advice in relation to a particular field of engineering provided only that this is the case.

ASSIGNMENT

From newspaper, journal, internet, online chatting groups, show one event that signify the breach of engineering ethics such as use of substandard materials, breach of safety law, breach of fair practice, attempt to monopolizing, use of law and authority for safeguarding own benefits or personal associates, depressing others and highlight how engineering ethics are breached.

MASTER OF SCIENCE (RENEWABLE ENERGY COURSE OUTLINE)

Part (1) Preliminary Course

RE001- Foundation Studies in Renewable Energy and Sustainability
RE002- Grid Connected Photovoltaic Power Systems
RE003- Solar and Thermal Energy Systems
RE004- Energy Storage Systems
RE005- Renewable Energy Resource Analysis
RE006- Wind Energy Conversion Systems
RE007- Energy System Efficiency

Part (2) Qualified (1) Course

Semester (1)

RE008-Mathematics & Physics (I)
RE009-Mathematics & Physics (II)
RE010-Engineering Materials
RE011-Civil & Mechanical Engineering

Semester (2)

RE012-Electrical Engineering
RE013-Electrical Machines
RE014-Electronics Control
RE015-Electrical Project
RE016-Design & Management

Part (3) Qualified (2) Course

RE 501-Control of Solar Energy System
RE502- Biomass Gasification
RE503- Energy Management in Industrial and Commercial Facilities
RE504- Engineering Solution for Sustainability
RE505- Green Building Design
RE506- Low Emission Power Generation Technologies
RE507- Offshore Wind Turbines
RE508- Solar Hydrogen Energy System
RE509- Applied Photovoltaics
RE510- Water Conservation
RE511- Sustaining Earth Energy resource

A written report between 10,000 – 12,000 words that covers both theory & practical knowledge of the above units.

Part (4) Final Thesis

Res 601 Research Method
MAE 602 Thesis

This course guides the student, step by step, through the research process, from problem selection through writing up results. It provides all of the basics necessary to complete a research project in any discipline.

Outline. The following aspects are reflected in this course:

What is research?

Tools of research

The problem: the heart of the research process

Review of the related literature

Planning your research design

Writing the research proposal

Qualitative research

Historical research

Descriptive research

Experimental and causal - comparative designs

Statistical techniques for analyzing quantitative data

Technical details: style, format, and organization of the research report

Masters Research Proposal

Synopsis: Research students are expected to present a written research proposal within three months after commencement. The proposal is handed in to the study leader.

Assessors of this proposal are selected by the faculty for their understanding of the field and the research involved. The purpose of a research is to set out a plan for conducting the research and writing the dissertation within the available time. It should take account of the availability and guidance of the study leader.

The starting point for a research proposal is the topic, which is the field of interest in which the research is to be carried out. In introducing the topic, the proposal should clarify the field that it falls into and the specific part that field which the research will explore. It should clarify why the topic is of interest and importance, and how the proposed research will contribute to the field of knowledge or profession. The proposal should clarify the research questions, ensuring that these are specific and answerable.

It is important to show how these questions relate to the topic are, and how they will advance the student's contribution. The proposal should detail the research to

be carried out, and clarify the research methods, the timeframe and the reasons for selecting particular methods. Where a period of literature review or research should precede any empirical research, this should be factored in as part of the research. It is important to estimate any periods of field research and to flag their duration and cost in your research proposal.

Res 601 Research Method

MENG6005 Quantitative Methods and Statistics (45 hrs) 3 credits

MAE 602 Thesis

Engineering Project/Thesis 24 credits

Candidates need to complete a 60000-words engineering dissertation (in Myanmar or English) and a 3000-words executive portfolio (in English).

This program requires the candidates to complete a dissertation as part of the assessment for the MSc (RE) degree. Doing a thesis means that instead of knowledge and information being presented and following a prescribed route for answering questions, candidates are thrust into an active role of managing an investigation into a topic area. This means researching and discovering things for themselves. They will have to set their own targets and parameters, pose their own central research questions and decide on the appropriate sources of information to support the research. It therefore requires the use of the higher-level cognitive skills of analysis, synthesis and evaluation. Candidates may choose an area of particular interest to them within the scope of course title. A dissertation is an individual effort and the candidate, academic tutor and the course professor will work together on constructing an approved topic (research question) and methodologies.

Engineering Dissertation Defense 9 credits

It is expected of Master's candidates to defend their thesis by means of a colloquium doctum (academic discussion). The purpose of the meeting is for the candidates to convince a panel of experts in the field of the dissertation how well they have done in the conducting of their research study and the preparation of their dissertation

Program Total Credits 48 credits

Candidates need to complete all course assessments with the results of Grade B+ or above.

Master of Science (Computer Network) (Each 10 credits) (70883)

Bachelor of Applied Science (Network)- 120 Credits

Master of Applied Science (Network)- 120 Credits

Total 240 credits

PART (1) Course Work in Graduate Diploma in Computer Network Level

(60 credits) (Each 10 credits)

ICTN701 APNET Content Management System

ICTN702 CISCO Certified Design Associate

ICTN703 CISCO Certified Network Associate

ICTN704 CISCO Firewall

ICTN705 CISCO LAN Switching Configuration

ICTN706 Computer Architecture and Security

PART (2) Course Work in Masters Level

(40 credits) (Each 10 credits)

Select 4 units

ICTN707 Computer Systems

ICTN708 Python Network Programming

ICTN709 Microsoft.NET Framework

ICTN710 Enterprise Network Monitoring

ICTN711 Parallel Computer Architecture

ICTN712 Cloud Computing

The students will have to write 20 pages study report for each of the subjects outlined below.

The report needs to include

- Book review- Review on each chapter of the book highlighting the key concepts, key points, key theory & practical application concepts in IT.
- Own idea on how to apply those concepts in real practical applications.

- Examples of IT system designs that use the concepts & knowledge expressed in those books (If any)
- Your comment on each book

Master of Applied Science Work Example

ENEY101A FOUNDATION STUDIES IN RENEWABLE ENERGY

AND SUSTAINABILITY

Course Outline

In this subject you will learn about the areas of renewable energy technologies and sustainability. You will develop foundation knowledge relating to:

- Defining sustainability and renewable energy
- Non-technical issues in sustainability and renewable energy
- Energy basics efficiency and calculations
- Solar energy systems
- Wind energy systems
- Hydro energy systems
- Biomass energy systems
- Ocean energy systems
- Principles of sustainable living
- Moving to a sustainable economy.

Prescribed Texts:

Mackay, D.J.C. 2008, *Sustainable Energy without the Hot Air*, UIT, Cambridge, England

Study Guide

WEEK NO:	TOPICS AND ACTIVITIES
Orientation Week	Orientation activities Review of syllabus and assessment activities.
Week 1	<ul style="list-style-type: none"> • Introduction to the Subject. • The cause of Climate Change. • Global and Australian Figures. • Climate Change - The Impacts and the imperative for change. Reading List: <ul style="list-style-type: none"> • <i>Sustainable Energy Without the Hot air</i>, pp. 5-18 • <i>ZCA Stationary Energy Plan</i>, pp. 2-3
Week 2	<ul style="list-style-type: none"> • Energy use in Australia. • Energy conversion and efficiency. • Primary, Secondary and End Use energy. Reading List: <ul style="list-style-type: none"> • Dept. of Energy Resources and Tourism, <i>Energy in Australia 2012</i>, pp. 15-28
Week 3	<ul style="list-style-type: none"> • Coal, Oil, Gas and Nuclear Energy Systems. Reading List: <ul style="list-style-type: none"> • Course notes
Week 4	<ul style="list-style-type: none"> • Solar Energy Systems – The Solar Resource – Photovoltaics. Reading List: <ul style="list-style-type: none"> • <i>Sustainable Energy Without the Hot air</i>, pp. 38-49
Week 5	Field Trip <ul style="list-style-type: none"> • Solar Energy Systems - Solar Hot Water, Solar Air conditioning and Solar Thermal Electricity. Reading List: <ul style="list-style-type: none"> • <i>Sustainable Energy Without the Hot air</i>, pp. 38-49 • <i>ZCA Solar Thermal Power Basics and Solar Thermal Power fact sheets</i>
Week 6	<ul style="list-style-type: none"> • Wind Energy Systems – size of the resource, principles of operation, World and Australian wind energy. Reading List: <ul style="list-style-type: none"> • <i>Sustainable Energy Without the Hot air</i>, pp. 32-34, 186-189 • <i>Clean Energy Council Fact sheet on Wind Energy</i> Assessment 1 due: Individual written report - 10%
Week 7	
Week 8	<ul style="list-style-type: none"> • Hydro Energy Systems – size of the resource, principles of operation, World and Australian Hydro energy. Reading List:

WEEK NO:	TOPICS AND ACTIVITIES
	<ul style="list-style-type: none"> • <i>Sustainable Energy Without the Hot air</i>, pp. 55-56 and pp. 190-194 • <i>Clean Energy Council Fact sheet on Hydro Electricity</i> Assessment 2 due: Written report on field trip - 5%
Week 9	<ul style="list-style-type: none"> • Biomass • Geothermal Reading List <ul style="list-style-type: none"> • <i>Clean Energy Council Fact sheet on Geothermal Energy</i> • <i>Clean Energy Council Fact sheet on Bio Energy</i> • <i>Sustainable Energy Without the Hot air</i>, pp. 96-99
Week 10	<ul style="list-style-type: none"> • Ocean Energy – Wave and tidal Reading List: <ul style="list-style-type: none"> • <i>Sustainable Energy Without the Hot air</i>, pp. 73-75; pp. 81-87; pp. 307-321 • <i>Clean Energy Council Fact sheet on Marine Energy</i>
Week 11	<ul style="list-style-type: none"> • The imperative for Sustainability • Moving to Renewable Energy Reading List: <ul style="list-style-type: none"> • <i>Less is More</i>, pp. 205-235
Week 12	<ul style="list-style-type: none"> • Sustainable Building Design • Sustainable Food and Farming Reading List: <ul style="list-style-type: none"> • <i>Sustainable Energy Without the Hot air</i>, pp. 76-80 • www.yourhome.gov.au <i>Technical Manual</i>, pp. 69-127
Week 13	<ul style="list-style-type: none"> • Sustainable Transport • Sustainable Mining and Manufacturing Reading List: <ul style="list-style-type: none"> • <i>Sustainable Energy Without the Hot air</i>, pp. 29-31; 35-37; 118-139; 88-95 and 322-326 • <i>ZCA Stationary Energy Plan</i>, pp. 16-19 Assessment 3 due: Collaborative written report – 30% Assessment 4: Presentation based on collaborative written report – 10%
Week 14	Study Week
Week 15	Examination Week B: Assessment 5: Written examination - 45%

AEEGY 101A Grid Connected Photovoltaics Power System

Course

Outline

In this subject you will learn the basics about photovoltaics and grid design. You will develop knowledge and applied skills relating to:

- Solar geometry
- Solar radiation terms and measurements
- Photovoltaic cell and module characteristics
- Manufacture of photovoltaic modules
- Photovoltaic array design and characteristics
- Effects of tilt, orientation, temperature and shading
- Workplace health and safety standards, Australian and industry standards
- Inverter principles and requirements for grid-connected inverters in Australia
- Inverter and Array matching
- Wiring, Protection and Earthing
- Metering and Tariff arrangements
- Installation and Commissioning
- Maintenance.

AEEGY 102A Solar and Thermal Energy Systems

Course Outline

In this subject you will learn about solar and thermal energy systems. You will develop specialised knowledge and applied skills relating to:

- Solar energy utilisation - introduction and overview
- Heating load calculations
- Thermal environment – solar radiation, shading and energy conservation
- Solar collectors
- Collector requirements for some specific applications
- Thermal energy storage
- Solar cooling
- Mechanical Power generation
- Sizing of heating, cooling and mechanical power generation components
- Ancillary equipment
- Equipment specification and installation
- Performance analysis.

AEEGY 201A Energy Storage System

Course Outline

In this subject you will learn about energy storage systems. You will develop specialised knowledge and skills relating to:

- The need for and benefits of energy storage technologies
 - Current energy storage technologies and their application
 - Environmental impacts and benefits of energy storage systems
 - Designing an energy storage system for specific engineering applications
 - Costing and payback of energy storage systems
 - Designing and building a small scale energy storage system.
-

AEEGY202A Renewable Energy Resources Analysis

Course Outline

In this subject you will learn about renewable energy resource analysis. You will develop specialised knowledge and skills relating to:

- National and international trends in renewable energy resource analysis
- Energy history
- Australian Renewable Energy reserves
- Energy and power conversion
- Behavioural trends and misconceptions
- Power Cycles
- Oil, coal and natural gas
- Solar photovoltaics
- Solar thermal
- Wind Energy
- Hydro-power
- Bio-mass
- Geo-thermal
- Ocean energy
- Hydrogen Economy
- Limitations in existing infrastructure.

AEEGY 203A Wind Energy Conversion System

Course Outline

In this subject you will learn about wind energy conversion systems. You will develop specialised knowledge and skills relating to:

- Introduction to wind as a natural resource
- Energy, power and wind
- Wind characteristics
- Data acquisition methods
- Site characteristics
- Correlation, wind and site
- Predicting energy output
- Turbines, types and construction
- Wind Energy Conversion Systems (WECS) sizing
- Retrospective performance.

AEEGY 204 A Energy Efficiency

Course Outline

In this subject you will learn about the efficiency of energy systems. You will develop specific knowledge and skills relating to:

- Energy conversion efficiencies of conventional and renewable energy systems
- Energy auditing
- Economic and environmental benefits of energy efficiency
- Energy efficiency of various energy loads
- Cogeneration (CHP)
- Pros and cons of distributed generation in terms of energy efficiency
- Ways to improve energy efficiency at the generation point and in the distribution system
- Ways to improve energy efficiency at the load points.

Part (2) Qualified (1) Course

ENMAT 101A Engineering Materials & Processes

Course Outline

In this subject you will learn about the structure, properties and usage of a variety of materials used in engineering applications. You will develop specialised knowledge relating to:

- Material structure and properties
- Mechanical properties
- Metals - ferrous and non-ferrous
- Polymers
- Ceramics
- Composites, concrete, other
- Basic destructive testing
- Steel – FeC (Iron/Carbon), heat treatment
- Casting - perm/non-perm
- Forming - hot, cold
- Processes - PowderM, welding, Rapid Proto
- Polymer processes - IM, BM, extrus, thermoset, composites
- Joining - fasteners, weld, non-fusion
- Corrosion
- Surface treatments - plating, coatings, peening, anodising
- Non-destructive testing
- Quality assurance and control, certified testing, safety, materials safety data sheets (MSDS)
- Economic and environmental issues - production/recycling.

Study Guide

WEEK	LECTURES / EXAMINATIONS	LABORATORY	QUIZ
Orientation Week	Orientation activities Review of syllabus and assessment activities. Laboratory orientation. Academic Foundations: Note taking; study skills; introduction to conducting research.		
Week 1	Lecture (2 hrs): Readings: Ch 1: Engineering materials; Ch 2: Properties of materials.	Laboratory 1 (2 hrs): Hardness test	
Week 2	Lecture (2 hrs): Readings: Ch 3: Mechanical testing; Ch 4: The crystal structure of metals.	Laboratory 2 (2 hrs): Tensile Test	
Week 3	Lecture (2 hrs): Readings: Ch 5: Casting process; Ch 6: Mechanical deformation of metals; Ch 7: The mechanical shaping of metals.	Laboratory 3 (2 hrs): Metal Casting	10101
Week 4	Lecture (2 hrs): Readings: Ch 8: Alloys; Ch 9: Equilibrium diagrams; Ch 10: Practical microscopy	Laboratory 4 (2 hrs): Microscopy, Weld samples	10102
Week 5	Lecture (2hrs): Readings: Ch 11: Iron and steel; Ch 12: The heat-treatment of plain-carbon steels	Laboratory 5 (2 hrs): Torsion, Bending Tests	10103
Week 6	Lecture (2hrs): Readings: Ch 13: Alloy steels; Ch 14: The surface hardening of steels; Ch 15: Cast iron.	Laboratory 6 (2 hrs): Heat Treatment	
Week 7	Examination Week A: Assessment 2: Short answer test on content from weeks 1 to 5 (Ch 1 to Ch 15) 15%	Assessment 3 due: Portfolio of Laboratory Reports 1, 2, 3 & 4 - 15%	
Week 8	Lecture (2hrs): Readings: Ch 16: Copper and its alloys; Ch 17: Aluminium and its alloys; Ch 18: Other non-ferrous metals and their alloys.	Laboratory 7 (2 hrs): Polymer tensile test,	10105

WEEK	LECTURES / EXAMINATIONS	LABORATORY	QUIZ
Week 9	Lecture (2hrs): Readings: Ch 19: Plastics materials and rubbers; Ch 20: Properties of plastics.	Site Visit: e.g. Rolling Mill, Materials process/testing	
Week 10	Lecture (2hrs): Readings: Ch 21: Ceramics; Ch 22: Glasses; Ch 23: Composite materials.	Demo: Epoxy FRC, thermoforming	10106
Week 11	Lecture (2hrs): Readings: Ch 24: Fibre-reinforced composite materials; Ch 25: Methods of joining materials.	Laboratory 8 (2 hrs): Dye, Mag, Ultrasound	10104
Week 12	Lecture (2hrs): Readings: Ch 26: Causes of failure; NDT; Material Standards.	Laboratory 9 (2 hrs): Product Study	10107
Week 13	Lecture (2 hrs): Readings: Ch 27 Choice of Materials and Processes; Design. Economic, Environmental, Social Issues.	Assessment 4 due: Collaborative Report (Product Study) 15%	10108
Week 14	Study Week		
Week 15	Examination Week B: Assessment 5: Written examination: 30%	Assessment 3 due: Portfolio of Laboratory Reports 5, 6, 7, 8 & 9 - 15%

ENELE 101A Principle of Electrical Engineering

Course Outline

In this subject you will learn about basic principles of electrical engineering. You will develop a range of foundation knowledge and skills relating to:

- Notation and units
- Circuit topologies

Direct current (DC) circuit principles:

- Voltage, current, power, resistance, conductance
- Ohm's Law; Kirchhoff voltage and current laws
- Series and parallel configurations
- Linearity and Superposition
- Thévenin and Norton equivalent circuits (simple cases)
- Nodal and mesh analysis (simple cases)
- Maximum power transfer
- Capacitors
- Passive and switched resistor-capacitor (RC) circuits
- Inductors
- Passive and switched resistor-inductor (RL) circuits
- Diodes

Alternating current (AC) circuit principles:

- Amplitude, frequency and phase
- Voltage
- Current and power in resistors, inductors & capacitors
- Time domain analysis of ac circuits
- Review of complex numbers
- Phasors and phasor notation
- Complex impedance and admittance
- Thévenin and Norton equivalents (simple cases)
- AC power (real, reactive, complex)
- Root-mean-square (RMS) values
- Maximum power transfer.

Study Guide

WEEK NO:	TOPICS AND ACTIVITIES
Orientation Week	Orientation activities Review of syllabus and assessment activities.
Week 1	Introduction to DC Circuits Reading List: Chapter 1 Sections: 1.1 – 1.5 Chapter 2 Sections: 2.1 – 2.6 & 2.9 Text: Dorf, R & Svoboda, J, 2010, <i>Introduction to Electric Circuits</i> , 8 th Edn, John Wiley & Sons, Hoboken, NJ.
Week 2	Kirchhoff Voltage & Current Laws Reading List: Chapter 3 Sections: 3.1 – 3.6 & 3.10 Text: Dorf, R & Svoboda, J, 2010, <i>Introduction to Electric Circuits</i> , 8 th Edn, John Wiley & Sons, Hoboken, NJ.
Week 3	Node & Mesh Analysis Reading List: Chapter 4 Sections: 4.1 – 4.3, 4.5, 4.6, 4.8, 4.13 Text: Dorf, R & Svoboda, J, 2010, <i>Introduction to Electric Circuits</i> , 8 th Edn, John Wiley & Sons, Hoboken, NJ.
Week 4	Superposition Principle & Source Transformation Thévenin & Norton Equivalent DC Circuits Reading List: Chapter 5 Sections: 5.1 – 5.6 & 5.11 Text: Dorf, R & Svoboda, J, 2010, <i>Introduction to Electric Circuits</i> , 8 th Edn, John Wiley & Sons, Hoboken, NJ.
Week 5	Capacitors & Inductors Reading List: Chapter 7 Sections: 7.1 – 7.8 & 7.13 Text: Dorf, R & Svoboda, J, 2010, <i>Introduction to Electric Circuits</i> , 8 th Edn, John Wiley & Sons, Hoboken, NJ.
Week 6	Passive & Switched RL & RC Circuits Reading List: Chapter 8 Sections: 8.1 – 8.4, 8.6 & 8.12 Text: Dorf, R & Svoboda, J, 2010, <i>Introduction to Electric Circuits</i> , 8 th Edn, John Wiley & Sons, Hoboken, NJ.
Week 7	Examination Week A: Assessment 1: Written examination - 25%

WEEK NO:	TOPICS AND ACTIVITIES
Week 8	Diodes in DC Circuits Introduction to AC Circuits Reading List: Chapter 10 Sections: 10.1 & 10.2 Text: Dorf, R & Svoboda, J, 2010, <i>Introduction to Electric Circuits</i> , 8 th Edn, John Wiley & Sons, Hoboken, NJ.
Week 9	AC Steady-State Analysis Reading List: Chapter 10 Sections: 10.3 & 10.4 Text: Dorf, R & Svoboda, J, 2010, <i>Introduction to Electric Circuits</i> , 8 th Edn, John Wiley & Sons, Hoboken, NJ.
Week 10	Complex Numbers & Phasor Notation Reading List: Chapter 10 Sections: 10.5 – 10.6 & 10.11 Text: Dorf, R & Svoboda, J, 2010, <i>Introduction to Electric Circuits</i> , 8 th Edn, John Wiley & Sons, Hoboken, NJ.
Week 11	Impedance & Admittance Thevenin & Norton Equivalent AC Circuits Reading List: Chapter 10 Section: 10.7 & 10.10 Text: Dorf, R & Svoboda, J, 2010, <i>Introduction to Electric Circuits</i> , 8 th Edn, John Wiley & Sons, Hoboken, NJ. Assessment 2 Due: Portfolio and/or written report on practicum work and experiments (Laboratory Workbook) – 25%
Week 12	AC Power Reading List: Chapter 11 Sections: 11.1 – 11.6 Text: Dorf, R & Svoboda, J, 2010, <i>Introduction to Electric Circuits</i> , 8 th Edn, John Wiley & Sons, Hoboken, NJ.
Week 13	Power Superposition & Maximum Power Reading List: Chapter 11 Sections: 11.7 – 11.8 Text: Dorf, R & Svoboda, J, 2010, <i>Introduction to Electric Circuits</i> , 8 th Edn, John Wiley & Sons, Hoboken, NJ.
Week 14	Study Week
Week 15	Examination Week B: Assessment 3: Written examination – 50%

ENELE201A Advanced Electrical Engineering

Course Outline

In this subject you will build on basic engineering knowledge gained in previous sub and develop further knowledge and skills relating to electrical engineering:

Circuit analysis:

- DC and AC Network theorems (Kirchhoff's, Superposition)
- Resonance
- Magnetically coupled circuits

Communications and signalling processing and applications:

- Analogue and digital communications principles
- Filters
- Amplifiers and attenuators
- Communication protocols

Analogue and digital communication systems and control circuits:

- Telemetry and monitoring systems
- Control systems and applications.

ENELE202A Principle of Electrical Machines

Course Outline

In this subject you will learn basic principles of electrical machinery. You will develop specialised knowledge and skills relating to:

Transformers:

- Transformer Principles and Construction
- Efficiency
- Impedance
- Equivalent circuit
- Polarity
- Vector groups
- Parallel operations
- Special Transformers (Auto and Instrument etc)

Induction Motors:

- Principle of Induction Motor
- Construction and operation of Squirrel Cage Induction Motors (SCIM) and Wound Rotor Induction Motors (WRIM)
- Operation and characteristics
- Induction Generator
- Single Phase Induction Motor

Synchronous Machines:

- Principles of operation
- Characteristics
- Motors
- Alternators

DC Machines:

- Principles of operation
- Shunt Series Compound Machines
- Characteristics

Single Phase and Special Motors:

- Split Phase motor
- Capacitor Start/Run motor

- Shaded Pole motor
- Universal motor
- Hysteresis motor
- Stepper motors
- Brushless DC motors
- Permanent magnet motors
- Variable reluctance motors
- Stepper motors
- Brushless DC motors

Electronic Control of Motors

- DC Motors
- AC Motors.

ENELE 203A Electronics and Power Control

Course Outline

In this subject you will learn about electronics and power control. You will develop specialised knowledge and skills relating to:

Semiconductors, diodes, transistors and integrated circuits:

- Semiconductor materials and junctions
- Diode construction, operation, ratings and applications
- Transistor construction, operation, ratings and applications
- Integrated circuit construction, operation, ratings and applications especially as related to operational amplifiers

Linear regulated dc power supplies:

- Basic power supplies (ac to dc and dc to dc), circuits and applications
- Regulation requirements and applications

Switching power control circuits:

- Basic types, operation
- Critical issues, solutions and applications

Digital electronics

- Digital logic, circuits and power control applications

Power Inverters (DC to AC):

- Basic types, operation
- Critical issues, solutions and applications.

ENPRA101A Engineering Practice

Course Outline

In this subject you will learn about the practices of an engineering professional within a multidisciplinary framework. You will develop basic knowledge and skills relating to electrical and other engineering specialisations, including:

Introduction to the Regulatory System:

- Electricity Act
- Electricity Regulation Australian
- Standards State Regulators
- Workplace Health and Safety
- Engineers Code of Ethics

Drawings And Specifications:

- Drawing Interpretation
- Overview of Computer Aided Design (CAD)
- Writing a Specification

Generation and Distribution:

- Generating Plant
- Transmission Grid
- Substations

Fasteners and Fastening Methods:

- Methods of securing electrical equipment to various surfaces

Wiring Systems:

- Load Calculations
- Max. Demand
- Cables and Systems
- AS3008

Control and Protection:

- Earthing
- Protection for safety
- Faults and overloads
- Protective devices and methods

Illumination:

Part (4) Final Thesis

Res 601 Research Method

MAE 602 Thesis

[http://www.filefactory.com/file/1l1r1k0ftawt/n/11.Research+Thesis \(ICT 605\).zip](http://www.filefactory.com/file/1l1r1k0ftawt/n/11.Research+Thesis (ICT 605).zip)

This course guides the student, step by step, through the research process, from problem selection through writing up results. It provides all of the basics necessary to complete a research project in any discipline.

Outline. The following aspects are reflected in this course:

What is research?

Tools of research

The problem: the heart of the research process

Review of the related literature

Planning your research design

Writing the research proposal

Qualitative research

Historical research

Descriptive research

Experimental and causal - comparative designs

Statistical techniques for analyzing quantitative data

Technical details: style, format, and organization of the research report

Masters Research Proposal

Synopsis: Research students are expected to present a written research proposal within three months after commencement. The proposal is handed in to the study leader. Assessors of this proposal are selected by the faculty for their understanding of the field and the research involved. The purpose of a research is to set out a plan for conducting the research and writing the dissertation within the available time. It should take account of the availability and guidance of the study leader. The starting point for a research proposal is the topic, which is the field of interest in which the research is to be carried out. In introducing the topic, the proposal should clarify the field that it falls into and the specific part that field which the research will explore. It should clarify why the topic is of interest and importance, and how the proposed research will contribute to the field of knowledge or profession. The proposal should clarify the research questions, ensuring that these are specific and answerable. It is important to show how these questions relate to the topic are, and how they will advance the student's contribution. The proposal should detail the research to be carried out, and clarify the research methods, the timeframe and the reasons for selecting particular methods. Where a period of literature review or research should precede any empirical research, this should be factored in as part of the research. It is important to estimate any periods of field research and to flag their duration and cost in your research proposal.

MAE 601 Professional Engineering Practice

MENG6003 Selective I: management subject (45 hrs) 3 credits

MENG6004 Selective II: management subject (45 hrs) 3 credits

Res 601 Research Method

MENG6005 Quantitative Methods and Statistics (45 hrs) 3 credits

MAE 602 Thesis

Engineering Project/Thesis 24 credits

Candidates need to complete a 60000-words engineering dissertation (in Myanmar or English) and a 3000-words executive portfolio (in English).

This program requires the candidates to complete a dissertation as part of the assessment for the MSc (RE) degree. Doing a thesis means that instead of knowledge and information being presented and following a prescribed route for answering questions, candidates are thrust into an active role of managing an investigation into a topic area. This means researching and discovering things for themselves. They will have to set their own targets and parameters, pose their own central research questions and decide on the appropriate sources of information to support the research. It therefore requires the use of the higher-level cognitive skills of analysis, synthesis and evaluation. Candidates may choose an area of particular interest to them within the scope of course title. A dissertation is an individual effort and the candidate, academic tutor and the course professor will work together on constructing an approved topic (research question) and methodologies.

Engineering Dissertation Defense 9 credits

It is expected of Master's candidates to defend their thesis by means of a colloquium doctum (academic discussion). The purpose of the meeting is for the candidates to convince a panel of experts in the field of the dissertation how well they have done in the conducting of their research study and the preparation of their dissertation

Program Total Credits 48 credits

Candidates need to complete all course assessments with the results of Grade B+ or above.

CIVIL ENGINEER

ELECTRICAL POWER ENGINEER

ELECTRONICS ENGINEER

MECHANICAL ENGINEER

MECHATRONICS ENGINEER

CHEMICAL AND MATERIALS ENGINEER

ARCHITECT

2124-11 Civil Engineer

Plans, designs, organises and oversees the construction and operation of civil engineering projects such as structural, transportation or hydraulic engineering systems.

Skill Level:

The entry requirement for this occupation is a bachelor degree or higher qualification. In some instances relevant experience is required in addition to the formal qualification. Registration or licensing may be required.

Tasks Include:

- designs civil engineering projects such as hydraulic systems, roads, aerodromes, water supply systems, bridges and buildings
- studies, evaluates and reports on the environmental implications of projects
- determines construction methods, materials and quality standards
- drafts and interprets specifications, drawings, plans, construction methods and procedures
- organises and directs site labour and the delivery of construction materials, plant and equipment
- administers contracts and verifies and certifies satisfactory completion
- establishes detailed programs for the coordination of site activities
- sets up work control systems to ensure that standards of performance, quality, cost and safety are met
- consults with other engineers, architects, landscape architects and environmental scientists
- researches, investigates and evaluates materials, processes or systems related to civil engineering works
- supervises the testing and commissioning of completed works

2125-11 Electrical Engineer

Designs, develops and supervises the manufacture, installation, operation and maintenance of equipment, machines and systems for the generation, distribution, utilisation and control of electric power.

Skill Level:

The entry requirement for this occupation is a bachelor degree or higher qualification. In some instances relevant experience is required in addition to the formal qualification. Registration or licensing may be required.

Tasks Include:

- plans and designs the manufacture and installation of electric power equipment and facilities
- determines the type and arrangement of circuits, transformers, circuit-breakers, transmission lines and other equipment
- develops products such as electric motors, components, equipment and appliances
- interprets specifications, drawings, standards and regulations relating to electric power equipment and use
- organises and manages resources used in the supply of electrical components, machines, appliances and equipment
- establishes delivery and installation schedules for machines, switchgear, cables and fittings
- supervises the operation and maintenance of power stations, transmission and distribution systems and industrial plants
- may specialise in research in areas such as power generation and transmission systems, transformers, switchgear and electric motors, telemetry and control systems

Specialisations:

Electrical Design Engineer

2125-13 Electronics Engineer

Designs, develops, adapts, installs, tests and maintains electronic components, circuits and systems used for computer systems, communication systems and other industrial applications.

Skill Level:

The entry requirement for this occupation is a bachelor degree or higher qualification. In some instances relevant experience is required in addition to the formal qualification. Registration or licensing may be required.

Tasks Include:

- designs electronic components, circuits and systems used for computer, communication and control systems, and other industrial applications
- designs software, especially embedded software, to be used within such systems
- develops apparatus and procedures to test electronic components, circuits and systems
- supervises installation and commissioning of computer, communications and control systems, and ensures proper control and protection methods
- establishes and monitors performance and safety standards and procedures for operation, modification, maintenance and repair of such systems
- designs communications bearers based on wired, optical fibre and wireless communications media
- analyses communications traffic and level of service, and determines the type of installation, location, layout and transmission medium for communications systems

designs and develops signal processing algorithms and implements these through appropriate choice of hardware and software

အီလက်ထရောနစ်အင်ဂျင်နီယာ

- ဒီဇိုင်းများ၊ တည်ဆောက်မှုများ၊ လိုက်လျောညီထွေဖြစ်အောင်တပ်ဆင်ခြင်း၊ တပ်ဆင်ခြင်းများ၊
- IQY ဘာသာရပ်များ
-
- ကွန်ပျူတာ၊

2126-11 Mechanical Engineer

Plans, designs, organises and oversees the assembly, erection, operation and maintenance of mechanical and process plant and installations.

Skill Level:

The entry requirement for this occupation is a bachelor degree or higher qualification. In some instances relevant experience is required in addition to the formal qualification. Registration or licensing may be required.

Tasks Include:

- designs mechanical equipment, machinery, components, products for manufacture; and plant and systems for construction
- develops specifications for manufacture, determining materials, equipment, piping, material flows, capacities and layout of plant or systems
- organises and manages project labour and the delivery of materials, plant and equipment
- establishes detailed programs for the coordination of project activities
- sets up work control systems to ensure that standards of performance, quality, cost and safety are met
- administers contracts and verifies and certifies satisfactory completion
- supervises the functioning of manufacturing process plants such as coal handling installations, power station steam generating systems, and sewerage and water supply pumping stations
- supervises in consultation with other engineers the testing and commissioning of completed works
- may specialise in research in areas such as utilisation of energy, materials handling, thermodynamic processes, fluid mechanics and environmental controls

• စက်မှုအင်ဂျင်နီယာ

- စက်ပိုင်းဆိုင်ရာနှင့်စက်ရုံနှင့်စက်တပ်ဆင်ခြင်းများတပ်ဆင်ခြင်း၊ တပ်ဆင်ခြင်း၊ လည်ပတ်ခြင်းနှင့်ထိန်းသိမ်းခြင်းများအားစီမံခြင်း၊ ဒီဇိုင်းဆွဲခြင်း၊ စက်ပစ္စည်း၊ အစိတ်အပိုင်းများ၊ ထုတ်လုပ်ရန်ထုတ်ကုန်များကိုဒီဇိုင်းဆွဲသည်။
နှင့်စက်ရုံနှင့်ဆောက်လုပ်ရေးအတွက်စနစ်များ ပစ္စည်း၊ စက်ကိရိယာ၊ ပိုက်၊

ARCHITECTS AND LANDSCAPE ARCHITECTS

design commercial, industrial, institutional, residential and recreational buildings and landscapes.

ဗိသုကာနှင့်ရှုခင်းဆိုင်ရာဗိသုကာများသည်ကူးသန်းရောင်းဝယ်ရေး၊ စက်မှုလုပ်ငန်း၊ အဖွဲ့အစည်းဆိုင်ရာ၊ လူနေအိမ်နှင့်အပန်းဖြေအဆောက်အ ဦး များနှင့်ရှုခင်းများကိုဒီဇိုင်းထုတ်သည်။

Registration or licensing may be required.

Tasks Include:

- obtaining advice from clients and management to determine type, style and size of planned buildings and alterations to existing buildings
- providing information regarding designs, materials and estimated building times
- preparing project documentation, including sketches and scale drawings, and integrating structural, mechanical and aesthetic elements in final designs

- writing specifications and contract documents for use by builders and calling tenders on behalf of clients
- consulting with Professionals and clients about external area designs, costs and construction
- compiling and analysing site and community data about geographical and ecological features, landforms, soils, vegetation, site hydrology, visual characteristics and human-made structures, to formulate land use and development recommendations, and for preparing environmental impact statements
- preparing reports, site plans, working drawings, specifications and cost estimates for land development, showing location and details of proposals, including ground modelling, structures, vegetation and access
- inspecting construction work in progress to ensure compliance with plans, specifications and quality standards

ဖောက်သည်များနှင့်စီမံခန့်ခွဲသူများထံမှအကြံဉာဏ်ရယူခြင်း၊ စီစဉ်ထားသောအဆောက်အ ဦး များ၏ပုံစံ၊ ပုံစံနှင့်အရွယ်အစားနှင့်ရှိပြီးသားအဆောက်အ ဦး များကိုပြောင်းလဲခြင်း

Occupations:

232111 Architect

232112 Landscape Architect

232111 ARCHITECT

Plans and designs buildings, provides concepts, plans, specifications and detailed drawings, negotiates with builders and advises on the procurement of buildings.

Registration or licensing is required.

Skill Level: 1

Specialisation:

Conservation or Heritage Architect

232112 LANDSCAPE ARCHITECT

Plans and designs land areas for projects such as open space networks, parks, schools, institutions, roads, external areas for all building types, land subdivisions, and commercial, industrial and residential sites.

Skill Level: 1

Mechatronics Engineer

Do for both [Electronics Engineer](#) and [Mechanical Engineer](#)

Chemical & Materials Engineer

UNIT GROUP 2331 CHEMICAL AND MATERIALS ENGINEERS

CHEMICAL AND MATERIALS ENGINEERS design and prepare specifications for chemical process systems and the construction and operation of commercial-scale chemical plants, supervise industrial processing and fabrication of products undergoing physical and chemical change, and investigate the properties of metals, ceramics, polymers and other materials and assess and develop their engineering and commercial applications.

Indicative Skill Level:

In Australia and New Zealand:

Most occupations in this unit group have a level of skill commensurate with a bachelor degree or higher qualification. In some instances relevant experience and/or on-the-job training may be required in addition to the formal qualification (ANZSCO Skill Level 1).

Registration or licensing may be required.

Tasks Include:

- preparing designs for chemical process systems and planning control systems for processes such as those used to remove and separate components, effect chemical changes, test and evaluate fuels, transfer heat, and control the storing and handling of solids, liquids and gases
- monitoring the operation and maintenance of equipment to achieve maximum efficiency under safe operating conditions
- ensuring correct materials and equipment are used and that they conform to specifications
- diagnosing malfunctions in chemical plants and instituting remedial action
- studying product utilisation and pollution control problems
- reviewing plans for new products and submitting material selection recommendations in accordance with design specifications and factors such as strength, weight and cost

- planning and implementing laboratory operations to develop new materials and fabrication procedures for new materials to fulfil production cost and performance standards
- conferring with producers of materials, such as metals, ceramics, polymers, cements and elastomers, during the investigation and evaluation of materials suitable for specific product applications
- reviewing product failure data and implementing laboratory tests to establish or reject possible causes, and advising on ways to overcome any problems

- ဓာတုဖြစ်စဉ်စနစ်များအတွက်ဒီဇိုင်းများကိုပြင်ဆင်ခြင်းနှင့်အစိတ်အပိုင်းများကိုဖယ်ရှားခြင်းနှင့်သီးခြားခွဲထုတ်ခြင်း၊ ဓာတုပြောင်းလဲမှုများကိုအကျိုးသက်ရောက်ခြင်း၊ လောင်စာများကိုစမ်းသပ်ခြင်းနှင့်အကဲဖြတ်ခြင်း၊ အပူလွှဲပြောင်းခြင်းနှင့်စိုင့်အခဲများ၊
- လုံခြုံစိတ်ချရသောလည်ပတ်မှုအခြေအနေများတွင်အမြင့်ဆုံးထိရောက်မှုရှိစေရန်ပစ္စည်းကိရိယာများလည်ပတ်ခြင်းနှင့်ထိန်းသိမ်းခြင်းကိုစောင့်ကြည့်ခြင်း
- မှန်ကန်သောပစ္စည်းများနှင့်ပစ္စည်းကိရိယာများအသုံးပြုခြင်းကိုသေချာစေရန်နှင့်၎င်းတို့သည်သတ်မှတ်ချက်များနှင့်ကိုက်ညီစေရန်
- ဓာတုဗေဒစက်ရုံများရှိအမှားအယွင်းများကိုရှာဖွေခြင်းနှင့်ပြန်လည်ကုစားခြင်းကိုစတင်ခြင်း
- ထုတ်ကုန်အသုံးချမှုနှင့်ညစ်ညမ်းမှုထိန်းချုပ်ရေးပြproblemsနာများကိုလေ့လာခြင်း
- ထုတ်ကုန်အသစ်များအတွက်အစီအစဉ်များကိုပြန်လည်သုံးသပ်ခြင်းနှင့်ဒီဇိုင်းသတ်မှတ်ချက်များနှင့်အစွမ်း၊
အလေးချိန်နှင့်ကုန်ကျစရိတ်စသည့်အချက်များနှင့်အညီပစ္စည်းရွေးချယ်မှုဆိုင်ရာအကြံပြုချက်များကိုတင်ပြခြင်း
- ထုတ်လုပ်မှုစရိတ်နှင့်စွမ်းဆောင်ရည်စံချိန်စံညွှန်းများနှင့်ကိုက်ညီရန်ပစ္စည်းများအသစ်များအတွက်ပစ္စည်းများအသစ်များနှင့်လုပ်ကြံသတ်ဖြတ်မှုလုပ်ထုံးလုပ်နည်းများကိုဖော်ထုတ်ရန် ဓာတ်ခွဲခန်းလုပ်ငန်းများအားစီစဉ်ခြင်းနှင့်အကောင်အထည်ဖော်ခြင်း
- တိကျသောထုတ်ကုန်အသုံးချမှုများအတွက်သင့်လျော်သောပစ္စည်းများစစ်ဆေးခြင်းနှင့်အကဲဖြတ်ခြင်းပြုလုပ်ရာတွင်သတ္တု၊ ကြွေထည်မြေထည်၊ ပိုလီမာ၊
- ထုတ်ကုန်ပျက်ကွက်မှုအချက်အလက်များကိုပြန်လည်သုံးသပ်ခြင်းနှင့်ဖြစ်နိုင်ချေရှိသောအကြောင်းတရားများကိုဖော်ထုတ်ရန်သို့မဟုတ်ငြင်းပယ်ရန်ဓာတ်ခွဲခန်းစမ်းသပ်မှုများကိုအ

ကောင်အထည်ဖော်ခြင်းနှင့်မည်သည့်ပြproblemsနာကိုမဆိုကျော်လွှားရန်နည်းလမ်းများကို
အကြံပေးခြင်း

အခြေခံပညာအလည်တန်းအဆင့်ရှိသူများ၊အကြောင်းအမျိုးမျိုးကြောင့်ကျောင်းဆက်မတက်နိုင်ဘဲအလုပ်လုပ်ရသူများအတွက်ကျောင်းသင်ခန်းစာပါဝင်သောအသက်မွေးဝမ်းကြောင်းပညာလက်မှတ်သင်တန်းများ။

IQY Technical College သည် THS/ ITC/ Year 10/ AGTI များအတွက်ပညာရေးလမ်းကြောင်းပြန်ဖွင့်ပေးသော အခြားရွေးချယ်လမ်းကြောင်းပညာရေး (Alternative Education) ဖြင့် Diploma/. Advanced Diploma/ Professional Diploma/ Bachelor of Technology/ Bachelor of Engineering/ Master of Engineering/ Graduate Diploma သင်တန်းများ၊ Singapore Institute of Engineering Technologists / International Federation of Engineering Education Societies-IFEES-USA)/ The Society of Professional Engineers (UK and International)/ The Institute of Management Specialists (UK)/ SCPU School of Engineering (Switzerland) အသိအမှတ်ပြု Engineering/ Management/ Information Technology သင်တန်းများကိုဖွင့်လှစ်နေသည်။

အဆိုပါအစီအစဉ်တွင်ပညာရေးအဆင့်ရှစ်တန်းအဆင့်ရှိသူများပါပါဝင်လာနိုင်ရန်ကျောင်းသင်ခန်းစာ (Year 9+10) ပါဝင်သောအသက်မွေးဝမ်းကြောင်းပညာလက်မှတ်သင်တန်းများ (Myanmar Vocational Training Certificate Level 1/2/3) (မြန်မာအသက်မွေးဝမ်းကြောင်းပညာလက်မှတ်အဆင့်၁/၂/၃) ကိုသင်ကြားမည်။

မြန်မာအသက်မွေးဝမ်းကြောင်းပညာလက်မှတ်အဆင့် (၁) (Myanmar Vocational Training Certificate Level 1)

အလုပ်အတွေ့ အကြုံကိုအခြေခံကာတရားဝင်အသိအမှတ်ပြုအသက်မွေးဝမ်းကြောင်းပညာလက်မှတ်ထုတ်ပေးခြင်းဖြစ်သည်။

မြန်မာအသက်မွေးဝမ်းကြောင်းပညာလက်မှတ်အဆင့် (၂) (Myanmar Vocational Training Certificate Level 2)

ကျောင်းသင်ခန်းစာ(Year 9+10)နှင့်ပူးတွဲ၍ အသက်မွေးဝမ်းကြောင်းပညာရပ်ကိုစာတွေ့ သင်ပေးခြင်းဖြစ်သည်။

ဘာသာများ

Engineering

Year 9+10 Maths/ Physics/ Science/ English/Myanmar နှင့်အောက်ပါဘာသာများမှတစ်ဘာသာ

PC 1-Certificate in Bricklaying & Masonry--Construction

PC 2-Certificate in Plumbing--Construction

PC 3-Certificate in Building Construction--Construction

PC 4-Certificate in Gutter Construction--Construction

PC 5-Certificate in Fitting & Machining--Metal & Engineering

PC 6-Certificate in Welding--Metal & Engineering

PC 7-Certificate in Engine Operation & Basic Servicing- Manufacturing, Production & Plant Operation

PC 8-Certificate in Air-conditioning & Refrigeration Basic Servicing-- Manufacturing, Production & Plant Operation

PC 9-Certificate in Electrical Wiring--Electrical

PC 10-Certificate in Electrical Machine Winding--Electrical

မှတ်ချက်--စာတွေ့ ကိုအထူးပြုကာလက်တွေ့ ဗီဒီယိုများအချို့ လက်တွေ့ ပစ္စည်းများသင်ကြားခြင်း။

သင်တန်းကာလ-Minimum 1 Year/ Maximum 2 Years

ပြီးစီးပါက Diploma in General Engineering (THS Course)/ Advanced Diploma in Engineering/

Professional Diploma in Engineering/ Bachelor of Technology/ Bachelor of Engineering

သင်တန်းများဆက်တက်နိုင်သည်။

Non Engineering

Year 9+10 Maths/ Physics/ Science/ English/Myanmar နှင့်အောက်ပါဘာသာများမှတစ်ဘာသာ

CERTIFICATE IN AGRICULTURE FOOD PRODUCTION (MVTC201)- Agri Food Production

CERTIFICATE IN ANIMALS HANDLING (MVTC202)- Animal Handling

CERTIFICATE IN BUSINESS (MVTC203)-- Business Services

CERTIFICATE IN LABORATORY WATER OPERATIONS (MVTC204)-- Health Services

CERTIFICATE IN COMMUNITY SERVICE (MVTC205)-- Community Service

(FOODS SERVICE/HEALTH SERVICES/LIBRARY SERVICES/AGE CARE/CHILD CARE)

CERTIFICATE IN PROPERTIES SERVICES (MVTC206)-- Community Service

CERTIFICATE IN PERFORMING (MVTC207)-- Performing Arts

CERTIFICATE IN PUBLIC SAFETY (MVTC208)-- Public Safety & Personal Services

CERTIFICATE IN LOGISTICS (MVTC209)-- Transport

စာတွေ့ ကိုအထူးပြုကာရိုက်နှိပ်ထားသောသင်ခန်းစာများကိုလေ့လာကာ Assignment များတင်ပြခြင်းဖြစ်သည်။

သင်တန်းကာလ-Minimum 1 Year/ Maximum 2 Years

ပြီးစီးပါက Diploma in Humanities Studies (Free course) / Advanced Diploma in Humanities (Free

Course)/ Bachelor of Humanities Studies (Free Course) / Diploma in Management (Fees paying

course)/ Advanced Diploma in Business Management (Fees paying course)/ Professional

Diploma+Bachelor of Business Management (Fees paying course)/ Diploma in Information

Technology (Fees Paying course)/ Advanced Diploma in Information Technology (Fees paying

course)/Professional Diploma/Bachelor of Applied Science (Information Technology) (Fees paying

course) သင်တန်းများဆက်တက်နိုင်သည်။

Year 9+10 သင်နေသောပညာဒါနကျောင်းများနှင့်လည်းပူးပေါင်းဆောင်ရွက်ခြင်း၊ပညာဒါနပြုခြင်းများ

လည်းပြုမည်။ Year 9+10 သင်လိုသော Tutors/ Study Guides များဆက်သွယ်နိုင်သည်။

Offered Courses

<u>Bachelor of Engineering/ Professional Diploma in Engineering Courses</u>
<u>Advanced Diploma/ Diploma in Engineering Courses</u>
<u>Self Study CPD Online Courses</u>
<u>Double Degrees Program</u>
<u>Graduate Diploma/ Master Diploma/ Master of Engineering /Doctor of Engineering/Doctor of Philosophy Courses</u>
<u>Engineering Trades Practical Courses</u>
<u>IQY Technical College Rural Development Engineering Program</u> <u>Myanmar Vocational Training Certificate Courses</u>
<u>Professional Engineer Support Program</u>
<u>Renewable Energy Programs</u>
<u>Certificate II, III, IV in Workplace English + Engineering & Diploma to Associate Degree in Engineering Practice Course</u>
<u>International Engineering & Engineering Trades Support Program</u>
<u>Engineering Design / BE (TU) Final Year Thesis/ Internship Report/Project Support Program</u>
<u>Bachelor of Engineering Science for THS/ITC/Year 9 Passed/AGTI</u>

Engineering Professional Development Courses SPE international +APEC

BE/ Professional Diploma in Engineering Courses

Live Lesson Courses

Advanced Diploma in Electro-mechanical and Construction Engineering (45667)

Bachelor of Technology/Professional Diploma in Engineering Technology in
Electrical/Civil/Mechanical and Renewable Energy Engineering (65667)

Bachelor of Engineering/Professional Diploma in Engineering in
Electrical/Civil/Mechanical and Renewable Energy Engineering (65668)

Diploma in Drone Technology (4/5/ 6778809)

Personal Attendance, Guided Study and Self Study e-Learning Courses

Professional Diploma in Engineering (Electrical/ Civil/Mechanical with Renewable
Energy)_(Course 67110A/67111A)

Professional Diploma +BE Automotive Engineering_(6722113)

Diploma/Advanced Diploma /Professional Diploma in Renewable Energy
Engineering_(Course 27333,37333, 67333)

Professional Diploma in Electrical Engineering (Electrical Power &
Electronics) (60115)

Professional Diploma in Industrial Engineering+BE(Industrial Engineering)
(677889)

Professional Diploma in Structural Engineering/ Master of Science
(Structural Engineering)_(677553/7776654)

Professional Diploma/ Advanced Diploma in Engineering
(Engineering Practice) for Diploma/AGTI/BTech/BE Degree holders

IQY Construction and Civil Specialist Skills Courses

Professional Diploma for 3 Years AGTI

Bachelor of Engineering (Special) (688974)

Bachelor of Engineering Practice (688975)

(For Site Practical People)

Bachelor of Trade Practice (699976)

(For Tradesmen)

See
Professional Diploma for 3 Years AGTI

Bachelor of Engineering Science -Mechanical Electrical
Construction (688977)

Bachelor of Engineering -Mechanical Electrical Construction
(688978)

AGTI to BE Conversion Program

(Course 67110/67111)

Arrangement of BTech and BE Courses for Instalment payments

Bachelor of Technology Program (56778)

Career Conversion Courses for BE/BTech/AGTI/City &
Guild Diplomas

SELF STUDY ENGINEERING PROFESSIONAL DIPLOMA PROGRAMS

Professional Diploma in Architectural Engineering (60116)

Professional Diploma in Metallurgical & Materials Engineering (60216)

Professional Diploma in Mineral Extraction & Explosion Protection Engineering
(Combined Mining& Petroleum Course) (60316)

Professional Diploma in Chemical Engineering (60416)

Certificate in Occupational Health and Safety (12128)

Professional Diploma in Hazardous Safety Engineering (60814)

Diploma in Hazardous Safety Engineering (39919)

Professional Diploma in Automotive and Mechanical Engineering (63111),

Professional Diploma in Marine and Mechanical Engineering (63112)

Professional Diploma in Naval Architectural Engineering (63113)

Professional Diploma in IT (Network) (63347), BE (ICT-Network) (63348)

**Bachelor Degree Programs (St Clements University
Higher Education School &**

STC Technological University of British West Indies)

Bachelor of Engineering (Electrical/ Civil/ Mechanical with Renewable Energy).
Course outline

Bachelor of Engineering (Electrical Engineering) Course Outline (60114/61112)

Bachelor of Engineering (Mechanical Engineering-Mechatronics) Course Outline (61012/61512)

Bachelor of Engineering (Civil Engineering-Building Services) Course Outline (60912/61412)

Bachelor of Engineering (Renewable Energy) (67333A)

Bachelor of Engineering (Computer Aided Engineering) with Electrical/Civil/Mechanical (6889907)

Graduate Diploma / Graduate Bachelors Degree Programs

Graduate Diploma of Civil Engineering + Bachelor of Applied Engineering (Final Year Civil Design) Course Outline (70214/71215)

Bachelor of Engineering (Civil) Course outline (60214/61212)

Bachelor of Engineering (Mechanical) Course outline (60314/61312)

Bachelor of Engineering (Mechanical Engineering Management) /Professional Diploma in Mechanical Engineering and Management Course (38811/68811)

Bachelor of Engineering (Genetic) (63321349)

Bachelor of Engineering (Nuclear Engineering) **6544321**

Bachelor of Engineering (Textile Engineering) 68812

Bachelor of Engineering Science (Genetic Engineering) Course(43321349)

Graduate Diploma of Engineering Practice (Computer Control Engineering) Course Outline(70714)

Advanced Diploma/ Diploma in Engineering Courses

Diploma Programs (IQY Technical College)

Electrical Engineering Course Outline (20112/30112/30112)

Mechanical Engineering Course Outline (20312/30312/40313)

Civil Engineering Course Outline (20212/30212/40213)

Automotive Engineering Course Outline (30512)

Diploma in Computer Aided Engineering (3556678)

Advanced Diploma in Engineering Design (Electrical/Civil/Mechanical
(30915/31015/31115)

Diploma / Advanced Diploma in Air-conditioning and Refrigeration
Engineering (28775/38775)

The following programs highlighted in this area are embedded with
Certificate in Tertiary Preparation (Year 11+12) General Education

Advanced Diploma in General Engineering and Drafting (with Basic Business
and IT). (32115)

For the students who have not passed Year 10/ University Entrance Examination.

Tutoring for the university entrance examination level subjects are concurrently provided

Advanced Diploma in Engineering (Myanmar Language)(27764).

Advanced Diploma in Electro-mechanical and Construction Engineering (27765)_____
_(Course for THS/ITC/Matured Workers).

Diploma in General Engineering + Advanced Diploma in Mechanical Electrical and Civil
Engineering

For the students who complete Year 8 Myanmar Vocational Certificate Courses (12115).

Diploma in Engineering (Drafting and Design) (20915)

Diploma/Advanced Diploma in Engineering (Trade) Practice Courses for
experienced workers in Myanmar

THS Certificate to IQY Advanced Diploma+ Degree Program

Marine Engineering Course Outline (30612)

Diploma in Telecommunication Engineering (30116)

Bachelor of Applied Science (Computer Science & Computer Technology.)
(63112/63212)

Diploma in Telecommunication Engineering_(30116)

Self Study CPD Online Courses

Self study online CPD Courses (12111/13111).

Open Public Courses and Continuing Professional Development Courses

Certificate of Attendance in Diploma/ Professional Diploma in Engineering,
Management and Information Technology Programs

General Vocational Courses

(10615)

Professional Engineer Support Program

Professional Engineers Support Course

(73115/73215/73315/73715/73815)

Engineering Fundamental Course

(73115/73215/73315/73715/73815)

Engineering Fundamental & PE Support

(73115/73215/73315/73715/73815)

Renewable Energy Programs

Certificate II, III, IV in Workplace English + Engineering & Diploma to Associate Degree in Engineering Practice Course

Certificate II, III, IV in Workplace English + Engineering & Diploma to Associate Degree in Engineering Practice Course Outline

(11114/21114/21214/50115/50215/50315/50715)

International Engineering & Engineering Trades Support Program

international Bachelors Degree in Engineering Electrical

(62115)

UEE11-UEE20 Mapping

International Bachelor of Applied Engineering (Electrical and Electronics) Australian Context

(62116)

Professional Diploma in Applied Engineering (Electrical and Electronics) Australian Context

(62116)

Certificate in Electrical Assisting (New Apprentice First Semester Course) (12116)

Advanced Certificate in Electrical Assisting mapping with Certificate III in Electro-technology -Electrician (UEE30820)) (22116)

Certificate/Diploma/Advanced Diploma in Electricity Supply Industry (ESI) (22117/32117/42117)(Form 71 Latest Engineering)

You can become Electrician and Electrical Engineer at the same time.

<http://www.iqytechnicalcollege.com/Electrician and Electrical Engineer Dual Qualification.htm>

International Civil Engineering

(41215)

International Mechanical Engineering

(41315)

INTERNATIONAL ELECTRICIAN TRAINING (41108/51413)

Engineering Design Course

IQY Technical College Unit Coding

Phoe Phyu School of Law, IPMTU Degree College, STC Technological University, IQY Technical College

Master of Engineering Legal Practice (7766554)

Engineering Professional Development Courses SPE international +APEC

Graduate Diploma in Engineering (Professional Development) 774321

The Society of Professional Engineers International & APEC Engineer Certificate Professional Development Training

HAND BOOKS

[IQY Engineering Courses Assessment Validation](#)

Engineering Disciplines

Electrical Engineering

Electrical Power, Electronics, Mechatronics, Information Technology, Network Engineering, Computer, Renewable Energy

Civil Engineering

Civil, Structure, Hydro, Architecture, Rural Development ,Agriculture

Mechanical Engineering

Mechanical, Mechatronics, Industrial, Chemical, Metallurgy, Mineral, Marine, Automotive,
Production, Petroleum, Explosion Protection

Self Study Online CPD Courses

www.highlightcomputer.com/onlinecpdcourses.htm

To enrol these course , follow the steps

1. Pay the fees (First course is Kyats 30000, then Kyats 10000 per additional course) . Deposit into the following account

Daw Hla Myat Mon –Account Number 020-33-500265-2 (Yoma Bank) and attached the evidence of deposit to this application form

2. Fill the online form. (Without evidence of fund deposit, no reply will be made.)

<http://www.emailmeform.com/builder/form/H7zdPO8n8K6EBIG>

3. Then , we will send you the download links to download the e-Books

4. We will send you CPD Course Attendance Certificate electronically.

5. Each course has 20 CPD Hours.

6. They are self study courses. No needs to submit the assessment tasks

7. The list of the CPD course attenders are not included in IQY Technical College Graduates List but the authenticity of issued IQY CPD Certificates can be enquired by emailing to iqytechnicalcollege@gmail.com

Study Areas

GE1	Electrical Wiring (EE)
GE2	Electrical Machine (EE)
GE3	Electrical Distribution (EE)
GE4	Power System Operation (EE)
GE5	Power System Protection
GE6	Occupational Health & Safety
GE7	Project Management (EE/CE/ME)
GE8	Electronics (EE)
GE9	Process Control (EE/ME)
GE10	Industrial Electronics (EE)
GE11	Programmable Logic Controller (EE/ME)

GE12	Photovoltaic Solar Electrical System
GE13	Principle of Engine(ME)
GE14	Fitting & Machining (ME)
GE15	Building Construction (CE)
GE16	Engineering Drawing I (EE/CE/ME)
GE17	Pipe Fitting (CE/ME)
GE18	Air-conditioning & Refrigeration (ME)
GE19	Computer Programming (EE/CE/ME)
GE20	Computer Networking (EE)
GE21	Welding (ME)
GE22	Painting & Decoration (CE)
GE23	Pneumatics (CE/ME)
GE24	Manufacturing Management (ME)
GE25	Surveying (CE)
GE26	Energy Efficient Building Design
GE27	Machine Principle(ME)
GE28	Hydraulic (CE/ME)
GE29	Materials & Corrosion Prevention (CE/ME)
GE30	Bricklaying (CE)
GE31	Sprouting & Guttering (CE)
GE32	Electronic Security Installation
GE33	Explosion Protection
GE34	Engineering Business Management
GE35	Scaffolding
GE36	Materials Handling & Storage
IE1	Engineering Mathematics
IE2	Engineering Physics
IE3	Material Science
IE4	Advanced Engineering Mathematics
IE5	Mechanical Science
IE6	Principle of Electricity
IE7	Electrical Circuit I (EE)
IE8	Electrical Circuit II (EE)
IE9	Advanced Building Construction (CE)
IE10	Transmission Line (EE)
IE11	Electrical & Mechanical Engineering Work Experience
IE12	Civil Engineering Work Experience

IE13	Workshop
IE15	Advanced Engineering Design & Project Work
IE16	Power System Analysis-Fault Calculation
IE17	Power Line Design
IE18	Building services
IE19	PCB Design
IE20	Maths References
IE21	Electrical Principle
IE22	Co-generation
IE23	Industrial Computer System
IE24	Microprocessor
IE25	Power System Fundamental
IE26	Electrical Communication Fundamental
IE27	Control Concept
IE28	Electronic Signal & System
IE29	Electrical Estimating
IE30	Electronic Workbench
IE31	Introduction to Renewable Energy Technology
IE32	Telecommunication Cabling & Installation
IE33	Hybrid Energy System
IE34	Electricity Supply Industrial Skills

**PROFESSIONAL ENGINEER SUPPORT WEBSITE
OF IQY TECHNICAL COLLEGE OF HIGHLIGHT COMPUTER GROUP**

(if the direct download link is unavailable, the resources can be found & downloaded from the download centre)

www.highlightcomputer.com/pesupport.htm

www.highlightcomputer.com

A Professional Engineer needs wide knowledge of theory and practical applications of engineering. The knowledge is not limited to a particular course.

This Professional Engineer Support Website includes Engineering Job Competencies, Technician+ Technologist Level, Theoretical Knowledge requirement for Professional Engineer, Undergraduate Level Theoretical Knowledge requirement for Professional Engineer, Post graduate Level Theoretical Knowledge requirement for Professional Engineer, Practical Knowledge requirement for Professional Engineer, Professional Engineer Postgraduate Competency Development (Electrical & Civil), Knowledge refreshing by watching lesson videos, Youtube Engineering Lessons, MP4 Engineering Lessons, Engineering Rules/Regulation/Safety Knowledge (Electrical Safety, Construction site safety & OHS, Explosion Protection & safety etc are included & the reference materials are referred from relevant Australian Industrial Safety Authorities), Engineering Competency Demonstration Report and Information on Professional Engineer Registration around the world. .

The purpose is to provide the one stop shop for the engineers who seek PE/RSE registration in Myanmar as well as ASEAN, UK, USA, Australia etc to get the information as well as refreshing the theoretical studies and practical knowledge.

Engineering Job Competencies

**IQY Technical College Professional
Engineer/Management Professional & Information
Technology Professional Skills Training**

**Engineers Australia Professional Engineer, Engineering
Technologists & Engineering Associate Competencies References**

Part 1-ENGINEERING FUNDAMENTAL

Technician+ Technologist Level Theoretical Knowledge requirement for Professional Engineer

Undergraduate Level Theoretical Knowledge requirement for Professional Engineer (Part 1-Online Lessons)

Undergraduate Level Theoretical Knowledge requirement for Professional Engineer (Part 2-Reference Resources)

Post graduate Level Theoretical Knowledge requirement for Professional Engineer

Practical Knowledge requirement for Professional Engineer

Practical Knowledge requirement for Professional Engineer

Part 2-PROFESSIONAL ENGINEER COMPETENCY

DEVELOPMENT

Electrical Electronics Civil

The resources+ handbooks can only be provided in DVD disks

Refresh your knowledge by watching lesson videos

Youtube Engineering Lessons by Program Leader Engineering-

MP4 Engineering Lessons by Program Leader Engineering-

Youtube Engineering Lessons (Advanced Diploma of Electrical Engineering/Technology courses in Australia).

by Program Leader Engineering-

PART (2)

YEAR 3 & 4 (Minumum 3 to 4 years is required for a graduate to become a PE)

The practice reports need to write for each topics of the study materials included in Scope Part II.

The reports should include the followings:

- Professional topics— You need to select the topic such as building electrical wiring or power distribution etc
- Fundamental of Engineering- What knowledge you got from the materials in your selected professional topic..
- Engineering Management— How will you manage the I project / workforce to implement the engineering tasks by applying those knowledge in actual workplace project or simulated work place and project?.
- Rules Regulations, Standards & Specifications- You need to refer the relevant engineering rules, regulations, standards and specifications in the tasks expressed in your report.
- Safety—How will you safeguard public safety in performing the engineering tasks?
- Ethics— How will you apply professional code of ethics in performing the engineering tasks?

The candidate should use the following format in the practice exercise reports for each topics of the Scope II that are simulated practice tasks for preparing the Professional Experience and Competency Report to be submitted to Myanmar Engineers Board for Professional Engineer (PE) Registration.

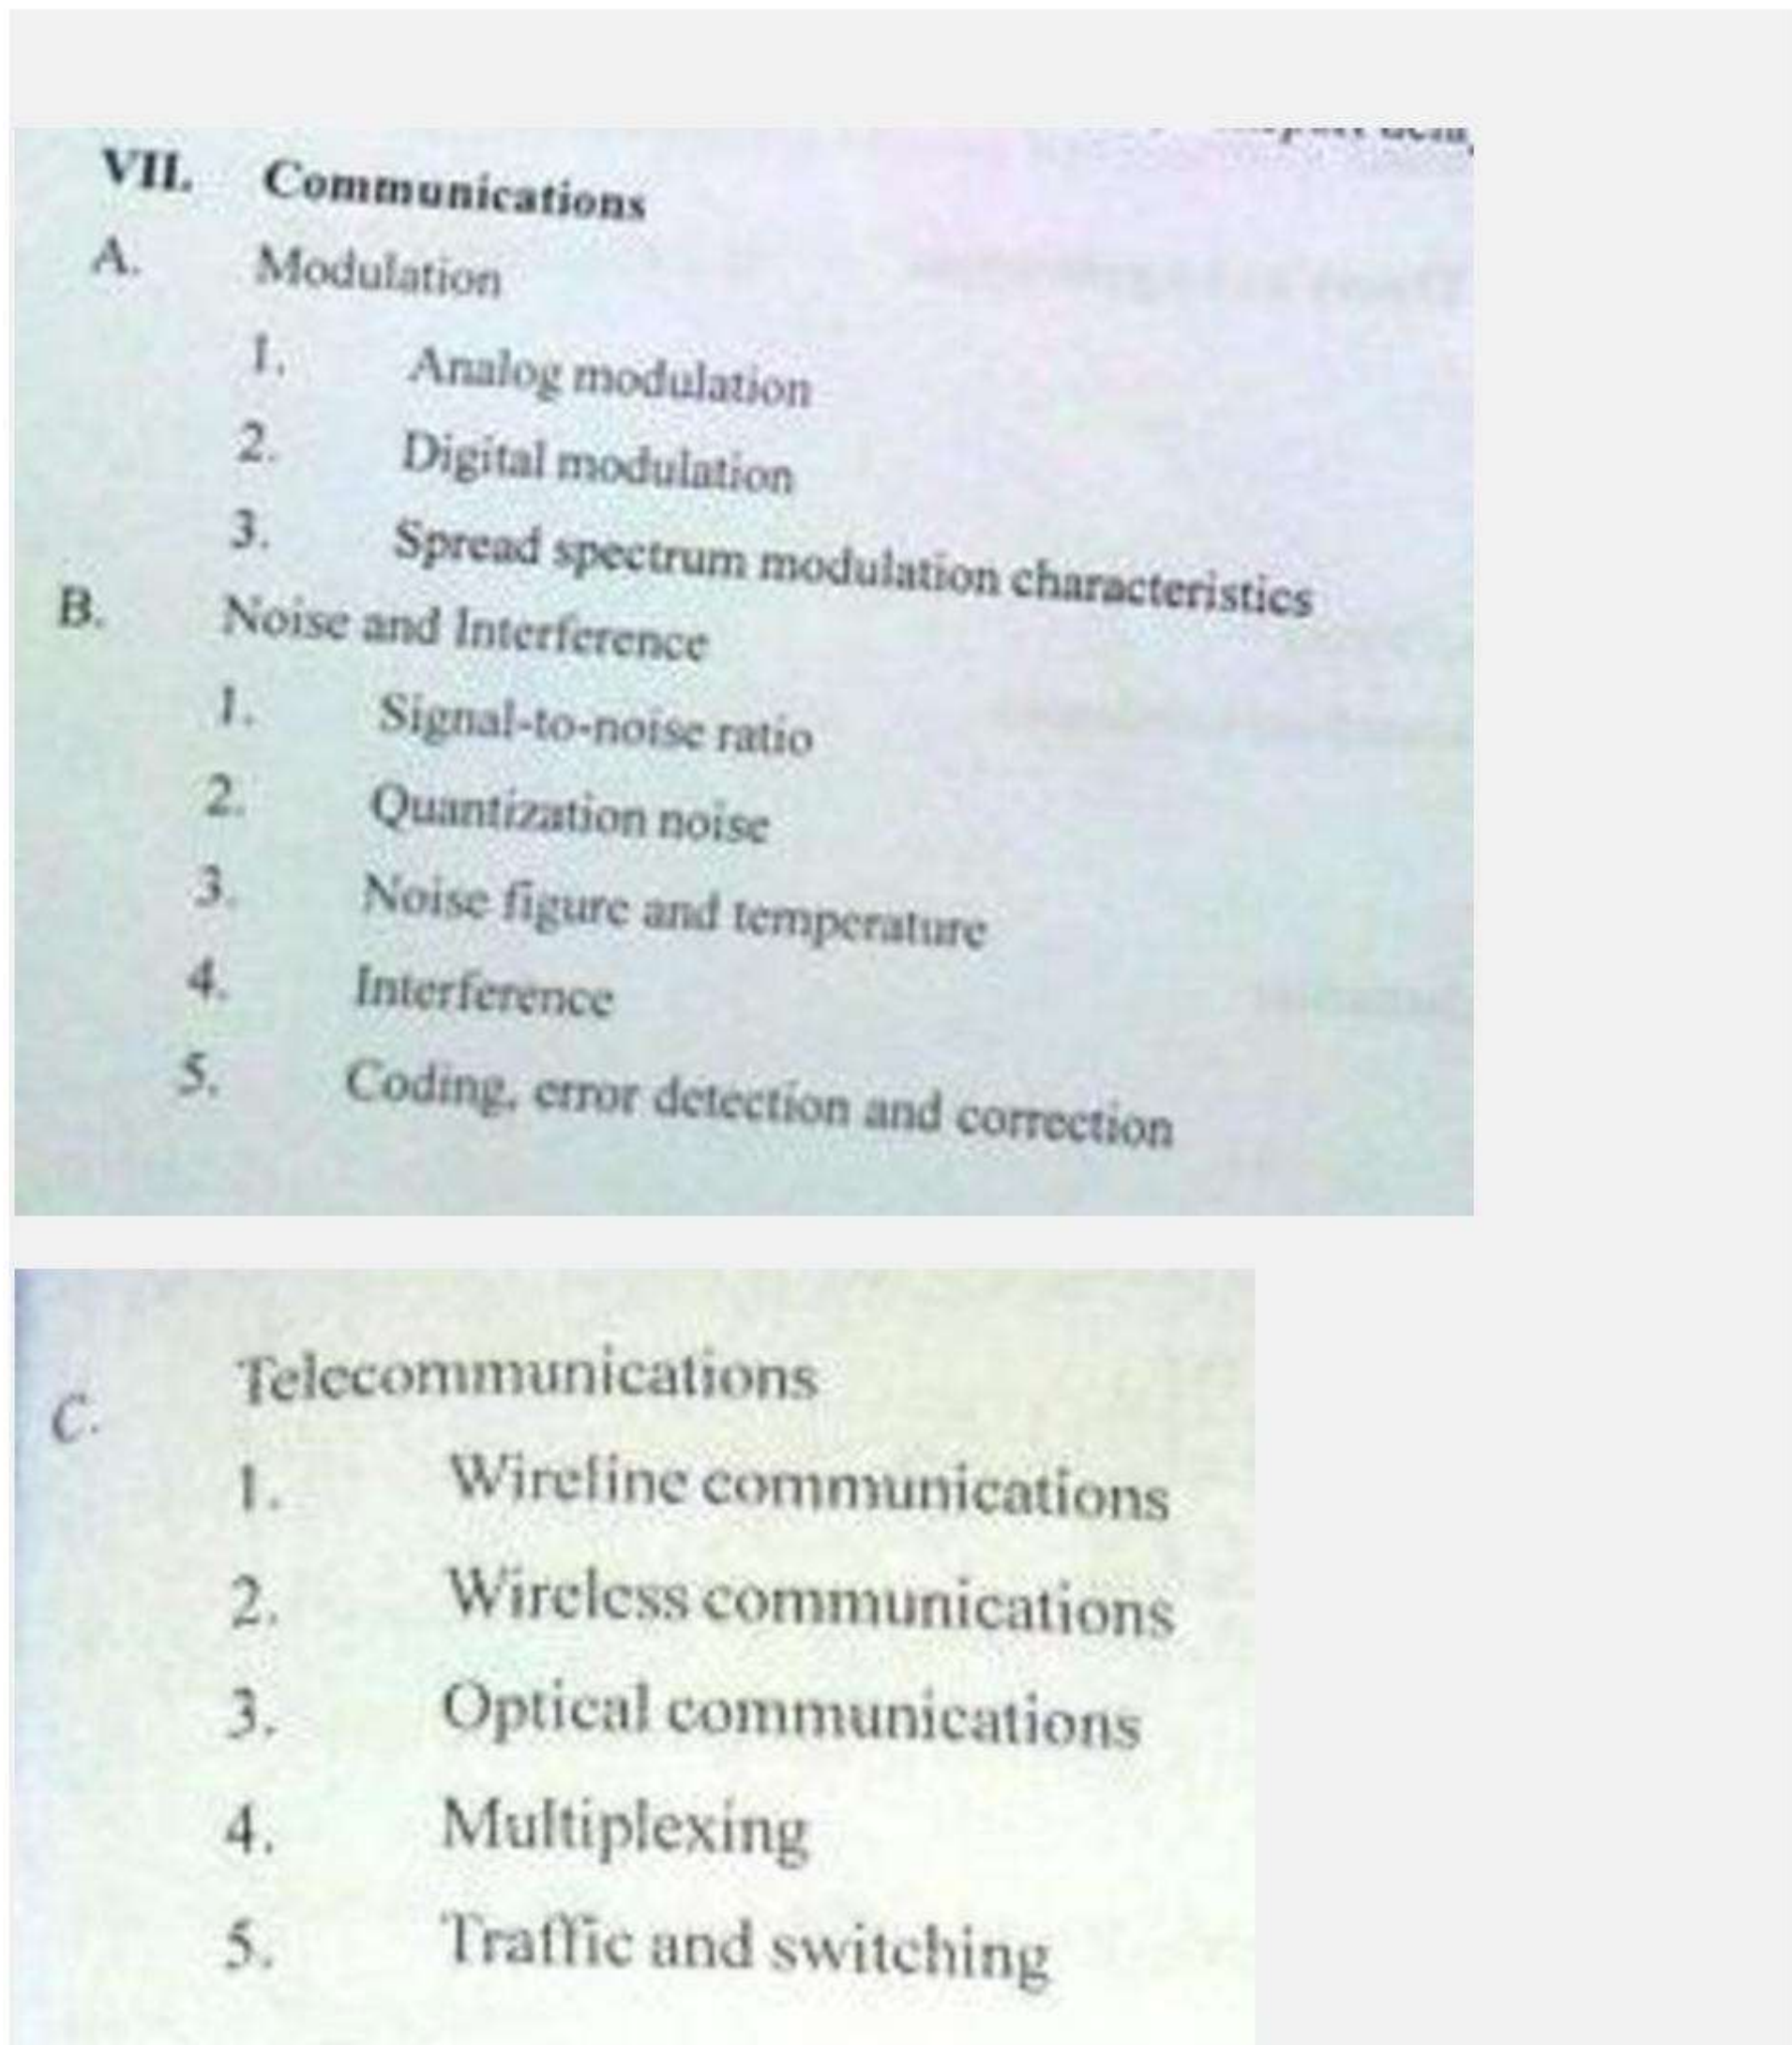

Section (1) Introduction

Section (2) Work experiences in brief and highlight the major important projects

Section 3 to 10 , the following competency should be addressed

- Apply engineering knowledge, methods and techniques
- Use of engineering technology , tools and equipments
- Safeguard public safety
- Recognition the impacts of engineering on the environment , economy and society.
- Manage engineering activities
- Communicate engineering information.

- Work collaboratively
- Main and enhance engineering skills and knowledge. (Ref-MEB PEng Reg)

PROFESSIONAL ENGINEER SUPPORT WEBSITE OF IQY TECHNICAL COLLEGE OF HIGHLIGHT COMPUTER GROUP

(if the direct download link is unavailable, the resources can be found & downloaded from the download centre)

www.highlightcomputer.com/pesupport.htm

www.highlightcomputer.com

A Professional Engineer needs wide knowledge of theory and practical applications of engineering. The knowledge is not limited to a particular course.

This Professional Engineer Support Website includes Engineering Job Competencies, Technician+ Technologist Level, Theoretical Knowledge requirement for Professional Engineer, Undergraduate Level Theoretical Knowledge requirement for Professional Engineer, Post graduate Level Theoretical Knowledge requirement for Professional Engineer, Practical Knowledge requirement for Professional Engineer, Professional Engineer Postgraduate Competency Development (Electrical & Civil), Knowledge refreshing by watching lesson videos, Youtube Engineering Lessons, MP4 Engineering Lessons, Engineering Rules/Regulation/Safety Knowledge (Electrical Safety, Construction site safety & OHS, Explosion Protection & safety etc are included & the reference materials are referred from relevant Australian Industrial Safety Authorities), Engineering Competency Demonstration Report and Information on Professional Engineer Registration around the world. .

The purpose is to provide the one stop shop for the engineers who seek PE/RSE registration in Myanmar as well as ASEAN, UK, USA, Australia etc to get the information as well as refreshing the theoretical studies and practical knowledge.

Content-Fitting & Machining + Safety Lessons

Location

IQY Technical College- No 307B Thura 2 Street, 9 Ward South Okkalapa

GGO Training Group -No 76A 4 th Floor Awwbar St, Kyauk-myaung, Tarmwe

ADVANCED COURSE (ONLINE)

Professional Diploma in Hazardous Safety Engineering

Course Objective

This course provides the information and knowledge related to safely working in hazardous areas, safe working knowledge, safety protection equipments, systems and methods, auditing the safety requirements of hazardous area engineering works such as mining, petroleum, chemical plants ,civil ,electrical and mechanical engineering

Pre-requisite

Professional Diploma/ Bachelor degree in Engineering (Any discipline)

Course Outline

It consists of 8 units with each 5 credits.

- BAE 631E Maintenance & Repair Works in Hazardous Areas
- BAE 632E Electrical Wiring in Hazardous Areas
- BAE 633E Hazardous Area Safety Audits
- BAE 634E Explosion Protection
- BAE 635E Testing in Hazardous Areas
- BAE 636E Hazardous Area Inspection
- BAE 637E Hazardous Chemical Management
- BAE 638E Environmental Engineering in Hazardous Areas

Professional Diploma in Architectural Engineering

(Guided study to complete Professional Diploma in Civil Engineering & Fees will be charge for that)

Stage 1- Complete Professional Diploma in Civil Engineering Program

Stage 2-Study the textbooks in the following site.

(Self study with presentation of study progress report to complete Professional Diploma in Architectural Engineering- Assessment Fees will be charged only after the student can submit the report for first textbook)

Year 4 BE (Architectural Engineering)

AE401 Architecture Theory

AE402 Architectural Design

AE404 Building Services

AE406 Sustainable Building Design

AE407 Architectural Drafting

Year 5 BE (Architectural Engineering)

AE501 Architectural Management

AE502 Interior Design

AE503 Green Building Design

AE504 Construction Contract

AE505 Solar Architecture & Smart House Design

AE506 Architecture Commercial Design

AE507 Urban Design

AE508 Landscape Design

Year 6 BE (Architectural Engineering)

AE601 Architectural Design& Ethics

AE602 Building Survey & Reporting

AE603 Building Control Systems

AE604 Sustainable Architecture

AE605 Details Design

AE606 Outdoor Structure Design

Study Method & Assessment

The students will need to read the reference materials provided in folder of each unit & write the report on their study for each unit.

The report should contain

- Summary of knowledge acquired in the unit
- Practical methods related to assessment, safe working, protection, technical data, equipments utilized in hazardous areas
- Practical applications in work place
- Specific applications in the area of your choice
- Reference guides etc

Each report should be Arial 11 fonts with 10 to 20 pages written in own words by using English..

Insert the appropriate diagrams & tables, formula and data related to information.

Professional Diploma in Chemical Engineering

(This course can only be studied by self study mode)

Fees will only be charged after submission of the study progress report for first textbook.

EM 11001	Engineering Mathematics I
EPh 11011	Engineering Physics I
ECh11011	Engineering Chemistry I
ME 11011	Basic Engineering Drawing
ChE 11001	Organic Chemistry

ME 22021	Machine Drawing
ME 22015	Engineering Mechanics
EcE 22012	Applied Electronic Engineering
Met 21071	Engineering Material
ChE 22013	Material and Energy Balances

BE(Chemical) Year 3

ME 31014	Strength of Materials
ChE 31012	Fluid Mechanics
ChE 31013	Chemical Engineering Thermodynamics
ChE 31022	Heat Transfer

BE(Chemical) Year 4

ME 41031	Design of Machine Elements
ChE41015	Quality Control
ChE41032	Mass Transfer
ChE41042	Particle Mechanics

BE(Chemical) Year 5

ME 51028	Industrial Management
ChE51025	Instrumentation for Chemical and Automatic Process Control
ChE 51052	Chemical Reaction Kinetics and Reactor Design
ChE 51007	Pollution Control, Maintenance and Industrial Safety
ChE 51062	Biochemical Engineering
ChE 51016	Chemical Process Design

BE(Chemical) Year 6

IT 61024 Computer Application Software

ChE 61016 Plant Design and Economics for Chemical Engineers

Study Method & Assessment

The students will need to read the reference materials provided in folder of each unit & write the report on their study for each unit.

The report should contain

- Summary of knowledge acquired in the unit
- Practical methods related to assessment, safe working, protection, technical data, equipments utilized in hazardous areas
- Practical applications in work place
- Specific applications in the area of your choice
- Reference guides etc

Each report should be Arial 11 fonts with 10 to 20 pages written in own words by using English..

Insert the appropriate diagrams & tables, formula and data related to information.

Advanced Diploma in Engineering (Engineering Practice)/ Professional Diploma in Engineering (Engineering Practice)

(Course 67110/67111)

Course Objective

This course aims to provide the necessary skills and knowledge for Diploma/ AGTI /BTech /BE Graduates of Government or Non Government Technical Colleges and Technological Universities of Myanmar to achieve the educational requirement to acquire Singapore Recognized Engineer (Fellowship)/ ASEAN Engineering Technologists/ Associate Engineering Technologists/ ASEAN Engineering Technician/ Associate Technicians through Membership of Singapore Institute of Engineering Technologists & further career progress toward ASEAN Engineer.

Course Outline

ENG601- Engineering Studies (60 pt- for submission of AGTI/BTech/BE)

ENG602-Engineering Applications (10 pt for submission of Curriculum Vitae for experienced engineers and Final Year Project Report for recent graduates)

ENG603-Engineering Practicals (10 pt- Which can be exempted for minimum of 5 Years Engineering Experience)

ENG604-Occupational Health & Safety (5 pt)

ENG605-Engineers Law (2 pt)

ENG606-Engineering Ethics (3 pt)

The candidates who complete ENG 601/602/603/604/605/606 can receive Advanced Diploma in Engineering (Engineering Practice) (Credit Points 90) which is academic requirement for MSIET (Member of Singapore Institute of Engineering Technologists)

ENG607 -Leadership & Management Skills for Engineers (4 pt)

ENG608-Business Skills for Engineers (6 pt)

ENG609-Financial Management Skills for Engineers (3 pt)

ENG610-Engineering Materials (4 pt)

ENG611-Renewable Energy Engineering (10 Pt)

ENG612-Risk Assessment Skills for Engineers (3 pt)

The candidates who complete ENG 601/602/603/604/605/606/607/608/609/610/611/612 can receive Professional Diploma in Engineering (Engineering Practice) (Credit Points 120) which is academic requirement for FSIET (Fellow of Singapore Institute of Engineering Technologists)

ENG605-Engineers Law (2 pt)

Write the critical review of Myanmar Engineering Council Laws and Regulations by reflecting your own view. You can write 1 to 3 Pages.

RESOURCES DOWNLOAD LINK

<http://www.highlightcomputer.com/mengclaw.htm>

<http://www.myanmarengc.org/laws-regulation>

ENG606-Engineering Ethics (3 pt)

Study Engineers Ethics of Myanmar Engineering Council. Then do the research work on various media such as Newspaper/ Journals/ Internet to find out any engineering tasks which do not comply with public safety/ ware fare of public and wasting of public money/ breach of consumers' right etc and provide the critical review by referring the relevant clauses of Engineers Ethics.

Enrolment Link

<http://www.emailmeform.com/builder/form/xE6omX3577z595Gcb60>

Objective

This course provides Electrical Power Knowledge to Electronics Engineers and Electronics Knowledge to Electrical Power Engineers.

Features of the course

It integrates Australian Electrical Engineering Training System Units (UEE07/UEE011)

It focuses on practical application aspects and the entire course is taught in English language by referring classroom lessons and videos that are used in Australian Electrical Engineering teaching classes.

Credit Points

It needs 120 credit points to complete this course. The credit transfer arrangements is as follows.

For Electrical Power Graduates

AGTI(EP)/BTech(EP)/BE(EP)----Credit Transfer of 60 points

Complete the following 20 subjects (Each 3 Credit points) Total= 60 Points

Total Credit Points = 120 Points

List of Subjects	Australian Electrical Units
EPEC601 Electronics Power Supply	UEENEEH011B

EPEC602 Digital Electronics	UEENEEH012B
EPEC603 Amplifiers	UEENEEH013B
EPEC604 Single Phase Electronics Power Control	UEENEEH025B
EPEC605 Three Phases Electronics Power Control	UEENEEH026B
EPEC606 Analogue Electronics	UEENEEH045B
EPEC607 Process Control Systems	UEENEEI006B
EPEC608 Sinewaves & Solar Inverters	UEENEEK035C
EPEC609 Building Services Electrical & Mechanical Systems	UEENEEK041B
EPEC610 Electrical Workshops	Electrical Workshops (UEENEEE001/002/005/007/008)
EPEC611 Electrical Wiring	UEENEEG003/004/005/007/033/063
EPEC612 Electrical Risk Assessment	UEENEEE011C+E117B
EPEC613 Control Programming	UEENEEI150/151B
EPEC614 Programmable Logic Controllers	UEENEEI150/151
EPEC615 Electronics Workshop	UEENEEH102B
EPEC626 Advanced Power System	UEENEEG037/38/39
BAE 604 Telecommunication Engineering	
BAE 602 Computer Network	
BAE 603 Software Engineering	

RE007 Energy System Efficiency

Professional Diploma in Information Technology (Computer Networking)

Bachelor of Applied Science (Computer Networking) (63347)

Professional Diploma in ICT Engineering (Network)

Bachelor of Engineering (Computer Networking) (63348)

Professional Diploma in Information Technology (Computer Networking)

Bachelor of Applied Science (Computer Networking)

Pre-requisite- Advanced Diploma in Information Technology (Network)
(Experience based) (60 Credits)

Self study

Professional 1-Core units (Each 5 credit points)

ICTN401-Computer Systems Architecture

ICTN402-Computer Networking

ICTN403-Cisco Networking

ICTN404- Home Networking

ICTN405- System and Network Administration

ICTN406- Wireless Communications and Networking

Professional 2-Elective units (Each 5 credit points)

Any six units to complete

ICTN501-Enterprise System Administration

ICTN502- Mobile and Wireless Network Security

ICTN503- Cisco Certified Entry Networking

ICTN504- Wireless Security

ICTN505- UNIX System Administration

ICTN506- Advanced Network Programming

ICTN507- Windows Server Administration

ICTN508- Enterprise Network Testing

Total 120 Credits

Professional Diploma in ICT Engineering (Network)

Bachelor of Engineering (Computer Networking)

Completion of Professional Diploma in IT (Computer Networking) (120 credits)+completion of the following units

BAE 401 Advanced Engineering Mathematics (3 credits)

BAE 402 Calculus (3 credits)

RE012a-Electrical Engineering Part 1(3 credits)

RE014-Electronics Control (3 credits)

BAE 604 Telecommunication Engineering (3 credits)

BAE 605 Engineering Management (3 credits)

BAE 608 Professional Engineer Engineering Competency Demonstration Report (2 credits)

Total 140 Credits

www.iqytechnicalcollege.com/ProfDipICTEnggBENetwork.pdf

Professional Diploma in Mechanical Engineering and Management

www.iqytechnicalcollege.com/ProfDipMechEnggMgtOutline.pdf

This program is mixture of Mechanical Engineering and Management. The graduates can either work as Mechanical Engineer or Project Manager

Advanced Diploma in Mechanical Engineering and Management

Advanced Diploma in Mechanical Engineering

30 Credit Points in Engineering units Each 2 Points

Maths 101 Engineering Mathematics

ME101 Applied Mathematics

ME106 Electrical Circuits

ME201 Introduction to Fluid Mechanic

ME103 Engineering Mechanics

ME107+ME102 Thermodynamics and Heat Transfer

ME108 Principle of Engines (Self Study)

ME203 Control Engineering

ME205 Manufacturing Processes and Materials (Self Study)

ME634 Pnuematics (Self Study)

ME334 Air-conditioning and Refrigeration (Self Study)

ME434 Mechatronics and Robotics (Self Study)

EE102+ME105 Electrical Workshop

ME305 Corrosion Protection (Self Study)

CE111 Drawing

30 Credit Points in Management units

Advanced Diploma in Management

Mgt 101 Management (4 pt)

Mgt 102 Performance Management (4 pt)

Mgt 103 Operation Management +Mgt 107 Industrial Risk Assessment
(4 pt)

ICT 104 Mgt 104 Program Project +BAE 508 Project Management

(6 pt)

Mgt 105 Quality Management (4 pt)

ICT 107 Business Information Systems (4 pt)

Mgt 108 Computer Application in Management (4 pt)

THS graduates will need to do self study in some mechanical units .

Advanced Diploma in Mechanical Engineering and Management will be completed

Professional Diploma in Mechanical Engineering and Management

PART 1-Engineering (9 points)

Professional Diploma in Engineering (Year 3) (9 points for Engineering)

Complete BAE units by personal attendance and RE units by self study

1 BAE 401 Advanced Engineering Mathematics (2 pt)

2 BAE 402 Calculus (2 pt)

3 BAE 403 Engineering Mechanics (2 pt)

4 BAE 404 Engineering Materials & Thermodynamics (3 pt)

PART 2-Management (21 points)

Complete any 7 units at each 3 points

Complete

<http://www.iqytechnicalcollege.com/advdipmgt.htm>

Mgt 201 Customer Service Management

Mgt 202 Change Management

Mgt 203 Inventory & Budget Management

Mgt 204 Continuous Improvement Management

Mgt 205 Office Management

Mgt 206 Work-based Training Management

Mgt 207 Business Letter Writing
Mgt 208 Safety Management
Mgt 209 Risk Management
Mgt 210 Professional Development Management
Mgt 211 Leadership
Mgt 212 Preparing Portfolios
Mgt 213 Conflict Management

Professional Diploma in Mechanical Engineering & Management (Year 4)
(30 points)

Professional Diploma in Mechanical Engineering

Complete 10 units at 30 Points

RE011a Civil and Mechanical Engineering (3 pt)
BAE606 Building Services Electrical and Mechanical Engineering(3 pt)
BAE314 Power Generation (3 pt)
BAE423 Fluid Mechanics(3 pt)
BAE512 Building Services Water Supply System (3 pt)
RE014 Electronics Control (3 pt)
BAE601 Computer Programming (3 pt)
BAE605 Management (3 pt)
BAE508 Project Management (3 pt)
BAE608 Engineering Competency Report (3 pt)

Professional Diploma in Mechanical Engineering and Management will be completed

Professional Diploma in Metallurgical & Materials Engineering

Stage 1- Complete Advanced Diploma in Mechanical Engineering & Year 3 Common course of Professional Diploma in Mechanical Engineering Studies

(Guided study to complete Advanced Diploma in Mechanical Engineering PLUS up to Year 3 of Professional Diploma)

Stage 2-Study the following textbooks

Year 4 BE (Metallurgy & Materials)

(Self study with presentation of study progress report to complete Professional Diploma in Metallurgical & Materials Engineering- Assessment Fees will be charged only after the student can submit the report for first textbook)

Met 401 Mechanical Properties of Metals
Met 402 Metallurgical Engineering Alloys
Met 403 Metallurgy Principle
Met 404 Metallurgy
Met 405 Powdered Metallurgy

Year 5 BE (Metallurgy & Materials) common to BE (Minerals Extraction & Explosion Protection)

Met501 Mechanical Estimating
Met502 Mechanical Properties of Metals

Met503 Metallurgy

Met504 Engineered Metals

Met505 Metallurgical Alloys

Met507 Stress Assessment in Metallurgy

Met508 Metallic Materials

Year 6 BE (Metallurgy & Materials) common to BE (Minerals Extraction & Explosion Protection)

Met601 Metallurgical Processing

Met602 Machinery Failure Analysis

Met603 Materials Selection in Mechanical Design

Met604 Strain Testing

Met605 Applied Metallurgy

Met606 Metals Extraction

Additional units

Met608 Corrosion Prevention

Study Method & Assessment

The students will need to read the reference materials provided in folder of each unit & write the report on their study for each unit.

The report should contain

- Summary of knowledge acquired in the unit
- Practical methods related to assessment, safe working, protection, technical data, equipments utilized in hazardous areas
- Practical applications in work place
- Specific applications in the area of your choice
- Reference guides etc

Each report should be Arial 11 fonts with 10 to 20 pages written in own words by using English..

Insert the appropriate diagrams & tables, formula and data related to information.

Professional Diploma in Mineral Extraction & Explosion Protection Engineering (Combined course of Mining & Petroleum)

Stage 1- Complete Advanced Diploma in Mechanical Engineering & Year 3 Common course of Professional Diploma in Mechanical Engineering Studies

(Guided study to complete Advanced Diploma in Mechanical Engineering PLUS up to Year 3 of Professional Diploma)

Stage 2-Study the following textbooks

(Self study with presentation of study progress report to complete Professional Diploma in Metallurgical & Materials Engineering- Assessment Fees will be charged only after the student can submit the report for first textbook)

Year 3 BE (Mineral Extraction& Explosion Protection)

PE 21015	Properties of Reservoir Rocks and Fluids
PE 21002	Drilling Fluids
Geol 21002	Petroleum Geology
ChE 31013	Chemical Engg. Thermodynamics
PE 31012	Drilling Engg.
PE 31016	Formation Evaluation
PE 31013	Production Engineering

Year 4 BE (Mineral Extraction& Explosion Protection)

PE 41014	Natural Gas Engg.
PE 41022	Applied Drilling Engg.
PE 41023	Well Completion and Servicing
PE 41035	Applied Reservoir Engg.

Year 4 BE (Minerals Extraction & Explosion Protection) common to
BE (Metallurgy & Materials)

Min501 Mechanical Estimating/ Met501 Mechanical Estimating

Min502 Mechanical Properties of Metals/ Met502 Mechanical Properties of
Metals

Min503 Metallurgy/ Met503 Metallurgy

Min504 Engineered Metals/ Met504 Engineered Metals

Min505 Metallurgical Alloys/ Met505 Metallurgical Alloys

Min507 Stress Assessment in Metallurgy/ Met507 Stress Assessment in
Metallurgy

Min508 Metallic Materials/ Met508 Metallic Materials

Year 5 BE (Minerals Extraction & Explosion Protection) common to
BE (Metallurgy & Materials)

Min601 Metallurgical Processing/ Met601 Metallurgical Processing

Min602 Machineries Failure Analysis/ Met602 Machineries Failure Analysis

Min603 Materials Selection in Mechanical Design/ Met603 Materials Selection
in Mechanical Design

Min604 Strain Testing/ Met604 Strain Testing

Min605 Applied Metallurgy/ Met605 Applied Metallurgy

Min606 Metals Extraction/ Met606 Metals Extraction

Additional Unit

Met607 Explosive Engineering

ADDITIONAL STUDY

Year 6 BE (Minerals Extraction & Explosion Protection)

Explosion Protection

Professional Diploma in Hazardous Safety Engineering

www.highlightcomputer.com/profdiphazardous.htm

Professional Diploma in Hazardous Safety Engineering

Course Objective

This course provides the information and knowledge related to safely working in hazardous areas, safe working knowledge, safety protection equipments, systems and methods, auditing the safety requirements of hazardous area engineering works such as mining, petroleum, chemical plants ,civil ,electrical and mechanical engineering

Course Outline

It consists of 8 units with each 5 credits.

BAE 631E Maintenance & Repair Works in Hazardous Areas

BAE 632E Electrical Wiring in Hazardous Areas

BAE 633E Hazardous Area Safety Audits

BAE 634 Explosion Protection

BAE 635E Testing in Hazardous Areas

BAE 636 E Hazardous Area Inspection

BAE 637E Hazardous Chemical Management

BAE 638E Environmental Engineering in Hazardous Areas

Study Method & Assessment

The students will need to read the reference materials provided in folder of each unit & write the report on their study for each unit.

The report should contain

- Summary of knowledge acquired in the unit
- Practical methods related to assessment, safe working, protection, technical data, equipments utilized in hazardous areas
- Practical applications in work place
- Specific applications in the area of your choice
- Reference guides etc

Each report should be Arial 11 fonts with 10 to 20 pages written in own words by using English..

Insert the appropriate diagrams & tables, formula and data related to information.

Professional Diploma in Hazardous Safety Engineering

Course Objective

This course provides the information and knowledge related to safely working in hazardous areas, safe working knowledge, safety protection equipments, systems and methods, auditing the safety requirements of hazardous area engineering works such as mining, petroleum, chemical plants ,civil ,electrical and mechanical engineering

Pre-requisite

Professional Diploma/ Bachelor degree in Engineering (Any discipline)

Course Outline

It consists of 8 units with each 5 credits.

BAE 631E Maintenance & Repair Works in Hazardous Areas

BAE 632E Electrical Wiring in Hazardous Areas

BAE 633E Hazardous Area Safety Audits

BAE 634E Explosion Protection

BAE 635E Testing in Hazardous Areas

BAE 636E Hazardous Area Inspection

BAE 637E Hazardous Chemical Management

BAE 638E Environmental Engineering in Hazardous Areas

Study Method & Assessment

The students will need to read the reference materials provided in folder of each unit & write the report on their study for each unit.

The report should contain

- Summary of knowledge acquired in the unit
- Practical methods related to assessment, safe working, protection, technical data, equipments utilized in hazardous areas
- Practical applications in work place
- Specific applications in the area of your choice
- Reference guides etc

Each report should be Arial 11 fonts with 10 to 20 pages written in own words by using English..

Insert the appropriate diagrams & tables, formula and data related to information.

Explosion protection, certification and techniques

Evidence shall show an understanding of Ex certification schemes and techniques to accepted Standards to an extent indicated by the following aspects:

T1 Explosion-protection equipment — Ex certification schemes encompassing:

- ☐ Purpose and scope of certification schemes.
- ☐ Schemes accepted in Australia and New Zealand.
- ☐ Schemes commonly used in countries other than Australia and New Zealand.
- ☐ Processes for having equipment certified under the acceptable Ex schemes — scheme procedures; quality management requirements; conformance testing and assessment; and requirements for ongoing certification.

T2 Flameproof (Ex 'd') explosion-protection technique encompassing:

- ☐ The purpose and characteristics of the design features of apparatus and circuits protected by the flameproof (Ex 'd') technique. (Examples of characteristics and design features are flame paths, integrity under pressure, pressure piling, and enclosure entries).
- ☐ Typical situations where the flameproof explosion-protection technique is used;
- ☐ Actions or conditions that would void the protection provided the Flameproof technique;
- ☐ The use of Standards in determining the requirements to which the installation of flameproof explosion-protected apparatus shall comply.

T3 Increased safety (Ex 'e') explosion-protection technique encompassing:

☐ The purpose and characteristics of the design features of apparatus and circuits protected by the Increased safety (Ex 'e') technique (Examples of characteristics and design features are temperature rise, maximum power dissipation, protection devices, certified components, creepage and clearance distances, absence of sparking contacts and enclosure entries).

☐ Typical situations where the Increased safety explosion-protection technique is used;

Actions or conditions that would void the protection provided the Increased safety technique;

☐ The use of Standards in determining the requirements to which the installation of Increased safety explosion-protected apparatus shall comply.

T4 Non-sparking (Ex 'n') explosion-protection technique encompassing:

☐ The purpose and characteristics of the design features of apparatus and circuits protected by the Non-sparking (Ex 'n') technique (Examples of characteristics and design features are creepage and clearance distances and restricted breathing).

☐ Typical situations where the Non-sparking explosion-protection technique is used;

☐ Actions or conditions that would void the protection provided the Non-sparking technique; and

☐ The use of Standards in determining the requirements to which the installation of Non-sparking explosion-protected apparatus shall comply.

T5 Intrinsic safety (Ex 'i') explosion-protection technique encompassing:

☐ The purpose and characteristics of the design features of apparatus and circuits protected by the Intrinsic safety (Ex 'i') technique (Examples of characteristics and design features are field devices, cables, safe area devices, earthing, entity

versus integrated system concept, simple devices and interface devices and their parameters, segregation, infallible components, current and voltage limiting, creepage and clearance distances).

☐ Typical situations where the Intrinsic safety explosion-protection technique is used;

☐ Actions or conditions that would void the protection provided the Intrinsic safety;

☐ The use of Standards in determining the requirements to which the installation of Intrinsic safety explosion-protected apparatus shall comply.

T6 Pressurization (Ex 'p') explosion-protection technique encompassing:

☐ The purpose and characteristics of the design features of apparatus and circuits protected by the Pressurization (Ex 'p') technique (Examples of characteristics and design features are exclusion and dilution; purge periods, controlled shut down, monitoring and sources of internal release).

☐ Typical situations where the pressurization explosion-protection technique is used;

☐ Actions or conditions that would void the protection provided the pressurization technique;

☐ The use of Standards in determining the requirements to which the installation of pressurization explosion-protected apparatus shall comply.

T7 Enclosures for dusts (Ex 'tD') - explosion-protection technique encompassing:

The purpose and characteristics of the design features of apparatus and circuits protected by the techniques for dusts (Examples of characteristics and design features are for enclosures; pressurization; encapsulation; and intrinsic safety).

☐ Typical situations where the each dust explosion-protection technique is used;

☐ Actions or conditions that would void the protection provided the each dust technique;

☐ The use of Standards in determining the requirements to which the installation of dust explosion-protected apparatus shall comply.

T8 Common characteristics of explosion-protection techniques encompassing:

☐ The purposes of 'temperature classification' and 'gas grouping/apparatus grouping'.

☐ Compliance plate markings.

☐ Limitations of non-metallic or specific alloy enclosures.

☐ The purpose of conformity and certification/approval for equipment used in hazardous areas.

☐ Environmental conditions that may impact on explosion-protection techniques.

☐ The principles and applications of other and mixed explosion-protection techniques (Other techniques include encapsulation Ex 'm'; oil-immersion Ex 'o'; powder-filling Ex 'q', ventilation Ex 'v' and special protection Ex 's').

☐ Features and purpose of conduit seals and cable termination devices designed for use in hazardous areas (These include conduit seals and barrier and compression glands for cables with or without armouring, screening and/or drain wires)

UEENEEM020A Attend to breakdowns in hazardous areas - gas

Explosion protection, certification and techniques

Evidence shall show an understanding of Ex certification schemes and techniques to accepted Standards to an extent indicated by the following aspects:

T1 Explosion-protection equipment — Ex certification schemes encompassing:

☐ Purpose and scope of certification schemes.

☐ Schemes accepted in Australia and New Zealand.

☐ Schemes commonly used in countries other than Australia and New Zealand.

☐ Processes for having equipment certified under the acceptable Ex schemes — scheme procedures; quality management requirements; conformance testing and assessment; and requirements for ongoing certification.

T2 Flameproof (Ex 'd') explosion-protection technique encompassing:

☐ The purpose and characteristics of the design features of apparatus and circuits protected by the flameproof (Ex 'd') technique. (Examples of characteristics and design features are flame paths, integrity under pressure, pressure piling, and enclosure entries).

☐ Typical situations where the flameproof explosion-protection technique is used;

☐ Actions or conditions that would void the protection provided the Flameproof technique;

☐ The use of Standards in determining the requirements to which the installation of flameproof explosion-protected apparatus shall comply.

T3 Increased safety (Ex 'e') explosion-protection technique encompassing:

☐ The purpose and characteristics of the design features of apparatus and circuits protected by the Increased safety (Ex 'e') technique (Examples of characteristics and design features are temperature rise, maximum power dissipation, protection devices, certified components, creepage and clearance distances, absence of sparking contacts and enclosure entries).

☐ Typical situations where the Increased safety explosion-protection technique is used;

Actions or conditions that would void the protection provided the Increased safety technique;

☐ The use of Standards in determining the requirements to which the installation of Increased safety explosion-protected apparatus shall comply.

T4 Non-sparking (Ex 'n') explosion-protection technique encompassing:

- ☐ The purpose and characteristics of the design features of apparatus and circuits protected by the Non-sparking (Ex 'n') technique (Examples of characteristics and design features are creepage and clearance distances and restricted breathing).
- ☐ Typical situations where the Non-sparking explosion-protection technique is used;
- ☐ Actions or conditions that would void the protection provided the Non-sparking technique; and
- ☐ The use of Standards in determining the requirements to which the installation of Non-sparking explosion-protected apparatus shall comply.

T5 Intrinsic safety (Ex 'i') explosion-protection technique encompassing:

- ☐ The purpose and characteristics of the design features of apparatus and circuits protected by the Intrinsic safety (Ex 'i') technique (Examples of characteristics and design features are field devices, cables, safe area devices, earthing, entity versus integrated system concept, simple devices and interface devices and their parameters, segregation, infallible components, current and voltage limiting, creepage and clearance distances).
- ☐ Typical situations where the Intrinsic safety explosion-protection technique is used;
- ☐ Actions or conditions that would void the protection provided the Intrinsic safety;
- ☐ The use of Standards in determining the requirements to which the installation of Intrinsic safety explosion-protected apparatus shall comply.

T6 Pressurization (Ex 'p') explosion-protection technique encompassing:

- ☐ The purpose and characteristics of the design features of apparatus and circuits protected by the Pressurization (Ex 'p') technique (Examples of characteristics

and design features are exclusion and dilution; purge periods, controlled shut down, monitoring and sources of internal release).

☐ Typical situations where the pressurization explosion-protection technique is used;

☐ Actions or conditions that would void the protection provided the pressurization technique;

☐ The use of Standards in determining the requirements to which the installation of pressurization explosion-protected apparatus shall comply.

T7 Enclosures for dusts (Ex 'tD') - explosion-protection technique encompassing:

The purpose and characteristics of the design features of apparatus and circuits protected by the techniques for dusts (Examples of characteristics and design features are for enclosures; pressurization; encapsulation; and intrinsic safety).

☐ Typical situations where the each dust explosion-protection technique is used;

☐ Actions or conditions that would void the protection provided the each dust technique;

☐ The use of Standards in determining the requirements to which the installation of dust explosion-protected apparatus shall comply.

T8 Common characteristics of explosion-protection techniques encompassing:

☐ The purposes of 'temperature classification' and 'gas grouping/apparatus grouping'.

☐ Compliance plate markings.

☐ Limitations of non-metallic or specific alloy enclosures.

☐ The purpose of conformity and certification/approval for equipment used in hazardous areas.

☐ Environmental conditions that may impact on explosion-protection techniques.

☐ The principles and applications of other and mixed explosion-protection techniques (Other techniques include encapsulation Ex 'm'; oil-immersion Ex

‘o’; powder-filling Ex ‘q’, ventilation Ex ‘v’ and special protection Ex ‘s’).

☐ Features and purpose of conduit seals and cable termination devices designed for use in hazardous areas (These include conduit seals and barrier and compression glands for cables with or without armouring, screening and/or drain wires).

Explosion protection, certification and techniques

Evidence shall show an understanding of Ex certification schemes and techniques to accepted Standards to an extent indicated by the following aspects:

T1 Explosion-protection equipment — Ex certification schemes encompassing:

☐ Purpose and scope of certification schemes.

☐ Schemes accepted in Australia and New Zealand.

☐ Schemes commonly used in countries other than Australia and New Zealand.

☐ Processes for having equipment certified under the acceptable Ex schemes — scheme procedures; quality management requirements; conformance testing and assessment; and requirements for ongoing certification.

T2 Flameproof (Ex ‘d’) explosion-protection technique encompassing:

☐ The purpose and characteristics of the design features of apparatus and circuits protected by the flameproof (Ex ‘d’) technique. (Examples of characteristics and design features are flame paths, integrity under pressure, pressure piling, and enclosure entries).

☐ Typical situations where the flameproof explosion-protection technique is used;

☐ Actions or conditions that would void the protection provided the Flameproof

technique;

☐ The use of Standards in determining the requirements to which the installation of flameproof explosion-protected apparatus shall comply.

T3 Increased safety (Ex 'e') explosion-protection technique encompassing:

☐ The purpose and characteristics of the design features of apparatus and circuits protected by the Increased safety (Ex 'e') technique (Examples of characteristics and design features are temperature rise, maximum power dissipation, protection devices, certified components, creepage and clearance distances, absence of sparking contacts and enclosure entries).

☐ Typical situations where the Increased safety explosion-protection technique is used;

Actions or conditions that would void the protection provided the Increased safety technique;

☐ The use of Standards in determining the requirements to which the installation of Increased safety explosion-protected apparatus shall comply.

T4 Non-sparking (Ex 'n') explosion-protection technique encompassing:

☐ The purpose and characteristics of the design features of apparatus and circuits protected by the Non-sparking (Ex 'n') technique (Examples of characteristics and design features are creepage and clearance distances and restricted breathing).

☐ Typical situations where the Non-sparking explosion-protection technique is used;

☐ Actions or conditions that would void the protection provided the Non-sparking technique; and

☐ The use of Standards in determining the requirements to which the installation of Non-sparking explosion-protected apparatus shall comply.

T5 Intrinsic safety (Ex 'i') explosion-protection technique encompassing:

☐ The purpose and characteristics of the design features of apparatus and circuits protected by the Intrinsic safety (Ex 'i') technique (Examples of characteristics and design features are field devices, cables, safe area devices, earthing, entity versus integrated system concept, simple devices and interface devices and their parameters, segregation, infallible components, current and voltage limiting, creepage and clearance distances).

☐ Typical situations where the Intrinsic safety explosion-protection technique is used;

☐ Actions or conditions that would void the protection provided the Intrinsic safety;

☐ The use of Standards in determining the requirements to which the installation of Intrinsic safety explosion-protected apparatus shall comply.

T6 Pressurization (Ex 'p') explosion-protection technique encompassing:

☐ The purpose and characteristics of the design features of apparatus and circuits protected by the Pressurization (Ex 'p') technique (Examples of characteristics and design features are exclusion and dilution; purge periods, controlled shut down, monitoring and sources of internal release).

☐ Typical situations where the pressurization explosion-protection technique is used;

☐ Actions or conditions that would void the protection provided the pressurization technique;

☐ The use of Standards in determining the requirements to which the installation of pressurization explosion-protected apparatus shall comply.

T7 Enclosures for dusts (Ex 'tD') - explosion-protection technique encompassing:

The purpose and characteristics of the design features of apparatus and circuits protected by the techniques for dusts (Examples of characteristics and design features are for enclosures; pressurization; encapsulation; and intrinsic safety).

- ☐ Typical situations where the each dust explosion-protection technique is used;
- ☐ Actions or conditions that would void the protection provided the each dust technique;
- ☐ The use of Standards in determining the requirements to which the installation of dust explosion-protected apparatus shall comply.

T8 Common characteristics of explosion-protection techniques encompassing:

- ☐ The purposes of 'temperature classification' and 'gas grouping/apparatus grouping'.
- ☐ Compliance plate markings.
- ☐ Limitations of non-metallic or specific alloy enclosures.
- ☐ The purpose of conformity and certification/approval for equipment used in hazardous areas.
- ☐ Environmental conditions that may impact on explosion-protection techniques.
- ☐ The principles and applications of other and mixed explosion-protection techniques (Other techniques include encapsulation Ex 'm'; oil-immersion Ex 'o'; powder-filling Ex 'q', ventilation Ex 'v' and special protection Ex 's').
- ☐ Features and purpose of conduit seals and cable termination devices designed for use in hazardous areas (These include conduit seals and barrier and compression glands for cables with or without armouring, screening and/or drain wires).

Explosion protection, certification and techniques

Evidence shall show an understanding of Ex certification schemes and techniques to accepted Standards to an extent indicated by the following aspects:

T1 Explosion-protection equipment — Ex certification schemes encompassing:

☐ Purpose and scope of certification schemes.

☐ Schemes accepted in Australia and New Zealand.

☐ Schemes commonly used in countries other than Australia and New Zealand.

☐ Processes for having equipment certified under the acceptable Ex schemes — scheme procedures; quality management requirements; conformance testing and assessment; and requirements for ongoing certification.

T2 Flameproof (Ex 'd') explosion-protection technique encompassing:

☐ The purpose and characteristics of the design features of apparatus and circuits protected by the flameproof (Ex 'd') technique. (Examples of characteristics and design features are flame paths, integrity under pressure, pressure piling, and enclosure entries).

☐ Typical situations where the flameproof explosion-protection technique is used;

☐ Actions or conditions that would void the protection provided the Flameproof technique;

☐ The use of Standards in determining the requirements to which the installation of flameproof explosion-protected apparatus shall comply.

T3 Increased safety (Ex 'e') explosion-protection technique encompassing:

☐ The purpose and characteristics of the design features of apparatus and circuits protected by the Increased safety (Ex 'e') technique (Examples of characteristics and design features are temperature rise, maximum power dissipation, protection devices, certified components, creepage and clearance distances, absence of sparking contacts and enclosure entries).

☐ Typical situations where the Increased safety explosion-protection technique is used;

Actions or conditions that would void the protection provided the Increased safety technique;

☐ The use of Standards in determining the requirements to which the installation of Increased safety explosion-protected apparatus shall comply.

T4 Non-sparking (Ex 'n') explosion-protection technique encompassing:

☐ The purpose and characteristics of the design features of apparatus and circuits protected by the Non-sparking (Ex 'n') technique (Examples of characteristics and design features are creepage and clearance distances and restricted breathing).

☐ Typical situations where the Non-sparking explosion-protection technique is used;

☐ Actions or conditions that would void the protection provided the Non-sparking technique; and

☐ The use of Standards in determining the requirements to which the installation of Non-sparking explosion-protected apparatus shall comply.

T5 Intrinsic safety (Ex 'i') explosion-protection technique encompassing:

☐ The purpose and characteristics of the design features of apparatus and circuits protected by the Intrinsic safety (Ex 'i') technique (Examples of characteristics and design features are field devices, cables, safe area devices, earthing, entity versus integrated system concept, simple devices and interface devices and their parameters, segregation, infallible components, current and voltage limiting, creepage and clearance distances).

☐ Typical situations where the Intrinsic safety explosion-protection technique is used;

☐ Actions or conditions that would void the protection provided the Intrinsic safety;

☐ The use of Standards in determining the requirements to which the installation of Intrinsic safety explosion-protected apparatus shall comply.

T6 Pressurization (Ex 'p') explosion-protection technique encompassing:

☐ The purpose and characteristics of the design features of apparatus and circuits protected by the Pressurization (Ex 'p') technique (Examples of characteristics and design features are exclusion and dilution; purge periods, controlled shut down, monitoring and sources of internal release).

☐ Typical situations where the pressurization explosion-protection technique is used;

☐ Actions or conditions that would void the protection provided the pressurization technique;

☐ The use of Standards in determining the requirements to which the installation of pressurization explosion-protected apparatus shall comply.

T7 Enclosures for dusts (Ex 'tD') - explosion-protection technique encompassing:

The purpose and characteristics of the design features of apparatus and circuits protected by the techniques for dusts (Examples of characteristics and design features are for enclosures; pressurization; encapsulation; and intrinsic safety).

☐ Typical situations where the each dust explosion-protection technique is used;

☐ Actions or conditions that would void the protection provided the each dust technique;

☐ The use of Standards in determining the requirements to which the installation of dust explosion-protected apparatus shall comply.

T8 Common characteristics of explosion-protection techniques encompassing:

☐ The purposes of 'temperature classification' and 'gas grouping/apparatus grouping'.

☐ Compliance plate markings.

☐ Limitations of non-metallic or specific alloy enclosures.

☐ The purpose of conformity and certification/approval for equipment used in hazardous areas.

☐ Environmental conditions that may impact on explosion-protection techniques.

☐ The principles and applications of other and mixed explosion-protection techniques (Other techniques include encapsulation Ex 'm'; oil-immersion Ex 'o'; powder-filling Ex 'q', ventilation Ex 'v' and special protection Ex 's').

☐ Features and purpose of conduit seals and cable termination devices designed for use in hazardous areas (These include conduit seals and barrier and compression glands for cables with or without armouring, screening and/or drain wires).

Explosion protection installation and maintenance requirements

Evidence shall show an understanding of explosion protection installation and maintenance requirements to an extent indicated by the following aspects:

T1 Explosion-protection equipment — Ex certification schemes encompassing:

☐ Purpose and scope of certification schemes.

☐ Schemes accepted in Australia and New Zealand.

☐ Schemes commonly used in countries other than Australia and New Zealand.

☐ Processes for having equipment certified under the acceptable Ex schemes — scheme procedures; quality management requirements; conformance testing and assessment; and requirements for ongoing certification.

T2 Flameproof (Ex 'd') explosion-protection technique encompassing:

☐ The purpose and characteristics of the design features of apparatus and circuits protected by the flameproof (Ex 'd') technique. (Examples of characteristics and design features are flame paths, integrity under pressure, pressure piling, and enclosure entries).

☐ Typical situations where the flameproof explosion-protection technique is used;

☐ Actions or conditions that would void the protection provided the Flameproof technique;

☐ The use of Standards in determining the requirements to which the installation of flameproof explosion-protected apparatus shall comply.

T3 Increased safety (Ex 'e') explosion-protection technique encompassing:

☐ The purpose and characteristics of the design features of apparatus and circuits protected by the Increased safety (Ex 'e') technique (Examples of characteristics and design features are temperature rise, maximum power dissipation, protection devices, certified components, creepage and clearance distances, absence of sparking contacts and enclosure entries).

☐ Typical situations where the Increased safety explosion-protection technique is used;

☐ Actions or conditions that would void the protection provided the Increased safety technique;

☐ The use of Standards in determining the requirements to which the installation of Increased safety explosion-protected apparatus shall comply.

T4 Non-sparking (Ex 'n') explosion-protection technique encompassing:

☐ The purpose and characteristics of the design features of apparatus and circuits protected by the Non-sparking (Ex 'n') technique (Examples of characteristics and design features are creepage and clearance distances and restricted breathing).

☐ Typical situations where the Non-sparking explosion-protection technique is used;

☐ Actions or conditions that would void the protection provided the Non-sparking technique; and

☐ The use of Standards in determining the requirements to which the installation of Non-sparking explosion-protected apparatus shall comply.

T5 Intrinsic safety (Ex 'i') explosion-protection technique encompassing:

- ☐ The purpose and characteristics of the design features of apparatus and circuits protected by the Intrinsic safety (Ex 'i') technique (Examples of characteristics and design features are field devices, cables, safe area devices, earthing, entity versus integrated system concept, simple devices and interface devices and their parameters, segregation, infallible components, current and voltage limiting, creepage and clearance distances).
- ☐ Typical situations where the Intrinsic safety explosion-protection technique is used;
- ☐ Actions or conditions that would void the protection provided the Intrinsic safety;
- ☐ The use of Standards in determining the requirements to which the installation of Intrinsic safety explosion-protected apparatus shall comply.

T6 Pressurization (Ex 'p') explosion-protection technique encompassing:

- ☐ The purpose and characteristics of the design features of apparatus and circuits protected by the Pressurization (Ex 'p') technique (Examples of characteristics and design features are exclusion and dilution; purge periods, controlled shut down, monitoring and sources of internal release).
- ☐ Typical situations where the pressurization explosion-protection technique is used;
- ☐ Actions or conditions that would void the protection provided the pressurization technique;
- ☐ The use of Standards in determining the requirements to which the installation of pressurization explosion-protected apparatus shall comply.

T7 Enclosures for dusts (Ex 'tD') - explosion-protection technique encompassing:

- ☐ The purpose and characteristics of the design features of apparatus and circuits protected by the techniques for dusts (Examples of characteristics and design

features are for enclosures; pressurization; encapsulation; and intrinsic safety).

- ☐ Typical situations where the each dust explosion-protection technique is used;

- ☐ Actions or conditions that would void the protection provided the each dust technique;

- ☐ The use of Standards in determining the requirements to which the installation of dust explosion-protected apparatus shall comply.

T8 Common characteristics of explosion-protection techniques encompassing:

- ☐ The purposes of 'temperature classification' and 'gas grouping/apparatus grouping'.

- ☐ Compliance plate markings.

- ☐ Limitations of non-metallic or specific alloy enclosures.

- ☐ The purpose of conformity and certification/approval for equipment used in hazardous areas.

- ☐ Environmental conditions that may impact on explosion-protection techniques.

- ☐ The principles and applications of other and mixed explosion-protection techniques (Other techniques include encapsulation Ex 'm'; oil-immersion Ex 'o'; powder-filling Ex 'q', ventilation Ex 'v' and special protection Ex 's').

- ☐ Features and purpose of conduit seals and cable termination devices designed for use in hazardous areas (These include conduit seals and barrier and compression glands for cables with or without armouring, screening and/or drain wires).

T9 Preparation to install and maintain explosion-protected equipment in hazardous areas encompassing:

- ☐ OHS procedures to be followed when working in a hazardous area;

the significance of information provided on the certification documentation and schedules for a given item of explosion-protected equipment;

- ☐ the typical contents of a verification dossier and their purpose; and

☐ limitations in the use of tools and testing devices in hazardous areas.

T10 The relationship between explosion-protected equipment, their certification documents and required locations given in specifications and layout drawings and/or written instructions encompassing:

☐ the purpose of markings on the compliance plate and certification documents for a given item of explosion-protected equipment;

☐ matching explosion-protected equipment with certification documents and the equipment specified for an installation; and

☐ the location the items of explosion-protected equipment for an installation from specifications and layout drawings and/or instructions.

T11 Installation Standards and requirements applicable to hazardous encompassing:

☐ the wiring systems permitted and not permitted in or above hazardous areas;

☐ equipment not permitted in or above hazardous areas;

☐ the regulations and Standards to which explosion-protected equipment and wiring must be installed in a hazardous area and how these are applied; and

☐ the documentation required as a record of the installation process, including certification documentation.

T12 Maintenance procedures in hazardous areas that will ensure the integrity of the explosion-protection technique encompassing:

☐ the purpose of a maintenance schedule;

☐ the purpose and extent of 'close', 'sample' and 'periodic' inspections;

☐ the features of each explosion-protection techniques that should be included in a maintenance schedule;

☐ the impact of environmental conditions on explosion-protected equipment, including corrosion and frequency of maintenance;

☐ the documentation requirements for recording the maintenance process and

results;

☐ the use of Standards in determining the requirements with which the design of explosion-protected apparatus shall comply.

T13 Cable termination types suitable for use in hazardous areas encompassing:

☐ explosion protection features of cable terminations devices.

☐ selecting compliant cable termination devices.

T14 Terminating cables suitable for use in hazardous areas encompassing:

☐ installing conduit systems, where applicable, including seals to meet hazardous areas requirements. (Gases only.)

☐ terminating a cable with a barrier gland. (Gases only.)

☐ terminating a multipair, SWA, overall screened, individual screened cable into an enclosure.

☐ testing termination/connections of installed cables/circuits.

Explosion protection installation and maintenance requirements

Evidence shall show an understanding of explosion protection installation and maintenance requirements to an extent indicated by the following aspects:

T1 Explosion-protection equipment — Ex certification schemes encompassing:

☐ Purpose and scope of certification schemes.

☐ Schemes accepted in Australia and New Zealand.

☐ Schemes commonly used in countries other than Australia and New Zealand.

☐ Processes for having equipment certified under the acceptable Ex schemes — scheme procedures; quality management requirements; conformance testing and assessment; and requirements for ongoing certification.

T2 Flameproof (Ex 'd') explosion-protection technique encompassing:

☐ The purpose and characteristics of the design features of apparatus and circuits protected by the flameproof (Ex 'd') technique. (Examples of characteristics and design features are flame paths, integrity under pressure, pressure piling, and enclosure entries).

☐ Typical situations where the flameproof explosion-protection technique is used;

☐ Actions or conditions that would void the protection provided the Flameproof technique;

☐ The use of Standards in determining the requirements to which the installation of flameproof explosion-protected apparatus shall comply.

T3 Increased safety (Ex 'e') explosion-protection technique encompassing:

☐ The purpose and characteristics of the design features of apparatus and circuits protected by the Increased safety (Ex 'e') technique (Examples of characteristics and design features are temperature rise, maximum power dissipation, protection devices, certified components, creepage and clearance distances, absence of sparking contacts and enclosure entries).

☐ Typical situations where the Increased safety explosion-protection technique is used;

☐ Actions or conditions that would void the protection provided the Increased safety technique;

☐ The use of Standards in determining the requirements to which the installation of Increased safety explosion-protected apparatus shall comply.

T4 Non-sparking (Ex 'n') explosion-protection technique encompassing:

☐ The purpose and characteristics of the design features of apparatus and circuits protected by the Non-sparking (Ex 'n') technique (Examples of characteristics and design features are creepage and clearance distances and restricted

breathing).

☐ Typical situations where the Non-sparking explosion-protection technique is used;

☐ Actions or conditions that would void the protection provided the Non-sparking technique; and

☐ The use of Standards in determining the requirements to which the installation of Non-sparking explosion-protected apparatus shall comply.

T5 Intrinsic safety (Ex 'i') explosion-protection technique encompassing:

☐ The purpose and characteristics of the design features of apparatus and circuits protected by the Intrinsic safety (Ex 'i') technique (Examples of characteristics and design features are field devices, cables, safe area devices, earthing, entity versus integrated system concept, simple devices and interface devices and their parameters, segregation, infallible components, current and voltage limiting, creepage and clearance distances).

☐ Typical situations where the Intrinsic safety explosion-protection technique is used;

☐ Actions or conditions that would void the protection provided the Intrinsic safety;

☐ The use of Standards in determining the requirements to which the installation of Intrinsic safety explosion-protected apparatus shall comply.

T6 Pressurization (Ex 'p') explosion-protection technique encompassing:

☐ The purpose and characteristics of the design features of apparatus and circuits protected by the Pressurization (Ex 'p') technique (Examples of characteristics and design features are exclusion and dilution; purge periods, controlled shut down, monitoring and sources of internal release).

☐ Typical situations where the pressurization explosion-protection technique is used;

☐ Actions or conditions that would void the protection provided the pressurization technique;

☐ The use of Standards in determining the requirements to which the installation of pressurization explosion-protected apparatus shall comply.

T7 Enclosures for dusts (Ex 'tD') - explosion-protection technique encompassing:

☐ The purpose and characteristics of the design features of apparatus and circuits protected by the techniques for dusts (Examples of characteristics and design features are for enclosures; pressurization; encapsulation; and intrinsic safety).

☐ Typical situations where the each dust explosion-protection technique is used;

☐ Actions or conditions that would void the protection provided the each dust technique;

☐ The use of Standards in determining the requirements to which the installation of dust explosion-protected apparatus shall comply.

T8 Common characteristics of explosion-protection techniques encompassing:

☐ The purposes of 'temperature classification' and 'gas grouping/apparatus grouping'.

☐ Compliance plate markings.

☐ Limitations of non-metallic or specific alloy enclosures.

☐ The purpose of conformity and certification/approval for equipment used in hazardous areas.

☐ Environmental conditions that may impact on explosion-protection techniques.

☐ The principles and applications of other and mixed explosion-protection techniques (Other techniques include encapsulation Ex 'm'; oil-immersion Ex 'o'; powder-filling Ex 'q', ventilation Ex 'v' and special protection Ex 's').

☐ Features and purpose of conduit seals and cable termination devices designed for use in hazardous areas (These include conduit seals and barrier and compression glands for cables with or without armouring, screening and/or

drain wires).

T9 Preparation to install and maintain explosion-protected equipment in hazardous areas encompassing:

- ☐ OHS procedures to be followed when working in a hazardous area;
- the significance of information provided on the certification documentation and schedules for a given item of explosion-protected equipment;
- ☐ the typical contents of a verification dossier and their purpose; and
- ☐ limitations in the use of tools and testing devices in hazardous areas.

T10 The relationship between explosion-protected equipment, their certification documents and required locations given in specifications and layout drawings and/or written instructions encompassing:

- ☐ the purpose of markings on the compliance plate and certification documents for a given item of explosion-protected equipment;
- ☐ matching explosion-protected equipment with certification documents and the equipment specified for an installation; and
- ☐ the location the items of explosion-protected equipment for an installation from specifications and layout drawings and/or instructions.

T11 Installation Standards and requirements applicable to hazardous encompassing:

- ☐ the wiring systems permitted and not permitted in or above hazardous areas;
- ☐ equipment not permitted in or above hazardous areas;
- ☐ the regulations and Standards to which explosion-protected equipment and wiring must be installed in a hazardous area and how these are applied; and
- ☐ the documentation required as a record of the installation process, including certification documentation.

T12 Maintenance procedures in hazardous areas that will ensure the integrity of the explosion-protection technique encompassing:

- ☐ the purpose of a maintenance schedule;
- ☐ the purpose and extent of 'close', 'sample' and 'periodic' inspections;
- ☐ the features of each explosion-protection techniques that should be included in a maintenance schedule;
- ☐ the impact of environmental conditions on explosion-protected equipment, including corrosion and frequency of maintenance;
- ☐ the documentation requirements for recording the maintenance process and results;
- ☐ the use of Standards in determining the requirements with which the design of explosion-protected apparatus shall comply.

T13 Cable termination types suitable for use in hazardous areas encompassing:

- ☐ explosion protection features of cable terminations devices.
- ☐ selecting compliant cable termination devices.

T14 Terminating cables suitable for use in hazardous areas encompassing:

- ☐ installing conduit systems, where applicable, including seals to meet hazardous areas requirements. (Gases only.)
- ☐ terminating a cable with a barrier gland. (Gases only.)
- ☐ terminating a multipair, SWA, overall screened, individual screened cable into an enclosure.
- ☐ testing termination/connections of installed cables/circuits.

Explosion protection installation and maintenance requirements

Evidence shall show an understanding of explosion protection installation and maintenance requirements to an extent indicated by the following aspects:

T1 Explosion-protection equipment — Ex certification schemes encompassing:

- ☐ Purpose and scope of certification schemes.
- ☐ Schemes accepted in Australia and New Zealand.
- ☐ Schemes commonly used in countries other than Australia and New Zealand.
- ☐ Processes for having equipment certified under the acceptable Ex schemes — scheme procedures; quality management requirements; conformance testing and assessment; and requirements for ongoing certification.

T2 Flameproof (Ex 'd') explosion-protection technique encompassing:

- ☐ The purpose and characteristics of the design features of apparatus and circuits protected by the flameproof (Ex 'd') technique. (Examples of characteristics and design features are flame paths, integrity under pressure, pressure piling, and enclosure entries).

Typical situations where the flameproof explosion-protection technique is used;

- ☐ Actions or conditions that would void the protection provided the Flameproof technique;
- ☐ The use of Standards in determining the requirements to which the installation of flameproof explosion-protected apparatus shall comply.

T3 Increased safety (Ex 'e') explosion-protection technique encompassing:

- ☐ The purpose and characteristics of the design features of apparatus and circuits protected by the Increased safety (Ex 'e') technique (Examples of characteristics and design features are temperature rise, maximum power dissipation, protection devices, certified components, creepage and clearance distances, absence of sparking contacts and enclosure entries).
- ☐ Typical situations where the Increased safety explosion-protection technique is used;
- ☐ Actions or conditions that would void the protection provided the Increased

safety technique;

☐ The use of Standards in determining the requirements to which the installation of Increased safety explosion-protected apparatus shall comply.

T4 Non-sparking (Ex 'n') explosion-protection technique encompassing:

☐ The purpose and characteristics of the design features of apparatus and circuits protected by the Non-sparking (Ex 'n') technique (Examples of characteristics and design features are creepage and clearance distances and restricted breathing).

☐ Typical situations where the Non-sparking explosion-protection technique is used;

☐ Actions or conditions that would void the protection provided the Non-sparking technique; and

☐ The use of Standards in determining the requirements to which the installation of Non-sparking explosion-protected apparatus shall comply.

T5 Intrinsic safety (Ex 'i') explosion-protection technique encompassing:

☐ The purpose and characteristics of the design features of apparatus and circuits protected by the Intrinsic safety (Ex 'i') technique (Examples of characteristics and design features are field devices, cables, safe area devices, earthing, entity versus integrated system concept, simple devices and interface devices and their parameters, segregation, infallible components, current and voltage limiting, creepage and clearance distances).

☐ Typical situations where the Intrinsic safety explosion-protection technique is used;

☐ Actions or conditions that would void the protection provided the Intrinsic safety;

☐ The use of Standards in determining the requirements to which the installation of Intrinsic safety explosion-protected apparatus shall comply.

T6 Pressurization (Ex 'p') explosion-protection technique encompassing:

- ☐ The purpose and characteristics of the design features of apparatus and circuits protected by the Pressurization (Ex 'p') technique (Examples of characteristics and design features are exclusion and dilution; purge periods, controlled shut down, monitoring and sources of internal release).
- ☐ Typical situations where the pressurization explosion-protection technique is used;
- ☐ Actions or conditions that would void the protection provided the pressurization technique;
- ☐ The use of Standards in determining the requirements to which the installation of pressurization explosion-protected apparatus shall comply.

T7 Enclosures for dusts (Ex 'tD') - explosion-protection technique encompassing:

- ☐ The purpose and characteristics of the design features of apparatus and circuits protected by the techniques for dusts (Examples of characteristics and design features are for enclosures; pressurization; encapsulation; and intrinsic safety).
- ☐ Typical situations where the each dust explosion-protection technique is used;
- ☐ Actions or conditions that would void the protection provided the each dust technique;
- ☐ The use of Standards in determining the requirements to which the installation of dust explosion-protected apparatus shall comply.

T8 Common characteristics of explosion-protection techniques encompassing:

- ☐ The purposes of 'temperature classification' and 'gas grouping/apparatus grouping'.
- ☐ Compliance plate markings.
- ☐ Limitations of non-metallic or specific alloy enclosures.
- ☐ The purpose of conformity and certification/approval for equipment used in hazardous areas.

☐ Environmental conditions that may impact on explosion-protection techniques.

☐ The principles and applications of other and mixed explosion-protection techniques (Other techniques include encapsulation Ex 'm'; oil-immersion Ex 'o'; powder-filling Ex 'q', ventilation Ex 'v' and special protection Ex 's').

☐ Features and purpose of conduit seals and cable termination devices designed for use in hazardous areas (These include conduit seals and barrier and compression glands for cables with or without armouring, screening and/or drain wires).

T9 Preparation to install and maintain explosion-protected equipment in hazardous areas encompassing:

☐ OHS procedures to be followed when working in a hazardous area; the significance of information provided on the certification documentation and schedules for a given item of explosion-protected equipment;

☐ the typical contents of a verification dossier and their purpose; and

☐ limitations in the use of tools and testing devices in hazardous areas.

T10 The relationship between explosion-protected equipment, their certification documents and required locations given in specifications and layout drawings and/or written instructions encompassing:

☐ the purpose of markings on the compliance plate and certification documents for a given item of explosion-protected equipment;

☐ matching explosion-protected equipment with certification documents and the equipment specified for an installation; and

☐ the location the items of explosion-protected equipment for an installation from specifications and layout drawings and/or instructions.

T11 Installation Standards and requirements applicable to hazardous encompassing:

☐ the wiring systems permitted and not permitted in or above hazardous areas;

- ☐ equipment not permitted in or above hazardous areas;
- ☐ the regulations and Standards to which explosion-protected equipment and wiring must be installed in a hazardous area and how these are applied; and
- ☐ the documentation required as a record of the installation process, including certification documentation.

T12 Maintenance procedures in hazardous areas that will ensure the integrity of the explosion-protection technique encompassing:

- ☐ the purpose of a maintenance schedule;
- ☐ the purpose and extent of 'close', 'sample' and 'periodic' inspections;
- ☐ the features of each explosion-protection techniques that should be included in a maintenance schedule;
- ☐ the impact of environmental conditions on explosion-protected equipment, including corrosion and frequency of maintenance;
- ☐ the documentation requirements for recording the maintenance process and results;
- ☐ the use of Standards in determining the requirements with which the design of explosion-protected apparatus shall comply.

T13 Cable termination types suitable for use in hazardous areas encompassing:

- ☐ explosion protection features of cable terminations devices.
- ☐ selecting compliant cable termination devices.

T14 Terminating cables suitable for use in hazardous areas encompassing:

- ☐ installing conduit systems, where applicable, including seals to meet hazardous areas requirements. (Gases only.)
- ☐ terminating a cable with a barrier gland. (Gases only.)
- ☐ terminating a multipair, SWA, overall screened, individual screened cable into an enclosure.
- ☐ testing termination/connections of installed cables/circuits.

UEENEEM030A Maintain equipment in hazardous areas – pressurisation

KS01-EM030A Explosion protection installation and maintenance requirements

Evidence shall show an understanding of explosion protection installation and maintenance requirements to an extent indicated by the following aspects:

T1 Explosion-protection equipment — Ex certification schemes encompassing:

- ☐ Purpose and scope of certification schemes.
- ☐ Schemes accepted in Australia and New Zealand.
- ☐ Schemes commonly used in countries other than Australia and New Zealand.
- ☐ Processes for having equipment certified under the acceptable Ex schemes — scheme procedures; quality management requirements; conformance testing and assessment; and requirements for ongoing certification.

T2 Flameproof (Ex 'd') explosion-protection technique encompassing:

- ☐ The purpose and characteristics of the design features of apparatus and circuits protected by the flameproof (Ex 'd') technique. (Examples of characteristics and design features are flame paths, integrity under pressure, pressure piling, and enclosure entries).
- ☐ Typical situations where the flameproof explosion-protection technique is used;

Actions or conditions that would void the protection provided the Flameproof technique;

- ☐ The use of Standards in determining the requirements to which the installation of flameproof explosion-protected apparatus shall comply.

T3 Increased safety (Ex 'e') explosion-protection technique encompassing:

- ☐ The purpose and characteristics of the design features of apparatus and circuits protected by the Increased safety (Ex 'e') technique (Examples of characteristics and design features are temperature rise, maximum power dissipation, protection devices, certified components, creepage and clearance

distances, absence of sparking contacts and enclosure entries).

☐ Typical situations where the Increased safety explosion-protection technique is used;

☐ Actions or conditions that would void the protection provided the Increased safety technique;

☐ The use of Standards in determining the requirements to which the installation of Increased safety explosion-protected apparatus shall comply.

T4 Non-sparking (Ex 'n') explosion-protection technique encompassing:

☐ The purpose and characteristics of the design features of apparatus and circuits protected by the Non-sparking (Ex 'n') technique (Examples of characteristics and design features are creepage and clearance distances and restricted breathing).

☐ Typical situations where the Non-sparking explosion-protection technique is used;

☐ Actions or conditions that would void the protection provided the Non-sparking technique; and

☐ The use of Standards in determining the requirements to which the installation of Non-sparking explosion-protected apparatus shall comply.

T5 Intrinsic safety (Ex 'i') explosion-protection technique encompassing:

☐ The purpose and characteristics of the design features of apparatus and circuits protected by the Intrinsic safety (Ex 'i') technique (Examples of characteristics and design features are field devices, cables, safe area devices, earthing, entity versus integrated system concept, simple devices and interface devices and their parameters, segregation, infallible components, current and voltage limiting, creepage and clearance distances).

☐ Typical situations where the Intrinsic safety explosion-protection technique is used;

☐ Actions or conditions that would void the protection provided the Intrinsic safety;

☐ The use of Standards in determining the requirements to which the installation of Intrinsic safety explosion-protected apparatus shall comply.

REQUIRED SKILLS AND KNOWLEDGE

T6 Pressurization (Ex 'p') explosion-protection technique encompassing:

☐ The purpose and characteristics of the design features of apparatus and circuits protected by the Pressurization (Ex 'p') technique (Examples of characteristics and design features are exclusion and dilution; purge periods, controlled shut down, monitoring and sources of internal release).

☐ Typical situations where the pressurization explosion-protection technique is used;

☐ Actions or conditions that would void the protection provided the pressurization technique;

☐ The use of Standards in determining the requirements to which the installation of pressurization explosion-protected apparatus shall comply.

T7 Enclosures for dusts (Ex 'tD') - explosion-protection technique encompassing:

☐ The purpose and characteristics of the design features of apparatus and circuits protected by the techniques for dusts (Examples of characteristics and design features are for enclosures; pressurization; encapsulation; and intrinsic safety).

☐ Typical situations where the each dust explosion-protection technique is used;

☐ Actions or conditions that would void the protection provided the each dust technique;

☐ The use of Standards in determining the requirements to which the installation of dust explosion-protected apparatus shall comply.

T8 Common characteristics of explosion-protection techniques encompassing:

☐ The purposes of 'temperature classification' and 'gas grouping/apparatus

grouping’.

- ☐ Compliance plate markings.

- ☐ Limitations of non-metallic or specific alloy enclosures.

- ☐ The purpose of conformity and certification/approval for equipment used in hazardous areas.

- ☐ Environmental conditions that may impact on explosion-protection techniques.

- ☐ The principles and applications of other and mixed explosion-protection techniques (Other techniques include encapsulation Ex ‘m’; oil-immersion Ex ‘o’; powder-filling Ex ‘q’, ventilation Ex ‘v’ and special protection Ex ‘s’).

- ☐ Features and purpose of conduit seals and cable termination devices designed for use in hazardous areas (These include conduit seals and barrier and compression glands for cables with or without armouring, screening and/or drain wires).

T9 Preparation to install and maintain explosion-protected equipment in hazardous areas encompassing:

- ☐ OHS procedures to be followed when working in a hazardous area;

- ☐ the significance of information provided on the certification documentation and schedules for a given item of explosion-protected equipment;

- ☐ the typical contents of a verification dossier and their purpose; and

- ☐ limitations in the use of tools and testing devices in hazardous areas.

T10 The relationship between explosion-protected equipment, their certification documents and required locations given in specifications and layout drawings and/or written instructions encompassing:

- ☐ the purpose of markings on the compliance plate and certification documents for a given item of explosion-protected equipment;

- ☐ matching explosion-protected equipment with certification documents and the equipment specified for an installation; and

☐ the location the items of explosion-protected equipment for an installation from specifications and layout drawings and/or instructions.

T11 Installation Standards and requirements applicable to hazardous encompassing:

- ☐ the wiring systems permitted and not permitted in or above hazardous areas;
- ☐ equipment not permitted in or above hazardous areas;
- ☐ the regulations and Standards to which explosion-protected equipment and wiring must be installed in a hazardous area and how these are applied; and
- ☐ the documentation required as a record of the installation process, including certification documentation.

T12 Maintenance procedures in hazardous areas that will ensure the integrity of the explosion-protection technique encompassing:

- ☐ the purpose of a maintenance schedule;
- ☐ the purpose and extent of 'close', 'sample' and 'periodic' inspections;
- ☐ the features of each explosion-protection techniques that should be included in a maintenance schedule;
- ☐ the impact of environmental conditions on explosion-protected equipment, including corrosion and frequency of maintenance;
- ☐ the documentation requirements for recording the maintenance process and results;
- ☐ the use of Standards in determining the requirements with which the design of explosion-protected apparatus shall comply.

T13 Cable termination types suitable for use in hazardous areas encompassing:

- ☐ explosion protection features of cable terminations devices.
- ☐ selecting compliant cable termination devices.

T14 Terminating cables suitable for use in hazardous areas encompassing:

- ☐ installing conduit systems, where applicable, including seals to meet hazardous

areas requirements. (Gases only.)

terminating a cable with a barrier gland. (Gases only.)

☐ terminating a multipair, SWA, overall screened, individual screened cable into an enclosure.

☐ testing termination/connections of installed cables/circuits.

UEENEEM047A Develop and manage maintenance programs for hazardous areas electrical equipment - coal mining

KS01-EM047

A

Hazardous areas maintenance management

Evidence shall show an understanding of hazardous areas maintenance management to an extent indicated by the following aspects:

T1 Explosion-protection equipment — Ex certification schemes encompassing:

☐ Purpose and scope of certification schemes.

☐ Schemes accepted in Australia and New Zealand.

☐ Schemes commonly used in countries other than Australia and New Zealand.

☐ Processes for having equipment certified under the acceptable Ex schemes — scheme procedures; quality management requirements; conformance testing and assessment; and requirements for ongoing certification.

T2 Flameproof (Ex 'd') explosion-protection technique encompassing:

☐ The purpose and characteristics of the design features of apparatus and circuits protected by the flameproof (Ex 'd') technique. (Examples of characteristics and design features are flame paths, integrity under pressure, pressure piling, and enclosure entries).

☐ Typical situations where the flameproof explosion-protection technique is used;

☐ Actions or conditions that would void the protection provided the Flameproof

technique;

☐ The use of Standards in determining the requirements to which the installation of flameproof explosion-protected apparatus shall comply.

T3 Increased safety (Ex 'e') explosion-protection technique encompassing:

☐ The purpose and characteristics of the design features of apparatus and circuits protected by the Increased safety (Ex 'e') technique (Examples of characteristics and design features are temperature rise, maximum power dissipation, protection devices, certified components, creepage and clearance distances, absence of sparking contacts and enclosure entries).

☐ Typical situations where the Increased safety explosion-protection technique is used;

☐ Actions or conditions that would void the protection provided the Increased safety technique;

☐ The use of Standards in determining the requirements to which the installation of Increased safety explosion-protected apparatus shall comply.

T4 Non-sparking (Ex 'n') explosion-protection technique encompassing:

☐ The purpose and characteristics of the design features of apparatus and circuits protected by the Non-sparking (Ex 'n') technique (Examples of characteristics and design features are creepage and clearance distances and restricted breathing).

☐ Typical situations where the Non-sparking explosion-protection technique is used;

☐ Actions or conditions that would void the protection provided the Non-sparking technique; and

☐ The use of Standards in determining the requirements to which the installation of Non-sparking explosion-protected apparatus shall comply.

T5 Intrinsic safety (Ex 'i') explosion-protection technique encompassing:

☐ The purpose and characteristics of the design features of apparatus and circuits protected by the Intrinsic safety (Ex 'i') technique (Examples of characteristics and design features are field devices, cables, safe area devices, earthing, entity versus integrated system concept, simple devices and interface devices and their parameters, segregation, infallible components, current and voltage limiting, creepage and clearance distances).

☐ Typical situations where the Intrinsic safety explosion-protection technique is used;

☐ Actions or conditions that would void the protection provided the Intrinsic safety;

☐ The use of Standards in determining the requirements to which the installation of Intrinsic safety explosion-protected apparatus shall comply.

T6 Pressurization (Ex 'p') explosion-protection technique encompassing:

☐ The purpose and characteristics of the design features of apparatus and circuits protected by the Pressurization (Ex 'p') technique (Examples of characteristics and design features are exclusion and dilution; purge periods, controlled shut down, monitoring and sources of internal release).

☐ Typical situations where the pressurization explosion-protection technique is used;

☐ Actions or conditions that would void the protection provided the pressurization technique;

☐ The use of Standards in determining the requirements to which the installation of pressurization explosion-protected apparatus shall comply.

T7 Enclosures for dusts (Ex 'tD') - explosion-protection technique encompassing:

☐ The purpose and characteristics of the design features of apparatus and circuits protected by the techniques for dusts (Examples of characteristics and design features are for enclosures; pressurization; encapsulation; and intrinsic safety).

- ☐ Typical situations where the each dust explosion-protection technique is used;
- ☐ Actions or conditions that would void the protection provided the each dust technique;
- ☐ The use of Standards in determining the requirements to which the installation of dust explosion-protected apparatus shall comply.

T8 Common characteristics of explosion-protection techniques encompassing:

- ☐ The purposes of 'temperature classification' and 'gas grouping/apparatus grouping'.
- ☐ Compliance plate markings.
- ☐ Limitations of non-metallic or specific alloy enclosures.

The purpose of conformity and certification/approval for equipment used in hazardous areas.

- ☐ Environmental conditions that may impact on explosion-protection techniques.
- ☐ The principles and applications of other and mixed explosion-protection techniques (Other techniques include encapsulation Ex 'm'; oil-immersion Ex 'o'; powder-filling Ex 'q', ventilation Ex 'v' and special protection Ex 's').
- ☐ Features and purpose of conduit seals and cable termination devices designed for use in hazardous areas (These include conduit seals and barrier and compression glands for cables with or without armouring, screening and/or drain wires).

T9 Maintenance procedures in hazardous areas that will ensure the integrity of the explosion-protection technique encompassing:

- ☐ the purpose of a maintenance schedule;
- ☐ the purpose and extent of 'close', 'sample' and 'periodic' inspections;
- ☐ the features of each explosion-protection techniques that should be included in a maintenance schedule;
- ☐ the impact of environmental conditions on explosion-protected equipment,

including corrosion and frequency of maintenance;

- ▣ the documentation requirements for recording the maintenance process and results; and

- ▣ the use of Standards in determining the requirements with which the design of explosion-protected apparatus shall comply.

T10 The responsibilities of a person managing activities or a site related to a hazardous area, encompassing:

- ▣ OHS procedures that are to be established;

- ▣ responsibilities for ensuring that a hazardous area is safe; and

- ▣ responsibilities and processes for establishing and maintaining a verification dossier.

T11 Explosion-protection strategies in relation to a hazardous area, encompassing:

- ▣ the process of classifying a hazardous area;

- ▣ various ways in which electrical systems /apparatus can be treated to prevent them from becoming an ignition source; and

- ▣ the cost of the different ways of treating electrical systems/apparatus associated with hazardous areas.

T12 Requirements for the maintenance of electrical systems associated with hazardous areas, encompassing:

- ▣ the type and grades of inspection of hazardous areas;

- ▣ maintenance programs for electrical explosion-protected systems/apparatus;

And documentation requirements associated with maintenance procedures.

BAE 632 Electrical Wiring in Hazardous Areas

Explosion protection installation and maintenance requirements

Evidence shall show an understanding of explosion protection installation and maintenance requirements to an extent indicated by the following aspects:

T1 Explosion-protection equipment — Ex certification schemes encompassing:

- ☐ Purpose and scope of certification schemes.
- ☐ Schemes accepted in Australia and New Zealand.
- ☐ Schemes commonly used in countries other than Australia and New Zealand.
- ☐ Processes for having equipment certified under the acceptable Ex schemes — scheme procedures; quality management requirements; conformance testing and assessment; and requirements for ongoing certification.

T2 Flameproof (Ex 'd') explosion-protection technique encompassing:

- ☐ The purpose and characteristics of the design features of apparatus and circuits protected by the flameproof (Ex 'd') technique. (Examples of characteristics and design features are flame paths, integrity under pressure, pressure piling, and enclosure entries).
- ☐ Typical situations where the flameproof explosion-protection technique is used;
- ☐ Actions or conditions that would void the protection provided the Flameproof technique;
- ☐ The use of Standards in determining the requirements to which the installation of flameproof explosion-protected apparatus shall comply.

T3 Increased safety (Ex 'e') explosion-protection technique encompassing:

- ☐ The purpose and characteristics of the design features of apparatus and circuits protected by the Increased safety (Ex 'e') technique (Examples of characteristics and design features are temperature rise, maximum power dissipation, protection devices, certified components, creepage and clearance distances, absence of sparking contacts and enclosure entries).

☐ Typical situations where the Increased safety explosion-protection technique is used;

☐ Actions or conditions that would void the protection provided the Increased safety technique;

☐ The use of Standards in determining the requirements to which the installation of Increased safety explosion-protected apparatus shall comply.

T4 Non-sparking (Ex 'n') explosion-protection technique encompassing:

☐ The purpose and characteristics of the design features of apparatus and circuits protected by the Non-sparking (Ex 'n') technique (Examples of characteristics and design features are creepage and clearance distances and restricted breathing).

☐ Typical situations where the Non-sparking explosion-protection technique is used;

☐ Actions or conditions that would void the protection provided the Non-sparking technique; and

☐ The use of Standards in determining the requirements to which the installation of Non-sparking explosion-protected apparatus shall comply.

T5 Intrinsic safety (Ex 'i') explosion-protection technique encompassing:

☐ The purpose and characteristics of the design features of apparatus and circuits protected by the Intrinsic safety (Ex 'i') technique (Examples of characteristics and design features are field devices, cables, safe area devices, earthing, entity versus integrated system concept, simple devices and interface devices and their parameters, segregation, infallible components, current and voltage limiting, creepage and clearance distances).

☐ Typical situations where the Intrinsic safety explosion-protection technique is used;

☐ Actions or conditions that would void the protection provided the Intrinsic

safety;

☐ The use of Standards in determining the requirements to which the installation of Intrinsic safety explosion-protected apparatus shall comply.

T6 Pressurization (Ex 'p') explosion-protection technique encompassing:

☐ The purpose and characteristics of the design features of apparatus and circuits protected by the Pressurization (Ex 'p') technique (Examples of characteristics and design features are exclusion and dilution; purge periods, controlled shut down, monitoring and sources of internal release).

☐ Typical situations where the pressurization explosion-protection technique is used;

☐ Actions or conditions that would void the protection provided the pressurization technique;

The use of Standards in determining the requirements to which the installation of pressurization explosion-protected apparatus shall comply.

T7 Enclosures for dusts (Ex 'tD') - explosion-protection technique encompassing:

☐ The purpose and characteristics of the design features of apparatus and circuits protected by the techniques for dusts (Examples of characteristics and design features are for enclosures; pressurization; encapsulation; and intrinsic safety).

☐ Typical situations where the each dust explosion-protection technique is used;

☐ Actions or conditions that would void the protection provided the each dust technique;

☐ The use of Standards in determining the requirements to which the installation of dust explosion-protected apparatus shall comply.

T8 Common characteristics of explosion-protection techniques encompassing:

☐ The purposes of 'temperature classification' and 'gas grouping/apparatus grouping'.

☐ Compliance plate markings.

- ☐ Limitations of non-metallic or specific alloy enclosures.
- ☐ The purpose of conformity and certification/approval for equipment used in hazardous areas.
- ☐ Environmental conditions that may impact on explosion-protection techniques.
- ☐ The principles and applications of other and mixed explosion-protection techniques (Other techniques include encapsulation Ex 'm'; oil-immersion Ex 'o'; powder-filling Ex 'q', ventilation Ex 'v' and special protection Ex 's').
- ☐ Features and purpose of conduit seals and cable termination devices designed for use in hazardous areas (These include conduit seals and barrier and compression glands for cables with or without armouring, screening and/or drain wires).

T9 Preparation to install and maintain explosion-protected equipment in hazardous areas encompassing:

- ☐ OHS procedures to be followed when working in a hazardous area;
- ☐ the significance of information provided on the certification documentation and schedules for a given item of explosion-protected equipment;
- ☐ the typical contents of a verification dossier and their purpose; and
- ☐ limitations in the use of tools and testing devices in hazardous areas.

T10 The relationship between explosion-protected equipment, their certification documents and required locations given in specifications and layout drawings and/or written instructions encompassing:

- ☐ the purpose of markings on the compliance plate and certification documents for a given item of explosion-protected equipment;
- ☐ matching explosion-protected equipment with certification documents and the equipment specified for an installation; and
- ☐ the location the items of explosion-protected equipment for an installation from specifications and layout drawings and/or instructions.

T11 Installation Standards and requirements applicable to hazardous

encompassing:

- ☐ the wiring systems permitted and not permitted in or above hazardous areas;
- ☐ equipment not permitted in or above hazardous areas;
- ☐ the regulations and Standards to which explosion-protected equipment and wiring must be installed in a hazardous area and how these are applied; and
- ☐ the documentation required as a record of the installation process, including certification documentation.

T12 Maintenance procedures in hazardous areas that will ensure the integrity of the explosion-protection technique encompassing:

- ☐ the purpose of a maintenance schedule;
- ☐ the purpose and extent of 'close', 'sample' and 'periodic' inspections;
- ☐ the features of each explosion-protection techniques that should be included in a maintenance schedule;
- ☐ the impact of environmental conditions on explosion-protected equipment, including corrosion and frequency of maintenance;
- ☐ the documentation requirements for recording the maintenance process and results;
- ☐ the use of Standards in determining the requirements with which the design of explosion-protected apparatus shall comply.

T13 Cable termination types suitable for use in hazardous areas encompassing:

- ☐ explosion protection features of cable terminations devices.
- ☐ selecting compliant cable termination devices.

T14 Terminating cables suitable for use in hazardous areas encompassing:

- ☐ installing conduit systems, where applicable, including seals to meet hazardous areas requirements. (Gases only.)
- ☐ terminating a cable with a barrier gland. (Gases only.)

☐ terminating a multipair, SWA, overall screened, individual screened cable into an enclosure.

☐ testing termination/connections of installed cables/circuits.

Explosion protection installation and maintenance requirements

Evidence shall show an understanding of explosion protection installation and maintenance requirements to an extent indicated by the following aspects:

T1 Explosion-protection equipment — Ex certification schemes encompassing:

☐ Purpose and scope of certification schemes.

☐ Schemes accepted in Australia and New Zealand.

☐ Schemes commonly used in countries other than Australia and New Zealand.

☐ Processes for having equipment certified under the acceptable Ex schemes — scheme procedures; quality management requirements; conformance testing and assessment; and requirements for ongoing certification.

T2 Flameproof (Ex 'd') explosion-protection technique encompassing:

☐ The purpose and characteristics of the design features of apparatus and circuits protected by the flameproof (Ex 'd') technique. (Examples of characteristics and design features are flame paths, integrity under pressure, pressure piling, and enclosure entries).

☐ Typical situations where the flameproof explosion-protection technique is used;

☐ Actions or conditions that would void the protection provided the Flameproof technique;

☐ The use of Standards in determining the requirements to which the installation

of flameproof explosion-protected apparatus shall comply.

T3 Increased safety (Ex 'e') explosion-protection technique encompassing:

- ☐ The purpose and characteristics of the design features of apparatus and circuits protected by the Increased safety (Ex 'e') technique (Examples of characteristics and design features are temperature rise, maximum power dissipation, protection devices, certified components, creepage and clearance distances, absence of sparking contacts and enclosure entries).
- ☐ Typical situations where the Increased safety explosion-protection technique is used;
- ☐ Actions or conditions that would void the protection provided the Increased safety technique;
- ☐ The use of Standards in determining the requirements to which the installation of Increased safety explosion-protected apparatus shall comply.

T4 Non-sparking (Ex 'n') explosion-protection technique encompassing:

- ☐ The purpose and characteristics of the design features of apparatus and circuits protected by the Non-sparking (Ex 'n') technique (Examples of characteristics and design features are creepage and clearance distances and restricted breathing).
- ☐ Typical situations where the Non-sparking explosion-protection technique is used;
- ☐ Actions or conditions that would void the protection provided the Non-sparking technique; and
- ☐ The use of Standards in determining the requirements to which the installation of Non-sparking explosion-protected apparatus shall comply.

T5 Intrinsic safety (Ex 'i') explosion-protection technique encompassing:

- ☐ The purpose and characteristics of the design features of apparatus and circuits protected by the Intrinsic safety (Ex 'i') technique (Examples of characteristics

and design features are field devices, cables, safe area devices, earthing, entity versus integrated system concept, simple devices and interface devices and their parameters, segregation, infallible components, current and voltage limiting, creepage and clearance distances).

☐ Typical situations where the Intrinsic safety explosion-protection technique is used;

☐ Actions or conditions that would void the protection provided the Intrinsic safety;

☐ The use of Standards in determining the requirements to which the installation of Intrinsic safety explosion-protected apparatus shall comply.

T6 Pressurization (Ex 'p') explosion-protection technique encompassing:

☐ The purpose and characteristics of the design features of apparatus and circuits protected by the Pressurization (Ex 'p') technique (Examples of characteristics and design features are exclusion and dilution; purge periods, controlled shut down, monitoring and sources of internal release).

☐ Typical situations where the pressurization explosion-protection technique is used;

☐ Actions or conditions that would void the protection provided the pressurization technique;

The use of Standards in determining the requirements to which the installation of pressurization explosion-protected apparatus shall comply.

T7 Enclosures for dusts (Ex 'tD') - explosion-protection technique encompassing:

☐ The purpose and characteristics of the design features of apparatus and circuits protected by the techniques for dusts (Examples of characteristics and design features are for enclosures; pressurization; encapsulation; and intrinsic safety).

☐ Typical situations where the each dust explosion-protection technique is used;

☐ Actions or conditions that would void the protection provided the each dust

technique;

☐ The use of Standards in determining the requirements to which the installation of dust explosion-protected apparatus shall comply.

T8 Common characteristics of explosion-protection techniques encompassing:

☐ The purposes of 'temperature classification' and 'gas grouping/apparatus grouping'.

☐ Compliance plate markings.

☐ Limitations of non-metallic or specific alloy enclosures.

☐ The purpose of conformity and certification/approval for equipment used in hazardous areas.

☐ Environmental conditions that may impact on explosion-protection techniques.

☐ The principles and applications of other and mixed explosion-protection techniques (Other techniques include encapsulation Ex 'm'; oil-immersion Ex 'o'; powder-filling Ex 'q', ventilation Ex 'v' and special protection Ex 's').

☐ Features and purpose of conduit seals and cable termination devices designed for use in hazardous areas (These include conduit seals and barrier and compression glands for cables with or without armouring, screening and/or drain wires).

T9 Preparation to install and maintain explosion-protected equipment in hazardous areas encompassing:

☐ OHS procedures to be followed when working in a hazardous area;

☐ the significance of information provided on the certification documentation and schedules for a given item of explosion-protected equipment;

☐ the typical contents of a verification dossier and their purpose; and

☐ limitations in the use of tools and testing devices in hazardous areas.

T10 The relationship between explosion-protected equipment, their certification documents and required locations given in specifications and layout drawings and/or

written instructions encompassing:

- ☐ the purpose of markings on the compliance plate and certification documents for a given item of explosion-protected equipment;
- ☐ matching explosion-protected equipment with certification documents and the equipment specified for an installation; and
- ☐ the location the items of explosion-protected equipment for an installation from specifications and layout drawings and/or instructions.

T11 Installation Standards and requirements applicable to hazardous encompassing:

- ☐ the wiring systems permitted and not permitted in or above hazardous areas;
- ☐ equipment not permitted in or above hazardous areas;
- ☐ the regulations and Standards to which explosion-protected equipment and wiring must be installed in a hazardous area and how these are applied; and
- ☐ the documentation required as a record of the installation process, including certification documentation.

T12 Maintenance procedures in hazardous areas that will ensure the integrity of the explosion-protection technique encompassing:

- ☐ the purpose of a maintenance schedule;
- ☐ the purpose and extent of 'close', 'sample' and 'periodic' inspections;
- ☐ the features of each explosion-protection techniques that should be included in a maintenance schedule;
- ☐ the impact of environmental conditions on explosion-protected equipment, including corrosion and frequency of maintenance;
- ☐ the documentation requirements for recording the maintenance process and results;
- ☐ the use of Standards in determining the requirements with which the design of explosion-protected apparatus shall comply.

T13 Cable termination types suitable for use in hazardous areas encompassing:

- ☐ explosion protection features of cable terminations devices.
- ☐ selecting compliant cable termination devices.

T14 Terminating cables suitable for use in hazardous areas encompassing:

- ☐ installing conduit systems, where applicable, including seals to meet hazardous areas requirements. (Gases only.)
- ☐ terminating a cable with a barrier gland. (Gases only.)
- ☐ terminating a multipair, SWA, overall screened, individual screened cable into an enclosure.
- ☐ testing termination/connections of installed cables/circuits.

Explosion protection installation and maintenance requirements

Evidence shall show an understanding of explosion protection installation and maintenance requirements to an extent indicated by the following aspects:

T1 Explosion-protection equipment — Ex certification schemes encompassing:

- ☐ Purpose and scope of certification schemes.
- ☐ Schemes accepted in Australia and New Zealand.
- ☐ Schemes commonly used in countries other than Australia and New Zealand.
- ☐ Processes for having equipment certified under the acceptable Ex schemes — scheme procedures; quality management requirements; conformance testing and assessment; and requirements for ongoing certification.

T2 Flameproof (Ex 'd') explosion-protection technique encompassing:

- ☐ The purpose and characteristics of the design features of apparatus and circuits protected by the flameproof (Ex 'd') technique. (Examples of characteristics

and design features are flame paths, integrity under pressure, pressure piling, and enclosure entries).

☐ Typical situations where the flameproof explosion-protection technique is used;

☐ Actions or conditions that would void the protection provided the Flameproof technique;

☐ The use of Standards in determining the requirements to which the installation of flameproof explosion-protected apparatus shall comply.

T3 Increased safety (Ex 'e') explosion-protection technique encompassing:

☐ The purpose and characteristics of the design features of apparatus and circuits protected by the Increased safety (Ex 'e') technique (Examples of characteristics and design features are temperature rise, maximum power dissipation, protection devices, certified components, creepage and clearance distances, absence of sparking contacts and enclosure entries).

Typical situations where the Increased safety explosion-protection technique is used;

☐ Actions or conditions that would void the protection provided the Increased safety technique;

☐ The use of Standards in determining the requirements to which the installation of Increased safety explosion-protected apparatus shall comply.

T4 Non-sparking (Ex 'n') explosion-protection technique encompassing:

☐ The purpose and characteristics of the design features of apparatus and circuits protected by the Non-sparking (Ex 'n') technique (Examples of characteristics and design features are creepage and clearance distances and restricted breathing).

☐ Typical situations where the Non-sparking explosion-protection technique is used;

☐ Actions or conditions that would void the protection provided the

Non-sparking technique; and

☐ The use of Standards in determining the requirements to which the installation of Non-sparking explosion-protected apparatus shall comply.

T5 Intrinsic safety (Ex 'i') explosion-protection technique encompassing:

☐ The purpose and characteristics of the design features of apparatus and circuits protected by the Intrinsic safety (Ex 'i') technique (Examples of characteristics and design features are field devices, cables, safe area devices, earthing, entity versus integrated system concept, simple devices and interface devices and their parameters, segregation, infallible components, current and voltage limiting, creepage and clearance distances).

☐ Typical situations where the Intrinsic safety explosion-protection technique is used;

☐ Actions or conditions that would void the protection provided the Intrinsic safety;

☐ The use of Standards in determining the requirements to which the installation of Intrinsic safety explosion-protected apparatus shall comply.

T6 Pressurization (Ex 'p') explosion-protection technique encompassing:

☐ The purpose and characteristics of the design features of apparatus and circuits protected by the Pressurization (Ex 'p') technique (Examples of characteristics and design features are exclusion and dilution; purge periods, controlled shut down, monitoring and sources of internal release).

☐ Typical situations where the pressurization explosion-protection technique is used;

☐ Actions or conditions that would void the protection provided the pressurization technique;

☐ The use of Standards in determining the requirements to which the installation

of pressurization explosion-protected apparatus shall comply.

T7 Enclosures for dusts (Ex 'tD') - explosion-protection technique encompassing:

- ☐ The purpose and characteristics of the design features of apparatus and circuits protected by the techniques for dusts (Examples of characteristics and design features are for enclosures; pressurization; encapsulation; and intrinsic safety).
- ☐ Typical situations where the each dust explosion-protection technique is used;
- ☐ Actions or conditions that would void the protection provided the each dust technique;
- ☐ The use of Standards in determining the requirements to which the installation of dust explosion-protected apparatus shall comply.

T8 Common characteristics of explosion-protection techniques encompassing:

- ☐ The purposes of 'temperature classification' and 'gas grouping/apparatus grouping'.
- ☐ Compliance plate markings.
- ☐ Limitations of non-metallic or specific alloy enclosures.
- ☐ The purpose of conformity and certification/approval for equipment used in hazardous areas.
- ☐ Environmental conditions that may impact on explosion-protection techniques.
- ☐ The principles and applications of other and mixed explosion-protection techniques (Other techniques include encapsulation Ex 'm'; oil-immersion Ex 'o'; powder-filling Ex 'q', ventilation Ex 'v' and special protection Ex 's').
- ☐ Features and purpose of conduit seals and cable termination devices designed for use in hazardous areas (These include conduit seals and barrier and compression glands for cables with or without armouring, screening and/or drain wires).

T9 Preparation to install and maintain explosion-protected equipment in hazardous areas encompassing:

- ☐ OHS procedures to be followed when working in a hazardous area;
- ☐ the significance of information provided on the certification documentation and schedules for a given item of explosion-protected equipment;
- ☐ the typical contents of a verification dossier and their purpose; and
- ☐ limitations in the use of tools and testing devices in hazardous areas.

T10 The relationship between explosion-protected equipment, their certification documents and required locations given in specifications and layout drawings and/or written instructions encompassing:

- ☐ the purpose of markings on the compliance plate and certification documents for a given item of explosion-protected equipment;
- ☐ matching explosion-protected equipment with certification documents and the equipment specified for an installation; and
- the location the items of explosion-protected equipment for an installation from specifications and layout drawings and/or instructions.

T11 Installation Standards and requirements applicable to hazardous encompassing:

- ☐ the wiring systems permitted and not permitted in or above hazardous areas;
- ☐ equipment not permitted in or above hazardous areas;
- ☐ the regulations and Standards to which explosion-protected equipment and wiring must be installed in a hazardous area and how these are applied; and
- ☐ the documentation required as a record of the installation process, including certification documentation.

T12 Maintenance procedures in hazardous areas that will ensure the integrity of the explosion-protection technique encompassing:

- ☐ the purpose of a maintenance schedule;
- ☐ the purpose and extent of 'close', 'sample' and 'periodic' inspections;
- ☐ the features of each explosion-protection techniques that should be included in

a maintenance schedule;

- ☐ the impact of environmental conditions on explosion-protected equipment, including corrosion and frequency of maintenance;
- ☐ the documentation requirements for recording the maintenance process and results;
- ☐ the use of Standards in determining the requirements with which the design of explosion-protected apparatus shall comply.

T13 Cable termination types suitable for use in hazardous areas encompassing:

- ☐ explosion protection features of cable terminations devices.
- ☐ selecting compliant cable termination devices.

T14 Terminating cables suitable for use in hazardous areas encompassing:

- ☐ installing conduit systems, where applicable, including seals to meet hazardous areas requirements. (Gases only.)
- ☐ terminating a cable with a barrier gland. (Gases only.)
- ☐ terminating a multipair, SWA, overall screened, individual screened cable into an enclosure.
- ☐ testing termination/connections of installed cables/circuits.

BAE633 Safety Audit in Hazardous Areas

UEENEEM036A Conduct a conformity assessment of explosion-protected equipment - gas atmospheres

KS01-EM036

A

Explosion-protected equipment conformity assessment

Evidence shall show an understanding of explosion-protected equipment conformity assessment to an extent indicated by the following aspects:

T1 Occupational Health and Safety responsibilities related to hazardous areas encompassing:

- ☐ the main features and purpose of a 'clearance to work' system (includes hot work permit systems).
- ☐ typical safety procedures that should be followed before entering a hazardous area;
- ☐ the purpose of gas detectors and their limitations;
- ☐ effects of temperature on gas and vapour detection;
- ☐ frequency of monitoring for presence of gas or vapours, i.e. effects of temperature rise;
- ☐ factors affecting the accuracy of gas detectors, for example, contamination, condensation, temperature;
- ☐ safety in use of gas detectors, for example, 'read and run concept'
- ☐ the safety precautions to be taken when working in a hazardous area.

T2 The roles of the parties involved in the safety of hazardous areas encompassing:

- ☐ common Acts and Regulations related to the safety of hazardous areas and the Authorities responsible for their implementation;
- ☐ where assistance and further information can be obtained to assist persons with hazardous area responsibilities, for example, Standard bodies, experienced consultants; and
- ☐ the hazardous area responsibilities of the owner of premises in which a hazardous area exists; the occupier of premises in which a hazardous area exists; enterprises and personnel engaged in installation and/or maintenance of explosion-protection systems; enterprises and personnel engaged in the classification of hazardous areas and/or design of explosion-protection systems; enterprises and personnel engaged in the overhaul, modification and/or assessment of explosion-protected equipment; enterprises and personnel engaged in the inspection of explosion-protection installations; manufacturers

of explosion-protected equipment; designated authorities; insurers.

T3 Properties of combustible substances and their potential to create an explosive hazard encompassing:

- ☐ condition in the workplace that will lead to an explosion;
- ☐ the terms 'combustion', 'ignition' and 'propagation';
- ☐ explosive range of substances encountered in the workplace i.e. LEL/UEL;
- ☐ explosive parameters of substances as given in tables of substance properties
- ☐ Note: Combustible materials are gases, vapours (from liquids), and dusts; flash point.
- ☐ the difference between gases and vapours; and
- ☐ the toxic nature of gases and vapours and potential harmful consequences.

T4 The nature of hazardous areas encompassing:

- ☐ the Standards definition of a 'hazardous area';
- ☐ the recommended methods for classifying the type and degree of explosion hazard in an area;
- ☐ hazardous area classifications as defined by Standards; and
- ☐ factors that are considered when a hazardous area is classified.
- ☐ the basics of how explosion-protection is achieved by the methods of exclusion, containment, energy limitation, dilution, avoidance of ignition source.

T5 Explosive-protected equipment encompassing:

- ☐ The principles of each explosion-protection technique, the methods used and how each technique works (Flameproof (Ex 'd'); Increased safety (Ex 'e'); Non-sparking (Ex 'n'); Intrinsic safety (Ex 'i') and Pressurization (Ex 'p') for gas atmospheres and Dust-exclusion enclosures (Ex 'tD'); Pressurization (Ex 'pD'); Encapsulation (Ex 'mD'); and Intrinsic safety (Ex 'iD') for dusts)
- ☐ How explosion-protected equipment is identified by the 'Ex' symbol marked

on the equipment, including old equipment and equipment certified in another country.

☐ Visible conditions or actions that would void the explosion-protection provided by a particular technique.

T6 Explosion-protection equipment — Ex certification schemes encompassing:

☐ Purpose and scope of certification schemes.

☐ Schemes accepted in Australia and New Zealand.

☐ Schemes commonly used in countries other than Australia and New Zealand.

☐ Processes for having equipment certified under the acceptable Ex schemes — scheme procedures; quality management requirements; conformance testing and assessment; and requirements for ongoing certification.

T7 Flameproof (Ex 'd') explosion-protection technique encompassing:

☐ The purpose and characteristics of the design features of apparatus and circuits protected by the flameproof (Ex 'd') technique. (Examples of characteristics and design features are flame paths, integrity under pressure, pressure piling, and enclosure entries).

☐ Typical situations where the flameproof explosion-protection technique is used;

☐ Actions or conditions that would void the protection provided the Flameproof technique;

☐ The use of Standards in determining the requirements to which the installation of flameproof explosion-protected apparatus shall comply.

T8 Increased safety (Ex 'e') explosion-protection technique encompassing:

☐ The purpose and characteristics of the design features of apparatus and circuits protected by the Increased safety (Ex 'e') technique (Examples of characteristics and design features are temperature rise, maximum power dissipation, protection devices, certified components, creepage and clearance

distances, absence of sparking contacts and enclosure entries).

☐ Typical situations where the Increased safety explosion-protection technique is used;

☐ Actions or conditions that would void the protection provided the Increased safety technique;

☐ The use of Standards in determining the requirements to which the installation of Increased safety explosion-protected apparatus shall comply.

T9 Non-sparking (Ex 'n') explosion-protection technique encompassing:

☐ The purpose and characteristics of the design features of apparatus and circuits protected by the Non-sparking (Ex 'n') technique (Examples of characteristics and design features are creepage and clearance distances and restricted breathing).

☐ Typical situations where the Non-sparking explosion-protection technique is used;

☐ Actions or conditions that would void the protection provided the Non-sparking technique; and

☐ The use of Standards in determining the requirements to which the installation of Non-sparking explosion-protected apparatus shall comply.

T10 Intrinsic safety (Ex 'i') explosion-protection technique encompassing:

☐ The purpose and characteristics of the design features of apparatus and circuits protected by the Intrinsic safety (Ex 'i') technique (Examples of characteristics and design features are field devices, cables, safe area devices, earthing, entity versus integrated system concept, simple devices and interface devices and their parameters, segregation, infallible components, current and voltage limiting, creepage and clearance distances).

☐ Typical situations where the Intrinsic safety explosion-protection technique is used;

☐ Actions or conditions that would void the protection provided the Intrinsic safety;

☐ The use of Standards in determining the requirements to which the installation of Intrinsic safety explosion-protected apparatus shall comply.

T11 Pressurization (Ex 'p') explosion-protection technique encompassing:

☐ The purpose and characteristics of the design features of apparatus and circuits protected by the Pressurization (Ex 'p') technique (Examples of characteristics and design features are exclusion and dilution; purge periods, controlled shut down, monitoring and sources of internal release).

☐ Typical situations where the pressurization explosion-protection technique is used;

☐ Actions or conditions that would void the protection provided the pressurization technique;

☐ The use of Standards in determining the requirements to which the installation of pressurization explosion-protected apparatus shall comply.

T12 Enclosures for dusts (Ex 'tD') - explosion-protection technique encompassing:

☐ The purpose and characteristics of the design features of apparatus and circuits protected by the techniques for dusts (Examples of characteristics and design features are for enclosures; pressurization; encapsulation; and intrinsic safety).

☐ Typical situations where the each dust explosion-protection technique is used;

☐ Actions or conditions that would void the protection provided the each dust technique;

☐ The use of Standards in determining the requirements to which the installation of dust explosion-protected apparatus shall comply.

T13 Common characteristics of explosion-protection techniques encompassing:

☐ The purposes of 'temperature classification' and 'gas grouping/apparatus grouping'.

- ☐ Compliance plate markings.
- ☐ Limitations of non-metallic or specific alloy enclosures.
- ☐ The purpose of conformity and certification/approval for equipment used in hazardous areas.
- ☐ Environmental conditions that may impact on explosion-protection techniques.
- ☐ The principles and applications of other and mixed explosion-protection techniques (Other techniques include encapsulation Ex 'm'; oil-immersion Ex 'o'; powder-filling Ex 'q', ventilation Ex 'v' and special protection Ex 's').
- ☐ Features and purpose of conduit seals and cable termination devices designed for use in hazardous areas (These include conduit seals and barrier and compression glands for cables with or without armouring, screening and/or drain wires).

T14 The compliance certification and the 'Ex' scheme for recognition of certification encompassing:

- ☐ the purposes of certification of explosion-protected equipment;
- ☐ the parties involved in the assessment/testing and certification of explosion-protected equipment and their responsibilities; and
- ☐ the process for recognition of assessment/testing and certification of explosion-protected equipment from other countries.

T15 The preparation required to assess explosion-protected equipment for compliance with Standards encompassing:

- ☐ the special safety measures that should be taken when assessing/testing explosion-protected equipment;
- ☐ documentation required prior to conducting conformity assessment;
- ☐ tests necessary to establish that an item of explosion-protected equipment conforms with relevant Standards; and
- ☐ situations where testing is not applicable or required.

T16 Assessing and testing explosion-protected equipment encompassing:

- ☐ assessment and test requirements; and
- ☐ procedures for conducting a conformity assessment.

T17 Documentation used in assessing explosion-protected equipment for conformance to accepted Standards encompassing:

- ☐ The documentation and Standard(s) required to begin an assessment.
- ☐ The differences between the test requirements of Standards from other countries and the compliant/acceptable Standards against which the equipment is being assessed.
- ☐ Results given in equipment test reports.
- ☐ Conformity assessment processes and procedures.

T18 Assessing to a current acceptable Standard existing equipment that has been certified to previously acceptable Standards encompassing:

- ☐ processes and procedures used; and
- ☐ possible outcomes.

T19 A clause by clause assessment between the equipment manufacturing Standard(s) and the current acceptable Ex Standards encompassing:

- ☐ processes and procedures used; and
- ☐ differences between the Standards that may be detected.

UEENEEM057A Design explosion-protected electrical systems and installations - gas atmospheres

KS01-EM05

7A

Hazardous area electrical systems design

Evidence shall show an understanding of hazardous area electrical systems design to an extent indicated by the following aspects:

T1 Occupational Health and Safety responsibilities related to hazardous areas

encompassing:

- ☐ the main features and purpose of a 'clearance to work' system (includes hot work permit systems).
- ☐ typical safety procedures that should be followed before entering a hazardous area;
- ☐ the purpose of gas detectors and their limitations;
- ☐ effects of temperature on gas and vapour detection;
- ☐ frequency of monitoring for presence of gas or vapours, i.e. effects of temperature rise;
- ☐ factors affecting the accuracy of gas detectors, for example, contamination, condensation, temperature;
- ☐ safety in use of gas detectors, for example, 'read and run concept'
- ☐ the safety precautions to be taken when working in a hazardous area.

T2 The roles of the parties involved in the safety of hazardous areas

encompassing:

- ☐ common Acts and Regulations related to the safety of hazardous areas and the Authorities responsible for their implementation;
- ☐ where assistance and further information can be obtained to assist persons with hazardous area responsibilities, for example, Standard bodies, experienced

UEENEEM068A Assess the fitness-for-purpose of hazardous areas

explosion-protected equipment - gas atmospheres

KS01-EM068

A

Explosion-protected equipment fitness-for-purpose

Evidence shall show an understanding of explosion-protected equipment

fitness-for-purpose to an extent indicated by the following aspects:

T1 Preparation to install and maintain explosion-protected equipment in

hazardous areas encompassing:

- ☐ OHS procedures to be followed when working in a hazardous area;
- ☐ the significance of information provided on the certification documentation and schedules for a given item of explosion-protected equipment;
- ☐ the typical contents of a verification dossier and their purpose; and
- ☐ limitations in the use of tools and testing devices in hazardous areas.

T2 The relationship between explosion-protected equipment, their certification documents and required locations given in specifications and layout drawings and/or written instructions encompassing:

the purpose of markings on the compliance plate and certification documents for a given item of explosion-protected equipment;

- ☐ matching explosion-protected equipment with certification documents and the equipment specified for an installation; and
- ☐ the location the items of explosion-protected equipment for an installation from specifications and layout drawings and/or instructions.

T3 Installation Standards and requirements applicable to hazardous encompassing:

- ☐ the wiring systems permitted and not permitted in or above hazardous areas;
- ☐ equipment not permitted in or above hazardous areas;
- ☐ the regulations and Standards to which explosion-protected equipment and wiring must be installed in a hazardous area and how these are applied; and
- ☐ the documentation required as a record of the installation process, including certification documentation.

T4 Maintenance procedures in hazardous areas that will ensure the integrity of the explosion-protection technique encompassing:

- ☐ the purpose of a maintenance schedule;
- ☐ the purpose and extent of 'close', 'sample' and 'periodic' inspections;

- ☐ the features of each explosion-protection techniques that should be included in a maintenance schedule;
- ☐ the impact of environmental conditions on explosion-protected equipment, including corrosion and frequency of maintenance;
- ☐ the documentation requirements for recording the maintenance process and results;
- ☐ the use of Standards in determining the requirements with which the design of explosion-protected apparatus shall comply.

T5 Cable termination types suitable for use in hazardous areas encompassing:

- ☐ explosion protection features of cable terminations devices.
- ☐ selecting compliant cable termination devices.

T6 The relationship between the documentation held in a verification dossier and the installed equipment encompassing:

- ☐ consistency between the location and type of equipment with the area classification details in the verification dossier; and
- ☐ equipment certification and any attached conditions that relate to the equipment as it is installed.

T7 Inspecting a hazardous area installation encompassing:

- ☐ typical processes for undertaking the inspection of a hazardous area installation;
- ☐ requirements applicable to a given installation; and
- ☐ reporting of an inspection of a hazardous area installation.

T8 Documentation used in assessing explosion-protected equipment for conformance to accepted Standards encompassing:

- ☐ The documentation and Standard(s) required to begin an assessment.
- ☐ The differences between the test requirements of Standards from other countries and the compliant/acceptable Standards against which the equipment

is being assessed.

- ▣ Results given in equipment test reports.

- ▣ Conformity assessment processes and procedures.

T9 Assessing to a current acceptable Standard existing equipment that has been certified to previously acceptable Standards encompassing:

- ▣ processes and procedures used; and

- ▣ possible outcomes.

T10 A clause by clause assessment between the equipment manufacturing Standard(s) and the current acceptable Ex Standards encompassing:

- ▣ processes and procedures used; and

- ▣ differences between the Standards that may be detected.

T11 Techniques used in fitness-for purpose assessment of equipment for use in hazardous areas encompassing:

- ▣ Processes for verifying that a design specification meets the integrity of the equipment, showing the equipment is fit-for-purpose and is safe to use:

- ▣ Standards against which fitness-for-purpose assessment is made;

- ▣ the need to maintain the accuracy/calibration of measuring/test devices/tools;

- ▣ assessment and measurements/tests requirements for determining that an item of explosion-protected equipment complies with the relevant Standards and meets the certification requirements;

- ▣ testing that is/is not required to determine compliance of the equipment being assessed; and

- ▣ development of different tests to those given in Standards and justification as to how they achieve the same result.

- ▣ Typical specification for the equipment to be assessed as fit-for-purpose.

T12 Processes used in auditing hazardous areas encompassing:

☐ Requirements to retain hazardous areas documentation on site.

☐ Components of an audit:

☐ authenticity of documentation;

hazardous areas delineations shown in site diagrams;

☐ location and operating parameters of equipment shown in certification documents;

☐ compliance of equipment location;

☐ compliance of wiring systems; and

☐ alignment of hazardous areas documentation to as- built installation.

☐ Reporting non-conformance of an installation.

BAE 634 Explosion Protection Equipments & Methods

UEENEEM080A Report on the integrity of explosion-protected equipment in a hazardous area

KS01-EM080A Hazardous areas and explosion-protection principles

Evidence shall show an understanding of hazardous areas and explosion-protection principles (including working safely in hazardous areas), principles of the following explosion-protection techniques and visible conditions of explosion-protection equipment that indicate the protection is void and changes in the nature of the explosion hazard that may render the explosion-protection unsafe. to an extent indicated by the following aspects:

T1 Occupational Health and Safety responsibilities related to hazardous areas encompassing:

the main features and purpose of a 'clearance to work' system (includes hot work permit systems).

☐ typical safety procedures that should be followed before entering a hazardous area;

☐ the purpose of gas detectors and their limitations;

- ☐ effects of temperature on gas and vapour detection;
- ☐ frequency of monitoring for presence of gas or vapours, i.e. effects of temperature rise;
- ☐ factors affecting the accuracy of gas detectors, for example, contamination, condensation, temperature;
- ☐ safety in use of gas detectors, for example, 'read and run concept'
- ☐ the safety precautions to be taken when working in a hazardous area.

T2 The roles of the parties involved in the safety of hazardous areas encompassing:

- ☐ common Acts and Regulations related to the safety of hazardous areas and the Authorities responsible for their implementation;
- ☐ where assistance and further information can be obtained to assist persons with hazardous area responsibilities, for example, Standard bodies, experienced consultants; and
- ☐ the hazardous area responsibilities of the owner of premises in which a hazardous area exists; the occupier of premises in which a hazardous area exists; enterprises and personnel engaged in installation and/or maintenance of explosion-protection systems; enterprises and personnel engaged in the classification of hazardous areas and/or design of explosion-protection systems; enterprises and personnel engaged in the overhaul, modification and/or assessment of explosion-protected equipment; enterprises and personnel engaged in the inspection of explosion-protection installations; manufacturers of explosion-protected equipment; designated authorities; insurers.

T3 Properties of combustible substances and their potential to create an explosive hazard encompassing:

- ☐ condition in the workplace that will lead to an explosion;
- ☐ the terms 'combustion', 'ignition' and 'propagation';

☐ explosive range of substances encountered in the workplace i.e. LEL/UEL;

☐ explosive parameters of substances as given in tables of substance properties

Note: Combustible materials are gases, vapours (from liquids), and dusts; flash point.

☐ the difference between gases and vapours; and

☐ the toxic nature of gases and vapours and potential harmful consequences.

T4 The nature of hazardous areas encompassing:

☐ the Standards definition of a 'hazardous area';

☐ the recommended methods for classifying the type and degree of explosion hazard in an area;

☐ hazardous area classifications as defined by Standards; and

factors that are considered when a hazardous area is classified.

☐ the basics of how explosion-protection is achieved by the methods of exclusion, containment, energy limitation, dilution, avoidance of ignition source.

T5 Explosive-protected equipment encompassing:

☐ The principles of each explosion-protection technique, the methods used and how each technique works (Flameproof (Ex 'd'); Increased safety (Ex 'e');

Non-sparking (Ex 'n'); Intrinsic safety (Ex 'i') and Pressurization (Ex 'p') for gas atmospheres and Dust-exclusion enclosures (Ex 'tD'); Pressurization (Ex 'pD');

Encapsulation (Ex 'mD'); and Intrinsic safety (Ex 'iD') for dusts)

☐ How explosion-protected equipment is identified by the 'Ex' symbol marked on the equipment, including old equipment and equipment certified in another country.

☐ Visible conditions or actions that would void the explosion-protection provided by a particular technique.

T6 Explosion-protection visual checks encompassing:

☐ occupational, health and safety procedures to be followed before entering hazardous areas; and while conducting visual inspection.

- ☐ Visible defects in explosion-protected equipment and wiring.
- ☐ Conditions that may indicate a change in a given explosion hazard.
- ☐ Reporting defects in explosion-protected equipment and wiring - the purpose of a verification dossier; and various ways for reporting defects in explosion-protected equipment and wiring.
- ☐ procedures to be followed in the event of a change in the explosion hazard.

UEENEEM065A Conduct audit of hazardous areas installations - gas

Atmospheres

KS01-EM065

A

Hazardous areas installation auditing

Evidence shall show an understanding of hazardous areas installation auditing to an extent indicated by the following aspects:

T1 Occupational Health and Safety responsibilities related to hazardous areas encompassing:

- ☐ the main features and purpose of a 'clearance to work' system (includes hot work permit systems).
- ☐ typical safety procedures that should be followed before entering a hazardous area;
- ☐ the purpose of gas detectors and their limitations;
- ☐ effects of temperature on gas and vapour detection;
- ☐ frequency of monitoring for presence of gas or vapours, i.e. effects of temperature rise;
- ☐ factors affecting the accuracy of gas detectors, for example, contamination, condensation, temperature;
- ☐ safety in use of gas detectors, for example, 'read and run concept'

☐ the safety precautions to be taken when working in a hazardous area.

T2 The roles of the parties involved in the safety of hazardous areas

encompassing:

☐ common Acts and Regulations related to the safety of hazardous areas and the Authorities responsible for their implementation;

☐ where assistance and further information can be obtained to assist persons with hazardous area responsibilities, for example, Standard bodies, experienced consultants; and

☐ the hazardous area responsibilities of the owner of premises in which a hazardous area exists; the occupier of premises in which a hazardous area exists; enterprises and personnel engaged in installation and/or maintenance of explosion-protection systems; enterprises and personnel engaged in the classification of hazardous areas and/or design of explosion-protection systems; enterprises and personnel engaged in the overhaul, modification and/or assessment of explosion-protected equipment; enterprises and personnel engaged in the inspection of explosion-protection installations; manufacturers of explosion-protected equipment; designated authorities; insurers.

T3 Properties of combustible substances and their potential to create an explosive hazard encompassing:

☐ condition in the workplace that will lead to an explosion;

☐ the terms 'combustion', 'ignition' and 'propagation';

☐ explosive range of substances encountered in the workplace i.e. LEL/UEL;

☐ explosive parameters of substances as given in tables of substance properties

☐ Note: Combustible materials are gases, vapours (from liquids), and dusts; flash point.

☐ the difference between gases and vapours; and

☐ the toxic nature of gases and vapours and potential harmful consequences.

T4 The nature of hazardous areas encompassing:

- ☐ the Standards definition of a 'hazardous area';
- ☐ the recommended methods for classifying the type and degree of explosion hazard in an area;
- ☐ hazardous area classifications as defined by Standards; and
- ☐ factors that are considered when a hazardous area is classified.
- ☐ the basics of how explosion-protection is achieved by the methods of exclusion, containment, energy limitation, dilution, avoidance of ignition source.

T5 Explosive-protected equipment encompassing:

- ☐ The principles of each explosion-protection technique, the methods used and how each technique works (Flameproof (Ex 'd'); Increased safety (Ex 'e'); Non-sparking (Ex 'n'); Intrinsic safety (Ex 'i') and Pressurization (Ex 'p') for gas atmospheres and Dust-exclusion enclosures (Ex 'tD'); Pressurization (Ex 'pD'); Encapsulation (Ex 'mD'); and Intrinsic safety (Ex 'iD') for dusts)
- ☐ How explosion-protected equipment is identified by the 'Ex' symbol marked on the equipment, including old equipment and equipment certified in another country.
- ☐ Visible conditions or actions that would void the explosion-protection provided by a particular technique.

T6 Explosion-protection equipment — Ex certification schemes encompassing:

- ☐ Purpose and scope of certification schemes.
- ☐ Schemes accepted in Australia and New Zealand.
- ☐ Schemes commonly used in countries other than Australia and New Zealand.
- ☐ Processes for having equipment certified under the acceptable Ex schemes — scheme procedures; quality management requirements; conformance testing and assessment; and requirements for ongoing certification.

T7 Flameproof (Ex 'd') explosion-protection technique encompassing:

☐ The purpose and characteristics of the design features of apparatus and circuits protected by the flameproof (Ex 'd') technique. (Examples of characteristics and design features are flame paths, integrity under pressure, pressure piling, and enclosure entries).

☐ Typical situations where the flameproof explosion-protection technique is used;

☐ Actions or conditions that would void the protection provided the Flameproof technique;

☐ The use of Standards in determining the requirements to which the installation of flameproof explosion-protected apparatus shall comply.

T8 Increased safety (Ex 'e') explosion-protection technique encompassing:

☐ The purpose and characteristics of the design features of apparatus and circuits protected by the Increased safety (Ex 'e') technique (Examples of characteristics and design features are temperature rise, maximum power dissipation, protection devices, certified components, creepage and clearance distances, absence of sparking contacts and enclosure entries).

☐ Typical situations where the Increased safety explosion-protection technique is used;

☐ Actions or conditions that would void the protection provided the Increased safety technique;

☐ The use of Standards in determining the requirements to which the installation of Increased safety explosion-protected apparatus shall comply.

T9 Non-sparking (Ex 'n') explosion-protection technique encompassing:

☐ The purpose and characteristics of the design features of apparatus and circuits protected by the Non-sparking (Ex 'n') technique (Examples of characteristics and design features are creepage and clearance distances and restricted

breathing).

☐ Typical situations where the Non-sparking explosion-protection technique is used;

☐ Actions or conditions that would void the protection provided the Non-sparking technique; and

☐ The use of Standards in determining the requirements to which the installation of Non-sparking explosion-protected apparatus shall comply.

T10 Intrinsic safety (Ex 'i') explosion-protection technique encompassing:

☐ The purpose and characteristics of the design features of apparatus and circuits protected by the Intrinsic safety (Ex 'i') technique (Examples of characteristics and design features are field devices, cables, safe area devices, earthing, entity versus integrated system concept, simple devices and interface devices and their parameters, segregation, infallible components, current and voltage limiting, creepage and clearance distances).

☐ Typical situations where the Intrinsic safety explosion-protection technique is used;

☐ Actions or conditions that would void the protection provided the Intrinsic safety;

☐ The use of Standards in determining the requirements to which the installation of Intrinsic safety explosion-protected apparatus shall comply.

T11 Pressurization (Ex 'p') explosion-protection technique encompassing:

☐ The purpose and characteristics of the design features of apparatus and circuits protected by the Pressurization (Ex 'p') technique (Examples of characteristics and design features are exclusion and dilution; purge periods, controlled shut down, monitoring and sources of internal release).

☐ Typical situations where the pressurization explosion-protection technique is used;

☐ Actions or conditions that would void the protection provided the pressurization technique;

☐ The use of Standards in determining the requirements to which the installation of pressurization explosion-protected apparatus shall comply.

T12 Enclosures for dusts (Ex 'tD') - explosion-protection technique encompassing:

☐ The purpose and characteristics of the design features of apparatus and circuits protected by the techniques for dusts (Examples of characteristics and design features are for enclosures; pressurization; encapsulation; and intrinsic safety).

☐ Typical situations where the each dust explosion-protection technique is used;

☐ Actions or conditions that would void the protection provided the each dust technique;

☐ The use of Standards in determining the requirements to which the installation of dust explosion-protected apparatus shall comply.

T13 Common characteristics of explosion-protection techniques encompassing:

☐ The purposes of 'temperature classification' and 'gas grouping/apparatus grouping'.

☐ Compliance plate markings.

☐ Limitations of non-metallic or specific alloy enclosures.

☐ The purpose of conformity and certification/approval for equipment used in hazardous areas.

☐ Environmental conditions that may impact on explosion-protection techniques.

☐ The principles and applications of other and mixed explosion-protection techniques (Other techniques include encapsulation Ex 'm'; oil-immersion Ex 'o'; powder-filling Ex 'q', ventilation Ex 'v' and special protection Ex 's').

☐ Features and purpose of conduit seals and cable termination devices designed or use in hazardous areas (These include conduit seals and barrier and compression glands for cables with or without armouring, screening and/or

drain wires).

T14 Preparation to install and maintain explosion-protected equipment in hazardous areas encompassing:

- ☐ OHS procedures to be followed when working in a hazardous area;
- ☐ the significance of information provided on the certification documentation and schedules for a given item of explosion-protected equipment;
- ☐ the typical contents of a verification dossier and their purpose; and
- ☐ limitations in the use of tools and testing devices in hazardous areas.

T15 The relationship between explosion-protected equipment, their certification documents and required locations given in specifications and layout drawings and/or written instructions encompassing:

- ☐ the purpose of markings on the compliance plate and certification documents for a given item of explosion-protected equipment;
- ☐ matching explosion-protected equipment with certification documents and the equipment specified for an installation; and
- ☐ the location the items of explosion-protected equipment for an installation from specifications and layout drawings and/or instructions.

T16 Installation Standards and requirements applicable to hazardous encompassing:

- ☐ the wiring systems permitted and not permitted in or above hazardous areas;
- ☐ equipment not permitted in or above hazardous areas;
- ☐ the regulations and Standards to which explosion-protected equipment and wiring must be installed in a hazardous area and how these are applied; and
- ☐ the documentation required as a record of the installation process, including certification documentation.

T17 Processes used in auditing hazardous areas encompassing:

- ☐ Requirements to retain hazardous areas documentation on site.

☐ Components of an audit:

☐ authenticity of documentation;

☐ hazardous areas delineations shown in site diagrams;

☐ location and operating parameters of equipment shown in certification documents;

☐ compliance of equipment location;

☐ compliance of wiring systems; and

☐ alignment of hazardous areas documentation to as-built installation.

☐ Reporting non-conformance of an installation.

BAE 635 Testing in Hazardous Areas

UEENEEM039A Conduct testing of hazardous areas installations - gas

Atmospheres

KS01-EM03

9A

Hazardous area installations testing

Evidence shall show an understanding of hazardous area installations testing to an extent indicated by the following aspects:

T1 Explosion-protection equipment — Ex certification schemes encompassing:

☐ Purpose and scope of certification schemes.

☐ Schemes accepted in Australia and New Zealand.

☐ Schemes commonly used in countries other than Australia and New Zealand.

☐ Processes for having equipment certified under the acceptable Ex schemes — scheme procedures; quality management requirements; conformance testing and assessment; and requirements for ongoing certification.

T2 Flameproof (Ex 'd') explosion-protection technique encompassing:

☐ The purpose and characteristics of the design features of apparatus and circuits

protected by the flameproof (Ex 'd') technique. (Examples of characteristics and design features are flame paths, integrity under pressure, pressure piling, and enclosure entries).

☐ Typical situations where the flameproof explosion-protection technique is used;

☐ Actions or conditions that would void the protection provided the Flameproof technique;

☐ The use of Standards in determining the requirements to which the installation of flameproof explosion-protected apparatus shall comply.

T3 Increased safety (Ex 'e') explosion-protection technique encompassing:

☐ The purpose and characteristics of the design features of apparatus and circuits protected by the Increased safety (Ex 'e') technique (Examples of characteristics and design features are temperature rise, maximum power dissipation, protection devices, certified components, creepage and clearance distances, absence of sparking contacts and enclosure entries).

Typical situations where the Increased safety explosion-protection technique is used;

☐ Actions or conditions that would void the protection provided the Increased safety technique;

☐ The use of Standards in determining the requirements to which the installation of Increased safety explosion-protected apparatus shall comply.

T4 Non-sparking (Ex 'n') explosion-protection technique encompassing:

☐ The purpose and characteristics of the design features of apparatus and circuits protected by the Non-sparking (Ex 'n') technique (Examples of characteristics and design features are creepage and clearance distances and restricted breathing).

☐ Typical situations where the Non-sparking explosion-protection technique is

used;

☐ Actions or conditions that would void the protection provided the

Non-sparking technique; and

☐ The use of Standards in determining the requirements to which the installation of Non-sparking explosion-protected apparatus shall comply.

T5 Intrinsic safety (Ex 'i') explosion-protection technique encompassing:

☐ The purpose and characteristics of the design features of apparatus and circuits protected by the Intrinsic safety (Ex 'i') technique (Examples of characteristics and design features are field devices, cables, safe area devices, earthing, entity versus integrated system concept, simple devices and interface devices and their parameters, segregation, infallible components, current and voltage limiting, creepage and clearance distances).

☐ Typical situations where the Intrinsic safety explosion-protection technique is used;

☐ Actions or conditions that would void the protection provided the Intrinsic safety;

☐ The use of Standards in determining the requirements to which the installation of Intrinsic safety explosion-protected apparatus shall comply.

T6 Pressurization (Ex 'p') explosion-protection technique encompassing:

☐ The purpose and characteristics of the design features of apparatus and circuits protected by the Pressurization (Ex 'p') technique (Examples of characteristics and design features are exclusion and dilution; purge periods, controlled shut down, monitoring and sources of internal release).

☐ Typical situations where the pressurization explosion-protection technique is used;

☐ Actions or conditions that would void the protection provided the pressurization technique;

☐ The use of Standards in determining the requirements to which the installation of pressurization explosion-protected apparatus shall comply.

T7 Enclosures for dusts (Ex 'tD') - explosion-protection technique encompassing:

☐ The purpose and characteristics of the design features of apparatus and circuits protected by the techniques for dusts (Examples of characteristics and design features are for enclosures; pressurization; encapsulation; and intrinsic safety).

☐ Typical situations where the each dust explosion-protection technique is used;

☐ Actions or conditions that would void the protection provided the each dust technique;

☐ The use of Standards in determining the requirements to which the installation of dust explosion-protected apparatus shall comply.

T8 Common characteristics of explosion-protection techniques encompassing:

☐ The purposes of 'temperature classification' and 'gas grouping/apparatus grouping'.

☐ Compliance plate markings.

☐ Limitations of non-metallic or specific alloy enclosures.

☐ The purpose of conformity and certification/approval for equipment used in hazardous areas.

☐ Environmental conditions that may impact on explosion-protection techniques.

☐ The principles and applications of other and mixed explosion-protection techniques (Other techniques include encapsulation Ex 'm'; oil-immersion Ex 'o'; powder-filling Ex 'q', ventilation Ex 'v' and special protection Ex 's').

☐ Features and purpose of conduit seals and cable termination devices designed for use in hazardous areas (These include conduit seals and barrier and compression glands for cables with or without armouring, screening and/or drain wires).

T9 Preparation to install and maintain explosion-protected equipment in

hazardous areas encompassing:

- ☐ OHS procedures to be followed when working in a hazardous area;
- ☐ the significance of information provided on the certification documentation and schedules for a given item of explosion-protected equipment;
- ☐ the typical contents of a verification dossier and their purpose; and
- ☐ limitations in the use of tools and testing devices in hazardous areas.

T10 The relationship between explosion-protected equipment, their certification documents and required locations given in specifications and layout drawings and/or written instructions encompassing:

- ☐ the purpose of markings on the compliance plate and certification documents for a given item of explosion-protected equipment;
- ☐ matching explosion-protected equipment with certification documents and the equipment specified for an installation; and
- the location the items of explosion-protected equipment for an installation from specifications and layout drawings and/or instructions.

T11 Installation Standards and requirements applicable to hazardous encompassing:

- ☐ the wiring systems permitted and not permitted in or above hazardous areas;
- ☐ equipment not permitted in or above hazardous areas;
- ☐ the regulations and Standards to which explosion-protected equipment and wiring must be installed in a hazardous area and how these are applied; and
- ☐ the documentation required as a record of the installation process, including certification documentation.

T12 Cable termination types suitable for use in hazardous areas encompassing:

- ☐ explosion protection features of cable terminations devices.
- ☐ selecting compliant cable termination devices.

T13 Terminating cables suitable for use in hazardous areas encompassing:

☐ installing conduit systems, where applicable, including seals to meet hazardous areas requirements. (Gases only.)

☐ terminating a cable with a barrier gland. (Gases only.)

☐ terminating a multipair, SWA, overall screened, individual screened cable into an enclosure.

☐ testing termination/connections of installed cables/circuits.

T14 Preparation for conducting installation testing in a hazardous area encompassing:

☐ OHS procedures to be followed for working in a hazardous area; and

☐ procedures for determining whether a given hazardous area is safe to conduct electrical testing.

T15 Characteristics and limitations of testing equipment used to test installation in hazardous areas encompassing:

☐ testing devices required to test an installation in a hazardous area; and

☐ the suitability of testing device for use in a hazardous area.

T16 Documentation of results of hazardous area installation tests encompassing:

☐ test results that should be recorded in a verification dossier; and

☐ procedures and options for dealing with test results that show non-conformance.

UEENEEM052A Classify hazardous areas - gas atmospheres

KS01-EM052A Hazardous areas classification

Evidence shall show an understanding of processes involved in gathering and analysing technical data to classify non-specific hazardous areas. The following aspects indicate the extent of understanding required.

T1 Occupational Health and Safety responsibilities related to hazardous areas encompassing:

- ☐ the main features and purpose of a 'clearance to work' system (includes hot work permit systems).
- ☐ typical safety procedures that should be followed before entering a hazardous area;
- ☐ the purpose of gas detectors and their limitations;
- ☐ effects of temperature on gas and vapour detection;
- ☐ frequency of monitoring for presence of gas or vapours, i.e. effects of temperature rise;
- ☐ factors affecting the accuracy of gas detectors, for example, contamination, condensation, temperature;
- ☐ safety in use of gas detectors, for example, 'read and run concept'
- ☐ the safety precautions to be taken when working in a hazardous area.

T2 The roles of the parties involved in the safety of hazardous areas encompassing:

- ☐ common Acts and Regulations related to the safety of hazardous areas and the Authorities responsible for their implementation;
- ☐ where assistance and further information can be obtained to assist persons with hazardous area responsibilities, for example, Standard bodies, experienced consultants; and
- ☐ the hazardous area responsibilities of the owner of premises in which a hazardous area exists; the occupier of premises in which a hazardous area exists; enterprises and personnel engaged in installation and/or maintenance of explosion-protection systems; enterprises and personnel engaged in the classification of hazardous areas and/or design of explosion-protection systems; enterprises and personnel engaged in the overhaul, modification and/or assessment of explosion-protected equipment; enterprises and personnel engaged in the inspection of explosion-protection installations; manufacturers of explosion-protected equipment; designated authorities; insurers.

T3 Properties of combustible substances and their potential to create an explosive hazard encompassing:

- ☐ condition in the workplace that will lead to an explosion;
- ☐ the terms 'combustion', 'ignition' and 'propagation';
- ☐ explosive range of substances encountered in the workplace i.e. LEL/UEL;
- ☐ explosive parameters of substances as given in tables of substance properties

Note: Combustible materials are gases, vapours (from liquids), and dusts; flash point.

- ☐ the difference between gases and vapours; and
- ☐ the toxic nature of gases and vapours and potential harmful consequences.

T4 The nature of hazardous areas encompassing:

- ☐ the Standards definition of a 'hazardous area';
- ☐ the recommended methods for classifying the type and degree of explosion hazard in an area;
- ☐ hazardous area classifications as defined by Standards; and
- ☐ factors that are considered when a hazardous area is classified.
- ☐ the basics of how explosion-protection is achieved by the methods of exclusion, containment, energy limitation, dilution, avoidance of ignition source.

T5 The process of classifying hazardous areas encompassing:

- ☐ methods by which an area can be classified;
- ☐ the characteristics/attributes of an area that should be considered in the classification process, for example, type of process, nature of plant, source and nature of release;
- ☐ the requirements and Standards for classifying a hazardous area; and
- ☐ the responsibilities of the owner/occupiers for classification of a hazardous area.

T6 The likelihood (zoning) or risk assessment method of an explosive hazard encompassing:

- ☐ ignition properties of materials relevant to determining the likelihood and extent of

an explosive hazard;

☐ sources for obtaining data on ignition properties of materials under the conditions in which they could be present in a given process;

☐ methods for assessment and calculation of factors such as release rate , ventilation and dispersion characteristics; and and

☐ means for reducing hazard risk.

T7 The extent of an explosive hazard and classifying an area accordingly encompassing:

☐ the extent of zones for an area given data on the likelihood of the explosive hazard for that area;

☐ requirements for documenting the classification of a hazardous area; and

☐ the extent of the zones, temperature classes and gas groups on site drawings in a hazardous area.

BAE 636 Inspection in Hazardous Area

UEENEEM078A Manage compliance of hazardous areas

KS01-EM078A Hazardous areas compliance requirements

Evidence shall show an understanding of hazardous areas compliance requirements to an extent indicated by the following aspects:

T1 Occupational Health and Safety responsibilities related to hazardous areas encompassing:

☐ the main features and purpose of a 'clearance to work' system (includes hot work permit systems).

☐ typical safety procedures that should be followed before entering a hazardous area;

☐ the purpose of gas detectors and their limitations;

☐ effects of temperature on gas and vapour detection;

☐ frequency of monitoring for presence of gas or vapours, i.e. effects of temperature

rise;

- ▣ factors affecting the accuracy of gas detectors, for example, contamination, condensation, temperature;

- ▣ safety in use of gas detectors, for example, 'read and run concept' the safety precautions to be taken when working in a hazardous area.

T2 The roles of the parties involved in the safety of hazardous areas encompassing:

- ▣ common Acts and Regulations related to the safety of hazardous areas and the Authorities responsible for their implementation;

- ▣ where assistance and further information can be obtained to assist persons with hazardous area responsibilities, for example, Standard bodies, experienced consultants; and

- ▣ the hazardous area responsibilities of the owner of premises in which a hazardous area exists; the occupier of premises in which a hazardous area exists; enterprises and personnel engaged in installation and/or maintenance of explosion-protection systems; enterprises and personnel engaged in the classification of hazardous areas and/or design of explosion-protection systems; enterprises and personnel engaged in the overhaul, modification and/or assessment of explosion-protected equipment; enterprises and personnel engaged in the inspection of explosion-protection installations; manufacturers of explosion-protected equipment; designated authorities; insurers.

T3 Properties of combustible substances and their potential to create an explosive hazard encompassing:

- ▣ condition in the workplace that will lead to an explosion;

- ▣ the terms 'combustion', 'ignition' and 'propagation';

- ▣ explosive range of substances encountered in the workplace i.e. LEL/UEL;

- ▣ explosive parameters of substances as given in tables of substance properties

Note: Combustible materials are gases, vapours (from liquids), and dusts; flash point.

- ☐ the difference between gases and vapours; and

- ☐ the toxic nature of gases and vapours and potential harmful consequences.

T4 The nature of hazardous areas encompassing:

- ☐ the Standards definition of a 'hazardous area';

- ☐ the recommended methods for classifying the type and degree of explosion hazard in an area;

- ☐ hazardous area classifications as defined by Standards; and

- ☐ factors that are considered when a hazardous area is classified.

- ☐ the basics of how explosion-protection is achieved by the methods of exclusion, containment, energy limitation, dilution, avoidance of ignition source.

T5 The responsibilities of a person managing activities or a site related to a hazardous area, encompassing:

- ☐ OHS procedures that are to be established;

- ☐ responsibilities for ensuring that a hazardous area is safe; and

- ☐ responsibilities and processes for establishing and maintaining a verification dossier.

T6 Explosion-protection strategies in relation to a hazardous area, encompassing:

- ☐ the process of classifying a hazardous area;

- ☐ various ways in which electrical systems /apparatus can be treated to prevent them from becoming an ignition source; and

- ☐ the cost of the different ways of treating electrical systems/apparatus associated with hazardous areas.

T7 Requirements for the maintenance of electrical systems associated with hazardous areas, encompassing:

- ☐ the type and grades of inspection of hazardous areas;

- ☐ maintenance programs for electrical explosion-protected systems/apparatus; and

documentation requirements associated with maintenance procedures.

UEENEEM042A Conduct visual inspection of hazardous areas installations

KS01-EM04

2A

Hazardous areas visual inspection

Evidence shall show an understanding of the purpose and process of hazardous areas visual inspections to an extent indicated by the following aspects:

T1 Occupational, health and safety procedures encompassing:

□ occupational, health and safety procedures to be followed before entering hazardous areas; and
occupational, health and safety procedures to be followed while conducting visual inspection.

T2 Requirements for a verification dossier and relationship to as-built electrical installation.

T3 Purpose, scope and limitations of visual inspections.

T4 Documentation requirements resulting from a visual inspection.

UEENEEM044A Conduct detailed inspection of hazardous areas installations - gas atmospheres

KS01-EM044

A

Hazardous areas detailed inspection techniques

Evidence shall show an understanding of hazardous areas detailed inspection techniques to an extent indicated by the following aspects:

T1 Explosion-protection equipment — Ex certification schemes encompassing:

□ Purpose and scope of certification schemes.

☐ Schemes accepted in Australia and New Zealand.

☐ Schemes commonly used in countries other than Australia and New Zealand.

☐ Processes for having equipment certified under the acceptable Ex schemes — scheme procedures; quality management requirements; conformance testing and assessment; and requirements for ongoing certification.

T2 Flameproof (Ex 'd') explosion-protection technique encompassing:

☐ The purpose and characteristics of the design features of apparatus and circuits protected by the flameproof (Ex 'd') technique. (Examples of characteristics and design features are flame paths, integrity under pressure, pressure piling, and enclosure entries).

☐ Typical situations where the flameproof explosion-protection technique is used;

☐ Actions or conditions that would void the protection provided the Flameproof technique;

☐ The use of Standards in determining the requirements to which the installation of flameproof explosion-protected apparatus shall comply.

T3 Increased safety (Ex 'e') explosion-protection technique encompassing:

☐ The purpose and characteristics of the design features of apparatus and circuits protected by the Increased safety (Ex 'e') technique (Examples of characteristics and design features are temperature rise, maximum power dissipation, protection devices, certified components, creepage and clearance distances, absence of sparking contacts and enclosure entries).

☐ Typical situations where the Increased safety explosion-protection technique is used;

☐ Actions or conditions that would void the protection provided the Increased safety technique;

☐ The use of Standards in determining the requirements to which the installation

of Increased safety explosion-protected apparatus shall comply.

T4 Non-sparking (Ex 'n') explosion-protection technique encompassing:

☐ The purpose and characteristics of the design features of apparatus and circuits protected by the Non-sparking (Ex 'n') technique (Examples of characteristics and design features are creepage and clearance distances and restricted breathing).

☐ Typical situations where the Non-sparking explosion-protection technique is used;

☐ Actions or conditions that would void the protection provided the Non-sparking technique; and

☐ The use of Standards in determining the requirements to which the installation of Non-sparking explosion-protected apparatus shall comply.

T5 Intrinsic safety (Ex 'i') explosion-protection technique encompassing:

☐ The purpose and characteristics of the design features of apparatus and circuits protected by the Intrinsic safety (Ex 'i') technique (Examples of characteristics and design features are field devices, cables, safe area devices, earthing, entity versus integrated system concept, simple devices and interface devices and their parameters, segregation, infallible components, current and voltage limiting, creepage and clearance distances).

☐ Typical situations where the Intrinsic safety explosion-protection technique is used;

☐ Actions or conditions that would void the protection provided the Intrinsic safety;

☐ The use of Standards in determining the requirements to which the installation of Intrinsic safety explosion-protected apparatus shall comply.

T6 Pressurization (Ex 'p') explosion-protection technique encompassing:

☐ The purpose and characteristics of the design features of apparatus and circuits

protected by the Pressurization (Ex 'p') technique (Examples of characteristics and design features are exclusion and dilution; purge periods, controlled shut down, monitoring and sources of internal release).

- ☐ Typical situations where the pressurization explosion-protection technique is used;

- ☐ Actions or conditions that would void the protection provided the pressurization technique;

- ☐ The use of Standards in determining the requirements to which the installation of pressurization explosion-protected apparatus shall comply.

T7 Enclosures for dusts (Ex 'tD') - explosion-protection technique encompassing:

- ☐ The purpose and characteristics of the design features of apparatus and circuits protected by the techniques for dusts (Examples of characteristics and design features are for enclosures; pressurization; encapsulation; and intrinsic safety).

- ☐ Typical situations where the each dust explosion-protection technique is used;

- ☐ Actions or conditions that would void the protection provided the each dust technique;

- ☐ The use of Standards in determining the requirements to which the installation of dust explosion-protected apparatus shall comply.

REQUIRED SKILLS AND KNOWLEDGE

T8 Common characteristics of explosion-protection techniques encompassing:

- ☐ The purposes of 'temperature classification' and 'gas grouping/apparatus grouping'.

- ☐ Compliance plate markings.

- ☐ Limitations of non-metallic or specific alloy enclosures.

- ☐ The purpose of conformity and certification/approval for equipment used in hazardous areas.

- ☐ Environmental conditions that may impact on explosion-protection techniques.

☐ The principles and applications of other and mixed explosion-protection techniques (Other techniques include encapsulation Ex 'm'; oil-immersion Ex 'o'; powder-filling Ex 'q', ventilation Ex 'v' and special protection Ex 's').

☐ Features and purpose of conduit seals and cable termination devices designed for use in hazardous areas (These include conduit seals and barrier and compression glands for cables with or without armouring, screening and/or drain wires).

T9 Preparation to install and maintain explosion-protected equipment in hazardous areas encompassing:

- ☐ OHS procedures to be followed when working in a hazardous area;
- ☐ the significance of information provided on the certification documentation and schedules for a given item of explosion-protected equipment;
- ☐ the typical contents of a verification dossier and their purpose; and
- ☐ limitations in the use of tools and testing devices in hazardous areas.

T10 The relationship between explosion-protected equipment, their certification documents and required locations given in specifications and layout drawings and/or written instructions encompassing:

- ☐ the purpose of markings on the compliance plate and certification documents for a given item of explosion-protected equipment;
- ☐ matching explosion-protected equipment with certification documents and the equipment specified for an installation; and
- ☐ the location the items of explosion-protected equipment for an installation from specifications and layout drawings and/or instructions.

T11 Installation Standards and requirements applicable to hazardous encompassing:

- ☐ the wiring systems permitted and not permitted in or above hazardous areas;
- ☐ equipment not permitted in or above hazardous areas;

- ☐ the regulations and Standards to which explosion-protected equipment and wiring must be installed in a hazardous area and how these are applied; and
- ☐ the documentation required as a record of the installation process, including certification documentation.

T12 Maintenance procedures in hazardous areas that will ensure the integrity of the explosion-protection technique encompassing:

- ☐ the purpose of a maintenance schedule;
- ☐ the purpose and extent of 'close', 'sample' and 'periodic' inspections;
- ☐ the features of each explosion-protection techniques that should be included in a maintenance schedule;
- ☐ the impact of environmental conditions on explosion-protected equipment, including corrosion and frequency of maintenance;
- ☐ the documentation requirements for recording the maintenance process and results;
- ☐ the use of Standards in determining the requirements with which the design of explosion-protected apparatus shall comply.

T13 Cable termination types suitable for use in hazardous areas encompassing:

- ☐ explosion protection features of cable terminations devices.
- ☐ selecting compliant cable termination devices.

T14 Terminating cables suitable for use in hazardous areas encompassing:

- ☐ installing conduit systems, where applicable, including seals to meet hazardous areas requirements. (Gases only.)
- ☐ terminating a cable with a barrier gland. (Gases only.)
- ☐ terminating a multipair, SWA, overall screened, individual screened cable into an enclosure.
- ☐ testing termination/connections of installed cables/circuits.

T15 The relationship between the documentation held in a verification dossier and

the installed equipment encompassing:

☐ consistency between the location and type of equipment with the area

classification details in the verification dossier; and

☐ equipment certification and any attached conditions that relate to the equipment as it is installed.

T16 Inspecting a hazardous area installation encompassing:

☐ typical processes for undertaking the inspection of a hazardous area installation;

☐ requirements applicable to a given installation; and

☐ reporting of an inspection of a hazardous area installation.

BAE 637 Chemical Hazardous Management

1. INTRODUCTION.....	
1.1 What are hazardous chemicals?	
1.2 Who has health and safety duties in relation to hazardous chemicals?	
1.3 What is required to manage the risks associated with hazardous chemicals?	
1.4 Prohibited and restricted hazardous chemicals	
1.5 Exposure standards	
1.6 Preparing a register and manifest of hazardous chemicals.....	
2. IDENTIFYING HAZARDS.....	
2.1 How to identify which chemicals are hazardous.....	
2.2 Safety Data Sheets (SDS)	
2.3 Labels	
2.4 Other sources of information	
3. ASSESSING RISKS	
3.1 Decide who should do the assessment	
3.2 Decide what sort of risk assessment is appropriate	
3.3 Things to consider in assessing health risks.....	
3.4 How to assess physicochemical risks.....	
4. CONTROLLING RISKS.....	
4.1 The hierarchy of control.....	
4.2 <i>Specific control</i> measures	
4.3 Maintaining control measures.....	
4.4 Providing information, training, instruction and supervision	
5. MONITORING AND REVIEW	
5.1 Health monitoring	
5.2 Reviewing control measures.....	
6. EMERGENCY PREPAREDNESS	
6.1 Emergency plan	
6.2 Emergency equipment and safety equipment.....	

6.3	Fire protection systems
6.4	Monitors and alarms
6.5	Automatic sprinkler systems
6.6	Water supply

BAE 638 Environmental Engineering in Hazardous Areas

HAZARDOUS MATERIALS AND HAZARDOUS WASTE MANAGEMENT

NOISE

SOCIOECONOMICS

TRANSPORTATION

UTILITIES

ENVIRONMENTAL JUSTICE

SUBSISTENCE

Mercury in the Environment

Health Hazards

MINE HEALTH AND SAFETY ACT

PIPELINE SAFETY REGULATIONS

[Renewable Energy Engineering Public Seminar + Diploma& Bachelor of Engineering \(Renewable Energy\).](#)

Master of Science (Renewable Energy Engineering).

Professional Diploma in Structural Engineering (120 Credits)

Master of Science (Structural Engineering) (240 Credits)

Pre requisite

Advanced Diploma in Civil Engineering or Equivalent with 60 credits advanced standing

Subjects (Totalling 60 Credits)

- CE113 Structure 1 (3 credits)
- CE114 Structure 2 (2 Credits)
- BAE404S Engineering Materials & Strength of Materials (10 credits)
- BAE 403S Engineering Mechanics (10 credits)
- RE010 Engineering Materials (5 credits)
- BAE621S Structural Engineering (Civil) (10 credits)
- BAE424S Reinforced Concrete (Civil) (10 credits)
- BAE 701 Engineering Fundamental (10 credits)

(BAE403S, BAE404S, BAE621S and BAE424S are more intensive version of BAE403, BAE404, BAE621 and BAE424)

Master Course (120 Credits transfer + 120 Credits of study = 240 credits)

- BAE 708 Engineering Knowledge (10 Credits)
- BAE 705 Engineering Competency Development (10 Credits)
- BAE 706 Engineering Report Writing Development (10 Credits)
- BAE 707 Engineering Ethics (10 Credits)
- BAE 709 Design Project (40 Credits)
- BAE 709S Structural Design Project (20 Credits)

(BAE706, BAE709 and BAE709S can be concurrently presented)

Advanced Diploma of Construction Studies

	GE+IE UNITS	TRAINING PACKAGE UNITS	
GE1	Electrical Wiring (EE).	MEM18049C MEM18050C MEM18051B	Disconnect/reconnect fixed wired equipment up to 1000 volts a.c./1500 volts d.c. Disconnect/reconnect fixed wired equipment over 1000 volts a.c./1500 volts d.c. Fault find and repair/rectify complex electrical circuits
		MEM18070C	Modify complex electrical circuits and systems
		MEM18073A	Perform advanced equipment testing and diagnostics on mobile plant and equipment
GE2	Electrical Machine (EE).		
GE3	Electrical Distribution (EE)		
GE4	Power System Operation (EE).		
GE5	Power System Protection		
GE6	Occupational Health & Safety.	MEM30008A BSBWHS506A MEM13002B MSS403032A MEM13010A	Apply basic economic and ergonomic concepts to evaluate engineering applications Contribute to developing, implementing and maintaining WHS management systems Undertake occupational health and safety activities in the workplace Analyse manual handling processes Supervise occupational health and safety in an industrial work environment.
		BSBOHS504B	* Apply principles of OHS risk management
		BSBPMG505A	Manage project quality
		BSBPMG508A	Manage project risk
		CPCCB5014A	Conduct asbestos assessment associated with removal
		CPCCOHS1001A	Work safely in the construction industry
GE7	Project Management (EE/CE/ME).	MEM22012A MEM22013A	Coordinate resources for an engineering project or operation Coordinate engineering projects
		CPCCB5005A	Select and manage building and construction contractors
		CPCCB5007B	Administer the legal obligations of a building or construction contractor

		CPCBC5013A	Develop professional technical and legal reports on building and construction projects
		CPCBC4009B	Apply legal requirements to building and construction projects
GE8	Electronics (EE)		
GE9	Process Control (EE/ME)	MEM23112A MEM10007C	Investigate electrical and electronic controllers in engineering applications Modify control systems
GE10	Industrial Electronics (EE)	MEM30026A	Select and test components for simple electronic switching and timing circuits
GE11	Programmable Logic Controller (EE/ME)	MEM23003A MEM30027A MEM23116A MSS402061A MSS404061A	Operate and program computers and/or controllers in engineering situations Prepare basic programs for programmable logic controllers Evaluate programmable logic controller and related control system component applications Use SCADA systems in operations Facilitate the use of SCADA systems in a team or work area
GE12	Photovoltaic Solar Electrical System		
GE13	Principle of Engine (ME)		
GE14	Fitting & Machining (ME)	MEM14005A MEM15004B MEM15005B MEM16010A MEM18002B MEM18003C MEM18006C MEM18010C MEM18055B MEM12003B MEM12023A MEM12005B MEM12022B MEM12003B MEM12004B MEM12005B	Plan a complete activity Perform inspection Select and control inspection processes and procedures Write reports Use power tools/hand held operations Use tools for precision work Repair and fit engineering components Perform equipment condition monitoring and recording Dismantle, replace and assemble engineering components Perform precision mechanical measurement Perform engineering measurements Calibrate measuring equipment Program coordinate measuring machines (advanced) Perform precision mechanical measurement Perform precision electrical/electronic measurement Calibrate measuring equipment
GE15	Building Construction (CE)	CPCBC4001A	* Apply building codes and standards to the construction process for low rise building projects
		CPCBC5004A	Supervise and apply quality standards to the selection of building and construction materials
		CPCBC4005A	Produce labour and material schedules for ordering
		CPCBC4006B	Select, procure and store construction materials for low rise projects
GE16	Engineering Drawing I (EE/CE/ME)	MEM30031A MEM30032A MEM30033A	Operate computer-aided design (CAD) system to produce basic drawing elements Produce basic engineering drawings Use computer-aided design (CAD) to create and display 3-D models

		MEM09153A MEM09155A MEM09156A MEM09157A MEM09158A MEM09204A MEM09205A MEM09002B MEM09004B MEM09006B MEM09007B MEM09008B MEM09009C MEM09010C MEM09023A	Apply CAD modelling and data management techniques to aeronautical engineering designs Prepare mechanical models for computer-aided engineering (CAE) Prepare mechatronic models for computer-aided engineering (CAE) Perform mechanical engineering design drafting Perform mechatronics engineering design drafting Produce basic engineering detail drawings Produce electrical schematic drawings Interpret technical drawing Perform electrical/electronic detail drafting Perform advanced engineering detail drafting Perform advanced mechanical detail drafting Perform advanced structural detail drafting Create 2D drawings using computer aided design system Create 3D models using computer aided design system Create 3D code files using computer aided manufacturing system
		CPCCB4014A	Prepare simple building sketches and drawings
GE17	Pipe Fitting (CE/ME)		
GE18	Air-conditioning & Refrigeration (ME)	MEM23144A MEM23146A MEM23147A MEM23149A MEM23150A MEM23153A MEM23140A MEM23142A MEM23129A MEM23130A MEM18091B MEM18092B MEM18093B	Contribute to the design of a commercial refrigeration system Contribute to the design of industrial refrigeration systems Contribute to the design of hydronic systems Contribute to the design of commercial and industrial exhaust systems Contribute to the design of heating systems Contribute to the design of heat exchanger systems Determine operational parameters for building HVAC hydronic systems Determine psychrometric processes and system performance Evaluate thermal loads for heating, ventilation, air conditioning and refrigeration Coordinate servicing and fault-finding of HVACR control systems Maintain and repair multi stage, cascade and/or ultra-cold industrial refrigeration systems Maintain and repair commercial and/or industrial refrigeration and/or air conditioning controls Maintain and repair integrated industrial refrigeration and/or large air handling system controls
GE19	Computer Programming (EE/CE/ME)		
GE20	Computer Networking (EE)		

GE21	<u>Welding (ME)</u>	MEM05024B MEM05025C MEM05026C MEM05042B MEM05043B MEM05044B MEM05045B MEM05046B	Perform welding supervision Perform welding/fabrication inspection Apply welding principles Perform welds to code standards using flux core arc welding process Perform welds to code standards using gas metal arc welding process Perform welds to code standards using gas tungsten arc welding process Perform pipe welds to code standards using manual metal arc welding process Perform welds to code standards using manual metal arc welding process
GE22	<u>Painting & Decoration (CE)</u>		
GE23	<u>Pneumatics (CE/ME)</u>	MEM30011A	Set up basic pneumatic circuits
GE24	<u>Manufacturing Management (ME)</u>	MEM14002B MSS405075A MEM14003B MEM14087A MEM15007B MEM15008B MEM14091A MEM15011B MEM15012B MEM22014A MEM22015A MEM22017A MEM22018A MEM30013A MEM30014A MEM30015A MEM30016A MEM30017A MEM30018A MEM30019A MEM30020A MEM30021A MEM30022A MEM30023A MEM30024A	Undertake basic process planning Facilitate the development of a new product Undertake basic production scheduling Apply manufactured product design techniques Conduct product and/or process capability studies Perform advanced statistical quality control Integrate manufacturing fundamentals into an engineering task Exercise external quality assurance Maintain/supervise the application of quality procedures Coordinate engineering-related manufacturing operations Source and estimate engineering materials requirements Coordinate continuous improvement and technical development Coordinate sales and promotion of engineering-related products or services Assist in the preparation of a basic workplace layout Apply basic just in time systems to the reduction of waste Develop recommendations for basic set up time improvements Assist in the analysis of a supply chain Use basic preventative maintenance techniques and tools Undertake basic process planning Use resource planning software systems in manufacturing Develop and manage a plan for a simple manufacturing related project Prepare a simple production schedule Undertake supervised procurement activities Prepare a simple cost estimate for a manufactured product Participate in quality assurance techniques
ME 205	Manufacturing Processes-and-Materials		
Mgt 503	<u>Production & Operation Management</u>		
Mgt 505	<u>Quality Management and Manufacturing Engineering</u>		

		MEM15001B MEM23123A MEM23131A MEM23132A MEM14001B MEM14002B MEM14003B	Perform basic statistical quality control Evaluate manufacturing processes Evaluate rapid prototyping applications Evaluate rapid manufacturing processes Schedule material deliveries Undertake basic process planning Undertake basic production scheduling
ME 303	Computer Aided Design and Manufacturing	MEM30009A	Contribute to the design of basic mechanical systems
ME 534	Numerical Control	MEM23122A MEM05053A MEM05054A MEM07016C MEM07018C MEM07019C MEM07020C MEM07022C MEM07023C MEM07039A	Evaluate computer integrated manufacturing systems Set and edit computer controlled thermal cutting machines Write basic NC/CNC programs for thermal cutting machines Set and edit computer controlled machines/processes Write basic NC/CNC programs Program NC/CNC machining centre Program multiple spindle and/or multiple axis NC/CNC machining centre Program CNC wire cut machines Program and set up CNC manufacturing cell Write programs for industrial robots
ME 434	Mechtronics-Robotics	MEM23126A MEM23064A	Evaluate industrial robotic applications Select and test mechatronic engineering materials
GE25	Surveying (CE)	CPCCB5006B	Apply site surveys and set-out procedures to medium rise building projects
		CPCCB4018A	Apply site surveys and set-out procedures to building and construction projects
GE26	Energy Efficient Building Design	MEM23141A	Complete a building thermal performance survey
		CPCCB5009A	Identify services layout and connection methods to medium rise construction projects
		CPCCB5011A	Manage environmental management practices and processes in building and construction
		CPCSUS5002A	Develop action plans to retrofit existing buildings for energy efficiency
		CPCSUS5003A	Manage energy efficient building methods and strategies
		CPCCB4020A	Build thermally efficient and sustainable structures
GE28	Hydraulic (CE/ME)	MEM30010A	Set up basic hydraulic circuits

GE29	Materials & Corrosion Prevention (CE/ME)	MEM30007A	Select common engineering materials
GE32	Electronic Security Installation		
GE33	Explosion Protection		
GE34	Engineering Business Management	MSAENV672B MSS402030A MSS403001A MSS403002A MSS403010A MSS403021A MSS403023A MSS403030A MSS403040A MSS403051A MSS404050A MSS404052A MSS404060A MSS405001A MSS405002A MSS405003A MSS405004A MSS405005A MSS405010A MSS405011A MSS405012A MSS405020A MSS405021A MSS405022A MSS405023A MSS405030A MSS405031A MSS405040A MSS405050A MSS405052A MSS405060A MSS405061A MEM23119A MEM30028A	Develop workplace policy and procedures for sustainability Apply cost factors to work practices Implement competitive systems and practices Ensure process improvements are sustained Facilitate change in an organisation implementing competitive systems and practices Facilitate a Just in Time system Monitor a levelled pull system of operations Improve cost factors in work practices Facilitate and improve implementation of 5S Mistake proof an operational process Undertake process capability improvements Apply statistics to operational processes Facilitate the use of planning software systems in a work area or team Develop competitive systems and practices for an organisation Analyse and map a value stream Manage a value stream Develop business plans in an organisation implementing competitive systems and practices Manage competitive systems and practices responding to individual and unique customer orders Manage relationships with non-customer external organisations Manage people relationships Manage workplace learning Develop quick changeover procedures Develop a Just in Time system Design a process layout Develop a levelled pull system for operations and processes Optimise cost of a product or service Undertake value analysis of product or process costs in terms of customer requirements Manage 5S system in an organisation Determine and improve process capability Design an experiment Develop the application of enterprise control systems in an organisation Determine and establish information collection requirements and processes Evaluate continuous improvement processes Assist in sales of technical products/systems

		MEM14005A MEM15002A MEM16006A MEM17003A	Plan a complete activity Apply quality systems Organise and communicate information Assist in the provision of on the job training
		BSBCUS501C	* Manage quality customer service
		BSBFIM501A	* Manage budgets and financial plans
		BSBHRM509A	* Manage rehabilitation or return to work programs
		BSBINN502A	Build and sustain an innovative work environment
		BSBITA401A	Design databases
		BSBITU402A	Develop and use complex spreadsheets
		BSBITU404A	Produce complex desktop published documents
		BSBLED502A	* Manage programs that promote personal effectiveness
		BSBMGT502B	* Manage people performance
		BSBMGT515A	* Manage operational plan
		BSBRSK501B	* Manage risk
		BSBSLS502A	* Lead and manage a sales team
		BSBWOR501B	* Manage personal work priorities and professional development
		BSBWOR502B	* Ensure team effectiveness
		CPCBCB4024A	Resolve business disputes
		CPPDSM5022A	Implement asset management plan
IE1	Engineering Mathematics	MEM23007A MEM23008A MEM23004A MEM23005A MEM12025A MEM12024A MEM12025A	Apply calculus to engineering tasks Apply advanced algebra and numerical methods to engineering tasks Apply technical mathematics Apply statistics and probability techniques to engineering tasks Use graphical techniques and perform simple statistical computations Perform computations Use graphical techniques and perform simple statistical computations
IE2	Engineering Physics		
IE3	Material Science	MEM24001B MEM24003B MEM24005B MEM24007B MEM24009B	Perform basic penetrant testing Perform basic magnetic particle testing Perform basic eddy current testing Perform ultrasonic thickness testing Perform basic radiographic testing
GE30 GE31 IE5	Bricklaying.(CE). Sprouting & Guttering.(CE). Mechanical Science	MEM14001B MEM23063A MEM23138A	Schedule material deliveries Select and test mechanical engineering materials Evaluate suitability of materials for engineering-related applications

Advanced Diploma of Engineering –Mechanical

	GE+IE UNITS	TRAINING PACKAGE UNITS	
GE1	Electrical Wiring.(EE).	MEM18049C MEM18050C MEM18051B MEM18070C MEM18073A MEM30025A MEM03004B MEM03005B MEM10001C MEM10011B MEM18045B MEM18046B	Disconnect/reconnect fixed wired equipment up to 1000 volts a.c./1500 volts d.c. Disconnect/reconnect fixed wired equipment over 1000 volts a.c./1500 volts d.c. Fault find and repair/rectify complex electrical circuits Modify complex electrical circuits and systems Perform advanced equipment testing and diagnostics on mobile plant and equipment Analyse a simple electrical system circuit Perform electronic/electrical assembly (production) Rework and repair (electrical/electronic production) Erect structures Terminate and connect specialist cables Fault find/repair electrical equipment/components up to 250 volts single phase supply Fault find/repair electrical equipment/components up to 1000 volts a.c./1500 volts d.c.
GE2	Electrical Machine.(EE).		
GE3	Electrical Distribution.(EE).		
GE4	Power System Operation.(EE).		
GE5	Power System Protection		
GE6	Occupational Health & Safety.	MEM30008A BSBWHS506A MEM13002B	Apply basic economic and ergonomic concepts to evaluate engineering applications Contribute to developing, implementing and maintaining WHS management systems Undertake occupational health and safety activities in the workplace

		MSS403032A MEM13010A	Analyse manual handling processes Supervise occupational health and safety in an industrial work environment.
GE7	Project Management (EE/CE/ME).	MEM22012A MEM22013A	Coordinate resources for an engineering project or operation Coordinate engineering projects
GE8	Electronics (EE).	MEM18056B MEM18058C MEM18059B MSATCM304A	Diagnose and repair analog equipment and components Modify electronic equipment Modify electronic systems Interpret basic binary phase diagrams
GE9	Process Control (EE/ME).	MEM18054B MEM23112A MEM18060B MEM18061B MEM18062B	Fault find, test and calibrate instrumentation systems and equipment Investigate electrical and electronic controllers in engineering applications Maintain, repair control instrumentation - single and multiple loop control systems Maintain/calibrate complex control systems Install, maintain and calibrate instrumentation sensors, transmitters and final control elements
		MEM18057B	Maintain/service analog/digital electronic equipment
		MEM18063B	Terminate signal and data cables
GE10	Industrial Electronics (EE).	MEM30026A MEM18047B MEM18048B	Select and test components for simple electronic switching and timing circuits Diagnose and maintain electronic controlling systems on mobile plant Fault find and repair/rectify basic electrical circuits
GE11	Programmable Logic Controller (EE/ME).	MEM23003A MEM30027A MEM23116A MSS402061A MSS404061A MEM10004B MEM10005B	Operate and program computers and/or controllers in engineering situations Prepare basic programs for programmable logic controllers Evaluate programmable logic controller and related control system component applications Use SCADA systems in operations Facilitate the use of SCADA systems in a team or work area Enter and change programmable controller operational parameters Commission programmable controller programs
GE12	Photovoltaic Solar Electrical System		
GE13	Principle of Engine(ME).	MEM18001C MEM18002B MEM18003C MEM18004B MEM18005B	Use hand tools Use power tools/hand held operations Use tools for precision work Maintain and overhaul mechanical equipment Perform fault diagnosis, installation and removal of bearings

	MEM18006C	Repair and fit engineering components
	MEM18007B	Maintain and repair mechanical drives and mechanical transmission assemblies
	MEM18008B	Balance equipment
	MEM18009B	Perform levelling and alignment of machines and engineering components
	MEM18012B	Perform installation and removal of mechanical seals
	MEM18013B	Perform gland packing
	MEM18014B	Manufacture press tools and gauges
	MEM18015B	Maintain tools and dies
	MEM18018C	Maintain pneumatic system components
	MEM18020B	Maintain hydraulic system components
	MEM18024B	Maintain engine cooling systems
	MEM18025B	Service combustion engines
	MEM18026C	Test compression ignition fuel systems
	MEM18027C	Overhaul engine fuel system components
	MEM18028B	Maintain engine lubrication systems
	MEM18029B	Tune diesel engines
	MEM18030B	Diagnose and rectify low voltage electrical systems
	MEM18031B	Diagnose and rectify low voltage starting systems
	MEM18032B	Maintain induction/exhaust systems
	MEM18033B	Perform engine bottom-end overhaul
	MEM18034B	Perform engine top-end overhaul
	MEM18035B	Diagnose and rectify braking systems
	MEM18037B	Diagnose and rectify low voltage charging systems
	MEM18038B	Maintain wheels and tyres
	MEM18039B	Diagnose and rectify track type undercarriage
	MEM18040B	Maintain suspension systems
	MEM18041B	Maintain steering systems
	MEM18042C	Diagnose and rectify manual transmissions
	MEM18043C	Diagnose and rectify automatic transmissions
	MEM18044C	Diagnose and rectify drive line and final drives
	MEM18001C	Use hand tools
	MEM18002B	Use power tools/hand held operations
	MEM18003C	Use tools for precision work
	MEM18004B	Maintain and overhaul mechanical equipment

		MEM18005B	Perform fault diagnosis, installation and removal of bearings
		MEM18006C	Repair and fit engineering components
GE14	Fitting & Machining (ME)	MEM14005A MEM15004B MEM15005B MEM16010A MEM18002B MEM18003C MEM18006C MEM18010C MEM18055B MEM12003B MEM12023A MEM12005B MEM12022B MEM03001B MEM03002B MEM03003B MEM03006B MEM12001B MEM12002B MEM12006C MEM12007D MEM12019B MEM12020B MEM12021B MEM12022B MEM12001B MEM18055B	Plan a complete activity Perform inspection Select and control inspection processes and procedures Write reports Use power tools/hand held operations Use tools for precision work Repair and fit engineering components Perform equipment condition monitoring and recording Dismantle, replace and assemble engineering components Perform precision mechanical measurement Perform engineering measurements Calibrate measuring equipment Program coordinate measuring machines (advanced) Perform manual production assembly Perform precision assembly Perform sheet and plate assembly Set assembly stations Use comparison and basic measuring devices Perform electrical/electronic measurement Mark off/out (general engineering) Mark off/out structural fabrications and shapes Measure components using coordinate measuring machines Set and operate coordinate measuring machines Program coordinate measuring machines Program coordinate measuring machines (advanced) Use comparison and basic measuring devices Dismantle, replace and assemble engineering components
GE15	Building Construction (CE)	CPCCB4007A CPCCB4012B CPCCB4014A CPCCB4018A CPCPDR4011B CPCPDR4012B CPCPFS4024A	Plan building or construction work Read and interpret plans and specifications Prepare simple building sketches and drawings Apply site surveys and set-out procedures to building and construction projects Design and size sanitary drainage systems Design and size stormwater drainage systems Design residential and domestic fire sprinkler systems

		ICTCBL2136A PMBFIN203C PMBPROD247C PMBTECH405B	Install, maintain and modify customer premises communications cabling: ACMA Restricted Rule Repair product imperfections Hand lay up composites Repair damaged fibre-composites structures
GE16	Engineering Drawing I (EE/CE/ME)	MEM30031A MEM30032A MEM30033A MEM09153A MEM09155A MEM09156A MEM09157A MEM09158A MEM09204A MEM09205A MEM09002B MEM09002B MEM09003B MEM09005B MEM09011B MEM09021B MEM09022A	Operate computer-aided design (CAD) system to produce basic drawing elements Produce basic engineering drawings Use computer-aided design (CAD) to create and display 3-D models Apply CAD modelling and data management techniques to aeronautical engineering designs Prepare mechanical models for computer-aided engineering (CAE) Prepare mechatronic models for computer-aided engineering (CAE) Perform mechanical engineering design drafting Perform mechatronics engineering design drafting Produce basic engineering detail drawings Produce electrical schematic drawings Interpret technical drawing Interpret technical drawing Prepare basic engineering drawing Perform basic engineering detail drafting Apply basic engineering design concepts Interpret and produce curved 3-dimensional shapes Create 2D code files using computer aided manufacturing system
GE17	Pipe Fitting (CE/ME)	MEM10010B	Install pipework and pipework assemblies
GE18	Air-conditioning & Refrigeration (ME)	MEM23144A MEM23146A MEM23147A MEM23149A MEM23150A MEM23153A MEM23140A MEM23142A MEM23129A MEM23130A MEM18091B	Contribute to the design of a commercial refrigeration system Contribute to the design of industrial refrigeration systems Contribute to the design of hydronic systems Contribute to the design of commercial and industrial exhaust systems Contribute to the design of heating systems Contribute to the design of heat exchanger systems Determine operational parameters for building HVAC hydronic systems Determine psychrometric processes and system performance Evaluate thermal loads for heating, ventilation, air conditioning and refrigeration Coordinate servicing and fault-finding of HVACR control systems Maintain and repair multi stage, cascade and/or ultra-cold industrial refrigeration systems

		MEM18092B	Maintain and repair commercial and/or industrial refrigeration and/or air conditioning controls
		MEM18093B	Maintain and repair integrated industrial refrigeration and/or large air handling system controls
		MEM10009B	Install refrigeration and air conditioning plant and equipment
		MEM10013A	Install split air conditioning systems and associated pipework
		MEM18084A	Commission and decommission split air conditioning systems
		MEM18085A	Install, service and repair domestic air conditioning and refrigeration appliances
		MEM18086B	Test, recover, evacuate and charge refrigeration systems
		MEM18087B	Service and repair domestic and light commercial refrigeration and air conditioning equipment
		MEM18088B	Maintain and repair commercial air conditioning systems and components
		MEM18089B	Maintain and repair central air handling systems
		MEM18090B	Maintain and repair industrial refrigeration systems and components
		MEM18094B	Service and repair commercial refrigeration
		MEM18095A	Maintain and repair cooling towers/evaporative condensers and associated equipment
		MEM18096A	Maintain, repair/replace and adjust refrigerant flow controls and associated equipment
		MEM18084A	Commission and decommission split air conditioning systems
GE19	Computer Programming.(EE/CE/ME).		
GE20	Computer Networking.(EE).		
GE21	Welding.(ME).	MEM05024B	Perform welding supervision
		MEM05025C	Perform welding/fabrication inspection
		MEM05026C	Apply welding principles
		MEM05042B	Perform welds to code standards using flux core arc welding process
		MEM05043B	Perform welds to code standards using gas metal arc welding process
		MEM05044B	Perform welds to code standards using gas tungsten arc welding process
		MEM05045B	Perform pipe welds to code standards using manual metal arc welding process
		MEM05046B	Perform welds to code standards using manual metal arc welding process
		MEM05024B	Perform welding supervision
		MEM05001B	Perform manual soldering/desoldering - electrical/electronic components

		MEM05002B MEM05003B MEM05004C MEM05005B MEM05006C MEM05007C MEM05008C MEM05009C MEM05010C MEM05011D MEM05012C MEM05013C MEM05014C MEM05015D MEM05016C MEM05017D MEM05018C MEM05019D MEM05020C MEM05022C MEM05023C MEM05036C MEM05037C MEM05001B MEM05002B	Perform high reliability soldering and desoldering Perform soft soldering Perform routine oxy acetylene welding Carry out mechanical cutting Perform brazing and or silver soldering Perform manual heating and thermal cutting Perform advanced manual thermal cutting, gouging and shaping Perform automated thermal cutting Apply fabrication, forming and shaping techniques Assemble fabricated components Perform routine manual metal arc welding Perform manual production welding Monitor quality of production welding/fabrications Weld using manual metal arc welding process Perform advanced welding using manual metal arc welding process Weld using gas metal arc welding process Perform advanced welding using gas metal arc welding process Weld using gas tungsten arc welding process Perform advanced welding using gas tungsten arc welding process Perform advanced welding using oxy acetylene welding process Weld using submerged arc welding process Repair/replace/modify fabrications Perform geometric development Perform manual soldering/desoldering - electrical/electronic components Perform high reliability soldering and desoldering
		MEM05038B MEM05039B MEM05040B MEM05041B MEM05047B MEM05048B MEM05049B	Perform advanced geometric development - cylindrical/rectangular Perform advanced geometric development - conical Perform advanced geometric development - transitions Weld using powder flame spraying Weld using flux core arc welding process Perform advanced welding using flux core arc welding process Perform routine gas tungsten arc welding

		MEM05050B	Perform routine gas metal arc welding
		MEM05051A	Select welding processes
GE22	Painting & Decoration (CE)		
GE23	Pneumatics (CE/ME)	MEM30011A	Set up basic pneumatic circuits
		MEM18019B	Maintain pneumatic systems
GE24	Manufacturing Management (ME)	MEM14002B	Undertake basic process planning
		MSS405075A	Facilitate the development of a new product
ME 205	Manufacturing Processes-and-Materials	MEM14003B	Undertake basic production scheduling
Mgt 503	Production & Operation Management	MEM14087A	Apply manufactured product design techniques
Mgt 505	Quality Management and Manufacturing Engineering	MEM15007B	Conduct product and/or process capability studies
		MEM15008B	Perform advanced statistical quality control
		MEM14091A	Integrate manufacturing fundamentals into an engineering task
		MEM15011B	Exercise external quality assurance
		MEM15012B	Maintain/supervise the application of quality procedures
		MEM22014A	Coordinate engineering-related manufacturing operations
		MEM22015A	Source and estimate engineering materials requirements
		MEM22017A	Coordinate continuous improvement and technical development
		MEM22018A	Coordinate sales and promotion of engineering-related products or services
		MEM30013A	Assist in the preparation of a basic workplace layout
		MEM30014A	Apply basic just in time systems to the reduction of waste
		MEM30015A	Develop recommendations for basic set up time improvements
		MEM30016A	Assist in the analysis of a supply chain
		MEM30017A	Use basic preventative maintenance techniques and tools
		MEM30018A	Undertake basic process planning
		MEM30019A	Use resource planning software systems in manufacturing
		MEM30020A	Develop and manage a plan for a simple manufacturing related project
		MEM30021A	Prepare a simple production schedule
		MEM30022A	Undertake supervised procurement activities
		MEM30023A	Prepare a simple cost estimate for a manufactured product
		MEM30024A	Participate in quality assurance techniques
		MEM15001B	Perform basic statistical quality control
		MEM23123A	Evaluate manufacturing processes
		MEM23131A	Evaluate rapid prototyping applications
		MEM23132A	Evaluate rapid manufacturing processes
		MEM14001B	Schedule material deliveries
		MEM14002B	Undertake basic process planning
		MEM14003B	Undertake basic production scheduling
		MEM15001B	Perform basic statistical quality control

		MEM15003B MEM15004B MEM15005B	Use improvement processes in team activities Perform inspection Select and control inspection processes and procedures
ME 303	Computer Aided Design and Manufacturing	MEM30009A	Contribute to the design of basic mechanical systems
ME 534	Numerical Control	MEM23122A MEM05053A MEM05054A	Evaluate computer integrated manufacturing systems Set and edit computer controlled thermal cutting machines Write basic NC/CNC programs for thermal cutting machines
		MEM07016C MEM07018C MEM07019C MEM07020C MEM07022C MEM07023C MEM07039A	Set and edit computer controlled machines/processes Write basic NC/CNC programs Program NC/CNC machining centre Program multiple spindle and/or multiple axis NC/CNC machining centre Program CNC wire cut machines Program and set up CNC manufacturing cell Write programs for industrial robots
ME 434	Mechtronics-Robotics	MEM23126A MEM23064A	Evaluate industrial robotic applications Select and test mechatronic engineering materials
GE25	Surveying (CE)		
GE26	Energy Efficient Building Design	MEM23141A	Complete a building thermal performance survey
GE28	Hydraulic (CE/ME)	MEM30010A MEM18021B MEM18022B MEM18023B MEM18052B MEM18071B MEM18072B	Set up basic hydraulic circuits Maintain hydraulic systems Maintain fluid power controls Modify fluid power system operation Maintain fluid power systems for mobile plant Connect/disconnect fluid conveying system components Manufacture fluid conveying conductor assemblies
GE29	Materials & Corrosion Prevention (CE/ME)	MEM30007A	Select common engineering materials
GE30	Bricklaying (CE)		
GE31	Sprouting & Guttering (CE)		
GE32	Electronic Security Installation	MEM20008A MEM20011A MEM20012A MEM20013A	Develop and implement a masterkey system Service and repair fire and security containers Service and repair mechanical automotive locking systems Service automotive transponder systems
		PRST5202A PRST5302A	Install security equipment/system Program security equipment/system

		PRSTS303A PRSTS304A PRSTS305A PRSTS307A	Test installed security equipment/system Commission/decommission security equipment/system Identify and diagnose electronic security equipment/system fault Maintain and service security equipment/system
GE33	Explosion Protection	MEM13001B MEM13002B MEM13003B MEM13004B MEM13006B MEM13007B MEM13010A MEM13013B	Perform emergency first aid Undertake occupational health and safety activities in the workplace Work safely with industrial chemicals and materials Work safely with molten metals/glass Collect and evaluate occupational health and safety data for an enterprise or section of an enterprise Maintain water treatment systems for cooling towers Supervise occupational health and safety in an industrial work environment. Work safely with ionizing radiation
GE34	Engineering Business Management	MSAENV672B MSS402030A MSS403001A MSS403002A MSS403010A MSS403021A MSS403023A MSS403030A MSS403040A MSS403051A MSS404050A MSS404052A MSS404060A MSS405001A MSS405002A MSS405003A MSS405004A MSS405005A MSS405010A MSS405011A	Develop workplace policy and procedures for sustainability Apply cost factors to work practices Implement competitive systems and practices Ensure process improvements are sustained Facilitate change in an organisation implementing competitive systems and practices Facilitate a Just in Time system Monitor a levelled pull system of operations Improve cost factors in work practices Facilitate and improve implementation of 5S Mistake proof an operational process Undertake process capability improvements Apply statistics to operational processes Facilitate the use of planning software systems in a work area or team Develop competitive systems and practices for an organisation Analyse and map a value stream Manage a value stream Develop business plans in an organisation implementing competitive systems and practices Manage competitive systems and practices responding to individual and unique customer orders Manage relationships with non-customer external organisations Manage people relationships

	<u>MSS405012A</u>	Manage workplace learning
	<u>MSS405020A</u>	Develop quick changeover procedures
	<u>MSS405021A</u>	Develop a Just in Time system
	<u>MSS405022A</u>	Design a process layout
	<u>MSS405023A</u>	Develop a levelled pull system for operations and processes
	<u>MSS405030A</u>	Optimise cost of a product or service
	<u>MSS405031A</u>	Undertake value analysis of product or process costs in terms of customer requirements
	<u>MSS405040A</u>	Manage 5S system in an organisation
	<u>MSS405050A</u>	Determine and improve process capability
	<u>MSS405052A</u>	Design an experiment
	<u>MSS405060A</u>	Develop the application of enterprise control systems in an organisation
	<u>MSS405061A</u>	Determine and establish information collection requirements and processes
	<u>MEM23119A</u>	Evaluate continuous improvement processes
	<u>MEM30028A</u>	Assist in sales of technical products/systems
	<u>MEM14001B</u>	Schedule material deliveries
	<u>MEM14002B</u>	Undertake basic process planning
	<u>MEM14003B</u>	Undertake basic production scheduling
	<u>MEM14001B</u>	Schedule material deliveries
	<u>MEM14002B</u>	Undertake basic process planning
	<u>MEM14003B</u>	Undertake basic production scheduling
	<u>MEM14001B</u>	Schedule material deliveries
	<u>MEM14002B</u>	Undertake basic process planning
	<u>MEM14003B</u>	Undertake basic production scheduling
	<u>MEM14001B</u>	Schedule material deliveries
	<u>MEM14002B</u>	Undertake basic process planning
	<u>MEM14003B</u>	Undertake basic production scheduling
	<u>MEM14001B</u>	Schedule material deliveries
	<u>MEM14001B</u>	Schedule material deliveries
	<u>MEM14002B</u>	Undertake basic process planning
	<u>MEM14003B</u>	Undertake basic production scheduling
	<u>MEM14001B</u>	Schedule material deliveries
	<u>MEM14002B</u>	Undertake basic process planning
	<u>MEM14003B</u>	Undertake basic production scheduling
	<u>MEM14001B</u>	Schedule material deliveries
	<u>MEM14002B</u>	Undertake basic process planning
	<u>MEM17001B</u>	Assist in development and deliver training in the workplace
	<u>MEM17002B</u>	Conduct workplace assessment
	<u>MEM14005A</u>	Plan a complete activity
	<u>MEM15002A</u>	Apply quality systems

		MEM16006A MEM16002C MEM16004B MEM16005A MEM17003A BSBSMB404A BSBSMB406A	Organise and communicate information Conduct formal interviews and negotiations Perform internal/external customer service Operate as a team member to conduct manufacturing, engineering or related activities Assist in the provision of on the job training * Undertake small business planning Manage small business finances
		MSS403001A	Implement competitive systems and practices
		MSS403002A	Ensure process improvements are sustained
		MSS403010A	Facilitate change in an organisation implementing competitive systems and practices
		MSS403021A	Facilitate a Just in Time system
		MSS403030A	Improve cost factors in work practices

JEWELLERY MAKING

MEM19001B	Perform jewellery metal casting
---------------------------	---------------------------------

MEM19002B	Prepare jewellery illustrations
MEM19003B	Handle gem materials
MEM19004B	Handle and examine gemstone materials
MEM19005B	* Produce three-dimensional precision items
MEM19006B	Replace watch batteries
MEM19007B	Perform gemstone setting
MEM19009B	Perform investment procedures for lost wax casting process
MEM19010B	Produce rubber moulds for lost wax casting process
MEM19011B	Perform wax injection of moulds for lost wax casting process
MEM19012B	Produce jewellery wax model
MEM19014B	Perform hand engraving
MEM19015B	Perform jewellery enamelling
MEM19016B	Construct jewellery components
MEM19017B	Fabricate jewellery items
MEM19020B	Fault-find and maintain micro-mechanisms
MEM19021B	Diagnose and service micro-mechanisms

Group MEM40105-01V08G03S16

WATCH MAKING

Modules/Units	Name
MEM20001A	Produce keys
MEM20002A	Assemble and test lock mechanisms
MEM20003A	Install and upgrade locks and hardware
MEM20004A	Gain entry
MEM20005A	Install and maintain door control devices/systems
MEM20006A	Maintain and service mechanical locking devices
MEM20007A	Plan and prepare a masterkey system
MEM20009A	Gain entry and reinstate fire and security containers
MEM20010A	Gain entry and reinstate automotive locking systems
MEM20014A	Perform a site security survey

Group MEM40105-01V08G03S17

Modules/Units	Name
MEM21001A	Replace watch batteries, capacitors and bands
MEM21002A	Perform watch movement exchange
MEM21003A	Perform watch case servicing, repair and refurbishment
MEM21004A	Clean watch and clock components
MEM21005A	Diagnose faults in quartz watches
MEM21006A	Service quartz watches
MEM21007A	Service complex quartz watches
MEM21008A	Service mechanical watches
MEM21009A	Inspect, diagnose, adjust and repair mechanical watches
MEM21010A	Service watch power generating systems
MEM21011A	Service calendar and other dial indication mechanisms for watches
MEM21012A	Service and repair mechanical watch oscillating systems
MEM21013A	Service, test and adjust watch escapements
MEM21014A	Service mechanical chronograph watches
MEM21015A	Perform precision watch timing and adjustment
MEM21016A	Install and set up clocks
MEM21017A	Service and repair clock timepieces

MARINE

Modules/Units	Name
MEM25001B	Apply fibre-reinforced materials
MEM25002B	Form and integrate fibre-reinforced structures
MEM25003B	Set up marine vessel structures
MEM25004B	Fair and shape surfaces
MEM25005B	Construct and assemble marine vessel timber components
MEM25006B	Undertake marine sheathing operations
MEM25007B	Maintain marine vessel surfaces
MEM25009B	Form timber shapes using hot processes
MEM25010B	Perform fitout procedures
MEM25011B	Install marine systems
MEM25012B	Install and test operations of marine auxiliary systems
MEM25014B	Perform marine slipping operations
MEM25015A	Assemble and install equipment and accessories/ancillaries

MEM50002B	Work safely on marine craft
MEM50003B	Follow work procedures to maintain the marine environment
MEM50004B	Maintain quality of environment by following marina codes
MEM50009B	Safely operate a mechanically powered recreational boat
GE21	Welding <u>Welding (ME)</u>

MEM05003B	Perform soft soldering	18	MEM05003B
MEM05004C	Perform routine oxy acetylene welding	18	MEM05004C
MEM05005B	Carry out mechanical cutting	18	MEM05005B

Course + Credit Outlines

Entry--- Year 9		
YEAR 10	Certificate II in Work Place English & Pre-vocational Engineering (6 Credits)	
		Credits
WENG 1	Workplace English 1	1
CGVE 401A	Year 10 Maths	1
CGVE 402A	Year 10 Physics	1
CGVE 403A	Year 10 Information Processing	1
CGVE 404A	Year 10 Science	1
CGVE 406A	Year 10 Chemistry	1
		6 credits
Year 11	Certificate III in Work Place English & Basic Engineering (9 Credits)	
		Credits
WENG 2	Workplace English 2	1
CGVE 401B	Year 11/12 Maths	1
CGVE 402B	Year 11/12 Physics	1
CGVE 403B	Year 11/12 Software Design	1
CGVE 404B	Year 11/12 Science	1
CGVE 405B	Year 11+12 Design & Technology	1
CGVE 406B	Year 10+11+12 Chemistry	1
CGVE 410	Industrial Technology (One unit from Certificate IV in Electrical/Civil/Mechanical Engineering)	2
		15 credits

Year 12 **Certificate IV in Work Place English & General Engineering Practice(15 Credits)**

		Credits
WENG 3	Workplace English 3	1
GE6	Occupational Health & Safety	2
IE6	Principle of Electricity	2
	PLUS any 4 units or more from the following group	
GE1	Electrical Wiring (EE)	2
GE8	Electronics (EE)	2
GE13	Principle of Engine(ME)	2
GE14	Fitting & Machining (ME)	2
GE16	Engineering Drawing I (EE/CE/ME)	2
GE19	Computer Programming (EE/CE/ME)	2
GE22	Painting & Decoration (CE)	2
GE27	Machine Principle(ME)	2
GE30	Bricklaying (CE)	2
GE31	Sprouting & Guttering (CE)	2
IE9	Basic Building Construction (CE)	2
	Credit Transfer from Certificate III in Work Place English & Basic Engineering	2
		15 Credits

Award Rule-

- If all elective are selected from EE units CIV in Work place English & Electrical Engineering Practice will be award. As for CE & ME.
- If the electives are selected from mixed discipline, CIV in Workplace English & General Engineering Practice will be awarded

Year 1 After Year 12	Diploma in General Engineering Practice 30 credits	<u>Credits</u>
IE1	Engineering Mathematics	2
IE2	Engineering Physics	2
IE3	Material Science	2
IE13	Workshop	2
IE15	Advanced Engineering Design & Project Work	2
	PLUS any 4 units or more from the following group	
GE2	Electrical Machine (EE)	5
GE3	Electrical Distribution (EE)	5
GE4	Power System Operation (EE)	5
GE9	Process Control (EE/ME)	5
GE15	Building Construction (CE)	5
GE18	Air-conditioning & Refrigeration (ME)	5
GE20	Computer Networking (EE)	5
GE21	Welding (ME)	5
GE25	Surveying (CE)	5
GE28	Hydraulic (CE/ME)	5
GE29	Materials & Corrosion Prevention (CE/ME)	5
	Workplace Assessment Units (Only based on previous work experiences)	
IE11	Electrical & Mechanical Engineering Work Experience	5
IE12	Civil Engineering Work Experience	5
		30 Credits

Award Rule-

- If 4 electives are selected from EE units Dip in Electrical Engineering Practice will be award. As for CE & ME.
- If the electives are selected from mixed discipline, Dip in General Engineering Practice will be awarded

Year 2 After Year 12	Advanced Diploma in Engineering Practice 60 credits	<u>Credits</u>
EE307	Energy Efficient Building Design	2
EE308	Sustainability	2
EE309	Project Management	2
EE310	Engineering Officer Competency Report	2
	PLUS any 4 units from the following group	
IE7	Electrical Circuit I (EE)	5
IE8	Electrical Circuit II (EE)	5
IE9	Advanced Building Construction (CE)	5
IE10	Transmission Line (EE)	5
GE7	Project Management (EE/CE/ME)	5
GE10	Industrial Electronics (EE)	5
GE11	Programmable Logic Controller (EE/ME)	5
GE17	Pipe Fitting (CE/ME)	5
GE23	Pneumatics (CE/ME)	5
GE24	Manufacturing Management (ME)	5
		30 Credits

Award Rule-

- If 4 electives are selected from EE units Adv Dip in Electrical Engineering Practice will be award. As for CE & ME.
- If the electives are selected from mixed discipline, Adv Dip in General Engineering Practice will be awarded

Year 3 After Year 12	Associate Degree in Engineering Practice (General/EE/CE/ME) 90 credits	<u>Credits</u>
BAE 401	Advanced Engineering Mathematics	9
BAE 402	Calculus	3
BAE 403	Engineering Mechanics	1
BAE 404	Engineering Materials & Thermodynamics	3
BAE 508	Industrial Engineering & Management	1
BAE 601	Computer Programming	3
BAE 608A	Final Graduation Project/ Research Report	10

Based on Advanced Diploma, Associate Degree will be awarded in relevant discipline.

IQY Milestones and recognitions

[IQY Technical College/ St Clements University Humanities Study Programs](#)

www.highlightcomputer.com/HumanitiesCoursesOutline.pdf

The objective of Humanities Studies program is to provide formal academic study and recognition for community workers, social service workers and volunteers who are performing the humanitarian works.

Entry Requirement

No formal requirement but working in humanitarian service is needed. But those without university entrance qualifications may need to attend our basic education studies.

Course Structure

- Diploma in Humanities Studies (Dip HS) (30 Credit Points) (IQY Course 37001)
- Advanced Diploma in Humanities Studies (Adv Dip HS) (60 Credit Points) (IQY Course 47001)
- Professional Diploma in Humanities Studies (Prof Dip HS) (120 Credit Points) (IQY Course 67001) which can be convertible to St Clements University's Bachelor of Humanities Studies (BHS)
- Master of Humanities Studies (MHS) (St Clements University) (240 Credits)
- Professional Doctorate of Humanities Studies (DHS) (St Clements University) (360 Credits)

[Diploma in Humanities Studies \(Dip HS\) \(30 Credit Points\)](#)

Outcome-

On completion of this course, the candidates will be able to effectively provide humanities services needed by the community.

Course Structure

It consists of compulsory work-based unit and elective units

Compulsory

HS101- Humanitarian Work Record (15Points)

Presenting own diary of humanities work for minimum of three months or work reference

ELECTIVES

The following streams can be selected to complete Diploma in Humanities Studies

[STREAM \(1\) -PEOPLE SERVICE STREAM \(Select any one\)](#)

[CERTIFICATE IN COMMUNITY SERVICE \(MVTC205\)](#)

[\(FOODS SERVICE/HEALTH SERVICES/LIBRARY SERVICES/AGE CARE/CHILD CARE\)](#)
(15 points)

CERTIFICATE IN PUBLIC SAFETY (MVTC208) (15 points)

CERTIFICATE IN AGRICULTURE FOOD PRODUCTION (MVTC201) (15 points)

STREAM (2)-COMMUNITY CONSTRUCTION STREAM

Select any one (15 points)

PC 1-Certificate in Bricklaying & Masonry

PC 2-Certificate in Plumbing

PC 3-Certificate in Building Construction

PC 4-Certificate in Gutter Construction

PC 5-Certificate in Fitting & Machining

PC 6-Certificate in Welding

PC 7-Certificate in Engine Operation & Basic Servicing

PC 8-Certificate in Air-conditioning & Refrigeration Basic Servicing

PC 9-Certificate in Electrical Wiring

PC 10-Certificate in Electrical Machine Winding

STREAM (3)- VOLUNTARY TEACHING STREAM

ED107 Theory of Education, Educational Technology & Teaching Practice

(15 Credits)

Advanced Diploma in Humanities Studies (Dip HS) (60 Credit Points)

Outcome

On completion of this course, the candidates will be able to effectively organize and manage the humanities services needed by the community.

Course Structure

It consists of credit transfer from Diploma in Humanities Studies, compulsory work-based unit and compulsory theory studies units.

Credit Transfer

Completion of Diploma in Humanities Studies (30 Credit Points)

Compulsory Work-based Unit

HS201-Humanitarian Organizing Work Record (5 points)

Presenting own diary of organizing humanities work or work reference in additional to minimum of 3 months humanitarian work experience.

Compulsory theory studies units.

The following management units need to be studied

Mgt 101 Management (5 points)

Mgt 201 Customer Service Management (Humanitarian Customer Service) (5 points)

Mgt 203 Inventory & Budget Management (Humanitarian Service Organization Budget Control) (5 points)

Mgt 208 Safety Management in Humanitarian Works-(5 Points)

Mgt 211 Leadership in Humanitarian Works (5 Points)

Professional Diploma in Humanities Studies (Dip HS) (120 Credit Points)

Outcome

On completion of this course, the candidates will be able to effectively set up the strategic tasks and judge the nature of humanities services needed by the community.

Course Structure

It consists of credit transfer from Advanced Diploma in Humanities Studies, compulsory self study unit compulsory theory studies units and a humanities project

Credit transfer

Completion of Diploma in Humanities Studies (60 Credit Points)

Compulsory self study unit

HS301-Professional Studies of Humanities (20 Credits)

It is an open unit. The student will need to study the literatures in Human Right, Democracy. History, Political Science, Philosophy, . They can read the books, online publications , attend the public talk, take part in online discussions etc and prepare a report on what they read, believe, accept on humanitarian issues.

They can freely present their views , comments and judgement.

The assessment will not be based on same or different views between student and assessor. It will only be based on how the student can do the study, what is accepted and believed and how well the arguments can be presented.

The report needs to include references sources as well and it can be written in any language. (For Myanmar, it can be written in Myanmar or English)

Compulsory theory studies

ED431-Critical Thinking (10 Credits)

Mgt 305 Quantitative Methods for Managers (10 Credits)

Mgt 306 Human Resources Management (10 Credits)

HS302- Humanities Work Project (10 Credits)

Humanities Project is to be written

The candidate needs to investigate the needs of the community and prepare the work plan to do the humanities project work such as building a school, digging the water well, disaster relief work.

They need to answer the questions regarding

- Why this task is important for the community
- Who will get the benefit
- What kinds of tasks need to be provided
- Who will do the job
- What materials , resources will be required
- How to provide the safety
- Time plan to complete the task
- Materials requirement and budgetary issues and how to raise the funding
- How to collaborate with local and other people / organizations
- How to assess the project completion
- How to determine the effectiveness and quality of the project outcome
- What lesson that you learnt from the project and conclusion

The project report needs to answer the above questions, record of project works, data, photos and references will need to be attached.

It should be 5 to 10 pages . Without community project but presentation of intensive portfolio 57001 Professional Diploma in Humanities Studies can be issued but to proceed to Masters , such project must be submitted for qualifying.

Bachelor of Humanities Studies (BHS) (St Clements University)

(Credit Transfer)

The graduates of Professional Diploma in Humanities Studies can pay degree registration fees and present the Professional Diploma in Humanities Studies to St Clements University's academic board to issue Bachelor of Humanities Studies (BHS)

Master of Humanities Studies (MHS) (St Clements University) (240 Credits)

Professional Doctorate of Humanities Studies (DHS) (St Clements University)
(360 Credits)

The graduates of Bachelor of Humanities Studies (BHS) can continue the studies on research method and prepare a thesis to complete Master of Humanities Studies (MHS)

St Clements University will also guide the additional studies as required.

They can contribute the literatures in St Clements University's Academic Journal, present the seminars, write the dissertation, defend the dissertation to complete Professional Doctorate of Humanities Studies

Final Thesis for Master and Dissertation for Doctorate

HUM 601 Research Method

HUM 602 Thesis

HUM 601 Research Method

This course guides the student, step by step, through the research process, from problem selection through writing up results. It provides all of the basics necessary to complete a research project in any discipline.

Outline. The following aspects are reflected in this course:

What is research?

Tools of research

The problem: the heart of the research process

Review of the related literature

Planning your research design

Writing the research proposal

Qualitative research

Historical research

Descriptive research

Experimental and causal - comparative designs

Statistical techniques for analyzing quantitative data

Technical details: style, format, and organization of the research report

Masters Research Proposal

Synopsis: Research students are expected to present a written research proposal within three months after commencement. The proposal is handed in to the study leader.

Assessors of this proposal are selected by the faculty for their understanding of the field and the research involved. The purpose of a research is to set out a plan for conducting the research and writing the dissertation within the available time. It should take account of the availability and guidance of the study leader.

The starting point for a research proposal is the topic, which is the field of interest in which the research is to be carried out. In introducing the topic, the proposal should clarify the field that it falls into and the specific part of that field which the research will explore.

It should clarify why the topic is of interest and importance, and how the proposed research will contribute to the field of knowledge or profession. The proposal should clarify the research questions, ensuring that these are specific and answerable.

It is important to show how these questions relate to the topic, and how they will advance the student's contribution. The proposal should detail the research to be carried out, and clarify the research methods, the timeframe and the reasons for selecting particular methods.

Where a period of literature review or research should precede any empirical research, this should be factored in as part of the research. It is important to estimate any periods of field research and to flag their duration and cost in your research proposal.

HUM 602 Thesis

Humanities Studies Thesis for Masters and Dissertation for Doctorate

Candidates need to complete a 60000-words dissertation (in Myanmar or English) and a 3000-words executive portfolio (in English).

This program requires the candidates to complete a thesis as part of the assessment for the Master of Humanities Studies degree and a dissertation for Doctor of Humanities Studies.

Doing a thesis / dissertation means that instead of knowledge and information being presented and following a prescribed route for answering questions, candidates are thrust into an active role of managing an investigation into a topic area. This means researching and discovering things for themselves.

They will have to set their own targets and parameters, pose their own central research questions and decide on the appropriate sources of information to support the research. It therefore requires the use of the higher-level cognitive skills of analysis, synthesis and evaluation. Candidates may choose an area of particular interest to them within the scope of course title.

Doctoral dissertation

A dissertation is an individual effort and the candidate, academic tutor and the course professor will work together on constructing an approved topic (research question) and methodologies.

Humanities Dissertation Defence for doctorate

It is expected of Doctoral candidates to defend their thesis by means of a colloquium (academic discussion). The purpose of the meeting is for the candidates to convince a panel of experts in the

field of the dissertation how well they have done in the conducting of their research study and the preparation of their dissertation

Candidates need to complete all course assessments with the results of Grade B+ or above.

Bachelor of Applied Science (Computer Science & Computer Technology)

Year (3)

Year 3 program focuses on hardware aspects of computer technology. Computer electronics circuit boards operation principles are emphasized. Basic electrical principle, analogue and digital electronics principle together with academic subjects of mathematics, physics, material science and management are contained in the program.

Unit	Topics	Reference	Points
ICT 301	General Electrical Knowledge	EE101	3
ICT 302	Digital Electronics	EE209/H012	3

Graduate Diploma of Engineering Practice (Computer Control Engineering)

This one year course with 30 credit points trains the BSc & BCTech graduates and final year students to work as computer control system technicians and engineers in various industries. It consists of electrical engineering units, electronic engineering units, analogue and digital principles, process control system, programmable control, computer aided control and instrumentation, linear system and modern control system units.

Pre-requisites

BSc or BC Tech , Final years

Contents

Group (1)	Group (2)
EE101 DC Circuit Problems EE103 Basic Electrical Drafting EE107 Electrical Equipments EE109 Electrical Control Circuits EE112 Alternating Current Principle EE113 Electrical Fundamental EE206 AC Machines EE207 DC Machines EE202 Electrical Circuits	EE115 Basic Analogue and Digital Electronics EE121 Electronic Power Control Devices EE208 Operational Amplifier EE209 Analogue Electronics EE301 Advanced Electrical Drafting EE117 Solar Electrical System
The students study the power points containing the explanations in English + Myanmar Languages, do & submit theoretical & simulated practicals. Tutoring support by electronics teachers.	The students study the power points containing the explanations in English + Myanmar Languages, do & submit theoretical & simulated practicals. Tutoring support by electronics teachers.

The students who successfully complete Group 1 & 2 will receive Graduate Certificate in Engineering Practice (Electrical & Electronic)

ME203 Control Engineering ME534 Numerical Control ME434 Mechatronics and Robotics EE624 Process Control ME302 Automation & Robotics	BAE408 Analogue and Digital Electronics BAE502 Linear System BAE503 Control System
The students study the power points containing the explanations in English + Myanmar Languages, Study the text books in Myanmar language & enrich the knowledge by reading the references in English Do & submit theoretical & simulated practicals. Tutoring support by electronics teachers.	The students study the power points containing the explanations in English + Myanmar Languages, do & submit theoretical & simulated practicals. Tutoring support by electronics teachers.

The students who successfully complete Group 3 & 4 will receive Graduate Diploma of Engineering Practice (Computer Control Engineering)

Diploma in Doctorate Studies (DDS)

IQY Diploma in Doctorate Studies is an academic award consisting of Research Studies and Writing Thesis Dissertation at 360 Credit points in which 240 Credit points are allocated for Masters Degree level academic qualifications and / or comparable professional experiences.

The candidates who have completed MAE 601 Research Method (30 Points) and their thesis proposal are accepted will be awarded IQY Master Diploma in Research Studies (270 Credit Points).

The candidates who have completed MAE602 Thesis (30 Points) but have not submitted it to St Clements University will be awarded IQY Diploma in Doctorate Studies (300 Credit Points)

Only St Clements University will confer the Doctoral Degree while IQY Technical College will provide the facilitation and successful candidates will be issued with BAE801 Thesis Dissertation Assessment and Defence (60 Points) when the success is notified by St Clements University. In the case of failure to meet the quality of dissertation, St Clements University's Diploma in Doctorate Studies or other relevant award can be issued and Doctorate degree award fees will not be charged.

IQY Technical College will issue Letter of Congratulation for having been successful in PhD.

BAE801 Thesis Dissertation Assessment and Defence (60 Points)

MAE601 Research Method

This course guides the student, step by step, through the research process, from problem selection through writing up results. It provides all of the basics necessary to complete a research project in any discipline.

Outline. The following aspects are reflected in this course:

What is research?

Tools of research

The problem: the heart of the research process

Review of the related literature

Planning your research design

Writing the research proposal

Qualitative research

Historical research

Descriptive research

Experimental and causal - comparative designs

Statistical techniques for analyzing quantitative data

Technical details: style, format, and organization of the research report

Doctoral Research Proposal

Synopsis: Research students are expected to present a written research proposal within three months after commencement. The proposal is handed in to the study leader.

Assessors of this proposal are selected by the faculty for their understanding of the field and the research involved. The purpose of a research is to set out a plan for conducting the research and writing the dissertation within the available time. It should take account of the availability and guidance of the study leader.

The starting point for a research proposal is the topic, which is the field of interest in which the research is to be carried out. In introducing the topic, the proposal should clarify the field that it falls into and the specific part that field which the research will explore.

It should clarify why the topic is of interest and importance, and how the proposed research will contribute to the field of knowledge or profession. The proposal should clarify the research questions, ensuring that these are specific and answerable.

It is important to show how these questions relate to the topic are, and how they will advance the student's contribution. The proposal should detail the research to be carried out, and clarify the research methods, the timeframe and the reasons for selecting particular methods.

Where a period of literature review or research should precede any empirical research, this should be factored in as part of the research. It is important to estimate any periods of field research and to flag their duration and cost in your research proposal.

MAE 602 Thesis

Thesis Dissertation for Doctorate

Candidates need to complete a 60000-words dissertation (in Myanmar or English) and a 3000-words executive portfolio (in English).

This program requires the candidates to complete a thesis as part of the assessment for the Doctorate

Doing a thesis / dissertation means that instead of knowledge and information being presented and following a prescribed route for answering questions, candidates are thrust into an active role of managing an investigation into a topic area. This means researching and

discovering things for themselves.

They will have to set their own targets and parameters, pose their own central research questions and decide on the appropriate sources of information to support the research. It therefore requires the use of the higher-level cognitive skills of analysis, synthesis and evaluation. Candidates may choose an area of particular interest to them within the scope of course title.

BAE801 Thesis Dissertation Assessment and Defence (60 Points)

Doctoral dissertation

A dissertation is an individual effort and the candidate, academic tutor and the course professor will work together on constructing an approved topic (research question) and methodologies.

Dissertation Defence for doctorate

It is expected of Doctoral candidates to defend their thesis by means of a colloquium (academic discussion). The purpose of the meeting is for the candidates to convince a panel of experts in the field of the dissertation how well they have done in the conducting of their research study and the preparation of their dissertation

Candidates need to complete all course assessments with the results of Grade B+ or above.

Master of Information Technology

This degree is designed for the experienced professionals who wish to develop their skills and knowledge as Information Technology professionals.

Graduate Diploma in Information Technology

Compulsory Modules

ICT 501 Programming in Visual C++ PLUS ICT 507 Visual Computing

ICT 502 Database Systems

ICT 503 Business System Development

ICT 504 Business Data Communications

ICT 505 Applied Computing I

ICT 506 Applied Computing II PLUS ICT 508 Object-Oriented Analysis & Design

Master of Science (Information Technology)

Electives

ICT 601 Programming in Java

ICT 602 E-Commerce

ICT 603 Software Engineering

ICT 604 Multimedia Systems

ICT 605 IT Management **Project/Thesis**

A written report between 10,000 – 12,000 words that covers both theory & practical knowledges of the above units.

To qualify for a MSc.IT degree, a student must take and pass 10 modules from the above list of modules, 6 modules are compulsory and the rest are electives.

Additionally, the student must undertake and pass a research-based or work-related project.

Professional Certificate in Medical Data System (Course Number-4889008)

Objective- To effectively manage data system in medical records

Pre-requisite- MBBS/ BDS/ B Pharm

Contents ICT409 Hospital Data System

- Hospital Data System (Reader)
- Database Management System for Hospital (Reader)

Videos

- Hospital Database Analysis Design
- Hospital Management System Data Entry
- Hospital website and appointment system
- Hospital Management System Doctor Log in
- Hospital Management System with PHP
- Hospital Management System in PHP

Part 1 - Practical Application Tutorials- Hospital Data System

Award- Professional Certificate in Medical Data System

An introduction about hospital Database

SQL [39 exercises with solution]

[An editor is available at the bottom of the page to write and execute the scripts.]

Sample Database: hospital

1. Write a query in SQL to find all the information of the nurses who are yet to be registered.

- 2.** Write a query in SQL to find the name of the nurse who are the head of their department.
- 3.** Write a query in SQL to obtain the name of the physicians who are the head of each department.
- 4.** Write a query in SQL to count the number of patients who taken appointment with at least one physician
- 5.** Write a query in SQL to find the floor and block where the room number 212 belongs to
- 6.** Write a query in SQL to count the number available rooms
- 7.** Write a query in SQL to count the number of unavailable rooms.
- 8.** Write a query in SQL to obtain the name of the physician and the departments they are affiliated with
- 9.** Write a query in SQL to obtain the name of the physicians who are trained for a special treatment
- 10.** Write a query in SQL to obtain the name of the physicians with department who are yet to be affiliated
- 11.** Write a query in SQL to obtain the name of the physicians who are not a specialized physician
- 12.** Write a query in SQL to obtain the name of the patients with their physicians by whom they got their preliminary treatment
- 13.** Write a query in SQL to find the name of the patients and the number of physicians they have taken appointment
- 14.** Write a query in SQL to count number of unique patients who got an appointment for examination room C
- 15.** Write a query in SQL to find the name of the patients and the number of the room where they have to go for their treatment
- 16.** Write a query in SQL to find the name of the nurses and the room scheduled, where they will assist the physicians.

- 17.** Write a query in SQL to find the name of the patients who taken the appointment on the 25th of April at 10 am, and also display their physician, assisting nurses and room no.
- 18.** Write a query in SQL to find the name of patients and their physicians who does not require any assistance of a nurse
- 19.** Write a query in SQL to find the name of the patients, their treating physicians and medication.
- 20.** Write a query in SQL to find the name of the patients who taken an advanced appointment, and also display their physicians and medication
- 21.** Write a query in SQL to find the name and medication for those patients who did not take any appointment
- 22.** Write a query in SQL to count the number of available rooms in each block
- 23.** Write a query in SQL to count the number of available rooms in each floor
- 24.** Write a query in SQL to count the number of available rooms for each block in each floor.
- 25.** Write a query in SQL to count the number of unavailable rooms for each block in each floor.
- 28.** Write a query in SQL to obtain the name of the patients, their block, floor, and room number where they are admitted.
- 29.** Write a query in SQL to obtain the nurses and the block where they are booked for attending the patients on call.
- 30.** Write a query in SQL to make a report which will show -
- a) name of the patient,
 - b) name of the physician who is treating him or her,
 - c) name of the nurse who is attending him or her,
 - d) which treatment is going on to the patient,
 - e) the date of release,
 - f) in which room the patient has admitted and which floor and block the room belongs to respectively.

- 31.** Write a SQL query to obtain the names of all the physicians performed a medical procedure but they are not certified to perform
- 32.** Write a query in SQL to obtain the names of all the physicians, their procedure, date when the procedure was carried out and name of the patient on which procedure have been carried out but those physicians are not certified for that procedure.
- 33.** Write a query in SQL to obtain the name and position of all physicians who completed a medical procedure with certification after the date of expiration of their certificate
- 34.** Write a query in SQL to obtain the name of all those physicians who completed a medical procedure with certification after the date of expiration of their certificate, their position, procedure they have done, date of procedure, name of the patient on which the procedure had been applied and the date when the certification expired
- 35.** Write a query in SQL to obtain the names of all the nurses who have ever been on call for room 122.
- 36.** Write a query in SQL to Obtain the names of all patients who has been prescribed some medication by his/her physician who has carried out primary care and the name of that physician
- 37.** Write a query in SQL to obtain the names of all patients who has been undergone a procedure costing more than \$5,000 and the name of that physician who has carried out primary care
- 38.** Write a query in SQL to Obtain the names of all patients who had at least two appointment where the nurse who prepped the appointment was a registered nurse and the physician who has carried out primary care
- 39.** Write a query in SQL to Obtain the names of all patients whose primary care is taken by a physician who is not the head of any department and name of that physician along with their primary care physician

Medical Data System

**Part (3) – Graduate Certificate in Information Technology (Hospital Data System)
(30 Credits)**

- ICT409 Medical Data System (10 Credits)
- ICT410 MYSQL (10 Credits)
- ICT502 Data Base System (10 Credits)

Application

- Access
- STATA

Master of Science (Computer Network) (Each 10 credits) (70883)

Bachelor of Applied Science (Network)- 120 Credits

Master of Applied Science (Network)- 120 Credits

Total 240 credits

PART (1) Course Work in Graduate Diploma in Computer Network Level

(60 credits) (Each 10 credits)

ICTN701 APNET Content Management System

ICTN702 CISCO Certified Design Associate

ICTN703 CISCO Certified Network Associate

ICTN704 CISCO Firewall

ICTN705 CISCO LAN Switching Configuration

ICTN706 Computer Architecture and Security

PART (2) Course Work in Masters Level

(40 credits) (Each 10 credits)

Select 4 units

ICTN707 Computer Systems

ICTN708 Python Network Programming

ICTN709 Microsoft.NET Framework

ICTN710 Enterprise Network Monitoring

ICTN711 Parallel Computer Architecture

ICTN712 Cloud Computing

The students will have to write 20 pages study report for each of the subjects outlined below.

The report needs to include

- Book review- Review on each chapter of the book highlighting the key concepts, key points, key theory & practical application concepts in IT.
- Own idea on how to apply those concepts in real practical applications.

- Examples of IT system designs that use the concepts & knowledge expressed in those books (If any)
- Your comment on each book

Master of Applied Science Work Example

[http://www.iqytechnicalcollege.com/Master Diploma in Information Technology-Worked Sample Report on IT Topics.pdf](http://www.iqytechnicalcollege.com/Master%20Diploma%20in%20Information%20Technology-Worked%20Sample%20Report%20on%20IT%20Topics.pdf)

PART (3) Master Project in Computer Network

(20 credits)

The candidate needs to write the project report for one topic mutually selected by the candidate and supervisor

REPORT GUIDE

<http://www.mongroupsydney1.com/Report.pdf>

Part (4) Master of Engineering (Computer Network) (70884)

Complete the following units after completion of Master of Applied Science (Computer Network) Each 10 credits

BAE 702 Engineering Management

BAE 703 Leadership & Human Resources Management

BAE 704 Risk Management & Industrial Safety

BAE 705 Engineering Competency Development

BAE 706 Engineering Report Writing

BAE 707 Engineering Ethics

Total Credits 320 Credits

The Institution of Professional Executives Myanmar Employment Qualifications Board

Effort by The Institution of Professional Engineers Myanmar (IPEM) to preserve the higher education in
Myanmar.

www.ipemyanmar.org/IPEMGEDC.pdf

IPEM Employment Qualifications Board (IPEMEQB) is established to provide the qualification
information references for the jobs advertised in the following employment groups managed by
The Institution of Professional Engineers Myanmar and Myanmar Vocational Training
Collaboration.

Institution of Professional Engineers Myanmar နှင့် Myanmar Vocational Training Cooperation မှစီမံခန့်ခွဲသည့်

အောက်ဖော်ပြပါအလုပ်အကိုင်အုပ်စုများတွင်ကြော်ငြာထားသောအလုပ်အကိုင်များအတွက်အရည်အချင်းအချက်အလက်များကိုရည်ညွှန်းကိုးကားရန်

IPEM Employment Qualifications Board (IPEMEQB) ကိုထူထောင်သည်။

Recognition Policy of The Institution of Professional Engineers Myanmar and its network group of employers regarding Myanmar and International Qualifications

The qualification authorities and professional associations of the different countries in the world have set up their own policies to align with the governmental regulations, to provide the professional qualifications needs of the country and to safeguard the professionalism in the country etc.

The recognition policies related to overseas qualifications of the qualification authorities and professional associations of the different countries depend on the policies set up by the executive governors of those institutions.

The Institution of Professional Engineers Myanmar, The Institution of Professional Executives Myanmar and it's networked group of employers in Myanmar have also set up the following policy to recognize the international qualifications for awarding the advanced standing in the courses of studies and employment purposes.

Those policies are applied in the following employments groups administered by the Institution of Professional Engineers Myanmar.

- **Recognition of the qualifications awarded in the Republic of the Union of Myanmar.**
- **Recognition of the international qualifications held by the citizen of Myanmar and foreign citizens of Myanmar origin at the same level of the qualifications status.**
- **Recognition of the qualifications awarded in any countries where the professionals and tradespersons including Myanmar citizens and foreign citizens of Myanmar origin do not face the restrictions to utilize their qualifications obtained in Myanmar including the qualifications awarded by IQY Technical College of Highlight Computer Group & it's affiliated educational institutions at the same level of the qualifications status.**
- **No recognition of the qualifications awarded in any countries where their qualification authorities and professional associations' policies of overseas skills recognition do not include**

the qualifications awarded in Myanmar at the same level of the qualifications status or reciprocal recognition of their qualifications at the same level of the qualifications status which is regarded by them on Myanmar Qualifications including those awarded by IQY Technical College of Highlight Computer Group & it's affiliated educational institutions (IPEM Technological University).

1. For example, if a qualification authority of an overseas country assesses Myanmar Bachelors degree at the standard equivalent to the bachelors degree awarded by their educational institution, we will also recognize their bachelors degree at the standard equivalent to the bachelors degree awarded in Myanmar.
2. If a qualification authority of an overseas country assesses Myanmar trade qualification at the standard equivalent to the trade qualification issued by their educational institution, we will also recognize their trade qualification at the standard equivalent to the trade qualification issued in Myanmar.
3. If a qualification authority of an overseas country assesses Myanmar Bachelors degree at the standard equivalent to the diploma awarded by their educational institution, we will also recognize their bachelors degree at the standard equivalent to the diploma awarded in Myanmar.
4. If a qualification authority of an overseas country does not recognize Myanmar trade qualification at the standard equivalent to their trade qualification issued by their educational

institution, we will also not recognize their trade qualification at the standard equivalent to the trade qualification issued in Myanmar and the employers of the networked group of employers in Myanmar should not consider such qualifications to be utilized in their workplaces.

- Recognition of the international qualifications not only needs maintaining the qualifications at international standard but also needs to safeguard the professionalism in Myanmar & to promote the reciprocal recognition and harmony among Myanmar nationals & the nationals of the foreign countries to enhance the work rights at the appropriate types of jobs where Myanmar nationals can utilize their skills & qualifications. It is one method of self protection strategy to protect the work rights of the citizens and nationals.

RECORD OF REGISTRATION

IQY Technical College is also an authorised education college of The Institution of Professional Engineers Myanmar New South Wales Australia Chapter registered with New South Wales State Government of Australia (INC1901087)

IQY Technical College of IQY St Clements Education Group and Highlight Computer Group (Myanmar) is an authorized training centre of Singapore Institute of Engineering Technologists for ASEAN Engineering Technologist and ASEAN Engineering Technician Registration.

One of top universities in Myanmar rated by Universities in the World

IQY - ST CLEMENTS EDUCATION GROUP MISSION AND VISION

IQY Technical College teaches Singapore Recognized Engineering , ICT Engineering , Engineering Management and Engineering Education Diplomas and Professional Diplomas at Bachelors degree levels to enable the graduates to receive the Bachelors Degree in Engineering, Information Technology and Management from our two affiliated universities by credit transfer scheme.

IQY Technical College educates the students of Myanmar at the price affordable to average working class people of Myanmar by applying e-Learning with study support education groups at various physical locations.

Affiliation

IQY Technical College is Education and Training Unit of The institution of Professional Engineers Myanmar which is Member of International Federation of Engineering Education Societies USA (IFEES-USA) and Education and Training Branch of The Institution of Professional Engineers Myanmar NSW Australia Chapter which is incorporated in NSW Australia. IQY Technical College is Authorized Training Centre of Singapore Institute of Engineering Technologists (SIET).

IQY Technical College delivers the following programs

- Diploma, Advanced Diploma, Professional Diploma (equivalent to Bachelors degree) Master Diploma (equivalent to Masters degree) in various Engineering, Management, Information Technology
- Various Engineering and Non Engineering Vocational Training Certificates
- Skilled Development Short Courses
- Internship and Apprenticeship Courses

IQY Technical College engineer; Diploma (Diploma) , Advanced Diploma (Advanced Diploma) , Bachelor 's Degree (Professional Diploma in Engineering

Diploma (Diploma) - Industry experts (Engineering Technician) to be able to work.

Duration - 6 months to 1 year (Saturdays / Sundays / Off line E -Learning)

<http://www.highlightcomputer.com/PracticalCourses.htm>

Advanced Diploma (Advanced Diploma) , Bachelor 's degree level scheduled Technical Diploma (Professional Diploma in Engineering) - Engineering Technician Engineering Technologist will be able to work.

Duration - Advanced Diploma (Advanced Diploma) 1 year 2 years (Saturdays / Sundays)

OFF line E-Learning)

Bachelor 's degree level scheduled Technical Diploma (Professional Diploma in Engineering) 2 years of the 4 -year (Saturdays / Sundays / Off -line E-Learning)

Training Time

Credit Points- Certificate- 15 Credits, Diploma-30 Credits. Advanced Diploma-60 Credits

Professional Diploma: 90 to 120 Credits

Electrical Engineering (Diploma to Professional Diploma) (Power & Elec . Combined tronics).

Mathematics, Physics, Material Science, Electrical principle, Electrical Workshop, Wiring, Control, AC / DC Machine, Power Control, Electrical Contracting, Project, Management, Solar Electrical System, Electrical Drafting, Analogue / Digital Electronics, Programmable Logic Controller, Microprocessor, Process Control, Power Generation / Transmission / Distribution / Power Protection System, Computer Programming, Computer Network, Renewable Energy, Energy Storage, Solar Thermal System, Engineering Materials, Telecommunication, Radio Wave, Microwave.

Civil Engineering (Diploma to Professional Diploma).

Mathematics, Physics, Material Science, Electrical principle, Electrical Workshop, Building Construction, Bricklaying. Plumbing, Building Drawing, Fluid Dynamics, Hydraulics, Hydrology. Surveying, Sanitation & Water Supply, Surveying, Road & Bridge Construction,

Structural Design, Estimating, Quantity Surveying, Reinforced Concrete, Timber Engineering, Rock Mechanics, Soil Mechanics, Environmental Engineering, Traffic Engineering, Architecture, Building Services Engineering, Engineering Management. Computer Studies

Mechanical Engineering (Diploma to Professional Diploma)

Mathematics, Physics, Material Science, Electrical principle, Electrical Workshop, Engineering Mechanics, Applied Thermodynamics, Machine Principle, Heat Transfer, Principle of Engines,

Fluid Mechanics, Hydraulics, Aerodynamics, Control Engineering, Manufacturing Process, Turbo Machineries, Chemical Thermodynamics. Hydrocarbons, Corrosion Protection, Computer Aided Manufacturing, Robotics, Mechatronics, Numerical Control, Pneumatics,.

Air conditioning & Refrigeration, Electrical Building & Mechanical System, Process Control, Production & Operation Management, Machine Design, Water Supply Building, Mechanical Instrumentation and Process, Computer Programming & Network, Engineering Management, Plant Engineering, Engineering Design, Mechanical Power Generation. , Material Engineering

Mechatronics - Common subjects up to Advanced Diploma. Combined with Electronics in Professional Diploma **Other Engineering Courses** Telecommunication, Automotive, Marine, Renewable Energy, Architecture . Computer Network, Metallurgy, Materials, Explosion Protection, Naval Architecture, Architecture, Chemical

<http://www.iqytechnicalcollege.com/offeredcourses.htm>

Information Technology (Diploma to Professional Diploma)

IT Principle, Computer Application, Computer Programming, Program Projects, Analysis System, Business Information System, Software Engineering, Organizational Behavior,

System Analysis, Computer Networking, Mathematics. Analogue / Digital Electronics, Microprocessor, Telecommunication, Java. C ++. C #, Object Oriented Programming, Website Development, Artificial Intelligence.

Business Management (Diploma to Professional Diploma)

Management, Performance Management, Operation Management, Computer Applications in Management, Quality Management, Risk Assessment, Project Management, Customer Service Management, Change Management, Inventory & Budget Management, Continuous Improvement Management, Safety Management, Risk Management, Professional Development Management, Leadership, Business Letter Writing, Office Management, Preparing Portfolios, Conflict Management, Work-based Training Management. Electronics Business & Commerce, Information Security, Information Management System, Quantitative Methods, Human Resources Management, Marketing Management,, Artificial Intelligence, Project Management.

IQY Qualification Framework

www.highlightcomputer.com/iqyqualificationsframework.pdf

IQY Qualification Framework (IQYQF) is largely based on Australian Qualifications Framework (AQF) but modified it to meet the customised needs of our teaching and training system.

AQF Level	IQY Level	Australian Qualifications Framework (AQF)	IQY Qualifications Framework (IQYQF)
School		Secondary School Certificate	Year 9 to 12 Bridging Education Certificate
1	1	Certificate I	Myanmar Vocational Training Certificate Level 1 (MVTC 1)
2		Certificate II	Myanmar Vocational Training Certificate Level 2 (MVTC 2)
3		Certificate III	Myanmar Vocational Training Certificate Level 3 (MVTC 3)
4		Certificate IV	Diploma Part 1 (Advanced Certificate)/ Diploma in General Engineering & Certificate in Tertiary Preparation (Year 12 Level)
5	2	Diploma	Diploma Part 2 (30 credits)
6		Advanced Diploma	Advanced Diploma (60 credits) (Diploma in Engineering Education Level 1-Diploma in Vocational Education and Training)
6	3	Associate Degree	Professional Diploma Part 1 (Year 3) (90 to 120 Credits) (Diploma in Engineering Education Level 2-Diploma in Technical Teaching)
7		Bachelors Degree	Professional Diploma Part 2 (Year 4) (120 credits and more) (Diploma in Engineering Education Level 3-Diploma in Engineering Education)
8	4	Graduate Certificate/ Graduate Diploma	Master Diploma Part A (Diploma in Engineering Education Level 4-Diploma in Engineering Education-Specialist Studies)
9		Masters Degree	Master Diploma Part B/ Master Diploma in Research Studies
10	5	Doctoral Degree	Diploma in Doctoral Studies

List of universities in Switzerland

From Wikipedia, the free encyclopedia

This **list of universities in Switzerland** lists all 12 Swiss universities (10 cantonal universities and 2 federal institutes of technology) and a number of public Swiss Universities of Applied Sciences and other education institutions, as higher education institutions. The Swiss law on publicly financed universities, the Swiss University Conference and its accreditation body the CRUS-OAQ is responsible for their recognition according to the Federal Higher Education Act, HEAd.^[1]

SINGAPORE INSTITUTE OF ENGINEERING TECHNOLOGISTS

The Singapore Institute of Engineering Technologists (SIET) being the Professional Body for Engineering Technologists is a multi-disciplined learned establishment registered in Singapore since 1980 under the Societies Act [Singapore Government Gazette Notification No: 3310].

<https://www.facebook.com/sietorgsg/>

SIET's Presidential Message for 35th Anniversary (1980 – 2015)

35 years ago I initiated the formation of SIET - a local professional body for Polytechnic and Vocational graduates in Singapore. It is for the '**Technologists**' and '**Technicians**' – the two key building blocks within the engineering profession.

SIET has weathered through the '**winds and rains**' or '**ups and downs**' during its 35 years of existence.

Today SIET has gone global with closed collaboration with various professional bodies:

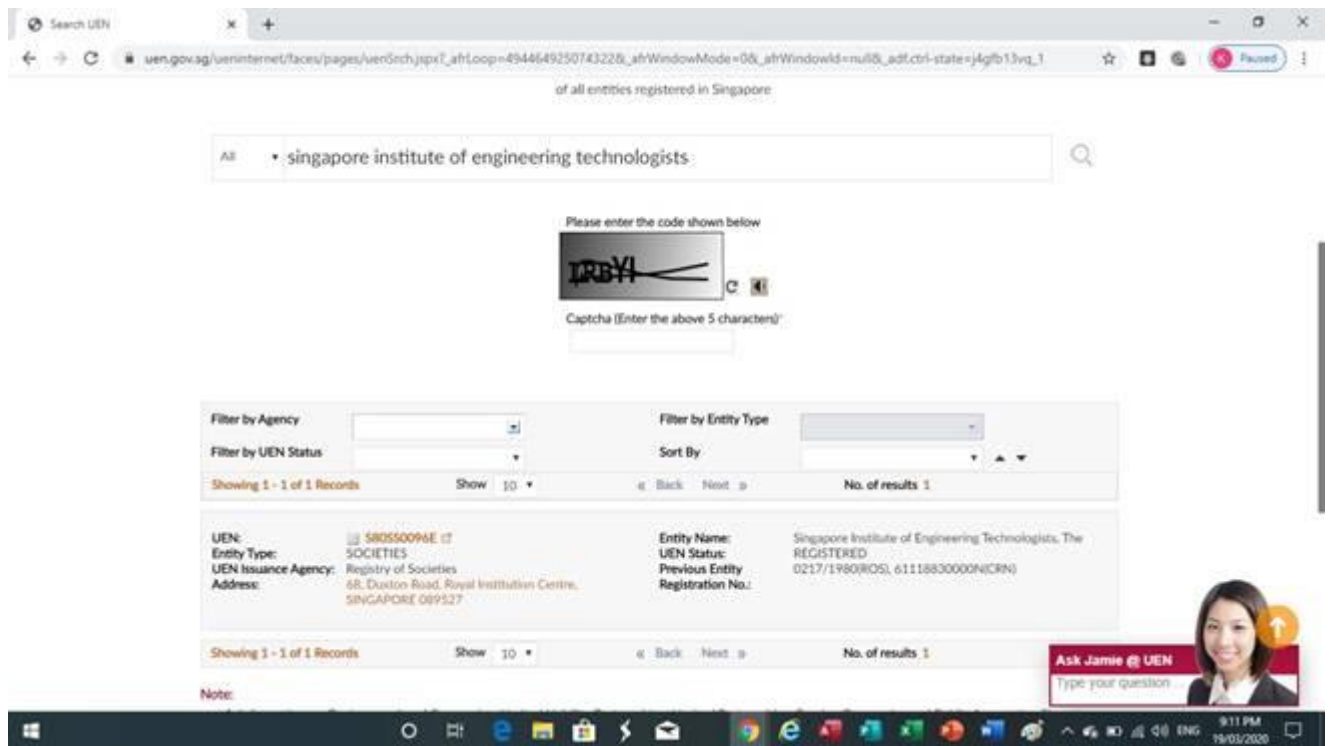

1. **United Kingdom** : The Society of Professional Engineers (SPE); The Institution of Engineering Designers (IED); Chartered Association of Building Engineers (CABE).
2. **South Africa** : Institute of Professional Engineering Technologists (IPET); Design, Technology and Management Society International (DTMSI).
3. **Italy** : Association of British Engineers in Italy (ABEI).
4. **Malaysia** : Technological Association of Malaysia (TAM).

SIET belongs to you - the Engineering/Technology graduates from Polytechnic and ITEs. Your support can make the difference – a stronger voice for the Engineering Profession : **Technicians → Technologists → Professional Engineers.**

Sam Man Keong (岑文强)

SIET's President (2014/2015)

Email: sammk1951@gmail.com

Some important milestones of SIET :

Year

1980

1981

1982

1984

1985

1986

Important Milestone

Establishment of SIET

SIET Yearbook launched (Last published in 1999)

SIET Quarterly Journals launched [Last issue : December 1999]

SIET – Advanced Diploma in Civil Engineering (incorporating CEI Part 2 syllabuses).

SIET Constitution was amended to enable the Institute to conduct its own **Professional Examinations**.

SIET was affiliated to the **Institute of Engineers & Technicians, UK** [Founded 1948; Incorporated 1967]

. Suitably qualified members can be registered as EngTech and IEng of UK.

[IET-UK later merged with IIE-UK; IIE-UK later merged with IEE-UK to form the present Institution of Engineering & Technology, UK.][website : www.theiet.org]

SIET adopted the **Society of Engineers, UK** as its own qualifying examinations:

[Established 1854; Incorporated 1910]

SOE Part 1 ➔ AMSIET

SOE Part 2 ➔ MSIET

SOE Part 3 ➔ FSIET

Members who have completed all the three part examinations and with the required professional experience can apply for registration as PEng(UK) with the Society of Professional Engineers, UK. [website : www.professionalengineers-uk.org]

SIET changed its name from ‘**Technicians**’ to ‘**Technologists**’.

SIET supported the **Master of Business Administration (MBA)** program awarded by the **Oklahoma City University, USA** in Singapore.

- 1988 SIET was elected as a full member of the **Singapore Professional Centre**.
SIET officially adopted The Engineering Council, UK Examinations as its alternate Qualifying Examinations:
EC Part 1 → MSIET
EC Part 2 → FSIET
- 1989 SIET introduced its first **Graduate Diploma in Management for Technology** (GDMT) programme.
Tuition classes leading to **UK - EC Part 2 Exam** began.
- 1990 Signed MOU with the **Technological Association of Malaysia** (TAM).
[website : www.tam.com.my]
- 1991 SIET was affiliated to the **Society of Engineers, UK**
[Founded 1854; Incorporated 1967]
[SOE-UK later merged with IIE-UK; IIE-UK later merged with IEE-UK to form the present Institution of Engineering & Technology, UK.][website : www.theiet.org]
- 1994 SIET – General Certificate in Engineering launched.
SIET – Diploma in Engineering Management launched.
- 1995 Signed MOU with the **Applied Science Technologists and Technicians of British Columbia**, Canada.
[website : www.asttbc.ca]
- Signed MOU with the **Institute of Professional Engineering Technologists, South Africa**.
[website : www.ipet.co.za]
- Signed MOU with the **Institution of Engineers, Australia**.
[website : www.engineersaustralia.org.au]
- 1997 Founder Member of the **World Federation of Technology Organizations** (WFTO).
[website : www.wfto.org]
Signed MOU with the **University of Southern Queensland**, Australia.
- Polytechnic Diploma holders in Engineering disciplines can upgrade themselves to ‘Professional Engineer’ level via **the Bachelor of Engineering programme by distance learning**.
[website : www.usq.edu.au]
- 1999 Signed MOU with the **University of Newcastle**, Australia.
- Polytechnic Diploma holders in Built Environment disciplines can upgrade themselves to ‘Fellow (FSIET)’ grade via **the Bachelor of Construction Management programme by distance learning**.
[website : www.newcastle.edu.au]
- 2005 Re-birth of SIET.**
- 2006 SIET Yearbook re-launched.
- 2008 **SIET – Accreditation Board** launched.
SIET – Approved Training Centre Scheme introduced.
- 2009 **SIET Certification Scheme** introduced:
AMSIET → Certified Engineering Associate (**CertEA**)*
MSIET → Certified Engineering Technologist (**CertET**)*
FSIET → Certified Technical Specialist (**CertTS**)*
[Must sit and pass the **SIET – Test of Professional Competence** unless exempted, e.g. **BCA-RE** can be registered as SIET – CertTS;
BCA – RTO can be registered as SIET – CertET without further exam.]

- 2010 **SIET – Professional Examinations:**
Level 1 – Associate Membership Exam (8 subjects)
[➔ SIET – Diploma in Engineering Technology]
Level 2 – Membership Exam (8 subjects)
[➔ SIET – Advanced Diploma in Engineering Technology]
Level 3 – Fellowship Exam (6 subjects)
[➔ SIET – Professional Graduate Diploma in Engineering Technology or Engineering Management]
[Formatted according to the **USA-NCEES : FE/PE Exams**; website : www.ncees.org]
- 2013 **MOUs with**
1. Institution of Engineering Designers, United Kingdom [**IED**]
2. SIPMM Academy, Singapore [*Diploma in **Engineering Management**; Advanced Diploma in **Engineering Management***]
- 2014 **MOUs with**
1. Association of British Engineers in Italy [**ABEI**]
2. Temasek Polytechnic, Singapore
3. **Institution of Aquaculture Singapore**

ST CLEMENTS UNIVERSITY MYANMAR COLLEGE

www.stclements.edu/myanmar

Our President-Dr David Le Cornu

St Clements University Myanmar College has been established to offer a wide range of university courses to the people of Myanmar as well as international students in both campus and online environment.

The courses offered are distance learning programs taught with local tutors helping to provide learning advice.

Places are available to non-Myanmar residents via distance learning.

The programs are Engineering, Information Technology , Management, Humanities , Technical and Vocational Teacher Education and several vocational education studies areas.

The engineering programs of St Clements University Myanmar College are delivered concurrently with engineering programs of IQY technical College ranging from Certificate to Master Diploma levels including Advanced Diploma and Professional Diplomas.

Professional Diplomas of IQY Technical College are equivalent to Bachelors degrees of St Clements University and Master Diplomas of IQY Technical College are equivalent to Masters degrees of St Clements University.

As Engineering diplomas of IQY Technical College are accredited by Singapore Institute of Engineering Technologists for Engineering Technologists registration with ASEAN federation of Engineering Organizations and they are also linked to Professional Engineers (UK) assessment system, the engineering graduates of St Clements University can also get the ASEAN and UK engineer registrations through IQY Technical College.

HISTORY

The St Clements Education Group was founded in 1995 when St Clements University was registered in the Turk and Caicos Islands as a university company offering non-traditional degree programs.

Mission Statement of St Clements Education Group

As far as practical education should be made easily accessible to the people through classroom campuses, satellite campuses, open learning and hybrid learning rather than forcing the students to leave their local community in order to obtain knowledge not available locally. Learning should be a lifelong experience and that higher education should be available to all who qualify, and not just school leavers.

An important part of the St Clements Education Group's philosophy flowing from its mission statement, is that it endeavors to take education to the people where there is need for it. This has led it opening schools in some very difficult parts of the world.

In 2012, St Clements University Myanmar College was firstly established as IQY Technical College of Highlight Computer Group in Myanmar to teach St Clements University Higher Education School Niue's Diploma/ Advanced Diploma and Bachelor Degree programs in Engineering, Information Technology and Management courses to the students of Myanmar at the price affordable to average working class people of Myanmar.

IQY Technical College of Highlight Computer Group (Myanmar) is an authorized training centre of Singapore Institute of Engineering Technologists for ASEAN Engineer, ASEAN Engineering Technologist and ASEAN Engineering Technician Registration. IQY Technical College of Highlight Computer Group is affiliated to St Clement's Technological University, International Institute of Science, Engineering & Management & The Institute of Professional Business & Technical Managers. IQY Technical College of Highlight Computer Group is the first Myanmar based institution that provides the international standard education to the students over the world by e-Learning.

From 2014 to 2017, IQY Technical College was operated as an affiliated college in Myanmar for St Clements University. In November 2017, St Clements University Myanmar College was established in the name of IQY St Clements Education Group which represents both St Clements University Myanmar College and IQY Technical College. All academic staff are taking part in both colleges in Myanmar.

St Clements University Myanmar College is not a registered educational institution in Myanmar, it has been developed to offer St Clements University's international programs to the people of Myanmar.

PROGRAMS

St Clements University Myanmar College offers a range of career oriented associate degrees, it is this focus in education for career development that St Clements University College specializes in.

ADMISSIONS

While catering for school leavers, St Clements University Myanmar College welcomes enquiries from mature adults wishing to develop their professional education to advance and develop their careers.

RECOGNITION

St Clements University Myanmar College works with a range of professional industry bodies to ensure the professional relevance of its degree programs

STC TECHNOLOGICAL UNIVERSITY

STC Technological University is a technological university which awards Master and Doctoral degrees in Applied Science, Applied Arts, Engineering and Education as well as providing the scholarships to the needy students of the developing countries.

It is a non profit international organization.

It only awards the degrees to the experienced researchers and the students who are awarded the scholarships. It does not offer any degree for commercial purpose.

STC Technological University academic council composes of academics from British West Indies & British Commonwealth Countries who nominate the candidates of research background to be awarded Masters & Doctoral degrees based on their practical research experiences & published works.

STC Technological University academic council also awards the scholarship Bachelor degrees in Engineering, Applied Science , Information Technology , Business Administration and Business Management through the affiliated colleges and schools led by International Academic Councillors.

For scholarship application & degree verification--Contact - stclementstu@gmail.com

Or

Apply through the affiliated schools & colleges

Approval of the scholarship will depend on consultation of the International Academic Councillor responsible for a particular country & e-mail interview with the applicant.

Only the successful candidates will be contacted by e-mail. The university has the right to make no contact to unsuccessful applicants.

International Councillors , Affiliated Organizations & awarded doctorate degree holders

Please contact stclementstu@gmail.com

STC University is an International Non Government Organisation established to provide the education needs of poor students in developing countries and it has the base in British West Indies Islands but it does not register with any government and does not operate as a profit organisation.

It assists the students by providing the education through the Government Registered Schools, Colleges worldwide but it does not issue any degree by charging any cost.

For this reason, it is not our business to take the concern on accreditation, diploma mills, government recognition, any issues raised by any government accreditation authorities , any government education departments, any governmental education laws and accreditation as well as any of degree mills issues.

STC Technological University wants the students to read our website and contact us only if they have satisfied with our information as neither STC Technological University nor our partners and affiliated educational institutions will answer the questions related to above issues because we are operating as EDUCATION REVOLUTIONISTS to equalise the education among riches and poors, First World and Third World.

We confer appropriate awards to academics who join our Worldwide Education Revolution by contributing appropriate academic research, operation , courses, training and resource developments.

ADDITIONAL INFORMATION

STC Technological University means St Kitts, Turk and Caicos Islands Technological University, operating as an International Educational Non Government Organisation since 2011 to assist the education needs especially in engineering which is essential to develop the communities of the students in West Indies, Caribbean , Africa, India, Pakistan, Myanmar and other developing countries.

As the main educational revolutionist activists founding members are engineering teachers from St Kitts, Turk and Caicos Islands who migrated there several years ago, we choose the name STC (St Kitts, Turk and Caicos).

Current CEO is Dr Peter Prasad originally from India.

Now STC Technological University has organised several colleges and schools which are either government registered or recognised by their regional professional organisations,

Based on the original awards, we provides the testimony in academic terms in accordance with MOUs.

Our network of affiliated colleges and schools include those in British West Indies, Africa, Asia, Middle East ,South Pacific and Latin America where there have been the most inequalities in education..

S TC Technological University Engineering Faculty is closely working with IQY Technical College Myanmar to deliver the engineering, engineering management and ICT engineering degree courses accredited by The Institution of Professional Engineers, Myanmar.

As we are educational revolutionist activists , if the instruments of the institutions which have done the most inequalities in education use the international media as the tool to undermine our efforts, we will also follow the same ways as utilized by them with the helps of our member activists worldwide.

IQY TECHNICAL UNIVERSITY TURKEY

Türkiye Direktörlüğü, Uzaktan Eğitim

SCPU Turkey & IQY Technical University Turkey

Professor Dr. Erdal Fırat was born in 1975. Their trainings are; Undergraduate: Mechanical Engineering, Graduate: Master of Business Administration, Doctorate: He has completed Political Science and Public Administration. Finally, Professor who completed his researches and studies in 2018. Erdal Fırat was entitled to become a professor in Political Science and Public Administration. He has 25 articles published in International Scientific Quality both in Turkish and English.

Dear Students,

We look forward to the days when a brand new era will begin in your life with us. Our aim is to make individuals who will contribute to the world by activating their talents and their potentials by equipping our students with a current and rich education program with our experience abroad, competent and dynamic teaching staff.

Our engineering faculty also aims to contribute to the country and to humanity in general in different fields.

We look forward to a good educational life that will help you achieve your dreams and goals.

Love and respect,

Professor Dr. Erdal Fırat

Tasks

The Institution of Professional Engineers Myanmar (IPEM) is an International Professional Association representing Myanmar Engineers and Engineering Friends of Myanmar. It is Member of International Federation of Engineering Education Societies-(IFEES -USA) and co-operates with Singapore Institute of Engineering Technologists and The Society of Professional Engineers International.

IPEM also administers Engineers Groups, Engineering Contractor Groups and Engineering Job Groups.

IPEM also delegates its education and training tasks to The Institution of Professional Engineers Myanmar Technological University.

By integrating academic and theory training and employment services, the graduates of The Institution of Professional Engineers Myanmar Technological University can secure the employment which is the aim of the pursuing the education and training.

<https://twitter.com/IPEMTU>

Teaching Programs

The teaching programs of IPEM Technological University are largely based on partnered institutions including IQY Technical College, STC Technological University ,St Clements University Myanmar College and SCPU School of Engineering Switzerland.

Instead of issuing own degrees, IPEM Technological University co-ordinates the diplomas and degrees issued by partnered institutions and link to professional practice and employment.

Legitimacy of operation and academic partners

IPEM Technological University is operating within the framework of National Education Strategic Plan (NESP) endorsed by Myanmar Parliament (Hluttaw) in the area of Alternative Education.

In 2019 and 2020 when IPEM Technological University was launched , there was no law in Myanmar to register private universities and tertiary education colleges.

The other self named private universities took the name of university to teach the degree courses of legitimate foreign universities and provide the facilitation of teaching tasks. Such practice is legal in Myanmar.

IPEM Technological university also does the same task as to other private universities by integrating, co-ordinating and representing the following legitimate foreign universities, colleges and professional associations.

- St Clements University and STC Technological University (Governmental Registered in British West Indies)
- St Clements Institute (Governmental Registered in Cambodia)
- SCPU School of Engineering (Ecole de Ingenieurs SCPU)
(Governmental Registered in Switzerland)
- IQY Technical College (Governmental Registered in Australia)
- Singapore Institute of Engineering Technologists (Governmental Registered in Singapore)
- The Institution of Professional Engineers Myanmar NSW Australia Chapter
(Governmental Registered in Australia)

THE SOCIETY OF PROFESSIONAL ENGINEERS (INTERNATIONAL)

www.thespeukinternational.org

<https://thespeukinternational.webs.com>

www.professionalengineers-ukinternational.blogspot.com

Background Information

The Society of Professional Engineers UK & International

(The Society of Professional Engineers -SPE) was established the United Kingdom in 1969, to promote the interests of skilled engineers in all the main branches of Engineering.

The main objective of the Society is to enhance the status of trained and experienced professional engineers in the absence in the UK of any legal protection for the title "**Engineer**". The founding members believed that this was necessary, as "Engineer" can be used by anyone in the UK, whether or not trained or experienced. This remains a priority for the Society.

The Society created and maintains a Register of Engineers who can demonstrate knowledge and competence in engineering. Applicants who meet the Society's criteria for membership may use the designation "**P.Eng**".

The Society of Professional Engineers traces its origins to the Society of Engineers, which was founded in 1854 as a learned society.^[1] On 27 October, 1969, a number of the Society of Engineers' Corporate members formed the Society of Professional Engineers. (The original Society of Engineers was integrated in 2005 into the Institution of Incorporated Engineers, itself merging with the Institution of Electrical Engineers in 2006 to form the Institution of Engineering and Technology, the biggest professional engineering body in Europe).

The Society is a Company Limited by Guarantee, registered in England, and its Memorandum and Articles of Association were approved by the UK Government's former Department of Trade and Industry, now Department for Business, Innovation and Skills. Its legal objects are:^[2]

- To promote the high standards of expertise and professionalism in the practice of engineering, for the benefit of those members of the general public who have need to avail themselves of the services of engineers.
- To promote the development of inventions and improvements in the practice of engineering and to disseminate information on matters affecting the practice of engineering so as to bring the results of research and considerations of good practice into the public domain.
- To promote improvements in the laws relating to matters of engineering practise so that members of the public may be better able to rely on the highest standards of advice and practise in those who purport to be professional engineers.

The Society keeps a register of persons who subscribe to the Society and who, in the eyes of the Society, 'have proved their competence and can be accurately described as Professional Engineers', awarding them the 'PEng MSPE' (member) or 'PEng FSPE' (fellow) designation according to qualifications and experience. Getting in is tough, but can prove rewarding if trying to excel in areas such as proving an invention.

In 2018 April, when The Society of Professional Engineers UK merged with Institution of Engineering and Technology, the international members of SPE-UK establish the Society of Professional Engineers UK & International and to keep the register of International Professional Engineers and their designations PEng,MSPE(UK &International) and PEng,MSPE(International)

The society becomes an online society and collaborates with other international engineering organisations which have the same objectives.

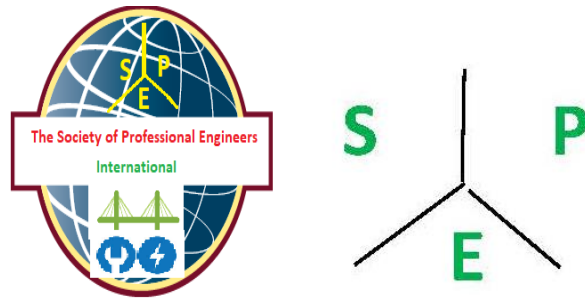

The Original Logo of The Society of Professional Engineers (UK) is shown below but **The Society of Professional Engineers UK & International will no longer use that logo and we are not a new form of The Society of Professional Engineers (UK) but a New International Professional Engineers Organization which does not link to The Society of Professional Engineers UK although we re-organize the former members of The Society of Professional Engineers UK to retain PEng titles.**

Due to our Life Members' wishes and UK is also included in International Community, on 8 February 2019, The Society of Professional Engineers (UK and International) changed its' name to The Society of Professional Engineers (UK and International). Our working documents will also be changed accordingly..

The Original Logo of The Society of Professional Engineers (UK) which is no longer used by The Society of Professional Engineers (International)

NEW LOGO OF THE SOCIETY OF PROFESSIONAL ENGINEERS (INTERNATIONAL)

The Society of Professional Engineers (International) acknowledges that our current website is sponsored by our international partner Pacific Engineering Ltd in Australia

The Society of Professional Engineers International integrates the following branches to provide the professional service for management and information technology.

- **Institute of Professional Business and Technical Managers (UK)**
- **International Institute of Science, Engineering and Management (Computer Science Branch)**
- **STC Technological University (Academic and Educational Branch)**

Bachelor of Law (BL) for Paralegal Professionals

Bachelor of Law (BL) Course outline of IQY Degree College

IQY ဒီဂရီကောလိပ်၏ဥပဒေဘွဲ့ (BL) သင်တန်း

ယခင်ကရှိခဲ့ဘူးသော BA.BL စသည့်ဘွဲ့များတွင် BL ဘွဲ့ကိုမြန်မာတက္ကသိုလ်ဥပဒေသင်ရိုးကိုထဲသွင်းကာ IQY ဒီဂရီကောလိပ်၏ဥပဒေဘွဲ့ (BL) သင်တန်းကို STC Technological University - Faculty of Law ၏နိုင်ငံတကာဥပဒေသင်တန်းအကြံဉာဏ်များရယူကာ The Society of Professional Executive ၏ Representative Lawyer (RL) ကိုရရှိရန်စီစဉ်ထားသည်။

ဤသင်တန်းပြီးဆုံးပြီးနောက်ဘွဲ့ရများသည် Para-legal ၏လုပ်ငန်းများကိုလုပ်ဆောင်နိုင်သည်။ ။

Paralegals သည်ရှေ့နေရဲလက်ထောက်အဖြစ်စဉ်းစားနိုင်ပါသည်။ ။

၎င်းတို့သည်ဥပဒေများနှင့်အမှုများကိုသုတေသနပြုခြင်းမှသည်တရား ဝ င်စာရွက်စာတမ်းများရေးဆွဲခြင်းနှင့်တရားရုံးတွင်အသုံးပြုရန်သက်သေအထောက်အထားများစုဆောင်းခြင်းအထိအရာရာကိုလုပ်ဆောင်သည်။ ၎င်းတို့သည်ရှေ့နေများအားအစီရင်ခံစာများရေးသားခြင်း၊

သက်သေခံပစ္စည်းများကိုပြသခြင်းနှင့်ဆန့်ကျင်သောရှေ့နေနှင့်အယူခံတင်ခြင်းများအားဖြင့်ရုံးတင်စစ်ဆေးခြင်းအတွက်အဆင်သင့်ဖြစ်စေရန်ကူညီသည်။

အမှုကိစ္စများကိုကျယ်ကျယ်ပြန့်ပြန့်လုပ်ဆောင်နေသောကြောင့်တရားသူကြီးများသည်တရားသူကြီးများအနေဖြင့် ဝ န်ဆောင်မှုခံယူသူများကိုငွေပေးချေနိုင်သည်။

သင်တန်းသည်အောက်ပါအရည်အချင်းများကိုထောက်ပံ့ပေးသည်။

၁။ တရားဝင်ကူးယူခြင်း၊

၂။ စာရွက်စာတမ်းစီမံခန့်ခွဲမှု၊

၃။ ငွေစုစာရင်းစီမံခန့်ခွဲမှု၊

၄။ တရားဝင်ငွေတောင်းခံ ခြင်း၊

၅။ ဥပဒေရေးရာ ပြဌာန်းသည့်ဥပဒေကိုအမှုအတွက်သတ်မှတ်ခြင်း၊

၆။ နယ်ပယ်နှင့်တရားရုံးအစီရင်ခံခြင်းဝန်ဆောင်မှုများပြုခြင်း၊

၇။ တရားဝင်ဘာသာပြန်ခြင်း ၊

၈။ ကိန်းဂဏန်းထည့်သွင်းဝန်ဆောင်မှုပြုခြင်း၊

၉။ အတွင်းရေးမှူးနှင့်ဥပဒေအထောက်အကူပြုစီးပွားရေးလုပ်ငန်းစဉ်ဝန်ဆောင်မှုများပေးခြင်း

၁၀။ အီလက်ထရောနစ်ဖိုင်တွဲခြင်း၊

After having completed this course, the graduates can do the tasks of Para-legal

Paralegals can be thought of as lawyer's assistants; they do everything from conducting research on laws and cases to drafting legal documents and compiling evidence to be used in court. They help lawyers get ready for trial by writing reports, demonstrating exhibits and filing appeals with the opposing counsel. Because of their extensive work on cases, paralegals are able to bill clients for their work, whereas legal assistants cannot.

The training provides the following competencies

1. Legal Transcription
2. Document management
3. Deposition summary
4. Legal billing
5. Legal coding
6. Scoping and court reporting services
7. Legal Translation

8. Data entry service
9. Secretarial and paralegal business process services
10. E-filing service

List of Subjects

Year 1

Each 2 credits x 8=16 Credits

- BL101 Myanmar Penal Code
- BL102 Defending the law case
- BL103 Criminal Procedure
- BL104 Anti Corruption Law
- BL105 Telecommunications Law
- BL106 Myanmar Civil Servant Code
- BL107 Public safety & Law

- BL108 Freedom of Judges and Lawyers

Year 2

Each 2 credits x 8=16 Credits

- BL201 Urban Safety
- L202 Industry Law

Form 310

Diploma in Legal Studies and Administration (2133456)

Objective of the course

When facing the legal cases, many people will not know how to systematically present their cases to the court. Although lawyers are hired, lawyer can only do the legal judgement on the information provided by the client.

The ethics of lawyer prohibits them to construct the case.

In many circumstances, the clients need the assistance provided by someone who can share their feelings , provide the assistance to them in construction of the case and provide the support to present the case to the lawyers and the court.

Diploma in Legal Studies and Administration, Advanced Diploma in Legal Studies and Administration and Bachelor of Business Administration (Legal System) are the courses designed for Para-Legal Professional to provide effective supports to the clients, effective support for the lawyers, legal administration and law office administration.

The courses are not designed for becoming a Licensed Lawyer. But they are designed for Legal Support, Para-Legal , Law Office Support and Legal Business Management.

Course Outline

The students can firstly attend Diploma in Legal Studies and Administration then continue to study Advanced Diploma in Legal Studies and Administration.

Form 311 Bachelor of Business Administration (Legal System)

Objective of the course

When facing the legal cases, many people will not know how to systematically present their cases to the court. Although lawyers are hired, lawyer can only do the legal judgement on the information provided by the client.

The ethics of lawyer prohibits them to construct the case.

In many circumstances, the clients need the assistance provided by someone who can share their feelings , provide the assistance to them in construction of the case and provide the support to present the case to the lawyers and the court.

Diploma in Legal Studies and Administration, Advanced Diploma in Legal Studies and Administration and Bachelor of Business Administration (Legal System) are the courses designed for Para-Legal Professional to provide effective supports to the clients, effective support for the lawyers, legal administration and law office administration.

The courses are not designed for becoming a Licensed Lawyer. But they are designed for Legal Support, Para-Legal , Law Office Support and Legal Business Management.

Course Outline

The students can firstly attend Diploma in Legal Studies and Administration then continue to study Advanced Diploma in Legal Studies and Administration.

Program Outline

Teaching of the postgraduate law degree by applying **online** and **campus** instruction learning processes .

Pre-requisite

- LLB Degree OR Degree and HGP
- Any graduate who wants to learn the Law without qualifying to practise as a Lawyer.

1. Executive LL.M in Human Rights Legal Practice/ Master Diploma of Law in Humanright

6 Subjects, Each 20 Credits Total 120 Credits

LLB 120 Credits= Total 240 Credits

LLM701 POSTGRADUATE LEGAL SKILLS

This module is compulsory for all taught Law Masters Programmes and is taught in the first semester. The aim of this module is to assist students in developing a number of core legal study skills needed during the LLM year (and thereafter). The module will commence with an Induction Day followed by seminars on subjects such as identifying and understanding sources of law, using electronic research resources, the role of private international and comparative law in international commercial law. Later in the semester there are seminars on plagiarism (how to avoid it and proper citation of sources), and writing and presentation skills.

LLM702 Securing human rights in development and conflict

In this module, the concepts explored in Securing Human Rights are used to review strategies employed by actors to secure human rights in the context of development and conflict situations, broadly understood.

Topics covered

Section A - Securing Human Rights in Development

- Human rights-based approaches to development
- How international development agencies work on human rights issues
- The particular challenges of protecting women's human rights in development
- The responsibilities of businesses in human rights protection
- The practice of securing human rights through domestic level capacity building and litigation on poverty-related issues.

Section B - Securing Human Rights in Conflict

- Issues facing human rights officers in field operations
- Safeguarding human rights defenders living in (or targets of) conflict
- The needs of refugees and IDPs
- Page 2 • The particular issues faced by women in conflict
- The difficulties of securing human rights in the transition to peace.

Learning outcomes

This module reflects on and builds skills for human rights practice and includes contributions from human rights practitioners, who will engage directly with the students in periodic online seminars and via videos.

Assessment

This module is assessed by one item of coursework (70% of the overall grade), and three E-tivities (30%).

LLM703 Topics in international human rights law

This module aims to develop a more advanced legal understanding around a broad range of crucially important aspects of human rights principles and practice.

Topics covered

Section A - Securing Social Justice through Human Rights Law

- explores how international law engages with key questions of social justice that go to the very heart of the discipline
- the principle of equality to economic, social and cultural rights
- the human rights of women
- business and human rights

Section B – Securing Human Rights during Armed Conflict

- How law seeks to protect human dignity during armed conflict and other public emergencies

- An introduction to International Humanitarian Law international law on refugees and internally displaced persons.

Assessment

Page | 3 This module is assessed by one item of coursework (70% of the overall grade), and three E-tivities (30%).

LLM704 Researching human rights: social science research methods

This module will introduce students to the theories and methods of qualitative social sciences research and how they can be applied to the study of human rights.

Topics covered

- Students will reflect on the theoretical context, key concepts and tools of social sciences research in order to articulate a critical perspective on human rights
- Students will learn how to identify a range of ethical issues and how to overcome them, understand how qualitative data is collected, analysed, interpreted, appreciate how quantitative and qualitative methods can be combined in interdisciplinary human rights research and articulate methodological steps for Human Rights Impact Assessments.

Learning outcomes

This module is particularly recommended for students interested to pursue further study at PhD level or to develop a career conducting human rights research.

Assessment This module is assessed by one item of coursework (70% of the overall grade), and three E-tivities (30%).

LLM705 Human rights and development

This module will equip students to understand the conceptual, legal and practice-based links of human rights with development. The module is

being taught by leading researchers in the field based at the Danish Institute for Human Rights.

Topics covered

- Page 4 why post-1945 human rights and development were forced apart and the gradual move back towards one another
- the human rights story in the context of decolonisation
 - the rise of international development aid
 - Sustainable Development Goals and to relevant programming tools
 - human rights indicators and the AAAQ (available, accessible, acceptable, and of good quality) framework.

Learning outcomes

This knowledge will be consolidated with an introduction to human rights-based approaches (HRBA) in development and their applicability, including the critical examination of the impact of applying HRBAs to development projects in different sectors.

Assessment

This module is assessed by one item of coursework (70% of the overall grade), and three E-tivities (30%).

LLM706 Indigenous peoples, minorities and human rights

This module will investigate key historical and contemporary human rights issues faced by indigenous peoples and ethnic, religious and linguistic minorities, that emanate from the relationship they have with the states in which they live, other communities and the international system.

Topics covered

- Colonial genocide and contemporary settler/indigenous relations
- Discrimination and accommodation of non-dominant ethnic, religious and linguistic minorities
- Struggles for equality and non-discrimination
- How indigenous peoples and minorities are protected by international human rights law
- Jurisprudence and the mechanisms for implementation.

Learning outcomes

The module will provide an opportunity to reflect how these rights have been constructed and framed, from the collective rights of indigenous peoples to the individual rights of 'persons belonging to minorities', and how they are protected and implemented in practice.

Assessment

This module is assessed by one item of coursework (70% of the overall grade), and three E-tivities (30%).

Self Studies

LLM707 Genocide, gross human rights violations and reconciliation

LLM708 Securing human rights in development and conflict

LLM709 Topics in international human rights law

LLM710 Researching human rights: social science research methods

LLM711 Human rights and development

2.Executive LL.M in International Trade Law/ Master Diploma of Law in International Trade Law

In **LLM701 POSTGRADUATE LEGAL SKILLS**, By adding the Human Rights Context and the subject **LLM701R POSTGRADUATE LEGAL SKILLS AND HUMAN RIGHTS**, to be delivered to award **LL.M in International Trade Law and Human Rights / Master Diploma of Law in International Trade Law and Human Rights**

6 Subjects, Each 20 Credits Total 120 Credits
LLB 120 Credits= Total 240 Credits

LLM701 POSTGRADUATE LEGAL SKILLS

This module is compulsory for all taught Law Masters Programmes and is taught in the first semester. The aim of this module is to assist students in developing a number of core legal study skills needed during the

LLM year (and thereafter). The module will commence with an Induction Day followed by seminars on subjects such as identifying and understanding sources of law, using electronic research resources, the role of private international and comparative law in international commercial law. Later in the semester there are seminars on plagiarism (how to avoid it and proper citation of sources), and writing and presentation skills.

LLM712 CARRIAGE OF GOODS BY SEA AND MARINE INSURANCE

This module will provide you with a comprehensive introduction to the law and business of the carriage of goods by sea and marine insurance and is key to the International Trade Law masters. It examines carriage documents and their interaction, the general principles of carriage of goods by sea, carriage contracts in the form of charter parties and those evidenced by bills of lading. The module also explores international attempts at harmonisation in the area of international carriage and examines the operation of international carriage regimes (conventions) such as The Hague, Hague-Visby Rules, the Hamburg Rules and the Rotterdam Rules. The module also looks at certain key issues in the law of marine insurance such as the formation of the contract of insurance, the insurable interest, the duty of utmost good faith, warranties, subrogation, contribution and the assignment of interests in an insured policy.

LLM713 LAW OF THE WTO

2. The World Trade Organisation (WTO) and the General Agreement on Tariffs and Trade (GATT), which it administers, are central to the international law of trade in goods and services. In studying this module, you will cover the legal rules and institutions of the WTO and the implementation of WTO obligations by members. You will pay particular attention to the institutions and governance of the WTO, its dispute settlement system, the principle of nondiscrimination in international trade under the GATT, and the ability of the WTO to cope with issues such as development, regionalism, and environmental protection. The module is particularly suitable for students taking the International Commercial Business Law and International Trade LLMS.

LLM714 COMMERCIALISATION OF INTELLECTUAL PROPERTY

This module is aimed at students who may have an interest in either Intellectual Property (IP) Law and/or Competition Law, as well as students more focused on Commercial Law. Students will be expected to have taken either or both Globalisation of IP or International Competition Law in the Autumn semester. If not, students will only be permitted to take the module with the consent of the module organiser. The relationship between intellectual property and competition law and policy is not only a very interesting and complex area of law, but also one of major importance to the commercial sector. Although both regimes protect innovation, their approaches and underlying principles are fundamentally different and need to be reconciled. Without a sound understanding of the interface between them, the rights holder runs the risk of infringing competition law by way of exploiting intellectual property rights. The module therefore focuses on the commercially most relevant intellectual property rights (patents, trademarks and copyrights). It provides the student with a sound understanding of the different intellectual property rights, the possible mechanisms of their commercialisation and the relevant restraints posed by competition law. The module critically assesses the most recent case law and decisional practice of the European Commission in the technology and pharmaceutical sectors (including the judgments in Microsoft and AstraZeneca, and the investigations against Samsung and Motorola) and discusses its impact on commercial practice.

LLM716 INTERNATIONAL COMMERCIAL ARBITRATION

International arbitration has become the established method of determining disputes between international commercial businesses, with new arbitral centres emerging and the law and practice of international commercial arbitration evolving rapidly. This module examines the legal theory and practice of international commercial arbitration. The module's focus is on understanding the nature and operation of the arbitral process in the context of international commercial relationships, as a means of resolving disputes that arise in international commercial transactions. In addition to providing an overview of the arbitral process, the module also focuses on key problems and issues that arise in arbitral practice, such as the interaction and application of the various relevant laws, and

the application and interpretation of the most important international legal instruments relevant to international commercial arbitration such as the New York Convention and the UNCITRAL Model Law. We also engage with national case law and undertake problem solving, and adopt a comparative approach.

LLM717 INTERNATIONAL COMMERCIAL LITIGATION

Page | 7

This module will provide an introduction to the issues which arise in the litigation of commercial disputes on an international basis. It will cover the treatment of jurisdiction and applicable law in commercial disputes by reference mainly to UK and European legal sources, and introduce some of the principal features of the common law legal systems (UK and USA), as they apply to commercial cases.

3.. Executive LL.M in International Commercial Law /Master Diploma of Law in International Commercial Law

In **LLM701 POSTGRADUATE LEGAL SKILLS**, By adding the Human Rights Context and the subject **LLM701R POSTGRADUATE LEGAL SKILLS AND HUMAN RIGHTS**, to be delivered to award **LL.M in International Commercial Law and Human Rights / Master Diploma of Law in International Commercial Law and Human Rights**

6 Subjects, Each 20 Credits Total 120 Credits

LLB 120 Credits= Total 240 Credits

LLM701 POSTGRADUATE LEGAL SKILLS

This module is compulsory for all taught Law Masters Programmes and is taught in the first semester. The aim of this module is to assist students in developing a number of core legal study skills needed during the LLM year (and thereafter). The module will commence with an Induction Day followed by seminars on subjects such as identifying and understanding sources of law, using electronic research resources, the role of private international and comparative law in international commercial law. Later in the semester there are seminars on plagiarism (how to avoid it and proper citation of sources), and writing and presentation skills.

LLM715 FOUNDATIONS OF INTERNATIONAL COMMERCIAL LAW

1. This 40 credit year-long module forms the grounding of (and is compulsory for) the International Commercial and Business Law and International Trade Law courses, and aims to introduce students to the essential foundational elements of international commercial law, not studied at undergraduate level. It aims to give students an understanding of what drives the law governing international commerce, the reasons for harmonisation of the law in the area, the institutions involved in the harmonisation process and the scope of that process. We examine the various ways in which harmonised instruments are created and the major problems and policy issues which have to be confronted. This module does not aim to teach the detailed substantive law relating to any specific aspect of international commercial law but instead seeks to provide an outline map that enables you to understand the scale and scope of transnational commercial law, while at the same time understanding how such law is developed and what and who drives its development. We will explore several areas of international commercial practice in the Spring semester in which attempts have been made to harmonise or codify the law in those areas. The process by which harmonisation / codification was attempted in each of these areas will be examined, as will some of the

substantive rules produced. We will conclude with an examination of what has caused some harmonisation efforts to be successful and others to fail and finally to consider ways in which the harmonisation process can be improved in general and the impact of regionalisation.

LLM716 INTERNATIONAL COMMERCIAL ARBITRATION

Page | 8

International arbitration has become the established method of determining disputes between international commercial businesses, with new arbitral centres emerging and the law and practice of international commercial arbitration evolving rapidly. This module examines the legal theory and practice of international commercial arbitration. The module's focus is on understanding the nature and operation of the arbitral process in the context of international commercial relationships, as a means of resolving disputes that arise in international commercial transactions. In addition to providing an overview of the arbitral process, the module also focuses on key problems and issues that arise in arbitral practice, such as the interaction and application of the various relevant laws, and the application and interpretation of the most important international legal instruments relevant to international commercial arbitration such as the New York Convention and the UNCITRAL Model Law. We also engage with national case law and undertake problem solving, and adopt a comparative approach.

LLM717 INTERNATIONAL COMMERCIAL LITIGATION

This module will provide an introduction to the issues which arise in the litigation of commercial disputes on an international basis. It will cover the treatment of jurisdiction and applicable law in commercial disputes by reference mainly to UK and European legal sources, and introduce some of the principal features of the common law legal systems (UK and USA), as they apply to commercial cases.

LLM718 CURRENT ISSUES IN INTELLECTUAL PROPERTY LAW

This module will provide you with an in-depth look at a number of current issues in intellectual property and information technology law. The relevant issues will change each year, but issues will be drawn from a wide variety of topics. You will have an opportunity to consider how intellectual property law is challenged by these current issues and to analyse its responses and proposed responses. You will be expected to have taken either Globalisation of Intellectual Property Law or Internet Law and Governance in the Autumn Semester, or have demonstrated knowledge in either area. For students not taking the ITIP LLM admission to the module will be at the discretion of the module organiser, and previous knowledge may be required. Classes will involve a mixture of group presentations and tutor-led class discussion, in a 50/50 time split. The class will be divided into groups, and each group will be asked to research and make a 15 minute presentation on one aspect of a defined topic or following a prescribed brief, relating to information technology and/or intellectual property. The presentations will be followed by feedback and further instruction from the module leader as necessary, and an open session for discussion.

LLM719 GLOBALISATION OF INTELLECTUAL PROPERTY LAW

You'll be provided with an introduction to intellectual property across the areas of trademarks, patents and copyright within the context globalisation and in light of the influence of new technologies. You'll be provided with an understanding of the pervasiveness and importance of IPRs in the modern day along with a theoretical knowledge and critical understanding of the legal principles and theory in relation to different IPRs. The geographical focus will be Global, with some more detailed consideration of UK, US and European law where appropriate.

3. Executive LL.M in International Business Law / Master Diploma of Law in International Business Law

In **LLM701 POSTGRADUATE LEGAL SKILLS**, By adding the Human Rights Context and the subject **LLM701R POSTGRADUATE LEGAL SKILLS AND HUMAN RIGHTS**, to be delivered to award **LL.M in International Business Law and Human Rights / Master Diploma of Law in International Business Law and Human Rights**

6 Subjects, Each 20 Credits Total 120 Credits
LLB 120 Credits= Total 240 Credits

LLM701 POSTGRADUATE LEGAL SKILLS

This module is compulsory for all taught Law Masters Programmes and is taught in the first semester. The aim of this module is to assist students in developing a number of core legal study skills needed during the LLM year (and thereafter). The module will commence with an Induction Day followed by seminars on subjects such as identifying and understanding sources of law, using electronic research resources, the role of private international and comparative law in international commercial law. Later in the semester there are seminars on plagiarism (how to avoid it and proper citation of sources), and writing and presentation skills.

LLM720 COMPARATIVE INTERNATIONAL SALES LAW

This module is key to the International Trade Law LLM and takes a critical and comparative look at the fundamental legal arrangements for the international sale of goods and the two competing international legal regimes, being the UN Convention on Contracts for the International Sale of Goods (CISG) and the English law on sale of goods (including the Sale of Goods Act 1979), all against the backdrop of international legal harmonisation. Today, international sales contracts are frequently governed by the CISG which is in force in more than 80 States from all parts of the world, among them both major industrial nations and developing states. It has been widely applied in international commercial transactions in the past thirty years with more than 3000 decisions by state courts and arbitral tribunals having been reported so far. It therefore seems fair to say that the CISG has in fact been one of the success stories in the field of the international unification of private law. Nevertheless, the United Kingdom, one of the oldest -and biggest- global trading nations, has not, yet, ratified the CISG. Also, in spite of the widespread adoption of the CISG, it remains the case that many international traders choose English law to govern their international sales contracts. We will examine select substantive provisions of these two "competing" legal regimes with a view to determine their essential differences and similarities. This examination may shed light on questions such as, why parties would choose English Sales Law rather than the CISG, and the implications of the "competition" between the two regimes for efforts aimed at the international harmonisation of law. Throughout the module, attention will be drawn to problems arising in international sales practice in order to develop an understanding of the commercial context in which the law of international sales operates.

LLM721 INTERNATIONAL INVESTMENT AND ARBITRATION LAW

Foreign direct investment refers to an investment made in a foreign jurisdiction to achieve a long term economic benefit. Almost 3000 treaties worldwide regulate foreign direct investment, and it is the interpretation of these treaties by arbitral tribunals, together with customary international law, which forms the basis of international investment law. This module examines the nature of international investment law and investor-State dispute resolution procedures, and looks at recent developments in the area. The module considers the policies underlying international investment law and how these impact upon the operation of international investment law in practice.

LLM722 LAW AND PRACTICE OF INTERNATIONAL COMMERCIAL PAYMENTS

With the growing volume of international trade worldwide, it is important to understand the methods by which international payments are made, and the involvement of banks and other third parties in these transactions. This module therefore examines the law and practice relating to the different payment methods and mechanisms that may be adopted by commercial parties to discharge the payment obligations of international buyers of goods and services. These include direct payment (through bank

platforms) by means of electronic funds transfer but the main focus of the module is on the most common terms of payment in international trade utilising the intervention of banks, that is, documentary collections and payment under documentary credits, with a detailed examination of the most recent version of the Uniform Customs and Practice for Documentary Credits (UCP 600). The module starts with a practical overview of the different payment mechanisms which are commonly used in international trade. These are analysed and compared, their fundamental characteristics identified and their advantages and disadvantages considered. We then go on to examine in detail the legal issues relating to documentary collections and payment under documentary credits. Though our main focus will be on English law, the importance of documentary collections and documentary credits to world trade has led to a need for international uniformity. Three texts of importance in this area are the Uniform Rules for Collections (URC 522), the Uniform Customs and Practice for Documentary Credits (UCP 600) and the Supplement to UCP 600 for Electronic Presentations (eUCP). These texts have been prepared by the International Chamber of Commerce (ICC) and govern various aspects of documentary collection and documentary credit practice. UCP 600 will be studied in detail. The module concludes with an examination of new payment methods such as the ICC's Bank Payment Obligations, and how electronic commerce has impacted on the use of documentary credits, and a review of current legal issues impacting international payment techniques.

You will discover the essentials of international trade law in your core, year-long Foundations of International Commercial Law module. Here you will gain an understanding of what drives the law governing international trade and commerce and, therefore, the reasons for harmonisation of the law in this area, the institutions involved in the harmonisation process, and the scope of that process. You will develop a firm understanding of international harmonisation efforts, discovering how this has resulted in a move away from national sovereignty and towards the reduction of legal differences. You will also develop an understanding of how international trade law subjects inter-relate as you will explore several areas in which attempts have been made to harmonise or codify the law, and consider how successful these efforts have been, and ways in which the process can be improved.

You will then have the chance to explore the specialist areas of international trade law that interest you most. You can choose from more than 15 optional modules including, for example, International Sales and Carriage Law, Law of the World Trade Organisation, International Commercial Arbitration and Litigation, and the Law of International Commercial Payment, International Banking and Finance, Globalisation of Intellectual Property Law, Information Technology Law, E-Commerce and Internet Law.

You will also take the compulsory non-credit bearing Postgraduate Legal Skills and Research module at the start of your course and write a dissertation on an area of specific interest to you during the summer months.

With the consent of the Course Director, you can also choose up to 40 credits from modules from other postgraduate courses offered by UEA, allowing you to personalise your course to your specific interests. For example, you might choose a module from one of UEA's International Relations, International Development, Business, or Economics courses.

LLM723COMPARATIVE COMPANY LAW

Globalisation, democratisation of information, Europeanisation and global competition have been partially responsible for a lot of fundamental changes in Company law and in the way Company law is intended around the world. This module will provide students with a sound understanding of these changes and of comparative Company Law in general. This module provides an understanding of the basic concepts, principles, rules and procedures of modern company law in a globalised and international context. It is structured so as to enable students to see their own system of company law in a new and more meaningful light, and to be able to form new views about its future development alongside with the future of International Company Law. It is designed to develop awareness of some of the aspects of Company Law, including 'minimum capital' and the legal standing of shareholders, directors and creditors around the world, and shall give an overview of the ways in which the various countries are developing their own Company Law within their boundaries, and how

that influences the development of company law outside their boundaries. The module aims to do so by a review of the harmonisation programme in Europe, an international comparative study, and an illustration of empirical findings that show new ways in which corporate vehicles can be developed to meet particular policy objectives.

LLM724 COMPARATIVE CORPORATE GOVERNANCE

Page | 11

This module examines the principal forms of corporate governance, control and regulation of the firm across countries. In particular, it introduces the key features of corporate governance and considers the legal relationship between directors, managers, and shareholders, including the contribution shareholder activism can make to improving corporate governance. The module also discusses the market for corporate control and the growing empirical research on comparative corporate governance. The overall purpose is to provide a theoretical and practical grasp of corporate governance, which can be useful for academic as well as professional work in this field.

4. Executive LL.M in Real Estate Law /Master Diploma of Law in Real Estate Law

In LLM701 POSTGRADUATE LEGAL SKILLS, By adding the Human Rights Context and the subject LLM701R POSTGRADUATE LEGAL SKILLS AND HUMAN RIGHTS, to be delivered to award LL.M Real Estate Law and Human Rights / Master Diploma of Law in Real Estate Law and Human Rights

6 Subjects, Each 20 Credits Total 120 Credits

LLB 120 Credits= Total 240 Credits

A Master of Laws (LL.M.) in Real Estate Law provides students with a solid foundation in real estate law, as well as in key areas such as real estate finance, residential and commercial leasing, land use, and affordable housing, as well as various areas such as environmental law, corporate law, tax, and related legal fields. The program can be completed in as few as two semesters, although students can also choose to take the Master on a part-time basis. The program is intended for attorneys looking to deepen their understanding of real estate law or to open up new career opportunities in real estate.

Classes include Real Estate Transactions, Real Estate Finance, Real Estate Drafting, Commercial Finance-Secured Transactions, Affordable Housing Law Practice & Policy, the Community Economic Development Clinic, Cooperatives and Condominiums, Environmental Law, Land Use Law, Land Use and Real Estate Development Skills

The areas of concentration include:

- Development
- Finance
- Sustainability
- Transactional

5. Executive LL.M in Court Practice and Strategic Litigation Management/Master Diploma of Law in Strategic Litigation Management .

In LLM701 POSTGRADUATE LEGAL SKILLS, By adding the Human Rights Context and the subject LLM701R POSTGRADUATE LEGAL SKILLS AND HUMAN RIGHTS, to be delivered to award LL.M in Court Practice and Strategic Litigation and Human Rights/ Master Diploma of Law in Court Practice and Strategic Litigation and Human Rights

This course is practical based course and work based studies and practice assessment are main component of the course

Subjects

LLM701 POSTGRADUATE LEGAL SKILLS

This module is compulsory for all taught Law Masters Programmes and is taught in the first semester. The aim of this module is to assist students in developing a number of core legal study skills needed during the LLM

year (and thereafter). The module will commence with an Induction Day followed by seminars on subjects such as identifying and understanding sources of law, using electronic research resources, the role of private international and comparative law in international commercial law. Later in the semester there are seminars on plagiarism (how to avoid it and proper citation of sources), and writing and presentation skills.

- Civil Litigation Practice
- Commercial and Corporate Law Practice
- Financial and Ethical Responsibilities
- Property Law Practice

LLM730 Civil Litigation Practice

Civil Litigation Practice is a compulsory subject for the Graduate Diploma in Legal Practice which covers the core skills area 'Civil Litigation Practice'. This is a practical based subject which will allow students to apply the necessary skills and knowledge required to conduct a civil litigation matter.

Students will draft litigious and non-litigious documents, participate in alternative dispute resolution and will observe the presentation of evidence in a court setting.

Learning outcomes

1. Review core documents and identify the merits of a case, dispute resolution alternative processes and the costs of litigation.
2. Apply requirements and processes used in civil litigation.
3. Draft litigious and non-litigious civil litigation documents.
4. Analyse the presentation of evidence and processes used in a court setting.

LLM731 Commercial and Corporate Law Practice

The aim of this subject is to equip students with the necessary skills and knowledge required to conduct commercial transactions, such as the purchase of a business, on behalf of a client and provide advice on revenue implications in such transactions, as well as financing options.

Learning outcomes

1. Define and analyse the operation of commercial law in practice, involving identification of client rights; the legal requirements for setting-up commercial structures and carrying-out commercial transactions.
2. Identify options with respect to business asset financing and revenue implications of commercial transactions and communicate them to a client in a way in which they could be understood and acted upon.
3. Practise the process of purchasing a business and acting in the interests of a client in such transactions.
4. Appraise the processes involved in the purchase of a business and the role of a solicitor in the preparation of documents necessary for the carrying into effect of the transaction.

LLM732 Financial and Ethical Responsibilities

The aim of this subject is to equip students with the skills and knowledge to maintain accurate trust and general account records and to act ethically, professionally and responsibly in dealings with clients, the courts, the community and other legal professionals. Students will engage in practical exercises including preparing trust and general accounting documents and will reflect on ethical responsibilities by addressing current ethical issues and disciplinary cases.

Learning outcomes

1. Identify financial responsibilities in dealing with client money and operating a trust and general account.
2. Review core documents and demonstrate compliance with costs disclosure regulation.
3. Apply ethical standards in relation to the Court, to the legal profession and to clients.
4. Demonstrate compliance with professional responsibilities including legal duties, obligations and professional conduct rules.

LLM733 Property Law Practice

The aim of this subject is to equip students with the necessary skills and knowledge required to convey, lease and mortgage real property and provide general advice on standard matters arising under local government, planning, environmental or other legislation relating to land use.

Learning outcomes

1. Demonstrate the process to transfer title by drafting appropriate instruments giving consideration to execution, stamping and registration.
2. Evaluate a lease in a form allowed by law and describe matters relating to the lessor and lessee's respective interests, execution, stamping and registration.
3. Advise on creating and releasing mortgages, reflecting the agreement between the grantor and grantee and protecting their respective interests.
4. Explain land use by identifying a planning scheme including other statutory provisions regulating the relevant use.

LLM734 General Law Practice

. This course will be delivered on the General Practice Stage 1 route of the Legal Practice Course and is designed to reflect the nature of legal and commercial property issues encountered and dealt with by general practice.

This course aims to facilitate the study of civil litigation and dispute resolution in the context of realistic "case study" scenarios and, where possible simulated clinical and experiential learning, to provide students with exposure to problem based learning and to develop students' oral communication, advocacy, fact management and problem solving skills. The module will be structured to follow the chronological steps involved in acting for a client on a contentious matter and will be designed to ensure that each student appreciates the options at various stages and acquires the skills necessary to achieve the client's objectives. Issues of professional practice will be dealt with throughout the module.

Following completion of this course, students should be able to demonstrate their knowledge and understanding of civil litigation and dispute resolution in the context of given factual scenarios, identifying both legal and professional conduct issues when they arise.

This course will also be the lead subject for the teaching and assessment of advocacy. The teaching of advocacy will be built in to the main subject and delivered in the context of the same case studies sometimes by way of discreet advocacy session and sometime as part of a broader session covering other aspects of procedure.

The course is delivered by a combination of large and small group sessions, and directed and independent learning.

The civil litigation and dispute resolution content will be assessed by examination. The skill of advocacy will be assessed separately.

Learning Outcome

On completion of the course, students should be able, in relation to transactions and matters which they undertake, to:

- understand the nature of civil litigation
- identify the critical steps in the process of litigation
- use the legal knowledge, skills, procedures and behaviours appropriate to each client and each transaction matter
- identify the client's goals and alternative means of achieving those goals, and deal appropriately with client care
- investigate and identify the relevant facts, research and identify the relevant legal issues, and advise the client on the legal consequences
- identify the overall nature of the transaction or matter, then plan and progress that transaction or matter through a series of steps and decisions including, where appropriate, drafting documentation
- recognise and act within the rules of professional conduct
- identify the client's reasonable expectations as to quality and timeliness of service.

In particular:

Element 1: Case analysis

Students should be able to analyse factual material, identify the legal context in which factual issues arise, relate the central legal and factual issues to each other and be able to:

1. identify the elements of selected causes of action and criminal charges
2. identify, analyse and, if necessary, research the propositions of fact going to the elements and be able to identify, analyse, secure and preserve evidence to support propositions of fact

3. identify, analyse and advise on the admissibility and relevance of evidence and assess the strengths and weaknesses of each side's case including, where appropriate, the opponent's evidence.

Element 2: Courses of action and funding

Students should be able to:

1. identify possible courses of action, demonstrate an awareness of the legal and non-legal consequences of selecting a course of action and advise the client on the attendant costs, benefits and risks
2. advise the client on the different ways of funding litigation, including the availability of public funding.

Element 3: Procedure

Students should be able to identify the steps and strategies that need to be taken in the preparation and conduct of litigation.

Element 4: Civil Litigation and Dispute Resolution

Students should be able to:

1. identify the appropriate forum for the resolution of the dispute, including appropriate methods of alternative dispute resolution
2. identify possible cost consequences of different outcomes, the effect of the different costs rules and the impact of the likely costs orders on the conduct of litigation
3. demonstrate an understanding of the Civil Procedure Rules, the overriding objective, and their application
4. demonstrate an understanding of the court's role in the litigation process, in particular the court's case management powers and duties
5. identify steps to be taken prior to commencement and be able to issue, serve and respond to claim forms
6. advise on interim applications, prepare and conduct applications to the master or district judge

7. understand the steps needed to prepare the case for trial and the procedure and evidential issues arising from expert witnesses, witnesses of fact and disclosure, and demonstrate an awareness of the basic elements of trial procedure

8. demonstrate an awareness of the mechanisms which are available to enforce and appeal a judgment

9. prepare the appropriate documentation and draft claim forms, particulars of claim, defences, application notices, orders and witness statements.

Advocacy

On completion of this area, students should, in relation to the skill of advocacy be able to:

1. understand the importance of preparation and the best way to undertake it
2. understand the basic skills in the presentation of cases before courts and tribunals
3. be able to formulate and present a coherent submission based upon facts, general principles and legal authority in a structured, concise and persuasive manner.

Element 1: Case analysis and preparation

Students should be able to:

1. identify and analyse the relevant facts, the legal context in which the factual issues arise, and how they relate to each other
2. summarise the strengths and weakness of the case from each party's perspective
3. prepare the legal framework of the case, and a simple narrative outline of the facts
4. prepare the submission as a series of propositions based on the evidence
5. identify, analyse and assess the purpose and tactics of examination, cross-examination and re-examination to adduce, rebut and clarify evidence.

Element 2: Oral presentations

Students should be able to:

1. identify, analyse and assess the specific communication skills and techniques employed by a presenting advocate
2. demonstrate an understanding of the ethics, etiquette and conventions of advocacy.

Assessment

The course has an oral assessment which is not marked anonymously

a Summative assessment and rationale for tasks

Page | 18 Summative assessment for civil litigation and dispute resolutions will be provided by an examination made up of a one half (1/2) hour closed book multiple choice paper plus a one and a half hour open book practical paper based on advance documents. The use of advance documents allows the subject team greater opportunity to test knowledge and application in the examination and allows greater use of realistic legal scenarios.

Summative assessment for advocacy will be by way of a live advocacy exercise. The students will be provided with advance documentation based on a realistic case scenario and will have to prepare and then conduct a live submission in front of a tutor.

b. Additional formative assessment – detail of process and rationale

Formative assessment will be provided by a combination of self test questions and multiple choice questions which students will complete through the module e-learning portal site and in small group sessions. Students will also have the opportunity to sit a mock open book examination paper.

Formative assessment on advocacy will be provided during small group sessions.

c. Indication of how students will get feedback and how this will support their learning

The multiple choice questions are undertaken in a small group session and feedback given during this session. Detailed answers to the self test questions will be available on the e-learning portal and feedback on the mock examination will be given via the e-learning portal and in a large group session.

Feedback on advocacy will be given on an ongoing individual basis and as an integral part of small group sessions.

Assessment Style

100 % Assignment . Online library . In addition to around
Fees \$ 5,000 fees should be charged to receive a master's degree .

.

In teaching process of law, it needs to set the Assignment as required by international trade and economics. Comparison between Myanmar Law and International law, international litigation , domestic legalisation, variation in

practice ,highlighting the difference and maintaining the human right standard values and harmony need to be emphasized.

Medico Legal Studies

LLM in Medico Legal Studies

This course trains the medical professionals and medical administrative persons to become Medico Legal Specialists.

Features of this course

Medical professionals must always make choices for the common good of the patients. However, healthcare scenarios and settings are complex, and taking the right decision while facing a situation may be difficult. It is essential for medical professionals to understand the legal implication of their actions and decisions for them and their patients, more so when the number of medico-legal cases is increasing rapidly. Likewise, legal professionals who aspire to handle cases involving medical laws find it difficult to understand the complex healthcare situations in view of their personal beliefs. Thus, it is important for both medical and legal professionals to understand medical laws objectively in order to practice successfully.

This course gives both the conceptual and practical application of medico-legal guidelines, medical ethics, landmark judgments and effective strategies to prevent and defend medical negligence litigation. The primary goal of this course is to help the learner think independently and become sensitive to the risks and issues that encompass the healthcare field.

LEARNING OUTCOME

After completing the course, medical professionals and administrators will be able to:

- Recognise medico-legal implications associated with day-to-day clinical practice
- Utilise the strategies to prevent and defend medical negligence litigation, effectively

After completing the course, lawyers will be able to:

- Counsel doctors and hospitals on various medico-legal situations
- Improve their legal practice related to medical negligence litigation in the Court

Entry Requirement

- MBBS
- BDS
- BVS
- B Pharm
- B Nursing
- Degree with work experience in Medical Administration

Subjects

LLM701 POSTGRADUATE LEGAL SKILLS (20 Credits)

LLM730 Civil Litigation Practice (20 Credits)

LLM735 Medico Legal Principle (10 Credits)
LLM736 Medico Legal Report Writing(5 Credits)
LLM737 Medical Tourism (5 credits)
LLM738 Medico Legal Issues (10 Credits)
LLM739 Triage and Medico Legal Issues (10 Credits)
LLM740 Medico Legal Ethical Issue Case Studies (10 Credits)
LLM741 General Medical Knowledge and Case Files (10 Credits)
LLM742 General Medical Knowledge (Continuation of LLM741)
LLM743 Medical Record System Project Task (10 Credits)
LLM744 Medical Data System (10 Credits)
LLM745 Forensic and Medico Legal Issues (10 Credits)

Total 120 Credits

LLM741 and LLM742 can be exempted for Licensed Medical Doctors but House Surgeons and the people who do not have Medical Doctor License must complete it.

၁၀။ အီလက်ထရောနစ်ဖိုင်တွဲခြင်း၊

After having completed this course, the graduates can do the tasks of Para-legal

Paralegals can be thought of as lawyer's assistants; they do everything from conducting research on laws and cases to drafting legal documents and compiling evidence to be used in court. They help lawyers get ready for trial by writing reports, demonstrating exhibits and filing appeals with the opposing counsel. Because of their extensive work on cases, paralegals are able to bill clients for their work, whereas legal assistants cannot.

The training provides the following competencies

1. Legal Transcription
2. Document management
3. Deposition summary
4. Legal billing
5. Legal coding
6. Scoping and court reporting services
7. Legal Translation

8. Data entry service
9. Secretarial and paralegal business process services
10. E-filing service

List of Subjects

Year 1

Each 2 credits x 8=16 Credits

- BL101 Myanmar Penal Code
- BL102 Defending the law case
- BL103 Criminal Procedure
- BL104 Anti Corruption Law
- BL105 Telecommunications Law
- BL106 Myanmar Civil Servant Code
- BL107 Public safety & Law

- BL108 Freedom of Judges and Lawyers

Year 2

Each 2 credits x 8=16 Credits

- BL201 Urban Safety
- L202 Industry Law
- BL203 Leave and Holiday Law
- BL204 Employment Contract
- BL204 Human Rights
- BL205 Payment Law
- BL206 Dispute Settlement Law
- BL207 Shop and Office Place Law
- BL208 Social Security Rule

Year 3

Each 3 credits x 8=24 Credits

BL301 Community & Healthcare Law

BL302 Citizenship Duty and Responsibility

BL303 Disaster Protection Community Approach

BL304 Welfare Tasks

BL305 Ethics

BL306 Human Trafficking Protection

BL307 Humanity Work and Protection of Violence

BL308 Police Studies

TOTAL 60 Credits

Diploma in Law Holders can join the course at Year 4 and they can do self studies in Year 1 to 3 Subjects

ဥပဒေဒီပလိုမာရထားသူများသည် Year

4 တွင်တက်ရောက်နိုင်ပြီးပထမနှစ်မှ တတိယနှစ်ဘာသာရပ်များတွင်ကိုယ်ပိုင်လေ့လာနိုင်သည်။

Year 4

Each 2 credits x 12=24 Credits

BL401 Insurance Law

BL402 Constitution 2008

BL403 Civil Litigation

BL403module_9

BL404A Customs Law

BL404B Export Import System

BL404B Rate of Customs Duties

BL405 Myanmar Revenue Law

BL406 Negotiation Act

BL407A Business Law

BL407A Business Law Part1 Competition Law
BL407B Business Law Part2 Consumer Protection Law
BL407C Competition Rules
BL408 Myanmar Human Rights Law
BL409 Equity and Trust
BL410 Administrative Law
BL411 Public Governance Law
BL412Evidence Law

Year 5

Each 3 credits x 12=36Credits

BL501 Civil Litigation Procedure
BL502 Constitutions of ASEAN
BL503 Comparative Law
BL504 Criminology
BL505 Intellectual Property Law
BL506 Land Law
BL506 Land Law of Myanmar
BL506 Land usage Permission Certificate
BL507 International Environment Law
BL508 Law of Tort
BL509 Military Law
BL510 Myanmar Maritime Law
BL510 Myanmar Ocean Law
BL510 UN Ocean Law
BL511 Law of Commercial Arbitration

YEAR (3)

Bachelor of Business (E-Business & Management)

Master of Management (Qualified 2) Course for Business/Accounting Degree Holders

(60 Points)

The learning system will be based on self study. Read the given references study materials and prepare the project work. You need to read the books in English.

The following units common to MBA course are to be studied. **(Each 5 Points)**

- Mgt 301 Electronics Business
- Mgt 302 Information Security
- Mgt 303 Management Information System
- Mgt 304 Electronics Commerce
- Mgt 305 Quantitative Methods for Management
- Mgt 306 Human Resources Management
- Mgt 307 Marketing Management
- Mgt 308 Artificial Intelligence

To assess ,you need to write the report of 10 pages each on what you have learnt in the unit.

YEAR (4)

Pathway 1- Diploma in Management +Q1/Q2 Stream (Each 10 Points)

- Mgt 401 Management Project
- Mgt 402 Electronics Business Project

For **Master of Management (Thesis)** (120 points after Bachelor degree), the candidates will need to write the thesis

Res 601 Research Methods (Non award unit)

PLUS

Pathway 2- Direct entry for IQY Professional Diploma in Management Qualifications Holders

Master of Management

(Course Work)

120 Points after Bachelors Degree

Total Points= 120 Points (Bachelors degree)+120 Points (Masters degree studies)

This program has been developed to fulfil the needs for those who are seeking a degree at the master's level and whom wish to specialize in a particular field of endeavour not usually available as a study option.

The main scope of this program is to emphasize the usual administrative aspects of management at the appropriate master's degree level. The Master of Management is today a professional degree and one of the most popular degree programs in the managerial or administrative fields of endeavour.

Our program has been designed to focus on major study areas of management and administration. The core courses forming the basis of the degree program equips the student with the usual fundamental aspects of management and administration applicable to the master's degree level.

The Graduate Diploma course section is common to all the majors and students must continue a masters study after completion of Graduate Diploma.

-

Graduate Diploma in Management (8 units) (Each 10 Points)

Mgt 501 Organizational Change Management

Mgt 502 Strategic Plans Development & Implementation

Mgt 503 Leadership in Organization

Mgt 504 Innovation & Continuous Improvement

Mgt 505 Risk Management

Mgt 506 Knowledge & Information Management

Mgt 507 Human Resources Management & Strategic Planning

Mgt 508 Employee Relations Management

-

Master Of Management (5 units)

All Graduate Diploma Subjects PLUS

Mgt 602 Project Management

Mgt 603 Financial Management

PLUS

Res 601 Research Methods (Non award unit)

Mgt 606 Masters of Management Project

Certificate in Financial Management

Financial Management is an important aspect in Business Management. This course does not train the students to become accountants but it trains the students to understand the financial statements of the company & to assess the financial situation of the company & will be able to perform the financial management.

By doing this course, the students will be able to

- Explain how accounting information assists in making decisions.
- Describe the components of the balance sheet.
- Analyze business transactions and relate them to changes in the balance sheet.
- Compare features of proprietorships, partnerships, and corporations
- Explain how income is measured using both the accrual basis and cash basis accounting methods.
- Use the concepts of recognition, matching, and cost recovery to record revenues and expenses.
- Prepare an income statement and show how it is related to the balance sheet.
- Prepare a statement of cash flows and show how it differs from an income statement.
- Use double-entry accounting.
- Analyze and journalize transactions.
- Post journal entries to the ledgers.
- Prepare and use a trial balance.
- Correct erroneous journal entries and describe how errors affect accounts.
- Use T-accounts to analyze accounting relationships.
- Explain how computers have transformed processing of accounting data
- Explain the concept of the statement of cash flows.
- Classify activities affecting cash as operating, investing, or financing activities.
- Use the direct method to measure cash flow.
- Determine cash flows from income statement and balance sheet accounts.
- Use the indirect method to calculate cash flows from operations.
- Relate depreciation to cash flows provided by operating activities.
- Reconcile net income to cash provided by operating activities.
- Adjust for gains and losses from fixed asset sales and debt extinguishments in the statement of cash flows.
- Use the T-account approach to prepare the statement of cash flows.

Completion of this course can be given the credit in Mgt 106 Financial Management subject in Diploma in Management Course.

IQY Technical College

Diploma in Tourism Management

Course 214467

List of subjects (3 creditsx 10= 30 credits)

- TMGT101 Tourism Management
- TMGT102 Tour Guiding
- TMGT103 Airline Ticketing
- TMGT104 Advertising in Tourism Management
- TMGT105 Cultural awareness in Hospitality and Tourism
- TMGT106 Tourist Safety and Security
- TMGT107 Code of Ethics of Tour Operators
- TMGT108 Global Code of Ethics for Tourism
- TMGT109 Dispute Resolution in Tourism Management
- TMGT110 Destination Attractiveness
- TMGT110 Example
- Work as Tour guide

YEAR (1)

Diploma of Management

Mgt 101 Management
Mgt 102 Performance Management
Mgt 103 Operation Management
Mgt 105 Quality Management
Mgt 106 Financial Management
Mgt 108 Computer Application in
Management

Mgt 107 Industrial Risk & Safety
Assessment
Mgt 104 Project Management

YEAR (2)

Advanced Diploma of Information Technology Management

Study the following units

ICT 103 Applied Programming

ICT 105 Systems Analysis and Programs

ICT 106 Software Engineering

ICT 202 Information Systems Principles and Networking

ICT 203 Information Systems, Analysis and Design

ICT 204 Advanced Programming

ICT 104 Program Projects

Mgt 501 Communication Skills & Management Leadership

Study BAE 508 Industrial Engineering & Industrial Management . You need to read the books in English.

(Focus on Mgt 501 Communication Skills & Mgt 501 Basic Management)

& do the exercises assigned by teacher.

YEAR (3)

Bachelor of Business (E-Business & Management)

The learning system will be based on self study. Read the given references study materials and prepare the project work. You need to read the books in English.

The following units common to MBA course are to be studied.

Mgt 301	Electronics Business
Mgt 302	Information Security
Mgt 303	Management Information System
Mgt 304	Electronics Commerce
Mgt 305	Quantitative Methods for Management
Mgt 306	Human Resources Management
Mgt 307	Marketing Management
Mgt 308	Artificial Intelligence

To assess Level 3, you need to write the report of 10 pages each on what you have learnt in the unit.

YEAR (4)

Mgt 401 Management Project

Mgt 402 Electronics Business Project

Two reports one for Management for (Mgt 303+Mgt 305+Mgt 306) & another for Electronics Business + Marketing (Mgt 301+Mgt 302+Mgt 304+Mgt 307+Mgt 308) subjects are required to be presented.

Each should contain 4000 to 6000 words of how you pursue the study in Management,, Marketing, Electronics Business subjects should be described.

The project should contain management plans, business plan & performance, task, job procedures IT integration etc of the topics of your choices.

Diploma of Management

The Diploma of Management is flexible and open, providing a choice of which common skills are required and by allowing skills to be included from basically any industry area.

Subject List - All 8 Subjects to be completed

BSBWOR501B Manage personal work priorities and professional development

BSBMGT502B Manage people performance

BSBMGT515A Manage operational plan

BSBCUS501B Manage quality customer service

BSBFIM501A Manage budgets and financial plans

BSBLED501A Develop a workplace learning environment

BSBOHS509A Ensure a safe workplace

BSBPMG510A Manage projects

DOCTOR OF BUSINESS ADMINISTRATION (DBA)

Course Outline

Diploma in Doctorate Studies (DDS) IQY Diploma in Doctorate Studies is an academic award consisting of Research Studies and Writing Thesis Dissertation at 360 Credit points in which 240 Credit points are allocated for Masters Degree level academic qualifications and / or comparable professional experiences.

Subjects

- Introduction to Doctoral Studies
- DBA701 Advanced Business Information Systems (10 Credits)
- DBA702 Business Aspect of Industry(10 Credits)
- DBA703 Business Laws(10 Credits)
- DBA704 Business Accounting(10 Credits)
- DBA705 Advanced Business Studies(10 Credits)
- DBA706 Introductory Research(10 Credits)
 - ED433 Scholarly Learning
 - ED434 Reflective Academic Practice
 - ED404 Educational Research
- MAE 601 Research Method (30 Points)
- DBA 801 Thesis (30 Points)+(Completion 10 Credits+ Approval 20 Credits)

St Clements University OR STC Technological University will confer the Doctoral Degree by collaboration with IQY Degree College

Form 311 Bachelor of Business Administration (Legal System)

Objective of the course

When facing the legal cases, many people will not know how to systematically present their cases to the court. Although lawyers are hired, lawyer can only do the legal judgement on the information provided by the client.

The ethics of lawyer prohibits them to construct the case.

In many circumstances, the clients need the assistance provided by someone who can share their feelings , provide the assistance to them in construction of the case and provide the support to present the case to the lawyers and the court.

Diploma in Legal Studies and Administration, Advanced Diploma in Legal Studies and Administration and Bachelor of Business Administration (Legal System) are the courses designed for Para-Legal Professional to provide effective supports to the clients, effective support for the lawyers, legal administration and law office administration.

The courses are not designed for becoming a Licensed Lawyer. But they are designed for Legal Support, Para-Legal , Law Office Support and Legal Business Management.

Course Outline

The students can firstly attend Diploma in Legal Studies and Administration then continue to study Advanced Diploma in Legal Studies and Administration.

Unicode

တရားရေးအမှုများနှင့်ရင်ဆိုင်ရသောအခါလူအများတို့သည်သူတို့၏အမှုများကိုတရားရုံးသို့မည်သို့စနစ်တကျတင်ဆက်ရမည်ကိုမသိရှိကြပါ။

ရှေ့နေများကိုငှားရမ်းထားသော်လည်းရှေ့နေသည်အမှုသည်မှပေးသောသတင်းအချက်အလက်များကိုသာတရားဥပဒေနှင့်အကြိုင်းဝင်မဝင်သုံးသပ်နိုင်သည်။

ရှေ့နေ၏ကျင့်ဝတ်သည်အမှုတည်ဆောက်ရန်တားမြစ်သည်။

အခြေအနေများစွာတွင်အမှုသည်များသည်သူတို့၏ခံစားချက်များကိုဝေမျှနိုင်သူ၊

အမှုတည်ဆောက်ခြင်းတွင်အကူအညီ ပေး၍ အမှုလိုက်ရှေ့နေများနှင့်

တရားရုံးသို့တင်ပြရန်ကူညီသူတစ် ဦး ဦး ထံမှပေးသောအကူအညီလိုအပ်သည်။

ဥပဒေရေးရာလေ့လာမှုနှင့်စီမံခန့်ခွဲမှုဒီပလိုမာ၊ဥပဒေရေးရာလေ့လာရေးနှင့်စီမံခန့်ခွဲမှုဒီပလိုမာနှင့်စီးပွားရေးစီမံခန့်ခွဲမှုဘွဲ့(ဥပဒေစနစ်) သည်အမှုသည်များအားထိရောက်သောအထောက်အပံ့များ၊ ရှေ့နေများ၊ ဥပဒေရေးရာအုပ်ချုပ်ရေးနှင့်ဥပဒေများအတွက်ထိရောက်သောပံ့ပိုးမှုများပေးရန် Para-Legal Professional အတွက်ရည်ရွယ်သည့်သင်တန်းများဖြစ်သည်။ ရုံးအုပ်ချုပ်ရေး။ လိုင်စင်ရရှေ့နေတစ်ယောက်ဖြစ်လာရန်ရည်ရွယ်ထားခြင်းမဟုတ်ပါ။ သို့သော်၎င်းတို့သည် Legal Support၊ Para-Legal၊ ဥပဒေရုံးအထောက်အပံ့နှင့်ဥပဒေရေးရာ စီးပွားရေးစီမံခန့်ခွဲမှုအတွက် ရည်ရွယ်သည်။

သင်တန်းအစီအစဉ်

ကျောင်းသားများသည်ပထမ ဦး ဆုံးဥပဒေရေးရာနှင့်အုပ်ချုပ်ရေးဒီပလိုမာသို့တက်ရောက်နိုင်ပြီး၊ နောက်မှဥပဒေသင်ကြားမှုနှင့်အုပ်ချုပ်ရေးတွင်အဆင့်မြင့်ဒီပလိုမာ/ စီးပွားရေးစီမံခန့်ခွဲမှုဘွဲ့ (ဥပဒေစနစ်) ကိုဆက်လက်လေ့လာနိုင်သည်။

ချီးမြှင့်မည့်လက်မှတ်

ဩစတြေးလျတွင်စီးပွားရေးနာမည်မှတ်ပုံတင်ထားပြီး၊နိုင်ငံတကာဥပဒေဥပဒေကျောင်းများ၏ အသင်းဝင်ဖြစ်သော IQY Technical Collegeနှင့် ဩစတြေးလျတွင်စီးပွားရေးနာမည် မှတ်ပုံတင်ထားပြီး UNESCO/ILO အသိအမှတ်ပြု International Association for Education and Vocational Guidance အသင်းဝင်ဖြစ်သော IQY Degree Collegeမှ စီးပွားရေးစီမံခန့်ခွဲမှု ဘွဲ့(ဥပဒေစနစ်) ချီးမြှင့်မည်။

ဥပဒေအသေးစိတ်လေ့လာလိုသူများအတွက်ဖိုးဖြူဥပဒေကျောင်းသို့ LLB/LLM တက်ရန် ရည် ညွှန် လိမ့်မည်။

Diploma in Legal Studies and Administration

List of Subjects

- ☐ LA101 Myanmar Penal Code
- ☐ LS102 Myanmar Code Criminal Procedure
- ☐ LS201A Defending in lawsuit ☐ LS201B Jurisprudence
- ☐ LS202 Anti Corruption Law

- ☐ LS203 Telecommunications Law
- ☐ LS204 Defamation International Standards
- ☐ Mgt 101 Management

Advanced Diploma in Legal Studies and Administration

List of Subjects

LS301 Public Safety Law

- ☐ LS 301 A Civil Servant Code
- ☐ L:S301B Community Security
- ☐ LS301C Ethics
- ☐ LS301D Freedom of Judges and Lawyers
- ☐ LS301E Human Trafficking
- ☐ LS301F Humanity Work/ Protection of Violence

IQY Technical College Masters Degree Programs

Myanmar Version _____ English Version List of EE/CE/ME/RE/ICT Subjects

IQY Technical College သည် STC Technological University/ St Clements University/ IPTEM Technological University များ၏ Masters Degree များကို Engineering, Information Technology, Management, Humanities, Education လေ့လာမှုများအတွက်လည်းသင်ပါသည်။

Masters Degree in Engineering ကိုအောက်ပါအစီအစဉ်၌ခွဲထားပါသည်။

1. Master of Engineering Practice
2. Master of Engineering Science
3. Master of Engineering

Master of Engineering Practice သည်အလုပ်အတွေ့ အကြုံရှိအင်ဂျင်နီယာများအတွက်ဖြစ်သည်။

IQY Year 4 Professional Diploma/BE ပြီးသူများအတွက်ဘွဲ့ ရအင်ဂျင်နီယာလေ့ကျင့်ရေး (Year 5/6

Graduate Engineer Training) တွင်ပါဝင်သောဘာသာများကိုလည်းထဲသွင်းထားသည်။

Electrical/Civil/Mechanical /Renewable Energy သာမကအခြားလိုင်းများအတွက်လည်းသင်သည်။

Course Work 8 Subjects (Graduate Diploma in Engineering Practice) + Project (BAE709) (For Master of Engineering Practice) ပြီးရန်လိုသည်။

Self study online program ဖြစ်ပြီး Assignment/ Project /Study Report/ Analysis/ Experience Presentation/ Design Works /Job Record Presentation စသည်တို့ ကိုအဓိကထားသည်။

Master of Engineering Practice ပြီးသူတို့သည် 5 Years Experience ရှိပါက The Society of Professional Engineers (UK and International) ၏ Member (MSPE-UK & International) နှင့်

Professional Engineer (UK and International) (PEng(UK and International)) လျှောက်နိုင်သည်။

Master of Engineering Practice is for experienced engineers . It will include the following subjects of 10 credits each

- BAE 701 Engineering Fundamental
- BAE 702 Engineering Management
- BAE 703 Leadership & Human Resources Management
- BAE 704 Risk Management & Industrial Safety

- BAE 705 Engineering Competency Development
- BAE 706 Engineering Report Writing
- BAE 707 Engineering Ethics
- BAE 708 Engineering Knowledge

Completion of the above subjects will earn Graduate Diploma in Engineering Practice (80 credits at Masters level +120 Credits for Bachelors degree level total 200 credits. Completion of two or more units can earn Graduate Certificate in Engineering.

The candidate will need to do BAE 709 Engineering Design Project of 40 credits to complete Master of Engineering Practice of 240 credits.

Master of Engineering Science/Master of Engineering

သည် ကျောင်းဆင်းစ BE များ၊အလုပ်အတွေ့ အကြုံမရှိသေးသောအင်ဂျင်နီယာများ အတွက် ဖြစ်သည်။ Electrical, Civil. Mechanical အတွက် 24 Subjects အခြားလိုင်းများအတွက်သင် ရိုးပါအတိုင်းပြီးစီးက Master of Engineering Science ရမည်။ထို့ နောက် Thesis (BAE709A) ပြီးစီးက Master of Engineering ရမည်။

Self study online program ဖြစ်ပြီးပျမ်းမျှတစ်လလျှင်တစ်ဘာသာနှုန်းဖြင့် 20 pages လေ့လာမှု၊ အစီရင်ခံစာကိုဘာသာတိုင်းအတွက်ရေးသားတင်ပြရမည်။

လေ့လာမှုအစီရင်ခံစာတွင်အောက်ပါတို့ ပါဝင်ရမည်။

- နေ့စွဲ၊လေ့လာသောအခန်းများ၊
- အဓိကအချက်များ၊အခြေခံသဘောတရား၊ဆက်စပ်မှုများ၊ညီမျှခြင်း၊ဖော်မြူလာ၊ပုံများ၊
- လက်တွေ့ သုံးခြင်းများ၊
- Powerpoint ပုံစံတင်ပြသောအနှစ်ချုပ်မှတ်စုများ။
- ကိုယ်ပိုင်ထင်မြင်ယူဆသုံးသပ်ချက်များ။

There are 24 units in Masters Program, the candidate will need to complete one unit per month so that the whole program will be completed within 24 months. (120 credits at Masters level and 120 Credits for Bachelors degree total 240 credits) to complete Master of Engineering Science, then submit the thesis to complete Master of Engineering.

Completion of the 12 subjects will earn Graduate Diploma in Engineering Practice (60 credits at Masters level +120 Credits for Bachelors degree level total 180 credits. Completion of two or more units can earn Graduate Certificate in Engineering.

ELECTRICAL

Part 1 Course Work

Any 24 subjects can be selected .

- (1) BAE 658-Real-time Systems
- (2) BAE 665-Fabrication Engineering at the Micro and Nanoscale
- (3) BAE 655-Wireless Communications.
- (3A) BAE 671-Satellite Communications and Navigation Systems
- (4) BAE 665-Embedded Digital Signal Processing Systems
- (5)BAE 657-Advanced Electromagnetics Applications
- (6)BAE 676-Failure Analysis
- (7)BAE 673-Frequency Stability
- (8) MEE11-High Speed A-D Converters
- (9) MEE2-Advanced Electric Power Engineering
- MEE9-Handbook of Power System Engineering-.pdf (11.57MB)
- (10)MEE12-Iterative Learning Control
- (11) BAE 664-Distributed Generation in Power System
- (12) BAE 675-Nanoelectronics
- (13) MEE1-Electric Distribution Systems
- (14) BAE 674-Intelligent Systems
- (15) MEE13-Non linear control

- (16) BAE 656-Advanced Digital Signal Processing and Noise Reduction**
- (17) BAE 677-Photovoltaic Systems**
- (18) BAE 660-Control Engineering**
- (19) BAE 659-Computer-aided Control Systems**
- (20) MEE7-EMI Filter Design**
- (21) BAE 661-Design of Electrical Services for Buildings**
- (22) BAE 670-Power System Engineering**
- (23) MEE10-High Performance Control of AC Drives**
- (24) BAE 667-Industrial Control System**
- (25) MEE14-System Engineering Concepts**
- (26) MEE6-Electronics+Power Electronics+Opto Electronics+Microwave+Radar**
- (27) BAE 666-Generating Electricity in a Carbon Constrained World**
- (28) BAE 669-Power Electronics and Instrumentation Engineering**
- (29) BAE 663-Advanced Digital Electronics**
- (30) MEE8-Flexible Power Transmission**
- (31) BAE 668-Photonics**
- (32) MEE3-Electric Power Transmission System Engineering**
- (33) BAE 672-Industrial& System Engineering**
- (34) MEE5-Electro Optics**
- (35) MEE4-Electricity Power Generation**
- (36) BAE 662-Design of Rotating Electrical Machines**

Part 2 Thesis

BAE709A Master of Engineering Thesis

CIVIL

Part 1 Course Work

All 24 subjects must be completed.

- (1) BAE 654-Theory & Design of Bridges
- (2)BAE 653-Surveying
- (3) BAE 652-Structural Analysis
- (4) BAE 649-Soil & Rock Mechanic
- (5)BAE 651-Strom & Waste Water
- (6) BAE 650-Steel Design.pdf
- (7) BAE 648-Railways Bridges
- (8)BAE 646 Highway Engineering
- (9) BAE 647-Piling Engineering
- (10) BAE 645-Geotechnics
- (11) BAE 642-Design of Reinforce Concrete
- (12) BAE 644-Estimating
- (13) BAE 643-Earthquake Resistant Structure
- (14) BAE 638-Construction Drawing
- (15)BAE 641-Construction Site Planning
- (16) BAE 640-Construction Mathematics.
- (17) BAE 639-Construction Materials
- (18) BAE 634-Building Construction
- (19) BAE 637-Composite Structure of Steel & Concrete
- (20) BAE 636-Building Technology Electrical Mechanical System
- (21) BAE 635-Building Survey
- (22) BAE 633-Bridge Construction
- (23) BAE 632-Architectural Design
- (24) BAE 631-Advanced Concrete Technology

Part 2 Thesis

BAE709A Master of Engineering Thesis

MECHANICAL

Part 1 Course Work

Any 24 subjects to be completed.

- (1) BAE 694-Control Engineering
- (2) BAE 682-Assembly Automation & Product Design
- (3) BAE 688-Manufacturing & Management.
- (4) BAE 692-Metallurgy
- (5) BAE 689A-Mechanical Design
- (6) BAE 686-Electro-Mechanical Manufacturing Process
- (7) BAE 683-Material engineering
- (8) BAE 693-Piping System
- (9) BAE 689B-Mechanical Design
- (10) BAE 625- Structural Engineering Mechanics
- (11) BAE 696-Specification Development
- (12) BAE 698-Thermal Engineering
- (13) BAE 699-Rotating Machinery Vibration
- (14) BAE 678A-Machine Design
- (15) BAE 684-Computerised Engine Control
- (16) BAE 678B-Machine Design
- (17) BAE 685-Electric Vehicle Technology
- (18) BAE 695-Random Vibration
- (19) BAE 691-Mechatronics
- (20) BAE 680-Quality Control
- (21) BAE 690-Mechanical Estimating
- (22) BAE 679- Materials Science
- (23) BAE 681- Welding Engineering.
- (24) BAE 679-Composite Materials & Joining Technology
- (25) BAE 687-Lasers in Manufacturing
- (26) BAE 697-Structural Foundation Design

Part 2 Thesis

BAE709A Master of Engineering Thesis

RENEWABLE ENERGY

Part 1 Course Work

The following 10 subjects to be completed.

Each 10 credits and total 100 credits to get Graduate Diploma

(1) RE511- Sustaining Earth Energy resources

(2) RE510- Water Conservation

(3) RE509- Applied Photovoltaics

(4) RE508- Solar Hydrogen Energy System

(5) RE507- Offshore Wind Turbines Part 1

RE507- Offshore Wind Turbines Part 2

(6) RE505- Green Building Design

(7) RE504- Engineering Solution for Sustainability

(8) RE503- Energy Management in Industrial and Commercial Facilities

(9) RE502- Biomass Gasification

(10) RE 501-Control of Solar Energy System

INFORMATION TECHNOLOGY

Part 1 Course Work

The following 8 subjects to be completed

Each 10 credits, total 80 credits to complete Graduate Diploma

(1) Programming (ICT 601)

(2) E-Commerce (ICT 602)

(3) Multimedia Systems (ICT 604)

(4) Database Systems (ICT 502)

(5) Applied Computing I (ICT 505)

(6) Applied Computing (ICT 506)

(7) Software Engineering (ICT 603).zip (90.71MB)

The following two Electrical (Computer) subjects must be completed

Each 5 credits. Two combined units 10 credits

(8) BAE658 Real Time Systems + BAE 674 Intelligent Systems

BAE 658-Real-time Systems

BAE 674-Intelligent Systems

Part 2 Thesis

BAE709B Master of Applied Science (Information Technology) Thesis

ENGLISH VERSION

(1) Master of Engineering Practice (240 credits, 120 credits for BE degree)

Master of Engineering Practice is for experienced engineers . It will include the following subjects of 10 credits each

- BAE 701 Engineering Fundamental
- BAE 702 Engineering Management
- BAE 703 Leadership & Human Resources Management
- BAE 704 Risk Management & Industrial Safety
- BAE 705 Engineering Competency Development
- BAE 706 Engineering Report Writing
- BAE 707 Engineering Ethics
- BAE 708 Engineering Knowledge

Completion of the above subjects will earn Graduate Diploma in Engineering Practice (80 credits at Masters level +120 Credits for Bachelors degree level total 200 credits. Completion of two or more units can earn Graduate Certificate in Engineering.

The candidate will need to do Engineering Design Project of 40 credits to complete Master of Engineering Practice of 240 credits

(2) Master of Engineering (240 credits, 120 credits for BE degree)

Masters of Engineering program is for recent graduates who have completed their BE degrees.

It will include the following 24 subjects of 5 credits each

The students will have to write 20 pages study progress report for each of the subjects outlined below.

The report needs to include

- Date and chapters that the candidate reads (The student will need to read the book
- at least 4 days per week)

- Highlight the key concepts, key formula, key theory & practical application concepts .
- Notes of the topic that you read.
- Key diagrams, formula, problem solutions
- Powerpoint slides to express the key topics

There are 24 units in Masters Program, the candidate will need to complete one unit per month so that the whole program will be completed within 24 months. (120 credits at Masters level and 120 Credits for Bachelors degree total 240 credits) to complete Master of Engineering Science, then submit the thesis to complete Master of Engineering.

Completion of the 12 subjects will earn Graduate Diploma in Engineering Practice (60 credits at Masters level +120 Credits for Bachelors degree level total 180 credits. Completion of two or more units can earn Graduate Certificate in Engineering.

LIST OF SUBJECTS

Please see above

Diploma in Doctorate Studies (DDS)

IQY Diploma in Doctorate Studies is an academic award consisting of Research Studies and Writing Thesis Dissertation at 360 Credit points in which 240 Credit points are allocated for Masters Degree level academic qualifications and / or comparable professional experiences.

The candidates who have completed MAE 601 Research Method (30 Points) and their thesis proposal are accepted will be awarded IQY Master Diploma in Research Studies (270 Credit Points).

The candidates who have completed MAE602 Thesis (30 Points) but have not submitted it to St Clements University will be awarded IQY Diploma in Doctorate Studies (300 Credit Points)

Only St Clements University will confer the Doctoral Degree while IQY Technical College will provide the facilitation and successful candidates will be issued with BAE801 Thesis Dissertation Assessment and Defence (60 Points) when the success is notified by St Clements University. In the case of failure to meet the quality of dissertation, St Clements University's Diploma in Doctorate Studies or other relevant award can be issued and Doctorate degree award fees will not be charged.

IQY Technical College will issue Letter of Congratulation for having been successful in PhD.

Doctoral Research Studies

IQY Master Diploma in Research Studies

Dissertation for Doctorate

MAE 601 Research Method (30 Points)

MAE602 Thesis (30 Points)

[http://www.filefactory.com/file/111r1k0ftawt/n/11.Research+Thesis_\(ICT_605\).zip](http://www.filefactory.com/file/111r1k0ftawt/n/11.Research+Thesis_(ICT_605).zip)

BAE801 Thesis Dissertation Assessment and Defence (60 Points)

MAE601 Research Method

This course guides the student, step by step, through the research process, from problem selection through writing up results. It provides all of the basics necessary to complete a research project in any discipline.

Outline. The following aspects are reflected in this course:

What is research?

Tools of research

The problem: the heart of the research process

Review of the related literature

Planning your research design

Writing the research proposal

Qualitative research

Historical research

Descriptive research

Experimental and causal - comparative designs

Statistical techniques for analyzing quantitative data

Technical details: style, format, and organization of the research report

Doctoral Research Proposal

Synopsis: Research students are expected to present a written research proposal within three months after commencement. The proposal is handed in to the study leader.

Assessors of this proposal are selected by the faculty for their understanding of the field and the research involved. The purpose of a research is to set out a plan for conducting the research and writing the dissertation within the available time. It should take account of the availability and guidance of the study leader.

The starting point for a research proposal is the topic, which is the field of interest in which the research is to be carried out. In introducing the topic, the proposal should clarify the field that it falls into and the specific part that field which the research will explore.

It should clarify why the topic is of interest and importance, and how the proposed research will contribute to the field of knowledge or profession. The proposal should clarify the research questions, ensuring that these are specific and answerable.

It is important to show how these questions relate to the topic are, and how they will advance the student's contribution. The proposal should detail the research to be carried out, and clarify the research methods, the timeframe and the reasons for selecting particular methods.

Where a period of literature review or research should precede any empirical research, this should be factored in as part of the research. It is important to estimate any periods of field research and to flag their duration and cost in your research proposal.

MAE 602 Thesis

Thesis Dissertation for Doctorate

Candidates need to complete a 60000-words dissertation (in Myanmar or English) and a 3000-words executive portfolio (in English).

This program requires the candidates to complete a thesis as part of the assessment for the Doctorate

Doing a thesis / dissertation means that instead of knowledge and information being presented and following a prescribed route for answering questions, candidates are thrust into an active role of managing an investigation into a topic area. This means researching and

discovering things for themselves.

They will have to set their own targets and parameters, pose their own central research questions and decide on the appropriate sources of information to support the research. It therefore requires the use of the higher-level cognitive skills of analysis, synthesis and evaluation. Candidates may choose an area of particular interest to them within the scope of course title.

BAE801 Thesis Dissertation Assessment and Defence (60 Points)

Doctoral dissertation

A dissertation is an individual effort and the candidate, academic tutor and the course professor will work together on constructing an approved topic (research question) and methodologies.

Dissertation Defence for doctorate

It is expected of Doctoral candidates to defend their thesis by means of a colloquium (academic discussion). The purpose of the meeting is for the candidates to convince a panel of experts in the field of the dissertation how well they have done in the conducting of their research study and the preparation of their dissertation

Candidates need to complete all course assessments with the results of Grade B+ or above.

Master of Management

This program has been developed to fulfill the needs for those who are seeking a degree at the master's level and whom wish to specialize in a particular field of endeavor not usually available as a study option.

The main scope of this program is to emphasize the usual administrative aspects of management at the appropriate master's degree level. The Master of Management is today a professional degree and one of the most popular degree programs in the managerial or administrative fields of endeavor.

Our program has been designed to focus on major study areas of management and administration. The core courses forming the basis of the degree program equips the student with the usual fundamental aspects of management and administration applicable to the master's degree level.

The Graduate Diploma course section is common to all the majors and students must continue a masters study after completion of Graduate Diploma.

[IQY Technical College Programs and Career](#)

[IQY Career Flow and Entry Table](#)

[IQY Courses and Award Systems and Recognition](#)

This table shows only Technical, Vocational, Engineering, Information Technology and Management studies.

All IQY Diploma programs require Year 12 or equivalent educational qualifications.

The students will need to do Year 9 to 12 studies in General Education before attending IQY Diploma Programs at Year 1

<http://www.highlightcomputer.com/y712lessons.htm>

In some cases, the relevant General Education programs can be concurrently undertaken together with IQY Diploma Programs so that **Certificate in Tertiary Preparation (Year 11+12)** can be embedded and the mode of the studies will be based on the needs of individual students. Generally after Year 12, Diploma (Year 1), Advanced Diploma (Year 2) and Bachelors Degree (Year 3 and 4) in line with international standards.

According to Myanmar Education system, to complete BE degree, including Year 11+12, total 6 Years will need to be spent to study by the students with Year 10 Qualifications.

The students of all IQY Advanced Diploma in Engineering (Electrical, Mechanical, Civil), Information Technology and Management Courses have also completed the following Skills Training Subjects (GE- General Engineering, IE-Intermediate Engineering) which are mapped to Australian Training Packages

IQY Advanced Diploma	Skills Training Subjects
Electrical Engineering	Advanced Diploma in Electrical Engineering Skills Training (GE+IE) Units Link
Civil Engineering	Advanced Diploma in Civil Engineering Skills Training (GE+IE) Units Link
Mechanical Engineering	Advanced Diploma in Mechanical Engineering Skills Training (GE+IE) Units Link

For all other courses, specific advice will be provided individually.

BACHELOR OF ARTS (ENGLISH)

B.A. English is a 3-year undergraduate course dealing with the various nuances of English as a language, both written and spoken. It is excellent preparation for careers in teaching, media, and advertising, writing, and publishing.

Employment Roles	Content Writer, Executive Assistant, HR Manager, Primary School Teacher, High School Teacher, Operations Team Leader, Copywriter, Marketing Manager, Editor, Graphic Designer, Technical Writer etc.
-------------------------	--

Why Study BA English?

Each student admitted into the BA English program has their own personal goals and reasons to pursue the program. Some of the reasons why this program should be considered are stated below.

- Multiple career opportunities: One of the major benefits of studying BA in English is the diverse career opportunities that are available. Students can choose to work or study in their line of study or in a completely different field. Graduates from this program are in demand, especially in media and publishing houses, in both the private and government sectors

What is BA English?

The program aims to introduce a wide range of Literatures in English. In the primary phase, Bachelor of Arts course has the aim to offer the opportunity for students to be able to respond and read novels of the large spectrum, play and create poetry with associated genres. At a secondary level, the students will be exposed to wider socio-cultural and political issues in relation to contemporary English. This program in English will be serving as an excellent foundation for students who want to do a very deep study.

The B.A. English course provides a strong background in the study of English. This particular program stresses upon:

- Diversity
- Literary Analysis
- Written and oral communication skills
- Critical thinking

through a rigorous curriculum of literature, composition, language and linguistics, and communication studies. Students interested in creative writing may choose this profession.

BA English Syllabus

The semester-wise syllabus of BA English are mentioned below:

Tick BSc Maths/Physics/Chemistry OR BSc(Maths) or BSc(Physics) or BSc(Physics/Chemistry)

English

Traditional subjects Mathematics, Physics, Chemistry can be studied with Vocational Subjects to get BSc (Maths/Physics/Chemistry) degrees.

The students will firstly study the Diploma in Intermediate Science then will continue BSc course.

The fees for direct online study with IQY Degree College is Kyats 100000.

Other education groups and schools can collaborate with IQY Degree College to teach the program.

Additional fees can be charged by those groups.

The students who want to attend Bachelor of Education Course can also attend BSc course at no extra fees.

Bachelor of Science (Maths/Physics/Chemistry) with Vocational Studies (49980)

The Bachelor of Science gives students a solid foundation in scientific knowledge and practice while allowing them to specialise in an area of interest.

Students study the Bachelor of Science to broaden their depth of knowledge, before specialising in a specific field.

Studying science provides an education for life. Training in multiple fields of science gives students transferable skills – a foundation of logical, analytical, critical thinking, teamwork and communication.

There are several disciplines studies in Science. At IQY Degree College, they are organized under the title of Work Studies to provide both theory and practical application of vocational studies.

Bachelor of Science (Mathematics) with Vocational Studies (49982)

The discipline of mathematics at IQY Degree College is divided into several areas of study: Pure Mathematics, Applied Mathematics and Statistics.

Pure Mathematics is the study of the essential structures of mathematics. Work by pure mathematicians underpins most of the technological advances of this century. Pure Mathematics is concerned with problems and techniques which transcend specific applications. Research, focusing on the development of existing theories or the creation of new ones, may be driven by applications or by the internal demands of the discipline. Pure Mathematics courses provide the insights and understanding required by those using mathematics, leading to mastery of the fundamental processes of mathematical science and the capacity for innovative applications in any area.

Applied Mathematics concerns the development of mathematics and models for understanding scientific phenomena, for the solution of technical and industrial problems, and for use in the social, economic and management sciences. Courses are designed to provide basic mathematical and computational skills needed for a wide range of applications, to develop the capability to construct, analyse and interpret mathematical models, and to encourage enthusiasm for the role of the mathematician in a variety of contexts.

Statistics is the science and art of using factual material for modelling and inference. Its mathematical foundations are in the theory of probability and it deals with how to estimate and make decisions using knowledge which is uncertain or observational material which is subject to error. There is a rich interplay of ideas between the theory of statistics and fields such as engineering, medicine and biological and behavioural sciences where statistical problems constantly arise.

Bachelor of Science (Physics Chemistry) with Vocational Studies (49983)

This combination discipline degree will provide the following knowledge.

Physics

Physics is the study of the laws of nature that govern the behaviour of the universe, from the smallest sub-atomic particles to the universe itself. It applies these laws to the solution of practical and theoretical problems and to the development of new technologies.

Chemistry

The Chemistry stream is designed for students who wish to specialise in the chemical sciences and undertake the maximum number of Chemistry courses. It is designed to provide education and training in all contemporary fields of chemistry, and should be selected by students who wish to devote the majority of their studies at Stage III to Chemistry.

This course aims to provide the teacher education theories and practical applications in school and vocational education classes.

Principles of teaching , learning , training and assessment are combined with instruction design methodologies and knowledge related to learning environment.

Modern learning technologies and technology in classroom contexts are added..

Teachers who are working in voluntary schools can be provided with necessary teaching and training knowledge to work as qualified teachers by attending this course.

Pre-requisite

Degree Holders	Non Degree Holders
<ul style="list-style-type: none">• Bachelor Degree & Teaching Experiences	<ul style="list-style-type: none">• Completion of Year 11+12 (Certificate in General & Vocational Education Level 4) PLUS• Completion of Diploma level qualification in Engineering, IT & Management courses of IQY Technical College & other vocational colleges/schools

Course structure

This course integrates Diploma in Teaching Practice , Teaching Practicum and Advanced study in Education to achieve 120 credit points required to get Professional Diploma in School & Vocational Education .awarded by IQY Technical College (Authorized Training Centre of Singapore Institute of Engineering Technologists, Member of ASEAN Federation of Engineering Organizations)

The universities (STC Technological University & St Clements University) affiliated to IQY Technical College award Bachelor of Education (School & Vocational Education) to holders of Professional Diploma in School & Vocational Education.

Year 1/2

Diploma in Teaching Practice (60 credits)

jointly taught by (STC Technological University/ St Clements University)

Singapore Institute of Engineering Technologists/ IQY Technical College)

Year 3 / 4

Professional Diploma in School & Vocational Education

60 credits in the following subjects

ED437 Teaching Skills (5 Credits)

ED438 Assessment & Feedback (5 Credits)

ED439 Fostering Students' Learning (5 Credits)

ED 402A Educational Leadership & Change Management in School Education

(10 Credits)

ED407A Learning Environment in School Education (10 Credits)

ED440 Science Teaching (5 Credits)

ED441 Mathematics Teaching (5 Credits)

ED442 Technology Teaching (5 Credits)

ED443 TVET Teaching (10 Credits)

GROUP (1) CURRICULUM SUBJECTS

ED437 Teaching Skills (5 Credit Points)

- **ED431-Critical Thinking**

www.highlightcomputer.com/ED431CriticalThinking.pptx

VIDEOS

<https://youtu.be/Cekuc04E2xM>

Assessment

Assignment

Refer your textbooks, select one chapter and write the followings

- the main purpose, the key question, the most important information, the main references or conclusions, the key idea, the main assumptions of the material, the implications, and the main point of view.
- Prepare one assessment requiring critical thinking by the students.
- Do internet research by using www.google.com and type Socratic questioning then submit the examples of Socratic questions.

- **ED431-Reflection& Evaluation (Day 2)**

www.highlightcomputer.com/ED431ReflectionEvaluation.pptx

VIDEO

https://youtu.be/Ezre_83QIfE

Assessment

Assignment

Write the lesson plan on how will you provide Problem Based Learning & Self Reflection for a group of students

Write one significant event in your class teaching and write down your own plan how to improve your teaching.

- **ED431-Teaching and learning strategies (Day 3)**

www.highlightcomputer.com/ED431Teachinglearningstrategies.pptx

VIDEO

https://youtu.be/gMJi_3CSDq0

Assessment

Assignment

- Outline 3 teaching strategies that you prefer to apply in your teaching and discuss the good points and bad points. Also write how to improve them for best teaching and learning

ED438 Assessment & Feedback (5 Credit Points)

ED432A-assessment principles+ED432B-constructive feedback+

Lessons

Down load and study the following power point slides and answer the questions

www.highlightcomputer.com/ED432ABC.pptx

VIDEO

<https://youtu.be/CIi1k4NECoQ>

Assessment

Assignment

ED432A-assessment principles

Provide three assessment evidences that you use in teaching.

ED432B-constructive feedback

Provide three assessment feedbacks that you provide to your students

ED439 Fostering Students' Learning (5 Credit Points)

ED433H-consequences for student learning+ED433I-improving students learning+ED433J-different ways of thinking about university teaching+ED433K-identify problems and issues

Lessons

Down load and study the following power point slides and answer the questions

www.highlightcomputer.com/ED433HIJK.pptx

VIDEO

<https://youtu.be/F2gUlg4qBho>

Assessment

Assignment

Provide one task that you want your students to do critical thinking.

Write one learning outcome of the lesson that you are teaching & provide your plan how to teach, facilitate & assess the students to reach that outcome

ED434H-reflect critically on and evaluate own teaching+ ED434J-reflecting on learning from formal learning programs

Lessons

Down load and study the following power point slides and answer the questions

www.highlightcomputer.com/ED434HIJK.pptx

VIDEO

<https://youtu.be/wIbNCUXxIMI>

Assessment

Assignment

Write a plan how will you maximize the effectiveness of teaching & learning for your students

ED 402A Educational Leadership & Change Management for School Education (10 CP)

Video

· Day 10 Session 2-Change Management

<http://youtu.be/ynkcUcKr8tQ>

· Powerpoint+Audio

POWER POINT

AUDIO

<http://yourlisten.com/Kyaw.Naing/day-10-session-1>

ASSIGNMENT

Based on your classroom experience, write the factors important for class room environment.

Project

Prepare a project plan how to develop a school that will provides the education for needy students.

GROUP (2) TEACHING PRACTICE SUBJECTS

ED440Science Teaching (5 credits)

Review the Science Teaching Videos in the following links

<http://www.highlightcomputer.com/y712lessons.htm#A>

<http://www.highlightcomputer.com/y910.htm>

Then develop your own teaching plan which combines e-Learning strategies. Your plan should contain

- Written notes to be given to students
- The lessons to be explained to the students
- Exercises to be given to the students
- Time frame and detailed teaching plan

ED441 Mathematics Teaching (5 credits)

Review the Mathematics Teaching Videos in the following links

<http://www.highlightcomputer.com/y712lessons.htm#A>

<http://www.highlightcomputer.com/y910.htm>

Then develop your own teaching plan which combines e-Learning strategies. Your plan should contain

- Written notes to be given to students
- The lessons to be explained to the students
- Exercises to be given to the students
- Time frame and detailed teaching plan

ED442 Technology Teaching (5 credits)

Review the Technology Teaching Videos in the following links

<http://www.highlightcomputer.com/y712lessons.htm#A>

<http://www.highlightcomputer.com/y910.htm>

Then develop your own teaching plan which combines e-Learning strategies. Your plan should contain

- Written notes to be given to students
- The lessons to be explained to the students
- Exercises to be given to the students
- Time frame and detailed teaching plan

GROUP (3) TVET TEACHING SUBJECTS

ED443 TVET Teaching (10 Credits)

Lesson Video

NNER Conference Presentation by Myanmar Vocational Training Collaboration Youtube

<https://youtu.be/2ZYnsJWSZU4>

Preparation for Myanmar Engineering Council Accreditation Course Detailed Course Teaching Plans & Summary of Notes --- Prepared by Dr Kyaw Naing

This teaching plan and summary of notes are developed in connection with the DVD containing the electronic textbooks, readers and accreditation and evaluation work samples that are to be distributed to the participants. This plan provides the summary of the course notes and study guide for the training.

Session	Topic	Page
Day 1 Session 3	Writing the objectives of the course	2
Day 2 Session 2	Outcome based education + Competency based education & training for outcome	3
Day 3 Session 1	Requirement of Myanmar Engineering Council & how to design the curriculum to address the learning outcomes	6
Day 4 Session 1+2	Programme structure, course contents, delivery and assessment methods+ Adult and Vocational Education & Training	18
Day 5 Session 1+2	Approach to various learning modes in Vocational Education and Training +Preparing vocational teaching portfolios	37
Day 5 Session 3	Learning outcome & teaching & training	38
Day 6 Session 1& 3	Developing the assessment strategies in Vocational Education and Training	38
Day 7 Session 2	Integration of Learning Technology in Teaching & Learning Part 1	41
Day 7 Session 3	E-Learning Platform Example	52
Day 8 Session 1	Technology in Classroom	53
Day 8 Session 2	Integration of Learning Technology in Teaching & Learning Part 2	71
Day 9 Session 1 +2	Preparing the documents to comply with Myanmar Engineering Council Requirement	72
Day 10 Session 1	Learning Environment	78
Day 10 Session 2	Change Management	90
Additional	Further Training	101

Day 1 Session 3

Highlighting [9.2.1 General Information \(MEng C\)](#)

9.2.2 Programme Objectives

& writing the objectives of the course by Dr Kyaw Naing

Step 1-Provide General Outline

Reference Reading (Education theory)

Stage 1 Competencies of PEng, Eng Technologists & Eng Associates

Engineering job competencies

<http://www.highlightcomputer.com/EngineeringJobCompetencies.pdf>

Participants' tasks

Write the course objectives of the engineering programs that they are teaching, discussion & feedback

Day 2 Session 2

Competency based education & training & how the competency based training is important to reach the desired outcome

By Dr Kyaw Naing

References

Characteristics of Learning Outcomes

In Certificate I to Vocational Diploma

http://www.filefactory.com/file/32hy8l1za8wz/TAE10_R3.4.docm

Provide the level of performances of the students tasks in the curriculums & activities

Sample Curriculums

Certificate to Advanced Diploma

<http://www.highlightcomputer.com/detailedcontent.htm>

Bachelor degrees equivalent level

[http://highlightcomputer.com/B%20E+B%20App%20Sc\(IT\)+B%20Bus%20Course%20Detailed%20Contents.htm](http://highlightcomputer.com/B%20E+B%20App%20Sc(IT)+B%20Bus%20Course%20Detailed%20Contents.htm)

Step 1-Provide General Outline

AGTI

- demonstrate understanding of specialised knowledge with depth in some areas
- analyse, diagnose, design and execute **judgements** across a broad range of technical or management functions
- generate ideas through the analysis of information and concepts at an abstract level
- demonstrate a command of wide-ranging, highly specialised technical, creative or conceptual skills
- demonstrate accountability for personal outputs within broad parameters

BTech

- The self-directed development and achievement of broad and specialised areas of knowledge and skills, building on prior knowledge and skills.
- Substantial breadth and complexity involving the initiation, analysis, design, planning, execution and evaluation of technical and management functions in highly varied and highly specialised contexts.
- Applications involve making significant, **high-level, independent judgements** in major broad or planning, design, operational, technical and management functions in highly varied and specialised contexts. They may include responsibility and broad-ranging accountability for the structure, management and output of the work or functions of others.
- The degree of emphasis on breadth, as opposed to depth, of knowledge and skills may vary between qualifications granted at this level.

BE

- The self-directed development and achievement of broad and specialised areas of knowledge and skills, building on prior knowledge and skills.
- Substantial breadth, depth and complexity involving the initiation, analysis, design, planning, execution and evaluation of major functions, both broad and highly specialised, in highly varied and highly specialised contexts.
- Further specialisation within a systematic and coherent body of knowledge.
- Applications involve making high-level, **fully independent, complex judgements** in broad planning, design, operational, technical and management functions in highly varied and highly specialised contexts. They may include full responsibility and accountability for all aspects of work and functions of others, including planning, budgeting and strategy development.
- The degree of emphasis on breadth, as opposed to depth, of knowledge and skills may vary between qualifications granted at this level.

Step 2 Objective is required for the designed course

Why we need to do this thing?

Principle of Adult Learning—

Motivation/ Reason/ Needs/Desires/ Benefit

Sample Objectives

Advanced Diploma in Engineering (Electrical+ Mechanical+ Civil+ Renewable Energy Engineering+ Computer Engineering & Information Technology) Course Outlines

IQY Technical College's two years Advanced Diploma in Engineering is designed to train the students **to work as Engineering Technologist** in wide ranges of industries.

It is designed to provide the following competencies.

To train the students to operate within broadly-defined technical environments, and undertake a wide range of functions and responsibilities. They are often specialists in the theory and practice of a particular branch of engineering technology or engineering-related technology

Professional Diploma in Engineering (Electrical+ Mechanical+ Civil+ Renewable Energy Engineering+ Computer Engineering & Information Technology) Course Outlines

IQY Technical College's four years Professional Diploma in Engineering is designed to train the students **to work as Engineering Technologist /Professional Engineer** in wide ranges of industries.

The program is designed to train the students to become Professional Engineers who are required to take responsibility for engineering projects and programs in the most far-reaching sense.

Provide examples of objectives

Objectives/ folder

Objective for each lesson materials

Example

Detailed Contents examples are provided

Folder/ Detailed Contents/

Day 3 Session 1

Day 4 Session 1

9.2.3 Learning Outcomes

Requirement of Myanmar Engineering Council

& how to design the curriculum to address the learning outcomes

By Dr Kyaw Naing

Educational Theoretical Readings

ED 104 Lesson Planning

<http://www.filefactory.com/file/4m30ym0ez37r/ED%20104%20Lesson%20Planning.zip>

ED 202 Curriculum & Design

<http://www.filefactory.com/file/1jotv5d428j1/ED%20202%20Curriculum%20%26amp%3B%20Design.Zip>

Practical Example

www.highlightcomputer.com/OverallProgramGeneral.pdf

Page 13 to 21

ED 104 Lesson Planning

<http://www.filefactory.com/file/4m30ym0ez37r/ED%20104%20Lesson%20Planning.zip>

Step 1 Review the educational theory related to lesson planning

ED 104 Lesson Planning/ Lesson Planning.pdf

Pupils have two kinds of needs. First, there are the general ones that provide the preconditions for education the need for such things as security, comfort and dignity.

Second, there are learning needs - provision for special educational needs such as dyslexia, for example, or remedial action to help pupils make good any gaps in their knowledge from earlier parts of the curriculum.

10

This is an idea I hit on when learning to teach adult classes and then used with (quite senior) classes in school at the beginning of their courses. Make a numbered list of the aims that pupils might have for the course you are teaching them.

For example:

- 1 Achieve a qualification.
- 2 Get the best grade at the end of the course.
- 3 Progress to a further course.
- 4 Muddle through.
- 5 Find out more about [a specified area of the subject].
- 6 have no specific aims.

OBJECTIVES

Objectives are based on the notion that education is observable and measurable

LEARNING

- o Which parts of your lessons lend themselves to thinking in terms of stimulus and response?
- o Where do assessment criteria require only certain *outcomes* rather than levels of *understanding*

1 Knowledge and understanding.

2 Skills, techniques, and methods (Idea 21).

3 Attitudes and perspectives (Idea 22). ^

4 Judgements and decisions (Idea 23).

attitude

12 Here is a checklist of the qualities an objective

Specific in terms of

- (a) what is to be learnt and
- (b) the time within which it is to be learnt;

Capable of assessment;

Achievable;

Manageable in the context you are working in.

55

1 T A ' or

1 Introduction.

2 Exposition. ,

3 Clarification.

4 Enactment.

5 Feedback.

6 Transfer

7 Deliberate practice.

There are four main types of practice:

56

- 1 Drills.
- 2 Variable practice.
- 3 Massed practice.
- 4 Distributed practice.

57

- 1 Introduction.
- 2 Presentation.
- 3 Conclusion

When preparing a PowerPoint presentation, use the following checklist to help avoid the most common pitfalls:

Are any of the slides too cramped? Can I reduce the amount of information on each slide?

When do I need to ask the class to focus on the screen?

When do I want them to focus on me as speaker?

How can I use body language or audience interaction to encourage this?

How can I vary my speaking position in order to establish eye contact and rapport?

When should I turn off the display?

25

Theoretical Learning

- o theory and generalization;
- o the concrete and the particular (see Idea 26); ^
- o reflection (see Idea 27); 21
- 0 activity - 'learning by doing' (see Idea 28).

26

Learning from concrete

25). In place of generalizations, axioms, probabilistic statements and deductive logic

Use one both of the two great staples of concrete learning - the worked example and the case study

27

Reflective Learning

The first is by encouraging pupils to reflect on aspects of their life in general - things that they have learnt beforehand, whether in or out of school.

The second is by encouraging pupils to reflect on what they have already learnt or experienced within the scheme of work that you are now engaged in appropriate for work experienced learners.

28

Active Learning

Active learning can feature in your planning in two places. Sometimes you can arrange for active learning within your lessons - drama, role-play, observation, conducting surveys, filming, and so on. Sometimes you can build it into the homeworks that you set, such as interviewing, researching and mini fieldwork projects

General learning strategies - techniques, habits of mind, and so on, not related to specific subjects or topics.

Contiguous knowledge - knowledge closely associated with that you are planning to teach.

For a pupil learning about a certain theme in a certain period of history, examples would include knowledge of other themes in that period.

Comparable knowledge - knowledge of a different topic that is sufficiently similar for analogies to be drawn. For example, in technology a pupil might learn about the qualities of one material by comparing it to other materials.

Top-down' knowledge - pupils who have learnt about a general concept (e.g. deforestation) proceed to learn about particular instances (e.g. Amazonia).

'Bottom-up' knowledge - pupils who have learnt about particular cases proceed to learn about the general concepts, issues or themes that they exemplify.

Step 2 Provide the lesson plan format

ED 104 Lesson Planning/ Instructional Design for Action Learning.pdf

Lesson Plan Format

Phase One:

Develop the following:

- ? Training content
- ? Graphics
- ? Media needs
- ? Lesson plans
- ? Instructor guides
- ? Evaluation needs
- ? Software needs

Phase Two:

Revise all items in Phase One.

Phase Three:

Complete the following.

- ? Conduct the test.
- ? Revise the program on the basis of the test.
- ? Schedule a second test, if needed.

TITLE: How to use the bundling machine

WRITTEN BY: Author's

Note DATE: Date Written

OBJECTIVES: At the end of this session, the participants will be able to

1. State one reason for using the bundling machine
2. Demonstrate the correct use of the bundling machine located in the workshop
3. State when the bundling machine is used

SESSION TIME: 15 minutes

NUMBER OF PARTICIPANTS: 6 (up to 10)

ENTRY LEVEL: New employees

AIDS/EQUIPMENT: Sample bundling machine

6 bundling cards for each participant
Whiteboard and markers

POTENTIAL FAULTS: Session not to be conducted at start or finish time of workshop

METHOD: Show and tell

Phase Four:

Conduct the following.

- ? Pilot-test a prototype program.
- ? Evaluate the pilot test.
- ? Identify the required revisions.

Revise the program as required (on the basis of the pilot test).
? Schedule another test, if needed.

Phase Five: Follow-through on the following.

? Finalize the training program content.
? Produce the training program in final form.

During the development phase, you will select, write, or otherwise obtain all training documentation and evaluation materials. These may include the following:

? Training materials
? Instructor guide (including lesson plans and a list of required supporting materials)
? Learners' guide or workbook
? Nonprint media (computer software, audiotapes and videotapes, equipment checklists)
? Program evaluation materials
? Procedures for evaluation
? Supervisors' form for evaluation of course participants' post-training job performance
? Training documentation
? Class attendance forms and other records for participants
? Course documentation (written objectives, authorship and responsibility for course material, lists of instructors and facilitators, and their qualifications)

Step 3 Expand the each lesson plan to unit in the curriculum

ED 202 Curriculum & Design/ Curriculum.pdf

6.1 Frame of Reference

The rapid progress of globalization has led to many unprecedented changes in the world in which students are educated and in which graduates will practice (Friedman, 2006). As Friedman puts it, "Globalization has collapsed time and distance and raised the notion that someone anywhere on earth can do your job more cheaply.

In 2004, the National Academy of Engineering published a report summarizing visions of what the engineering profession might be like in the year 2020 (National Academy of Engineering, 2004). A follow-up report (National Academy of Engineering, 2005) on how to educate the engineer of 2020 was released a year later.

The key message gleaned is that engineering education must be adapted to the challenges of globalization.

Course and curriculum redesign must better address and constructively align “what” is to be learned and “why” those target outcomes are needed.

Then, building on the “what” and “why”, it should present clearly the “how” or strategies used to achieve them. We know that current engineering students will be tomorrow’s engineering workforce and that they will have to face and address challenges and dilemmas that are very different from the problems and tasks they were exposed to as students.

The nature of those challenges will require them to take on open-ended ill-defined problems and unforeseen issues, understand system-level challenges, and respond to them with innovations.

If they have not experienced creative challenges that require innovative responses in their engineering classes, they will not be prepared to do so in their professional careers.

The “how” of developing this type of skills and expertise in analysis, evaluation, and creative production for unforeseen needs requires authentic experience in tasks that require students to exercise these skills.

There are various ways to provide practice in creative problem-solving and innovation.

One way to provide this experience is experiential learning. If designed well, experiential learning not only offers authentic opportunity but also supports self-determined motivation and regulation.

Further, it can be structured to enable adaptive interaction among those with various types of expertise, sharing in a professional community, and experience building both competence and community.

This involves balancing structure and autonomy, supporting both team and individual effort, and valuing error that leads to deeper learning and skill refinement. Related to these outcomes is the power of metacognition, reflection on task process and products, both during and after experiences.

Metacognition is directly linked to the process skills of analysis and evaluation and, within a discipline, divides legitimately creative experts from those whose skills are limited to doing the same thing, albeit doing it well, over and over again (Ericsson, 2006).

Curriculum Development

- Needs of engineering workforce
- Appropriate to changing needs of industry & technology
- National guidelines
- Relevant & related to & based on and past & current curriculums

- Based on accumulation of lesson planning for each lesson, each unit in the curriculum
- Concern the interrelation of the contents
- Develop on skills level & performance standards—Outcome based/ Competency based/ Adult Education/ Vocational Education & Training

Step 4 Provide the practical example of a curriculum which is developed based on MEng C requirements

Myanmar Engineering Council

9.2.3 Learning Outcomes

I List down the Learning Outcomes and state where are they published

Group Base learning.pdf

Ref - 16.taadel401a Plan & Organize Group Base learning.pdf

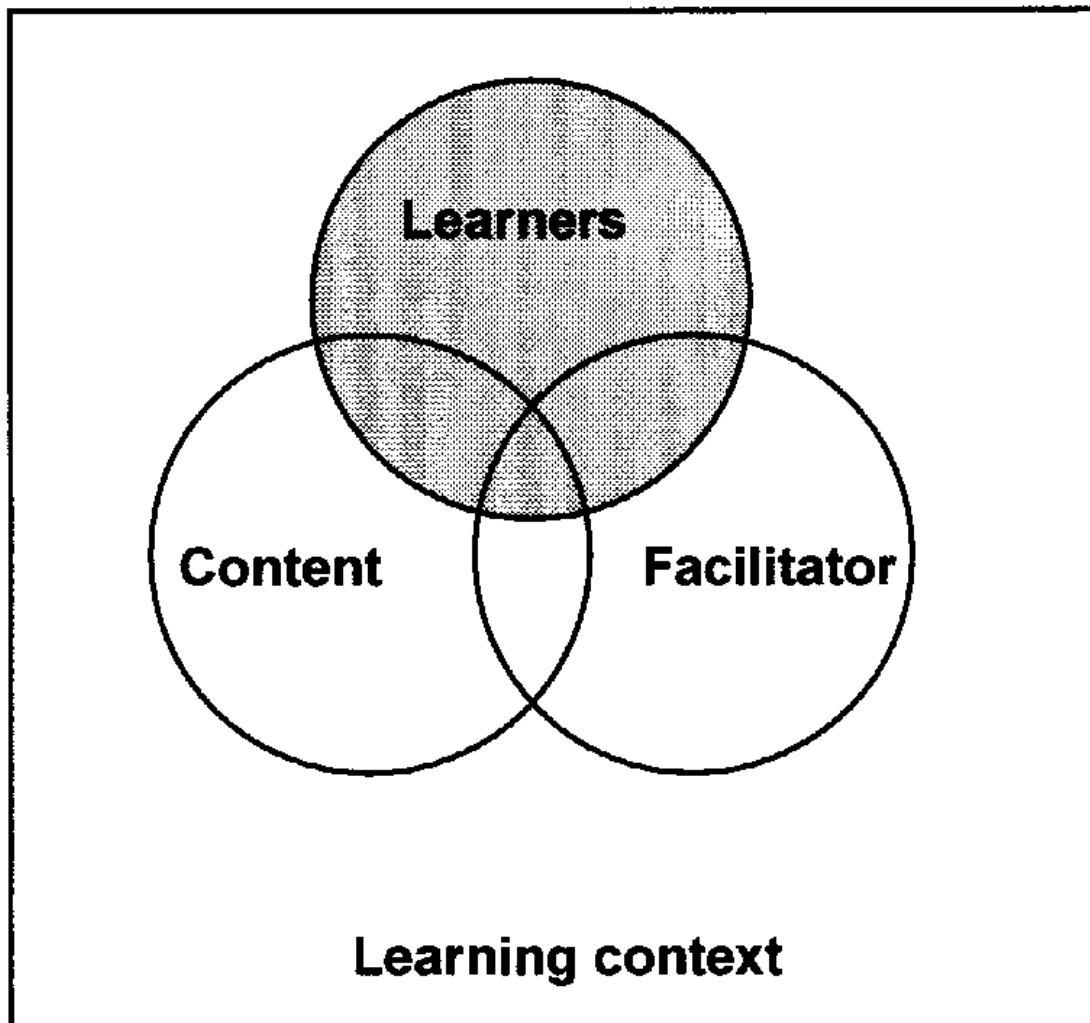

First of all, what is learning? Learning is a personal process, which occurs internally. Learning can involve:

- growth of knowledge
- development of skills
- change of attributes.

Models, like myths and metaphors, help us to make sense of information. A model can offer the means for understanding an otherwise incomprehensible problem. Models can provide structure and meaning; they often help us to visualise a concept or problem, breaking it down into discrete and manageable parts. As such, models are very useful in learning.

Facilitating learning

When it comes to facilitating learning, there are three things the facilitator need to manage: the learners, the content and themselves. These need to be considered separately and collectively and managed in the context of the learning environment. In the beginning, it can feel a bit like running a three-ring circus! As you can imagine, undertaking such a process also requires considerable preparation to make sure that everything goes smoothly. Armed with a clear plan, an understanding of how people learn, and an increased awareness of the part you play, you will be well on the way to being a success.

Knowles' andragogical model of learning

The need to know

Adults need to know why they are learning something before undertaking to learn it. When adults undertake to learn something on their own, they invest considerable energy determining the benefits they will gain from learning it and the negative consequences of not learning it. Consequently, one of the first tasks of the facilitator of learning is to help the learners become aware of the 'need to know'.

The role of learners' experience

Adults have a variety of life experience that represents a rich resource for learning. To capitalise on adult learners' experience, facilitators can use techniques that tap into these — group discussion, storytelling, simulation exercises, problem-solving activities, case studies and other interactive strategies. While the richness of experience is a valuable resource for learning, it can also present some challenges, as these experiences can be filled with bias and presupposition which may impact on our perceptions.

Readiness to learn

Adults are ready to learn those things they need to know and do, in order to cope effectively with their real life situations. 'Readiness to learn' occurs strongly when adults move from one developmental stage to the next. Timing learning experiences to coincide with those developmental tasks is obviously important.

Orientation to learning

Adults are motivated to learn something to the extent that they perceive that it will help them perform tasks or deal with problems that they are likely to encounter. They learn most effectively when learning is presented in the context of application to real life situations.

Motivation

While adults respond to some external motivators (better jobs, promotions, higher salaries etc), the most potent motivators are internal pressures (desire for increased job satisfaction, self-esteem, quality of life). Generally, adults are motivated to keep growing and developing, however, this motivation is often blocked by barriers such as a negative self-concept, especially as a student; inaccessibility of opportunities or resources; time constraints; and programs that do not meet the needs of adult learners.

Another way of looking at the principles of adult learning

The Australian National Training Authority (ANTA) provided a number of principles of adult learning in 1995, which were slightly modified in 1998. The following list is a compilation of both sets of principles.

Active participation

Adults learn best when they actively participate; that is, when they are involved physically, intellectually or emotionally. Adults learn best by 'doing'.

Meaningful and relevant

How does it relate to me? Adults need to be able to relate to the material—to identify the meaning and relevance of the material to them and their situation.

Holistic learning

Adults like to know where this material fits in relation to the whole. Starting with the big picture, then dropping down into the specific details, provides a context for the material.

Multi-sensory learning

We have five senses—why limit learning to one sense? Instead, use a range of senses: sight, sound, taste, smell and touch. Using two or three senses in the learning experience increases the learners' capacity to understand and to retain the material.

- **Active Participation---Practical/ Work-based Learning**
- **Meaningful & Relevant—Curriculum & Resource Planning**
- **Holistic Learning—Career objective link to outcome 7 objective of the course , subjects/ units and detailed contents plans**
- **Multisensory Learning—e-Learning, face to face, Educational Multimedia**

Practiced and reinforced

Learners require appropriate time and opportunities to practice and reflect on what they have learnt and apply this material to their workplace context. Practice opportunities need to be provided for developing knowledge and skills and changing attributes.

Regular and useful feedback

Learners like feedback; they want to know how well they are doing. Feedback provided early in the learning experience can mean that learners practice and reinforce the correct behaviours, rather than reinforce incorrect information or behaviours. Feedback needs to be provided in a positive and constructive manner. When providing feedback, concentrate on the action or the behaviour and not on the person.

Reward

Learners respond differently to learning experiences, yet they all need to be able to identify the benefits and value of the experience. These benefits act as a reward for the work learners have done and help motivate further learning. Sometimes it is also valuable to provide external recognition and reward. It is very motivating to be told you have done well and your efforts are recognised and appreciated.

Behavioural learning theory

Observable behaviour rather than internal thought processes are the focus; in particular, learning is shown by a change in behaviour. Four key principles are considered to be important. They are:

- learning is better when the learner is active, not passive
- frequent practice is necessary for learning
- positive reinforcements, like rewards and successes, are encouraged
- objectives need to be clear, for example, performance criteria found in units of competency.

Information processing theory

This theory uses the computer as a model for human learning. The human mind, like the computer, takes in information; changes the form and content of this information; stores and locates it; and generates responses to it. The approach to learning here is primarily through the use and study of memory.

Cognitive learning theory

This theory is based on the cognitive process we use to acquire knowledge, which includes knowledge gained through perception, intuition and reasoning. The theory outlines an active mental process of acquiring, remembering and using knowledge.

Constructivist learning theory

This theory is based on the idea that learners construct knowledge for themselves. That is, each learner individually and socially constructs meaning as they learn. This then leads to a focus on the learner, rather than on the subject or the lesson to be taught, as it is the learner's thinking about the learning which is the key to the learning taking place.

Learner/ students centred learning

- Teacher as facilitator—Provide tool, references, resources,
- Provide the students with the task.
- Ask them to do research themselves
- Present their work evidence portfolios
- Assess their work
- E-Learning is an effective way to provide a great deal of resources.

Situational approach to learning

The emphasis here is on learning being situation-based, that is, placed in a social context, like a workplace. Learning takes place through the relationships between people, and is based on the conditions that bring people together, allowing for particular pieces of information to take on relevance and meaning

Problem-based learning

This approach to learning recognises the need to develop problem-solving skill in order for learning to take place. The learning goals are the learners' abilities to solve the problem, present solutions and revise solutions when presented with additional information.

Global	Analytic
Big Picture	Detail
Inter-connection	Specific
Broad overall approach	Step by step
Begin with the end in mind	Start at the beginning

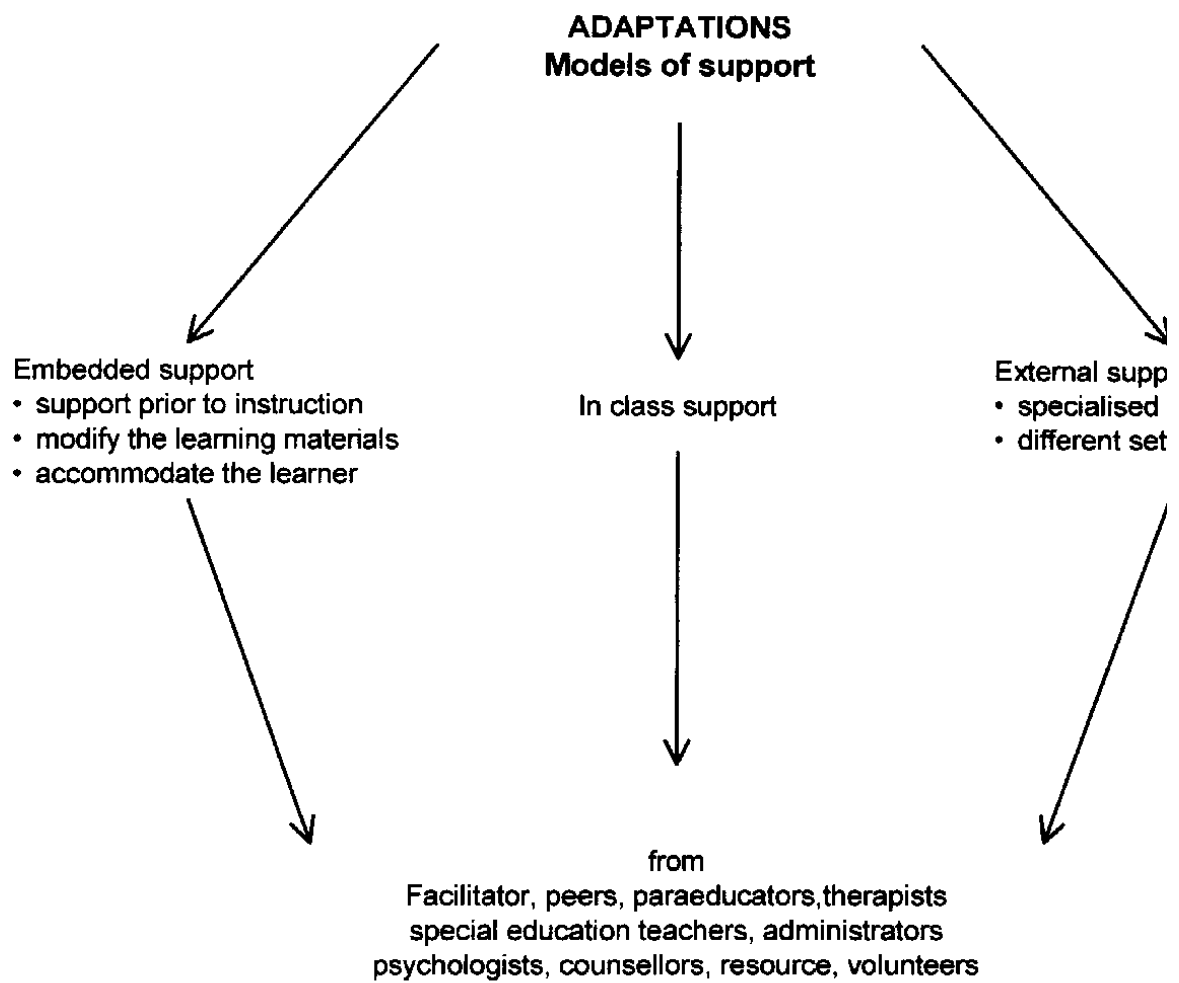

- your roles and responsibilities as the facilitator
- the learning context
- the learner program requirements
- who your learners are, what their needs and characteristics are, and how you might go about supporting them
- how to identify potential risks to learners
- other factors that should be considered when planning and organising group-based delivery.

Regulatory environment

Learning program requirements

Learners, their needs and characteristics

Before planning training, it is important to get a clear understanding of exactly who the learners are and what they need to gain from the program.

Modify the learning materials

- Incorporate techniques such as modelling, demonstrating, visual/diagrammatic representation, opportunities to practise skills, peer support and repetition.
- Build underpinning knowledge and skills using support materials.
- Tape sessions for learners unable to attend class.
- Provide resources in large print (this may just involve making activity cards in slightly larger font to make them more accessible).
- Use videos and audio tapes to offer variety.
- Post class notes on a website.
- Build in information about discrimination—the law, direct and indirect forms of discrimination.
- Use video conferencing facilities to access learners.
- Provide different instructional materials to meet a learner's individual goals.

Accommodate the learner

- Draw on a range of resources from first language, including peer support.
- Listen to problems and help within limits.
- Arrange the timetable so it caters for people who work or have family commitments.
- Provide flexibility in the timing of assessment tasks.
- Use adaptive technology.
- Modify the number of items that a learner is expected to learn or complete.
- Extend the time allowed for learning, task completion or testing.
- Increase the amount of personal assistance with a specific learner.
- Modify the way a learner can respond to instruction (verbal, written, hands-on).
- Vary the extent to which a learner is actively involved in a task.
- Adjust the goals or outcome expectations while using the same materials.
- Adapt the skill level, problem type or the way learners may approach the work.

Provide in-class support

- Ensure appropriate physical and communication supports are available.
- Incorporate inclusiveness strategies so that learners learn from each other, not just the facilitator — for example, group sessions, peer tutoring, co-operative learning, reciprocal teaching.
- Introduce Indigenous protocols into learning relationships.
- Get learners to provide instructions and directions for activities.
- Build in activities in which learners and you, as facilitator, think about the values and beliefs they have with regard to diversity, including gender.
- Challenge the subtle forms of discrimination you witness within the practice environment.

Identifying risks

Preparing for facilitating

This Learning Topic explores what you need to do to prepare for facilitating a group and to prepare the content and structure of your learning resources.

There are many things you need to do:

- identify learning objectives, performance criteria and assessment methods (where required) and refine them
- identify, evaluate, select, modify and contextualise existing published learning resources and support materials
- develop an outline of the structure of each session
- develop specific session-based learning resources and activities
- identify specific facility, technology and equipment needs for each session
- identify and organise additional resourcing to meet identified learner support needs, where required.

The delivery plan

A delivery plan is sometimes referred to as a session plan. It could cover a series of sessions.

A delivery plan provides you with a step by step guide to follow. You will need to start with learning objectives and then develop a delivery plan that provides you with a guide for the effective facilitation of learning. You will structure information, develop resources and provide practice opportunities that meet the needs of your learners.

A delivery plan may include:

- duration of each activity or exercise
- individual or group objectives
- formative assessment opportunities
- location of training
- number of learners
- activities to be used
- resources, for example, a whiteboard, overhead projector, handouts, or articles
- any additional requirements to meet special needs of learners
- OHS considerations to ensure a safe learning environment. This may be addressed under separate headings of venue, activities, equipment, or personnel as appropriate.

Learning objectives

Imagine what archery would be like without a target, or football without the goal posts—how would you know if you were successful? This is what it is like to run a session without planned and documented learning objectives. How would you know where you were going? How would you know if you had succeeded?

Learning objectives state what the learner is to learn as a result of participating in the program or session. Due to the diversity in the sector, you may find different kinds of learning objectives. They could include:

- units of competency
- learning objectives
- individual or group objectives
- generic or technical skills.

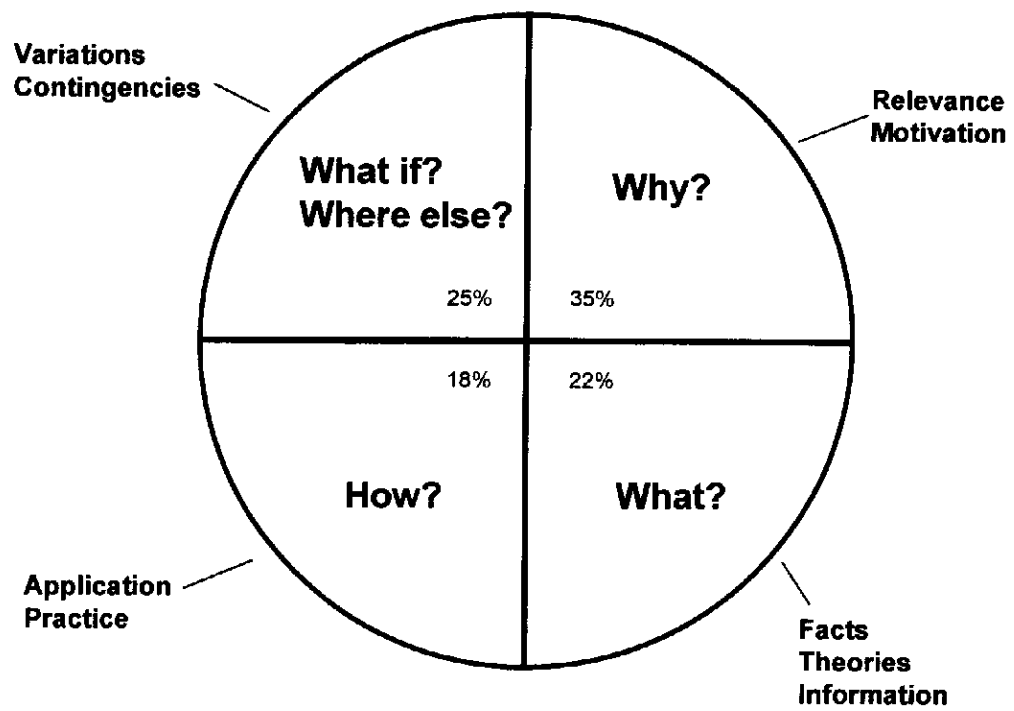

Assessment methods

You need to find out:

- what responsibility you will have for assessment
- who else may be involved in assessing your learners
- what you need to do if others are responsible for assessing your learners.

Checklist for selecting resources

- ☐ Is the resource current?
- ☐ Does the resource cover the competency standards or learning objectives that need to be addressed in the learning program?
- ☐ Does the resource provide clear and comprehensive information?
- ☐ Does the resource clearly identify its purpose and objective?
- ☐ Is the resource able to be contextualised to meet your learning needs?
- ☐ Does the resource respond to access and equity issues?
- ☐ Does the resource offer flexibility for delivery and assessment?
- ☐ If a course has been selected, do the hours and cost seem reasonable?
- ☐ Is the resource recognised by accredited bodies or organisations as covering the training requirements?

Learning activities may include:

- discussion
- role-plays
- written tasks
- slides and/or video presentations
- case studies
- solving problems
- 'thinking skills' exercises
- collaborative learning projects
- workplace practice
- question and answer
- online research
- self-paced materials
- group learning activities
- individual activities
- practice
- demonstration
- a combination of the above.

Day 6 Session 1 & 3

Assessment Validation Guide of Myanmar Engineering Council

- assessment & evaluation methods for the attainment achievement of the Learning Outcome

Step 1

Day 6 Session 1/ VET Level Assessment Tasks/27.taaass401a Plan & organize assessment.pdf

Page 15, 18, 21, 22, 23, 24, 25, 26, 27, 28, 29, 31, 32, 51-Levels of performance

The potential assessment methods were:

Observation of the candidate at work/practical demonstration

Role-play

Customer feedback

Written and verbal questioning

Practical tasks
Third party report
Case study—customer complaints
Journal
Portfolio

Methods:

- observation of the candidate at the workplace interacting, serving and attending to customers
- verbal questioning that focuses on underpinning knowledge and contingency management for the three competencies
- role-play for customer complaints; working in a non-discriminatory manner; or a simulation of processing particular payments such as gift certificates
- third party reports from a supervisor.
- Sequencing of assessment activities
- When planning the assessment, consideration was given to the sequence of assessment activities.
- The initial assessment could be verbal questioning to ensure candidates have the required knowledge. This could be followed by a role-play to establish that individuals have basic skills to serve customers.
- A series of observations on the-job could be supplemented by a third party report from the supervisor

OHS

- Find out the answers to the following questions in your practice environment.
- Who are the relevant OHS personnel?
- What are the main OHS considerations in your industry or area of assessment?
- What are the specific procedures relating to hazard identification?
- What risk control measures are in place?

- What are the requirements for reporting hazards and incidents?
- What are the emergency procedures?
- What are the procedures for use of the relevant personal protective equipment?
- What OHS factors do you need to consider when planning assessment?

Advantages

- Consistent teaching & learning
- Good references
- It is time consuming to start but once it has been developed, the head of the department can effectively control the whole and teaching and learning system
- The students can be directed to self place learning, resource research .
- By this way the self dependency and confidence can be developed

Disadvantages

- Needs IT skills
- Need to prepare all lessons in advanced.
- Computer competency
- Time consuming
- Limitation of resources

If this methodology is utilized to share the resources between the institutes rather than at the classroom teaching level, more consistent teaching, learning and resources sharing can be achieved among the institutes located at different geographical locations.

Introduction

Learning Technologies are the various forms of Information Technology (IT) [or Information and Communications Technologies (ICT)], which are used to improve student learning. Learning Technologies (LT) encompass:

- integration of IT into teaching and learning;
- developing and enhancing teacher competencies in learning technologies;
- student access to electronic educational resources (hardware, software and networked multimedia); and
- school infrastructure and connectivity.

Learning Technologies are an integral part of teaching and learning programs and are expected to facilitate the development and improvement of outcomes in all learning areas (not just "Technology and Enterprise"). They are tools to achieve an outcome, not an outcome within themselves. Let us not forget that! Success will be shown by what teachers and students achieve and can do, not by the number of machines sitting in classrooms

Accessing the Course Materials Via the CD-ROM

All materials for this course and other *Learning Technology for Teachers* courses provided by Curtin University are also provided on CD-ROM. The CD-ROM allows us to include some files (exercises, handbooks, videos , etc.) that, because of their large size, have not been placed on the Internet site.

The CD-ROM has a file structure that is virtually identical to that of the Internet site.

The main **ADVANTAGES** of accessing the course via the CD-ROM are:

- Access is MUCH FASTER than via the Internet;
- Some materials are available only on the CD-ROM; and
- Many students will find it convenient that an Internet connection is not required.

The main **DISADVANTAGES** of accessing the course via the CD-ROM are:

- The CD-ROM is "static" - that is, it can not be updated. In an area changing as fast as networked multimedia, it probably has a "shelf life" of about three or four months;
- There is no access to the internal Mail, Bulletin Board, Chat Rooms or hypertext logging; and
- Some materials that are available only via other Internet sites cannot be accessed.

Dimension	Traditional classroom	Classroom using Internet - Multimedia - information technology
Primary source of knowledge	Teacher	Available "out there" in the net
Learning group	Class size or small group	Class or the individual in an unlimited number of net sites
Learner age range	Uniform	8 to 80
Learning initiator	Mostly a teacher	The student
Learning schedule	In school, at fixed hours	In school as well as any other time
Place of learning	The school	Next to a computer
Learning tools	Reading and writing materials	Computer technology
Learning style	Linear	Parallel
State of updated knowledge	Knowledge rarely updated	State of the art knowledge
Student questions directed to	Teacher: question time limited	Teacher and experts: question time flexible
Evaluation	Teacher is main source	Projects are main source
Laboratory work	May be a % of class time	Mainly indirect as lab simulation

Tools, Not Take-overs

Do we want computers to replace teachers?

Do we want every child to have access to her own computer throughout the school day?

Do we know where computers are best used in schools, and where listening - talking - thinking - writing (on paper) - reading (from books) are preferred methods of instruction?

Do we really know what we want to do with IT in the classroom, much less how to do it?

One approach is to provide every child -- or, more likely, have every parent provide for their child -- a personal laptop computer. This is becoming increasingly common, especially in independent schools.

Is this the answer?

Computing As A Tool, NOT An End In Itself

Before looking a little more closely at "wired schools", we should consider the impacts of IT and computing across the curriculum, from pre-school to secondary and beyond -- what does it really offer?

I addressed some of these issues in the paper I asked you to read for Module 2 (Staff Development in Computing and Information Systems Literacy: Computing as a Tool, Not an End in Itself). You might recall that my goals were to look at:

What are the differences between "educational computing" (that is, using computers, digital information and the Internet to teach a wide range of subjects), and "computer education" (teaching how computers and networks operate, personal computing skills, information systems design and analysis, programming, etc.)? Can IT change the nature of teaching and learning, in a range of environments, from pre-school to tertiary study? Are our schools exploiting the potential successfully? Do we need / want the "cyber classroom - School of the Future" to dominate education? What are its pros and cons?

What is the division of responsibility, between the home and the school, in encouraging the developing of IT skills, as well as providing access to IT?

Are students being inundated with "information" with little consequent increase in knowledge or understanding? Is IT becoming the education system's servant, or are teachers and students becoming IT's slave?

Search Directories and Search Engines

Many people like to think of the Internet as a huge library of information, but nothing could be further from the truth. Libraries are designed specifically to support the organised retrieval of published information and use tools, such as card catalogues and online databases, created for this purpose. The Internet -- and especially the World Wide Web -- was not designed this way. The Web has evolved into a somewhat chaotic digital repository that includes not only books, reports, and other types of papers, but also raw scientific data, menus, meeting notices, personal

stories, multimedia recordings, recipes, transcripts of interactive conversations, news, and advertisements. Pages of great value share Web space with pages of little or no worth to the general public (which is as it should be on a democratic Net).

Methods for organising the chaos of the Web are being developed continuously, but so far there is no single source for searching its entire contents. Because content being searched with one tool may or may not overlap with content being searched with another (no two indexes are exactly the same), you might have to use more than one tool to satisfy your research query.

Choosing the most appropriate tool for a search can save you time and frustration. Just as you wouldn't want to use a high-heeled shoe to pound in a nail, you wouldn't want to frustrate yourself by using a search tool that makes your research more difficult.

(from Internet Search Techniques, by Karin Rex, ZDU, 1998.)

We've already looked at special "teacher sites" and the use of special lists compiled for teachers by others. Later you may want to focus on refining your own search skills and building up your own list of favourites. [As previously mentioned, there is an excellent tutorial on 'Using the Internet -- Basic and Advanced Searching' referenced in the optional extras section at the bottom of this page.]

Evaluating What We Find

Once you have practised searching, you'll get very handy, very quickly, at it. More difficult is deciding the value of what we find on the WWW -- as I mentioned earlier, there are no editors, no filters -- grandma's old wives tales share the Internet with scholarly articles and hate sites.

I have seen two serious problems with my own children, especially when they were 10 - 13 years old, using the Internet

Firstly, they seem to think it is the "first stop" for all homework -- WWW first, then books, then ask Mum or Dad. Very often, the WWW is **not** the place to start, or even to finish; an encyclopaedia (paper or CD-ROM), or a newspaper/magazine/book, would be much more useful.

Secondly, children are used to believing what they read, and see on TV, and see on computer screens, and often have difficulty distinguishing a vested interest or personal axe to grind (even if they can pick the most extreme "hate sites" or "radical religion" pages). [A third issue, of course, is access to inappropriate material although most school networks are fairly well filtered and protected these days.]

I don't think that many educators have paid sufficient attention to these issues.

Quality Control and the WWW

There is a wealth of poor quality information on the WWW -- endless examples of information that is inaccurate, inaccessible, invalid, incomplete, out of date, unreadable or simply irrelevant. Students (and teachers) need a set of evaluation skills beyond those required for print media.

Remember that virtually anyone can publish virtually anything on the WWW; authors make mistakes, assume personas, exaggerate, make false claims, and simply lie. Consider the WWW site that claimed to be written by a political party but was in fact written by the opposition party, or the citation of an online physics paper by A. Einstein (Amy Einstein, of Melbourne). [adapted from a paper by Emma Worsfold and Debra Hiom, citation unknown.]

So what do we need to consider? Source (author / authority / affiliation), Content (accuracy / objectivity), Currency and Purpose would be at the top of my list.

Source (author / authority / affiliation)

- Who wrote the material?
- What are his/her credential **on this subject**? [A PhD in physics does not guarantee authority on AIDS, politics or theology]
- What are his/her professional affiliations? Can they be verified independently? [And are they the same as the site's, or is the site a "personal page" on a commercial service?]

Content (accuracy / objectivity)

- Are the sources for all factual information, including charts and diagrams, cited?
- Can the cited sources be located?
- Is the material well-written (comparable to a textbook)?
- Is there evidence of bias, or a particular point of view on a controversial topic?
- Are the links provided relevant, unbiased and comprehensive?
- Is the site free from advertising? If not, does the advertiser have a vested interest in the topic? [such as a pro-smoking page supported by a tobacco company]

Currency

- Is this a subject which changes rapidly over short periods of time?
- Is a publication date / date of last revision provided?
- If data are time-dependent, are dates provided?

Purpose

- Is it clear why the author wrote the material? Is the author affiliated with an educational institution (.edu), a non-profit organisation (.org), the government (.gov), or a commercial venture (.com)? [It is important to note that some domains can be bought by pretty much anyone and anyway, would you trust every country's .gov sites?] In other words, Check the Source
- Is the purpose of the sponsoring organisation clear?

- Can the organisation be located independently of the WWW (physical address, mailing address, telephone/fax)?

Students should be made aware of these issues when they first start using the WWW, not years down the track.

Day 8 Session 1

Technology in Classroom

Day 8 Session 1/ 7. [Technology in classroom/ index.html/](#) **Start the Unit/Do the course/** [Developing Leadership Skills in Technology](#)

Teachers as Learners

Before commencing any program of supervision, it is important to develop an understanding of the teacher as a learner. Teachers' practice, it is held, is determined by the construction of an internally verifiable base of knowledge. Learning or change requires a teacher to test new knowledge against what he/she already knows to be "true". Sometimes called a "constructivist" perspective [1]

(MacKinnon & Erickson, 1988), it requires that any attempt "to change the practices of those who teach, it is necessary to come to grips with the subjectively reasonable beliefs of teachers" (Fenstermacher, 1978, p.174).

To understand the teacher as a learner, it is useful to have some conception of the what and how of teacher learning. Michael Fullan (1990) describes four aspects of the teacher as learner - technical, reflective, inquiry and collaborative. "[These aspects] must be seen in combination. Each has its separate tradition of research and practice, and each has made important contributions in its own right. The mastery of technical skills increases instructional certainty; reflective practice enhances clarity, meaning and coherence; inquiry fosters investigation and exploration; collaboration enables one to receive and give ideas and assistance" (p. 19-20).

Leadership

The teacher as learner is shaped by a variety of personality and career factors that make up the total teacher. Teacher learning is also affected by environmental factors - the classroom, colleagues and the culture of the school, of which leadership is one aspect. It is important not to overplay (nor underplay) the importance of leadership in teaching. The teacher is a professional practitioner constantly grappling with real problems in his/her classroom. Reflection, inquiry, collaboration and the development of technical expertise will proceed with or without good leadership. Leadership can however make a difference in promoting teacher learning by mobilising an organisational climate of support (Rosenholtz, 1989). Fullan et al (1990, p. 14-15), for example, refer to four climatic conditions:

Day 8 Session 1/ ED 308 Computer Supported Learning & Distance Education/Computer Supported Learning.pdf

Page 14 to 22

Collaborative learning:

- promotes critical thinking skills

Under this dot point Panitz suggests that collaborative learning develops higher level thinking skills; stimulates critical thinking; helps students clarify ideas through discussion and debate; enhances skill building and practice; develops oral communication skills; fosters metacognition in students; and improves students' recall of text content through cooperative discussions;

- involves students actively in the learning process

And here, that it creates an environment of active, involved, exploratory learning; encourages student responsibility for learning; involves students in developing curriculum and class procedures; provides training in effective teaching strategies to the next generation of teachers; helps students wean themselves away from

considering teachers the sole sources of knowledge and understanding; fits in well with the TQM and CQI models of effective management; promotes a learning goal rather than a performance goal; fits in well with the constructivist approach; and allows students to exercise a sense of control on task;

models appropriate student problem-solving techniques

Collaborative learning fosters modeling of problem solving techniques by students' peers; allows assignment of more challenging tasks without making the workload unreasonable; can help weaker students improve their performance when grouped with higher achieving students; provides stronger students with the deeper understanding that comes only from teaching material (cognitive rehearsal); leads to the generation of more and better questions in class; provides a safe environment for alternate problem solutions; and addresses learning style differences among students.

Collaborative learning:

Psychological Benefits

- can increase students' self esteem

Group learning can help to reduce anxiety; enhance student satisfaction with the learning experience; promote a mastery attribution pattern rather than helpless attribution pattern; and encourage students to seek help and accept tutoring from their peers;

- develops positive attitudes towards teachers

Such an environment can create a more positive attitude on the part of students towards their instructors; and create a more positive attitude by instructors toward their students; and set high expectations for students and teachers.

Social Benefits

Collaborative learning:

- **develops a social support system for students**

For example, it promotes student-faculty interaction and familiarity; develops social interaction skills; promotes positive societal responses to problems and fosters a supportive environment within which to manage conflict resolution; creates a stronger social support system; fosters and develops interpersonal relationships; and helps students to develop responsibility for each other;

- **builds diversity understanding among students and staff**

- Collaborative learning builds more positive heterogeneous relationships; encourages diversity understanding; fosters a greater ability in students to view situations from others' perspectives (development of empathy); and helps majority and minority populations in a class learn to work with each other (different ethnic groups, men and women, traditional and non-traditional students);
- establishes a positive atmosphere for modeling and practicing cooperation
- Collaborative learning establishes an atmosphere of cooperation and helping;
- helps students learn how to criticize ideas rather than people; helps to model desirable social behaviors necessary for employment situations that utilize teams and groups;
- helps students practice modeling societal and work related roles;
- fosters team building and a team approach to problem solving while maintaining individual accountability; creates environments where students can practice
- building leadership skills; increases leadership skills of female students; develops learning communities;
- provides the foundation for developing learning communities within institutions and in courses; helps to promote social and academic relationships well beyond the classroom and individual course; and helps teachers
- change their roles from their being the focus of the teaching process to becoming facilitators of the learning process (they move from teacher-centered to student centered learning).

Graham and Misanchuk (2003) have suggested that there are three general stages that

are important if using groups in a CSCL environment is to be successful:

- creating the groups,
- structuring the learning activities, and
- facilitating group interactions

- Davis (1993) has supplied excellent solutions to a number of problems of collaborative

- learning, broken down under the following headings:
 - • general strategies,
 - • designing group work,
 - • organizing learning groups,
 - • evaluating group work,
 - • dealing with student and faculty concerns about group work, and
 - • setting up study teams.

General strategies,

- designing group work,
- organizing learning groups,
- evaluating group work,
- dealing with student and faculty concerns about group work, and
- setting up study teams.
 - forming teams,
 - dealing with dysfunctional teams,
 - grading,
 - distance learning, and
 - avoiding discouragement.

Challenges for teachers

Salmon (2000) has suggested that in any computer-supported session, the instructor might need to be a chair, host, lecturer, tutor, facilitator, mediator of team debates, mentor, provocateur, observer, participant, co-learner, assistant, community organizer, or some combination of these! This clearly points to the fact that the skills required on the part of the instructor are more complex and diverse than those required for a face-to-face lecture. Thus, instructors need to be prepared for the different roles they will have to assume. In some cases, this may mean formalized training programs.

However, it is quite possible for collaborative learning to benefit all students. It is often said by academics and instructors generally that the best way to learn a subject is to teach it, and for good reason – when teaching, one needs to gain a thorough knowledge of the subject, not

only to prepare material, but also to be able to answer questions confidently.

No matter how good the preparation on the part of the instructor, further questions will almost inevitably arise during the course of instruction, thus leading to an even better understanding.

It seems naïve in the extreme to assume a similar process will not occur when the students themselves take on the unofficial role of instructors to other students within their group.

Assessment

- At the beginning of the course, the instructor randomly assigns students into groups.
- Each group is assigned one of the weekly topics and has to make a single online presentation. Students are assessed not just for their group's presentation but also for their comments about other presentations.
- Each group presentation is also assessed on the quality of the discussion that follows. Typically, by the end of semester, students will have received over 100 inputs on their work from other students in the group, other groups, and the instructor.
- In the last week of term, students are invited to submit a recommendation in writing on each other's group performance.
- The instructor considers any such recommendations when allocating individual marks for group performance to members of the group.
- A student who a group decides did not contribute sufficiently may suffer a reduction in mark as a result.
- Different assessment criteria may be used – for example, for the electronic presentation, clarity and structure of presentation, originality of ideas, and ability to substantiate arguments by relevant data; for other contributions, understanding the arguments

that are made by other presenters, linking them to the relevant literature, and making pertinent critical comments about these arguments.

- The students' final marks are based on a combination of their group work throughout the semester and their performance in an end-of-semester examination.

Page 31

Online Group Projects:

Preparing the Instructors to Prepare the Students

- Preparing instructors to prepare students to participate in online group projects is an important precursor to successful collaborative projects in computer-supported courses.
- Lesson modules developed in "*The Group Project Project*" provided instructors with specific guidance in applying techniques and teaching strategies for collaborative online projects. Interviews with instructors and students participating in online collaboration and group projects, as well as reviews of published research, were influential in determining the content of the instructor preparation modules.
- Student collaborative learning and the resulting learning communities are important elements in online teaching, both in principle and in practice. It is the vibrant sense of community of learners that makes successful online courses so rewarding for participants.
- Group projects need to be considered in the overall instructional plan for usefulness, timeliness, and instructional quality. However, many instructors teaching
- online classes are themselves new to online teaching and learning. They need guidance in setting up and delivering instruction for their students to fully engage in an online collaborative learning experience. Providing this guidance was the goal of

The Group Project

- The Group Project incorporates theories and methods learned, and applies them to online lessons targeting instructors. The project focused on the development of lesson modules (or learning objects) that are intended to be used as part of a larger course.

- These modules include guidelines and specific “how to’s” for instructors, based on reported research in collaborative group projects in online learning. These lessons are designed to prepare instructors to prepare students to participate in online group projects and to apply techniques and teaching strategies for collaborative learning to online group projects. With this set of flexible instructional modules, the basic elements of online group projects can be passed on to instructors either individually or as a group.
- These modules instruct faculty members on the theory and process for including group projects in their own online course work. Preparation of instructors and students for online collaboration and group projects are critical to their success.

Student-Centered Learning

“

- Student-centered learning requires active input from students and requires intellectual effort and aids retention. Students must build their own knowledge through activities that engage them in active learning. Effective learning happens when students take stock of what they already know and then move beyond it.
- The role of the teacher in student centered learning is to facilitate the students’ learning by providing a framework (i.e., activities for students to complete) that facilitates their learning (Hiltz, 1993).
- Following the Constructivist Learning Approach, online group project activities are collaborative, conversational, intentional, and reflective (Lum, Mebius, & Wijekumar, 1999). Collaborative work, joint assignments, and learning resources shared among class members and the instructor are integrated (Mason, 1998). To succeed, students are self disciplined, intrinsically motivated, willing to learn, comfortable with basic technology, have access to a computer with an Internet connection and have adequate computing skills (McCormick & Jones, 1998).
- The group will not have all the skills or knowledge necessary to complete the activities and will need to work through a series of trial and error attempts.
- Experimenting is an important activity within the project. Depending on the skills within the group, the instructor may have to provide additional instruction or guidance or direction to ensure that the groups will be successful in bridging the knowledge gap before or during the project work.
- Practicing skills through project activities ensures that learners have the opportunity to acquire knowledge and move toward the expected learning outcomes. The group work necessitates using and refining skills in many

areas of group working, relationship building, and the specific content-related tasks.

- Group project work usually involves some individual work and the synthesis of the group deliverable. In an online environment, these activities usually require reading and summarization of the source information. Using online communications -discussion, email, chat-requires students to engage in reading and summarization.
- Depending on the project task, the depth of research and analysis can be extensive or relatively minor. Conducting research and analysis online is a natural extension of the project.
- Articulating (writing, drawing) appropriate to the project should be included.
- Each student is required to contribute through articulation, informing, and, in some cases, persuading team members. Online, more forms of expression such as images, animation, video, audio, may be possible and encouraged.

Instructional Approach

- In online teaching and learning, technology can provide new and challenging avenues for addressing a variety of learning styles. It is important to strive for a balance of instructional methods. Students can be taught in a manner they prefer, which leads to an increased comfort level and willingness to learn. Some learning in a less preferred manner provides practice and feedback in ways of thinking and solving problems.
- Students may not initially be comfortable with this, but with practice, they will become
- more effective learners. Teaching designed to address all dimensions on any of the
- models is likely to be effective (Felder, 1996). While each learning style model has its advocates, all models lead to more or less the same instructional approach.
- Traditional instruction focuses almost exclusively on formal presentation of material
- (lecturing), a style comfortable only for learners who prefer information presented in an organized, logical fashion and who benefit from time for reflection. To reach all types of learners, instruction should explain the relevance of each new topic, present the basic information and methods associated with the topic, provide opportunities for practice in the methods, and encourage exploration of applications

- Distance learning styles, or learning preferences, change over time and by situation (Diaz, 2002). Student characteristics change constantly. A model that continuously monitors student characteristics and determines which characteristics facilitate favourable outcomes is more appropriate than traditional static learning style models.
- This student- and learning-centered approach in educational practice can be accommodated in an online learning environment by providing information - student tracking, captured discussions, work products-for increasing faculty sensitivity to the individual learner

Benefits of Group Projects in Online Collaborative Learning

- There are significant benefits that can be derived from collaborative learning and project work (Tinzmann et al., 1990). The principle benefits of group projects in online collaborative learning include but are not limited to: building self-esteem, reducing anxiety, encouraging understanding of diversity, fostering relationships, stimulating critical thinking, and developing skills needed in the workforce.
- Building self-esteem is an important benefit of online collaboration and group project activities. Students are simultaneously working alone and in an intense community of learners. Students must develop and rely on their own efforts.
- There is little opportunity to be swept along with the rest of the group.
- There is no escaping the personal accountability. By contributing to the group effort, students take personal credit for their role in the activity.
- This visible effort is concrete evidence of participation and learning and contributes to building students' self-esteem.

Text -E Learning Standards.pdf

Page 22

The development of competency model

A competency may be considered to be based on subject matter knowledge and skill, contextualized with respect to particular situations or scenarios (Harzallah, Berio and Vernadat, 2006).

Competencies may be assembled and linked in a rich data structures. A competency may appear in more than one place in a competencies hierarchy.

Thus, it makes sense to capture the data model of competencies in some reusable form, so they have to be defined only once.

- **Description:** the general description of the competency.
- **Type:** type of trait that represents an aspect of the competency such as knowledge, skill, attitude, and so on.
- **Relationship:** relationship to other competencies such as “part-of”, “child competency”, and “parent competency”.
- **Proficiency level:** a measurement of the degree to which the competency has been achieved.
- **Measurement scale:** a scale that relates to proficiency level and weight.
- **Taxonomy:** a taxonomy reference for structuring competency data.

Evidence: facts or indicators about the achievement of a competency, such as test results and certificates.

- **Tools:** any tool(s) required to support reaching the competency.

- **User area:** Other data, such the description of a job position.

Page 23 *Table 1. A comparison of the capabilities of competency standards*

Page 25 *Figure 1. QTI version 2.0 processing (Wills et al., 2006)*

Page 26 *Coding*

Page 28 *Figure 4. Architecture of the COMBA system*

Page 29 *Figure 5. Ontology of COMBA*

Page 30 *Figure 7. ‘QTItools’ player showing the test result*

Experimental Validation of Generated Questions

An experiment (Sitthisak, Gilbert and Davis, 2008) was carried out to demonstrate the acceptability of the generated questions from the competency model, exploring the following two questions:

- Were the generated questions semantically intelligible to an expert teacher of the domain?

- How did students rate the generated questions on the criteria of clarity, usefulness, challenge, and match with the learning outcomes?

The results indicate that the generated questions were of acceptable value to the students.

The student ratings showed the specific questions were more useful, and the generic questions were more challenging. This finding suggests that the students did not enjoy answering with definitions and explanations, and preferred questions with a variety of specific situations.

Page 33 *Table 6. Illustrative question template summaries*

Learner management in e-Learning Page 500

Educational institutions and corporate bodies are turning to e-Learning primarily because it has capabilities to effectively impact a larger community for the least amount of investment and expense.

Secondarily, it is contributing to an increase in retention and recruitment. To fully apprehend the results of e-Learning, it is important to examine the systems of learning available, how to manage them, and how they can be integrated with other learning environments.

Example www.electricaldiploma2013.zoomshare.com Study option 1/2/3

SAMPLE ASSESSMENT ITEMS:

- **documented learning strategies**

In TAFE college where I am teaching, there are different categories of students. Some can attend the classes during the day times, some from the industries can only attend at night & some from remote areas can not attend the face to face classes.

I develop the teaching strategies to teach the face to face classes as well as flexible online/ off line learning.

I establish the learning support website

www.electricaldiploma2013.zoomshare.com

Advanced Diploma in Electrical Engineering & Technology Home.htm

& plan three tupes of learning strategies

Study Option 1.

The students will study the lessons by downloading them from the link

Click

HERE

http://www.filefactory.com/file/58jjdqiek18z/Study_Option%201.htm

Password—joe2013

The face to face class lessons are recorded in digital note takers and digitized.

The students learn the topics of the lessons, do the exercises and submit the assignments.

By this way, the same level of learning as to face to face class can be obtained.

Study Option 2

Study option 1 is suitable for the students who have not learnt the lessons before.

But some students prefer their own study & want to do self paced assignment projects. For those, I design the study option 2 webpage in which the textbooks/ reference books are uploaded & linked. The students can study those resources , do the project assignments and submit them.

It is more suitable for the matured aged students with industrial experiences.

The link can be accessed at

Click [EE011 +1790817794.Zoomshare.com](https://www.zoomshare.com/join/EE011+1790817794)

<http://www.filefactory.com/file/551mzcdoav8p/1790817794zoomshare.htm>

Password—joe2013

Study Option 3

It is a video version of lesson delivery. The same classroom demonstration can be viewed. The students who attend the face to face class or who view the lesson demonstration will then be assessed by test/ examinations.

[youtubevideos.htm](#)

Practical

Practical delivery is also designed with both face to face and online mode.

For online mode, the students can study and do the engineering practicals from the following link.

[youtubevideos.htm](#)

Thus, merging the two areas, functions in LMS will include:

- Managing facilities, users, courses, instructors, roles, and generating reports,
- A Course calendar outlining the timelines for course or assignment,

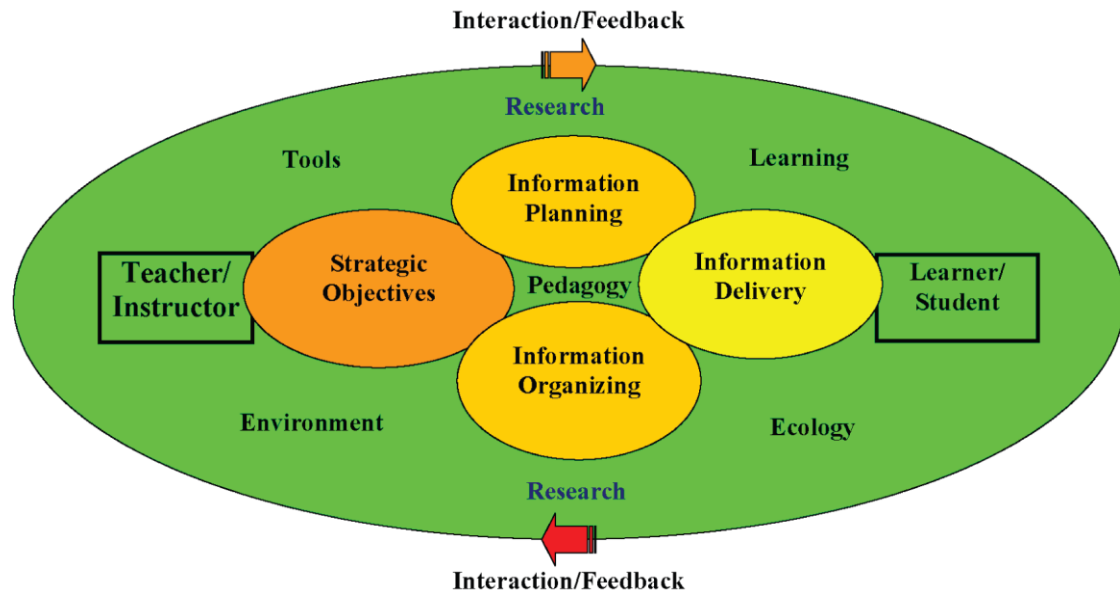

- A Learning Path or the means of identifying how the student and faculty will complete the knowledge and other competencies,
- Student messaging and notifications,
- Assessment/testing capable of handling student pre/post testing,
- Display scores and transcripts,
- Grading of coursework and roster processing, including wait listing,
- Web-based or blended course delivery.

Characteristics more specific to corporate learning, which sometimes includes franchisees or other business partners, includes:

- Autoenrollment (enrolling Students in courses by predefined criteria),
- Administrator/Manager enrollment and approval,
- Definitions for prerequisites or equivalencies (generally boolean),
- Integration with performance tracking and management systems,

Planning tools to identify skill gaps at departmental and individual level,

- Curriculum, required and elective training requirements at an individual and organizational level,
- Grouping students according to demographic units (geographic region, product line, business size, etc.),
- Assign corporate and partner employees to more than one job title at more than one demographic unit.

Overview of traditional, Non E-based Pedagogy

Principles of teaching have been traditionally established in methods of instruction for a while and extensively researched. According to Meyen et al (2002), pedagogy includes teaching methods related to the following

- a. presentation of experiences,
- b. engagement of learners,
- c. reinforcement,
- d. motivation,
- e. organization of teaching tasks,
- f. feedback,
- g. evaluation, and
- h. curriculum integration

of these elements have been researched to determine the most significant factors with what, who, when, where and how. However, certain common themes have emerged over time including:

1. learner
2. teacher
3. learning environment
4. learning content
5. learning support systems/tools

For example, when an institution trains teachers, is the institution's effectiveness evaluated on the basis of the following?

- i. number of teachers produced,
- ii. practices and approaches to teaching and

producing the teachers and evaluating them?

iii. failure, passing, college admission or attendance rates of the students produced by the teacher or the institutions in which they teach?

iv. how many students go on from the school to be classified as successful professionals

v. e.t.c.?

Overview of E-based Pedagogy

According to Meyen et al (2002), e-Learning is a form of pedagogy, and the effectiveness of pedagogical practices can be measured. A knowledge base of pedagogical practices has evolved over time and is currently still a work in progress.

Examples include practices related to communication, assessment, instructional design and mediation.

Traditional/classical and E-Learning systems

In both systems, the themes are the same and the players have been stable. What has changed is that the traditional environment more strongly emphasizes a hierarchical structure for learning with the teacher controlling the environment, and a more limited social environmental learning.

However, because classical learning also includes limited space (in distance and time) for physical contact, it also has some social learning environments. This is in contrast to the virtual environment where several learning processes may be simultaneously engaged in several private spaces that may include two or more people.

Thus the “hubbub” of the communication environment can be “controlled” for more private interactions without the other learning “relationships” being aware of the exchanges in the virtual spaces.

However, the virtual environment lacks the physical interactions of the real environment, thus the avenues for information transmission to all the senses is currently limited.

five-phase implementation strategy

labeled *initiating*, *discovering*, *envisioning*, *actioning* and *sustaining*. with four key theoretical concepts: metastrategy (Limerick et al. 1998); appreciative inquiry (Cooperrider and Whitney 1996); action learning (Argyris and Schon 1996; Kolb 1984; Zuber-Skerrit 1990) and organizational capacity building

Technology in the resource Poor Environment

Technology and creativity in e-Learning can help compensate for and overcome levels of resource poverty.

Recent advances in computer technology have made e-Learning a major component of the learning environment. Teachers and students are challenged to upgrade their skills for appropriate use of the technology to meet pedagogical and didactic needs.

The virtual environment allows and encourages students to initiate their learning.

The instructor/teacher's role becomes more supportive, flexible and responsive, to meet and address the student's requirements while the instructor also expands his/her repertoire of tools and competencies.

By learning and implementing new skills, teachers can introduce new approaches such as multimedia course design, tutoring, managing collaborative work groups, problem-based learning, product development or any emerging technologies to encompass new teaching and learning in contrast to traditional teaching methods.

This high quality, effective and efficient learning process for both students and teachers can be brought about by improved teacher training

To make pedagogy effective, teachers can design and develop courses (FGCU 2006, Athabascau 2004, Illinois Online Network 2007) of interest and make them available on-line for communicating with the student remotely.

The design must incorporate necessary skills for understanding – conceptual, cognitive, psychometric, and attitudinal, among others – knowledge, skills and competence transfer.

Such measures do not require much resources for the teacher; rather, it utilizes available technologies to gain interaction with the student.

Example

- e-Based electrical practical class.
- e-based practical videos

Sample-- CNC 1.mp4-- CNC 3.mp4-----Mechanical

The Use of blended Learning Approaches to Address specific resource Needs

In e-Learning, the terms blended learning and hybrid courses are synonymously used to refer to a combination or integration of face-to-face class room instruction with online instruction (Graham 2005).

Blended learning incorporates the best features of the two learning approaches.

Regardless of whether the environment is resource rich or resource poor, the blended learning helps to bridge gaps in learning. Learners will have face-to-face instruction, a wealth of learning activities available online for independent learning, and reduce drawbacks in resources for class instruction and time.

In resource poor environments, it is necessary to assess the level of blending required based on the resource needs available for class room and online instruction. If the quality of instructors, buildings, or space is a limitation, then online instruction makes a greater contribution and has greater weight; but a balance is more critical to the learner's needs.

Blending is an ongoing process and evolves with time, until effective delivery of instruction is attained for both instructor and learner.

The reduction of class room time will also help retain students who are limited by other constraints such as transportation, family responsibilities, occupation, and/or being otherwise engaged.

Blended learning allows students to make up for class hours with online instruction available for them to study at their own pace and style.

Blended learning also provides more options for the teacher to manage and organize course curriculum.

Online instruction can be used to deliver a major portion of course contents, while class room instruction can be utilized for discussing difficult aspects of learning or for problem solving (Doo & Seung 2008).

The blended learning environment puts greater responsibility on the instructor to design the course to address the needs of the learner based on the best pedagogy applicable to the student.

LMS may help to monitor and track student performance, and throw light on blended instruction effectiveness.

Day 8 Session 2

Sharing the e-Learning work experience utilized in TAFE-NSW
Australian Classroom

- Resources development
- Computer assisted test
- Use of online test/online survey
- Online simulated practicals

ASSESSMENT POLICY OF ADVANCED DIPLOMA COURSES IN ENGINEERING, MANAGEMENT & INFORMATION TECHNOLOGY

ASSESSMENT POLICY OF PROFESSIONAL DIPLOMA COURSES IN ENGINEERING, MANAGEMENT & INFORMATION TECHNOLOGY

ASSESSMENT POLICY OF CERTIFICATE/ DIPLOMA COURSES IN ENGINEERING, MANAGEMENT & INFORMATION TECHNOLOGY

The assessment tasks are designed for assessing the followings

Graduates at this level will have specialised knowledge and skills for skilled/paraprofessional work and/or further learning

Knowledge	Graduates at this level will have technical and theoretical knowledge in a specific area or a broad field of work and learning
Skills	<p>Graduates at this level will have a broad range of cognitive, technical and communication skills to select and apply methods and technologies to:</p> <ul style="list-style-type: none">• analyse information to complete a range of activities• provide and transmit solutions to sometimes complex problems• transmit information and skills to others
Application of knowledge and skills	Graduates at this level will apply knowledge and skills to demonstrate autonomy, judgement and defined responsibility in known or changing contexts and within broad but established parameters

Competency-based training focuses on students' ability to achieve learning outcomes to a specified level (ie Competent). Once the students attain this level, they receive a grade of Competent .

The assessment grades are given at USA Grading Criteria together with Australian Competency based training system,.

The assessment tasks up to diploma level is focussed on the knowledge the students needed in order to perform that work, and the abilities the students needed in order to apply their knowledge in an engineering /management, Information Technology context.

The assessments project assignments are designed to assess the candidates' capability in feasibility investigation, scoping, establishing criteria/performance measures, assessing and reporting technical and procedural options; design and development; component, resources and materials sourcing and procurement; construction, prototyping, manufacture, testing, installation, commissioning, service provision and de-commissioning; tools, plant, equipment and facilities acquisition, management, maintenance, calibration and upgrades; operations management; procedures documentation; presentation and reporting; maintenance systems design and management; project and facility management; quality assurance, costing and budget management; document control and quality assurance in several engineering, business and information technology applications.

IQY Technical College uses continuous monitoring & assessment methods and tasks to evaluate the student's competence in a particular unit of competence/qualification. All assessments tasks are designed in accordance to the relevant training package specifications of a qualification/unit of competence and may include assignments, practical assessments, presentation, project work, written tests or other methods deemed appropriate to assess students' competence in carrying out tasks to a required standard.

Especially assignments/ project works are continually assessed throughout the course as the students progress in their study. For a limited circumstances, formal written tests are conducted.

ASSESSMENT POLICY OF ADVANCED DIPLOMA COURSES IN ENGINEERING, MANAGEMENT & INFORMATION TECHNOLOGY

The assessment tasks are designed for assessing the followings

Graduates at this level will have broad knowledge and skills for paraprofessional/highly skilled work and/or further learning

Knowledge	Graduates at this level will have broad theoretical and technical knowledge of a specific area or a broad field of work and learning
Skills	<p>Graduates at this level will have a broad range of cognitive, technical and communication skills to select and apply methods and technologies to:</p> <ul style="list-style-type: none">· analyse information to complete a range of activities· interpret and transmit solutions to unpredictable and sometimes complex problems· transmit information and skills to others
Application of knowledge and skills	<p>Graduates at this level will apply knowledge and skills to demonstrate autonomy, judgement and defined responsibility:</p> <ul style="list-style-type: none">· in contexts that are subject to change· within broad parameters to provide specialist advice and function

Competency-based training focuses on students' ability to achieve learning outcomes to a specified level (ie Competent). Once the students attain this level, they receive a grade of Competent .

The assessment grades are given at USA Grading Criteria together with Australian Competency based training system,.

The assessment tasks for advanced diploma level is focussed on operate within broadly-defined technical & business environments, and undertake a wide range of functions and responsibilities and specifically in its application, adaptation or management, in a variety of contexts.

Their expertise often lies in familiarity with the current state of development of a business system or technology domain and most recent applications of the business and technology

The assessment tasks are designed for assessing the activities, knowledge & skills that combines the need for a strong understanding of practical situations and applications, with the intellectual challenge of keeping abreast of leading-edge developments as a specialist in a technology or business domain and how these relate to established practice.

The assessment tasks are focussed on students' understanding of the specific interactions with other aspects of an overall operating context and for managing the contributions of their specialist work to a broader engineering or business system or solution. The students' focus on sustainable solutions and practices which optimise technical, social, environmental and economic outcomes within the technology or business practice domain and understanding of the standards and codes of practice that underpin the technology & business practice domain and ensure that the performance outcomes comply with statutory requirements & relevant code of practice of business systems as well as implementation, operation, quality assurance, safety, management, and maintenance of projects, plant, facilities, or processes within specialist practice area(s) of the technology & business practice domain

IQY Technical College uses continuous monitoring & assessment methods and tasks to evaluate the student's competence in a particular unit of competence/qualification. All assessments tasks are designed in accordance to the relevant training package specifications of a qualification/unit of competence and may include assignments, practical assessments, presentation, project work, written tests or other methods deemed appropriate to assess students' competence in carrying out tasks to a required standard.

Especially assignments/ project works are continually assessed throughout the course as the students progress in their study. For a limited circumstances, formal written tests are conducted.

ASSESSMENT POLICY OF PROFESSIONAL DIPLOMA COURSES IN ENGINEERING, MANAGEMENT & INFORMATION TECHNOLOGY

The assessment tasks are designed for assessing the followings

Graduates at this level will have broad and coherent knowledge and skills for professional work and/or further learning

Knowledge	Graduates at this level will have broad and coherent theoretical and technical knowledge with depth in one or more disciplines or areas of practice
Skills	<p>Graduates at this level will have well-developed cognitive, technical and communication skills to select and apply methods and technologies to:</p> <ul style="list-style-type: none">· analyse and evaluate information to complete a range of activities· analyse, generate and transmit solutions to unpredictable and sometimes complex problems· transmit knowledge, skills and ideas to others
Application of knowledge and skills	<p>Graduates at this level will apply knowledge and skills to demonstrate autonomy, well-developed judgement and responsibility:</p> <ul style="list-style-type: none">· in contexts that require self-directed work and learning· within broad parameters to provide specialist advice and functions

The assessment grades are given at USA Grading Criteria together with Australian Competency based training system, Test / Examination & Project Assignments are utilized in assessment tasks.

The assessment tasks are designed to assess the candidate's capability to take responsibility for engineering / business / IT projects and programs in the most far-reaching

sense. This includes the reliable functioning of all materials, components, sub-systems and technologies used; their integration to form a complete, sustainable and self-consistent system; and all

interactions between the technical system and the context within which it functions. The latter includes understanding the requirements of clients, wide ranging stakeholders and of society as a whole; working to optimise social, environmental and economic outcomes over the full lifetime of the product or program; interacting effectively with other disciplines, professions and people; and ensuring that their work contribution is properly integrated into the totality of the undertaking.

The assessment tasks are designed for candidate's capability in interpreting technological possibilities to society, business and government; and for ensuring as far as possible that policy decisions are properly informed by such possibilities and consequences, and that costs, risks and limitations are properly understood as the desirable outcomes.

The assessment activities are also focussed on bringing knowledge to bear from multiple sources to develop solutions to complex problems and issues, for ensuring that technical and non-technical considerations are properly integrated, and for managing risk as well as sustainability issues. While the outcomes of engineering have physical forms, the work of

The students' advancement of technologies and with the development of new technologies and their applications , new business practice through innovation, creativity and change. Professional Engineers may conduct research concerned with advancing the technology & business practice and with developing new principles and technologies within a broad technology & business practice discipline.

9.2.2 Programme Objectives

- i. State the vision and mission of the Technological Institutions.
- ii. Describe the Programme Objectives and state where they are published.
- iii. Describe how the Programme Objectives are consistent with the vision and mission of the Technological Institutions and stakeholder requirements.
- iv. Describe the processes used to establish and review the Programme Objectives, and the extent to which the programme's various stakeholders are involved in these processes.
- v. Describe how the Technological Institutions ensures achievement of the Programme Objectives.
- vi. Describe the ongoing evaluation of the level of achievement of these objectives, and the extent to which the programme's various stakeholders are involved in these processes.
- vii. Describe how the results obtained from evaluation are being used to improve the effectiveness of the programme.

(Myanmar Engineering Council)

Evaluation/Obtain the Result----

Individual Teacher/Class----- Course—Department--- The whole Institute

How to assess the learning environment is the main thing to assess the academic position and operation condition of the whole institution.

ASSESSING AND IMPROVING CLASSROOM ENVIRONMENT

STUDENTS SPEND a vast amount of time, in the order of 15,000 hours, in school classrooms during primary and secondary schooling. Consequently, the quality of life in these classrooms is of great importance and students' reactions to and perceptions of their school experiences are significant.

Teachers often speak of a classroom's climate, environment, atmosphere, tone, ethos or ambience and consider it to be both important in its own right and influential in terms of student learning. It would be rare, however, for science and mathematics teachers to include classroom environment measures among their evaluation procedures. Typically, teachers concentrate almost exclusively on the assessment of academic achievement, and devote little attention to factors which might be related to their students' performance.

ASSESSMENT OF CLASSROOM ENVIRONMENT

DESPITE THE FACT that the original form of several instruments measuring student perceptions of classroom environment has proved useful for various research purposes, experience has shown that many teachers would prefer an assessment method which is more economical in terms of the time required for administration and scoring.

A METHOD FOR IMPROVING CLASSROOM ENVIRONMENT

FRASER (1981) has proposed a simple approach by which teachers can use information obtained from classroom environment questionnaires to guide attempts to improve their classrooms. The basic approach involves two aspects. First, assessments of student perceptions of both their actual and preferred classroom environment are used to identify differences between the actual classroom environment and that preferred by students. Second, strategies aimed at reducing these differences are implemented. An example of the use of these methods in a secondary science class is described by Fraser and Fisher (1986) and an example involving a mathematics class is contained in Fraser, Malone and Neale (1989).

1. Assessment.
2. Feedback.
3. Reflection and Discussion.
4. Intervention.

5. Reassessment.

Scales

- My Class Inventory—Page 49+50
- Science Laboratory Environment Inventory—Page 55+61-64
- Items in the What is Happening in this Class? Questionnaire

Student Cohesiveness

1. I make friendships among students in this class.
2. I know other students in this class.
3. I am friendly to members of this class.
4. Members of the class are my friends.
5. I work well with other class members.
6. I help other class members who are having trouble with their work.
7. Students in this class like me.
8. In this class, I get help from other students.

Teacher Support

9. The teacher takes a personal interest in me.
10. The teacher goes out of his/her way to help me.
11. The teacher considers my feelings.
12. The teacher helps me when I have trouble with the work.
13. The teacher talks with me.
14. The teacher is interested in my problems.
15. The teacher moves about the class to talk with me.
16. The teacher's questions help me to understand.

Involvement

17. I discuss ideas in class.
18. I give my opinions during class discussions.
19. The teacher asks me questions.
20. My ideas and suggestions are used during classroom discussions.
21. I ask the teacher questions.
22. I explain my ideas to other students.
23. Students discuss with me how to go about solving problems.
24. I am asked to explain how I solve problems.

Investigation

- 25. I carry out investigations to test my ideas.
- 26. I am asked to think about the evidence for statements.
- 27. I carry out investigations to answer questions coming from discussions.
- 28. I explain the meaning of statements, diagrams and graphs.
- 29. I carry out investigations to answer questions which puzzle me.
- 30. I carry out investigations to answer the teacher's questions.
- 31. I find out answers to questions by doing investigations.

- 32. I solve problems by using information obtained from my own investigations.

Task Orientation

- 33. Getting a certain amount of work done is important to me.
- 34. I do as much as I set out to do.
- 35. I know the goals for this class.
- 36. I am ready to start this class on time.
- 37. I know what I am trying to accomplish in this class.
- 38. I pay attention during this class.
- 39. I try to understand the work in this class.
- 40. I know how much work I have to do.

Cooperation

41. I cooperate with other students when doing assignment work.
42. I share my books and resources with other students when doing assignments.
43. When I work in groups in this class, there is teamwork.
44. I work with other students on projects in this class.
45. I learn from other students in this class.
46. I work with other students in this class.
47. I cooperate with other students on class activities.
48. Students work with me to achieve class goals.

Equity

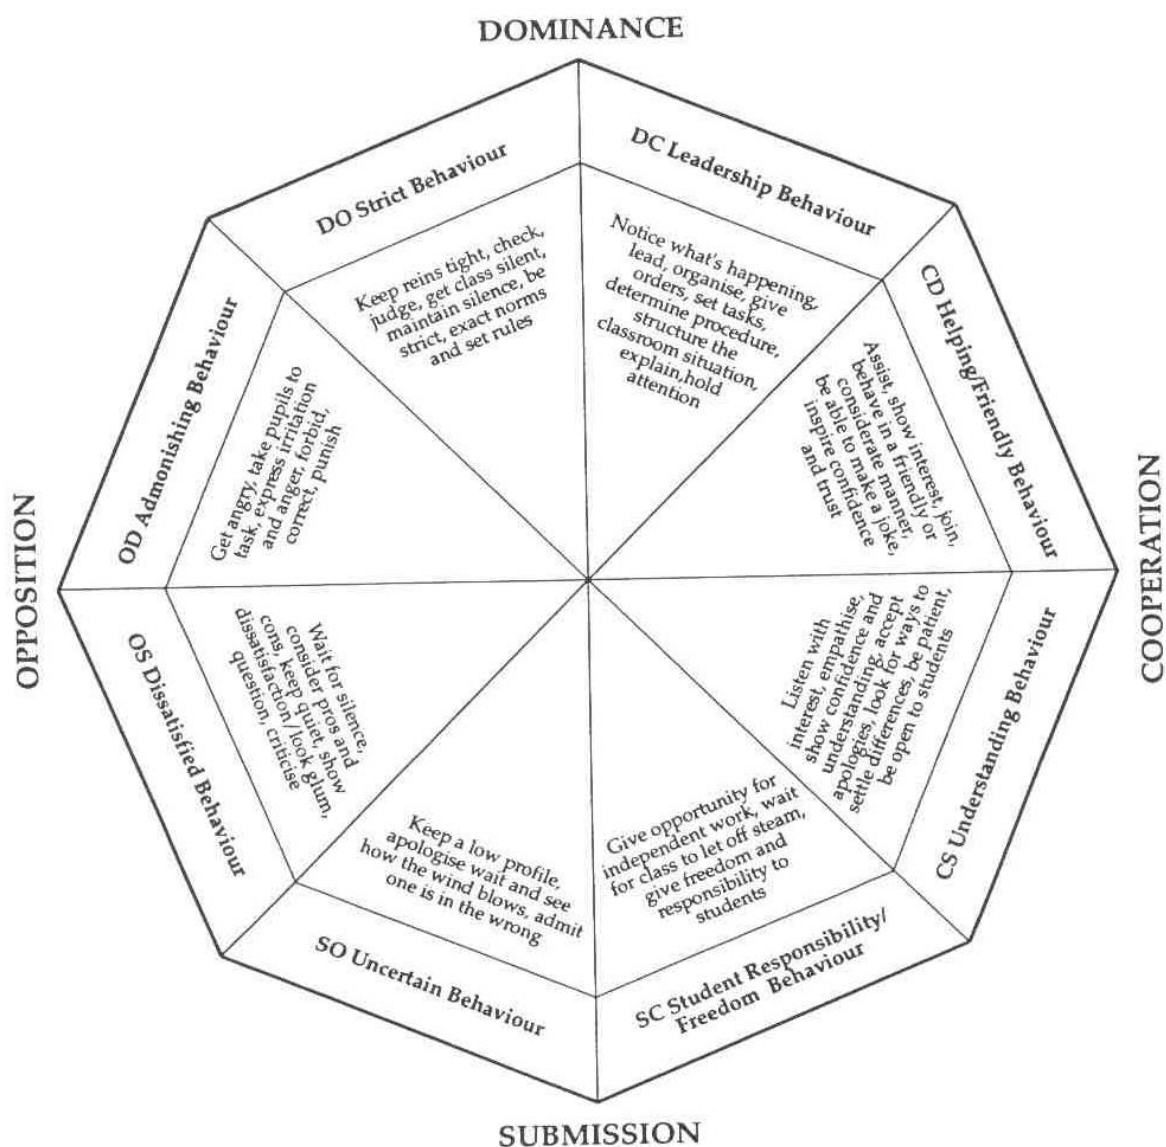

49. The teacher gives as much attention to my questions as to other students' questions.
50. I get the same amount of help from the teacher as do other students.
51. I have the same amount of say in this class as other students.
52. I am treated the same as other students in this class.
53. I receive the same encouragement from the teacher as other students do.
54. I get the same opportunity to contribute to class discussions as other students.
55. My work receives as much praise as other students' work.
56. I get the same opportunity to answer questions as other students.

6.1 The Nature of the Curriculum

Interviews with teachers and students in both countries indicated that the nature of the curriculum could be a major influence on the learning environment created by teachers in each country. The story of a Taiwanese classroom describes a teacher-centered lesson in which students appear to play a fairly passive role. Without exception, the classes observed by the researcher in Taiwan were teacher-centered and, whilst the roles of the students varied between teachers, there were generally few opportunities for discussions or questions. Interviews with teachers revealed that the teacher-centered approaches were largely a result of the examination-driven nature of the curriculum:

The story describes the teacher's battle to fit the required content into each lesson and the desire of the teacher to avoid giving the students additional work. The science curriculum (for both biology and physics) is presented to students in the form of textbooks, and examinations are based on the content of these. As a result, it is important for teachers to cover all areas. Teachers whom were interviewed explained that teacher-centered methods were the most practical way to cover the content in the given time frame and diversions (described in the story as student questions referring to real-life situations) are often not possible given the time constraints:

In contrast, the Australian teachers whom were interviewed generally expressed a desire to use methods that were not teacher-centered in their science classes. Their reasons were varied, but generally it was felt that, by using a variety of approaches, students would be better able to develop a range of abilities in their students. In many cases, these teachers claimed that they were encouraged, through professional development days and by other staff, to use a variety of methods in their teaching.

Rote learning was frowned upon by many of the teachers interviewed in Australia and one commented that "developing the students' ability as learners is more important than the acquisition of content knowledge" (Interview, Teacher 1, p. 2). In general, these teachers were of the opinion that, by incorporating a range of teaching styles, they were more likely to cater for the range of learning styles that could be present in their class. In addition, they felt that their students were more likely to understand concepts if they were actively involved in their learning.

6.4 Questioning Techniques

Both stories describe the use of questioning in the classrooms, but it appears that the techniques used were different for the two countries. The question-and-answer session described in Australia depicts a teacher posing questions to the whole class and selecting only from students with their hands raised. Interviews with teachers indicated that they were careful not to damage the self-esteem of students and to ensure that the student's pride amongst his/her peers was protected. According to student interviews, many students were reluctant to raise their hands unless they were reasonably sure of the answer, while others made a point of never answering questions in class. Students explained that ridicule from peers was possibly the main reason for their reluctance to answer questions: "I usually don't like putting my hand up. ... If I get the answer wrong, then I get embarrassed [because] other kids in the class could laugh at me" (Australian Student A).

In contrast, teachers whom were observed in Taiwan (described in the story in Figure 2) randomly select students using the students' identity numbers (stitched above the pocket on their school shirts) rather than their names. The selected student stood up to answer the question and, if the answer was wrong, the teacher bluntly told him or her so. The student then either tried again or sat down and listened to the answer of another student. Interviews with students revealed that they were not uncomfortable with this method of questioning and that questions were used as a means of gauging what students need to know or what they do not understand to enable them to improve and learn. As one student put it, "When he [the teacher] teaches important content, he checks that we understand. So he asks us questions" (Taiwanese Student, Interview 2, Item 23).

Leadership

● Management has its start point in the organisation. It is taken to involve the conduct and evolutionary development of an institution and its staff by means of rational decisions and performance monitoring underpinned by information systems, policies, procedures and plans. ● Leadership has a start point in the people within the organisation. It is concerned with getting their willing cooperation and contribution towards organisational goals and with meeting their needs as individuals.

● Just as 'managers' exist at all levels of the organisation so, too, can leaders be found at all levels. The latter do not necessarily depend on a formal role position. ● Both activities, leading and managing, are required. The balance between each activity varies both from time to time and also from the position of an individual within an organisation.

Both activities, leading and managing, are required. The balance between each activity varies both from time to time and also from the position of an individual within an organisation. 2 Leadership issues: raising achievement

● Whether one activity subsumes the other or whether management and leadership exist as poles of activity along a continuum does not have any bearing on the argument presented.

● Incorporation and the essential need to run an efficient and effective organisation have made it inevitable that there has been an emphasis on the top levels of colleges and upon the managerial activities of senior management. Leadership has

always been required at that level. Our interest lies in improving the impact of leadership activity at lower levels in colleges.

- These lower levels are those at which course organisation and delivery by a group of staff is the key activity. If leadership is to have a more direct impact on student achievement than is the case with the mediated leadership activity of senior post-holders, then this lower level may be the one level to examine in more detail.

Leadership in further education

- clarification of what we mean by leadership, particularly within an educational context
- an outline of a number of models of, or approaches to, leadership
- a description of the key behaviours which are associated with effective leadership
- leadership roles within organisations
- how leadership impacts on student outcomes

Features of leadership

- leadership is a process of influencing
- leadership can be exercised by people in organisations who do not possess formal authority
- leadership implies followers
- leadership involves the achievement of goals or objectives

What does leadership look like?

Instructional leadership

It focuses on the development of behaviours that directly influence teachers in their relationships with students and, in particular, the planning and delivery of teaching and learning.

Transformational leadership

Idealised influence – the ability of the leader to gain the trust, respect and support of those being led. This might otherwise be termed charisma which brings it close to the traits concept of leadership.

- Inspirational motivation – the ability to inspire and focus the attention of individuals on the achievement of shared goals, often using imagery and symbols.
- Intellectual stimulation – a culture of challenge and questioning where individuals are constantly encouraged to reassess both ways of working and the values of the organisation including those of the leader.
- Individualised consideration – the support that is available to individuals to allow them to develop in order to meet new challenges and goals.

Moral leadership

Moral leadership is based on the assumption that educational and other organisations operate within a framework of absolute values.

The leader's role is to:

- influence the adoption of a clear set of organisational values
- manage conflict over the interpretation of basic values
- commit others to the values that leaders themselves believe to be good.

Participative leadership

Participative leadership In common with moral leadership, participative leadership emphasises consultation and the importance of the decision-making processes of the group. Unlike moral leadership, however, participation and consultation are usually based on more pragmatic decisionmaking needs rather than on any ideas of 'moral rightness' or 'what ought to be'. The need to establish a sense of ownership of decisions usually underpins use of the model.

Participative leadership can be seen as leading to:

- better quality decisions
- greater consensus and acceptance

- better understanding of the decision by those responsible for implementing it
- the development of decision-making skills throughout the organisation
- enhanced motivation and job satisfaction for staff involved in decision-making
- resolution of conflict and the development of the team. However, participative leadership often results in conflicts associated with:
 - the need for consensus and at the same time the need for strong and authoritative leadership
 - the need to consult and involve while at the same time making decisions which are timely and efficient in terms of the resources used
 - the need to reconcile accountability for the implementation of externally derived policy with the values and systems orientation of staff within a school or college

Managerial leadership

This model of leadership is strongly evidenced in further education.

The model is sometimes referred to as transactional or functional and is widely associated with writer John Adair.

Teams and teamworking are important in the model, and the leader's primary responsibility is to balance the needs of the team, the task on which the team is engaged, and the individual needs of team members.

The leadership role is strongly associated with the team leader rather than any of the other team members and there is therefore an emphasis on leader training and skills development.

Contingent leadership

Closely related to the managerial leadership model is contingent or situational leadership. Leadership is viewed as situationally focused – in other words

variations in the contexts for decision-making require different leadership responses. Leaders therefore need to master a range of leadership practices including the development of different leadership styles that can be adopted in varied settings. Organisational learning The concept of the learning organisation developed during the late 1980s and early 1990s. It is often associated with the work of Peter Senge. Senge's view was that just as individuals have the capacity to continually learn, so too do organisations. This new type of organisation requires a new type of leadership – one in which the purpose of leadership is to build organisational capacity for learning. The leader has three important roles to perform:

- As designer, the leader's role is to design the organisational learning process so that people are able to solve problems and achieve personal mastery. This requires new leadership behaviours including coaching, mentoring and helping others to learn.
- As steward, the leader has a responsibility not only for developing a personal vision for the organisation but ensuring that the vision reflects the common aspirations of others working in it.
- As teacher, the leader's role is not just about coaching and supporting individuals but more importantly about developing 'systemic understanding' – the ability to see how the various parts of the organisation fit together and inter-relate, and how learning can be transferred from one section or from one situation to another (Senge 1990).

LEADERSHIP IN CHANGE MANAGEMENT

A NEW MODEL OF LEADERSHIP

It has been argued that the traditional style of management is inappropriate for today's organisation. A more flexible, responsive leader displaying high trust, participative management styles is needed to replace the autocratic, individualised, competitive leader who was found to be effective in the past (Smith & Hutchinson 1995, 93)

THE MANAGERS

Future TAFE managers need the 'soft' or 'people' skills that have been described by many management theorists (Feuer 1988; Randell 1993; Smith & Hutchinson 1995) according to the participants in this study. Words used by participants to describe these managers included integrity, honesty, sincerity, humbleness, courage, openness, trust, empowering, supporting, developing, empathetic, flexible, team centred, adaptable, encouraging, approachable, fair and ethical.

From management to leadership

The shift from management to leadership has been brought about by the fundamental requirement for people to cope with the management of change. John Kotter (1990) suggested that management is about planning, organising and controlling, whereas leadership is about setting direction, aligning people – and motivating and inspiring them. It is fundamentally about people.

THE MANAGER	THE LEADER
Administers Is a copy Maintains Focuses on systems Relies on control Short-range view Asks how and when Eye on the bottom line Imitates Accepts the status quo Obeys orders without question Does things right Is trained Managers operate within the culture.	Innovates Is an original Develops Focuses on people Inspires trust Long-range view Asks what and why Eye on the horizon Originates Challenges the status quo Obeys when appropriate but thinks Does the right things Learns Leaders create the culture.

The leadership competencies

- First, leaders need to set the direction for the organisation, which incorporates a vision of the future.
- Second, effective leaders are influential examples and role models because they are aware that people are more influenced by what they see than by what they are told.
- Third, they are effective communicators, both in communicating the vision, and also inspiring their people in such a way that it causes an emotional effect.
- Fourth, provided that the leader is convincing, followers will want to be part of the operation and work towards the common goal themselves. This process is one of alignment.
- Fifth, effective leaders bring out the best in people. This involves a holistic approach which embraces motivation, empowerment, coaching and encouragement.
- Sixth, leaders need to be proactive in a situation of continual change. In effect, they become change agents.
- The seventh attribute is the ability to make decisions in times of crisis and for the ambiguous.

These seven competencies, which are discussed in detail in *The business of leadership* (Hooper and Potter 1997), are the skills required to lead effectively at all levels, in the appropriate style, in order to add value to an organisation. In addition, these competencies enable leaders to make significant improvement to the performance of their organisations.

Effective communications

Part of the process of creating understanding is effective communications. It is particularly difficult when managing change, because leaders are often struggling to clarify their own thinking as well as trying to communicate a clear message. Unless there is clarity of thought, there is a danger that leaders will give a mixed message, which can lead to confusion. The important first step is to have a clear strategy right from the outset. Once the general way forward is clear, it is essential that the senior management team maintain open communications with every individual in that group.

Change Management Approach

Traditional Change Management Approach & Participative Change Management Approach

Read the provided article “Change Management Approach.pdf” & “Helping People Adapt”

TRADITIONAL CHANGE MANAGEMENT APPROACH

For a number of decades the dominant paradigm has been the traditional change management approach. It is best represented by the viewpoint that leaders and managers are solely responsible for making the key decisions within an organisation and are also accountable for ensuring successful change management processes. The focus in the literature is about

managing the transition and specifically overcoming resistance to change (Hay and Hartel, 2000; Maurer 1996; Tichy, 1983; Quinn, 1978; March and Simon, 1958). Senior managers ‘worry a lot’ about change but too few of these concerns are focused on building rapport with the affected staff. Much of the focus instead is with providing legitimate justification for the need for the change. They avoid dealing with the tougher issues of staff perception of hidden agendas and unsurfaced rationale(s) rooted in self-interest and the exercise of managerial power.

Resistance to change (once seen as inevitable) when manifested can be resolved through a number of mechanisms. Argyris and Kaplan's (1994) study of the implementation of activity based costing identified three processes to overcome barriers to change that exist at the individual, group, inter-group and organisational levels. These included education and training to explain the need for change and reduce fear of the unknown; sponsorship of the process by key individuals who then persuade others; and, alignment of incentives such that systems and structures reward and reinforce effective change.

PARTICIPATIVE CHANGE MANAGEMENT APPROACH

There is a need to alter the approach and shift the focus within the extant literature with its prescriptive edge that attempts to deliver more successful change management and implementation with the concomitant emphasis on identifying and overcoming employee resistance (Waldersee and Griffiths, 1997; Clarke, 1994; Kanter, Stein and Jick, 1992;

EFFECTIVE WAY OF CHANGE MANAGEMENT

Carnall, 1990). The alternative is to involve employees from the beginning by permitting and encouraging active involvement, full participation in and psychological ownership of the change process.

This would act as an effective counterfoil to the shortcomings of management '...failing to communicate a vision, planning problems, not matching vision with processes, not being committed to the change process, failing to lead by example, demonstrating inconsistencies of attitudes to change' (Walderssee and Griffiths, 1997, p. 10).

The first step is to rethink the existing negative notion of resistance. Waddell and Sohal (1998, p. 5) argue that one should consider the utility of resistance in '...injecting energy into the change process' and that it '...encourages the search for alternative methods and outcomes in order to synthesise the conflicting opinions that may exist.' This means that resistance can be a positive force and a critical source of innovation during a change process to ensure that many more possibilities are examined and evaluated closely.⁴ What we advocate then is to recast the notion of resistance so that it is viewed instead as the active encouragement of constructive conflict. This avoids what can happen if overt resistance is itself merely resisted and battered down (usually by information overload) by senior managers. This resistance can become more intense and covert, effectively derailing the change process.

The next step is to utilise an action framework that has a collective and collaborative approach to decision-making and the change process. The management role becomes one of facilitation not the usual top-down dictatorial change management decision-making process. The intellectual underpinning for this move comes from action learning and action research methodologies, which are oriented to both change

and learning/research within organisations. They are participative and egalitarian and have a problem/solution orientation that is recursive (cyclic in nature). As a result they are empowering, engender greater ownership of the outcome(s) and are also reflexive, flexible and responsive to the organisational context and constraints (Sankaran et al., 2001).

Under this approach the affected employees form groups that are empowered to consider, debate alternatives, construct outcome(s) and actively engage in and manage the change process from both a bottom up and a top down perspective. Senior managers and employees are equal and active participants in the change process. The result is a more effective organisational change with enhanced employee engagement in, and ownership of, the outcome(s) and minimising, if not eliminating, resistance.

COURSE OUTCOME & FURTHER TRAINING

After completion of this training course, IQY Technical College (Accredited by Singapore Institute of Engineering Technologists) Diploma in Technical Teaching (Training, Assessment & Learning Management) can be completed as well as the award from it's affiliated overseas university.

The components of **Professional Diploma in Technical Teaching (Training, Assessment & Learning Management)** which are included in Diploma in Technical Teaching (Training, Assessment & Learning Management)

Level 1-Educational Theories , Teaching Pedagogies & Training and Assessment Practice

- [Part \(2A\) Basic Teaching Practicum Preparation](#)
- [Part \(2B\) Training &Assessment Practice](#)

Level 2-Adult Vocational Education

- [Part \(2\) Vocational Education & Training Practice](#)

Level 3-Training Authorities Accreditation Compliances

- [Part \(2\) Myanmar Engineering Council's Accreditation Compliance Practice](#)

By completing the educational theory subjects at Level 1 Part 1, Level 2 Part 1, Level 3 Part 1 and Level 4 of Professional Diploma in Technical Teaching (Training, Assessment & Learning Management), the professional diploma can be completed.

Professional Diploma in Technical Teaching (Training, Assessment & Learning Management)

www.highlightcomputer.com/ProfDipTechTchg.pdf

Objective of the course

This Professional Diploma in Technical Teaching (Training, Assessment & Learning Management) is designed as Teachers Education Professional Development for teachers in Government Technical Colleges , Technological Universities and other Vocational Education and Training Institutions in Myanmar to upgrade their skills and knowledge in training and assessment, curriculum design and development, management of technical training institutions, adult and vocational education and training ,assessment validation and current accreditation rules and requirements of Myanmar Engineering Council as well as current training and assessment practices of overseas industrialized countries.

Learning Outcomes

After completion of the levels of the training programs, the students should be able to

- Understand adult learning principles in technical education and training contexts

- Apply the skills in training, assessment, course development, curriculum development, learning management and management of technical training institutions.
- Understand the accreditation requirements of Myanmar Engineering Council in accredited engineer, technologist and technician education & prepare for the compliance processes.
- Understand the technology, science and mathematics teaching & educational pedagogies principles of outcome based education and effectively utilize them in the workplace
- Provide effective work-based learning & career development for the working people in industries and apply the various ways of assessing the competences

Components of the course

- Educational theories ,educational technology, teaching and learning, teaching and measuring.
- Lesson planning, interpreting curriculums, class room management, instruction and assessment design, training principle, competency based training and assessment integrated the competencies of Australian Training and Assessment (TAE40110) course
- Management of educational establishment in line with the accreditation requirements of Myanmar Engineering Council by customizing the competencies in Australian Vocational Education and Training Diploma (TAE50111) to be relevant to the requirements of Myanmar Vocational Education and Training .
- Postgraduate level educational knowledge related to Learning Technology, Technology in classrooms, educational leadership, leadership and change management , computer supported learning and distance education,
- Teaching practicum preparation at different levels of training

Study Areas & Levels of Training

Level 1-Educational Theories , Teaching Pedagogies & Training and Assessment Practice

Part (1) Educational Theoretical Subjects

- ED 101 Theory of Education
- ED 102 Education Technology
- ED 103 Teaching Practice
- ED 104 Lesson Planning
- ED 105 Principle of Learning
- ED 106 Interpreting Curriculums

- ED 107 Teaching & Learning
- ED 201 Class Room Management & Teaching

Part (2A) Basic Teaching Practicum Preparation

ED101P-Teaching Support

ED102P- Application of Information Technology in School /Vocational Education

ED103P- Classroom Management

ED104P- Teaching Portfolio

ED105P- Inclusive Teaching

ED106P- Subject Area Knowledge

ED107P- Theory of Education, Educational Technology & Teaching Practice

ED107PA-Theory of Education

ED107PB-Education Technology

ED107PC-Teaching Practice

ED107PD-Lesson Planning

ED108P- Curriculum Study , Teaching & Learning

ED108PA-Principle of Learning

ED108PB-Interpreting Curriculums

ED108PC-Teaching & Learning

Part (2B) Training &Assessment Practice (Certificate IV in Training & Assessment TAE40110)

- ED111P Learning Program Design & Development Practice
(TAEDES401A Design and develop learning programs)
- ED112P Assessing the needs of trainees
(TAEDES402A Use training packages and accredited courses to meet client needs Delivery)
- ED113P Group based learning
(TAEDEL401A Plan, organise and deliver group-based learning)
- ED114P Workplace Assessment

(TAEDEL402A Plan, organise and facilitate learning in the workplace Assessment)

- ED115P Assessment Planning

(TAEASS401B Plan assessment activities and processes)

- ED116P Competency Assessment

(TAEASS402B Assess competence)

- ED117P Assessment Validation

(TAEASS403B Participate in assessment validation)

- ED118P Work skills Instruction

(TAEDEL301A Provide work skill instruction)

- ED119P Educational Presentation

(BSBCM401A Make a presentation)(TAEASS301B Contribute to assessment

Level 2-Adult Vocational Education

Part (1) Adult Vocational Education Theoretical Subjects

- ED 401 Adult Learning Technology
- ED 202 Curriculum & Design
- ED 205 Teaching & Measuring
- ED 206 Designing Instructions & Assessment
- ED 405 Training Principle

Part (2) Vocational Education & Training Practice (Diploma in Vocational Education & Training TAE50111)

- ED201P-Advanced Assessment Practice
(TAEASS501A: Provide advanced assessment practice)
- ED202P-Assessment Development
(TAEASS502B: Design and develop assessment tools)
- ED203P-Training Facilitation
(TAEDEL502A: Provide advanced facilitation practice)
- ED204P-Learning Strategies
(TAEDES501A: Design and develop learning strategies)

- ED205P- Language Literacy & Numeracy
(TAELLN401A: Address adult language, literacy and numeracy skills)
- ED206P-Continuing Professional Development
(TAEPDD501A: Maintain and enhance professional practice)
- ED207P Learning Resources Design & Development
(TAEDES502A: Design and develop learning resources)
- ED208P Organizational Training Needs Analysis
(TAETAS501B: Undertake organisational training needs analysis)
- ED 404 Educational Research (Part 1)
(TAERES501A: Apply research to training and assessment practice)
- ED209P- Training Program Evaluation
(TAEDES505A: Evaluate a training program)

Level 3-Training Authorities Accreditation Compliances

Part (1) Educational Leadership Subjects

- ED 402 Educational Leadership
- ED 301 Educational Policy (Myanmar Engineering Council Accreditation Requirements)
- ED 308 Change Management
- ED309 Educational Communication
- ED 407 Learning Environment
- ED311 Outcome based Education

Part (2) Myanmar Engineering Council's Accreditation Compliance Practice

- ED301P- Curriculum design for accreditation compliance
- ED302P-Overall accreditation and compliance practice

Level 4-Specialized Teaching Areas

- ED 308 Computer Supported Learning & Distance Education
- ED 304 Maths Teaching
- ED 305 Science Teaching

- ED 306 Technology Teaching
- ED 404 Educational Research (Part 2)
- ED310 Learning Technology I & II

Diploma in Vocational Education & Training, Diploma in Technical Teaching (Training, Assessment & Learning Management)
Diploma in Engineering Education (YTU)

www.highlightcomputer.com/ProfDipTechTchg.pdf

Objective of the course

This Diploma in Engineering Education/Professional Diploma in Technical Teaching (Training, Assessment & Learning Management) is designed as Teachers Education Professional Development for teachers in Government Technical Colleges , Technological Universities and other Vocational Education and Training Institutions in Myanmar to upgrade their skills and knowledge in training and assessment, curriculum design and development, management of technical training institutions, adult and vocational education and training ,assessment validation and current accreditation rules and requirements of Myanmar Engineering Council as well as current training and assessment practices of overseas industrialized countries.

Learning Outcomes

After completion of the levels of the training programs, the students should be able to

- Understand adult learning principles in technical education and training contexts
- Apply the skills in training, assessment, course development, curriculum development, learning management and management of technical training institutions.
- Understand the accreditation requirements of Myanmar Engineering Council in accredited engineer, technologist and technician education & prepare for the compliance processes.
- Understand the technology, science and mathematics teaching & educational pedagogies principles of outcome based education and effectively utilize them in the workplace
- Provide effective work-based learning & career development for the working people in industries and apply the various ways of assessing the competences

Components of the course

- Educational theories ,educational technology, teaching and learning, teaching and measuring.
- Lesson planning, interpreting curriculums, class room management, instruction and assessment design, training principle, competency based training and assessment integrated the competencies of Australian Training and Assessment (TAE40110) course
- Management of educational establishment in line with the accreditation requirements of Myanmar Engineering Council by customizing the competencies in Australian Vocational Education and Training Diploma (TAE50111) to be relevant to the requirements of Myanmar Vocational Education and Training .
- Postgraduate level educational knowledge related to Learning Technology, Technology in classrooms, educational leadership, leadership and change management , computer supported learning and distance education,
- Teaching practicum preparation at different levels of training

Level	Course	Abbreviation	Pre-requisite	Target Group
1	Diploma in Vocational Education & Training (Certificate in Vocational Education & Training for completion of certain subjects)	Dip VET	Degree/Diploma /Certificate In relevant professional/ vocational areas	Vocational Education Teachers in various training courses
2	Diploma in Technical Teaching	Dip Tech Tchg	Diploma in Vocational Education & Training	Government Technical College Teachers
3	Diploma in Engineering Education	Dip Engg Ed	Diploma in Technical Teaching	Technological University Teachers
4	Diploma in Engineering Education (Specialist Discipline)	Dip Engg Ed (Specialist Area)	Diploma in Engineering Education	Technological University Teachers with specialized teaching in specific area of study.

Training & Assessment System Overview

Level	Course	2 weeks workshop (Assessment based on participation in workshop sessions)	Teaching Experience Assessment +Teaching Portfolio Assessment (Individual Assessment- During/After two weeks workshop) (The candidates can submit their portfolios)	Self study & Assignment Assessment (Individual Assessment)

Diploma in Engineering Education

The following units can be added to Diploma in Technical Teaching to award Diploma in Engineering Education

ED411-Engineering Education Part 1

ED412-Engineering Education Part 2

ED413-Engineering Education Part 3

CURRICULUM

Level 1-Educational Theories , Teaching Pedagogies & Training and Assessment Practice

ED101 Theory of Education

Objective-

This unit provided the concept of education to enable the learners to understand the complex system of education by developing an understanding at different levels, inner workings of the individual learner, thinking processes and motivation & apply in practical teaching

Outcomes

- to understand all the different levels of education at the same time,
- to see personal learning and national legislation
- to build an understanding of education at all of these different levels.

Contents

Education theory, Modelling, Classroom Management, Equality of opportunity, Learning & Teaching, Quality Assurance, Theory into practice.

Instruction Reference Textbook-

Theory of Education.pdf by David A Turner + Lecture slides

Assessment

Assignments = 100% (4 assignments with 25% each)

ED 102 Education Technology

Objective-

This unit provide the knowledge to include reference to the use of technology for instruction, training, learning, or teaching. In practice, definitions serve to focus the interest of associations of individuals by emphasizing a particular scope of interest.

Outcomes

- To design, development, utilization, management, and evaluation
- To provide instructional technology,” “instructional systems design,” and “instructional media
- To do the design and development of instruction and instructional resources using education technologies

Contents

Active Learning, Alternative Assessment, Adult Learners, Analysis, Assistive Technology, Cognitive Apprenticeship, Computer-Assisted Instruction

Instruction Reference Textbook-

Education Technology - An Encyclopedia Edited by Ann Kovalchick and Kara Dawson+ Lecture slides
Assessment

Assignments = 100% (7 assignments)

ED 103 Teaching Practice

Objective-

To use developmental process for reflecting on and improving one's teaching; and as an evaluative product for personnel decisions such as tenure, promotion, or a teaching

Outcomes

- To provide different sources of evidence of teaching performance.
- To contribute important information about teaching performance
- To collect variety of sources of information related to teaching
- To reflect more of teaching's intellectual substance and complexity.
- To make teaching more visible through their demonstration of a variety of teaching-related activities.
- To place the initiative for reflecting on and evaluating teaching in the hands of faculty.
- To give the individual an opportunity to think about own teaching —
- To change priorities or teaching strategies as needed, and to reflect about future

Contents

Meaning of Teaching Portfolio, Why Prepare a Teaching Portfolio? ,How Does One Develop a Teaching Portfolio? ,Preparing Portfolio ,Shaping the Final Portfolio ,Keeping Your Portfolio Up to Date ,Assembling an Electronic Portfolio ,Portfolio evaluation.

Assessment

Assignments = 100% Portfolio Assessment

ED 104 Lesson Planning

Objective-

This unit provides the methods to apply thought-stimulating examples teaching & learning techniques to be applied in training design and delivery to apply the various techniques and strategies in training design and presentation, that will stick! Specific strategies.

Outcomes

- To create trainings that are fun and memorable.
- To write learner-based trainings that guarantee success for each learner performance.
- To develop learning activities that match the need, learning style, and level of understanding of the participants.
- To use learning strategies that encourage learners to build on their experiences.
- To plan ongoing training activities that evaluate learner mastery during the entire learning event.
- To design blended and accelerated learning strategies that strengthen learning transfer back on the job.
- To identify methods that accurately measure training results.

Contents

Introducing planning, Needs, aims and objectives ANALYSIS OF NEEDS ,THE RATIONALE OF OBJECTIVES ,WRITING YOUR LEARNING OBJECTIVES ,SETTING A VARIETY OF OBJECTIVES , Learning, SKILLS, TECHNIQUES AND METHODS ,JUDGEMENT AND DECISION-MAKING,THE PLACE OF EMOTIONAL EDUCATION,PLANNING FOR THEORETICAL LEARNING,PLANNING FOR LEARNING FROM THE CONCRETE,PLANNING FOR REFLECTIVE LEARNING,PLANNING FOR ACTIVE LEARNING,PLANNING PROGRESSION FROM PRIOR LEARNING,PLANNING FUTURE PROGRESSION,CROSS-CURRICULAR LINKS,DIFFERENTIATION,PLANNING LISTENING ACTIVITIES,PLANNING SPEAKING ACTIVITIES,PLANNING WHOLE CLASS DISCUSSION,PLANNING READING,PLANNING TO DEVELOP COMPREHENSION,TEACHING PUPILS TO LEARN FROM WHOLE BOOKS,PLANNING WRITING,TEACHING ABOUT SUBJECT DISCOURSE ,Pedagogy, TASK ANALYSIS ,A SUCCESSFUL LESSON STRUCTURE ,PLANNING PRACTICE SESSIONS

Instructional Design for Action Learning By GERI M C ARDLE

100 Ideas for Lesson Planning – By Anthony Haynes

Read the above textbooks and prepare three lesson plans

Assessment

Assignments = 100% (Assessment of three lesson plans)

ED 105 Principle of Learning

Objective-

To understand the memory concept & apply it in effective teaching and learning.

Outcomes

- To demonstrate the principle of learning
- To understand the principle of control memory
- To understand the principle of Inhibition
- To apply the Principle of Adaptive Specialization as It Applies to Learning and Memory

Contents

FORMATION OF MEMORIES, ORGANIZATION OF MEMORIES, CONSOLIDATION OF MEMORIES, CONTROL OF MEMORIES, ADAPTIVE SPECIALIZATION OF MEMORIES

Instruction Reference Textbook-

Lecture slides

Principle of learning & memory Edited by Rainer H. Kluwe, Gerd Liier and Frank Räsler

Assessment

Assignments = 100% (5 Assignments of 20% each)

ED 106 Interpreting Curriculums

Objective-

To interpret the curriculum & develop the detailed lesson plans in teaching process.

Outcomes

- To interpret the curriculum presented to teachers;
- To adopt the curriculum;

- To understand the curriculum assimilated by learners; and
- To evaluate curriculum.

Contents

KINDS OF CURRICULUM, ORIENTATIONS TO CURRICULUM, ORIENTATIONS TO CURRICULUM, TYPES OF CURRICULUM, Competency Curriculum, LEVELS OF CURRICULUM, STAGES OF THE PROCESS, CURRICULUM PLANNING, CURRICULUM DESIGN, CURRICULUM DEVELOPMENT- PHASES, CURRICULUM DEVELOPMENT. IMPLEMENTATION OF THE CURRICULUM, CURRICULUM EVALUATION, CURRICULAR CHANGES

CURRICULUM DESIGN AND DEVELOPMENT-1.pdf

THE CURRICULUM by Cecilia Braslavsky 1

Assessment

Assessment = 100% (Assess as part of Learning outcomes & curriculum development tasks in Residential Workshop session)

ED 107 Teaching & Learning

Objective-

This unit provides new and experienced faculty in all disciplines with practical, tested strategies for addressing all major aspects of college and university teaching, from planning a course through assigning final grades. Graduate student instructors and teaching assistants will also benefit from the foundational knowledge and research findings described in this unit.

Outcomes

- To addresses planning: designing a new course or revising an existing one, creating a syllabus, preparing for the class, and managing classroom conduct and decorum.
- To respond to a Changing Student Body,
- To do “ Discussion Strategies, ” provides ideas for leading a productive discussion, framing challenging questions, and encouraging student participation, both in class and online.
- To explore aspects of the lecture in the Large-Enrolment Course, ” method: preparing and delivering effective lectures, engaging students and providing for student participation, and maintaining instructional quality with limited resources.
- To find the Alternatives and Supplements to Lectures and Discussion,
- To Enhance Students ’ Learning and Motivation, ” provides research -based approaches to helping students become more confident, independent, and self - motivated learners. Informal ways to assess learning and the use of mobile

- To Strengthen Students ' Writing and Problem-Solving Skills, ”

Contents

RESPONDING TO A CHANGING STUDENT BODY ,DISCUSSION STRATEGIES ,THE LARGE-ENROLLMENT COURSE ,Maintaining Instructional Quality with Limited Resources ,ENHANCING STUDENTS' LEARNING AND MOTIVATION ,STRENGTHENING STUDENTS' WRITING AND,PROBLEM-SOLVING SKILLS ,TESTING AND GRADING,PRESENTATION TECHNOLOGIES ,EVALUATION TO IMPROVE TEACHING,TEACHING OUTSIDE THE CLASSROOM ,FINISHING UP

Tools for teaching by Barbara Gross Davis

Assessment

Experience Assessment = 100% (Assessed on Formal Teaching experience record for the teachers being employed by Government Technical Colleges & Technological Universities)

Separate assessment system is applied for pre-service teacher trainees.

ED 201 Class Room Management & Teaching

Objective-

To define classroom management, explain the relationship between classroom management and discipline, and describe the concept of “culturally responsive classroom management”

Outcomes

1. To describe the characteristics of an effective teacher
2. To explain why reflection on teaching is so important for teacher growth
3. To describe the reflective decision making model of teaching
4. To identify important factors that affect instructional decision making
- 5.To contrast the characteristics of authoritative, authoritarian, and permissive teachers
- 6.To identify the ongoing tasks involved in classroom management and to explain how each contributes to a well-functioning learning environment

Contents

Level 2-Adult Vocational Education

ED 401 Adult Learning Technology

Objective-

This unit provides and skills and the roles of training developers and instructional designers who are responsible for analysing training needs and designing training solutions and products to meet workplace capability requirements, and evaluating the effectiveness of adult training programs.

Outcomes

To provide the guidance and advice to trainers and assessors, promoting innovative practices, e.g. e-learning, and in researching and incorporating best practice in training and assessment into training programs and products.

Contents

- Learner-Centered Teaching and the Use of Technology
- Effective Teaching with Technology in Adult Education
- Adult Learners and Their Development in the Information Society
- Supporting Lifelong Learning and Flexicurity Policies
- Adult Learning Principles as the Foundation for Innovative Technology Applications in Business and Higher Education Venues
- The Role of Learning Styles and Technology
- Innovative Instructional Strategies with the Use of Technology for Adult Learners
- Integrating Adult Learning and Technology for Effective Education:
- Strategic Approaches
- Comparing the Principles of Adult Learning with Traditional Pedagogical Teaching in Relation to the Use of Technology:

- Provide Training through instruction and demonstration of work skills
- Facilitate work-based learning
- Group based delivery
- Design and develop learning programs
- Foster and promote an inclusive learning culture
- Ensure a safe and healthy learning environment
- Individual learning
- Language Literacy & Numeracy

Assessment

Participation in Educational Support Workshop sessions=100%

(Assess as part of Learning outcomes & curriculum development tasks in Residential Workshop session)

ED 202 Curriculum & Design

Objective-

To provide theoretical consideration for the twenty-first century curriculum, & technological and pedagogical innovations influencing curriculum renewal together with sustainable practice in technology-rich environments.

Outcomes

- To address theoretical foundations for the development of curricula.
- To explore the pedagogical options available to higher education instructors
- To explore new ways of accessing and connecting content to multimodal forms
- To examine how curriculum design needs to be influenced by the effective development of virtual collaborative learning environments
- To devise more adaptive, educationally focused teaching and learning

Contents

Curriculum Design for the Twenty-First Century, Online Collaboration: Coordinating Technology, Strategies for Collaborative Learning, Designing a Virtual Collaborative Learning Environment, Curriculum Design as Applied to Virtual Collaborative, Course Evaluation, Creating Curriculum Within the Context of an Enterprise, Teaching Instructional Design, Online education examples.

Curriculum Models for the 21st Century Using Learning Technologies in Higher Education

Assessment

Participation in Educational Support Workshop sessions=100%

(Assess as part of Learning outcomes & curriculum development tasks in Residential Workshop session)

ED 205 Teaching & Measuring

Objective-

To apply adaptive expertise, creative thinking, metacognition, and teamwork in teaching and measuring task

Outcomes

To apply Adaptability, Adaptive expertise, Adaptive problem solving, Communication, Creative thinking , Decision making , Metacognition, Situation awareness & Teamwork

Contents

Cognitive Readiness, A Model for Instruction and Assessment of Cognitive Readiness, The Development and Assessment of Cognitive Readiness: Lessons Learned from K-12 Education, Cognitive Readiness for Solving Equations . Cognitive Readiness Applications, Creative Thinking Abilities: Measures for Various Domains, Using Analogies as a Basis for Teaching Cognitive Readiness . Simulation Assessment of Cognitive Readiness . Assessing Cognitive Readiness in a Simulation- Based Training Environment, Software Support for Teaching and Measuring Cognitive Readiness, Cognitive Readiness for Complex Team Performance, Impact of Individual Game-Based Training on Team Cognitive Readiness

(Assess as part of Learning outcomes & curriculum development tasks in Residential Workshop session)

ED 206 Designing Instructions & Assessment

Objective-

To deconstruct the broad-sweeping goals of the standards and transform them into unit plan objectives (more specific) and daily instructional objectives

Outcomes

To entails a logical progression from (1) content area standards to (2) modified standards to

(3) unit plan objectives to (4) daily instructional objectives in an understandable sequence of increasing specificity

Contents

Deconstructing the Standards ,Writing Unit and Daily Instructional Objectives , Writing True–False and Completion, Items and Matching Exercises ,Writing Multiple-Choice Items ,Writing Short-Answer and Essay Items .Performance-Based Assessment ,Portfolios

Designing Elementary Instructions & Assessments

By John L. Badgett Edwin P . Christmann

Assessment

Participation in Educational Support Workshop sessions=100%

(Assess as part of Learning outcomes & curriculum development tasks in Residential Workshop session)

ED 405 Training Principle

Objective-

To provide numerous techniques, designs, case examples, and tips for designing and facilitating training that is participant centred, brain-friendly, and experiential

Outcomes

- To explore all aspects of training.
- To promote an active approach to training
- To provide a practical handbook of techniques

Contents

INTRODUCING ACTIVE TRAINING, DESIGNING AN ACTIVE TRAINING PROGRAM, Assessing Training Needs, Developing Active Training Objectives, Creating Opening Exercises, Preparing Brain-Friendly Lectures, Using

Experiential Learning Approach, Designing Active Training Activities, Sequencing Active Training Activities, Planning Active Training Programs, Blending Technology into Active Training, CONDUCTING AN ACTIVE TRAINING PROGRAM, Beginning an Active Training Program, Gaining Leadership of the Training Group, Giving Presentations and Leading Discussions, facilitating Structured Activities and Promoting Team Learning, Concluding an Active Training Program, EXTENDING THE VALUE OF AN ACTIVE TRAINING PROGRAM, Evaluating an Active Training Program

Assessment

Participation in Educational Support Workshop sessions=100%

(Assess as part of Learning outcomes & curriculum development tasks in Residential Workshop session)

ED411-Engineering Education (1)

Objective-

To design the engineering educational programs and teaching programs by applying multi disciplinary approaches by combining technological aspects

Outcomes

- To attain the strategies to promote the engineering education
- To apply technological concepts in engineering teaching support system
- To develop the quality work-based learning system
- To write Sociological Rationale of a design curriculum
- To find the strategies to improve the communication skills of engineers
- To design the computer server for engineering education program

Contents

- Pre-university Outreach: Encouraging Students to Consider Engineering Careers
- The ASTutE Tutorial Assistant: Efficient, Accessible and Interactive
- Learning at Work within the Ford Motor Company
- Using Rubrics to Assess the Development of CDIO
- Syllabus Personal and Professional Skills and Attributes at the 2.x.x Level*
- Quality Assurance Issues Relating to the Delivery of Work Based Learning Programmes*

- The Role of Work-Based Learning Methodologies in the 21 st Century
- Development of Life-Long Engineering Education in the 21 st Century
- Traits Analysis and Influences on High Performing Students in Mechanical Education
- The Construction of an Instructional Quality System for Industrial Technology Education
- Design Hegemony: an Exploration of Hegemony in the Curriculum and Instruction of Industrial Design Education
- The Engineering Mechanics Interactive Lecture Series: Oligomedia Resources for Computer-Based Learning
- The Sociological Rationale of the Industrial Design Curriculum
- Achieving Advances and New Developments in Engineering and Technological Education
- Important Considerations in Improving the Acquisition of Communication Skills by Engineers
- Client-Server and Gateway Systems for Remote Control in Engineering Education
- The Development of Online Conference Management Tools as a Student Project*
- Co-operation across Disciplines in Engineering Education Using Technical and Scientific Computing Environments

Assessment

Questions & answers

Level 3-Training Authorities Accreditation Compliance

ED 402 Educational Leadership

Objective-

This course provides the educators with skills to take an active and creative approach to their personal and professional development. While it may be of most interest to those in middle or senior education management, it is also designed to help teachers, governors and those in organizations allied with education.

Outcomes

To attain the competencies in

- Leading and managing
- Changing and learning
- Undertake Tasks and responsibilities

Instruction Reference Textbook-

**Educational leadership and learning Practice, policy and research
by Sue Law and Derek Glover**

Contents

- The context for educational leadership
- Developing leadership and management effectiveness
- Managing ourselves and leading others
- Motivating and managing others
- Leading effective teams
- Effective communication
- Organizational cultures

- Managing change and creating opportunities
- Educational improvement, inspection and effectiveness
- Leading and managing in learning organizations
- Managing staff and promoting quality
- Managing resources and finance
- Managing stakeholder relationships and partnerships
- Leading and managing for professional development

Assessment

Assignments = 100%

ED 301 Educational Policy (Myanmar Engineering Council Accreditation Requirements)

Objective-

This course provides the educators with Myanmar Engineering Council Laws, Rules, Regulations, Accreditation Requirements, Accreditation Practices, procedures related to accreditation of engineering courses and engineering professionals in Myanmar to enable them to design, develop and teach the engineering programs accredited by Myanmar Engineering Council.

Outcomes

- To understand Myanmar Engineering Council Accreditation Rules & Regulations related to accreditation of Government Technical Colleges & Technological Universities in Myanmar.
- Get the information & knowledge on Current issues related to international & Myanmar Engineering profession.
- Participate in hand on practice workshop focussing on curriculum development & collecting and preparing the materials for accreditation by Myanmar Engineering Council Engineering Accreditation Committee & taking part in mock accreditation sessions.

Contents

- Overview of Myanmar Engineering Council Law, Regulation, Accreditation Principles
- Examples of marine engineers competency assessment in Myanmar/ in line with International Certification standards & explore the way to apply the similar competency based training in other engineering areas
- Requirement of Myanmar Engineering Council & how to design the curriculum to address the learning outcomes
- Discussing the programme structure and course contents(MEng C)
- Discussing the programme delivery and assessment methods

- Assessment Validation Guide of Myanmar Engineering Council
- Educational Resources Development in line with Myanmar Engineering Council Requirements
- Curriculum design for accreditation compliance
- Overall accreditation and compliance practice
- Preparation for self accreditation report
- Engineering Accreditation Plan

Instruction Reference Textbook-

1. Accreditation Manual
2. Graduate Attributes & Terminology.pptx
3. SAR.pptx
4. EngineerCoulcilRegulation
5. Policy - Qualifications Policy POL11 v4
6. Myanmar Engineering Council Law
7. Policies for Accreditation of Programs
8. Time line,EAC Code,Guidelines,Fees

Assessment

Assignments = Participation in workshop sessions

ED 308 Change Management

Objective-

The unit involves candidates in leading a complete cycle of the change process. This process falls into three phases that correspond broadly to the elements of competency.

- i. Preparing for change
- ii. Planning for change
- iii. Implementing and evaluating change

Outcomes

- To provide leadership and support to others within the organization
- To manage change more effectively
- To develop educational business skills
- To analyse work practice and context, and make improvements
- To contribute to innovation and capacity building in the organization.

Contents

- Leadership issues Raising achievement
- The Leadership of Change
- A shift from management to leadership
- How not to do change management
- Managing change and transition

Instruction Reference Textbook-

Lecture Slides

Leadership+ Change Management DVD

Assessment Assignment-100%

ED309 Educational Communication

Objective-

This program uses methods of the social sciences, encompassing both qualitative and quantitative approaches to the study of communication and education. It asks in particular how education and other social systems change under the impact of new media

Outcomes

- Reflect on the historical effects of media and on the cultural uses of developments such as face-to-face speech, writing, printing, photography, film, radio, television, computers, and networked multimedia;
- Use anthropological and linguistic methods to study how the diverse forms of communication, literacy, information processing, and cognition condition educational practice; and
- Explore positive and negative effects of media on social relations and develop strategies for using information and communication technologies to improve conditions of education and life.

Contents

- Creating a production that communicates your message
- Digital Design
- Great Looking Presentations
- Planning

- Technical Papers related to effectiveness of ICT in education
- Access and equity issues
- Educational Communication Portfolio Presentation

Instruction Reference Textbook-

Lecture Slides

ED309 Educational Communication Assignment Tasks-806A Modified (Worked Examples)

Assignment

Assignments = Portfolio Assessment- 100%

ED 407 Learning Environment

Objective-

The objective of this unit is to give the candidate an understanding of the conceptualisation, historical development, assessment, determinants and effects of classroom learning environments.

Outcomes

- To review classroom learning environment for effective educational setting
- To prepare effective educational setting for teaching and learning
- To understand the students' behaviour in the classroom and the cause of the behaviour
- To effectively use the teaching and learning strategies for keeping the good learning environment in the class
- To perform educational survey task on learning environment assessment.

Contents

- Background information about the fields of school and classroom environment
- Outcomes and environment; evaluation of educational innovations
- Quantitative and qualitative methods
- Teachers' use of classroom and school environment instruments in practical attempts to improve their own classrooms and schools.
- Current trends and future desirable directions in research on educational environments.

Action Research Project

ED311 Outcome based Education

Objective-

At the end of this training, participants will be able to understand:

- ☐ Outcome-Based Education (OBE)
- ☐ Programme Education Objectives (PEO'S),

Outcomes

Programme Outcomes (PO's), Course Outcomes (CO) and Performance Indicators

- ☐ Bloom's Learning Taxonomy
- ☐ Assessment and Evaluation Methods
- ☐ Continual Quality Improvement Process

Contents

- ☐ The Origins of Outcome Based Education
- ☐ *Approaches to OBE*
- ☐ *OBE Process*
- ☐ Educational Process - Stakeholders
- ☐ Educational Process – Lecturers' Roles
- ☐ Educational Process - References
- ☐ OBE Model Hierarchy
- ☐ Characteristics of OBE curricula
- ☐ *Types of Teaching/Learning Delivery Activities*
- ☐ *OBE Delivery*
- ☐ Continual Quality Improvement (CQI)
- ☐ Essentials for OBE's success
- ☐ Essentials Components of OBE

- ☐ Different Levels of Outcomes
- ☐ Development of Programme Education Objectives
- ☐ CHARACTERISTICS OF GOOD OUTCOME STATEMENTS
- ☐ Course Development
- ☐ ENGINEERING EDUCATION
BLOOM'S TAXONOMY
- ☐ DOMAINS of LEARNING OUTCOMES
- ☐ Assessment in OBE
- ☐ Continual Quality Improvement (CQI)

Final OBE Training at Myanmar July 2014. by **Ir. Professor Academician Dato' Dr. HT Chuah**
President of FEIAP

Assessment

Participation in workshop & presenting the portfolios

ED412 Engineering Education (2)

Objective-

To design the international standard engineering education program by applying total quality management

Outcomes

- To have the knowledge and skills in total quality management
- To foster the cross border co-operation
- To interface the school to engineering programs

Contents

- Secondary School-University Interface: Science and Engineering
- The Educational Process
- Quality Engineering Education: Student Skills and Experience
- The Web as a Tool for Supporting Student Learning
- Develop a Long-Term Plan to Overcome Skills Shortage
- Cross border engineering practice

- Cross-cultural Skills for engineers

Instruction Reference Textbook-

ED412 File

Assessment

Assignments = 100% (Two assignments of 50% each)

Level 4-Specialized Teaching Areas

ED 308 Computer Supported Learning & Distance Education

Objective-

This unit provides the skills related to contribute to the central questions of how students can learn collaboratively using the new technologies, the problems that can be expected, and the benefits that may ensue. The various ways to examine how computer supported group work differs from face-to-face group work, and the implications for both educators and students are provided.

Outcomes

- ☐ To offer assessment of e-learning with the hope of offering ideas in terms of practical guide and points of good practices, while addressing potential pitfalls to avoid.
- ☐ To be aware of what constitutes good and effective e-learning practices and how to design them for specific contexts and audiences in the global information
- ☐ Innovative uses of e-learning, Addressing various divides in e-learning, user centred focus in e-learning, special considerations in e-learning and development economy.

Contents

- ☐ Computer-Supported Collaborative Learning in Higher Education:
- ☐ An Introduction
- ☐ Online Group Projects: Preparing the Instructors to Prepare the Students
- ☐ Time, Place and Identity in Project Work on the Net
- ☐ The Collective Building of Knowledge in Collaborative Learning Environments
- ☐ Collaboration or Cooperation
- ☐ Analyzing Small Group
- ☐ Interactions in Educational Environments
- ☐ Mapping Perceived Socio-Emotive Quality of Small-Group Functioning
- ☐ A Constructivist Framework for Online Collaborative Learning:
- ☐ Adult Learning and Collaborative Learning Theory
- ☐ The Real Challenge of Computer-Supported Collaborative Learning
- ☐ Use and Mis-Use of Technology for Online, Asynchronous, Collaborative Learning
- ☐ The Personal and Professional Learning Portfolio
- ☐ An Online Environment for Mentoring, Collaboration, and Publication
- ☐ Problems and Opportunities of Learning Together in a Virtual Learning Environment
- ☐ Web-Based Learning by Tele-Collaborative Production in Engineering Education

- ☐ Relational Online Collaborative Learning Model
- ☐ Online, Offline and In-Between: Analyzing Mediated-Action

Assessment

Assignments = 100%

ED 304 Maths Teaching

Objective-

This unit provides the skills to the teachers to act as mechanisms for communicating an approach to mathematics education that is eclectic and embracing, respectful and engaging, reflective and, ultimately, educational.

Outcomes

To provide the methods to the educators in class teaching to provide the students with conceptual understanding of mathematics content through modelling or interpretation of representations,

- computational fluency,
- problem solving through application of the content.

Contents

- Strategies for Vocabulary Development
- Strategies for Using Manipulatives
- Strategies for Teaching Procedures
- Strategies for Understanding Problem Solving
- Strategies for Using Mathematical Games
- Strategies for Assessing
- Mathematical Thinking

Instruction Reference Textbook-

Lecture Slides

- ☐ Multiple Perspectives on Mathematics Teaching and Learning Edited by Jo Boaler

Assessment

Assignments = 100%

ED 305 Science Teaching

Objective-

This unit provide the teaching pedagogy in science that effectively enable the teacher to transfer what they learn in our courses into their own classroom practices.

Outcomes

- To shine a spotlight on important work that science teacher educators are doing with teachers and youth
- To describe the professional purposes and benefits realized when they, as science teacher educators, arranged opportunities to teach children or adolescents.
- To utilize model teaching lessons in class room practice

Contents

- Pedagogical Content Knowledge
- Teaching & learning Through experience
- Teaching examples

Instruction Reference Textbook-

Lecture Slides

- Understanding and Developing Science Teachers' Pedagogical Content Knowledge

Assignments = 100%

ED 306 Technology Teaching

Objective-

This unit provides the teaching idea for teaching students with unique opportunities to develop a range of process skills such as critical and creative thinking skills in addition to their practical skills, through undertaking authentic tasks of real purpose.

Outcomes

- To link philosophy and educational issues in my daily work
- To help teachers to improve the teaching by means of the insights that philosophy of technology offers.

Contents

- Philosophy of technology:
- Technological artifacts
- Technological knowledge
- Technological processes
- Technology and the nature of humans
- Ethics and aesthetics of technology
- Learners' philosophies of technology
- Reconceptualizing technology through education
- Practical issues in teaching about technology

Instruction Reference Textbook-

Teaching about Technology by MARC J. DE VRIES

Assessment

Assignments = 100%

ED 404 Educational Research

Objective-

This unit describes the performance outcomes, skills and knowledge required to undertake research into educational theory and apply this research to improve current training and assessment practice.

This unit typically applies to those who need to develop skills in research in order to apply educational theory to improve current and future training and assessment practice

Outcomes

- Prepare research brief relating to training and assessment practice
- Conduct research in training and assessment practice
- Investigate and apply educational theory to the research
- Report on application of educational theory to training and assessment practice
- Review entire process

Contents

Qualitative Research and Public Policy

- Multilevel Analysis in Higher Education Research: A Multidisciplinary Approach .
- Conducting Multi-paradigm Inquiry in the Study of Higher Education Organization and Governance: Transforming
- Research Perspectives on Colleges and Universities

- Examining Pathways to and Through the Community College for Youth and Adults
- Review of the Theories Developed to Describe the Process of College Persistence and Attainment

Instruction Reference Textbook-

Higher Education: Handbook of Theory and Research

Published under the Sponsorship of the Association for Institutional Research (AIR) and the Association for the Study of Higher Education (ASHE)

Assessment

Assignments = 100%

Prepare & submit one educational research paper.

ED310 Learning Technology I & II

Objective-

On completion of this unit you should be able to demonstrate your achievement of the following learning outcomes:

All participants will be competent, confident and professional users of e-Learning system in teaching

Outcomes

To use e-Learning tools to:

- improve their own professional productivity,
- improve their preparation for classes and teaching generally and
- improve their ability to use and integrate IT appropriately within the classroom

Contents

The Syllabus:

The unit consists of five inter-related modules:

- 1. Module 1: Getting Started and IT Empowerment and Teaching**
 - a. Unit Introduction
- 2. Module 2: IT and Education:**
 - a. The Hype and the Reality
 - b. Multimedia in Education

3. Module 3: Ghosts of Schooling Past, Present and Future

- a. Technology and the Whole Curriculum
- b. Technology as a Classroom Tool
- c. Creating an active learning Environment

4. Module 4: Making the World Wide Web Work for You

- a. The Tools of the Trade
- b. Using the internet for information

5. Module 5: Technology in Your Classroom

- a. Classroom Applications of the
- b. WWW
- c. Educational Software
- d. Ideas, Approaches, Tools and Tricks
- e. Integration
- f. Early Learning and Primary

Tuition Pattern:

This unit is provided as an online unit. All tuition is provided through the online course website. The length of the unit is one semester (12 weeks); however, some students will finish sooner, and some may require additional time to complete it. While the weekly time commitment will vary from student to student, most should allow approximately 10 hours per week total study time for the unit.

Assessment

Two assignments= 100%

ED312 Technology in Classrooms

Objective-

To provide use of technology in educational context by combining with teaching and learning principle, educational leadership skills and educational leadership skills.

Outcomes

On completion of this unit you should be able to demonstrate your achievement of the following learning outcomes:

Upon completion, the participant;

1. Through the use of professional based portfolios will design, implement and evaluate the use of IT, multimedia and the Internet in their own classrooms
2. Using the skills and knowledge developed within the unit, conduct research of the use on learning technologies within the areas of;
 - a. Learning technologies and Developing Leadership Skills in Technology
 - b. Assessing and Changing IT Learning EnvironmentsTeaching and Learning Principles for Technology-Rich Classrooms

Contents The unit consists of 2 inter-related sections:

1. **Section 1**
 - a. Conduct independent research in one of the following
 - i. Developing Leadership Skills in Technology
 - ii. Assessing and Changing IT Learning Environments
 - iii. Teaching and Learning Principles for Technology-Rich Classrooms
2. **Section 2**
 - a. The development of two Portfolios
 - i. "Classroom" based portfolio that demonstrates the use and integration of educational technology in your classroom or workplace.
 - ii. "Personal" based portfolio that provides the student with the opportunity to demonstrate the use and educational practice in professional practice.

ED413 Engineering Education (3)

Objective-

This unit provides the engineering educators with engineering ethical issues, New pedagogy , Industrial co-operation & Lifelong learning and Strategic Planning skills in engineering education

Outcomes

Design the engineering programs by taking account on emphasizing in engineering ethics & by utilizing innovative new teaching pedagogies

Contents

- Engineering ethics
- Engineering teaching pedagogies
- New training and work-based approach
- Strategies planning in engineering education

Instruction Reference Textbook-

- ED413 Par1 Ethics
- ED413 Part2 New pedagogy , Industrial co-operation & Lifelong learning
- ED413 Part3 Strategic Planning in Engineering Education
- ED413 Part4 Training & Work-based Approach

Assessment

Assignments = Project 100%

RESOURCES

ASSESSMENT FOR THE SUBJECTS IN PART 1 OF THE LEVELS

The students will have to write 20 pages study report for each of the subjects outlined in the Part 1 of any level .

The report general needs to include

- Book review- Review on each chapter of the book highlighting the key concepts, points, key theory & practical application concepts
- Own idea on how to apply those concepts in real practical applications.
- Examples of curriculum designs that use the concepts & knowledge expressed in those books (If any)
- Your comment on each book

The book references for the subjects can be downloaded from the following links by entering the given password. The detailed instruction will be given in subject study guides. Some of the units can be assessed in residential training workshops.

Password- to be given

ASSESSMENT FOR THE SUBJECTS IN PART 2 OF THE LEVELS

Follow the specific assessment instruction provided for the units in Part 2 of the levels

ASSIGNMENT

Prepare the portfolios for your section/ department to comply with Myanmar Engineering Council's Accreditation Requirements.

Level 4-Specialized Teaching Areas

The students will have to write 20 pages study report for each of the subjects outlined in the Part 1 of any level .

The report needs to include

- Book review- Review on each chapter of the book highlighting the key concepts, points, key theory & practical application concepts
- Own idea on how to apply those concepts in real practical applications.
- Examples of curriculum designs that use the concepts & knowledge expressed in those books (If any)
- Your comment on each book

The book references for the subjects can be downloaded from the following links by entering the given password.

Password- to be given

Preparation for Teaching Practice & TVET Teacher Training (Introductory 2 weeks course)

Course Outline

This two weeks course is designed as Technical Teacher Education Professional Development course for teachers working at Government Schools, Private Schools, TVET Centres, Voluntary Schools as well as Government Technological Universities and Technical Colleges to effectively design, teach and assess the quality learning programs at upper secondary, TVET and tertiary technical education sectors..

Aim of the course

To provide the training to the technical education teachers to understand and apply the principles of secondary and adult & vocational education outcome based education, competency based training. compliance with Qualification & Training Authority-such as Ministry of Education/TVET Council etc , Educational Regulations and Standards by taking part in intensive workshop focussing on curriculum development and assessment documents portfolio preparations for meeting the relevant educational standards.

Outcome of the course

After completion of this course, the participant will be able to

- Understand the objective of National Education Strategic Plan 2016 to 2021 of Myanmar.
- Understand and utilize the principle & features of Outcome based education & critical thinking
- Understand the Technical & Vocational Education, Work based Learning and Competency based training & assessments tasks.
- Acquire the knowledge on Competency based education and training and training packages being used in industrialized countries (Examples of Australian Standard Competency based vocational education & training system.
- Get the information & knowledge on Current issues related to international & Myanmar TVET .
- Participate in hand on practice workshop focussing on curriculum development & collecting and preparing the materials for educational quality control tasks.

- Explore the School , Technical ,Adult & Vocational Educational Literatures, Textbooks, References & Resources, e-Learning, Learning Technology & Technology in classroom resources knowledge sharing.
- Certificate/Diploma of Teaching Practice & Certificate/Diploma of Vocational Education & Training will be issued.

Target Group

- TVET Teachers, Voluntary School Teachers, Government & Private Vocational / Engineering Education Teachers.

Arrangement of attendances

- It will be teacher professional development course for various Government & Non Government Schools and Colleges. The attenders should seek the appropriate permission from their employments.

Place of the course

- Appropriate training venue arranged by Myanmar Vocational Training Collaboration and its partnered organization: Welfare Evolvment & Development Organization

Course Duration

12 days (Mondays to Saturdays) (December 2017)(The exact date will be provided)

Requirements

The participants will need to bring the documents related to teaching plan, curriculum, course materials or reference notes that they are using in teaching. Access to laptop/computer will be required for the participants. Teaching aids such as white board , computer & Overhead Projector will be required to show the slides. It will be better to access Internet.

Sessions , trainers and facilitators

Day	Session 1 9 to 10:30AM	Tea break	Session 2 11 to 12:30 Noon	Lunch break 12:30 to 1:30 PM	Session 3 1:30 to 3:30PM (The extended time up to 5PM can be taken up to the duration of workshop & group works)

Objective of the course

This Diploma in Engineering Education/Professional Diploma in Technical Teaching (Training, Assessment & Learning Management) is designed as Teachers Education Professional Development for teachers in Government Technical Colleges , Technological Universities and other Vocational Education and Training Institutions in Myanmar to upgrade their skills and knowledge in training and assessment, curriculum design and development, management of technical training institutions, adult and vocational education and training ,assessment validation and current accreditation rules and requirements of Myanmar Engineering Council as well as current training and assessment practices of overseas industrialized countries.

Learning Outcomes

After completion of the levels of the training programs, the students should be able to

- Understand adult learning principles in technical education and training contexts
- Apply the skills in training, assessment, course development, curriculum development, learning management and management of technical training institutions.
- Understand the accreditation requirements of Myanmar Engineering Council in accredited engineer, technologist and technician education & prepare for the compliance processes.
- Understand the technology, science and mathematics teaching & educational pedagogies principles of outcome based education and effectively utilize them in the workplace
- Provide effective work-based learning & career development for the working people in industries and apply the various ways of assessing the competences

Components of the course

- Educational theories ,educational technology, teaching and learning, teaching and measuring.
- Lesson planning, interpreting curriculums, class room management, instruction and assessment design, training principle, competency based training and assessment integrated the competencies of Australian Training and Assessment (TAE40110) course
- Management of educational establishment in line with the accreditation requirements of Myanmar Engineering Council by customizing the competencies in Australian Vocational Education and Training Diploma (TAE50111) to be relevant to the requirements of Myanmar Vocational Education and Training .
- Postgraduate level educational knowledge related to Learning Technology, Technology in classrooms, educational leadership, leadership and change management , computer supported learning and distance education,

- Teaching practicum preparation at different levels of training

Study Areas & Levels of Training

Level 1-Educational Theories , Teaching Pedagogies & Training and Assessment Practice

Part (1) Educational Theoretical Subjects

- ED 101 Theory of Education
- ED 102 Education Technology
- ED 103 Teaching Practice
- ED 104 Lesson Planning
- ED 105 Principle of Learning
- ED 106 Interpreting Curriculums
- ED 107 Teaching & Learning
- ED 201 Class Room Management & Teaching

ED120-Part (2A) Basic Teaching Practicum Preparation

ED101P-Teaching Support

ED102P- Application of Information Technology in School /Vocational Education

ED103P- Classroom Management

ED104P- Teaching Portfolio

ED105P- Inclusive Teaching

ED106P- Subject Area Knowledge

ED107P- Theory of Education, Educational Technology & Teaching Practice

ED107PA-Theory of Education

ED107PB-Education Technology

ED107PC-Teaching Practice

ED107PD-Lesson Planning

ED108P- Curriculum Study , Teaching & Learning

ED108PA-Principle of Learning

ED108PB-Interpreting Curriculums

ED108PC-Teaching & Learning

ED121-Part (2B) Training & Assessment Practice

(Certificate IV in Training & Assessment TAE40110)

- ED111P Learning Program Design & Development Practice
(TAEDES401A Design and develop learning programs)
- ED112P Assessing the needs of trainees
(TAEDES402A Use training packages and accredited courses to meet client needs Delivery)
- ED113P Group based learning
(TAEDEL401A Plan, organise and deliver group-based learning)
- ED114P Workplace Assessment
(TAEDEL402A Plan, organise and facilitate learning in the workplace Assessment)
- ED115P Assessment Planning
(TAEASS401B Plan assessment activities and processes)
- ED116P Competency Assessment
(TAEASS402B Assess competence)
- ED117P Assessment Validation
(TAEASS403B Participate in assessment validation)
- ED118P Work skills Instruction
(TAEDEL301A Provide work skill instruction)
- ED119P Educational Presentation
(BSBCM401A Make a presentation)(TAEASS301B Contribute to assessment

Level 2-Adult Vocational Education

Part (1) Adult Vocational Education Theoretical Subjects

- ED 401 Adult Learning Technology
- ED 202 Curriculum & Design
- ED 205 Teaching & Measuring
- ED 206 Designing Instructions & Assessment
- ED 405 Training Principle
- **ED411-Engineering Education (1)**

ED220-Part (2) Vocational Education & Training Practice (Diploma in Vocational Education & Training TAE50111)

- ED201P-Advanced Assessment Practice
(TAEASS501A: Provide advanced assessment practice)
- ED202P-Assessment Development
(TAEASS502B: Design and develop assessment tools)
- ED203P-Training Facilitation
(TAEDEL502A: Provide advanced facilitation practice)
- ED204P-Learning Strategies
(TAEDES501A: Design and develop learning strategies)
- ED205P- Language Literacy & Numeracy
(TAEELN401A: Address adult language, literacy and numeracy skills)
- ED206P-Continuing Professional Development
(TAEPPD501A: Maintain and enhance professional practice)
- ED207P Learning Resources Design & Development
(TAEDES502A: Design and develop learning resources)
- ED208P Organizational Training Needs Analysis
(TAETAS501B: Undertake organisational training needs analysis)
- ED 404 Educational Research (Part 1)
(TAERES501A: Apply research to training and assessment practice)
- ED209P- Training Program Evaluation
(TAEDES505A: Evaluate a training program)

Level 3-Training Authorities Accreditation Compliance

Part (1) Educational Leadership Subjects

- ED 402 Educational Leadership
- ED 301 Educational Policy (Myanmar Engineering Council Accreditation Requirements)
- ED 308 Change Management
- **ED309 Educational Communication**
- ED 407 Learning Environment
- ED311 Outcome based Education
- **ED412 Engineering Education (2)**

- ED301P- Curriculum design for accreditation compliance
- ED302P-Overall accreditation and compliance practice

Level 4-Specialized Teaching Areas

- ED 313 Computer Supported Learning & Distance Education
- ED 304 Maths Teaching
- ED 305 Science Teaching
- ED 306 Technology Teaching
- ED 404 Educational Research (Part 2)
- ED310 Learning Technology I & II
- ED312 Technology in Classrooms
- ED413 Engineering Education (3)

RESOURCES

ASSESSMENT FOR THE SUBJECTS IN PART 1 OF THE LEVELS

The students will have to write 20 pages study report for each of the subjects outlined in the Part 1 of any level .

The report general needs to include

- Book review- Review on each chapter of the book highlighting the key concepts, points, key theory & practical application concepts
- Own idea on how to apply those concepts in real practical applications.
- Examples of curriculum designs that use the concepts & knowledge expressed in those books (If any)
- Your comment on each book

The book references for the subjects can be downloaded from the following links by entering the given password. The detailed instruction will be given in subject study guides. Some of the units can be assessed in residential training workshops.

Password- to be given

ASSESSMENT FOR THE SUBJECTS IN PART 2 OF THE LEVELS

Follow the specific assessment instruction provided for the units in Part 2 of the levels

Study Areas & Levels of Training

Diploma in Engineering Education

The following units can be added to Diploma in Technical Teaching to award Diploma in Engineering Education

ED409-Engineering Education Part 1

ED410-Engineering Education Part 2

ED411-Engineering Education Part 3

ED412-Engineering Education Part 4

ED101 Theory of Education

Objective-

This unit provided the concept of education to enable the learners to understand the complex system of education by developing an understanding at different levels, inner workings of the individual learner, thinking processes and motivation & apply in practical teaching

Outcomes

- to understand all the different levels of education at the same time,
- to see personal learning and national legislation
- to build an understanding of education at all of these different levels.

Contents

Education theory, Modelling, Classroom Management, Equality of opportunity, Learning & Teaching, Quality Assurance, Theory into practice.

Assessment

Assignments = 100% (4 assignments with 25% each)

Instruction Reference Textbook- Theory of Education.pdf by David A Turner

Education theory

Education studies are full of attempts to develop this kind of explanation. The search for intelligence, either general intelligence, *g*, or multifaceted factors of intelligence, whether inherited from parents or learned from teachers, have been identified as ways of explaining different levels of performance. Those who have this magic quality do well at school, those who lack it do not. Even emotional intelligence, which at least represents a branching-out into less tangible fields of development, is couched in terms of the dominant discourse of intelligence, the mystery factor which explains school performance.

Whatever cannot be explained by intelligence might be explained by the wealth of the child's father, the upward social aspirations of its mother, the number of siblings, the presence of books in the home, the language patterns of significant adults, the qualifications of its teachers, birth-weight, the parents' smoking habits or a telephone at home, to name but a few candidates which have been tried. Each failure simply stimulates the next attempted explanation.

If this approach worked, then using a multidimensional array we would be able to identify a group of young people identical on all of these variables and any others we chose to add, and we would expect all members of a homogeneous group to perform equally well in school, and differently from the members of any other group.

Educ 101- power point PHILOSOPHICAL FOUNDATIONS.ppt (0.15MB)

http://www.filefactory.com/file/4hs52fe8ctdt/n/Educ_101-_power_point_PHILOSOPHICAL_FOUNDATIONS.ppt

Assignment (1)

How should education be understood? Provide your argument with the references provided in this reading section.

Modelling

The topic of the preceding three chapters has been modelling; constructing explicit and specific models from game theory and chaos (or complexity) theory, and holding them up as patterns for understanding and explaining naturalistic, everyday phenomena. The purpose is to develop theory in order to build better models, so that a wider range of events can be researched, understood and eventually made subject to effective policy.

The modelling must be explicit because otherwise the model can achieve too much significance.

The model may assume the stature of a description of real life, or worse yet it may be understood as 'reality'. There is a difference between a model as a description of reality, and the model as a lens through which to view 'reality'.

Read Page 51 to 59 (Chapter 4 Modelling)

Assignment (2)

If you choose a particular model in education/ teaching/ learning, what factors are needed to be considered. Provide the reasons by referring this section of reading.

Classroom Management

Classroom management concerns policy at the microlevel, with teachers setting standards of behaviour, classroom rules, patterns of interaction, and so on, which all set the policy framework within which pupil behaviour takes place.

Considerable emphasis is placed upon the idea that education research should examine the behaviour of groups rather than individuals, and that research models should be able to take into account the ways in which the behaviour of some members of the group may have repercussions on other members of the group.

At its very simplest, every teacher will watch those pupils who head for the back row of the classroom as the pupils enter the classroom. In the classroom, the key features of multi-centred approaches can be seen where the actions of each member of the group have an instant and sometimes powerful effect on the choices of others, and the possibility that behaviours can be amplified or attenuated.

Read Page 64 to 81 (Chapter 5 Classroom Management)

Assignment (3)

What are the important aspects in classroom management. Provide the facts from this section of reading.

Just read through Chapter 7 Equality of Opportunity (From Page 104 to 120)

Learning & Teaching

Do people learn better in small groups or large? Do people learn best with individualized tuition? Is reading best taught through phonics or look-and-say?

The child is born with certain animal responses, the ability or necessity to respond to certain stimuli in particular ways. For example, loud noises will startle a young child and draw his or her attention immediately. But, as Pavlov had shown, the response can be transferred to a conditioned stimulus by repetition, as when the mother first calls the child's attention by the (relative) loudness of her voice, but later the quality and tone of voice, or even the speaking of the name of the child, is enough to attract his or her attention. By progressive stages stimuli of greater and greater cultural content, and less and less directly linked to a loud noise, can be used to direct the child's attention. A bright red sign, a written instruction, even an exclamation mark can eventually be used to focus the individual's attention. At some point in this process the child will recognize that he can substitute his own stimuli and give them specific meaning in relation to the response, and can therefore control his own behaviour.

The individuals can use the laws that govern lower mental functions in order to transcend them, and create a form of mental activity that is qualitatively different .

The teacher can and should manage and manipulate the inter-mental sequence, and should structure this experience in such a way as to maximize the opportunities for the learner to engage with the concepts that are being used.

Read Page 121 to 139 Chapter 8 Learning & Teaching

Assignment 4

How does learning relate to different levels of educational activities. Explain by providing the examples that you get from this section of reading

Just read through Page140 to 156 Chapter 9 Quality Assurance

Objective-

This unit provide the knowledge to include reference to the use of technology for instruction, training, learning, or teaching. In practice, definitions serve to focus the interest of associations of individuals by emphasizing a particular scope of interest.

Outcomes

- To design, development, utilization, management, and evaluation
- To provide instructional technology," "instructional systems design," and "instructional media
- To do the design and development of instruction and instructional resources using education technologies

Assessment

Assignments = 100% (7 assignments)

Active Learning

Active learning constitutes learning that helps students to think critically, analyze, synthesize, and evaluate information, work efficiently and effectively in groups, and solve problems within a variety of different disciplines. Active learning is an attempt to counter traditional instructional models that primarily consist of knowledge transmission and development of inert knowledge (Whitehead 1929). Inert knowledge refers to knowledge learned out of context that is not readily transferable to novel situations. For example, students may learn the formula for determining distance but be unable to apply this information within the context of an interdisciplinary scenario.

Read Page 37 to 42

Assignment 1

Describe the features of active learning & provide the factors that assist the active learning.

Alternative Assessment

Alternative assessment refers to non-traditional assessment methods. Such assessment methods are often applied to complex knowledge and performances and engage students in higher-level thinking and authentic performances while simultaneously permitting reliable scoring and manageable record-keeping. Most frequently, alternative assessment is used as a complement to rather than a replacement for traditional objective tests. Objective tests are an efficient way to assess students' knowledge of rote facts, whereas alternative assessment strategies move beyond such testing and meet the learning styles of more students.

Alternative assessment is closely linked to curriculum planning and instructional methods. Thus the push for constructivist learning environments, authentic learning experiences, collaboration, and facilitation of higher-order thinking skills has fueled interest in alternative assessment.

Read Page 51 to 53

Assignment 2

Write the ways of alternative assessment

Adult Learners

Adult learners are people over the age of eighteen in an instructional situation, whether formal or informal. Lifelong learning is now a common expectation of society, but in the field of educational technology most adult learners undertake their studies in employee education and training programs. This stems from the fact that since the 1980s the preponderance of instructional design practice has occurred within the private sector, primarily in business and industrial settings. This coincides with the steady growth of employee training as an integral part of most organizations. This growth reflects the emphasis on producing a more knowledgeable workforce and, increasingly, on improving employee on-the-job performance and solving organizational problems.

Read Page 47 to 50 Adult Learners

Assignment 3

Write the characteristics of adult learners & provide the suitable kinds of learning assessment.

Analysis

Analysis represents the planning phase critical to the effective use of educational technology. It is what educational technology professionals undertake when determining what action should be taken. Whether called "analysis," "assessment," "needs analysis," or "performance analysis," the focus is on making decisions regarding the design and use of technologies toward achieving educational outcomes by examining and considering many viewpoints and data elements rather than by habit, intuition, or fiat. Through analysis, it is possible to cultivate an analytical point of view rather than a view that favors technology or formal classroom instructional strategies. Similar to the diagnostic activities carried out by doctors, architects, and consultants, analysis is a data-driven process that helps educational technologists identify key problems to design effective solutions.

During analysis, many sources, questions, instruments, work products, and approaches are used to plan a solution.

Read Page 53 to 60 Analysis

Assignment 4

Write the strategies for increasing support for analysis

Assistive Technology

Assistive technology plays a key role in allowing students with disabilities to interact with instructional technology products and bypass barriers associated with physical, sensory, or cognitive limitations. Beyond simply enabling equal access to educational tools, assistive technology contributes to the individual's full participation in the learning environment and enhances potential vocational and continuing education opportunities. In some circumstances, educational technology that increases or improves learning outcomes can serve the dual purposes of assistive technology that increases, maintains, or improves functional capabilities. A typical example would be the use of a word-processing program by a student who cannot complete handwritten work due to paralysis of the dominant hand. The word- processing program represents assistive technology because it offers a functional way for written work to be completed.

Read Page 82 to 89 Assistive Technology

Assignment 5

How does Effective assistive technology implementation enhance?

Cognitive Apprenticeship

Cognitive apprenticeships are modelled after traditional apprenticeships. Whereas traditional apprenticeships involve learning a visible activity or skill, cognitive apprenticeships involve using mentors to model processes that are often invisible, such as problem-solving, comprehension, and computation. Apprenticeships can be distinguished from traditional instructional methods because they provide opportunities for practice rather than specifications for practices (Berryman 1991).

Read Page 173 to 177

Assignment 6

Describe the relationship between Educational Technology and Cognitive Apprenticeships.

Computer-Assisted Instruction

Computer-assisted instruction occurs when an instructional program is delivered to a learner using a computer. CAI is sometimes considered a type of computer-based instruction (CBI), which refers to any form of computer use in an educational setting, including instructional programs, tutorials, simulations, instructional management, supplementary exercises, programming, and productivity software applications such as word processing and spreadsheets. CAI and CBI are often synonymous, the former sometimes in a more restrictive sense to refer to drill-and-practice, tutorial, or simulation software used for stand-alone learning activities or as supplements to teacher-directed instruction.

CAI may also describe the instructional program itself or the delivery of the instructional program by a computer.

CAI is sometimes known as educational software and courseware when packaged as a comprehensive curriculum with management and assessment features. In a typical CAI session the student sits in front of a computer, which presents information on the screen. The student reacts to the information presented by working with the mouse and/or keyboard. The pace of instruction may be controlled by the student, who may have control over the sequence of instruction. At certain points in the program, the student responds to questions posed, and the program notifies the student whether the response was correct or incorrect. In more complex CAI settings, the program may also keep track of the number of correct and incorrect responses and adapt the sequence of instruction according to performance throughout the program.

Read Page 217 to 220

Assignment 7

In your teaching area, outline your idea to utilize computer assisted learning system.

Objective-

To use developmental process for reflecting on and improving one's teaching; and as an evaluative product for personnel decisions such as tenure, promotion, or a teaching

Outcomes

- To provide different sources of evidence of teaching performance.
- To contribute important information about teaching performance
- To collect variety of sources of information related to teaching
- To reflect more of teaching's intellectual substance and complexity.
- To make teaching more visible through their demonstration of a variety of teaching-related activities.
- To place the initiative for reflecting on and evaluating teaching in the hands of faculty.
- To give the individual an opportunity to think about own teaching —
- To change priorities or teaching strategies as needed, and to reflect about future

Meaning of Teaching Portfolio, Why Prepare a Teaching Portfolio? ,How Does One Develop a Teaching Portfolio? ,Preparing Portfolio ,Shaping the Final Portfolio ,Keeping Your Portfolio Up to Date ,Assembling an Electronic Portfolio ,Portfolio evaluation

[Instruction Reference Textbook- teaching-portfolio.pdf](#) (University of South Australia)

[Reference- Preparing a Teaching Portfolio by Fran Mues and Mary Deane Sorcinelli](#) The Center for Teaching University of Massachusetts Amherst

A teaching portfolio is an essential part of your professional development. It is a document that records your achievements, allows you to reflect on your teaching and supports your applications for tenure and promotion.

A teaching portfolio is a living document; it will change over time as you evaluate your teaching, reflect and act on the results, and develop different approaches to teaching.

Teaching portfolios are usually 6–12 pages in length, and may contain supplementary material in appendices.

They provide a summary of your major teaching accomplishments with selected examples that substantiate your commentary. The portfolio is usually written as a scholarly reflection of your teaching and the principles that you have used to inform your approach to academic work. The document will highlight any changes you have made to your teaching on the basis of reading the

educational literature, student and peer evaluations, research you have conducted on learning and teaching and participation in professional development programs.

There is no prescribed way to write a teaching portfolio; it is your document. You are not expected to reach some hypothetical standard; the document is a commentary on reflection and development. It is quite acceptable to reflect on teaching activities that did not have the desired effect of improving student learning, as well as those activities that were successful. Portfolios usually develop in stages, from the collection of information, to exploring new methods of teaching through to scholarly reflection and informed action.

Those reading your portfolio for tenure or promotion will be seeking evidence you have:

- a scholarly approach to teaching
- obtained student and peer feedback of your teaching and that you have acted on the results
- reflected on how your teaching has influenced student learning
- made an impact on student learning

Assessment

Assignments = 100% Portfolio Assessment

There is no prescribed proforma for a teaching portfolio. Each portfolio is unique, but usually contains most of the following information:

- personal details, including name, department, contact details
 - a list of contents, so it is easy for the reader to find items
 - an introduction containing your teaching and administrative duties
 - a summary of your teaching philosophy, including reference to University learning and teaching plans
 - a critical reflection of your teaching activities and their impact on students and your school. This could include a description of the approach you adopted for a particular activity, including the context and rationale for the approach. You could comment on any difficulties or unexpected results from the activity, discuss any student and peer evaluations, and add a reflective summary of the positive aspects resulting from the activity and any changes you would make if you repeated the activity.
 - a summary of professional development activity
 - a summary of any future developments you would like to undertake and a timeframe for their implementation
 - a plan of action for improvements in your teaching
 - conference presentations, publications, awards and grants related to learning and teaching
 - appendices with documentary evidence in support of your details listed above
-

Objective-

This unit provides the methods to apply thought-stimulating examples teaching & learning techniques to be applied in training design and delivery to apply the various techniques and strategies in training design and presentation, that will stick! Specific strategies.

Outcomes

- To create trainings that are fun and memorable.
- To write learner-based trainings that guarantee success for each learner performance.
- To develop learning activities that match the need, learning style, and level of understanding of the participants.
- To use learning strategies that encourage learners to build on their experiences.
- To plan ongoing training activities that evaluate learner mastery during the entire learning event.
- To design blended and accelerated learning strategies that strengthen learning transfer back on the job.
- To identify methods that accurately measure training results.

Lesson Planning

Planning gives you something you can communicate - to pupils ('In this lesson you will learn . . .') and to colleagues, especially support staff (see Idea 77). The provision of teaching assistants is a major item in most schools' budget, yet some teachers fail to make best use of them by not explaining lessons beforehand. Lack of planning wastes, and demotivates, support staff.

The most important point, however, is that lesson planning enables you to optimize things. Without planning, you may find you're able to get by or even produce an adequate lesson, but you'll not be teaching with maximum effect. When planning lessons, therefore, ask yourself not 'What can I teach

them?' but 'What's the best thing I can teach them?', not 'How can I teach this?' but 'What's the best way I can teach it?'

It is natural when one first goes into teaching to think in terms of the following sequence:

After you have planned and taught the lesson and then assessed your pupils' work, you need to use the , information that you have gained from assessment to inform your planning of the next lesson that you teach that class , You need to:

- 1 Consider what the assessment data tell you in general about the lesson that you have just taught. Are there, for example, points that have not been well understood and which you need to cover again?
- 2 Decide how you will give marked work back to pupils and encourage them to learn from your assessment.
- 3 Consider whether the assessment information on particular pupils suggests you need to give special consideration to the way you teach them

Instruction Reference Textbook- Principle of learning & memory Edited by Rainer H. Kluwe, Gerd Liier and Frank Räsler

Learning & Memory

Research on learning and memory is performed at different levels of analysis ranging from the cell to observable behavior. The breadth of research methodologies raises the challenge of integrating the different approaches. In order to answer questions about the brain structures and systems that enable human cognitive activity, it is necessary to relate approaches and results from experimental psychology to those provided by biology, neuroanatomy, or neuroscience.

The former are concerned with the systems level of behavior, the latter with more elementary levels of neurons and neuronal networks. It is only through a synthesis of the disciplines that cover the whole hierarchy of analysis, that researchers can develop a better understanding of the system, its components, its constituting elements, and, last but not least, its interaction with the environment

The emphasis of the chapters in this volume is on the interconnections between the level of behavior and the level of neural activities and structures. The goal is to overcome the traditional borders separating different fields of research in order to present an integrated pattern of results that enables a broader, interdisciplinary view and a deeper understanding of human learning and memory.

The large amount of research and the broad range of phenomena require us to focus on selected topics. We selected phenomena that are central to human learning and memory, and that are studied from different perspectives in cognitive psychology, in neuroscience, and in biology.

By analyzing the literature fifteen principles were delineated which seem to be most central for research on learning and memory and which are currently being investigated through an interdisciplinary approach. These principles can be subsumed under five main themes:

- (A) Formation of memories;
- (B) Organization of memories during encoding, storage and retrieval;
- (C) Consolidation of memories;
- (D) Control of memories during information processing; and
- (E) Adaptive specialization of memories.

A. Formation of memories:

The human cognitive system is able to learn and to change, to improve and to adapt performance based on experience and changes in the environment. How does the brain enable learning and memory? The first four chapters by Lachnit, by Kress and Daum, by Roder and Rosier, and by Roth focus on the mechanisms and underlying brain structures that participate in the formation of new memories, i.e. on the processes that lead to the acquisition of knowledge. The chapters discuss results from animal and human research that point to four basic principles: spatio-temporal contiguity, multiple brain structures underlying experience-related changes, brain plasticity, and emotional learning.

B. Organization of memories:

How are processes of encoding, storage and retrieval related to brain structures and neural processes? Probably one of the most important insights gained through recent research is that these processes are based on highly organized and specialized structures of the brain (e.g., Damasio, 1989; Squire, Knowlton, & Musen, 1993).

Functional modularity of the brain is now one of the key concepts of neuroscience. Data obtained from experimental analyses of human cognitive performance as well as a theoretical analysis of memory phenomena suggest that specialized subsystems perform specific tasks like encoding,

storage, retrieval, and modification of information. These systems are defined by structural and functional criteria, in particular by the type of information representation that is available to them. The goal of research is to identify such specialized subsystems and to understand their functional intricacies. This is the central issue addressed by Rosier and Heil, by Buchner and Brandt, and by Jonides, Sylvester, Lacey, Wager, Nichols and Awh.

C. Consolidation of memories:

The flexible acquisition of new information is essential for systems that have to interact with a changing world. Equally important is the ability of the system to transform this new information into stable memories that can reliably guide behaviour later. Mechanisms and processes that support the consolidation of newly acquired knowledge and provide for enduring memories. These authors cover the principle of memory consolidation and its pharmacological modulation, the principle of cross-cortical consolidation of episodic memories, and the principle of bottleneck structures necessary for consolidation and retrieval.

D. Control of memories:

The chapters in this section all deal with the basic mechanisms

of how information is represented and how information transfer is controlled in the nervous system. The chapter of Munk discusses the principle of transient binding in the CNS, which is a powerful, empirically based hypothesis that explains how the brain can find its equilibrium between two seemingly antagonistic processing modes: cortical adaptivity versus consolidation, or rapid reorganization versus the generation of stabilized representations. The principle of inhibition is another basic mechanism, which regulates activation processes on both the neuronal and behavioral levels of memory representations. Dagenbach & Kubat-Silman review several inhibitory mechanisms, derived from cognitive psychology, that are relevant to working memory and long-term memory control. They relate these mechanisms to possible neural correlates. Mayr's chapter draws on recent evidence from behavioral, brain imaging, and single-cell recording work to sketch out an integrated view of the neurocognitive basis of executive control.

E. Adaptive specialization of memories:

Pinker (1997), referring to Darwin's claim that future psychological research will be performed on new foundations, stated that the process of relating psychological and biological research has been slow except for the important development of evolutionary psychology, as initiated by Cosmides and colleagues (e.g. Barkow, Cosmides, & Tooby, 1992). Evolutionary psychology has engendered an unusually strong combination of approaches that includes cognitive psychology's analysis of information processing and evolutionary biology's analysis of complex, adaptive behavior of species. Giinterkiin and Durstewitz and of Gal/istel continue this fruitful collaboration in their chapters, which cover the principle of species independent learning phenomena and the principle of adaptive specialization

Day 1 Session 3A.zip (41.59MB)

http://www.filefactory.com/file/2jzqn42ykqkf/n/Day_1_Session_3A.zip

Assessment

Assessment = 100% (Assess as part of Learning outcomes & curriculum development tasks in Residential Workshop session)

Objective-

This unit provides new and experienced faculty in all disciplines with practical, tested strategies for addressing all major aspects of college and university teaching, from planning a course through assigning final grades. Graduate student instructors and teaching assistants will also benefit from the foundational knowledge and research findings described in this unit.

Outcomes

- To addresses planning: designing a new course or revising an existing one, creating a syllabus, preparing for the class, and managing classroom conduct and decorum.
- To respond to a Changing Student Body,
- To do “ Discussion Strategies, ” provides ideas for leading a productive discussion, framing challenging questions, and encouraging student participation, both in class and online.
- To explore aspects of the lecture in the Large-Enrollment Course, ” method: preparing and delivering effective lectures, engaging students and pro-viding for student participation, and maintaining instructional quality with limited resources.
- To find the Alternatives and Supplements to Lectures and Discussion,
- To Enhance Students ’ Learning and Motivation, ” provides research -based approaches to helping students become more confi dent, independent, and self - motivated learners. Informal ways to assess learning and the use of mobile
- To Strengthen Students ’ Writing and Problem-Solving Skills, ”

Contents

RESPONDING TO A CHANGING STUDENT BODY ,DISCUSSION STRATEGIES ,THE LARGE-ENROLLMENT COURSE ,Maintaining Instructional Quality with Limited Resources ,ENHANCING STUDENTS’ LEARNING AND MOTIVATION ,STRENGTHENING STUDENTS’ WRITING AND,PROBLEM-SOLVING SKILLS ,TESTING AND GRADING,PRESENTATION TECHNOLOGIES ,EVALUATION TO IMPROVE TEACHING,TEACHING OUTSIDE THE CLASSROOM ,FINISHING UP

Assessment

Experience Assessment = 100% (Assessed on Formal Teaching experience record for the teachers being employed by Government Technical Colleges & Technological Universities)

Separate assessment system is applied for pre-service teacher trainees.

Objective-

To define classroom management, explain the relationship between classroom management and discipline, and describe the concept of “culturally responsive classroom management”

Outcomes

1. To describe the characteristics of an effective teacher
2. To explain why reflection on teaching is so important for teacher growth
3. To describe the reflective decision making model of teaching
4. To identify important factors that affect instructional decision making
5. To contrast the characteristics of authoritative, authoritarian, and permissive teachers
6. To identify the ongoing tasks involved in classroom management and to explain how each contributes to a well-functioning learning environment

Contents

Effective teacher, understanding students, Involving students in learning, Questioning skills, Responding to diversity, Co-operative learning, Classroom management

Assessment

Experience Assessment = 100% (Assessed on Formal Teaching experience record for the teachers being employed by Government Technical Colleges & Technological Universities)

Separate assessment system is applied for pre-service teacher trainees.

Level 2-Adult Vocational Education

ED 401 Adult Learning Technology

Objective-

This unit provides and skills and the roles of training developers and instructional designers who are responsible for analysing training needs and designing training solutions and products to meet workplace capability requirements, and evaluating the effectiveness of adult training programs.

Outcomes

To provide the guidance and advice to trainers and assessors, promoting innovative practices, e.g. e-learning, and in researching and incorporating best practice in training and assessment into training programs and products.

Contents

- Learner-Centered Teaching and the Use of Technology
- Effective Teaching with Technology in Adult Education
- Adult Learners and Their Development in the Information Society
- Supporting Lifelong Learning and Flexicurity Policies
- Adult Learning Principles as the Foundation for Innovative Technology Applications in Business and Higher Education Venues
- The Role of Learning Styles and Technology
- Innovative Instructional Strategies with the Use of Technology for Adult Learners
- Integrating Adult Learning and Technology for Effective Education:
- Strategic Approaches
- Comparing the Principles of Adult Learning with Traditional Pedagogical Teaching in Relation to the Use of Technology:
- Provide Training through instruction and demonstration of work skills
- Facilitate work-based learning
- Group based delivery
- Design and develop learning programs
- Foster and promote an inclusive learning culture
- Ensure a safe and healthy learning environment
- Individual learning
- Language Literacy & Numeracy

Assessment

Participation in Educational Support Workshop sessions=100%

(Assess as part of Learning outcomes & curriculum development tasks in Residential Workshop session)

Objective-

To provide theoretical consideration for the twenty-first century curriculum, & technological and pedagogical innovations influencing curriculum renewal together with sustainable practice in technology-rich environments.

Outcomes

- To address theoretical foundations for the development of curricula.
- To explore the pedagogical options available to higher education instructors
- To explore new ways of accessing and connecting content to multimodal forms
- To examine how curriculum design needs to be influenced by the effective development of virtual collaborative learning environments
- To devise more adaptive, educationally focused teaching and learning

Contents

Curriculum Design for the Twenty-First Century, Online Collaboration: Coordinating Technology, Strategies for Collaborative Learning, Designing a Virtual Collaborative Learning Environment, Curriculum Design as Applied to Virtual Collaborative, Course Evaluation, Creating Curriculum Within the Context of an Enterprise, Teaching Instructional Design, Online education examples.

Learning Practice

ED 205 Teaching & Measuring

Objective-

To apply adaptive expertise, creative thinking, metacognition, and teamwork in teaching and measuring task

Outcomes

To apply Adaptability, Adaptive expertise, Adaptive problem solving, Communication, Creative thinking , Decision making , Metacognition, Situation awareness & Teamwork

Contents

Cognitive Readiness, A Model for Instruction and Assessment of Cognitive Readiness, The Development and Assessment of Cognitive Readiness: Lessons Learned from K-12 Education, Cognitive Readiness for Solving Equations . Cognitive Readiness Applications, Creative Thinking Abilities: Measures for Various Domains, Using Analogies as a Basis for Teaching Cognitive Readiness . Simulation Assessment of Cognitive Readiness . Assessing Cognitive Readiness in a Simulation-Based Training Environment, Software Support for Teaching and Measuring Cognitive Readiness, Cognitive Readiness for Complex Team Performance, Impact of Individual Game-Based Training on Team Cognitive Readiness

ED 405 Training Principle

Objective-

To provide numerous techniques, designs, case examples, and tips for designing and facilitating training that is participant-centered, brain-friendly, and experiential

Outcomes

- To explore all aspects of training.
- To promote an active approach to training
- To provide a practical handbook of techniques

Contents

INTRODUCING ACTIVE TRAINING, DESIGNING AN ACTIVE TRAINING PROGRAM, Assessing Training Needs, Developing Active Training Objectives, Creating Opening Exercises, Preparing Brain-Friendly Lectures, Using Experiential Learning Approach, Designing Active Training Activities, Sequencing Active Training Activities, Planning Active Training Programs, Blending Technology into Active Training, CONDUCTING AN ACTIVE TRAINING PROGRAM, Beginning an Active Training Program, Gaining Leadership of the Training Group, Giving Presentations and Leading Discussions, facilitating Structured Activities and Promoting Team Learning, Concluding an Active Training Program, EXTENDING THE VALUE OF AN ACTIVE TRAINING PROGRAM, Evaluating an Active Training Program

Assessment

Participation in Educational Support Workshop sessions=100%

(Assess as part of Learning outcomes & curriculum development tasks in Residential Workshop session)

Objective-

To design the engineering educational programs and teaching programs by applying multi-disciplinary approaches by combining technological aspects

Outcomes

- To attain the strategies to promote the engineering education
- To apply technological concepts in engineering teaching support system
- To develop the quality work-based learning system
- To write Sociological Rationale of a design curriculum
- To find the strategies to improve the communication skills of engineers
- To design the computer server for engineering education program

Contents

- Pre-university Outreach: Encouraging Students to Consider Engineering Careers
- The ASTutE Tutorial Assistant: Efficient, Accessible and Interactive
- Learning at Work within the Ford Motor Company
- Using Rubrics to Assess the Development of CDIO
- Syllabus Personal and Professional Skills and Attributes at the 2.x.x Level*
- Quality Assurance Issues Relating to the Delivery of Work Based Learning Programmes*
- The Role of Work-Based Learning Methodologies in the
- Development of Life-Long Engineering Education in the 21st Century
- Traits Analysis and Influences on High Performing Students in Mechanical Education
- The Construction of an Instructional Quality System for Industrial Technology Education
- Design Hegemony: an Exploration of Hegemony in the Curriculum and Instruction of Industrial Design Education
- The Engineering Mechanics Interactive Lecture Series: Oligomedia Resources for Computer-Based Learning
- The Sociological Rationale of the Industrial Design Curriculum
- Achieving Advances and New Developments in Engineering and Technological Education
- Important Considerations in Improving the Acquisition of Communication Skills by Engineers
- Client-Server and Gateway Systems for Remote Control in Engineering Education

- The Development of Online Conference Management Tools as a Student Project*
- Co-operation across Disciplines in Engineering Education Using Technical and Scientific Computing Environments

Assessment

Questions

- 1.To encourage the students to take the engineering career, which aspects should be concerned?
 - 2.Outline the facts to design the interactive tutorial assistance program
 - 3.Express the Personal and Professional Skills and Attributes required for Year 2 Engineering programs.
 - 4.To design the work-based learning program, what are to be considered for quality assurance.?
 - 5.Write Sociological Rationale of a design curriculum
 - 6.Express the examples of Advances and New Developments in Engineering and Technological Education.
 - 7.To improve the communication skills of engineers, what are to be emphasized in training program?
 - 8.To design the computer server for engineering education program, what are to be aware of?
 - 9.How can online system be utilized in students project management?
 - 10.By using Technical and Scientific Computing Environments, how can the different disciplines be co-operated?
-

Objective-

This course provides the educators with skills to take an active and creative approach to their personal and professional development. While it may be of most interest to those in middle or senior education management, it is also designed to help teachers, governors and those in organizations allied with education.

Outcomes

To attain the competencies in

- Leading and managing
- Changing and learning
- Undertake Tasks and responsibilities

Instruction Reference Textbook-

**Educational leadership and learning Practice, policy and research
by Sue Law and Derek Glover**

Contents

- The context for educational leadership
- Developing leadership and management effectiveness
- Managing ourselves and leading others
- Motivating and managing others
- Leading effective teams
- Effective communication
- Organizational cultures
- Managing change and creating opportunities
- Educational improvement, inspection and effectiveness
- Leading and managing in learning organizations
- Managing staff and promoting quality
- Managing resources and finance
- Managing stakeholder relationships and partnerships
- Leading and managing for professional development

Leadership

• Management has its start point in the organisation. It is taken to involve the conduct and evolutionary development of an institution and its staff by means of rational decisions and performance monitoring underpinned by information systems, policies, procedures and plans. • Leadership has a start point in the people within the organisation. It is concerned with getting their

willing cooperation and contribution towards organisational goals and with meeting their needs as individuals.

- Just as 'managers' exist at all levels of the organisation so, too, can leaders be found at all levels. The latter do not necessarily depend on a formal role position.
- Both activities, leading and managing, are required. The balance between each activity varies both from time to time and also from the position of an individual within an organisation.

Both activities, leading and managing, are required. The balance between each activity varies both from time to time and also from the position of an individual within an organisation. 2 Leadership issues: raising achievement

- Whether one activity subsumes the other or whether management and leadership exist as poles of activity along a continuum does not have any bearing on the argument presented.
- Incorporation and the essential need to run an efficient and effective organisation have made it inevitable that there has been an emphasis on the top levels of colleges and upon the managerial activities of senior management. Leadership has always been required at that level. Our interest lies in improving the impact of leadership activity at lower levels in colleges.
- These lower levels are those at which course organisation and delivery by a group of staff is the key activity. If leadership is to have a more direct impact on student achievement than is the case with the mediated leadership activity of senior post-holders, then this lower level may be the one level to examine in more detail.

Leadership in further education

- clarification of what we mean by leadership, particularly within an educational context
- an outline of a number of models of, or approaches to, leadership
- a description of the key behaviours which are associated with effective leadership
- leadership roles within organisations
- how leadership impacts on student outcomes

http://www.filefactory.com/file/2au2d9n4837f/Day_10_Session_23A.zip

Assignment

Write 20 pages report on your leadership role at your section/department/ organization. Your report should include the followings.

- Your understanding of leadership
- How do you develop leadership and effective management?
- How do you lead others?
- How do you motivate others?
- How do you lead the effective teams
- Your effective communication?
- Your organizational cultures
- You do you perform managing change and creating opportunities
- Your participation in educational improvement, inspection and effectiveness
- Your activities in leading and managing in learning organizations
- Your responsibility in managing staff and promoting quality
- Your activities in managing resources and finance

- Your activities in managing stakeholder relationships and partnerships

- Your leadership in managing for professional development of your staff.

Assignments = 100%

ED 301 Educational Policy (Myanmar Engineering Council Accreditation Requirements)

Objective-

This course provides the educators with Myanmar Engineering Council Laws, Rules, Regulations, Accreditation Requirements, Accreditation Practices , procedures related to accreditation of engineering courses and engineering professionals in Myanmar to enable them to design, develop and teach the engineering programs accredited by Myanmar Engineering Council.

Outcomes

- To understand Myanmar Engineering Council Accreditation Rules & Regulations related to accreditation of Government Technical Colleges & Technological Universities in Myanmar.

- Get the information & knowledge on Current issues related to international & Myanmar Engineering profession.
- Participate in hand on practice workshop focussing on curriculum development & collecting and preparing the materials for accreditation by Myanmar Engineering Council Engineering Accreditation Committee & taking part in mock accreditation sessions.

Contents

- Overview of Myanmar Engineering Council Law, Regulation, Accreditation Principles
- Examples of marine engineers competency assessment in Myanmar/ in line with International Certification standards & explore the way to apply the similar competency based training in other engineering areas
- Requirement of Myanmar Engineering Council & how to design the curriculum to address the learning outcomes
- Discussing the programme structure and course contents(MEng C)
- Discussing the programme delivery and assessment methods
- Assessment Validation Guide of Myanmar Engineering Council
- Educational Resources Development in line with Myanmar Engineering Council Requirements
- Curriculum design for accreditation compliance
- Overall accreditation and compliance practice
- Preparation for self accreditation report
- Engineering Accreditation Plan

Assessment

Assignments = Participation in workshop sessions

Objective-

The unit involves candidates in leading a complete cycle of the change process. This process falls into three phases that correspond broadly to the elements of competency.

- i. Preparing for change
- ii. Planning for change
- iii. Implementing and evaluating change

Outcomes

- To provide leadership and support to others within the organization
- To manage change more effectively
- To develop educational business skills
- To analyse work practice and context, and make improvements
- To contribute to innovation and capacity building in the organization.

Contents

- Leadership issues Raising achievement
- The Leadership of Change
- A shift from management to leadership
- How not to do change management
- Managing change and transition

Brief Notes

Why do so many people resist change (initially at least)? How do you personally respond to change? Marvin Weisbord has written extensively about organizational change and in his book, *Productive workplaces: organizing and managing for dignity, meaning and community*, he draws on a fascinating visual model to aid understanding of people's capacity to change.

According to this representation, we all move from room to room depending on our perceptions, feelings or aspirations triggered by external events. How much energy we have for change depends on what room we're in at the time. In Contentment, we like the status quo and feel calm and satisfied. Any prospect of change can move us into Denial where we stay until we acknowledge our own fear or anxiety. We then move into the Confusion room where we feel unsure and scattered. As we stumble about in Confusion, trying to sort things out, we eventually open the door to Renewal where we feel open and willing to take risks.

This perspective does not see anxiety as a state to be avoided; rather, anxiety is the place we store energy while deciding whether to invest it. Every new project or major change requires a certain amount of anxiety. If there's too much, we're paralysed, while if there's too little, we're unmotivated.

As Weisbord (p268-9) observes, *"People in Contentment or Denial are not frozen. Events will move them soon enough. ... The urge to hold on - to old habits, familiar patterns, relationships and structures (whether they satisfy or not) - is as old as human history. ... We can help by giving people a chance to come together, to experience their mutual dilemmas more fully, to make their own choices about when and how to move. ... Feelings and perceptions can block task accomplishment as surely as lack of money, time or tools."*

- leadership is a process of influencing
- leadership can be exercised by people in organizations who do not possess formal authority
- leadership implies followers
- leadership involves the achievement of goals and objectives

- leadership may best be seen as the exercise of influence to move an organization forward, whereas management is concerned largely with the maintenance of existing systems and structures.

To conclude this section, you could dip into a book that takes a radically different approach to change and leadership. In contrast to most management texts, the authors of *Presence*, like Weisbord, acknowledge the emotional as well as the intellectual aspects of change. They emphasise the connectedness of all things and argue for a synergy between the personal and the collective. Senge et al explain why change is necessary and suggest an almost spiritual approach to learning the profound transformations that are required.

Leadership+ Change Management DVD

Read

- 811A.pdf
- Reading1.pdf
- Reading2.pdf
- Reading3.pdf
- Reading4.pdf
- Reading5.pdf

Assignment

PATHWAYS AND RESOURCES

OPTION 1

Prepare an annotated bibliography or brief literature review (maximum five pages) demonstrating your familiarity with current thinking about leadership styles and change management strategies.

Plus

Select relevant entries from the reflective journal to illustrate your developing skills and knowledge in relation to leadership and change management.

Plus

Present a fully developed action plan for the proposed change.

OPTION 2

Prepare a formal report or case study which includes detailed information about how you prepared for this project, planned and implemented the change, and evaluated both the outcomes and your own performance as leader.

Plus

Provide a statement from your supervisor or manager, confirming your role and attesting to your leadership development.

OPTION 3

Present a portfolio of workplace documents that tracks progress of the change project and demonstrates your leadership role at every stage of the change process.

Plus

Select reflective journal entries that show the ways in which interaction with your mentor contributed to your growth as a leader.

Assessment

Assignments = 100%

ED309 Educational Communication

Objective-

This program uses methods of the social sciences, encompassing both qualitative and quantitative approaches to the study of communication and education. It asks in particular how education and other social systems change under the impact of new media

Outcomes

- Reflect on the historical effects of media and on the cultural uses of developments such as face-to-face speech, writing, printing, photography, film, radio, television, computers, and networked multimedia;
- Use anthropological and linguistic methods to study how the diverse forms of communication, literacy, information processing, and cognition condition educational practice; and
- Explore positive and negative effects of media on social relations and develop strategies for using information and communication technologies to improve conditions of education and life.

Contents

- Creating a production that communicates your message
- Digital Design
- Great Looking Presentations
- Planning
- Technical Papers related to effectiveness of ICT in education

- Access and equity issues
- Educational Communication Portfolio Presentation

ED309 Educational Communication Assignment Tasks-806A Modified (Work Examples)

Assignment

Prepare the educational communication portfolio based on your workplace tasks. Your portfolio should demonstrate the following criterias

- At least two substantial written texts such as a submission , project plan, evaluative report, professional journal article or web site contribution to the project
- Planning documents and evidence of consultation and evaluation relating to the above texts.This could be in the form of e-mail correspondences or meeting notes
- A video taped presentation delivered as part of the project OR presentation notes and visual aids eg powerpoint , overhead transparencies)used in your presentation together with audience feedback commenting on the effectiveness of presentation.
- Planning , problem solving , decision making and evaluating tools that you have developed for facilitating group processes as part of the project
- Samples from strategies you developed to enhance communication between participants in the project such as newsletters, facilitated online forums, e-mail group correspondences , web blogs , teleconference minutes

PLUS

- Write a reflective essay discussing how the project developed workplace relationships and evaluating your role as a facilitator and the strategies that you used
- OTHER RELATED EVIDENCES

Assessment

Assignments = Portfolio Assessment- 100%

Objective-

The objective of this unit is to give the candidate an understanding of the conceptualisation, historical development, assessment, determinants and effects of classroom learning environments.

Outcomes

- To review classroom learning environment for effective educational setting
- To prepare effective educational setting for teaching and learning
- To understand the students' behaviour in the classroom and the cause of the behaviour
- To effectively use the teaching and learning strategies for keeping the good learning environment in the class
- To perform educational survey task on learning environment assessment.

Contents

- Background information about the fields of school and classroom environment
- Outcomes and environment; evaluation of educational innovations
- Quantitative and qualitative methods
- Teachers' use of classroom and school environment instruments in practical attempts to improve their own classrooms and schools.
- Current trends and future desirable directions in research on educational environments.

Learning Environment Reader

Brief Lesson

Educators often speak of a classroom's or school's climate, environment, atmosphere, tone, ethos, or ambience; they consider it to be both important in its own right and influential in terms of student learning. Despite the fact that the educational climate or environment is a somewhat subtle concept, remarkable progress has been made over the last two decades in conceptualising it, assessing it, and researching its determinants and effects. Although important educational learning environment work has been undertaken by researchers interested in a variety of school subject areas, clearly science education researchers have led the world in terms of developing, validating, and applying environment assessment instruments.

The learning environment focuses on the research on classroom learning environments in technology, science and mathematics. Topics include the history of learning environment research; questionnaires for assessing classroom environments; relations between type of learning environment and learning outcomes; and practical attempts to improve educational environments.

History of Learning Environment Research

Begin your study with Reading No. 1, Science learning environments: Assessment, effects and determinants. (B. J. Fraser). You will observe that this monograph falls into seven main parts:

1. Background information about the fields of school and classroom environment including alternative assessment approaches, a historical perspective on past work, the distinction between school and classroom environment and the unit-of-analysis question.
2. Instruments for assessing perceptions of classroom environment.
3. Assessment instruments for school environment.
4. An overview of several lines of past research involving environment including:
 - i. associations between student outcomes and environment; evaluation of educational innovations;
 - ii. investigations of differences between students' and teachers' perceptions of the same classroom;
 - iii. and investigations of whether students achieve better when in their preferred environments.
5. Recent research in which quantitative and qualitative methods were combined in the same study.
6. Teachers' use of classroom and school environment instruments in practical attempts to improve their own classrooms and schools.

7. Current trends and future desirable directions in research on educational environments.

Instruments for Assessing the Classroom Learning Environment

Refer to the Table on page 531 of Reading 1. This table contains, in summary form, some of the instruments that are used in studies of learning environments.

Complete Readings 2 to 8. These readings will provide further information about the development and application of instruments used in the quantitative assessment of learning environments. After completing these readings you should be able to select an appropriate instrument that you can use in your own teaching situation.

Assessment

Assignments = 100%

In this assignment you are required to complete an action research project incorporating the use of a learning environment measure. Use one of the learning environment instruments with a class, colleagues, or others in your own teaching situation. You could use more than one form of the instrument. Use the following guide in presenting this assignment.

Title

The title should be brief and accurately describe the nature of the project.

Context of the study

Discuss the background to the central problem. Explain why the problem is significant to your teaching or professional activities and educational research.

Selection of instrument

Briefly describe the development of the questionnaire and your reasons for its selection.

Data sources

Describe the target population (i.e., the class or other group).

Role of participants

Describe your role in the action research and any other persons involved the study (e.g., other teachers, principal, students).

Data collection

Describe and explain the types of data you collected, and how they were obtained and recorded.

Data analysis & interpretation

Present your results and explain the methods you used to analyse and interpret the data. Use tabular and graphical forms to enhance your presentation.

Significance

Explain your results and reflect on what they mean. Discuss the importance of both the results and the process.

References

Every reference you cite must be included in a list of references at the end of the assignment. Do not include any reference which is not explicitly cited in your report. Use *APA Format. This is covered in the "I Hate to Write Guide to Writing a Report" under the section "Citing Sources and References".

Sample Report

Assessing the Effectiveness of Information & Communication Technology in Senior Students' Learning Environment at Niue High School

ED311 Outcome based Education

Objective-

At the end of this training, participants will be able to understand:

- ☐ Outcome-Based Education (OBE)
- ☐ Programme Education Objectives (PEO'S),

Outcomes

Programme Outcomes (PO's), Course Outcomes (CO) and Performance Indicators

- ☐ Bloom's Learning Taxonomy
- ☐ Assessment and Evaluation Methods
- ☐ Continual Quality Improvement Process

Contents

- ☐ The Origins of Outcome Based Education
- ☐ *Approaches to OBE*
- ☐ *OBE Process*
- ☐ Educational Process - Stakeholders
- ☐ Educational Process – Lecturers' Roles
- ☐ Educational Process - References
- ☐ OBE Model Hierarchy
- ☐ Characteristics of OBE curricula
- ☐ *Types of Teaching/Learning Delivery Activities*
- ☐ *OBE Delivery*
- ☐ Continual Quality Improvement (CQI)
- ☐ Essentials for OBE's success

- ☐ Essentials Components of OBE
- ☐ Different Levels of Outcomes
- ☐ Development of Programme Education Objectives

Instruction Reference Textbook-

Final OBE Training at Myanmar July 2014. by **Ir. Professor Academician Dato' Dr. HT Chuah**
President of FEIAP

Assessment

Participation in workshop & presenting the portfolios

Objective-

To design the international standard engineering education program by applying total quality management

Outcomes

- To have the knowledge and skills in total quality management
- To foster the cross border co-operation
- To interface the school to engineering programs

Contents

- Secondary School-University Interface: Science and Engineering
- The Educational Process
- Quality Engineering Education: Student Skills and Experience
- The Web as a Tool for Supporting Student Learning
- Develop a Long-Term Plan to Overcome Skills Shortage
- Cross border engineering practice
- Cross-cultural Skills for engineers

Instruction Reference Textbook-

ED412 File

Assessment

Assignments = 100% (Two assignments of 50% each)

Describe total quality management in engineering education by outlining the important concepts.

Explore the rationales to prepare the global engineering program by cross border co-operation

Level 4-Specialized Teaching Areas

ED 313 Computer Supported Learning & Distance Education

Objective-

This unit provides the skills related to contribute to the central questions of how students can learn collaboratively using the new technologies, the problems that can be expected, and the benefits that may ensue. The various ways to examine how computer supported group work differs from face-to-face group work, and the implications for both educators and students are provided.

Outcomes

- ☐ To offer assessment of e-learning with the hope of offering ideas in terms of practical guide and points of good practices, while addressing potential pitfalls to avoid.
- ☐ To be aware of what constitutes good and effective e-learning practices and how to design them for specific contexts and audiences in the global information
- ☐ Innovative uses of e-learning, Addressing various divides in e-learning, user centered focus in e-learning, special considerations in e-learning and development economy.

Contents

- ☐ Computer-Supported Collaborative Learning in Higher Education:
- ☐ An Introduction
- ☐ Online Group Projects: Preparing the Instructors to Prepare the Students
- ☐ Time, Place and Identity in Project Work on the Net
- ☐ The Collective Building of Knowledge in Collaborative Learning Environments
- ☐ Collaboration or Cooperation
- ☐ Analyzing Small Group
- ☐ Interactions in Educational Environments
- ☐ Mapping Perceived Socio-Emotive Quality of Small-Group Functioning
- ☐ A Constructivist Framework for Online Collaborative Learning:
- ☐ Adult Learning and Collaborative Learning Theory
- ☐ The Real Challenge of Computer-Supported Collaborative Learning
- ☐ Use and Mis-Use of Technology for Online, Asynchronous, Collaborative Learning
- ☐ The Personal and Professional Learning Portfolio
- ☐ An Online Environment for Mentoring, Collaboration, and Publication
- ☐ Problems and Opportunities of Learning Together in a Virtual Learning Environment
- ☐ Web-Based Learning by Tele-Collaborative Production in Engineering Education
- ☐ Relational Online Collaborative Learning Model
- ☐ Online, Offline and In-Between: Analyzing Mediated-Action

Instruction Reference Textbook-

Computer Supported Learning by Tim S. Roberts

Assessment

Assignments = 100%

The students will have to write 20 pages study report The report needs to include

- Book review- Review on each chapter of the book highlighting the key concepts, points, key theory & practical application concepts
- Own idea on how to apply those concepts in real practical applications.
- Examples of curriculum designs that use the concepts & knowledge expressed in those books (If any)
- Your comment on each book

The book references for the subjects can be downloaded from the following links by entering the given password.

Objective-

This unit provides the skills to the teachers to act as mechanisms for communicating an approach to mathematics education that is eclectic and embracing, respectful and engaging, reflective and, ultimately, educational.

Outcomes

To provide the methods to the educators in class teaching to provide the students with conceptual understanding of mathematics content through modelling or interpretation of representations,

- computational fluency,
- problem solving through application of the content.

Contents

- Strategies for Vocabulary Development
- Strategies for Using Manipulatives
- Strategies for Teaching Procedures
- Strategies for Understanding Problem Solving
- Strategies for Using Mathematical Games
- Strategies for Assessing
- Mathematical Thinking

Instruction Reference Textbook-

- Multiple Perspectives on Mathematics Teaching and Learning Edited by Jo Boaler
- Strategies for Teaching Mathematics by *Deborah V. Mink*

Assessment

Assignments = 100%

The students will have to write 20 pages study report The report needs to include

- Book review- Review on each chapter of the book highlighting the key concepts, points, key theory & practical application concepts
- Own idea on how to apply those concepts in real practical applications.
- Examples of curriculum designs that use the concepts & knowledge expressed in those books (If any)
- Your comment on each book

Objective-

This unit provide the teaching pedagogy in science that effectively enable the teacher to transfer what they learn in our courses into their own classroom practices.

Outcomes

- To shine a spotlight on important work that science teacher educators are doing with teachers and youth
- To describe the professional purposes and benefits realized when they, as science teacher educators, arranged opportunities to teach children or adolescents.
- To utilize model teaching lessons in class room practice

Contents

- Pedagogical Content Knowledge
- Teaching & learning Through experience
- Teaching examples

Instruction Reference Textbook-

- Understanding and Developing Science Teachers' Pedagogical Content Knowledge
By John Loughran
- Science Teacher Educators as K-12 Teachers edited by Michael Dias • Charles J. Eick, Laurie Brantley-Dias

Assessment

Assignments = 100%

The students will have to write 20 pages study report The report needs to include

- Book review- Review on each chapter of the book highlighting the key concepts, points, key theory & practical application concepts
- Own idea on how to apply those concepts in real practical applications.
- Examples of curriculum designs that use the concepts & knowledge expressed in those books (If any)
- Your comment on each book

The book references for the subjects can be downloaded from the following links by entering the given password.

Objective-

This unit provides the teaching idea for teaching students with unique opportunities to develop a range of process skills such as critical and creative thinking skills in addition to their practical skills, through undertaking authentic tasks of real purpose.

Outcomes

- To link philosophy and educational issues in my daily work
- To help teachers to improve the teaching by means of the insights that philosophy of technology offers.

Contents

- Philosophy of technology:
- Technological artifacts
- Technological knowledge
- Technological processes
- Technology and the nature of humans
- Ethics and aesthetics of technology
- Learners' philosophies of technology
- Reconceptualizing technology through education
- Practical issues in teaching about technology

Teaching about Technology by MARC J. DE VRIES

Assessment

Assignments = 100%

The students will have to write 20 pages study report The report needs to include

- Book review- Review on each chapter of the book highlighting the key concepts, points, key theory & practical application concepts
- Own idea on how to apply those concepts in real practical applications.
- Examples of curriculum designs that use the concepts & knowledge expressed in those books (If any)
- Your comment on each book

The book references for the subjects can be downloaded from the following links by entering the given password.

Objective-

This unit describes the performance outcomes, skills and knowledge required to undertake research into educational theory and apply this research to improve current training and assessment practice.

This unit typically applies to those who need to develop skills in research in order to apply educational theory to improve current and future training and assessment practice

Outcomes

- Prepare research brief relating to training and assessment practice
- Conduct research in training and assessment practice
- Investigate and apply educational theory to the research
- Report on application of educational theory to training and assessment practice
- Review entire process

Contents

Qualitative Research and Public Policy

- Multilevel Analysis in Higher Education Research: A Multidisciplinary Approach .
- Conducting Multi-paradigm Inquiry in the Study of Higher Education Organization and Governance: Transforming
- Research Perspectives on Colleges and Universities
- Examining Pathways to and Through the Community College for Youth and Adults
- Review of the Theories Developed to Describe the Process of College Persistence and Attainment

Higher Education: Handbook of Theory and Research

Published under the Sponsorship of the Association for Institutional Research (AIR)
and the Association for the Study of Higher Education (ASHE)

Assessment

Assignments = 100%

Prepare & submit one educational research paper.

Objective-

On completion of this unit you should be able to demonstrate your achievement of the following learning outcomes:

All participants will be competent, confident and professional users of e-Learning system in teaching

Outcomes

To use e-Learning tools to:

- improve their own professional productivity,
- improve their preparation for classes and teaching generally and
- improve their ability to use and integrate IT appropriately within the classroom

Contents

The Syllabus:

The unit consists of five inter-related modules:

- 1. Module 1: Getting Started and IT Empowerment and Teaching**
 - a. Unit Introduction
- 2. Module 2: IT and Education:**
 - a. The Hype and the Reality
 - b. Multimedia in Education
- 3. Module 3: Ghosts of Schooling Past, Present and Future**
 - a. Technology and the Whole Curriculum
 - b. Technology as a Classroom Tool
 - c. Creating an active learning Environment
- 4. Module 4: Making the World Wide Web Work for You**
 - a. The Tools of the Trade
 - b. Using the internet for information
- 5. Module 5: Technology in Your Classroom**
 - a. Classroom Applications of the
 - b. WWW
 - c. Educational Software
 - d. Ideas, Approaches, Tools and Tricks
 - e. Integration
 - f. Early Learning and Primary

Tuition Pattern:

This unit is provided as an online unit. All tuition is provided through the online course website. The length of the unit is one semester (12 weeks); however, some students will finish sooner, and some may require additional time to complete it. While the weekly time commitment will vary from student to student, most should allow approximately 10 hours per week total study time for the unit.

Day 7 Session 23A.zip (226.17MB)

http://www.filefactory.com/file/38t5wd7eancf/n/Day_7_Session_23A.zip

Assessment**Assignment One: Your Portfolio**

Due progressively, by installments, see unit outline.

50% of final mark.

Each student is expected to keep a personal portfolio / diary / reading log, which will be assessed at the completion of the subject. Students will record -- in an outline / notes / diary style -- their reactions to and reflections upon their reading and other study: from the modules of this course, from assigned and optional readings, from what is happening at their school -- whatever is relevant. This is a reflective record of your journey through the course

and the development of your ideas, skills and professional practice. As your skills and knowledge develop so to will your portfolio

Assignment Two: Educational and Multimedia Review

. 50% of final mark.

Students will gather material on educational multimedia -- both WWW sites and self-contained packages (such as CD-ROMs) -- that are relevant to the age group(s) and learning area(s) they teach. Midway through Module 5, they will be required to submit a formal report reviewing these materials from the perspective of: educational merit, overall quality, appropriate uses, and deficiencies / room for improvement. In developing your evaluation and report you are required to your own evaluation mechanism, based upon the readings and course notes. In addition you are to indicate the rational for the evaluation design and how you would use your review template in your teaching

ED312 Technology in Classrooms

Objective-

To provide use of technology in educational context by combining with teaching and learning principle, educational leadership skills and educational leadership skills.

Outcomes

On completion of this unit you should be able to demonstrate your achievement of the following learning outcomes:

Upon completion, the participant;

1. Through the use of professional based portfolios will design, implement and evaluate the use of IT, multimedia and the Internet in their own classrooms
2. Using the skills and knowledge developed within the unit, conduct research of the use on learning technologies within the areas of;
 - a. Learning technologies and Developing Leadership Skills in Technology
 - b. Assessing and Changing IT Learning EnvironmentsTeaching and Learning Principles for Technology-Rich Classrooms

Contents The unit consists of 2 inter-related sections:

1. **Section 1**
 - a. Conduct independent research in one of the following
 - i. Developing Leadership Skills in Technology
 - ii. Assessing and Changing IT Learning Environments
 - iii. Teaching and Learning Principles for Technology-Rich Classrooms
2. **Section 2**
 - a. The development of two Portfolios
 - i. "Classroom" based portfolio that demonstrates the use and integration of educational technology in your classroom or workplace.
 - ii. "Personal" based portfolio that provides the student with the opportunity to demonstrate the use and educational practice in professional practice.

Diploma in Higher Education Teaching

Study Instruction

Overview

The course helps students to reflect critically on their teaching in ways which are underpinned by their own experiences and those of their students and colleagues, and by the research on learning and teaching in higher education.

Course aims

The course aims to encourage students to develop:

- an understanding of different ways of thinking about university teaching, and the consequences for student learning, to enable them to make informed decisions about their approaches to teaching, subject design and assessment in a variety of contexts and with a diversity of students (relates to professional and intellectual attributes)
- an ability to reflect critically on and evaluate their own teaching and subjects and make changes aimed at improving their students' learning (relates to professional and intellectual attributes)
- a commitment to scholarship in teaching and to self-directed continuing teaching development (relates to professional and personal attributes), and
- a broader awareness of the higher education, university and academic career contexts in which they work, to assist them to develop their academic potential more effectively (relates to professional and personal attributes).

Course duration and attendance

2 weeks Intensive Course OR Online Plus Self study & assignments.

Course structure

The course consists of 60 credit points of study, comprising four subjects which must be completed to be eligible for the award.

Course completion requirements

ED431 Student Learning and Teaching Approaches	15 cp
ED432 Course Design and Assessment	15 cp
ED433 Scholarly Teaching and Learning Project	15 cp
ED434 Reflective Academic Practice	15 cp
Total	60 cp

ED431 Student Learning and Teaching Approaches

Description

Participants in this subject develop their understanding of key ideas from research on student learning and teaching in higher education to enable them to reflect on and review their teaching from the perspective of this research. They develop their understanding of a model that relates teaching to student learning and is underpinned by empirical research on student learning and teaching in higher education, so that they become more aware of students' approaches to their learning, the influences of the learning environment on students' approaches to learning, and relations between learning approaches and the quality of the learning outcome. Participants relate this to their approaches to teaching, the nature of good teaching and teaching strategies which encourage high quality student learning. They seek feedback on their own teaching from students and peers and make use of this feedback and the research to plan changes to their teaching to improve the learning environment for students.

Subject learning objectives (SLOs)

explain how key ideas from higher education research on approaches to student

- a. learning and teaching could be applied to their students and teaching contexts

analyse the effects of their teaching on students' experiences of learning, using

- b. feedback from reflection, students, peers and other sources

evaluate the potential of different teaching strategies to encourage student

- c. understanding

reflect on the perspectives offered by research and feedback and use this to

- d. propose changes to their teaching to improve student learning

Contribution to the development of graduate attributes

The subject aims to encourage participants to develop:

- an understanding of different ways of thinking about university teaching, and the consequences for student learning, to enable them to make informed decisions about their approaches to teaching, subject design and assessment in a variety of contexts and with a diversity of students (relates to professional and intellectual attributes)

- an ability to reflect critically on and evaluate their own teaching and subjects and make changes aimed at improving their students' learning (relates to professional and intellectual attributes)
- a commitment to scholarship in teaching and to self-directed continuing teaching development (relates to professional and personal attributes), and
- a broader awareness of the higher education and academic career contexts in which they work, to assist them to develop their academic potential more effectively (relates to professional and personal attributes).

This subject makes a major contribution to the first and second of these aims and a minor contribution to the third.

Teaching and learning strategies

Learning in the subject involves students in engaging in, inquiring into and reflecting on their teaching practice in ways which are informed by perspectives from the literature on teaching and learning, course lecturers, peers, students and personal experiences.

Learning the key concepts of the subject occurs through a combination of interactive face to face workshops, online activities and discussion and independent reading and reflection.

Learning to analyse and evaluate teaching strategies and feedback on teaching occurs through a combination of interactive face to face workshops, online activities, collection and analysis of feedback from students and peers, peer discussion and independent reading. Suggestions for changes occur through independent reflection and negotiation with a teacher

Content (topics)

- students' approaches to learning in different contexts and cultures, the influences of teaching and the learning environment on students' approaches to learning, and relations between learning approaches and the quality of the learning outcome
- the nature of good teaching and teaching strategies for encouraging understanding in a variety of teaching and learning contexts, including face-to-face classes and online. The subject builds upon the extensive literature on what constitutes good teaching, including videos of teachers at UTS teaching and reflecting on their teaching
- ways of gaining feedback on teaching and on students approaches to learning, in particular through student interviews, questionnaires, classroom assessment techniques and peer observation and review.

Lessons

Down load and study the following power point slides and answer the questions

ED431-Critical Thinking (Day 1)

www.highlightcomputer.com/ED431CriticalThinking.pptx

VIDEOS

<https://youtu.be/Cekuc04E2xM>

Assessment

Assignment

Refer your textbooks, select one chapter and write the followings

- the main purpose, the key question, the most important information, the main references or conclusions, the key idea, the main assumptions of the material, the implications, and the main point of view.
- Prepare one assessment requiring critical thinking by the students.
- Do internet research by using www.google.com and type Socratic questioning then submit the examples of Socratic questions.

Lessons

Down load and study the following power point slides and answer the questions

ED431-Higher education and academic career contexts (Day 2)

www.highlightcomputer.com/ED431highereducationacademiccareercontexts.pptx

VIDEOS

<https://youtu.be/KpLG8ud5bf8>

Assessment

Assignment

Prepare your own career development plan.

To improve sustainability of your university, what tasks should be planned. Present your idea.

Lessons

Down load and study the following power point slides and answer the questions

ED431-Reflection & Evaluation (Day 2)

www.highlightcomputer.com/ED431ReflectionEvaluation.pptx

VIDEO

https://youtu.be/Ezre_83QIfE

Assessment

Assignment

Write the lesson plan on how will you provide Problem Based Learning & Self Reflection for a group of students

Write one significant event in your class teaching and write down your own plan how to improve your teaching.

Lessons

Down load and study the following power point slides and answer the questions

ED431-Self-directed continuing teaching development (Day 3)

www.highlightcomputer.com/ED431selfdirectedcontinuingteachingdevelopment.pptx

VIDEO

<https://youtu.be/YpnGt3NISyk>

Assessment

Assignment

Prepare your own professional development record over 2 years

Write your own professional development for next two years

Lessons

Down load and study the following power point slides and answer the questions

ED431-Teaching and learning strategies (Day 3)

www.highlightcomputer.com/ED431Teachinglearningstrategies.pptx

VIDEO

https://youtu.be/gMJi_3CSDq0

Assessment

Assignment

- Outline 3 teaching strategies that you prefer to apply in your teaching and discuss the good points and bad points. Also write how to improve them for best teaching and learning.

ED432 Course Design and Assessment

.

.

Description

This subject aims to develop university teachers' ability to design courses and subjects that provide an environment for meaningful student learning in higher education. The subject looks at the context within which subjects and courses are developed and how course design policies shape the development of course goals and subject objectives. Participants in the subject develop an understanding of the principles of constructive alignment (Biggs, 2003) as a method for achieving consistency between objectives assessment and teaching and learning activities. Participants relate the features of effective assessment to their own subject design, with attention to issues of equity, validity, the involvement of students in assessment choices, marking efficiencies, and the provision of effective feedback on student work. This subject enables university teachers to explore a range of methods for improving courses and subjects in order to ensure an effective learning environment for students.

Subject learning objectives (SLOs)

- describe the principles used in designing courses and subjects with a particular
- a. focus on student learning
- analyse the design or redesign of subject or course components in ways that enable
- b. students to develop relevant graduate attributes
- explain the relationship between assessment, learning objectives
- c. and student learning in higher education
- discriminate between assessment for feedback and assessment for grading or
- d. certification, and relate how this informs the design of assessment activities
- evaluate subjects and make suggestions for improvements consistent with the
- e. findings from evaluation

Contribution to the development of graduate attributes

This subject makes a major contribution to the students capacity to:

- an understanding of different ways of thinking about university teaching, and the consequences for student learning, to enable them to make informed decisions about their approaches to teaching, subject design and assessment in a variety of contexts and with a diversity of students (relates to professional and intellectual attributes)
- an ability to reflect critically on and evaluate their own teaching and subjects and make changes aimed at improving their students' learning (relates to professional and intellectual attributes).

Teaching and learning strategies

Learning in the course involves you in reflecting on your practice and your teaching and learning context. Your reflections will be informed by perspectives drawn from the literature on teaching and learning, conversations with peers and students, and from personal experiences. Specific learning experiences involve a combination of interactive face-to-face workshops, online activities and discussion and independent reading.

Content (topics)

The principal topics covered in this subject are:

- choosing appropriate graduate attributes, course goals and subject objectives
- aligning teaching and learning activities and outcomes through course and subject design

- understanding assessment principles, criteria and standards
- enhancing student learning with constructive feedback
- evaluating courses and subjects.

Minimum requirements

Participants in this subject are required to participate in 24 hours of concurrent teaching in higher education. Participants will provide evidence of participation in educational design activities and reflections related to course design and assessment issues. Participants who do not provide evidence of participation in work experience will not have their assignments assessed.

ED432-aligning teaching and learning activities and outcomes

Lessons

Down load and study the following power point slides and answer the questions

www.highlightcomputer.com/ED432-AligningTeachingAndLearningActivitiesAndOutcomes.pptx

Assessment

Assignment

Write your teaching plan on one selected lesson and explain how will you utilize Constructive Alignment method for your students

ED432A-assessment principles+ED432B-constructive feedback+ ED432C-relationship between assessment, learning objectives and student learning in higher education

Lessons

Down load and study the following power point slides and answer the questions

www.highlightcomputer.com/ED432ABC.pptx

VIDEO

<https://youtu.be/Cli1k4NECoQ>

Assessment

Assignment

ED432A-assessment principles

Provide three assessment evidences that you use in teaching.

ED432B-constructive feedback

Provide three assessment feedbacks that you provide to your students.

ED432C-relationship between assessment, learning objectives and student learning in higher education

Provide three examples that you link assessments to learning objectives of the subject which you are teaching.

ED432D-Course Design Reflection+ED432E-course goals+ED432F-curriculum design+ED432G-graduate attributes

Lessons

Down load and study the following power point slides and answer the questions

www.highlightcomputer.com/ED432DEFG.pptx

VIDEO

<https://youtu.be/SvugZrFGO60>

Assessment

Assignment

Design a one course that include the aspects and components indicated in the lecture slide.

Lessons

Down load and study the following power point slides and answer the questions

ED432H-Subject Evaluation Plan+ ED432I-subject objectives+ ED432J-Subject Outline Analysis

Lessons

Down load and study the following power point slides and answer the questions

www.highlightcomputer.com/ED432HIJ.pptx

VIDEO

<https://youtu.be/kwOPA2e1XDo>

Assessment

Assignment

Evaluate one syllabus that you are teaching

Write objective of a subject that you are teaching

Write three objective and relevant assessment questions for the course that you are teaching.

Read the following outlines

- CBAPPREP
- FINS3641_Security_Analysis_and_Valuation_S12014
- MS110-Business-Systems-Analysis-Course-Outline-2011-12

Then write the analysis of the contents for one of your subject that you are teaching

ED433 Scholarly Teaching and Learning Project

Description

This subject draws together and builds on what participants have learned in other course subjects and their previous teaching experience. It involves participants in undertaking a scholarly project focused on understanding and improving selected aspects of their teaching and learning. Participants choose an area that they would like to investigate, and undertake one plan-act-observe-reflect cycle in which they plan a change to their teaching or subject, implement the change, collect information about its effects, and reflect on the information. The project is informed by scholarly literature related to higher education in general and/or to teaching and learning in the participant's discipline. Participants may choose to develop their project further and communicate it to achieve publishable outcomes.

Subject learning objectives (SLOs)

- identify problems and issues for investigation in their own higher education teaching and learning

- b. change aspects of their teaching and learning practice
- c. analyse stakeholder responses to change using at least two forms of evidence
- d. synthesise findings for presentation to peers
- e. justify the practical significance of the change for their own practice

Contribution to the development of graduate attributes

The course aims to encourage students to develop:

- an understanding of different ways of thinking about university teaching, and the consequences for student learning, to enable them to make informed decisions about their approaches to teaching, subject design and assessment in a variety of contexts and with a diversity of students (relates to professional and intellectual attributes)
- an ability to reflect critically on and evaluate their own teaching and subjects and make changes aimed at improving their students' learning (relates to professional and intellectual attributes)
- a commitment to scholarship in teaching and to self-directed continuing teaching development (relates to professional and personal attributes)
- a broader awareness of the higher education and academic career contexts in which they work, to assist them to develop their academic potential more effectively (relates to professional and personal attributes).

Teaching and learning strategies

Learning in the subject involves subject participants in engaging in and reflecting on their practice in ways which are informed by perspectives from the literature on teaching and learning, course lecturers, peers, students and their learning and from personal experiences. Specific learning experiences in this subject involve identifying problems and issues in higher education teaching and learning through independent reading and online discussion, topics on project management monthly lunchtime seminars on topics of interest to the group and wider UTS scholarly learning community, undertaking the project with individual project advice and online group support and a requirement that you present your project to others, either in a presentation workshop within the course or in the UTS Teaching Forum.

Content (topics)

ED 404 Educational Research (Part 1)

Planning scholarly teaching and learning projects

What is a research topic?

Choosing a research methodology

Data collection

Getting Scholarship of Teaching published

Presenting your findings

ED 404 Educational Research (Part 1)

ED433A-scholarly literature related to higher education+ED433B-scholarly project+ED433C-commitment to scholarship in teaching

Lessons

Down load and study the following power point slides and answer the questions

www.highlightcomputer.com/ED433ABC.pptx

VIDEO

ED434 Reflective Academic Practice

Description

This subject enables participants to extend their awareness of the broader context of academic work in a practice-oriented university. Participants have the choice of exploring a wide range of topics relevant to their academic work, including research supervision or research-led teaching in their discipline. Credit can be gained towards subject completion by participating in professional development activities offered in the University such as the LEAP modules on entrepreneurship or project management. The subject also provides an opportunity for participants to reflect on their learning over the course as a whole and identify practical learning outcomes for their own practice.

Subject learning objectives (SLOs)

- a. identify meaningful dimensions of academic work related to their own work
- b. reflect on an aspect of their scholarly academic work
- c. relate learning to the higher education, university and/or academic contexts in which they work
- d. revise learning from previous subjects

- e. justify the practical significance of learning to their own practice

Contribution to the development of graduate attributes

The course aims to encourage students to develop:

- an understanding of different ways of thinking about university teaching, and the consequences for student learning, to enable them to make informed decisions about their approaches to teaching, subject design and assessment in a variety of contexts and with a diversity of students (relates to professional and intellectual attributes)
- an ability to reflect critically on and evaluate their own teaching and subjects and make changes aimed at improving their students' learning (relates to professional and intellectual attributes)
- a commitment to scholarship in teaching and to self-directed continuing teaching development (relates to professional and personal attributes)
- broader awareness of the higher education and academic career contexts in which they work, to assist them to develop their academic potential more effectively (relates to professional and personal attributes).

Teaching and learning strategies

This subject entails undertaking scholarly learning activity that may focus on any aspect of the subject participants' academic work. The scholarly learning activity is negotiated with a project adviser. Activities could include participating in and reflecting on learning from formal learning programs, or engaging in an aspect of academic practice which is relatively new to you and reflecting on what you have learned from your engagement.

Content (topics)

This subject includes core and negotiated components. The core component focuses on the different types of scholarship in academic work, following Boyer (1990) and Sandmann (2002), and reflection on the implications of these kinds of scholarship for academic work in different disciplines. The negotiated content varies depending on the focus of the scholarly learning activity.

Minimum requirements

Participants in this subject are required to participate in 24 hours of concurrent teaching in higher education. Participants will provide evidence of participation in teaching and learning action learning project. Participants who do not provide evidence of participation in work experience will not have their assignments assessed.

ED434A-academic work in a practice oriented university+ED434B-broader awareness of the higher education and academic career contexts+ED434C-develop academic potential+ED434D-different types of scholarship in academic work

Lessons

Down load and study the following power point slides and answer the questions

Diploma in Doctorate Studies (DDS)

IQY Diploma in Doctorate Studies is an academic award consisting of Research Studies and Writing Thesis Dissertation at 360 Credit points in which 240 Credit points are allocated for Masters Degree level academic qualifications and / or comparable professional experiences.

The candidates who have completed MAE 601 Research Method (30 Points) and their thesis proposal are accepted will be awarded IQY Master Diploma in Research Studies (270 Credit Points).

The candidates who have completed MAE602 Thesis (30 Points) but have not submitted it to St Clements University will be awarded IQY Diploma in Doctorate Studies (300 Credit Points)

Only St Clements University will confer the Doctoral Degree while IQY Technical College will provide the facilitation and successful candidates will be issued with BAE801 Thesis Dissertation Assessment and Defence (60 Points) when the success is notified by St Clements University. In the case of failure to meet the quality of dissertation, St Clements University's Diploma in Doctorate Studies or other relevant award can be issued and Doctorate degree award fees will not be charged.

IQY Technical College will issue Letter of Congratulation for having been successful in PhD.

Doctoral Research Studies

IQY Master Diploma in Research Studies

<http://www.highlightcomputer.com/iQYDDS.pdf>

Dissertation for Doctorate

MAE 601 Research Method (30 Points)

MAE602 Thesis (30 Points)

[http://www.filefactory.com/file/111r1k0ftawt/n/11.Research+Thesis_\(ICT_605\).zip](http://www.filefactory.com/file/111r1k0ftawt/n/11.Research+Thesis_(ICT_605).zip)

BAE801 Thesis Dissertation Assessment and Defence (60 Points)

MAE601 Research Method

This course guides the student, step by step, through the research process, from problem selection through writing up results. It provides all of the basics necessary to complete a research project in any discipline.

Outline. The following aspects are reflected in this course:

What is research?

Tools of research

The problem: the heart of the research process

Review of the related literature

Planning your research design

Writing the research proposal

Qualitative research

Historical research

Descriptive research

Experimental and causal - comparative designs

Statistical techniques for analyzing quantitative data

Technical details: style, format, and organization of the research report

Doctoral Research Proposal

Synopsis: Research students are expected to present a written research proposal within three months after commencement. The proposal is handed in to the study leader.

Assessors of this proposal are selected by the faculty for their understanding of the field and the research involved. The purpose of a research is to set out a plan for conducting the research and writing the dissertation within the available time. It should take account of the availability and guidance of the study leader.

The starting point for a research proposal is the topic, which is the field of interest in which the research is to be carried out. In introducing the topic, the proposal should clarify the field that it falls into and the specific part that field which the research will explore.

It should clarify why the topic is of interest and importance, and how the proposed research will contribute to the field of knowledge or profession. The proposal should clarify the research questions, ensuring that these are specific and answerable.

It is important to show how these questions relate to the topic are, and how they will advance the student's contribution. The proposal should detail the research to be carried out, and clarify the research methods, the timeframe and the reasons for selecting particular methods.

Where a period of literature review or research should precede any empirical research, this should be factored in as part of the research. It is important to estimate any periods of field research and to flag their duration and cost in your research proposal.

MAE 602 Thesis

Thesis Dissertation for Doctorate

Candidates need to complete a 60000-words dissertation (in Myanmar or English) and a 3000-words executive portfolio (in English).

This program requires the candidates to complete a thesis as part of the assessment for the Doctorate

Doing a thesis / dissertation means that instead of knowledge and information being presented and following a prescribed route for answering questions, candidates are thrust into an active role of managing an investigation into a topic area. This means researching and

discovering things for themselves.

They will have to set their own targets and parameters, pose their own central research questions and decide on the appropriate sources of information to support the research. It therefore requires the use of the higher-level cognitive skills of analysis, synthesis and evaluation. Candidates may choose an area of particular interest to them within the scope of course title.

BAE801 Thesis Dissertation Assessment and Defence (60 Points)

Doctoral dissertation

A dissertation is an individual effort and the candidate, academic tutor and the course professor will work together on constructing an approved topic (research question) and methodologies.

Dissertation Defence for doctorate

It is expected of Doctoral candidates to defend their thesis by means of a colloquium (academic discussion). The purpose of the meeting is for the candidates to convince a panel of experts in the field of the dissertation how well they have done in the conducting of their research study and the preparation of their dissertation

Candidates need to complete all course assessments with the results of Grade B+ or above.

Master Diploma in Education/ Master of Education

IQY Technical College/ St Clements University/

STC Technological University

www.highlightcomputer.com/medcourse.htm

Course Overview

This program is designed to develop and support the careers of teachers who are teaching professionals, educational administrators, researchers and policymakers.

The students can choose to complete your course with units of study that suit your interests from our field offerings which are engineering education and school and vocational education.

Graduate Attributes

Demonstrate expert, specialised and technical knowledge in broad educational areas of pedagogy, assessment and curriculum designed to address the needs of diverse learners across a range of educational contexts related to engineering education or school and vocational education.

Demonstrate an advanced understanding of theory and practice in specialised disciplines within the field of education in national and/or international contexts in engineering education or school and vocational education.

Analyse critically, reflect on and synthesise information to solve complex problems in the educational field

Conduct independent research and inquiry, involving theoretical conceptualisation, innovative ideas and personal initiative in engineering education or school and vocational education

Demonstrate professional leadership through interpreting and communicating pedagogical knowledge and professional skills to specialist and non-specialist audiences in engineering education or school and vocational education.

Admission requirement

Admission to candidature for the Master of Education requires:

- a Bachelor of Education , or Bachelor degree and working as teacher or equivalent qualification or the completion of postgraduate studies, or professional experience .

Course Structure

The course consists of 240 credit points in which 120 credit points is given for Bachelors degree

Stream 1- Engineering Education

Preparation for Myanmar Engineering Council Accreditation Course

Course Outline

This two weeks course is designed as Technical Teacher Education Professional Development course for teachers working at Government Technical Colleges and Technological Universities to design the curriculums and teaching resources to meet the accreditation requirements of Myanmar Engineering Council.

Aim of the course

To provide the training to the technical education teachers to understand and apply the principles of adult & vocational education outcome based education, competency based training. compliance with Qualification & Training Authority-Myanmar Engineering Council's Rules, Regulations and Standards for accreditation by taking part in intensive workshop focussing on curriculum development and assessment documents portfolio preparations for Myanmar Engineering Council Accreditation

Outcome of the course

After completion of this course, the participant will be able to

- Understand Myanmar Engineering Council Accreditation Rules & Regulations related to accreditation of Government Technical Colleges & Technological Universities in Myanmar.
- Understand and utilize the principle & features of Outcome based education.
- Understand the Adult & Vocational Education, Work based Learning and Competency based training & assessments tasks.
- Acquire the knowledge on Competency based education and training and training packages being used in industrialized countries (Examples of Australian Standard Competency based vocational education & training system.
- Get the information & knowledge on Current issues related to international & Myanmar Engineering profession.
- Participate in hand on practice workshop focussing on curriculum development & collecting and preparing the materials for accreditation by Myanmar Engineering Council Engineering Accreditation Committee & taking part in mock accreditation sessions.
- Explore the Adult & Vocational Educational Literatures, Textbooks, References & Resources, e-Learning, Learning Technology & Technology in classroom resources knowledge sharing.
- Certificate of Training will be issued by Myanmar Engineering Council as well as by the trainer's educational institution.

Target Group

- Course leaders who are responsible for development of teaching curriculums and learning resources for teaching of engineering programs.

Arrangement of attendances

- It will be an official course development and accreditation workshop in accordance with Myanmar Engineering Councils' Rules , Regulations and Accreditation system, the attendance of this course is part of the official duty and appropriate duty release arrangement may be required under the procedures of the Ministry of Science & Technology.

Place of the course

- Appropriate training venue arranged by Myanmar Engineering Council or Myanmar Engineering Society.

Course Duration

12 days (Mondays to Saturdays) (December 2015)(The exact date will be provided)

Requirements

The participants will need to bring the documents related to teaching plan, curriculum, course materials or reference notes that they are using in teaching
Access to laptop/computer will be required for the participants. Teaching aids such as white board , computer & Overhead Projector will be required to show the slides. It will be better to access Internet.

Sessions, Trainers and Facilitators

Remark

Depending on the resources & facilities availabilities, Session 2 & 3 of Day 7 & 8 may need to be replaced with other activities

Preparation for Myanmar Engineering Council Accreditation Course

Course Outline

This two weeks course is designed as Technical Teacher Education Professional Development course for teachers working at Government Technical Colleges and Technological Universities to design the curriculums and teaching resources to meet the accreditation requirements of Myanmar Engineering Council.

Aim of the course

To provide the training to the technical education teachers to understand and apply the principles of adult & vocational education outcome based education, competency based training. compliance with Qualification & Training Authority-Myanmar Engineering Council's Rules, Regulations and Standards for accreditation by taking part in intensive workshop focussing on curriculum development and assessment documents portfolio preparations for Myanmar Engineering Council Accreditation

Outcome of the course

After completion of this course, the participant will be able to

- Understand Myanmar Engineering Council Accreditation Rules & Regulations related to accreditation of Government Technical Colleges & Technological Universities in Myanmar.
- Understand and utilize the principle & features of Outcome based education.
- Understand the Adult & Vocational Education, Work based Learning and Competency based training & assessments tasks.
- Acquire the knowledge on Competency based education and training and training packages being used in industrialized countries (Examples of Australian Standard Competency based vocational education & training system.
- Get the information & knowledge on Current issues related to international & Myanmar Engineering profession.
- Participate in hand on practice workshop focussing on curriculum development & collecting and preparing the materials for accreditation by Myanmar Engineering Council Engineering Accreditation Committee & taking part in mock accreditation sessions.

- Explore the Adult & Vocational Educational Literatures, Textbooks, References & Resources, e-Learning, Learning Technology & Technology in classroom resources knowledge sharing.
- Certificate of Training will be issued by Myanmar Engineering Council as well as by the trainer's educational institution.

Target Group

- Course leaders who are responsible for development of teaching curriculums and learning resources for teaching of engineering programs.

Arrangement of attendances

- It will be an official course development and accreditation workshop in accordance with Myanmar Engineering Councils' Rules, Regulations and Accreditation system, the attendance of this course is part of the official duty and appropriate duty release arrangement may be required under the procedures of the Ministry of Science & Technology.

Place of the course

- Appropriate training venue arranged by Myanmar Engineering Council or Myanmar Engineering Society.

Course Duration

12 days (Mondays to Saturdays) (December 2015)(The exact date will be provided)

Requirements

The participants will need to bring the documents related to teaching plan, curriculum, course materials or reference notes that they are using in teaching. Access to laptop/computer will be required for the participants. Teaching aids such as white board, computer & Overhead Projector will be required to show the slides. It will be better to access Internet.

Sessions , Trainers and Facilitators

Day	Session 1 9 to 10:30AM	Tea break	Session 2 11 to 12:30 Noon	Lunch break 12:30 to 1:30 PM	Session 3 1:30 to 3:30PM (The extended time up to 5PM can be taken up to the duration of workshop & group works)

12 31 Dec 2015	Mock Accreditation Sessions Practice	Morning tea and networking	Mock Accreditation Sessions Practice		Conclusion of the training.

Remark

Depending on the resources & facilities availabilities, Session 2 & 3 of Day 7 & 8 may need to be replaced with other activities

Objective of the course

This Professional Diploma in Technical Teaching (Training, Assessment & Learning Management) is designed as Teachers Education Professional Development for teachers in Government Technical Colleges, Technological Universities and other Vocational Education and Training Institutions in Myanmar to upgrade their skills and knowledge in training and assessment, curriculum design and development, management of technical training institutions, adult and vocational education and training, assessment validation and current accreditation rules and requirements of Myanmar Engineering Council as well as current training and assessment practices of overseas industrialized countries.

Learning Outcomes

After completion of the levels of the training programs, the students should be able to

- Understand adult learning principles in technical education and training contexts
- Apply the skills in training, assessment, course development, curriculum development, learning management and management of technical training institutions.
- Understand the accreditation requirements of Myanmar Engineering Council in accredited engineer, technologist and technician education & prepare for the compliance processes.
- Understand the technology, science and mathematics teaching & educational pedagogies principles of outcome based education and effectively utilize them in the workplace
- Provide effective work-based learning & career development for the working people in industries and apply the various ways of assessing the competences

Components of the course

- Educational theories, educational technology, teaching and learning, teaching and measuring.
- Lesson planning, interpreting curriculums, class room management, instruction and assessment design, training principle, competency based training and assessment integrated the competencies of Australian Training and Assessment (TAE40110) course
- Management of educational establishment in line with the accreditation requirements of Myanmar Engineering Council by customizing the competencies in Australian Vocational Education and Training Diploma (TAE50111) to be relevant to the requirements of Myanmar Vocational Education and Training.
- Postgraduate level educational knowledge related to Learning Technology, Technology in classrooms, educational leadership, leadership and change management, computer supported learning and distance education,
- Teaching practicum preparation at different levels of training

Study Areas & Levels of Training

Level 1-Educational Theories , Teaching Pedagogies & Training and Assessment Practice

Part (1) Educational Theoretical Subjects

- ED 101 Theory of Education
- ED 102 Education Technology
- ED 103 Teaching Practice
- ED 104 Lesson Planning
- ED 105 Principle of Learning
- ED 106 Interpreting Curriculums
- ED 107 Teaching & Learning
- ED 201 Class Room Management & Teaching

Part (2A) Basic Teaching Practicum Preparation

ED101P-Teaching Support

ED102P- Application of Information Technology in School /Vocational Education

ED103P- Classroom Management

ED104P- Teaching Portfolio

ED105P- Inclusive Teaching

ED106P- Subject Area Knowledge

ED107P- Theory of Education, Educational Technology & Teaching Practice

ED107PA-Theory of Education

ED107PB-Education Technology

ED107PC-Teaching Practice

ED107PD-Lesson Planning

ED108P- Curriculum Study , Teaching & Learning

ED108PA-Principle of Learning

ED108PB-Interpreting Curriculums

ED108PC-Teaching & Learning

Part (2B) Training &Assessment Practice (Certificate IV in Training & Assessment TAE40110)

- ED111P Learning Program Design & Development Practice
(TAEDES401A Design and develop learning programs)
- ED112P Assessing the needs of trainees
(TAEDES402A Use training packages and accredited courses to meet client needs Delivery)
- ED113P Group based learning
(TAEDEL401A Plan, organise and deliver group-based learning)
- ED114P Workplace Assessment
(TAEDEL402A Plan, organise and facilitate learning in the workplace Assessment)
- ED115P Assessment Planning
(TAEASS401B Plan assessment activities and processes)
- ED116P Competency Assessment
(TAEASS402B Assess competence)
- ED117P Assessment Validation
(TAEASS403B Participate in assessment validation)
- ED118P Work skills Instruction
(TAEDEL301A Provide work skill instruction)
- ED119P Educational Presentation
(BSBCM401A Make a presentation)(TAEASS301B Contribute to assessment

Level 2-Adult Vocational Education

Part (1) Adult Vocational Education Theoretical Subjects

- ED 401 Adult Learning Technology
- ED 202 Curriculum & Design
- ED 205 Teaching & Measuring
- ED 206 Designing Instructions & Assessment
- ED 405 Training Principle

Part (2) Vocational Education & Training Practice (Diploma in Vocational Education & Training TAE50111)

- ED201P-Advanced Assessment Practice
(TAEASS501A: Provide advanced assessment practice)

- ED202P-Assessment Development
(TAEASS502B: Design and develop assessment tools)
- ED203P-Training Facilitation
(TAEDEL502A: Provide advanced facilitation practice)
- ED204P-Learning Strategies
(TAEDES501A: Design and develop learning strategies)
- ED205P- Language Literacy & Numeracy
(TAEELN401A: Address adult language, literacy and numeracy skills)
- ED206P-Continuing Professional Development
(TAEPPD501A: Maintain and enhance professional practice)
- ED207P Learning Resources Design & Development
(TAEDES502A: Design and develop learning resources)
- ED208P Organizational Training Needs Analysis
(TAETAS501B: Undertake organisational training needs analysis)
- ED 404 Educational Research (Part 1)
(TAERES501A: Apply research to training and assessment practice)
- ED209P- Training Program Evaluation
(TAEDES505A: Evaluate a training program)

Level 3-Training Authorities Accreditation Compliances

Part (1) Educational Leadership Subjects

- ED 402 Educational Leadership
- ED 301 Educational Policy (Myanmar Engineering Council Accreditation Requirements)
- ED 308 Change Management
- ED309 Educational Communication
- ED 407 Learning Environment
- ED311 Outcome based Education

Part (2) Myanmar Engineering Council's Accreditation Compliance Practice

- ED301P- Curriculum design for accreditation compliance
- ED302P-Overall accreditation and compliance practice

Level 4-Specialized Teaching Areas

- ED 308 Computer Supported Learning & Distance Education
- ED 304 Maths Teaching
- ED 305 Science Teaching
- ED 306 Technology Teaching
- ED 404 Educational Research (Part 2)
- ED310 Learning Technology I & II
- ED312 Technology in Classrooms

RESOURCES

ASSESSMENT FOR THE SUBJECTS IN PART 1 OF THE LEVELS

The students will have to write 20 pages study report for each of the subjects outlined in the Part 1 of any level .

The report needs to include

- Book review- Review on each chapter of the book highlighting the key concepts, points, key theory & practical application concepts
- Own idea on how to apply those concepts in real practical applications.
- Examples of curriculum designs that use the concepts & knowledge expressed in those books (If any)
- Your comment on each book

The book references for the subjects can be downloaded from the following links by entering the given password.

Password- to be given

ASSESSMENT FOR THE SUBJECTS IN PART 2 OF THE LEVELS

Follow the specific assessment instruction provided for the units in Part 2 of the levels

Study Areas & Levels of Training

Level 1-Educational Theories , Teaching Pedagogies & Training and Assessment Practice

Part (1) Educational Theoretical Subjects

The students will have to write 20 pages study report for each of the subjects outlined in the Part 1 of any level .

The report needs to include

- Book review- Review on each chapter of the book highlighting the key concepts, points, key theory & practical application concepts
- Own idea on how to apply those concepts in real practical applications.
- Examples of curriculum designs that use the concepts & knowledge expressed in those books (If any)
- Your comment on each book

The book references for the subjects can be downloaded from the following links by entering the given password.

List of Subjects for Teaching Practice

ED101P Teaching Support

ED102P Application of Information Technology in School Education

ED103P Classroom Management

ED104P Teaching Portfolio

ED105P Inclusive Teaching

ED106P Subject Area Knowledge

ED107 Theory of Education, Educational Technology & Teaching Practice

ED107A-Theory of Education (ED101) (Slide 1 to 60 Principle of Learning)

ED107B-Education Technology (ED102) (Slide 61 to 100)

ED107C-Teaching Practice (ED103 Classroom Management) (Slide 101 to 140)

ED107D-Lesson Planning (ED104 Teaching Portfolio)(Slide 241 to 300)

ED107E-Teaching & Learning (Slide 141 to 160+ Slide 200 to 240)

ED107F-Inclusive Teaching (ED105 Inclusive Teaching Slide 161 to 200)
ED107G-Evaluation & Assessment (Slide 301 to 320)

ED108 Curriculum Study, Teaching & Learning
Interpreting Curriculums

Study Sequence for Graduates

ED106 Subject Area Knowledge (Present Degree)

Part (1) Theory Training & Assignment (Certificate in Teaching Practice).

ED107 Theory of Education, Educational Technology & Teaching Practice

ED108 Curriculum Study , Teaching & Learning

Part (2) Teaching Practice Portfolio Presentation (Diploma in Teaching Practice).

ED101P Teaching Support

ED102P Application of Information Technology in School Education

ED103P Classroom Management

ED104P Teaching Portfolio

ED105P Inclusive Teaching

Study Sequence for Experienced Teachers

ED106 Subject Area Knowledge (Present Degree)

Part (1) Theory Training & Assignment (Certificate in Teaching Practice).

ED107 Theory of Education, Educational Technology & Teaching Practice

ED108 Curriculum Study , Teaching & Learning

Part (2) Teaching Practice Portfolio Presentation (Diploma in Teaching Practice).

The following subjects can be exempted by presenting the reference letter from the school.

ED101 Teaching Support

ED103 Classroom Management

ED105 Inclusive Teaching

The following subject needs to be studied

ED102 Application of Information Technology in School Education

Teaching portfolio needs to be presented for the following subject

ED104 Teaching Portfolio

REFERENCE EDUCATION THEORIES

ED 101 Theory of Education

ED 102 Education Technology

ED 103 Teaching Practice

ED 104 Lesson Planning

ED 105 Principle of Learning

ED 106 Interpreting Curriculums

Advanced Diploma of Rural Development Engineering

www.highlightcomputer.com/adrde.htm

www.highlightcomputer.com/adrde.pdf

Objective of the course

This course aims to provide the necessary skills required for people in rural areas to perform the followings

- Agricultural Foods Production and Animal Handling
- Building Construction, Drawing, Water Supply, Road and Bridge Construction, Irrigation
- Electrical Supply & Solar Electrical Supply System
- Hydraulics
- Machine Repair, Welding and Machining
- Water Chemical Treatment
- Transportation & Logistics

Course Structure

The course consists of Civil, Electrical and Mechanical Engineering principle together with Transportation, Logistics and Agricultural Foods Production.

Outcome of the course

After having completed this course, the attenders can perform rural developmental engineering basic works in their regions.

Detailed Structure of the course

Credit Points- 60 points to complete Advanced Diploma of Rural Development. Diploma and Certificate in Rural Development can be awarded upon completion of the specific units.

List of Subjects

Advanced Certificate in Rural Development Engineering (16 Credits)

(MVTC Level (3) (Course Number MVTC301)

CE106 Brick Laying, Sprouting and Gutter Construction (4 Points)

CE104 Construction Drawing (4 Points)

CE110 Building Construction (4 Points)

CE107 Water Supply (4 Points)

Diploma in Rural Development (32 Credits)

(MVTC Level (4) (Course Number MVTC401)

All units in Certificate in Rural Development (16 Credits)

CE111 Road Bridge and Irrigation System Construction (4 Points)

MVTC13PC9 Electrical Wiring (4 Points)

MVTC201Agriculture+MVTC202Animal Handling(4 Points)

MVTC204 Water Chemical Treatment (4 Points)

Advanced Diploma in Rural Development (60Credits)

(MVTC Level (5) (Course Number MVTC501)

All units in Diploma in Rural Development

RE002 Grid Connected Power System (4 Points) together with EE101 DC Circuits+EE112 AC Circuits

EE118 Electrical Supply System (4 Points)

ME108 Principle of Engine+MVTC13PC7 Engine Repairs (4 Points)

ME201 Hydraulics (4 Points)

MVTC13PC6 Welding+MVTC13PC5FittingMachining (4 Points)

MVTC209 Transport Logistics (4 Points)

Mgt101 Management Studies (4 Points)

ADVANCED STUDY

The candidates who have successfully completed Advanced Diploma of Rural Development Engineering can continue the study in Professional Diploma/ Bachelor of Applied Engineering/ Bachelor of Engineering Technology in Electrical Engineering or Civil Engineering or Mechanical Engineering or Mechatronics Engineering or Renewable Energy Engineering and Bachelor of Management Programs at St Clements University or STC Technological University.

MVTC601-Professional Diploma of Rural Development Engineering

(Bachelor of Applied Engineering-Rural Development)

(St Clements University/ STC Technological University)

TOTAL 24 Units at 60 Credit points

BE General Discipline (Total 12 units)

(Each 2 Credit points)

YEAR 2+3

Professional Diploma in Engineering (Year 3)

www.iqytechnicalcollege.com/profdipengg.htm

1 BAE 401 Advanced Engineering Mathematics (2 pt)

2 BAE 402 Calculus (2 pt)

3 BAE 403 Engineering Mechanics (2 pt)

4 BAE 404 Engineering Materials & Thermodynamics (2 pt)

5 RE001- Foundation Studies in Renewable Energy and Sustainability (2 pt)

6.RE003- Solar and Thermal Energy Systems (2 pt)

7.RE004- Energy Storage Systems(2 pt)

10 RE010-Engineering Materials(2 pt)

11 RE012a-Electrical Engineering Part 1(2 pt)

12RE016-Design& Management (2 pt)

Professional Diploma/BE (Rural Development)

(Total 12 units) (Each 2 Credit points)

YEAR 4+5

13.RE013-Electrical Machines (2 pt)

<http://www.iqytechnicalcollege.com/profdipelectengg.htm#z6>

14.BAE 501 Advanced Power Systems & Power Transmission Networks

<http://www.iqytechnicalcollege.com/profdipelectengg.htm#z9>

Rural Electrical Power Supply System

<http://www.iqytechnicalcollege.com/BRDE-BAE501R Rural Power Supply.pdf>

16.BAE 604 Telecommunication Engineering

<http://www.iqytechnicalcollege.com/profdipelectengg.htm#z11>

Rural Telecommunication System

<http://www.iqytechnicalcollege.com/BRDE-BAE604R Rural Telecommunication.pdf>

<http://www.iqytechnicalcollege.com/BRDE-BAE 604 Part 2.pdf>

17.BAE421 Building Construction Engineering (2 pt)

<http://www.iqytechnicalcollege.com/profdipcivilengg.htm#z3>

18. BAE422 Estimating (2 pt)

<http://www.iqytechnicalcollege.com/profdipcivilengg.htm#z7>

19. BAE423 Fluid Mechanics (2 pt)

<http://www.iqytechnicalcollege.com/profdipcivilengg.htm#z6>

20. BAE424 Reinforced Concrete (2 pt)

<http://www.iqytechnicalcollege.com/profdipcivilengg.htm#z8>

22. BAE 523A Environmental Engineering (2 pt)

<http://www.iqytechnicalcollege.com/profdipcivilengg.htm#z10>

23. BAE621 Structural Engineering (2 pt)

<http://www.iqytechnicalcollege.com/profdipcivilengg.htm#z11>

24. BAE511 Air-conditioning & Refrigeration (2 pt)

<http://www.iqytechnicalcollege.com/profdipmechengg.htm#z8>

Solar Powered Refrigeration for Rural Area

Diploma in Work Studies/ Advanced Diploma in Work Studies/ Bachelor of Work Studies

This course is structured as linking Skills Recognition and Bridging of work experiences and training in vocational practice other than engineering to academic qualifications at Diploma/ Advanced Diploma and Bachelors degree levels.

This course is prepared and taught by IQY Technical College/ Myanmar Vocational Training Collaboration/ STC Technological University and St Clements University Myanmar College.

အင်ဂျင်နီယာလုပ်ငန်းမဟုတ်သောအခြားအသက်မွေးဝမ်းကျောင်းအလုပ်အကိုင်အကြံပြုနှင့်လေ့ကျင့်သင်ကြားမှုများကိုအထက်တန်းပညာရေးနှင့်တက္ကသိုလ်ပညာရေးပူးပေါင်းပြီး Diploma/ Advanced Diploma/ Bachelors သို့ များရရှိစေရန် IQY Technical College/ Myanmar Vocational Training Collaboration/ STC Technological University/ St Clements University Myanmar College တို့က စီစဉ်သင်ကြားသည်။

Diploma in Work Studies (30 credits)

Outcome

On completion of this course, the candidates will be able to effectively provide vocational work services to the customers.

ဤသင်တန်းပြီးပါကစားသုံးသူတို့ ကိုလိုအပ်သောအလုပ်များလုပ်ပေးနိုင်မည်။

Course Structure (သင်ရိုးဖွဲ့ စည်းပုံ)

It consists of compulsory work-based unit and elective units

WS101 Vocational Studies (10 credits)

- Vocational Experience and/ or completion of Vocational Training and studies at other schools and training centres

WS102 Safety Training (5 credits)

WS103 English (5 credits)

WS104 Myanmar Vocational Training Certificate (10 credits)

Optional

WS105 Myanmar

Advanced Diploma in Work Studies (30 credits)

Outcome

On completion of this course, the candidates will be able to effectively organize and manage the services needed by the customers.

ဤသင်တန်းပြီးပါကစားသုံးသူတို့ ကိုလိုအပ်သောအလုပ်များလုပ်ပေးသောလုပ်ငန်းကိုထိရောက်စွာ စီမံခန့်ခွဲနိုင်မည်။

Course Structure

It consists of credit transfer from Diploma in Work Studies, compulsory work-based unit and compulsory theory studies units.

Credit Transfer Completion of Diploma in Work Studies (30 Credit Points)

Mgt 101 Management (5 Credit points)

Mgt 201 Customer Service Management (5 Credit points)

Mgt 203 Inventory & Budget Management (5 Credit points)

Mgt 208 Safety Management (5 Credit points)

Mgt 211 Leadership in Humanitarian Works (5 Credit points)

WS 201 Business Plan and Work Record (5 Credit points)

Total Credits = 60 (5 Credit points)

Bachelor of Work Studies (60 credits)

Outcome

On completion of this course, the candidates will be able to effectively set up the strategic tasks and judge the nature of humanities services needed by the customers

ဤသင်တန်းပြီးပါကစားသုံးသူတို့ ကိုလိုအပ်သောအလုပ်များလုပ်ပေးသောလုပ်ငန်းကိုထိရောက်စွာ စီမံခန့်ခွဲနိုင်မည်သာမကလုပ်ငန်းမဟာဗျူဟာချမှတ်ရန်ခြံ့ချိန်ကြံဆစွမ်းရည်လဲရရှိမည်။

Course Structure

It consists of credit transfer from Advanced Diploma in work Studies, compulsory self study unit compulsory theory studies units and a Work based project

Credit transfer

Completion of Diploma in Work Studies (60 Credit Points)

Subjects

(English Notes+ Myanmar Explanation)

ED 431-Critical Thinking (10 Credits)

Mgt 303 Management Information System (10 Credits)

Mgt 306 Human Resources Management (10 Credits)

Mgt302 Information Security (10 Credits)

Mgt 307 Marketing Management (10 Credits)

(English)

BWS 401 Advanced Work Studies (Individualized Unit) (10 Credits)

Total Credits 120

Sample Structure (သင်ရိုးဖွဲ့ စည်းပုံနမူနာ)

Garment Factory Worker (အထည်ချုပ်လုပ်ငန်းအလုပ်သမားသို့ မဟုတ်အထည်ချုပ်သင်တန်းဆင်းသူ)

WS101 Vocational Studies (10 credits)

By submitting work experience or Certificate issued by other training school, WS101 will be given credits

အလုပ်အတွေ့ အကြုံတင်ပြခြင်းသို့ မဟုတ်အခြားသင်တန်းဆင်းလက်မှတ်တင်ပြခြင်းဖြင့်

WS101 Vocational Studies (10 credits)ရရှိမည်။

Study at IQY (အောက်ပါတို့ ကို IQY တွင်တက်ရန်

WS102 Safety Training (5 credits), WS103 English (5 credits)

WS104 Myanmar Vocational Training Certificate (10 credits)

ပြီးစီးပါက Diploma in Work Studies (Garment) ရရှိပြီး Advanced Diploma/ Bachelors

Degree ဆက်တက်နိုင်မည်။ When completed, Diploma in Work Studies (Garment) will

be awarded and then can proceed to Advanced Diploma in Work Studies (Garment) and Bachelor of Work Studies (Garment).

WS104 Myanmar Vocational Training Certificate (10 credits)

CERTIFICATE IN AGRICULTURE FOOD PRODUCTION (MVTC201)

CERTIFICATE IN ANIMALS HANDLING (MVTC202)

CERTIFICATE IN BUSINESS (MVTC203)

CERTIFICATE IN LABORATORY WATER OPERATIONS (MVTC204)

CERTIFICATE IN COMMUNITY SERVICE (MVTC205)

CERTIFICATE IN PROPERTIES SERVICES (MVTC206)

CERTIFICATE IN PERFORMING (MVTC207)

CERTIFICATE IN PUBLIC SAFETY (MVTC208)

CERTIFICATE IN LOGISTICS (MVTC209)

As Myanmar Vocational Training Certificate is designed with the study resources for the above vocational areas, the workers who are working in other vocational areas can study ADEMC203-Design and Technology (Year 12 Level) Subjects as tertiary preparation.

မြန်မာ့အသက်မွေးဝမ်းကျောင်းပညာလေ့ကျင့်ရေးလက်မှတ်ကိုအထက်ပါလုပ်ငန်းများအတွက်စီစဉ်ထားသည့်အဆိုပါဘာသာများသည်အလုပ်နှင့်မသက်ဆိုင်ပါက ADEMC203-Design and Technology (Year 12 Level) ကိုအထက်တန်းပညာရေးပေါင်းကူးအဖြစ်သင်နိုင်သည်။

BWS/BSc-Engg /Prof Dip Engg Sc (Course 5066689)

THS/ITC/ Year 10 မှဝင်သူများသည်အောက်ပါအစီအစဉ်အတိုင်းတက်ရမည်။

Year 1

Diploma in General Engineering and Certificate in Tertiary Preparation (First 6 months)

Diploma in Electrical/Mechanical/Civil Engineering (Myanmar Version) (Second 6 months)

Associate Degree in Work Studies-Engineering

Year 2

Advanced Diploma in Electrical/Mechanical/Civil Engineering Part 1+Associate Degree of Work Studies in Engineering (Course 332256)

Year 3

BTech/BE ဆက်မတက်နိုင်ပါက Bachelor of Work Studies-Engineering /Professional Diploma in Work Studies-Engineering ကို Year 3 တွင်အခမဲ့တက်ကာဘွဲ့ရယူနိုင်မည်။

အလုပ်အတွေ့အကြုံတစ်နှစ်ရှိပါက Bachelor of Work Studies-Engineering ကို Bachelor of Science-Engineering (Professional Diploma in Engineering Science) သို့ CV (Curriculum Vitae) တင်ပြပြီးအဆင့်မြှင့်နိုင်သည်။

- Bachelor of Work Studies(Engineering)+ Software Studies Part 2

[IQY Technical College/ St Clements University Humanities Study Programs](#)

www.highlightcomputer.com/HumanitiesCoursesOutline.pdf

The objective of Humanities Studies program is to provide formal academic study and recognition for community workers, social service workers and volunteers who are performing the humanitarian works.

Entry Requirement

No formal requirement but working in humanitarian service is needed. But those without university entrance qualifications may need to attend our basic education studies.

Course Structure

- Diploma in Humanities Studies (Dip HS) (30 Credit Points) (IQY Course 37001)
- Advanced Diploma in Humanities Studies (Adv Dip HS) (60 Credit Points) (IQY Course 47001)
- Professional Diploma in Humanities Studies (Prof Dip HS) (120 Credit Points) (IQY Course 67001) which can be convertible to St Clements University's Bachelor of Humanities Studies (BHS)
- Master of Humanities Studies (MHS) (St Clements University) (240 Credits)
- Professional Doctorate of Humanities Studies (DHS) (St Clements University) (360 Credits)

[Diploma in Humanities Studies \(Dip HS\) \(30 Credit Points\)](#)

Outcome-

On completion of this course, the candidates will be able to effectively provide humanities services needed by the community.

Course Structure

It consists of compulsory work-based unit and elective units

Compulsory

HS101- Humanitarian Work Record (15Points)

Presenting own diary of humanities work for minimum of three months or work reference

ELECTIVES

The following streams can be selected to complete Diploma in Humanities Studies

[STREAM \(1\) -PEOPLE SERVICE STREAM \(Select any one\)](#)

[CERTIFICATE IN COMMUNITY SERVICE \(MVTC205\)](#)

[\(FOODS SERVICE/HEALTH SERVICES/LIBRARY SERVICES/AGE CARE/CHILD CARE\)](#)
(15 points)

CERTIFICATE IN PUBLIC SAFETY (MVTC208) (15 points)

CERTIFICATE IN AGRICULTURE FOOD PRODUCTION (MVTC201) (15 points)

STREAM (2)-COMMUNITY CONSTRUCTION STREAM

Select any one (15 points)

PC 1-Certificate in Bricklaying & Masonry

PC 2-Certificate in Plumbing

PC 3-Certificate in Building Construction

PC 4-Certificate in Gutter Construction

PC 5-Certificate in Fitting & Machining

PC 6-Certificate in Welding

PC 7-Certificate in Engine Operation & Basic Servicing

PC 8-Certificate in Air-conditioning & Refrigeration Basic Servicing

PC 9-Certificate in Electrical Wiring

PC 10-Certificate in Electrical Machine Winding

STREAM (3)- VOLUNTARY TEACHING STREAM

ED107 Theory of Education, Educational Technology & Teaching Practice

(15 Credits)

Advanced Diploma in Humanities Studies (Dip HS) (60 Credit Points)

Outcome

On completion of this course, the candidates will be able to effectively organize and manage the humanities services needed by the community.

Course Structure

It consists of credit transfer from Diploma in Humanities Studies, compulsory work-based unit and compulsory theory studies units.

Credit Transfer

Completion of Diploma in Humanities Studies (30 Credit Points)

Compulsory Work-based Unit

HS201-Humanitarian Organizing Work Record (5 points)

Presenting own diary of organizing humanities work or work reference in additional to minimum of 3 months humanitarian work experience.

Compulsory theory studies units.

The following management units need to be studied

Mgt 101 Management (5 points)

Mgt 201 Customer Service Management (Humanitarian Customer Service) (5 points)

Mgt 203 Inventory & Budget Management (Humanitarian Service Organization Budget Control) (5 points)

Mgt 208 Safety Management in Humanitarian Works-(5 Points)

Mgt 211 Leadership in Humanitarian Works (5 Points)

Professional Diploma in Humanities Studies (Dip HS) (120 Credit Points)

Outcome

On completion of this course, the candidates will be able to effectively set up the strategic tasks and judge the nature of humanities services needed by the community.

Course Structure

It consists of credit transfer from Advanced Diploma in Humanities Studies, compulsory self study unit compulsory theory studies units and a humanities project

Credit transfer

Completion of Diploma in Humanities Studies (60 Credit Points)

Compulsory self study unit

HS301-Professional Studies of Humanities (20 Credits)

It is an open unit. The student will need to study the literatures in Human Right, Democracy. History, Political Science, Philosophy, . They can read the books, online publications , attend the public talk, take part in online discussions etc and prepare a report on what they read, believe, accept on humanitarian issues.

They can freely present their views , comments and judgement.

The assessment will not be based on same or different views between student and assessor. It will only be based on how the student can do the study, what is accepted and believed and how well the arguments can be presented.

The report needs to include references sources as well and it can be written in any language. (For Myanmar, it can be written in Myanmar or English)

Compulsory theory studies

ED431-Critical Thinking (10 Credits)

Mgt 305 Quantitative Methods for Managers (10 Credits)

Mgt 306 Human Resources Management (10 Credits)

HS302- Humanities Work Project (10 Credits)

Humanities Project is to be written

The candidate needs to investigate the needs of the community and prepare the work plan to do the humanities project work such as building a school, digging the water well, disaster relief work.

They need to answer the questions regarding

- Why this task is important for the community
- Who will get the benefit
- What kinds of tasks need to be provided
- Who will do the job
- What materials , resources will be required
- How to provide the safety
- Time plan to complete the task
- Materials requirement and budgetary issues and how to raise the funding
- How to collaborate with local and other people / organizations
- How to assess the project completion
- How to determine the effectiveness and quality of the project outcome
- What lesson that you learnt from the project and conclusion

The project report needs to answer the above questions, record of project works, data, photos and references will need to be attached.

It should be 5 to 10 pages . Without community project but presentation of intensive portfolio 57001 Professional Diploma in Humanities Studies can be issued but to proceed to Masters , such project must be submitted for qualifying.

Bachelor of Humanities Studies (BHS) (St Clements University)

(Credit Transfer)

The graduates of Professional Diploma in Humanities Studies can pay degree registration fees and present the Professional Diploma in Humanities Studies to St Clements University's academic board to issue Bachelor of Humanities Studies (BHS)

Master of Humanities Studies (MHS) (St Clements University) (240 Credits)

Professional Doctorate of Humanities Studies (DHS) (St Clements University)
(360 Credits)

The graduates of Bachelor of Humanities Studies (BHS) can continue the studies on research method and prepare a thesis to complete Master of Humanities Studies (MHS)

St Clements University will also guide the additional studies as required.

They can contribute the literatures in St Clements University's Academic Journal, present the seminars, write the dissertation, defend the dissertation to complete Professional Doctorate of Humanities Studies

Final Thesis for Master and Dissertation for Doctorate

HUM 601 Research Method

HUM 602 Thesis

HUM 601 Research Method

This course guides the student, step by step, through the research process, from problem selection through writing up results. It provides all of the basics necessary to complete a research project in any discipline.

Outline. The following aspects are reflected in this course:

What is research?

Tools of research

The problem: the heart of the research process

Review of the related literature

Planning your research design

Writing the research proposal

Qualitative research

Historical research

Descriptive research

Experimental and causal - comparative designs

Statistical techniques for analyzing quantitative data

Technical details: style, format, and organization of the research report

Masters Research Proposal

Synopsis: Research students are expected to present a written research proposal within three months after commencement. The proposal is handed in to the study leader.

Assessors of this proposal are selected by the faculty for their understanding of the field and the research involved. The purpose of a research is to set out a plan for conducting the research and writing the dissertation within the available time. It should take account of the availability and guidance of the study leader.

The starting point for a research proposal is the topic, which is the field of interest in which the research is to be carried out. In introducing the topic, the proposal should clarify the field that it falls into and the specific part of that field which the research will explore.

It should clarify why the topic is of interest and importance, and how the proposed research will contribute to the field of knowledge or profession. The proposal should clarify the research questions, ensuring that these are specific and answerable.

It is important to show how these questions relate to the topic, and how they will advance the student's contribution. The proposal should detail the research to be carried out, and clarify the research methods, the timeframe and the reasons for selecting particular methods.

Where a period of literature review or research should precede any empirical research, this should be factored in as part of the research. It is important to estimate any periods of field research and to flag their duration and cost in your research proposal.

HUM 602 Thesis

Humanities Studies Thesis for Masters and Dissertation for Doctorate

Candidates need to complete a 60000-words dissertation (in Myanmar or English) and a 3000-words executive portfolio (in English).

This program requires the candidates to complete a thesis as part of the assessment for the Master of Humanities Studies degree and a dissertation for Doctor of Humanities Studies.

Doing a thesis / dissertation means that instead of knowledge and information being presented and following a prescribed route for answering questions, candidates are thrust into an active role of managing an investigation into a topic area. This means researching and discovering things for themselves.

They will have to set their own targets and parameters, pose their own central research questions and decide on the appropriate sources of information to support the research. It therefore requires the use of the higher-level cognitive skills of analysis, synthesis and evaluation. Candidates may choose an area of particular interest to them within the scope of course title.

Doctoral dissertation

A dissertation is an individual effort and the candidate, academic tutor and the course professor will work together on constructing an approved topic (research question) and methodologies.

Humanities Dissertation Defence for doctorate

It is expected of Doctoral candidates to defend their thesis by means of a colloquium (academic discussion). The purpose of the meeting is for the candidates to convince a panel of experts in the

field of the dissertation how well they have done in the conducting of their research study and the preparation of their dissertation

Candidates need to complete all course assessments with the results of Grade B+ or above.

IQY Technical College

International Engineering

Professional Diploma in Structural Engineering/ MSc (Structure)

Course Code 67553/7776654)

Recognised by Singapore Institute of Engineering Technologists/ The Society of Professional Engineers (UK and International) St Clements University/ STC Technological University/

The Institution of Professional Engineers Myanmar, a Member of International Federation of Engineering Education Societies –IFEES-USA)

Total Training Fees

To be advised

Training Period – 6 Months

Main Office

No 704 Myitta Street, 12 Ward , South Okkalapa, Yangon

Inclusive Education for all citizens/ Myanmar Vocational Training Certificate (MVTC)

Traditional Schooling Pathway

11 Years schooling (KG to Standards 10)

Complete

Yes

University Entrance Examination

Complete

Pass

No/ can not
continue
schooling

Fail

We must remove the situation that Standard 10 determines everything for future career for the whole life of our kids. The whole Career prospects of the kid must not be narrowly decided by one examination which has caused unreasonable financial burden on working parents /waste a lot of our labours causing social inequalities.

The minimum wages must be determined relevant to competency level

Determination of skills level is referenced from ANZCO Dictionary

Work entry pathway

Youth and adult employees in several businesses such as café/restaurant/construction sites/sewing etc

Minimum 4 years experience at employment & relevant onsite assessment/additional training/ application process

MVTC Level 1 Certificate which is equivalent to Skills Level 5-Experienced Elementary Workers

Theory & practical training related to their jobs.
For example, cooking skills for restaurant workers/ trade skills for construction site labourers etc + Formal recognition

MVTC Level 2 Certificate which is equivalent to Skills Level 4 –Trained Assistant Tradespersons

Adult Education composing some academic study at university entrance level with the choice of subjects relevant to vocational field PLUS advanced trades skills level course/ training at Government/ Private/ Community/ Non Government Organizations

MVTC Level 3 Certificate which is equivalent to Skills Level 3- Fully Qualified Tradespersons (Equivalent Year 11 Standard)

Tertiary Preparation Course for adult learners (Equivalent Year 12 Standard)

Entry to relevant Government & Non Government Tertiary/ Technical/Business/ Vocational Colleges to pursue Diploma

Skills- Para professional Level 3- Para-professional/ Technician

Entry to various degree programs at Government/ Private Universities and colleges

Professional-Skills Level 2 then proceeds to Skills Level 1 Managers

Self Study Online CPD Courses

www.highlightcomputer.com/onlinecpdcourses.htm

To enrol these course , follow the steps

1. Pay the fees (First course is Kyats 30000, then Kyats 10000 per additional course) . Deposit into the following account

Daw Hla Myat Mon –Account Number 020-33-500265-2 (Yoma Bank) and attached the evidence of deposit to this application form

2. Fill the online form. (Without evidence of fund deposit, no reply will be made.)

<http://www.emailmeform.com/builder/form/H7zdPO8n8K6EBIG>

3. Then , we will send you the download links to download the e-Books

4. We will send you CPD Course Attendance Certificate electronically.

5. Each course has 20 CPD Hours.

6. They are self study courses. No needs to submit the assessment tasks

7. The list of the CPD course attenders are not included in IQY Technical College Graduates List but the authenticity of issued IQY CPD Certificates can be enquired by emailing to iqytechnicalcollege@gmail.com

Study Areas

GE1	Electrical Wiring (EE)
GE2	Electrical Machine (EE)
GE3	Electrical Distribution (EE)
GE4	Power System Operation (EE)
GE5	Power System Protection
GE6	Occupational Health & Safety
GE7	Project Management (EE/CE/ME)
GE8	Electronics (EE)
GE9	Process Control (EE/ME)
GE10	Industrial Electronics (EE)
GE11	Programmable Logic Controller (EE/ME)

GE12	Photovoltaic Solar Electrical System
GE13	Principle of Engine(ME)
GE14	Fitting & Machining (ME)
GE15	Building Construction (CE)
GE16	Engineering Drawing I (EE/CE/ME)
GE17	Pipe Fitting (CE/ME)
GE18	Air-conditioning & Refrigeration (ME)
GE19	Computer Programming (EE/CE/ME)
GE20	Computer Networking (EE)
GE21	Welding (ME)
GE22	Painting & Decoration (CE)
GE23	Pneumatics (CE/ME)
GE24	Manufacturing Management (ME)
GE25	Surveying (CE)
GE26	Energy Efficient Building Design
GE27	Machine Principle(ME)
GE28	Hydraulic (CE/ME)
GE29	Materials & Corrosion Prevention (CE/ME)
GE30	Bricklaying (CE)
GE31	Sprouting & Guttering (CE)
GE32	Electronic Security Installation
GE33	Explosion Protection
GE34	Engineering Business Management
GE35	Scaffolding
GE36	Materials Handling & Storage
IE1	Engineering Mathematics
IE2	Engineering Physics
IE3	Material Science
IE4	Advanced Engineering Mathematics
IE5	Mechanical Science
IE6	Principle of Electricity
IE7	Electrical Circuit I (EE)
IE8	Electrical Circuit II (EE)
IE9	Advanced Building Construction (CE)
IE10	Transmission Line (EE)
IE11	Electrical & Mechanical Engineering Work Experience
IE12	Civil Engineering Work Experience

IE13	Workshop
IE15	Advanced Engineering Design & Project Work
IE16	Power System Analysis-Fault Calculation
IE17	Power Line Design
IE18	Building services
IE19	PCB Design
IE20	Maths References
IE21	Electrical Principle
IE22	Co-generation
IE23	Industrial Computer System
IE24	Microprocessor
IE25	Power System Fundamental
IE26	Electrical Communication Fundamental
IE27	Control Concept
IE28	Electronic Signal & System
IE29	Electrical Estimating
IE30	Electronic Workbench
IE31	Introduction to Renewable Energy Technology
IE32	Telecommunication Cabling & Installation
IE33	Hybrid Energy System
IE34	Electricity Supply Industrial Skills

Civil/Mechanical/Electrical Engineering Practical Courses for AGTI/BTech/BE students of Government Technical Colleges & Technological Universities

If you find the question in Myanmar language, the lessons in Myanmar language for that question is also provided.

PC 1-Certificate in Bricklaying & Masonry

PC 2-Certificate in Plumbing

PC 3-Certificate in Building Construction

PC 4-Certificate in Gutter Construction

PC 5-Certificate in Fitting & Machining

PC 6-Certificate in Welding

PC 7-Certificate in Engine Operation & Basic Servicing

PC 8-Certificate in Air-conditioning & Refrigeration Basic Servicing

PC 9-Certificate in Electrical Wiring

PC 10-Certificate in Electrical Machine Winding

PC 11-Certificate in Electrical Power Wiring & Switch Gear Installation

(PC15/H102) Certificate in Basic Electronics & Telecommunication

PC16 Certificate in Rigging & Scaffolding

PC Practical Course (Level 2 for Engineering Technicians)

PC 12-Certificate in Surveying. Quantity Surveying & Estimating

PC 13-Certificate in Manufacturing Process Control & CNC

PC 14-Certificate in Building Energy Efficiency

IQY Classrooms
