Introduction

Accreditation period

The following list provides details of programs accredited by Engineers Australia. The year shown after each program is the year in which that particular program was first accredited by Engineers Australia. Discontinued programs are clearly identified by displaying a final year of accreditation and are listed in the 'No longer offered' section.

Students are deemed to have graduated from an accredited program providing they **commence** their studies within the period that ongoing, full accreditation applies. A student admitted to a fully accredited program can thus expect their degree to be recognised by Engineers Australia and also by the signatories to the Washington, Sydney and Dublin Accords where applicable. Where full accreditation is terminated by Engineers Australia after the commencement, but prior to the completion of the student's program, once satisfying graduation requirements the graduate will still be deemed to have graduated from an accredited program, provided there was no substantive break in the sequence of study. Accreditation terminating dates are set after careful consideration of program wind-down arrangements and with due reference to current student cohorts.

Provisional accreditation

As accreditation is outcomes-based, if an engineering course or program hasn't yet produced a sufficient number of graduates, it may be granted provisional accreditation. This means the program meets the accreditation criteria to the extent possible at the time of the evaluation and will likely receive full accreditation when a representative group of graduates have emerged.

Education courses or programs must be fully accredited to be recognised under the international accord agreements. Provisionally accredited programs are not recognised under the accords.

If a particular program is not listed or you have any queries related to accreditation, contact the [Australian Engineering Accreditation Centre](#) for assistance.
