Remove rust from metal quickly and easily with WD-40

WD-40 Team

3 years ago

Nearly everyone at some stage has used WD-40 to fix a squeaky hinge or unjam a window, but did you know it's also a quick and easy way to remove surface rust from metal?

Most people know WD-40 Multi-Use Product as a lubricant, but it was originally used as an anti-corrosive by the aerospace industry to prevent spacecraft from rusting. WD-40 can help remove rust from metals like iron, chrome, and stainless steel without further damaging the surface of the
