

COMMUNITY

SPECTRUM AND E3 COMPLIANCE

This Community is brought to you by DISA's Defense Spectrum Organization's (DSO) Joint Spectrum Center (JSC). Compliance with Spectrum Supportability (SS) requirements and control of E3 can be critical performance parameters for platforms, systems, and electronic equipment acquired by the DoD. If these technical areas are not given the proper level of attention during the acquisition process, you can be sure that fielded systems will suffer from some level of operational degradation up to, and including catastrophic failures or unacceptable operating restrictions. This CoP is to be used for training purposes only.
