

# Using the Snipping Tool to capture Virtual Machine windows

Figure 1 - Opening the Snipping Tool program

1. Select the **start** button, then type “**Snipping Tool**” in the search box on the taskbar, then select **Snipping Tool** from the list of results.
2. To take Window Snips (which is useful when capturing entire virtual machine windows) do the following:
  - a. In Snipping Tool, select **Mode**
  - b. From the options listed choose **Window Snip**

3. To capture a virtual machine window, do the following:
  - a. Have the virtual machine window you want to capture opened and visible on your monitor screen.
  - b. Open Snipping Tool and select **New**

Figure 3 - Creating a New Screen Capture

- c. Then select the window you want to capture.

4. To save the screen capture, click on **Save**

## Capturing Virtual Machine Windows for Assessment Tasks

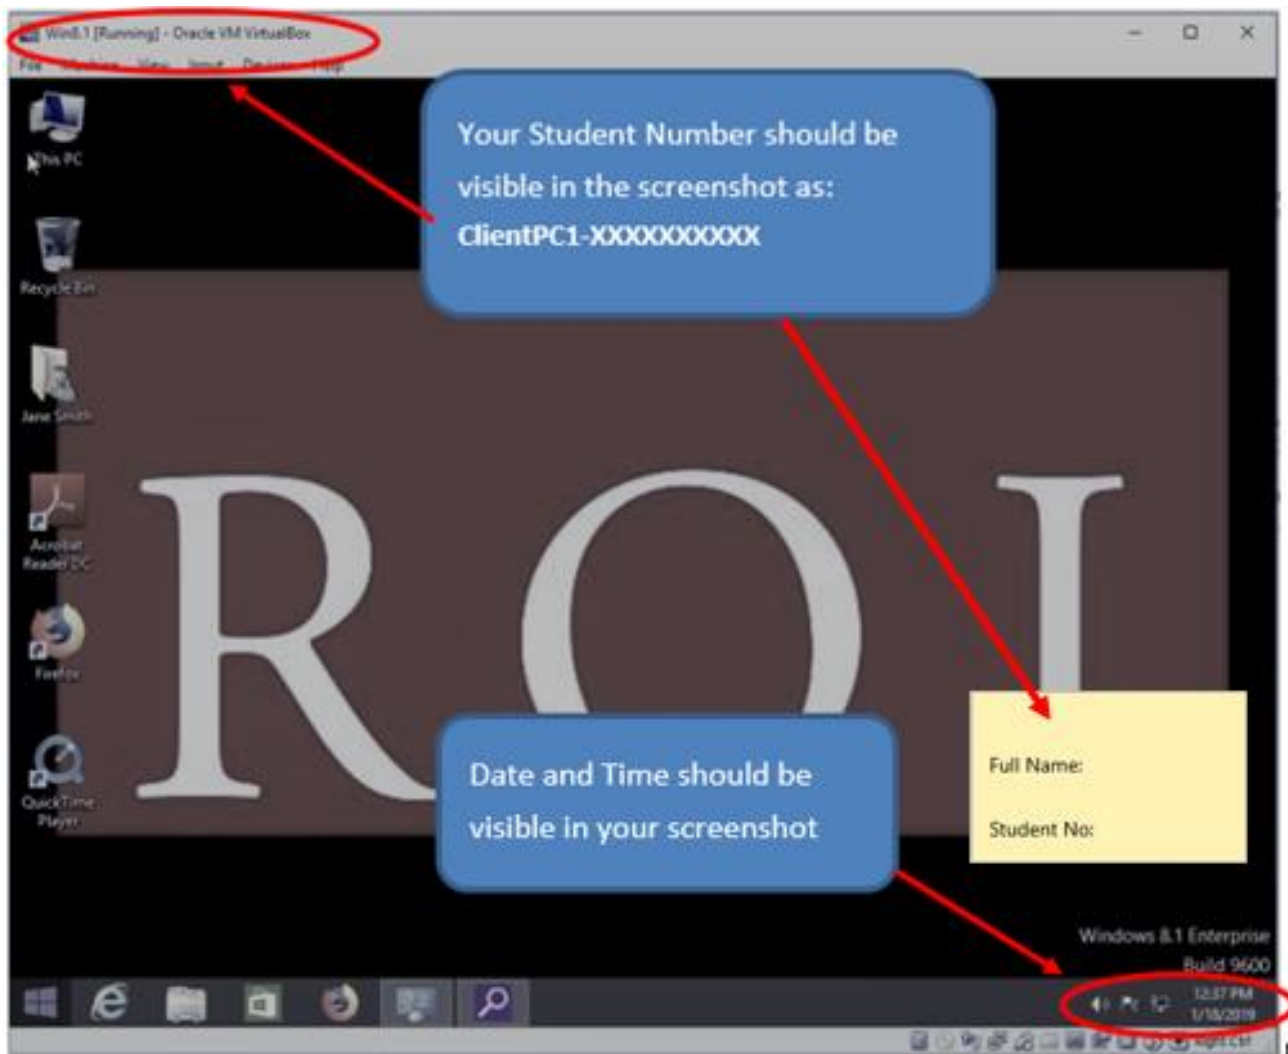

Often when capturing evidence for assessment tasks you will be asked to ensure that certain details are visible in your screenshot. Such as;

- Student Number
- Student Name
- Date and Time

One way you can ensure your details are visible is to place a **Sticky Note** on the virtual Machine Window before taking the screenshot. To do this, follow the steps given below.

- Search for **Sticky Notes** in the search box inside your Virtual Machine.
- Then type in your details as requested in your assessment instructions.
- Position the Sticky Note in an appropriate place, where it is clearly visible to your assessor.
- Then take the screen capture of the virtual machine window using the Snipping Tool.

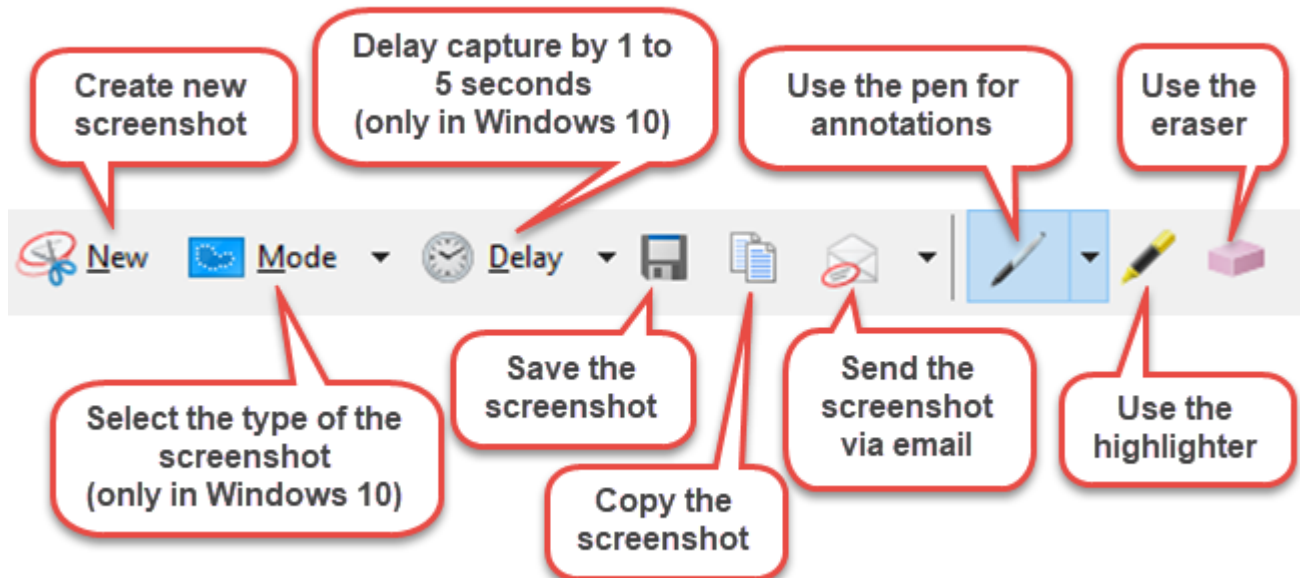

*Sample screenshot given below as a reference*

NOTE: If the Virtual Machine's name (at the time of creation) includes your details (For example: student number), this will be captured at the top left of the Window.

## Snipping tool overview
