UEENEEH127A	Set up and adjust commercial radio frequency (RF) transmission and reception systems
UEENEEH128A	Install and test microwave antennae and waveguides
UEENEEH138A	Fault find and repair complex power supplies
UEENEEH139A	Troubleshoot basic amplifier circuits
UEENEEH142A	Solve oscillator problems
UEENEEH146A	Solve fundamental electronic communications system problems
UEENEEH150A	Assemble and set up basic security systems
UEENEEH151A	Install large security systems

UEENEEH152A	Enter instructions and test wired and wireless security systems
UEENEEH154A	Program and commission commercial security systems
UEENEEH155A	Program and commission commercial access control security systems
UEENEEH156A	Program and commission commercial security closed circuit television systems
UEENEEH161A	Install fire detection and warning system apparatus
UEENEEH162A	Verify compliance and functionality of fire protection system installations
UEENEEH163A	Enter and verify programs for fire protection systems
UEENEEH164A	Commission large fire protection systems
UEENEEH165A	Troubleshoot fire protection systems
UEENEEH166A	Troubleshoot microcontroller based hardware systems
UEENEEH169A	Solve problems in basic electronic circuits
UEENEEH171A	Troubleshoot faults in television receivers
UEENEEH172A	Troubleshoot communication systems
UEENEEH173A	Troubleshoot professional audio reproduction components
UEENEEH174A	Troubleshoot audio/video recording equipment
UEENEEH187A	Solve problems in electronic musical equipment circuits
UEENEEI101A	Use instrumentation drawings, specification, standards and equipment manuals
UEENEEI116A	Assemble, enter and verify operating instructions in microprocessor equipped devices
UEENEEI117A	Calibrate, adjust and test measuring instruments
UEENEEC004B	Prepare specifications for the supply of materials and equipment for electrotechnology projects
UEENEEC005B	Estimate electrotechnology projects
UEENEEI103A	Evaluate and modify object oriented code programs
UEENEEI110A	Set up, create and implement content for a web server
UEENEEI154A	Analyse and implement biometric measuring techniques and applications
UEENEEE110A	Develop and implement energy sector maintenance programs
UEENEEE114A	Supervise and coordinate energy sector work activities
UEENEEE118A	Establish, maintain and evaluate energy sector OHS systems
UEENEEE124A	Compile and produce an energy sector detailed report
UEENEEH129A	Fault find and repair navigation systems
UEENEEH130A	Fault find and repair satellite-based surveillance and observation systems
UEENEEH131A	Fault find and repair radar apparatus and systems
UEENEEH132A	Fault find and repair global positioning systems
UEENEEH133A	Fault find and repair telecommunication apparatus and systems
UEENEEH134A	Fault find and repair electronic medical equipment
UEENEEH135A	Design custom electronic equipment installations
UEENEEH136A	Design commercial video/audio installations
UEENEEH137A	Program and commission commercial video/audio systems
UEENEEH140A	Fault find and repair sonar apparatus and systems
UEENEEH153A	Program and test large security systems
UEENEEH175A	Troubleshooting in security system installations
UEENEEH176A	Diagnose and rectify faults in electronic display circuits

UEENEEH177A	Diagnose and rectify faults in recording and replay equipment
UEENEEH178A	Diagnose and rectify faults in camera circuits and equipment
UEENEEH179A	Diagnose and rectify faults in digital television circuits and apparatus
UEENEEH180A	Diagnose and rectify faults in digital transmission circuits and systems
UEENEEH186A	Commission satellite and microwave communication systems
UEENEEI148A	Solve problems in single phase electronic power control circuits
UEENEEI155A	Develop structured programs to control external devices
UEENEEI157A	Configure and maintain industrial control system networks
UEENEEC006B	Prepare tender submissions for electrotechnology projects
UEENEEED150A	Develop industrial control programs for microcomputer equipped devices
UEENEEED151A	Provide programming solution for computer systems engineering problems
UEENEEEE072B	Write specifications for electronics and communications engineering projects
UEENEEEE125A	Provide engineering solutions for problems in complex multiple path circuit
UEENEEEE126A	Provide solutions to basic engineering computational problems
UEENEEED147A	Develop energy sector directory services
UEENEEEE160A	Provide engineering solutions for uses of materials and thermodynamic effects
UEENEEH145A	Develop engineering solutions to analogue electronic problems
UEENEEH148A	Design and develop advanced digital systems
UEENEEH149A	Develop engineering solutions to audio electronic problems
UEENEEH157A	Develop basic plans for integrating security systems
UEENEEH181A	Design electronic printed circuit boards
UEENEEH182A	Develop engineering solutions to RF amplifiers problems
UEENEEH183A	Analyse the performance of wireless-based electronic/communication systems
UEENEEI153A	Design and configure Human-Machine Interface (HMI) networks
UEENEEI156A	Develop and test code for microcontroller devices
UEENEEC007B	Manage contract variations
UEENEEED152A	Design embedded controller control systems
UEENEEED155A	Develop and validate biometric equipment/systems installation
UEENEEEE011C	Manage risk in electrotechnology activities
UEENEEEE127A	Use advanced computational processes to provide solutions to energy sector engineering problems
UEENEEEE128A	Develop engineering solutions to photonic system problems
UEENEEEE129A	Solve electrotechnical engineering problems
UEENEEED149A	Develop energy sector computer network applications infrastructure
UEENEEEE163A	Analyse materials for suitability in electrical equipment
UEENEEH147A	Assess electronic apparatus compliance
UEENEEH158A	Design integrated security systems
UEENEEH159A	Design integrated complex security systems for multiple sites
UEENEEH160A	Plan large electronic projects
UEENEEH184A	Modify digital signal processing (DSP) based sub-systems
UEENEEH185A	Design signal-conditioning subsystems
UEENEEH189A	Provide Gate Array solutions for complex electronics systems

UEENEEI123A Design electronic control systems
UEENEEI130A Set up electronically controlled robotically operated complex systems
UEENEEI154A Design and use advanced programming tools PC networks and HMI I
interfacing

Custom Content Section

UEE60411 Advanced Diploma of Computer Systems Engineering

Modification History

Not applicable.

Description

Scope

This qualification provides competencies to design, install/validate/evaluate and administer computer equipment and systems, manage risk, estimate and manage projects and provide technical advice/sales.

Pathways Information

Not applicable.

Licensing/Regulatory Information

Not applicable.

Entry Requirements

Not applicable.

Employability Skills Summary

Not applicable.

Packaging Rules

Completion requirements

The requirements for granting this qualification will be met when competency is demonstrated and achieved for:

- All the Core competency standard units, defined in the Core Competency Standard Units table below and
- A combination of Elective competency standard units to achieve a total weighting of 1880 points in accordance with the Elective Competency Standard Units table below.

Core Competency Standard Units	Weighting
All Core competency standard units to be achieved	Points

Core Competency Standard Units		Weighting
All Core competency standard units to be achieved		Points
UEENEED144A	Commission industrial computer systems	20
UEENEED145A	Modify-redesign of industrial computer systems	20
UEENEEE015B	Develop design brief for electrotechnology projects	40
UEENEEE038B	Participate in development and follow a personal competency development plan	20
UEENEEE078B	Contribute to risk management in electrotechnology systems	20
UEENEEE101A	Apply Occupational Health and Safety regulations, codes and practices in the workplace	20
UEENEEE117A	Implement and monitor energy sector OHS policies and procedures	20
UEENEEE137A	Document and apply measures to control OHS risks associated with electrotechnology work	20
UEENEEH141A	Manage computer systems/electronics projects	40
UEENEEH188A	Design and develop electronics/ computer systems projects	40
UEENEEK132A	Develop strategies to address environmental and sustainability issues in the energy sector	20
Total points in core		280

Elective Competency Standard Units		
Complete Elective units to achieve a total of weighting of 1880 points from the following groups:		
Group	Minimum points	Maximum points
A	Imported and Common Elective Units	0
	Imported units from other training packages and/or state accredited courses can be added to this group, but they must be selected from qualifications where the unit is first packaged at AQF level 6. If units have not	360

	being assigned a weighting by the relevant EE-Oz Industry Technical Advisory Committee, their weighting will be 10 points.		
B	Qualification Elective Units	0	900
C	Qualification Elective Units	0	280
D	Qualification Elective Units	0	280
E	Qualification Elective Units You may select the majority of your elective units from this Group	420	1600

Group A – Imported and Common Elective Units		Weighting Points
You may complete units to a maximum weighting of 360		
BSBMGT502B	Manage people performance	70
BSBINM501A	Manage an information or knowledge management system	50
BSBMGT516C	Facilitate continuous improvement	60
BSBINN502A	Build and sustain an innovative work environment	50
BSBWOR502B	Ensure team effectiveness	60
	Imported units from other training packages and/or state accredited courses can be added to this group, but they must be selected from qualifications where the unit is first packaged at AQF level 6. If units have not being assigned a weighting by the relevant EE-Oz Industry Technical Advisory Committee, their weighting will be 10 points. Note: For further information see Application of the NQC Flexibility Formula, UEE11 Electrotechnology Training Package, Version 1, Volume 1 Qualification Framework	Up to 360 points

Group B – Qualification Elective Units	Weighting Points
You may complete units to a maximum weighting of 900	

UEENEEA101A	Assemble electronic components	40
UEENEEA102A	Select electronic components for assembly	20
UEENEEA104A	Modify electronic sub assemblies	40
UEENEEA106A	Use lead-free soldering techniques	40
UEENEEED102A	Assemble, set-up and test computing devices	80
UEENEEED104A	Use engineering applications software on personal computers	40
UEENEEED112A	Support computer hardware and software for engineering applications	120
UEENEEED129A	Develop web pages for engineering applications	40
UEENEEED130A	Select, install, configure and test multimedia components	40
UEENEEED143A	Install and configure a client computer operating system and software	40
UEENEEED146A	Set up and configure basic local area network (LAN)	80
UEENEEED153A	Set up, configure and test biometric devices	40
UEENEEEEE102A	Fabricate, assemble and dismantle utilities industry components	40
UEENEEEEE104A	Solve problems in d.c. circuits	80
UEENEEEEE105A	Fix and secure electrotechnology equipment	20
UEENEEEEE107A	Use drawings, diagrams, schedules, standards, codes and specifications	40
UEENEEEEE108A	Lay wiring/cabling and terminate accessories for extra-low voltage (ELV) circuits	40
UEENEEEEE119A	Solve problems in multiple path extra low voltage (ELV) a.c. circuits	40
UEENEEEEE123A	Solve basic problems electronic and digital equipment and circuits	80
UEENEEEEE179A	Identify and select components, accessories and materials for energy sector work activities	20

UEENEEF102A	Install and maintain cabling for multiple access to telecommunication services	120
UEENEEF104A	Install and modify performance data communication copper cabling	40
UEENEEF105A	Install and modify optical fibre performance data communication cabling	40
UEENEEF107A	Set up and configure the wireless capabilities of communications and data storage devices	40
UEENEEF108A	Select and arrange equipment for wireless communication networks	40
UEENEEF109A	Install and connect data and voice communication equipment	40
UEENEEH101A	Repair basic computer equipment faults by replacement of modules/sub-assemblies	40
UEENEEH102A	Repairs basic electronic apparatus faults by replacement of components	40
UEENEEH103A	Repair routine business equipment faults	120
UEENEEH111A	Troubleshoot single phase input d.c. power supplies	40
UEENEEH112A	Troubleshoot digital sub-systems	80
UEENEEH113A	Troubleshoot amplifiers in an electronic apparatus	80
UEENEEH114A	Troubleshoot resonance circuits in an electronic apparatus	80
UEENEEH115A	Develop software solutions for microcontroller based systems	60
UEENEEH139A	Troubleshoot basic amplifier circuits	40
UEENEEH150A	Assemble and set up basic security systems	80
UEENEEH151A	Install large security systems	100
UEENEEH152A	Enter instructions and test wired and wireless security systems	40
UEENEEH166A	Troubleshoot microcontroller based hardware systems	40

UEENEEH169A	Solve problems in basic electronic circuits	100
UEENEEI101A	Use instrumentation drawings, specification, standards and equipment manuals	40
UEENEEI116A	Assemble, enter and verify operating instructions in microprocessor equipped devices	20

Group C – Qualification Elective Units		Weighting Points
You may complete units to a maximum weighting of 280		
UEENEEC004B	Prepare specifications for the supply of materials and equipment for electrotechnology projects	40
UEENEEC005B	Estimate electrotechnology projects	40
UEENEED103A	Evaluate and modify object oriented code programs	40
UEENEED110A	Set up, create and implement content for a web server	120
UEENEED113A	Install and administer Unix based networked computers	80
UEENEED115A	Administer computer networks	80
UEENEED117A	Install and configure network systems for internetworking	120
UEENEED154A	Analyse and implement biometric measuring techniques and applications	120
UEENEEE110A	Develop and implement energy sector maintenance programs	60
UEENEEE114A	Supervise and coordinate energy sector work activities	40
UEENEEE124A	Compile and produce an energy sector detailed report	60
UEENEEI124A	Fault find and repair analogue circuits and components in electronic control systems	60
UEENEEI155A	Develop structured programs to control external devices	40
UEENEEI157A	Configure and maintain industrial control system networks	60

Group D – Qualification Elective Units		Weighting Points
You may complete units to a maximum weighting of 280		
UEENEEC006B	Prepare tender submissions for electrotechnology projects	60
UEENEED111A	Develop, implement and test object oriented code	140
UEENEED118A	Design and implement network systems for internetworking	120
UEENEED124A	Integrate multiple computer operating systems on a client server local area network	80
UEENEED150A	Develop industrial control programs for microcomputer equipped devices	60
UEENEED151A	Provide programming solution for computer systems engineering problems	60
UEENEEE070B	Write specifications for computer systems engineering projects	40
UEENEEE125A	Provide engineering solutions for problems in complex multiple path circuit	60
UEENEEE126A	Provide solutions to basic engineering computational problems	60
UEENEED147A	Develop energy sector directory services	80
UEENEEH145A	Develop engineering solutions to analogue electronic problems	80
UEENEEH148A	Design and develop advanced digital systems	40
UEENEEH157A	Develop basic plans for integrating security systems	40
UEENEEH181A	Design electronic printed circuit boards	40
UEENEEH183A	Analyse the performance of wireless-based electronic/communication systems	40
UEENEEI153A	Design and configure Human-Machine Interface (HMI) networks	60
UEENEEI156A	Develop and test code for microcontroller devices	60

Group E – Qualification Elective Units		Weighting Points
You must complete units to a minimum weighting of 420 to a maximum of 1600		
UEENECC007B	Manage contract variations	40
UEENEED114A	Design and manage enterprise computer networks	80
UEENEED116A	Develop computer network services	120
UEENEED119A	Design and implement advanced routing for internetworking systems	100
UEENEED120A	Design and implement remote access for Internetworking systems	100
UEENEED121A	Design and implement multi-layer switching for Internetworking systems	100
UEENEED122A	Design and implement security for Internetworking systems	100
UEENEED123A	Design and implement wireless LANs/WANs for internetworking systems	100
UEENEED148A	Plan industrial computer systems projects	60
UEENEED152A	Design embedded controller control systems	80
UEENEED155A	Develop and validate biometric equipment/systems installation	120
UEENEEE011C	Manage risk in electrotechnology activities	60
UEENEEE127A	Use advanced computational processes to provide solutions to energy sector engineering problems	80
UEENEEE128A	Develop engineering solutions to photonic system problems	80
UEENEEE129A	Solve electrotechnical engineering problems	60
UEENEED149A	Develop energy sector computer network applications infrastructure	80
UEENEEH184A	Modify digital signal processing (DSP) based sub-systems	80

Group E – Qualification Elective Units		Weighting Points
You must complete units to a minimum weighting of 420 to a maximum of 1600		
UEENEEH185A	Design signal-conditioning subsystems	80
UEENEEI154A	Design and use advanced programming tools PC networks and HMI interfacing	120

Note:

1. Pre-requisite pathways shall be identified and met for all elective units selected.
2. In selecting elective units considerations to career planning advice should be given to units that form part of a pre-requisite pathway for the progression to achieve particular competencies or qualification at a higher level.
3. Registered training organisations shall also provide information related to the relevant pathway(s) that may be taken to achieve paraprofessional status ("associate membership") with a professional engineering membership organisation.

END OF QUALIFICATION

Unit Grid

UEENEE144A	Commission industrial computer systems
UEENEE145A	Modify-redesign of industrial computer systems
UEENEE015B	Develop design brief for electrotechnology projects
UEENEE038B	Participate in development and follow a personal competency development plan
UEENEE078B	Contribute to risk management in electrotechnology systems
UEENEE101A	Apply Occupational Health and Safety regulations, codes and practices in the workplace
UEENEE117A	Implement and monitor energy sector OHS policies and procedures
UEENEE137A	Document and apply measures to control OHS risks associated with electrotechnology work
UEENEEH141A	Manage computer systems/electronics projects
UEENEEH188A	Design and develop electronics/ computer systems projects
UEENEEK132A	Develop strategies to address environmental and sustainability issues in the energy sector
BSBMGT502B	Manage people performance
BSBINM501A	Manage an information or knowledge management system
BSBMGT516C	Facilitate continuous improvement
BSBINN502A	Build and sustain an innovative work environment
BSBWOR502B	Ensure team effectiveness
UEENEEA101A	Assemble electronic components
UEENEEA102A	Select electronic components for assembly
UEENEEA104A	Modify electronic sub assemblies
UEENEEA106A	Use lead-free soldering techniques
UEENEE102A	Assemble, set-up and test computing devices

UEENEED104A	Use engineering applications software on personal computers
UEENEED112A	Support computer hardware and software for engineering applications
UEENEED129A	Develop web pages for engineering applications
UEENEED130A	Select, install, configure and test multimedia components
UEENEED143A	Install and configure a client computer operating system and software
UEENEED146A	Set up and configure basic local area network (LAN)
UEENEED153A	Set up, configure and test biometric devices
UEENEEE102A	Fabricate, assemble and dismantle utilities industry components
UEENEEE104A	Solve problems in d.c. circuits
UEENEEE105A	Fix and secure electrotechnology equipment
UEENEEE107A	Use drawings, diagrams, schedules, standards, codes and specifications
UEENEEE108A	Lay wiring/cabling and terminate accessories for extra-low voltage (ELV) circuits
UEENEEE119A	Solve problems in multiple path extra low voltage (ELV) a.c. circuits
UEENEEE123A	Solve basic problems electronic and digital equipment and circuits
UEENEEE179A	Identify and select components, accessories and materials for energy sector work activities
UEENEEF102A	Install and maintain cabling for multiple access to telecommunication services
UEENEEF104A	Install and modify performance data communication copper cabling
UEENEEF105A	Install and modify optical fibre performance data communication cabling
UEENEEF107A	Set up and configure the wireless capabilities of communications and data storage devices
UEENEEF108A	Select and arrange equipment for wireless communication networks
UEENEEF109A	Install and connect data and voice communication equipment
UEENEEH101A	Repair basic computer equipment faults by replacement of modules/sub-assemblies
UEENEEH102A	Repairs basic electronic apparatus faults by replacement of components
UEENEEH103A	Repair routine business equipment faults
UEENEEH111A	Troubleshoot single phase input d.c. power supplies
UEENEEH112A	Troubleshoot digital sub-systems
UEENEEH113A	Troubleshoot amplifiers in an electronic apparatus
UEENEEH114A	Troubleshoot resonance circuits in an electronic apparatus
UEENEEH115A	Develop software solutions for microcontroller based systems
UEENEEH139A	Troubleshoot basic amplifier circuits
UEENEEH150A	Assemble and set up basic security systems
UEENEEH151A	Install large security systems
UEENEEH152A	Enter instructions and test wired and wireless security systems
UEENEEH166A	Troubleshoot microcontroller based hardware systems
UEENEEH169A	Solve problems in basic electronic circuits
UEENEEI101A	Use instrumentation drawings, specification, standards and equipment manuals
UEENEEI116A	Assemble, enter and verify operating instructions in microprocessor equipped devices
UEENEEC004B	Prepare specifications for the supply of materials and equipment for electrotechnology projects
UEENEEC005B	Estimate electrotechnology projects

UEENEED103A	Evaluate and modify object oriented code programs
UEENEED110A	Set up, create and implement content for a web server
UEENEED113A	Install and administer Unix based networked computers
UEENEED115A	Administer computer networks
UEENEED117A	Install and configure network systems for internetworking
UEENEED154A	Analyse and implement biometric measuring techniques and applications
UEENEEE110A	Develop and implement energy sector maintenance programs
UEENEEE114A	Supervise and coordinate energy sector work activities
UEENEEE124A	Compile and produce an energy sector detailed report
UEENEEI124A	Fault find and repair analogue circuits and components in electronic control systems
UEENEEI155A	Develop structured programs to control external devices
UEENEEI157A	Configure and maintain industrial control system networks
UEENEEC006B	Prepare tender submissions for electrotechnology projects
UEENEED111A	Develop, implement and test object oriented code
UEENEED118A	Design and implement network systems for internetworking
UEENEED124A	Integrate multiple computer operating systems on a client server local area network
UEENEED150A	Develop industrial control programs for microcomputer equipped devices
UEENEED151A	Provide programming solution for computer systems engineering problems
UEENEEE070B	Write specifications for computer systems engineering projects
UEENEEE125A	Provide engineering solutions for problems in complex multiple path circuit
UEENEEE126A	Provide solutions to basic engineering computational problems
UEENEED147A	Develop energy sector directory services
UEENEEH145A	Develop engineering solutions to analogue electronic problems
UEENEEH148A	Design and develop advanced digital systems
UEENEEH157A	Develop basic plans for integrating security systems
UEENEEH181A	Design electronic printed circuit boards
UEENEEH183A	Analyse the performance of wireless-based electronic/communication systems
UEENEEI153A	Design and configure Human-Machine Interface (HMI) networks
UEENEEI156A	Develop and test code for microcontroller devices
UEENEEC007B	Manage contract variations
UEENEED114A	Design and manage enterprise computer networks
UEENEED116A	Develop computer network services
UEENEED119A	Design and implement advanced routing for internetworking systems
UEENEED120A	Design and implement remote access for Internetworking systems
UEENEED121A	Design and implement multi-layer switching for Internetworking systems
UEENEED122A	Design and implement security for Internetworking systems
UEENEED123A	Design and implement wireless LANs/WANs for internetworking systems
UEENEED148A	Plan industrial computer systems projects
UEENEED152A	Design embedded controller control systems

UEENEED155A	Develop and validate biometric equipment/systems installation
UEENEEE011C	Manage risk in electrotechnology activities
UEENEEE127A	Use advanced computational processes to provide solutions to energy sector engineering problems
UEENEEE128A	Develop engineering solutions to photonic system problems
UEENEEE129A	Solve electrotechnical engineering problems
UEENEED149A	Develop energy sector computer network applications infrastructure
UEENEEH184A	Modify digital signal processing (DSP) based sub-systems
UEENEEH185A	Design signal-conditioning subsystems
UEENEEI154A	Design and use advanced programming tools PC networks and HMI interfacing

Completion requirements

The requirements for granting this qualification will be met when competency is demonstrated and achieved for:

- All the Core competency standard units, defined in the Core Competency Standard Units table below and
- A combination of Elective competency standard units to achieve a total weighting of 360 points in accordance with the Elective Competency Standard Units table below.

Note: UEENEEG105A - Those holding an 'Unrestricted Electricians Licence or equivalent issued in an Australian State or Territory meets the requirements of this unit and its pre-requisite requirements.

Core Competency Standard Units		Weighting Points
All Core competency standard units to be achieved		
UEENEED104A	Use software for engineering applications	40
UEENEEE006B	Apply methods to maintain currency of industry developments	20
UEENEEE011C	Manage risk in electrotechnology activities	60
UEENEEE015B	Develop design briefs for electrotechnology projects	40
UEENEEE075B	Write specifications for industrial electronics and control projects	40
UEENEEE080A	Apply industry and community standards to engineering activities	20
UEENEEE081A	Apply material science to solving electrotechnology engineering problems	60
UEENEEE082A	Apply physics to solving electrotechnology engineering problems	60
UEENEEE083A	Establish and follow a competency development plan in an electrotechnology engineering discipline	120
UEENEEE101A	Apply Occupational Health and Safety regulations, codes and practices in the workplace	20
UEENEEE102A	Fabricate, assemble and dismantle utilities industry components	40
UEENEEE104A	Solve problems in d.c. circuits	80
UEENEEE105A	Fix and secure electrotechnology equipment	20
UEENEEE107A	Use drawings, diagrams, schedules, standards, codes and specifications	40
UEENEEE117A	Implement and monitor energy sector OHS policies and procedures	20
UEENEEE124A	Compile and produce an energy sector detailed report	60
UEENEEE125A	Provide engineering solutions for problems in complex multiple path circuits	60

UEENEEE126A	Provide solutions to basic engineering computational problems	60
UEENEEE137A	Document and apply measures to control OHS risks associated with electrotechnology work	20
UEENEEG006A	Solve problems in single and three phase low voltage machines	80
UEENEEG033A	Solve problems in single and three phase low voltage electrical apparatus and circuits	60
UEENEEG063A	Arrange circuits, control and protection for general electrical installations	40
UEENEEG101A	Solve problems in electromagnetic devices and related circuits	60
UEENEEG102A	Solve problems in low voltage a.c. circuits	80
UEENEEG103A	Install low voltage wiring and accessories	20
UEENEEG104A	Install appliances, switchgear and associated accessories for low voltage electrical installations	20
UEENEEG105A	Verify compliance and functionality of low voltage general electrical installations	40
UEENEEG106A	Terminate cables, cords and accessories for low voltage circuits	40
UEENEEG107A	Select wiring systems and cables for low voltage general electrical installations	60
UEENEEG108A	Trouble-shoot and repair faults in low voltage electrical apparatus and circuits	40
UEENEEG109A	Develop and connect electrical control circuits	80
UEENEEG149A	Provide engineering solutions to problems in complex polyphase power circuits	60
UEENEEI124A	Diagnose and rectify faults in electronic control systems	60
UEENEEI134A	Manage control projects	40
UEENEEI135A	Plan control projects	60

UEENEEI139A	Diagnose and rectify faults in digital controls systems	60
UEENEEK132A	Develop energy sector strategies to address environmental and sustainability issues	20
Total points in core		1800

Elective Competency Standard Units

Complete Elective units to achieve a total of weighting of 360 points from the following groups:

Group		Minimum points	Maximum points
A	Imported and Common Elective Units Imported units from other training packages and/or state accredited courses can be added to this group, but they must be selected from qualifications where the unit is first packaged at AQF level 6. If units have not been assigned a weighting by the relevant EE-Oz Industry Technical Advisory Committee, their weighting will be 10 points.	0	180
B	Qualification Elective Units	0	60
C	Qualification Elective Units	0	100
D	Qualification Elective Units	0	60
E	Qualification Elective Units You may select all your elective units from this Group	160	360

Group A – Imported and Common Elective Units		Weighting Points
You may complete units to a maximum weighting of 180		
BSBMGT502B	Manage people performance	70
BSBINM501A	Manage an information or knowledge management system	50
BSBMGT516C	Facilitate continuous improvement	60
BSBINN502A	Build and sustain an innovative work environment	50

BSBWOR502B	Ensure team effectiveness	60
	<p>Imported units from other training packages and/or state accredited courses can be added to this group, but they must be selected from qualifications where the unit is first packaged at AQF level 6. If units have not being assigned a weighting by the relevant EE-Oz Industry Technical Advisory Committee, their weighting will be 10 points.</p> <p>Note: For further information see Application of the NQC Flexibility Formula, UEE11 Electrotechnology Training Package, Version 1, Volume 1 Qualification Framework</p>	Up to 180 points

Group B – Qualification Elective Units		Weighting Points
You may complete units to a maximum weighting of 60		
UEENEEE190A	Prepare engineering drawings using manual drafting and CAD for electrotechnology/utilities applications	60
UEENEEE191A	Prepare electrotechnology/utilities drawings using manual drafting and CAD equipment and software	60
UEENEEG110A	Diagnose and rectify faults in d.c. electrical apparatus and circuits	60
UEENEEG111A	Carry out repairs to electrical apparatus	40
UEENEEG116A	Diagnose and rectify faults in lifts/escalator systems	80
UEENEEG118A	Maintain operation of electrical mining equipment and systems	60
UEENEEG119A	Maintain the operation of electrical marine equipment and systems	60
UEENEEH102A	Repair basic electronic apparatus faults by replacement of components	40
UEENEEH111A	Troubleshoot single phase input d.c. power supplies	40
UEENEEH150A	Assemble and set up basic wired and wireless security systems	80

UEENEEI101A	Use instrumentation drawings, specifications, standards and equipment manuals	40
UEENEEI102A	Solve problems in pressure measurement circuits and systems	40
UEENEEI103A	Solve problems in density/level measurement circuits and systems	40
UEENEEI104A	Solve problems in flow measurement circuits and systems	40
UEENEEI105A	Solve problems in temperature measurement circuits and systems	40
UEENEEI116A	Enter and verify operating instructions in microprocessor equipped devices	20
UEENEEI138A	Provide solutions to extra low voltage (ELV) electro-pneumatic control systems and drives	60
UEENEEI150A	Develop, enter and verify discrete control programs for programmable controllers	60
UEENEEM019A	Attend to breakdowns in hazardous areas — coal mining	20
UEENEEM020A	Attend to breakdowns in hazardous areas — gas atmospheres	20
UEENEEM021A	Attend to breakdowns in hazardous areas — dust atmospheres	20
UEENEEM022A	Attend to breakdowns in hazardous areas — pressurisation	20
UEENEEM027A	Maintain equipment in hazardous areas — coal mining	60
UEENEEM028A	Maintain equipment in hazardous areas — gas atmospheres	60
UEENEEM029A	Maintain equipment in hazardous areas — dust atmospheres	60
UEENEEM030A	Maintain equipment in hazardous areas — pressurisation	60
UEENEEM038A	Conduct testing of hazardous areas installations —	40

	coal mining	
UEENEEM080A	Report on the integrity of explosion-protected equipment in hazardous area	20

Group C – Qualification Elective Units		Weighting Points
You may complete units to a maximum weighting of 100		
UEENEEC005B	Estimate electrotechnology projects	40
UEENEEE192A	Produce detailed electrotechnology/utilities drawings using computer aided design equipment and software	60
UEENEEG132A	Carry out and report electrical field testing findings	60
UEENEEG162A	Set up and place LV electrical apparatus and associated circuits into service	40
UEENEEG168A	Diagnose and rectify faults in complex lifts equipment and systems	40
UEENEEG177A	Select power factor correction equipment	40
UEENEEG179A	Develop detailed electrical drawings	60
UEENEEI119A	Set up transducers and field control devices	60
UEENEEI120A	Provide solutions to problems in industrial control systems	60
UEENEEI125A	Provide solutions to fluid circuit operations	60
UEENEEI126A	Provide solutions to pneumatic/hydraulic system operations	80
UEENEEI148A	Provide solutions to single phase electronic power control problems	60
UEENEEI149A	Provide solutions to polyphase electronic power control problems	60
UEENEEI151A	Develop, enter and verify programs for industrial control systems using high level instructions	60
UEENEEI152A	Develop, enter and verify programs in Supervisory Control and Data Acquisition systems	60

UEENEEI155A	Develop structured programs to control external devices	40
UEENEEM039A	Conduct testing of hazardous area installations — gas atmospheres	40
UEENEEM042A	Conduct visual inspection of hazardous areas installations	40
UEENEEM044A	Conduct detailed inspection of hazardous areas installations — gas atmospheres	40
UEENEEM047A	Develop and manage maintenance programs for hazardous areas electrical equipment — coal mining	20
UEENEEM078A	Manage compliance of hazardous areas	20

Group D – Qualification Elective Units		Weighting Points
You may complete units to a maximum weighting of 60		
UEENEEC006B	Prepare tender submissions for electrotechnology projects	60
UEENEEE110A	Develop and implement energy sector maintenance programs	60
UEENEEM131A	Evaluate performance of LV electrical apparatus	40
UEENEEM180A	Develop detailed and complex drawings for electrical systems using CAD systems	60
UEENEEI127A	Analyse complex electronic circuits controlling fluids	80
UEENEEI145A	Diagnose and rectify faults in a.c. motor drive systems	60
UEENEEI146A	Diagnose and rectify faults in d.c. motor drive systems	60
UEENEEI147A	Diagnose and rectify faults in servo drive systems	60
UEENEEI156A	Develop and test code for microcontroller devices	60
UEENEEI157A	Configure and maintain industrial control system networks	60
UEENEEM035A	Conduct a conformity assessment of explosion-protected equipment — coal mining	40

UEENEEM036A	Conduct a conformity assessment of explosion-protected equipment — gas atmospheres	40
UEENEEM037A	Conduct a conformity assessment of explosion-protected equipment — dust atmospheres	40
UEENEEM054A	Plan electrical installations for hazardous areas — gas atmospheres	20
UEENEEM064A	Conduct audit of hazardous areas installations — coal mining	60
UEENEEM065A	Conduct audit of hazardous areas installations — gas atmospheres	60
UEENEEM066A	Conduct audit of hazardous areas installations — dust atmospheres	60
UEENEEM067A	Assess the fitness-for-purpose of hazardous areas explosion-protected equipment — coal mining	60
UEENEEM068A	Assess the fitness-for-purpose of hazardous areas explosion-protected equipment — gas atmospheres	60
UEENEEM069A	Assess the fitness-for-purpose of hazardous areas explosion-protected equipment — dust atmospheres	60

Group E – Qualification Elective Units		Weighting Points
You must complete units to a minimum weighting of 160 You may select all your elective units from this Group		
UEENEEC007B	Manage contract variations	40
UEENEEE127A	Use advanced computational processes to provide solutions to engineering problems	80
UEENEEE128A	Develop engineering solutions to photonic problems	80
UEENEEE160A	Provide engineering solutions for uses of materials and thermodynamic effects	80
UEENEEE161A	Analyse static and dynamic parameters of electrotechnology/utilities equipment	80
UEENEEE162A	Select drive components for equipment design	80

UEENEEE163A	Analyse materials for suitability in electrotechnology/utilities equipment	80
UEENEEE164A	Design electrical machine drives and production layout plans	80
UEENEEE078B	Contribute to risk management in electrotechnology systems	20
UEENEEG143A	Develop engineering solutions for synchronous machine problems	60
UEENEEG144A	Develop engineering solutions for direct current machine problems	60
UEENEEG145A	Develop engineering solutions for induction machine problems	60
UEENEEG160A	Evaluate performance of LV electrical machines	40
UEENEEG161A	Design and develop modifications for electrical machines	60
UEENEEH147A	Assess compliance of electronic apparatus	60
UEENEEH184A	Modify DSP based sub-systems	80
UEENEEH185A	Design a signal-conditioning subsystem	80
UEENEEH188A	Design and develop electronics/computer systems projects	40
UEENEEI123A	Design electronic control and instrumentation systems	60
UEENEEI128A	Set up controls on complex fluid systems	80
UEENEEI129A	Set up electronically controlled mechanically operated complex systems	80
UEENEEI130A	Set up electronically controlled robotically operated complex systems	80
UEENEEI153A	Design and configure Human-Machine Interface (HMI) networks	60
UEENEEI154A	Design a computer based control system	120
UEENEEM052A	Classify hazardous areas — gas atmospheres	40

UEENEEM053A	Classify hazardous areas — dust atmospheres	40
UEENEEM057A	Design explosion-protected electrical systems and installations — gas atmospheres	20
UEENEEM058A	Design explosion-protected electrical systems and installations — dust atmospheres	20
UEENEEM059A	Design explosion-protected electrical systems and installations — pressurisation	20
UEENEEM075A	Design explosion-protected electrical systems — Coal mining	20
UEENEEM079A	Design of gas detection systems and installations	20

Note:

1. Pre-requisite pathways shall be identified and met for all elective units selected.
2. In selecting elective units considerations to career planning advice should be given to units that form part of a pre-requisite pathway for the progression to achieve particular competencies or qualification at a higher level.
3. Registered training organisations shall also provide information related to the relevant pathway(s) that may be taken to achieve paraprofessional status ("associate membership") with a professional engineering membership organisation.

END OF QUALIFICATION**Unit Grid**

UEENEED104A	Use software for engineering applications
UEENEEE006B	Apply methods to maintain currency of industry developments
UEENEEE011C	Manage risk in electrotechnology activities
UEENEEE015B	Develop design briefs for electrotechnology projects
UEENEEE075B	Write specifications for industrial electronics and control projects
UEENEEE080A	Apply industry and community standards to engineering activities
UEENEEE081A	Apply material science to solving electrotechnology engineering problems
UEENEEE082A	Apply physics to solving electrotechnology engineering problems
UEENEEE083A	Establish and follow a competency development plan in an electrotechnology engineering discipline
UEENEEE101A	Apply Occupational Health and Safety regulations, codes and practices in the workplace
UEENEEE102A	Fabricate, assemble and dismantle utilities industry components
UEENEEE104A	Solve problems in d.c. circuits
UEENEEE105A	Fix and secure electrotechnology equipment
UEENEEE107A	Use drawings, diagrams, schedules, standards, codes and specifications
UEENEEE117A	Implement and monitor energy sector OHS policies and procedures
UEENEEE124A	Compile and produce an energy sector detailed report

UEENEEE125A	Provide engineering solutions for problems in complex multiple path circuits
UEENEEE126A	Provide solutions to basic engineering computational problems
UEENEEE137A	Document and apply measures to control OHS risks associated with electrotechnology work
UEENEEG006A	Solve problems in single and three phase low voltage machines
UEENEEG033A	Solve problems in single and three phase low voltage electrical apparatus and circuits
UEENEEG063A	Arrange circuits, control and protection for general electrical installations
UEENEEG101A	Solve problems in electromagnetic devices and related circuits
UEENEEG102A	Solve problems in low voltage a.c. circuits
UEENEEG103A	Install low voltage wiring and accessories
UEENEEG104A	Install appliances, switchgear and associated accessories for low voltage electrical installations
UEENEEG105A	Verify compliance and functionality of low voltage general electrical installations
UEENEEG106A	Terminate cables, cords and accessories for low voltage circuits
UEENEEG107A	Select wiring systems and cables for low voltage general electrical installations
UEENEEG108A	Trouble-shoot and repair faults in low voltage electrical apparatus and circuits
UEENEEG109A	Develop and connect electrical control circuits
UEENEEG149A	Provide engineering solutions to problems in complex polyphase power circuits
UEENEEI124A	Diagnose and rectify faults in electronic control systems
UEENEEI134A	Manage control projects
UEENEEI135A	Plan control projects
UEENEEI139A	Diagnose and rectify faults in digital controls systems
UEENEEK132A	Develop energy sector strategies to address environmental and sustainability issues
BSBMGT502B	Manage people performance
BSBINM501A	Manage an information or knowledge management system
BSBMGT516C	Facilitate continuous improvement
BSBINN502A	Build and sustain an innovative work environment
BSBWOR502B	Ensure team effectiveness
UEENEEE190A	Prepare engineering drawings using manual drafting and CAD for electrotechnology/utilities applications
UEENEEE191A	Prepare electrotechnology/utilities drawings using manual drafting and CAD equipment and software
UEENEEG110A	Diagnose and rectify faults in d.c. electrical apparatus and circuits
UEENEEG111A	Carry out repairs to electrical apparatus
UEENEEG116A	Diagnose and rectify faults in lifts/escalator systems
UEENEEG118A	Maintain operation of electrical mining equipment and systems
UEENEEG119A	Maintain the operation of electrical marine equipment and systems
UEENEEH102A	Repair basic electronic apparatus faults by replacement of components
UEENEEH111A	Troubleshoot single phase input d.c. power supplies
UEENEEH150A	Assemble and set up basic wired and wireless security systems

UEENEEI101A	Use instrumentation drawings, specifications, standards and equipment manuals
UEENEEI102A	Solve problems in pressure measurement circuits and systems
UEENEEI103A	Solve problems in density/level measurement circuits and systems
UEENEEI104A	Solve problems in flow measurement circuits and systems
UEENEEI105A	Solve problems in temperature measurement circuits and systems
UEENEEI116A	Enter and verify operating instructions in microprocessor equipped devices
UEENEEI138A	Provide solutions to extra low voltage (ELV) electro-pneumatic control systems and drives
UEENEEI150A	Develop, enter and verify discrete control programs for programmable controllers
UEENEEM019A	Attend to breakdowns in hazardous areas — coal mining
UEENEEM020A	Attend to breakdowns in hazardous areas — gas atmospheres
UEENEEM021A	Attend to breakdowns in hazardous areas — dust atmospheres
UEENEEM022A	Attend to breakdowns in hazardous areas — pressurisation
UEENEEM027A	Maintain equipment in hazardous areas — coal mining
UEENEEM028A	Maintain equipment in hazardous areas — gas atmospheres
UEENEEM029A	Maintain equipment in hazardous areas — dust atmospheres
UEENEEM030A	Maintain equipment in hazardous areas — pressurisation
UEENEEM038A	Conduct testing of hazardous areas installations — coal mining
UEENEEM080A	Report on the integrity of explosion-protected equipment in hazardous area
UEENEEC005B	Estimate electrotechnology projects
UEENEEE192A	Produce detailed electrotechnology/utilities drawings using computer aided design equipment and software
UEENEEG132A	Carry out and report electrical field testing findings
UEENEEG162A	Set up and place LV electrical apparatus and associated circuits into service
UEENEEG168A	Diagnose and rectify faults in complex lifts equipment and systems
UEENEEG177A	Select power factor correction equipment
UEENEEG179A	Develop detailed electrical drawings
UEENEEI119A	Set up transducers and field control devices
UEENEEI120A	Provide solutions to problems in industrial control systems
UEENEEI125A	Provide solutions to fluid circuit operations
UEENEEI126A	Provide solutions to pneumatic/hydraulic system operations
UEENEEI148A	Provide solutions to single phase electronic power control problems
UEENEEI149A	Provide solutions to polyphase electronic power control problems
UEENEEI151A	Develop, enter and verify programs for industrial control systems using high level instructions
UEENEEI152A	Develop, enter and verify programs in Supervisory Control and Data Acquisition systems
UEENEEI155A	Develop structured programs to control external devices
UEENEEM039A	Conduct testing of hazardous area installations — gas atmospheres
UEENEEM042A	Conduct visual inspection of hazardous areas installations
UEENEEM044A	Conduct detailed inspection of hazardous areas installations — gas atmospheres

UEENEEM047A	Develop and manage maintenance programs for hazardous areas electrical equipment — coal mining
UEENEEM078A	Manage compliance of hazardous areas
UEENEEC006B	Prepare tender submissions for electrotechnology projects
UEENEEE110A	Develop and implement energy sector maintenance programs
UEENEEG131A	Evaluate performance of LV electrical apparatus
UEENEEG180A	Develop detailed and complex drawings for electrical systems using CAD systems
UEENEEI127A	Analyse complex electronic circuits controlling fluids
UEENEEI145A	Diagnose and rectify faults in a.c. motor drive systems
UEENEEI146A	Diagnose and rectify faults in d.c. motor drive systems
UEENEEI147A	Diagnose and rectify faults in servo drive systems
UEENEEI156A	Develop and test code for microcontroller devices
UEENEEI157A	Configure and maintain industrial control system networks
UEENEEM035A	Conduct a conformity assessment of explosion-protected equipment — coal mining
UEENEEM036A	Conduct a conformity assessment of explosion-protected equipment — gas atmospheres
UEENEEM037A	Conduct a conformity assessment of explosion-protected equipment — dust atmospheres
UEENEEM054A	Plan electrical installations for hazardous areas — gas atmospheres
UEENEEM064A	Conduct audit of hazardous areas installations — coal mining
UEENEEM065A	Conduct audit of hazardous areas installations — gas atmospheres
UEENEEM066A	Conduct audit of hazardous areas installations — dust atmospheres
UEENEEM067A	Assess the fitness-for-purpose of hazardous areas explosion-protected equipment — coal mining
UEENEEM068A	Assess the fitness-for-purpose of hazardous areas explosion-protected equipment — gas atmospheres
UEENEEM069A	Assess the fitness-for-purpose of hazardous areas explosion-protected equipment — dust atmospheres
UEENEEC007B	Manage contract variations
UEENEEE127A	Use advanced computational processes to provide solutions to engineering problems
UEENEEE128A	Develop engineering solutions to photonic problems
UEENEEE160A	Provide engineering solutions for uses of materials and thermodynamic effects
UEENEEE161A	Analyse static and dynamic parameters of electrotechnology/utilities equipment
UEENEEE162A	Select drive components for equipment design
UEENEEE163A	Analyse materials for suitability in electrotechnology/utilities equipment
UEENEEE164A	Design electrical machine drives and production layout plans
UEENEEE078B	Contribute to risk management in electrotechnology systems
UEENEEG143A	Develop engineering solutions for synchronous machine problems
UEENEEG144A	Develop engineering solutions for direct current machine problems
UEENEEG145A	Develop engineering solutions for induction machine problems
UEENEEG160A	Evaluate performance of LV electrical machines
UEENEEG161A	Design and develop modifications for electrical machines

UEENEEH147A	Assess compliance of electronic apparatus
UEENEEH184A	Modify DSP based sub-systems
UEENEEH185A	Design a signal-conditioning subsystem
UEENEEH188A	Design and develop electronics/computer systems projects
UEENEEI123A	Design electronic control and instrumentation systems
UEENEEI128A	Set up controls on complex fluid systems
UEENEEI129A	Set up electronically controlled mechanically operated complex systems
UEENEEI130A	Set up electronically controlled robotically operated complex systems
UEENEEI153A	Design and configure Human-Machine Interface (HMI) networks
UEENEEI154A	Design a computer based control system
UEENEEM052A	Classify hazardous areas — gas atmospheres
UEENEEM053A	Classify hazardous areas — dust atmospheres
UEENEEM057A	Design explosion-protected electrical systems and installations — gas atmospheres
UEENEEM058A	Design explosion-protected electrical systems and installations — dust atmospheres
UEENEEM059A	Design explosion-protected electrical systems and installations — pressurisation
UEENEEM075A	Design explosion-protected electrical systems — Coal mining
UEENEEM079A	Design of gas detection systems and installations

Custom Content Section

Not applicable.

UEE60911 Advanced Diploma of Renewable Energy Engineering

Modification History

Not applicable.

Description

Scope

This qualification provides competencies to design and validate/evaluate renewable energy equipment and systems, manage risk, estimate and manage projects and provide technical advice/sales.

Pathways Information

Not applicable.

Licensing/Regulatory Information

Not applicable.

Entry Requirements

Not applicable.

Employability Skills Summary

Not applicable.

Packaging Rules

Completion requirements

The requirements for granting this qualification will be met when competency is demonstrated and achieved for:

- All the Core competency standard units, defined in the Core Competency Standard Units table below and
- A combination of Elective competency standard units to achieve a total weighting of 340 points in accordance with the Elective Competency Standard Units table below.

Note: UEENEEG105A - Those holding an 'Unrestricted Electricians Licence or equivalent issued in an Australian State or Territory meets the requirements of this unit and its pre-requisite requirements.

Core Competency Standard Units		Weighting Points
All Core competency standard units to be achieved		
UEENEED104A	Use software for engineering applications	40
UEENEEE006B	Apply methods to maintain currency of industry developments	20
UEENEEE011C	Manage risk in electrotechnology activities	60
UEENEEE015B	Develop design briefs for electrotechnology projects	40
UEENEEE074B	Write specifications for renewable energy projects	40
UEENEEE080A	Apply industry and community standards to engineering activities	20
UEENEEE081A	Apply material science to solving electrotechnology engineering problems	60
UEENEEE082A	Apply physics to solving electrotechnology engineering problems	60
UEENEEE083A	Establish and follow a competency development plan in an electrotechnology engineering discipline	120
UEENEEE101A	Apply Occupational Health Safety regulations, codes and practices in the workplace	20
UEENEEE102A	Fabricate, dismantle, assemble of utilities industry components	40
UEENEEE104A	Solve problems in d.c. circuits	80
UEENEEE105A	Fix and secure electrotechnology equipment	20
UEENEEE107A	Use drawings, diagrams, schedules, standards, codes and specifications	40
UEENEEE117A	Implement and monitor OHS energy sector procedures and policies	20
UEENEEE124A	Compile and produce an energy sector report	60
UEENEEE125A	Provide solutions to complex multiple path circuits problems	60
UEENEEE126A	Provide solutions to basic engineering computational	60

	problems	
UEENEEE137A	Document and apply measures to control OHS risks associated with electrotechnology work	20
UEENEEG006A	Solve problems in single and three phase low voltage machines	80
UEENEEG033A	Solve problems in single and three phase low voltage electrical apparatus and circuits	60
UEENEEG063A	Arrange circuits, control and protection for general electrical installations	40
UEENEEG101A	Solve problems in electromagnetic devices and related circuits	60
UEENEEG102A	Solve problems in low voltage a.c. circuits	80
UEENEEG103A	Install low voltage wiring and accessories	20
UEENEEG104A	Install appliances, switchgear and associated accessories for low voltage electrical installations	20
UEENEEG105A	Verify compliance and functionality of low voltage general electrical installations	40
UEENEEG106A	Terminate cables, cords and accessories for low voltage circuits	40
UEENEEG107A	Select wiring systems and cables for low voltage general electrical installations	60
UEENEEG108A	Trouble-shoot and repair faults in low voltage electrical apparatus and circuits	40
UEENEEG109A	Develop and connect electrical control circuits	80
UEENEEG149A	Provide engineering solutions to problems in complex polyphase power circuits	60
UEENEEK121A	Manage renewable energy (RE) projects	40
UEENEEK122A	Plan renewable energy (RE) projects	60
UEENEEK123A	Carry out basic repairs to renewable energy apparatus	80
UEENEEK128A	Solve problems in stand-alone renewable energy apparatus and systems	60

UEENEEK132A	Develop energy sector strategies to address environmental and sustainability issues	20
Total points in core		1820

Elective Competency Standard Units

Complete Elective units to achieve a total of weighting of 340 points from the following groups:

Group		Minimum points	Maximum points
A	Imported and Common Elective Units Imported units from other training packages and/or state accredited courses can be added to this group, but they must be selected from qualifications where the unit is first packaged at AQF level 6. If units have not being assigned a weighting by the relevant EE-Oz Industry Technical Advisory Committee, their weighting will be 10 points.	0	170
B	Qualification Elective Units	0	60
C	Qualification Elective Units	0	100
D	Qualification Elective Units	0	60
E	Qualification Elective Units You may select all your elective units from this Group	160	340

Group A – Imported and Common Elective Units		Weighting Points
You may complete units to a maximum weighting of 170		
BSBMGT502B	Manage people performance	70
BSBINM501A	Manage an information or knowledge management system	50
BSBMGT516C	Facilitate continuous improvement	60
BSBINN502A	Build and sustain an innovative work environment	50
BSBWOR502B	Ensure team effectiveness	60

	<p>Imported units from other training packages and/or state accredited courses can be added to this group, but they must be selected from qualifications where the unit is first packaged at AQF level 6. If units have not being assigned a weighting by the relevant EE-Oz Industry Technical Advisory Committee, their weighting will be 10 points.</p> <p>Note: For further information see Application of the NQC Flexibility Formula, UEE11 Electrotechnology Training Package, Version 1, Volume 1 Qualification Framework</p>	<p>Up to 170 points</p>
--	---	-------------------------

<p>Group B – Qualification Elective Units You may complete units to a maximum weighting of 60</p>		<p>Weighting Points</p>
UEENEEE190A	Prepare engineering drawings using manual drafting and CAD for electrotechnology/utilities applications	60
UEENEEE191A	Prepare electrotechnology/utilities drawings using manual drafting and CAD equipment and software	60
UEENEEG171A	Install, set up and commission interval metering	20
UEENEEH102A	Repair basic electronic apparatus faults by replacement of components	40
UEENEEH111A	Troubleshoot single phase input d.c. power supplies	40
UEENEEI116A	Enter and verify operating instructions in microprocessor equipped devices	20
UEENEEI150A	Develop, enter and verify discrete control programs for programmable controllers	60
UEENEEK124A	Solve basic problems in micro hydro systems	20
UEENEEK125A	Solve basic problems in photovoltaic energy apparatus and systems	20
UEENEEK127A	Diagnose and rectify faults in renewable energy control systems	60
UEENEEK130A	Solve problems in wind energy conversion apparatus and systems	60

UEENEEK134A	Install standalone extra low voltage photovoltaic power systems	60
UEENEEK136A	Install, configure and commission LV micro-hydro systems rated up to 6.4 kW	20
UEENEEK137A	Install and set up micro-hydro power systems	20
UEENEEK143A	Install wind energy conversion systems rated to 10 kW for ELV stand-alone applications	20
UEENEEK144A	Install, configure and commission LV wind energy conversion systems rated to 10 kW	40
UEENEEK148A	Install, configure and commission photovoltaic grid connected power systems	40

Group C – Qualification Elective Units		Weighting Points
You may complete units to a maximum weighting of 100		
UEENEEC005B	Estimate electrotechnology projects	40
UEENEEE192A	Produce detailed electrotechnology/utilities drawings using computer aided design equipment and software	60
UEENEEG076A	Install and replace low voltage current transformer metering	20
UEENEEG125A	Plan LV electrical installations with a demand up to 400A per phase	40
UEENEEG128A	Plan layouts for electrical switchboards and control panels	40
UEENEEG132A	Carry out and report electrical field testing findings	60
UEENEEG162A	Set up and place LV electrical apparatus and associated circuits into service	40
UEENEEG175A	Develop compliance policies and plans to conduct a electrical contracting business	80
UEENEEG177A	Select power factor correction equipment	40
UEENEEG179A	Develop detailed electrical drawings	60
UEENEEI151A	Develop, enter and verify programs for industrial	60

	control systems using high level instructions	
UEENEEI152A	Develop, enter and verify programs in Supervisory Control and Data Acquisition systems	60
UEENEEK135A	Design photovoltaic grid connected power supply systems	60
UEENEEK152A	Develop strategies to address sustainability issues for electrical installations	20
UEENEEK153A	Assessment of energy loads and uses for energy efficiency in residential, office and retail dwellings	40
UEENEEK154A	Assessment of energy loads and uses for energy efficiency in commercial facilities	40
UEENEEK155A	Assessment of energy loads and uses for energy efficiency in large industrial properties and enterprise	40

Group D – Qualification Elective Units		Weighting Points
You may complete units to a maximum weighting of 60		
UEENEEC006B	Prepare tender submissions for electrotechnology projects	60
UEENEEE110A	Develop and implement energy sector maintenance programs	60
UEENEEG127A	Design LV electrical installations with a demand greater than 400 A per phase	40
UEENEEG180A	Develop detailed and complex drawings for electrical systems using CAD systems	60
UEENEEG187A	Design effective and efficient lighting for public, open and sports areas	20
UEENEEI156A	Develop and test code for microcontroller devices	60
UEENEEK129A	Design renewable energy (RE) heating systems	120
UEENEEK131A	Design wind energy conversion systems (WECS) rated to 10 kW.	60
UEENEEK138A	Design micro-hydro power systems	60

Group E – Qualification Elective Units		Weighting Points
You must complete units to a minimum weighting of 160 You may select all your elective units from this Group		
UEENEEC007B	Manage contract variations	40
UEENEEE012B	Manage electrotechnology projects	40
UEENEEE013B	Plan electrotechnology projects	60
UEENEEE078B	Contribute to risk management in electrotechnology systems	20
UEENEEE127A	Use advanced computational processes to provide solutions to engineering problems	80
UEENEEE160A	Provide engineering solutions for uses of materials and thermodynamic effects	80
UEENEEE163A	Analyse materials for suitability in electrotechnology/utilities equipment	80
UEENEEG130A	Design electrical switchboards rated for high fault levels	60
UEENEEK133A	Design hybrid renewable power systems	80
UEENEEK139A	Design stand-alone renewable energy power systems	40
UEENEEK140A	Develop engineering solutions to renewable energy problems	60
UEENEEK146A	Design energy management controls systems for electrical installations in buildings	80
UEENEEK151A	Develop engineering strategies for energy reduction in buildings	60

Note:

1. Pre-requisite pathways shall be identified and met for all elective units selected.
2. In selecting elective units considerations to career planning advice should be given to units that form part of a pre-requisite pathway for the progression to achieve particular competencies or qualification at a higher level.
3. Registered training organisations shall also provide information related to the relevant pathway(s) that may be taken to achieve paraprofessional status ("associate membership") with a professional engineering membership organisation.

END OF QUALIFICATION

Unit Grid

UEENEEED104A	Use software for engineering applications
UEENEEEE006B	Apply methods to maintain currency of industry developments
UEENEEEE011C	Manage risk in electrotechnology activities
UEENEEEE015B	Develop design briefs for electrotechnology projects
UEENEEEE074B	Write specifications for renewable energy projects
UEENEEEE080A	Apply industry and community standards to engineering activities
UEENEEEE081A	Apply material science to solving electrotechnology engineering problems
UEENEEEE082A	Apply physics to solving electrotechnology engineering problems
UEENEEEE083A	Establish and follow a competency development plan in an electrotechnology engineering discipline
UEENEEEE101A	Apply Occupational Health Safety regulations, codes and practices in the workplace
UEENEEEE102A	Fabricate, dismantle, assemble of utilities industry components
UEENEEEE104A	Solve problems in d.c. circuits
UEENEEEE105A	Fix and secure electrotechnology equipment
UEENEEEE107A	Use drawings, diagrams, schedules, standards, codes and specifications
UEENEEEE117A	Implement and monitor OHS energy sector procedures and policies
UEENEEEE124A	Compile and produce an energy sector report
UEENEEEE125A	Provide solutions to complex multiple path circuits problems
UEENEEEE126A	Provide solutions to basic engineering computational problems
UEENEEEE137A	Document and apply measures to control OHS risks associated with electrotechnology work
UEENEEEG006A	Solve problems in single and three phase low voltage machines
UEENEEEG033A	Solve problems in single and three phase low voltage electrical apparatus and circuits
UEENEEEG063A	Arrange circuits, control and protection for general electrical installations
UEENEEEG101A	Solve problems in electromagnetic devices and related circuits
UEENEEEG102A	Solve problems in low voltage a.c. circuits
UEENEEEG103A	Install low voltage wiring and accessories
UEENEEEG104A	Install appliances, switchgear and associated accessories for low voltage electrical installations
UEENEEEG105A	Verify compliance and functionality of low voltage general electrical installations
UEENEEEG106A	Terminate cables, cords and accessories for low voltage circuits
UEENEEEG107A	Select wiring systems and cables for low voltage general electrical installations
UEENEEEG108A	Trouble-shoot and repair faults in low voltage electrical apparatus and circuits
UEENEEEG109A	Develop and connect electrical control circuits
UEENEEEG149A	Provide engineering solutions to problems in complex polyphase power circuits
UEENEEK121A	Manage renewable energy (RE) projects
UEENEEK122A	Plan renewable energy (RE) projects
UEENEEK123A	Carry out basic repairs to renewable energy apparatus

UEENEEK128A	Solve problems in stand-alone renewable energy apparatus and systems
UEENEEK132A	Develop energy sector strategies to address environmental and sustainability issues
BSBMGT502B	Manage people performance
BSBINM501A	Manage an information or knowledge management system
BSBMGT516C	Facilitate continuous improvement
BSBINN502A	Build and sustain an innovative work environment
BSBWOR502B	Ensure team effectiveness
UEENEEE190A	Prepare engineering drawings using manual drafting and CAD for electrotechnology/utilities applications
UEENEEE191A	Prepare electrotechnology/utilities drawings using manual drafting and CAD equipment and software
UEENEEG171A	Install, set up and commission interval metering
UEENEEH102A	Repair basic electronic apparatus faults by replacement of components
UEENEEH111A	Troubleshoot single phase input d.c. power supplies
UEENEEI116A	Enter and verify operating instructions in microprocessor equipped devices
UEENEEI150A	Develop, enter and verify discrete control programs for programmable controllers
UEENEEK124A	Solve basic problems in micro hydro systems
UEENEEK125A	Solve basic problems in photovoltaic energy apparatus and systems
UEENEEK127A	Diagnose and rectify faults in renewable energy control systems
UEENEEK130A	Solve problems in wind energy conversion apparatus and systems
UEENEEK134A	Install standalone extra low voltage photovoltaic power systems
UEENEEK136A	Install, configure and commission LV micro-hydro systems rated up to 6.4 kW
UEENEEK137A	Install and set up micro-hydro power systems
UEENEEK143A	Install wind energy conversion systems rated to 10 kW for ELV stand-alone applications
UEENEEK144A	Install, configure and commission LV wind energy conversion systems rated to 10 kW
UEENEEK148A	Install, configure and commission photovoltaic grid connected power systems
UEENEEC005B	Estimate electrotechnology projects
UEENEEE192A	Produce detailed electrotechnology/utilities drawings using computer aided design equipment and software
UEENEEG076A	Install and replace low voltage current transformer metering
UEENEEG125A	Plan LV electrical installations with a demand up to 400A per phase
UEENEEG128A	Plan layouts for electrical switchboards and control panels
UEENEEG132A	Carry out and report electrical field testing findings
UEENEEG162A	Set up and place LV electrical apparatus and associated circuits into service
UEENEEG175A	Develop compliance policies and plans to conduct a electrical contracting business
UEENEEG177A	Select power factor correction equipment
UEENEEG179A	Develop detailed electrical drawings
UEENEEI151A	Develop, enter and verify programs for industrial control systems using high level instructions

UEENEEI152A	Develop, enter and verify programs in Supervisory Control and Data Acquisition systems
UEENEEK135A	Design photovoltaic grid connected power supply systems
UEENEEK152A	Develop strategies to address sustainability issues for electrical installations
UEENEEK153A	Assessment of energy loads and uses for energy efficiency in residential, office and retail dwellings
UEENEEK154A	Assessment of energy loads and uses for energy efficiency in commercial facilities
UEENEEK155A	Assessment of energy loads and uses for energy efficiency in large industrial properties and enterprise
UEENEEC006B	Prepare tender submissions for electrotechnology projects
UEENEEE110A	Develop and implement energy sector maintenance programs
UEENEEG127A	Design LV electrical installations with a demand greater than 400 A per phase
UEENEEG180A	Develop detailed and complex drawings for electrical systems using CAD systems
UEENEEG187A	Design effective and efficient lighting for public, open and sports areas
UEENEEI156A	Develop and test code for microcontroller devices
UEENEEK129A	Design renewable energy (RE) heating systems
UEENEEK131A	Design wind energy conversion systems (WECS) rated to 10 kW.
UEENEEK138A	Design micro-hydro power systems
UEENEEC007B	Manage contract variations
UEENEEE012B	Manage electrotechnology projects
UEENEEE013B	Plan electrotechnology projects
UEENEEE078B	Contribute to risk management in electrotechnology systems
UEENEEE127A	Use advanced computational processes to provide solutions to engineering problems
UEENEEE160A	Provide engineering solutions for uses of materials and thermodynamic effects
UEENEEE163A	Analyse materials for suitability in electrotechnology/utilities equipment
UEENEEG130A	Design electrical switchboards rated for high fault levels
UEENEEK133A	Design hybrid renewable power systems
UEENEEK139A	Design stand-alone renewable energy power systems
UEENEEK140A	Develop engineering solutions to renewable energy problems
UEENEEK146A	Design energy management controls systems for electrical installations in buildings
UEENEEK151A	Develop engineering strategies for energy reduction in buildings

UEE61111 Advanced Diploma of Automated Systems Maintenance Engineering

Modification History

Not applicable.

Description

Scope

This qualification provides competencies to monitor/validate/evaluate automated equipment and systems, manage risk, develop and manage maintenance programs, and provide technical advice.

Pathways Information

Not applicable.

Licensing/Regulatory Information

Not applicable.

Entry Requirements

Not applicable.

Employability Skills Summary

Not applicable.

Packaging Rules

Completion requirements

The requirements for granting this qualification will be met when competency is demonstrated and achieved for:

All the Core competency standard units, defined in the Core Competency Standard Units table below and

A combination of Elective competency standard units to achieve a total weighting of 1040 points in accordance with the Elective Competency Standard Units table below.

Core Competency Standard Units	Weighting Points
--------------------------------	------------------

All Core competency standard units to be achieved		
UEENEED104A	Use software for engineering applications	40
UEENEEE011C	Manage risk in electrotechnology activities	60
UEENEEE015B	Develop design briefs for electrotechnology projects	40
UEENEEE077B	Write specifications for automated systems projects	40
UEENEEE080A	Apply industry and community standards to engineering activities	20
UEENEEE081A	Apply material science to solving electrotechnology engineering problems	60
UEENEEE082A	Apply physics to solving electrotechnology engineering problems	60
UEENEEE083A	Establish and follow a competency development plan in an electrotechnology engineering discipline	120
UEENEEE101A	Apply Occupational Health Safety regulations, codes and practices in the workplace	20
UEENEEE102A	Fabricate, dismantle, assemble utilities components	40
UEENEEE104A	Solve problems in d.c. circuits	80
UEENEEE107A	Use drawings, diagrams, schedules, standards, codes and specifications	40
UEENEEE117A	Implement and monitor energy sector OHS policies and procedures	20
UEENEEE119A	Solve problems in multiple path a.c. circuits	40
UEENEEE124A	Compile and produce an energy sector detailed report	60
UEENEEE125A	Provide solutions to complex multiple path circuits problems	60
UEENEEE126A	Provide solutions to basic engineering computational problems	60
UEENEEE137A	Document and apply measures to control OHS risks associated with electrotechnology work	20
UEENEEI138A	Provide solutions to ELV electro-pneumatic control	60

	systems and drives	
UEENEEI136A	Manage automated systems projects	40
UEENEEI137A	Plan automated systems projects	60
UEENEEK132A	Develop energy sector strategies to address environmental and sustainability issues	20
UEPOPS202A	Apply Quality Systems To Work	20
UEPOPS337A	Maintain Quality Systems within the Team	20
UEPOPS416A	Monitor the Implementation of the Enterprise's Production / Maintenance Quality Control procedures	20
Total points in core		1120

Elective Competency Standard Units

Complete Elective units to achieve a total of weighting of 1040 points from the following groups:

Group		Minimum points	Maximum points
A	Imported and Common Elective Units Imported units from other training packages and/or state accredited courses can be added to this group, but they must be selected from qualifications where the unit is first packaged at AQF level 6. If units have not being assigned a weighting by the relevant EE-Oz Industry Technical Advisory Committee, their weighting will be 10 points.	0	360
B	Qualification Elective Units	0	280
C	Qualification Elective Units	0	220
D	Qualification Elective Units	0	220
E	Qualification Elective Units You may select all your elective units from this Group	320	1040

Group A – Imported and Common Elective Units	Weighting Points
---	-------------------------

You may complete units to a maximum weighting of 360		
BSBMGT502B	Manage people performance	70
BSBINM501A	Manage an information or knowledge management system	50
BSBMGT516C	Facilitate continuous improvement	60
BSBINN502A	Build and sustain an innovative work environment	50
BSBWOR502B	Ensure team effectiveness	60
UEENEEC001B	Maintain documentation	20
UEENEEC002B	Source and purchase material/parts for installation or service jobs	20
UEENEEC003B	Provide quotations for installation or service jobs	20
UEENEEC010B	Deliver a service to customers	20
UEENEED101A	Use basic computer applications relevant to a energy sector workplace	20
UEENEEE009B	Comply with scheduled and preventative maintenance program processes	20
UEENEEE020B	Provide basic instruction in the use of electrotechnology apparatus	20
BSBCUS401B	Coordinate implementation of customer service strategies	40
BSBINM401A	Implement workplace information system	40
BSBLED401A	Develop teams and individuals	40
BSBMGT402A	Implement operational plan	40
BSBMGT403A	Implement continuous improvement	40
BSBWOR401A	Establish effective workplace relationships	50
BSBWOR404A	Develop Work Priorities	40
TLILIC108A	Licence to operate a forklift truck	40
HLTCPR201B	Perform CPR	10

	<p>Imported units from other training packages and/or state accredited courses can be added to this group, but they must be selected from qualifications where the unit is first packaged at AQF level 6. If units have not being assigned a weighting by the relevant EE-Oz Industry Technical Advisory Committee, their weighting will be 10 points.</p> <p>Note: For further information see Application of the NQC Flexibility Formula, UEE11 Electrotechnology Training Package, Version 1, Volume 1 Qualification Framework</p>	<p>Up to 360 points</p>
--	---	-------------------------

Group B – Qualification Elective Units You may complete units to a maximum weighting of 280		Weighting Points
UEENEED102A	Assemble, set-up and test personal computer hardware	80
UEENEED146A	Set up and configure basic local area network (LAN)	80
UEENEEE190A	Prepare engineering drawings using manual drafting and CAD for electrotechnology/utilities applications	60
UEENEEE191A	Prepare electrotechnology/utilities drawings using manual drafting and CAD equipment and software	60
UEENEEF102A	Install and maintain cabling for multiple access to telecommunication services	120
UEENEEF104A	Install and modify performance data communication copper cabling	40
UEENEEF108A	Select and arrange equipment for wireless communication networks	40
UEENEEG006A	Solve problems in single and three phase low voltage machines	80
UEENEEG101A	Solve problems in electromagnetic devices and related circuits	60
UEENEEG102A	Solve problems in low voltage a.c. circuits	80
UEENEEG106A	Terminate cables, cords and accessories for low voltage circuits	40

UEENEEG111A	Carry out repairs to electrical apparatus	40
UEENEEG164A	Repair mechanical and electrical components of electrical machines	40
UEENEEG181A	Provide advice on effective and energy efficient lighting products	20
UEENEEG182A	Supply effective and efficient lighting products for domestic and small commercial applications	40
UEENEEG183A	Provide advice on the application of energy efficient lighting for ambient and aesthetic effect	20
UEENEEH102A	Repair basic electronic apparatus faults by replacement of components	40
UEENEEH111A	Troubleshoot d.c. power supplies with single phase input	40
UEENEEH150A	Assemble and set up basic wired and wireless security systems	80
UEENEEI101A	Use instrumentation drawings, specifications, standards and equipment manuals	40
UEENEEI102A	Solve problems in pressure measurement circuits and systems	40
UEENEEI103A	Solve problems in density/level measurement circuits and systems	40
UEENEEI104A	Solve problems in flow measurement circuits and systems	40
UEENEEI105A	Solve problems in temperature measurement circuits and systems	40
UEENEEI106A	Set up and adjust PID process control loops	40
UEENEEI107A	Install process instrumentation and tubing and control cabling	20
UEENEEI108A	Install process control apparatus and associated equipment	20
UEENEEI110A	Set up and adjust advanced process control loops	40
UEENEEI111A	Find and rectify faults in process final control	40

	elements	
UEENEEI112A	Verify compliance and functionality of instrumentation and control installations	40
UEENEEI113A	Setup and configure human-machine interface (HMI) and industrial networks	60
UEENEEI116A	Enter and verify operating instructions in microprocessor equipped devices	20
UEENEEI150A	Develop, enter and verify discrete control programs for programmable controllers	60
UEENEEM080A	Report on the integrity of explosion-protected equipment in a hazardous area	20
UEENEEM024A	Attach cords and plugs to electrical equipment for connection to a single phase 230 Volt supply	20
UEENEEM025A	Attach cords, cables and plugs to electrical equipment for connection to 1000 Va.c. or 1500 Vd.c. supply	20
UEENEEM026A	Conduct in-service safety testing of electrical cord assemblies and cord connected appliances/equipment	20

Group C – Qualification Elective Units		Weighting Points
You may complete units to a maximum weighting of 220		
UEENEEM005B	Estimate electrotechnology projects	40
UEENEEE192A	Produce detailed electrotechnology/utilities drawings using computer aided design equipment and software	60
UEENEEG179A	Develop detailed electrical drawings	60
UEENEEI119A	Set up transducers and field control devices	60
UEENEEI120A	Provide solutions to problems in industrial control systems	60
UEENEEI124A	Diagnose and rectify faults in electronic control systems	60
UEENEEI125A	Provide solutions to fluid circuit operations	60
UEENEEI126A	Provide solutions to pneumatic/hydraulic system	80

	operations	
UEENEEI139A	Diagnose and rectify faults in digital controls systems	60
UEENEEI148A	Provide solutions to single phase electronic power control problems	60
UEENEEI149A	Provide solutions to polyphase electronic power control problems	60
UEENEEI151A	Develop, enter and verify programs for industrial control systems using high level instructions	60
UEENEEI152A	Develop, enter and verify programs in Supervisory Control and Data Acquisition systems	60
UEENEEI155A	Develop structured programs to control external devices	40

Group D – Qualification Elective Units		Weighting Points
You may complete units to a maximum weighting of 220		
UEENEEC006B	Prepare tender submissions for electrotechnology projects	60
UEENEEE110A	Develop and implement energy sector maintenance programs	60
UEENEEG131A	Evaluate performance of LV electrical apparatus	40
UEENEEG149A	Provide engineering solutions to problems in complex polyphase power circuits	60
UEENEEG180A	Develop detailed and complex drawings for electrical systems using CAD systems	60
UEENEEI127A	Analyse complex electronic circuits controlling fluids	80
UEENEEI145A	Diagnose and rectify faults in a.c. motor drive systems	60
UEENEEI146A	Diagnose and rectify faults in d.c. motor drive systems	60
UEENEEI147A	Diagnose and rectify faults in servo drive systems	60
UEENEEI156A	Develop and test code for microcontroller devices	60
UEENEEI157A	Configure and maintain industrial control system	60

	networks	
--	----------	--

Group E – Qualification Elective Units		Weighting Points
You must complete units to a minimum weighting of 320		
You may select all your elective units from this Group		
UEENEEC007B	Manage contract variations	40
UEENEEE127A	Use advanced computational processes to provide solutions to engineering problems	80
UEENEEE128A	Develop engineering solutions to photonic problems	80
UEENEEE160A	Provide engineering solutions for uses of materials and thermodynamic effects	80
UEENEEE161A	Analyse static and dynamic parameters of electrotechnology/utilities equipment	80
UEENEEE162A	Select drive components for equipment design	80
UEENEEE163A	Analyse materials for suitability in electrotechnology/utilities equipment	80
UEENEEE164A	Design electrical machine drives and production layout plans	80
UEENEEE078B	Contribute to risk management in electrotechnology systems	20
UEENEEG143A	Develop engineering solutions for synchronous machine problems	60
UEENEEG144A	Develop engineering solutions for direct current machine problems	60
UEENEEG145A	Develop engineering solutions for induction machine problems	60
UEENEEG160A	Evaluate performance of LV electrical machines	40
UEENEEG161A	Design and develop modifications for electrical machines	60
UEENEEH147A	Assess compliance of electronic apparatus	60
UEENEEH184A	Modify DSP based sub-systems	80

UEENEEH185A	Design a signal-conditioning subsystem	80
UEENEEH188A	Design and develop electronics/computer systems projects	40
UEENEEI123A	Design electronic control and instrumentation systems	60
UEENEEI128A	Set up controls on complex fluid systems	80
UEENEEI129A	Set up electronically controlled mechanically operated complex systems	80
UEENEEI130A	Set up electronically controlled robotically operated complex systems	80
UEENEEI153A	Design and configure Human-Machine Interface (HMI) networks	60
UEENEEI154A	Design a computer based control system	120

Note:

1. Pre-requisite pathways shall be identified and met for all elective units selected.
2. In selecting elective units considerations to career planning advice should be given to units that form part of a pre-requisite pathway for the progression to achieve particular competencies or qualification at a higher level.
3. Registered training organisations shall also provide information related to the relevant pathway(s) that may be taken to achieve paraprofessional status ("associate membership") with a professional engineering membership organisation.

END OF QUALIFICATION

Unit Grid

UEENEE104A	Use software for engineering applications
UEENEE011C	Manage risk in electrotechnology activities
UEENEE015B	Develop design briefs for electrotechnology projects
UEENEE077B	Write specifications for automated systems projects
UEENEE080A	Apply industry and community standards to engineering activities
UEENEE081A	Apply material science to solving electrotechnology engineering problems
UEENEE082A	Apply physics to solving electrotechnology engineering problems
UEENEE083A	Establish and follow a competency development plan in an electrotechnology engineering discipline
UEENEE101A	Apply Occupational Health Safety regulations, codes and practices in the workplace
UEENEE102A	Fabricate, dismantle, assemble utilities components
UEENEE104A	Solve problems in d.c. circuits
UEENEE107A	Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE117A	Implement and monitor energy sector OHS policies and procedures
UEENEEE119A	Solve problems in multiple path a.c. circuits
UEENEEE124A	Compile and produce an energy sector detailed report
UEENEEE125A	Provide solutions to complex multiple path circuits problems
UEENEEE126A	Provide solutions to basic engineering computational problems
UEENEEE137A	Document and apply measures to control OHS risks associated with electrotechnology work
UEENEEI138A	Provide solutions to ELV electro-pneumatic control systems and drives
UEENEEI136A	Manage automated systems projects
UEENEEI137A	Plan automated systems projects
UEENEEK132A	Develop energy sector strategies to address environmental and sustainability issues
UEPOPS202A	Apply Quality Systems To Work
UEPOPS337A	Maintain Quality Systems within the Team
UEPOPS416A	Monitor the Implementation of the Enterprise's Production / Maintenance Quality Control procedures
BSBMGT502B	Manage people performance
BSBINM501A	Manage an information or knowledge management system
BSBMGT516C	Facilitate continuous improvement
BSBINN502A	Build and sustain an innovative work environment
BSBWOR502B	Ensure team effectiveness
UEENEEC001B	Maintain documentation
UEENEEC002B	Source and purchase material/parts for installation or service jobs
UEENEEC003B	Provide quotations for installation or service jobs
UEENEEC010B	Deliver a service to customers
UEENEED101A	Use basic computer applications relevant to a energy sector workplace
UEENEEE009B	Comply with scheduled and preventative maintenance program processes
UEENEEE020B	Provide basic instruction in the use of electrotechnology apparatus
BSBCUS401B	Coordinate implementation of customer service strategies
BSBINM401A	Implement workplace information system
BSBLED401A	Develop teams and individuals
BSBMGT402A	Implement operational plan
BSBMGT403A	Implement continuous improvement
BSBWOR401A	Establish effective workplace relationships
BSBWOR404A	Develop Work Priorities
TLILIC108A	Licence to operate a forklift truck
HLTCPR201B	Perform CPR
UEENEED102A	Assemble, set-up and test personal computer hardware
UEENEED146A	Set up and configure basic local area network (LAN)
UEENEEE190A	Prepare engineering drawings using manual drafting and CAD for electrotechnology/utilities applications
UEENEEE191A	Prepare electrotechnology/utilities drawings using manual drafting and CAD equipment and software
UEENEFF102A	Install and maintain cabling for multiple access to telecommunication services
UEENEFF104A	Install and modify performance data communication copper cabling
UEENEFF108A	Select and arrange equipment for wireless communication networks

UEENEEG006A	Solve problems in single and three phase low voltage machines
UEENEEG101A	Solve problems in electromagnetic devices and related circuits
UEENEEG102A	Solve problems in low voltage a.c. circuits
UEENEEG106A	Terminate cables, cords and accessories for low voltage circuits
UEENEEG111A	Carry out repairs to electrical apparatus
UEENEEG164A	Repair mechanical and electrical components of electrical machines
UEENEEG181A	Provide advice on effective and energy efficient lighting products
UEENEEG182A	Supply effective and efficient lighting products for domestic and small commercial applications
UEENEEG183A	Provide advice on the application of energy efficient lighting for ambient and aesthetic effect
UEENEEH102A	Repair basic electronic apparatus faults by replacement of components
UEENEEH111A	Troubleshoot d.c. power supplies with single phase input
UEENEEH150A	Assemble and set up basic wired and wireless security systems
UEENEEI101A	Use instrumentation drawings, specifications, standards and equipment manuals
UEENEEI102A	Solve problems in pressure measurement circuits and systems
UEENEEI103A	Solve problems in density/level measurement circuits and systems
UEENEEI104A	Solve problems in flow measurement circuits and systems
UEENEEI105A	Solve problems in temperature measurement circuits and systems
UEENEEI106A	Set up and adjust PID process control loops
UEENEEI107A	Install process instrumentation and tubing and control cabling
UEENEEI108A	Install process control apparatus and associated equipment
UEENEEI110A	Set up and adjust advanced process control loops
UEENEEI111A	Find and rectify faults in process final control elements
UEENEEI112A	Verify compliance and functionality of instrumentation and control installations
UEENEEI113A	Setup and configure human-machine interface (HMI) and industrial networks
UEENEEI116A	Enter and verify operating instructions in microprocessor equipped devices
UEENEEI150A	Develop, enter and verify discrete control programs for programmable controllers
UEENEEEM080A	Report on the integrity of explosion-protected equipment in a hazardous area
UEENEEP024A	Attach cords and plugs to electrical equipment for connection to a single phase 230 Volt supply
UEENEEP025A	Attach cords, cables and plugs to electrical equipment for connection to 1000 Va.c. or 1500 Vd.c. supply
UEENEEP026A	Conduct in-service safety testing of electrical cord assemblies and cord connected appliances/equipment
UEENEEC005B	Estimate electrotechnology projects
UEENEEE192A	Produce detailed electrotechnology/utilities drawings using computer aided design equipment and software
UEENEEG179A	Develop detailed electrical drawings
UEENEEI119A	Set up transducers and field control devices
UEENEEI120A	Provide solutions to problems in industrial control systems
UEENEEI124A	Diagnose and rectify faults in electronic control systems

UEENEEI125A	Provide solutions to fluid circuit operations
UEENEEI126A	Provide solutions to pneumatic/hydraulic system operations
UEENEEI139A	Diagnose and rectify faults in digital controls systems
UEENEEI148A	Provide solutions to single phase electronic power control problems
UEENEEI149A	Provide solutions to polyphase electronic power control problems
UEENEEI151A	Develop, enter and verify programs for industrial control systems using high level instructions
UEENEEI152A	Develop, enter and verify programs in Supervisory Control and Data Acquisition systems
UEENEEI155A	Develop structured programs to control external devices
UEENEEC006B	Prepare tender submissions for electrotechnology projects
UEENEEE110A	Develop and implement energy sector maintenance programs
UEENEEG131A	Evaluate performance of LV electrical apparatus
UEENEEG149A	Provide engineering solutions to problems in complex polyphase power circuits
UEENEEG180A	Develop detailed and complex drawings for electrical systems using CAD systems
UEENEEI127A	Analyse complex electronic circuits controlling fluids
UEENEEI145A	Diagnose and rectify faults in a.c. motor drive systems
UEENEEI146A	Diagnose and rectify faults in d.c. motor drive systems
UEENEEI147A	Diagnose and rectify faults in servo drive systems
UEENEEI156A	Develop and test code for microcontroller devices
UEENEEI157A	Configure and maintain industrial control system networks
UEENEEC007B	Manage contract variations
UEENEEE127A	Use advanced computational processes to provide solutions to engineering problems
UEENEEE128A	Develop engineering solutions to photonic problems
UEENEEE160A	Provide engineering solutions for uses of materials and thermodynamic effects
UEENEEE161A	Analyse static and dynamic parameters of electrotechnology/utilities equipment
UEENEEE162A	Select drive components for equipment design
UEENEEE163A	Analyse materials for suitability in electrotechnology/utilities equipment
UEENEEE164A	Design electrical machine drives and production layout plans
UEENEEE078B	Contribute to risk management in electrotechnology systems
UEENEEG143A	Develop engineering solutions for synchronous machine problems
UEENEEG144A	Develop engineering solutions for direct current machine problems
UEENEEG145A	Develop engineering solutions for induction machine problems
UEENEEG160A	Evaluate performance of LV electrical machines
UEENEEG161A	Design and develop modifications for electrical machines
UEENEEH147A	Assess compliance of electronic apparatus
UEENEEH184A	Modify DSP based sub-systems
UEENEEH185A	Design a signal-conditioning subsystem
UEENEEH188A	Design and develop electronics/computer systems projects
UEENEEI123A	Design electronic control and instrumentation systems
UEENEEI128A	Set up controls on complex fluid systems

UEENEEI129A	Set up electronically controlled mechanically operated complex systems
UEENEEI130A	Set up electronically controlled robotically operated complex systems
UEENEEI153A	Design and configure Human-Machine Interface (HMI) networks
UEENEEI154A	Design a computer based control system

UEE61211 Advanced Diploma of Engineering - Explosion protection

Modification History

Not applicable.

Description

Scope

This qualification provides competencies to assess and manage risk associated with hazardous areas, design and validate/evaluate explosion protection aspects of electrical and instrument systems, audit explosion-protected installations and provide explosion protection technical advice/sales.

Pathways Information

Not applicable.

Licensing/Regulatory Information

Not applicable.

Entry Requirements

Not applicable.

Employability Skills Summary

Not applicable.

Packaging Rules

Completion requirements

The requirements for granting this qualification will be met when competency is demonstrated and achieved for:

- All the Core competency standard units, defined in the Core Competency Standard Units table below and
- A combination of Elective competency standard units to achieve a total weighting of 380 points in accordance with the Elective Competency Standard Units table below.

Note:

UENEEG105A - Those holding an 'Unrestricted Electricians Licence or equivalent issued in an Australian State or Territory meets the requirements of this unit and its pre-requisite requirements.

Core Competency Standard Units		Weighting Points
All Core competency standard units to be achieved		
UEENEE104A	Use software for engineering applications	40
UEENEE006B	Apply methods to maintain currency of industry developments	20
UEENEE011C	Manage risk in electrotechnology activities	60
UEENEE015B	Develop design briefs for electrotechnology projects	40
UEENEE071B	Write specifications for electrical engineering projects	40
UEENEE080A	Apply industry and community standards to engineering activities	20
UEENEE081A	Apply material science to solving electrotechnology engineering problems	60
UEENEE082A	Apply physics to solving electrotechnology engineering problems	60
UEENEE083A	Establish and follow a competency development plan in an electrotechnology engineering discipline	120
UEENEE101A	Apply Occupational Health and Safety regulations, codes and practices in the workplace	20
UEENEE102A	Fabricate, assemble and dismantle utilities industry components	40
UEENEE104A	Solve problems in d.c. circuits	80
UEENEE105A	Fix and secure electrotechnology equipment	20
UEENEE107A	Use drawings, diagrams, schedules, standards, codes and specifications	40
UEENEE117A	Implement and monitor energy sector OHS policies and procedures	20
UEENEE124A	Compile and produce an energy sector detailed report	60

UEENEEE125A	Provide engineering solutions for problems in complex multiple path circuits	60
UEENEEE126A	Provide solutions to basic engineering computational problems	60
UEENEEE137A	Document and apply measures to control OHS risks associated with electrotechnology work	20
UEENEEG006A	Solve problems in single and three phase low voltage machines	80
UEENEEG033A	Solve problems in single and three phase low voltage electrical apparatus and circuits	60
UEENEEG063A	Arrange circuits, control and protection for general electrical installations	40
UEENEEG101A	Solve problems in electromagnetic devices and related circuits	60
UEENEEG102A	Solve problems in low voltage a.c. circuits	80
UEENEEG103A	Install low voltage wiring and accessories	20
UEENEEG104A	Install appliances, switchgear and associated accessories for low voltage electrical installations	20
UEENEEG105A	Verify compliance and functionality of low voltage general electrical installations	40
UEENEEG106A	Terminate cables, cords and accessories for low voltage circuits	40
UEENEEG107A	Select wiring systems and cables for low voltage general electrical installations	60
UEENEEG108A	Trouble-shoot and repair faults in low voltage electrical apparatus and circuits	40
UEENEEG109A	Develop and connect electrical control circuits	80
UEENEEG149A	Provide engineering solutions to problems in complex polyphase power circuits	60
UEENEEG169A	Manage large electrical projects	40
UEENEEG170A	Plan large electrical projects	60

UEENEEK132A	Develop energy sector strategies to address environmental and sustainability issues	20
UEENEEM052A	Classify hazardous areas — gas atmospheres	40
UEENEEM053A	Classify hazardous areas — dust atmospheres	40
UEENEEM080A	Report on the integrity of explosion-protected equipment in hazardous area	20
Total points in core		1780

Elective Competency Standard Units

Complete Elective units to achieve a total of weighting of 380 points from the following groups:

Group		Minimum points	Maximum points
A	Imported and Common Elective Units Imported units from other training packages and/or state accredited courses can be added to this group, but they must be selected from qualifications where the unit is first packaged at AQF level 6. If units have not being assigned a weighting by the relevant EE-Oz Industry Technical Advisory Committee, their weighting will be 10 points.	0	170
B	Qualification Elective Units	0	60
C	Qualification Elective Units	0	80
D	Qualification Elective Units	0	60
E	Qualification Elective Units You may select all your elective units from this Group	160	380

Group A – Imported and Common Elective Units		Weighting Points
You may complete units to a maximum weighting of 170		
BSBMGT502B	Manage people performance	70
BSBINM501A	Manage an information or knowledge management	50

	system	
BSBMGT516C	Facilitate continuous improvement	60
BSBINN502A	Build and sustain an innovative work environment	50
BSBWOR502B	Ensure team effectiveness	60
PMASUP410B	Develop plant documentation	30
	<p>Imported units from other training packages and/or state accredited courses can be added to this group, but they must be selected from qualifications where the unit is first packaged at AQF level 6. If units have not being assigned a weighting by the relevant EE-Oz Industry Technical Advisory Committee, their weighting will be 10 points.</p> <p>Note: For further information see Application of the NQC Flexibility Formula, UEE11 Electrotechnology Training Package, Version 1, Volume 1 Qualification Framework</p>	Up to 170 points

\

Group B – Qualification Elective Units		Weighting Points
You may complete units to a maximum weighting of 60		
UEENEEM019A	Attend to breakdowns in hazardous areas — coal mining	20
UEENEEM020A	Attend to breakdowns in hazardous areas — gas atmospheres	20
UEENEEM021A	Attend to breakdowns in hazardous areas — dust atmospheres	20
UEENEEM022A	Attend to breakdowns in hazardous areas — pressurisation	20
UEENEEM023A	Install explosion-protected equipment and wiring systems — coal mining	60
UEENEEM024A	Install explosion-protected equipment and wiring systems — gas atmospheres	60
UEENEEM025A	Install explosion-protected equipment and wiring	60

	systems — dust atmospheres	
UEENEEM026A	Install explosion-protected equipment and wiring systems — pressurisation	60
UEENEEM027A	Maintain equipment in hazardous areas — coal mining	60
UEENEEM028A	Maintain equipment in hazardous areas — gas atmospheres	60
UEENEEM029A	Maintain equipment in hazardous areas — dust atmospheres	60
UEENEEM030A	Maintain equipment in hazardous areas — pressurisation	60
UEENEEM038A	Conduct testing of hazardous areas installations — coal mining	40

Group C – Qualification Elective Units		Weighting Points
You may complete units to a maximum weighting of 80		
UEENEEC005B	Estimate electrotechnology projects	40
UEENEEM039A	Conduct testing of hazardous area installations — gas atmospheres	40
UEENEEM042A	Conduct visual inspection of hazardous areas installations	40
UEENEEM044A	Conduct detailed inspection of hazardous areas installations — gas atmospheres	40
UEENEEM047A	Develop and manage maintenance programs for hazardous areas electrical equipment — coal mining	20
UEENEEM078A	Manage compliance of hazardous areas	20

Group D – Qualification Elective Units		Weighting Points
You may complete units to a maximum weighting of 60		
UEENEEC006B	Prepare tender submissions for electrotechnology projects	60
UEENEEE110A	Develop and implement energy sector maintenance programs	60

UEENEEM035A	Conduct a conformity assessment of explosion-protected equipment — coal mining	40
UEENEEM036A	Conduct a conformity assessment of explosion-protected equipment — gas atmospheres	40
UEENEEM037A	Conduct a conformity assessment of explosion-protected equipment — dust atmospheres	40
UEENEEM054A	Plan electrical installations for hazardous areas — gas atmospheres	20
UEENEEM064A	Conduct audit of hazardous areas installations — coal mining	60
UEENEEM065A	Conduct audit of hazardous areas installations — gas atmospheres	60
UEENEEM066A	Conduct audit of hazardous areas installations — dust atmospheres	60
UEENEEM067A	Assess the fitness-for-purpose of hazardous areas explosion-protected equipment — coal mining	60
UEENEEM068A	Assess the fitness-for-purpose of hazardous areas explosion-protected equipment — gas atmospheres	60
UEENEEM069A	Assess the fitness-for-purpose of hazardous areas explosion-protected equipment — dust atmospheres	60
UEENEEM035A	Evaluate performance of LV electrical apparatus	40
UEENEEM180A	Develop detailed and complex drawings for electrical systems using CAD systems	60

Group E – Qualification Elective Units		Weighting Points
You must complete units to a minimum weighting of 160 You may select all your elective units from this Group		
UEENEEM007B	Manage contract variations	40
UEENEEM127A	Use advanced computational processes to provide solutions to engineering problems	80
UEENEEM160A	Provide engineering solutions for uses of materials and thermodynamic effects	80

UEENEEE161A	Analyse static and dynamic parameters of electrotechnology/utilities equipment	80
UEENEEE162A	Select drive components for equipment design	80
UEENEEE163A	Analyse materials for suitability in electrotechnology/utilities equipment	80
UEENEEE164A	Design electrical machine drives and production layout plans	80
UEENEEE078B	Contribute to risk management in electrotechnology systems	20
UEENEEG143A	Develop engineering solutions for synchronous machine problems	60
UEENEEG144A	Develop engineering solutions for direct current machine problems	60
UEENEEG145A	Develop engineering solutions for induction machine problems	60
UEENEEG160A	Evaluate performance of LV electrical machines	40
UEENEEG161A	Design and develop modifications for electrical machines	60
UEENEEM057A	Design explosion-protected electrical systems and installations — gas atmospheres	20
UEENEEM058A	Design explosion-protected electrical systems and installations — dust atmospheres	20
UEENEEM059A	Design explosion-protected electrical systems and installations — pressurisation	20
UEENEEM075A	Design explosion-protected electrical systems — Coal mining	20
UEENEEM079A	Design of gas detection systems and installations	20

Note:

1. Pre-requisite pathways shall be identified and met for all elective units selected.
2. In selecting elective units considerations to career planning advice should be given to units that form part of a pre-requisite pathway for the progression to achieve particular competencies or qualification at a higher level.

3. Registered training organisations shall also provide information related to the relevant pathway(s) that may be taken to achieve paraprofessional status ("associate membership") with a professional engineering membership organisation.

END OF QUALIFICATION

Unit Grid

UEENEED104A	Use software for engineering applications
UEENEEE006B	Apply methods to maintain currency of industry developments
UEENEEE011C	Manage risk in electrotechnology activities
UEENEEE015B	Develop design briefs for electrotechnology projects
UEENEEE071B	Write specifications for electrical engineering projects
UEENEEE080A	Apply industry and community standards to engineering activities
UEENEEE081A	Apply material science to solving electrotechnology engineering problems
UEENEEE082A	Apply physics to solving electrotechnology engineering problems
UEENEEE083A	Establish and follow a competency development plan in an electrotechnology engineering discipline
UEENEEE101A	Apply Occupational Health and Safety regulations, codes and practices in the workplace
UEENEEE102A	Fabricate, assemble and dismantle utilities industry components
UEENEEE104A	Solve problems in d.c. circuits

UEENEED101A	Solve problems in electromagnetic devices and related circuits
UEENEED102A	Solve problems in low voltage a.c. circuits
UEENEED103A	Install low voltage wiring and accessories
UEENEED104A	Install appliances, switchgear and associated accessories for low voltage electrical installations
UEENEED105A	Verify compliance and functionality of low voltage general electrical installations
UEENEED106A	Terminate cables, cords and accessories for low voltage circuits
UEENEED107A	Select wiring systems and cables for low voltage general electrical installations
UEENEED108A	Trouble-shoot and repair faults in low voltage electrical apparatus and circuits

UEENEEG109A	Develop and connect electrical control circuits
UEENEEG149A	Provide engineering solutions to problems in complex polyphase power circuits
UEENEEG169A	Manage large electrical projects
UEENEEG170A	Plan large electrical projects
UEENEEK132A	Develop energy sector strategies to address environmental and sustainability issues
UEENEEM052A	Classify hazardous areas — gas atmospheres
UEENEEM053A	Classify hazardous areas — dust atmospheres
UEENEEM080A	Report on the integrity of explosion-protected equipment in hazardous area
BSBMGT502B	Manage people performance
BSBINM501A	Manage an information or knowledge management system
BSBMGT516C	Facilitate continuous improvement
BSBINN502A	Build and sustain an innovative work environment
BSBWOR502B	Ensure team effectiveness
PMASUP410B	Develop plant documentation
UEENEEM019A	Attend to breakdowns in hazardous areas — coal mining
UEENEEM020A	Attend to breakdowns in hazardous areas — gas atmospheres
UEENEEM021A	Attend to breakdowns in hazardous areas — dust atmospheres
UEENEEM022A	Attend to breakdowns in hazardous areas — pressurisation
UEENEEM023A	Install explosion-protected equipment and wiring systems — coal mining
UEENEEM024A	Install explosion-protected equipment and wiring systems — gas atmospheres
UEENEEM025A	Install explosion-protected equipment and wiring systems — dust atmospheres
UEENEEM026A	Install explosion-protected equipment and wiring systems — pressurisation
UEENEEM027A	Maintain equipment in hazardous areas — coal mining
UEENEEM028A	Maintain equipment in hazardous areas — gas atmospheres
UEENEEM029A	Maintain equipment in hazardous areas — dust atmospheres
UEENEEM030A	Maintain equipment in hazardous areas — pressurisation
UEENEEM038A	Conduct testing of hazardous areas installations — coal mining
UEENEEM005B	Estimate electrotechnology projects
UEENEEM039A	Conduct testing of hazardous area installations — gas atmospheres
UEENEEM042A	Conduct visual inspection of hazardous areas installations
UEENEEM044A	Conduct detailed inspection of hazardous areas installations — gas atmospheres
UEENEEM047A	Develop and manage maintenance programs for hazardous areas electrical equipment — coal mining
UEENEEM078A	Manage compliance of hazardous areas
UEENEEM006B	Prepare tender submissions for electrotechnology projects
UEENEEE110A	Develop and implement energy sector maintenance programs
UEENEEG131A	Evaluate performance of LV electrical apparatus
UEENEEG180A	Develop detailed and complex drawings for electrical systems using CAD systems

UEENEEM035A coal mining	Conduct a conformity assessment of explosion-protected equipment —
UEENEEM036A gas atmospheres	Conduct a conformity assessment of explosion-protected equipment —
UEENEEM037A dust atmospheres	Conduct a conformity assessment of explosion-protected equipment —
UEENEEM054A	Plan electrical installations for hazardous areas — gas atmospheres
UEENEEM064A	Conduct audit of hazardous areas installations — coal mining
UEENEEM065A	Conduct audit of hazardous areas installations — gas atmospheres
UEENEEM066A	Conduct audit of hazardous areas installations — dust atmospheres
UEENEEM067A	Assess the fitness-for-purpose of hazardous areas explosion-protected equipment — coal mining
UEENEEM068A	Assess the fitness-for-purpose of hazardous areas explosion-protected equipment — gas atmospheres
UEENEEM069A	Assess the fitness-for-purpose of hazardous areas explosion-protected equipment — dust atmospheres
UEENEEM007B	Manage contract variations
UEENEEE127A engineering problems	Use advanced computational processes to provide solutions to
UEENEEE160A effects	Provide engineering solutions for uses of materials and thermodynamic
UEENEEE161A equipment	Analyse static and dynamic parameters of electrotechnology/utilities
UEENEEE162A	Select drive components for equipment design
UEENEEE163A equipment	Analyse materials for suitability in electrotechnology/utilities
UEENEEE164A	Design electrical machine drives and production layout plans
UEENEEE078B	Contribute to risk management in electrotechnology systems
UEENEEG143A	Develop engineering solutions for synchronous machine problems
UEENEEG144A	Develop engineering solutions for direct current machine problems
UEENEEG145A	Develop engineering solutions for induction machine problems
UEENEEG160A	Evaluate performance of LV electrical machines
UEENEEG161A	Design and develop modifications for electrical machines
UEENEEM057A atmospheres	Design explosion-protected electrical systems and installations — gas
UEENEEM058A atmospheres	Design explosion-protected electrical systems and installations — dust
UEENEEM059A pressurisation	Design explosion-protected electrical systems and installations —
UEENEEM075A	Design explosion-protected electrical systems — Coal mining
UEENEEM079A	Design of gas detection systems and installations

UEE61511 Advanced Diploma of Instrumentation and Control Engineering

Modification History

Not applicable.

Description

Scope

This qualification provides competencies to design and validate/evaluate process control equipment and systems, manage risk, estimate and manage projects and provide technical advice/sales. It's also provides competencies to install, set up, test, develop, select, commission, maintain, diagnose faults/malfunctions of equipment and systems.

Pathways Information

Not applicable.

Licensing/Regulatory Information

Not applicable.

Entry Requirements

Not applicable.

Employability Skills Summary

Not applicable.

Packaging Rules

Completion requirements

The requirements for granting this qualification will be met when competency is demonstrated and achieved for:

- All the Core competency standard units, defined in the Core Competency Standard Units table below and
- A combination of Elective competency standard units to achieve a total weighting of 420 points in accordance with the Elective Competency Standard Units table below.

Note: UEENEEI112A - Those holding an 'Certificate III in Instrumentation and Control trade qualification or equivalent' meet the requirements of this unit and its pre-requisite requirements.

Core Competency Standard Units		Weighting Points
All Core competency standard units to be achieved		
UEENEED104A	Use software for engineering applications	40
UEENEEE006B	Apply methods to maintain currency of industry developments	20
UEENEEE011C	Manage risk in electrotechnology activities	60
UEENEEE015B	Develop design briefs for electrotechnology projects	40
UEENEEE075B	Write specifications for industrial electronics and control projects	40
UEENEEE080A	Apply industry and community standards to engineering activities	20
UEENEEE081A	Apply material science to solving electrotechnology engineering problems	60
UEENEEE082A	Apply physics to solving electrotechnology engineering problems	60
UEENEEE083A	Establish and follow a competency development plan in an electrotechnology engineering discipline	120
UEENEEE101A	Apply Occupational Health Safety regulations, codes and practices in the workplace	20
UEENEEE102A	Fabricate, dismantle, assemble of utilities industry components	40
UEENEEE104A	Solve problems in d.c. circuits	80
UEENEEE105A	Fix and secure electrotechnology equipment	20
UEENEEE107A	Use drawings, diagrams, schedules, standards, codes and specifications	40
UEENEEE117A	Implement and monitor OHS energy sector procedures and policies	20
UEENEEE119A	Solve problems in multiple path extra low voltage (ELV) a.c. circuits	40
UEENEEE124A	Compile and produce an energy sector report	60

UEENEEE125A	Provide solutions to complex multiple path circuits problems	60
UEENEEE126A	Provide solutions to basic engineering computational problems	60
UEENEEE137A	Document and apply measures to control OHS risks associated with electrotechnology work	20
UEENEEI101A	Use instrumentation drawings, specifications, standards and equipment manuals	40
UEENEEI102A	Solve problems in pressure measurement circuits and systems	40
UEENEEI103A	Solve problems in density/level measurement circuits and systems	40
UEENEEI104A	Solve problems in flow measurement circuits and systems	40
UEENEEI105A	Solve problems in temperature measurement circuits and systems	40
UEENEEI106A	Set up and adjust PID process control loops	40
UEENEEI107A	Install process instrumentation and tubing and control cabling	20
UEENEEI108A	Install process control apparatus and associated equipment	20
UEENEEI110A	Set up and adjust advanced process control loops	40
UEENEEI111A	Find and rectify faults in process final control elements	40
UEENEEI112A	Verify compliance and functionality of instrumentation and control installations	40
UEENEEI113A	Setup and configure human-machine interface (HMI) and industrial networks	60
UEENEEI124A	Diagnose and rectify faults in electronic control systems	60
UEENEEI134A	Manage instrumentation and control projects	40
UEENEEI135A	Plan instrumentation and control projects	60

UEENEEI139A	Diagnose and rectify faults in digital controls systems	60
UEENEEI150A	Develop, enter and verify discrete control programs for programmable controllers	60
UEENEEK132A	Develop energy sector strategies to address environmental and sustainability issues	20
UEENEOP013A	Disconnect /reconnect control devices connected to low voltage installation wiring	60
Total points in core		1740

Elective Competency Standard Units

Complete Elective units to achieve a total of weighting of 420 points from the following groups:

Group		Minimum points	Maximum points
A	Imported and Common Elective Units Imported units from other training packages and/or state accredited courses can be added to this group, but they must be selected from qualifications where the unit is first packaged at AQF level 6. If units have not being assigned a weighting by the relevant EE-Oz Industry Technical Advisory Committee, their weighting will be 10 points.	0	170
B	Qualification Elective Units	0	80
C	Qualification Elective Units	0	80
D	Qualification Elective Units	0	80
E	Qualification Elective Units You may select all your elective units from this Group	180	420

Group A – Imported and Common Elective Units		Weighting Points
You may complete units to a maximum weighting of 170		
BSBMGT502B	Manage people performance	70

BSBINM501A	Manage an information or knowledge management system	50
BSBMGT516C	Facilitate continuous improvement	60
BSBINN502A	Build and sustain an innovative work environment	50
BSBWOR502B	Ensure team effectiveness	60
	<p>Imported units from other training packages and/or state accredited courses can be added to this group, but they must be selected from qualifications where the unit is first packaged at AQF level 6. If units have not being assigned a weighting by the relevant EE-Oz Industry Technical Advisory Committee, their weighting will be 10 points.</p> <p>Note: For further information see Application of the NQC Flexibility Formula, UEE11 Electrotechnology Training Package, Version 1, Volume 1 Qualification Framework</p>	Up to 170 points

Group B – Qualification Elective Units		Weighting Points
You may complete units to a maximum weighting of 80		
UEENEEED101A	Use basic computer applications relevant to a energy sector workplace	20
UEENEEEE190A	Prepare engineering drawings using manual drafting and CAD for electrotechnology/utilities applications	60
UEENEEEE191A	Prepare electrotechnology/utilities drawings using manual drafting and CAD equipment and software	60
UEENEEEH102A	Repair basic electronic apparatus faults by replacement of components	40
UEENEEEH111A	Troubleshoot single phase input d.c. power supplies	40
UEENEEEI114A	Find and rectify faults in process control systems	60
UEENEEEI115A	Find and rectify faults in medical equipment and control systems	120
UEENEEEI117A	Calibrate and test measuring instrumentation	40

	equipment	
UEENEEI118A	Set up weighting measuring and control instruments	20
UEENEEI131A	Set up gas analysis measuring and control instruments	20
UEENEEI132A	Set up water analysis measuring and control instruments	20
UEENEEI133A	Set up scientific analysis measuring and control instruments	20
UEENEEM019A	Attend to breakdowns in hazardous areas — coal mining	20
UEENEEM020A	Attend to breakdowns in hazardous areas — gas atmospheres	20
UEENEEM021A	Attend to breakdowns in hazardous areas — dust atmospheres	20
UEENEEM022A	Attend to breakdowns in hazardous areas — pressurisation	20
UEENEEM023A	Install explosion-protected equipment and wiring systems — coal mining	60
UEENEEM024A	Install explosion-protected equipment and wiring systems — gas atmospheres	60
UEENEEM025A	Install explosion-protected equipment and wiring systems — dust atmospheres	60
UEENEEM026A	Install explosion-protected equipment and wiring systems — pressurisation	60
UEENEEM027A	Maintain equipment in hazardous areas — coal mining	60
UEENEEM028A	Maintain equipment in hazardous areas — gas atmospheres	60
UEENEEM029A	Maintain equipment in hazardous areas — dust atmospheres	60
UEENEEM030A	Maintain equipment in hazardous areas — pressurisation	60
UEENEEM076A	Use and maintain the integrity of a portable gas	20

	detection device	
UEENEEM077A	Install and maintain the integrity of fixed gas detection equipment	20
UEENEEM080A	Report on the integrity of explosion-protected equipment in a hazardous area	20

Group C – Qualification Elective Units		Weighting Points
You may complete units to a maximum weighting of 80		
UEENEEC005B	Estimate electrotechnology projects	40
UEENEEE192A	Produce detailed electrotechnology/utilities drawings using computer aided design equipment and software	60
UEENEEI121A	Find and repair faults in measuring and analysis systems	40
UEENEEI122A	Assist in commissioning of process control systems	40
UEENEEI125A	Provide solutions to fluid circuit operations	60
UEENEEI126A	Provide solutions to pneumatic/hydraulic system operations	80
UEENEEI148A	Provide solutions to single phase electronic power control problems	60
UEENEEI149A	Provide solutions to polyphase electronic power control problems	60
UEENEEI151A	Develop, enter and verify programs for industrial control systems using high level instructions	60
UEENEEI152A	Develop, enter and verify programs in Supervisory Control and Data Acquisition systems	60
UEENEEI155A	Develop structured programs to control external devices	40
UEENEEM038A	Conduct testing of hazardous areas installations — coal mining	40
UEENEEM039A	Conduct testing of hazardous areas installations — gas atmospheres	40

UEENEEM040A	Conduct testing of hazardous areas installations — dust atmospheres	40
UEENEEM041A	Conduct testing of hazardous area installations — pressurisation	40
UEENEEM042A	Conduct visual inspection of hazardous areas installations	40
UEENEEM043A	Conduct detailed inspection of hazardous areas installations — coal mining	40
UEENEEM044A	Conduct detailed inspection of hazardous areas installations — gas atmospheres	40
UEENEEM045A	Conduct detailed inspection of hazardous areas installations — dust atmospheres	40
UEENEEM046A	Conduct detailed inspection of hazardous areas installations — pressurisation	40
UEENEEM078A	Manage compliance of hazardous areas	20

Group D – Qualification Elective Units		Weighting Points
You may complete units to a maximum weighting of 80		
UEENEEC006B	Prepare tender submissions for electrotechnology projects	60
UEENEED116A	Develop computer network services	120
UEENEED110A	Set up and create content for a web server	120
UEENEED111A	Develop object oriented code	140
UEENEED144A	Commission computer systems	20
UEENEED145A	Modify-redesign of computer system	20
UEENEED131A	Evaluate performance of LV electrical apparatus	40
UEENEED180A	Develop detailed and complex drawings for electrical systems using CAD systems	60
UEENEED127A	Analyse complex electronic circuits controlling fluids	80

UEENEEI145A	Diagnose and rectify faults in a.c. motor drive systems	60
UEENEEI146A	Diagnose and rectify faults in d.c. motor drive systems	60
UEENEEI147A	Diagnose and rectify faults in servo drive systems	60
UEENEEI156A	Develop and test code for microcontroller devices	60
UEENEEI157A	Configure and maintain industrial control system networks	60
UEENEEM035A	Conduct a conformity assessment of explosion-protected equipment — coal mining	40
UEENEEM036A	Conduct a conformity assessment of explosion-protected equipment — gas atmospheres	40
UEENEEM037A	Conduct a conformity assessment of explosion-protected equipment — dust atmospheres	40
UEENEEM054A	Plan electrical installations for hazardous areas — gas atmospheres	20
UEENEEM064A	Conduct audit of hazardous areas installations — coal mining	60
UEENEEM065A	Conduct audit of hazardous areas installations — gas atmospheres	60
UEENEEM066A	Conduct audit of hazardous areas installations — dust atmospheres	60
UEENEEM067A	Assess the fitness-for-purpose of hazardous areas explosion-protected equipment — coal mining	60
UEENEEM068A	Assess the fitness-for-purpose of hazardous areas explosion-protected equipment — gas atmospheres	60
UEENEEM069A	Assess the fitness-for-purpose of hazardous areas explosion-protected equipment — dust atmospheres	60

<p>Group E – Qualification Elective Units</p> <p>You must complete units to a minimum weighting of 180</p> <p>You may select all your elective units from this Group</p>	<p>Weighting Points</p>
---	--------------------------------

UEENEEC007B	Manage contract variations	40
UEENEEE127A	Use advanced computational processes to provide solutions to engineering problems	80
UEENEEE128A	Develop engineering solutions to photonic problems	80
UEENEEE160A	Provide engineering solutions for uses of materials and thermodynamic effects	80
UEENEEE161A	Analyse static and dynamic parameters of electrotechnology/utilities equipment	80
UEENEEE162A	Select drive components for equipment design	80
UEENEEE163A	Analyse materials for suitability in electrotechnology/utilities equipment	80
UEENEEE164A	Design electrical machine drives and production layout plans	80
UEENEEE078B	Contribute to risk management in electrotechnology systems	20
UEENEEH147A	Assess compliance of electronic apparatus	60
UEENEEH184A	Modify DSP based sub-systems	80
UEENEEH185A	Design a signal-conditioning subsystem	80
UEENEEH188A	Design and develop electronics/computer systems projects	40
UEENEEI123A	Design electronic control and instrumentation systems	60
UEENEEI128A	Set up controls on complex fluid systems	80
UEENEEI129A	Set up electronically controlled mechanically operated complex systems	80
UEENEEI130A	Set up electronically controlled robotically operated complex systems	80
UEENEEI153A	Design and configure Human-Machine Interface (HMI) networks	60
UEENEEI154A	Design a computer based control system	120
UEENEEM052A	Classify hazardous areas — gas atmospheres	40

UEENEEM053A	Classify hazardous areas — dust atmospheres	40
UEENEEM057A	Design explosion-protected electrical systems and installations — gas atmospheres	20
UEENEEM058A	Design explosion-protected electrical systems and installations — dust atmospheres	20
UEENEEM059A	Design explosion-protected electrical systems and installations — pressurisation	20
UEENEEM075A	Design explosion-protected electrical systems — Coal mining	20
UEENEEM079A	Design of gas detection systems and installations	20

Note:

1. Pre-requisite pathways shall be identified and met for all elective units selected.
2. In selecting elective units considerations to career planning advice should be given to units that form part of a pre-requisite pathway for the progression to achieve particular competencies or qualification at a higher level.
3. Registered training organisations shall also provide information related to the relevant pathway(s) that may be taken to achieve paraprofessional status ("associate membership") with a professional engineering membership organisation.

END OF QUALIFICATION**Unit Grid**

UEENEED104A	Use software for engineering applications
UEENEEE006B	Apply methods to maintain currency of industry developments
UEENEEE011C	Manage risk in electrotechnology activities
UEENEEE015B	Develop design briefs for electrotechnology projects
UEENEEE075B	Write specifications for industrial electronics and control projects
UEENEEE080A	Apply industry and community standards to engineering activities
UEENEEE081A	Apply material science to solving electrotechnology engineering problems
UEENEEE082A	Apply physics to solving electrotechnology engineering problems
UEENEEE083A	Establish and follow a competency development plan in an electrotechnology engineering discipline
UEENEEE101A	Apply Occupational Health Safety regulations, codes and practices in the workplace
UEENEEE102A	Fabricate, dismantle, assemble of utilities industry components
UEENEEE104A	Solve problems in d.c. circuits
UEENEEE105A	Fix and secure electrotechnology equipment
UEENEEE107A	Use drawings, diagrams, schedules, standards, codes and specifications
UEENEEE117A	Implement and monitor OHS energy sector procedures and policies
UEENEEE119A	Solve problems in multiple path extra low voltage (ELV) a.c. circuits

UEENEEE124A	Compile and produce an energy sector report
UEENEEE125A	Provide solutions to complex multiple path circuits problems
UEENEEE126A	Provide solutions to basic engineering computational problems
UEENEEE137A	Document and apply measures to control OHS risks associated with electrotechnology work
UEENEEI101A	Use instrumentation drawings, specifications, standards and equipment manuals
UEENEEI102A	Solve problems in pressure measurement circuits and systems
UEENEEI103A	Solve problems in density/level measurement circuits and systems
UEENEEI104A	Solve problems in flow measurement circuits and systems
UEENEEI105A	Solve problems in temperature measurement circuits and systems
UEENEEI106A	Set up and adjust PID process control loops
UEENEEI107A	Install process instrumentation and tubing and control cabling
UEENEEI108A	Install process control apparatus and associated equipment
UEENEEI110A	Set up and adjust advanced process control loops
UEENEEI111A	Find and rectify faults in process final control elements
UEENEEI112A	Verify compliance and functionality of instrumentation and control installations
UEENEEI113A	Setup and configure human-machine interface (HMI) and industrial networks
UEENEEI124A	Diagnose and rectify faults in electronic control systems
UEENEEI134A	Manage instrumentation and control projects
UEENEEI135A	Plan instrumentation and control projects
UEENEEI139A	Diagnose and rectify faults in digital controls systems
UEENEEI150A	Develop, enter and verify discrete control programs for programmable controllers
UEENEEK132A	Develop energy sector strategies to address environmental and sustainability issues
UEENEEP013A	Disconnect /reconnect control devices connected to low voltage installation wiring
BSBMGT502B	Manage people performance
BSBINM501A	Manage an information or knowledge management system
BSBMGT516C	Facilitate continuous improvement
BSBINN502A	Build and sustain an innovative work environment
BSBWOR502B	Ensure team effectiveness
UEENEEI101A	Use basic computer applications relevant to a energy sector workplace
UEENEEE190A	Prepare engineering drawings using manual drafting and CAD for electrotechnology/utilities applications
UEENEEE191A	Prepare electrotechnology/utilities drawings using manual drafting and CAD equipment and software
UEENEEH102A	Repair basic electronic apparatus faults by replacement of components
UEENEEH111A	Troubleshoot single phase input d.c. power supplies
UEENEEI114A	Find and rectify faults in process control systems
UEENEEI115A	Find and rectify faults in medical equipment and control systems
UEENEEI117A	Calibrate and test measuring instrumentation equipment
UEENEEI118A	Set up weighting measuring and control instruments
UEENEEI131A	Set up gas analysis measuring and control instruments
UEENEEI132A	Set up water analysis measuring and control instruments

UEENEEI133A	Set up scientific analysis measuring and control instruments
UEENEEM019A	Attend to breakdowns in hazardous areas — coal mining
UEENEEM020A	Attend to breakdowns in hazardous areas — gas atmospheres
UEENEEM021A	Attend to breakdowns in hazardous areas — dust atmospheres
UEENEEM022A	Attend to breakdowns in hazardous areas — pressurisation
UEENEEM023A	Install explosion-protected equipment and wiring systems — coal mining
UEENEEM024A	Install explosion-protected equipment and wiring systems — gas atmospheres
UEENEEM025A	Install explosion-protected equipment and wiring systems — dust atmospheres
UEENEEM026A	Install explosion-protected equipment and wiring systems — pressurisation
UEENEEM027A	Maintain equipment in hazardous areas — coal mining
UEENEEM028A	Maintain equipment in hazardous areas — gas atmospheres
UEENEEM029A	Maintain equipment in hazardous areas — dust atmospheres
UEENEEM030A	Maintain equipment in hazardous areas — pressurisation
UEENEEM076A	Use and maintain the integrity of a portable gas detection device
UEENEEM077A	Install and maintain the integrity of fixed gas detection equipment
UEENEEM080A	Report on the integrity of explosion-protected equipment in a hazardous area
UEENEEM005B	Estimate electrotechnology projects
UEENEEE192A	Produce detailed electrotechnology/utilities drawings using computer aided design equipment and software
UEENEEI121A	Find and repair faults in measuring and analysis systems
UEENEEI122A	Assist in commissioning of process control systems
UEENEEI125A	Provide solutions to fluid circuit operations
UEENEEI126A	Provide solutions to pneumatic/hydraulic system operations
UEENEEI148A	Provide solutions to single phase electronic power control problems
UEENEEI149A	Provide solutions to polyphase electronic power control problems
UEENEEI151A	Develop, enter and verify programs for industrial control systems using high level instructions
UEENEEI152A	Develop, enter and verify programs in Supervisory Control and Data Acquisition systems
UEENEEI155A	Develop structured programs to control external devices
UEENEEM038A	Conduct testing of hazardous areas installations — coal mining
UEENEEM039A	Conduct testing of hazardous areas installations — gas atmospheres
UEENEEM040A	Conduct testing of hazardous areas installations — dust atmospheres
UEENEEM041A	Conduct testing of hazardous area installations — pressurisation
UEENEEM042A	Conduct visual inspection of hazardous areas installations
UEENEEM043A	Conduct detailed inspection of hazardous areas installations — coal mining
UEENEEM044A	Conduct detailed inspection of hazardous areas installations — gas atmospheres
UEENEEM045A	Conduct detailed inspection of hazardous areas installations — dust atmospheres
UEENEEM046A	Conduct detailed inspection of hazardous areas installations — pressurisation

UEENEEM078A	Manage compliance of hazardous areas
UEENEEC006B	Prepare tender submissions for electrotechnology projects
UEENEED116A	Develop computer network services
UEENEED110A	Set up and create content for a web server
UEENEED111A	Develop object oriented code
UEENEED144A	Commission computer systems
UEENEED145A	Modify-redesign of computer system
UEENEED131A	Evaluate performance of LV electrical apparatus
UEENEED180A	Develop detailed and complex drawings for electrical systems using CAD systems
UEENEED127A	Analyse complex electronic circuits controlling fluids
UEENEED145A	Diagnose and rectify faults in a.c. motor drive systems
UEENEED146A	Diagnose and rectify faults in d.c. motor drive systems
UEENEED147A	Diagnose and rectify faults in servo drive systems
UEENEED156A	Develop and test code for microcontroller devices
UEENEED157A	Configure and maintain industrial control system networks
UEENEEM035A	Conduct a conformity assessment of explosion-protected equipment — coal mining
UEENEEM036A	Conduct a conformity assessment of explosion-protected equipment — gas atmospheres
UEENEEM037A	Conduct a conformity assessment of explosion-protected equipment — dust atmospheres
UEENEEM054A	Plan electrical installations for hazardous areas — gas atmospheres
UEENEEM064A	Conduct audit of hazardous areas installations — coal mining
UEENEEM065A	Conduct audit of hazardous areas installations — gas atmospheres
UEENEEM066A	Conduct audit of hazardous areas installations — dust atmospheres
UEENEEM067A	Assess the fitness-for-purpose of hazardous areas explosion-protected equipment — coal mining
UEENEEM068A	Assess the fitness-for-purpose of hazardous areas explosion-protected equipment — gas atmospheres
UEENEEM069A	Assess the fitness-for-purpose of hazardous areas explosion-protected equipment — dust atmospheres
UEENEED007B	Manage contract variations
UEENEED127A	Use advanced computational processes to provide solutions to engineering problems
UEENEED128A	Develop engineering solutions to photonic problems
UEENEED160A	Provide engineering solutions for uses of materials and thermodynamic effects
UEENEED161A	Analyse static and dynamic parameters of electrotechnology/utilities equipment
UEENEED162A	Select drive components for equipment design
UEENEED163A	Analyse materials for suitability in electrotechnology/utilities equipment
UEENEED164A	Design electrical machine drives and production layout plans
UEENEED078B	Contribute to risk management in electrotechnology systems
UEENEED147A	Assess compliance of electronic apparatus
UEENEED184A	Modify DSP based sub-systems
UEENEED185A	Design a signal-conditioning subsystem

UEENEEH188A	Design and develop electronics/computer systems projects
UEENEEI123A	Design electronic control and instrumentation systems
UEENEEI128A	Set up controls on complex fluid systems
UEENEEI129A	Set up electronically controlled mechanically operated complex systems
UEENEEI130A	Set up electronically controlled robotically operated complex systems
UEENEEI153A	Design and configure Human-Machine Interface (HMI) networks
UEENEEI154A	Design a computer based control system
UEENEEM052A	Classify hazardous areas — gas atmospheres
UEENEEM053A	Classify hazardous areas — dust atmospheres
UEENEEM057A	Design explosion-protected electrical systems and installations — gas atmospheres
UEENEEM058A	Design explosion-protected electrical systems and installations — dust atmospheres
UEENEEM059A	Design explosion-protected electrical systems and installations — pressurisation
UEENEEM075A	Design explosion-protected electrical systems — Coal mining
UEENEEM079A	Design of gas detection systems and installations

Custom Content Section

Not applicable.

UEE61711 Advanced Diploma of Engineering Technology - Electronics

Modification History

Not applicable.

Description

Scope

This qualification provides competencies to design and validate/evaluate electronics and/or communication equipment and systems and provide technical advice/sales.

Pathways Information

Not applicable.

Licensing/Regulatory Information

Not applicable.

Entry Requirements

Not applicable.

Employability Skills Summary

Not applicable.

Packaging Rules

Completion requirements

The requirements for granting this qualification will be met when competency is demonstrated and achieved for:

All the Core competency standard units, defined in the Core Competency Standard Units table below and

A combination of Elective competency standard units to achieve a total weighting of 1000 points in accordance with the Elective Competency Standard Units table below.

Core Competency Standard Units		Weighting Points
All Core competency standard units to be achieved		
UEENEED102A	Assemble, set-up and test personal computer hardware	80

UEENEED104A	Use software for engineering applications	40
UEENEEE015B	Develop design briefs for electrotechnology projects	40
UEENEEE038B	Participate in development and follow a personal competency development plan	20
UEENEEE081A	Apply material science to solving electrotechnology engineering problems	60
UEENEEE082A	Apply physics to solving electrotechnology engineering problems	60
UEENEEE101A	Apply Occupational Health Safety regulations, codes and practices in the workplace	20
UEENEEE102A	Fabricate, dismantle, assemble of electrotechnology components	40
UEENEEE104A	Solve problems in d.c. circuits	80
UEENEEE107A	Use drawings, diagrams, schedules, standards, codes and specifications	40
UEENEEE117A	Implement and monitor OHS energy sector procedures and policies	20
UEENEEE124A	Compile and produce an energy sector report	60
UEENEEE125A	Provide solutions to complex multiple path circuits problems	60
UEENEEE126A	Provide solutions to basic engineering computational problems	60
UEENEEE137A	Document and apply measures to control OHS risks associated with electrotechnology work	20
UEENEEH102A	Repair basic electronic apparatus faults by replacement of components	40
UEENEEH111A	Troubleshoot single phase input d.c. power supplies	40
UEENEEH112A	Troubleshoot digital sub-systems	80
UEENEEH113A	Troubleshoot amplifiers in an electronic apparatus	80
UEENEEH114A	Troubleshoot resonance circuits in an electronic apparatus	80

UEENEEH139A	Troubleshoot basic amplifier circuits	40
UEENEEH146A	Solve fundamental electronic communications system problems	40
UEENEEH188A	Design and develop electronics/computer systems projects	40
UEENEEK132A	Develop energy sector strategies to address environmental and sustainability issues	20
Total points in core		1160

Elective Competency Standard Units

Complete Elective units to achieve a total of weighting of 1000 points from the following groups:

Group		Minimum points	Maximum points
A	<p>Imported and Common Elective Units</p> <p>Imported units from other training packages and/or state accredited courses can be added to this group, but they must be selected from qualifications where the unit is first packaged at AQF level 6. If units have not being assigned a weighting by the relevant EE-Oz Industry Technical Advisory Committee, their weighting will be 10 points.</p>	0	360
B	Qualification Elective Units	0	200
C	Qualification Elective Units	0	200
D	Qualification Elective Units	100	300
E	<p>Qualification Elective Units</p> <p>You may select all your elective units from this Group</p>	280	1000

Group A – Imported and Common Elective Units

You may complete units to a maximum weighting of 360

		Weighting Points
UEENEEC001B	Maintain documentation	20

UEENEEC002B	Source and purchase material/parts for installation or service jobs	20
UEENEEC003B	Provide quotations for installation or service jobs	20
UEENEEC010B	Deliver a service to customers	20
UEENEEED101A	Use basic computer applications relevant to a energy sector workplace	20
UEENEEEEE020B	Provide basic instruction in the use of electrotechnology apparatus	20
BSBINM501A	Manage an information or knowledge management system	50
BSBWOR502B	Ensure team effectiveness	60
BSBMGT502B	Manage people performance	70
BSBMGT516C	Facilitate continuous improvement	60
BSBINN502A	Build and sustain an innovative work environment	50
	<p>Imported units from other training packages and/or state accredited courses can be added to this group, but they must be selected from qualifications where the unit is first packaged at AQF level 6. If units have not being assigned a weighting by the relevant EE-Oz Industry Technical Advisory Committee, their weighting will be 10 points.</p> <p>Note: For further information see Application of the NQC Flexibility Formula, UEE11 Electrotechnology Training Package, Version 1, Volume 1 Qualification Framework</p>	Up to 360 points

Group B – Qualification Elective Units		Weighting Points
You may complete units to a maximum weighting of 200		
UEENEEA101A	Assemble electronic components	40
UEENEEA102A	Select electronic components for assembly	20
UEENEEA103A	Set up and check electronic component assembly machines	40

UEENEEA104A	Modify electronic sub assemblies	40
UEENEEA105A	Conduct quality and functional tests on assembled electronic apparatus	20
UEENEEA106A	Use lead-free soldering techniques	40
UEENEEB101A	Operate and maintain amateur radio communication stations	40
UEENEEED112A	Support computer software and hardware	120
UEENEEED129A	Develop basic web pages for engineering applications	40
UEENEEED130A	Select, install, configure and test multimedia devices	40
UEENEEED143A	Install and configure a computer software and operating systems	40
UEENEEED146A	Set up and configure basic local area network (LAN)	80
UEENEEEEE105A	Fix and secure electrotechnology equipment	20
UEENEEEEE108A	Lay wiring/cabbling and terminate accessories for extra-low voltage (ELV) circuits	40
UEENEEEEE121A	Plan an integrated cabling installation system	40
UEENEEEEE122A	Carry out preparatory energy sector work activities	60
UEENEEEEE123A	Solve basic problems electronic and digital equipment and circuits	80
UEENEEEEE179A	Identify and select components, accessories and materials for energy sector work activities	20
UEENEEEF102A	Install and maintain cabling for multiple access to telecommunication services	120
UEENEEEF104A	Install and modify performance data communication copper cabling	40
UEENEEEF105A	Install and modify optical fibre performance data communication cabling	40
UEENEEEF107A	Set up and configure the wireless capabilities of communications and data storage devices	40
UEENEEEF108A	Select and arrange equipment for wireless	40

	communication networks	
UEENEEF109A	Install and connect data and voice communication equipment	40
UEENEEF110A	Select and arrange data and voice equipment for local area networks	40
UEENEEF111A	Test, report and rectify faults in data and voice installations	40
UEENEEF114A	Set up and configure basic data communication systems	40
UEENEEH101A	Repair basic computer equipment faults by replacement of modules/sub-assemblies	40
UEENEEH103A	Repair routine business equipment faults	120
UEENEEH104A	Set up and test residential video/audio equipment	40
UEENEEH105A	Verify functionality and compliance of custom electronic installations	40
UEENEEH106A	Assemble and set up fixed video/audio components and systems in buildings and premises	120
UEENEEH107A	Repair predictable faults in general electronic apparatus	40
UEENEEH115A	Develop software solutions for microcontroller based systems	60
UEENEEH116A	Find and repair microwave amplifier section faults in electronic apparatus	40
UEENEEH117A	Carry out repairs of predictable faults in video and audio replay/recording apparatus	120
UEENEEH118A	Fault find and repair electronic apparatus	40
UEENEEH119A	Repair predictable faults in television receivers	120
UEENEEH120A	Fault find and repair gaming and games equipment	80
UEENEEH122A	Fault find and repair remote control apparatus	60
UEENEEH123A	Fault find and repair microwave heating apparatus	40

UEENEEH124A	Repair predictable faults in audio components	40
UEENEEH138A	Fault find and repair complex power supplies	40
UEENEEH142A	Solve oscillator problems	40
UEENEEH150A	Assemble and set up basic security systems	80
UEENEEH152A	Enter instructions and test wired and wireless security systems	40
UEENEEH166A	Troubleshoot microcontroller based hardware systems	40
UEENEEH171A	Troubleshoot faults in television receivers	120
UEENEEH172A	Troubleshoot communication systems	80
UEENEEH174A	Troubleshoot audio/video recording equipment	120
UEENEEH187A	Solve problems in electronic musical equipment circuits	40
UEENEEI116A	Enter and verify operating instructions in microprocessor equipped devices	20

Group C – Qualification Elective Units		Weighting Points
You may complete units to a maximum weighting of 200		
UEENEEC004B	Prepare specifications for the supply of materials and equipment for electrotechnology projects	40
UEENEEC005B	Estimate electrotechnology projects	40
UEENEED113A	Install and administer Unix based computers	80
UEENEED116A	Develop computer network services	120
UEENEED117A	Install and configure Internetworking systems	120
UEENEED124A	Integrate multiple computer operating systems on a client server network	80
UEENEED153A	Set up and test biometric devices	40
UEENEEH133A	Fault find and repair telecommunication apparatus and systems	60

Group C – Qualification Elective Units		Weighting Points
You may complete units to a maximum weighting of 200		
UEENEEH135A	Design custom electronic equipment installations	120
UEENEEH136A	Design commercial video/audio installations	120
UEENEEH157A	Develop basic plans for integrating security systems	40
UEENEEH175A	Troubleshooting in security system installations	60
UEENEEH176A	Diagnose and rectify faults in electronic display circuits	60
UEENEEH177A	Diagnose and rectify faults in recording and replay equipment	60
UEENEEH178A	Diagnose and rectify faults in camera circuits and equipment	60
UEENEEH179A	Diagnose and rectify faults in digital television circuits and apparatus	80
UEENEEH181A	Design electronic printed circuit boards	40
UEENEEI155A	Develop structured programs to control external devices	40

Group D – Qualification Elective Units		Weighting Points
You may complete units to a maximum weighting of 300		
UEENEEC006B	Prepare tender submissions for electrotechnology projects	60
UEENEED110A	Set up and create content for a web server	120
UEENEED111A	Develop object oriented code	140
UEENEED115A	Administer computer user networks	80
UEENEED144A	Commission computer systems	20
UEENEED145A	Modify-redesign of computer system	20
UEENEED154A	Analyse and implement biometric techniques and applications	120

UEENEED155A	Develop and validate biometric systems installation instructions	120
UEENEEE070B	Write specifications for computer systems engineering projects	40
UEENEEE160A	Provide engineering solutions for uses of materials and thermodynamic effects	80
UEENEEE161A	Analyse static and dynamic parameters of electrical equipment	80
UEENEEE163A	Analyse materials for suitability in electrical equipment	80
UEENEEH148A	Design and develop advanced digital systems	40
UEENEEH149A	Develop engineering solutions to audio electronic problems	60
UEENEEH158A	Design integrated security systems	40
UEENEEH159A	Design integrated complex security systems for multiple sites	60
UEENEEH182A	Develop engineering solutions to RF amplifiers problems	40
UEENEEH183A	Analyse the performance of wireless-based electronic/communication systems	40
UEENEEI156A	Develop and test code for microcontroller devices	60

Group E – Qualification Elective Units		Weighting Points
You must complete units to a minimum weighting of 280		
You may select all your elective units from this Group		
UEENEED114A	Design and manage enterprise computer networks	80
UEENEED118A	Design and implement Internetworking systems	120
UEENEED119A	Design and implement Internetworking systems — advanced routing	100
UEENEED120A	Design and implement Internetworking systems — remote access	100

UEENEED121A	Design and implement Internetworking systems — multi-layer switching	100
UEENEED122A	Design and implement Internetworking systems — security	100
UEENEED123A	Design and implement Internetworking systems — wireless LANs/WANs	100
UEENEED150A	Develop control programs for micro-computer equipped devices	60
UEENEED151A	Provide programming solution for engineering problems	60
UEENEED152A	Design embedded controller systems	80
UEENEEE127A	Use advanced computational processes to provide solutions to energy sector engineering problems	80
UEENEEE128A	Develop engineering solutions to photonic system problems	80
UEENEEH147A	Assess electronic apparatus compliance	60
UEENEEH160A	Plan large electronic projects	60
UEENEEH184A	Modify digital signal processing (DSP) based sub-systems	80
UEENEEH185A	Design signal-conditioning subsystems	80

Note:

1. Prerequisite pathways shall be identified and met for all elective units selected.
2. In selecting elective units considerations to career planning advice should be given to units that form part of a prerequisite pathway for the progression to achieve particular competencies or qualification at a higher level.
3. Registered training organisations shall also provide information related to the relevant pathway(s) that may be taken to achieve paraprofessional status ("associate membership") with a professional engineering membership organisation.

END OF QUALIFICATION**Unit Grid**

UEENEED102A	Assemble, set-up and test personal computer hardware
UEENEED104A	Use software for engineering applications
UEENEEE015B	Develop design briefs for electrotechnology projects

UEENEEE038B	Participate in development and follow a personal competency
development plan	
UEENEEE081A	Apply material science to solving electrotechnology engineering
problems	
UEENEEE082A	Apply physics to solving electrotechnology engineering problems
UEENEEE101A	Apply Occupational Health Safety regulations, codes and practices in
the workplace	
UEENEEE102A	Fabricate, dismantle, assemble of electrotechnology components
UEENEEE104A	Solve problems in d.c. circuits
UEENEEE107A	Use drawings, diagrams, schedules, standards, codes and specifications
UEENEEE117A	Implement and monitor OHS energy sector procedures and policies
UEENEEE124A	Compile and produce an energy sector report
UEENEEE125A	Provide solutions to complex multiple path circuits problems
UEENEEE126A	Provide solutions to basic engineering computational problems
UEENEEE137A	Document and apply measures to control OHS risks associated with
electrotechnology work	
UEENEEH102A	Repair basic electronic apparatus faults by replacement of components
UEENEEH111A	Troubleshoot single phase input d.c. power supplies
UEENEEH112A	Troubleshoot digital sub-systems
UEENEEH113A	Troubleshoot amplifiers in an electronic apparatus
UEENEEH114A	Troubleshoot resonance circuits in an electronic apparatus
UEENEEH139A	Troubleshoot basic amplifier circuits
UEENEEH146A	Solve fundamental electronic communications system problems
UEENEEH188A	Design and develop electronics/computer systems projects
UEENEEK132A	Develop energy sector strategies to address environmental and
sustainability issues	
UEENEEC001B	Maintain documentation
UEENEEC002B	Source and purchase material/parts for installation or service jobs
UEENEEC003B	Provide quotations for installation or service jobs
UEENEEC010B	Deliver a service to customers
UEENEEED101A	Use basic computer applications relevant to a energy sector workplace
UEENEEE020B	Provide basic instruction in the use of electrotechnology apparatus
BSBINM501A	Manage an information or knowledge management system
BSBWOR502B	Ensure team effectiveness
BSBMGT502B	Manage people performance
BSBMGT516C	Facilitate continuous improvement
BSBINN502A	Build and sustain an innovative work environment
UEENEEA101A	Assemble electronic components
UEENEEA102A	Select electronic components for assembly
UEENEEA103A	Set up and check electronic component assembly machines
UEENEEA104A	Modify electronic sub assemblies
UEENEEA105A	Conduct quality and functional tests on assembled electronic apparatus
UEENEEA106A	Use lead-free soldering techniques
UEENEEB101A	Operate and maintain amateur radio communication stations
UEENEEED112A	Support computer software and hardware
UEENEEED129A	Develop basic web pages for engineering applications
UEENEEED130A	Select, install, configure and test multimedia devices
UEENEEED143A	Install and configure a computer software and operating systems

UEENEED146A	Set up and configure basic local area network (LAN)
UEENEEE105A	Fix and secure electrotechnology equipment
UEENEEE108A	Lay wiring/cabbling and terminate accessories for extra-low voltage (ELV) circuits
UEENEEE121A	Plan an integrated cabbling installation system
UEENEEE122A	Carry out preparatory energy sector work activities
UEENEEE123A	Solve basic problems electronic and digital equipment and circuits
UEENEEE179A	Identify and select components, accessories and materials for energy sector work activities
UEENEEF102A	Install and maintain cabbling for multiple access to telecommunication services
UEENEEF104A	Install and modify performance data communication copper cabbling
UEENEEF105A	Install and modify optical fibre performance data communication cabbling
UEENEEF107A	Set up and configure the wireless capabilities of communications and data storage devices
UEENEEF108A	Select and arrange equipment for wireless communication networks
UEENEEF109A	Install and connect data and voice communication equipment
UEENEEF110A	Select and arrange data and voice equipment for local area networks
UEENEEF111A	Test, report and rectify faults in data and voice installations
UEENEEF114A	Set up and configure basic data communication systems
UEENEEH101A	Repair basic computer equipment faults by replacement of modules/sub-assemblies
UEENEEH103A	Repair routine business equipment faults
UEENEEH104A	Set up and test residential video/audio equipment
UEENEEH105A	Verify functionality and compliance of custom electronic installations
UEENEEH106A	Assemble and set up fixed video/audio components and systems in buildings and premises
UEENEEH107A	Repair predictable faults in general electronic apparatus
UEENEEH115A	Develop software solutions for microcontroller based systems
UEENEEH116A	Find and repair microwave amplifier section faults in electronic apparatus
UEENEEH117A	Carry out repairs of predictable faults in video and audio replay/recording apparatus
UEENEEH118A	Fault find and repair electronic apparatus
UEENEEH119A	Repair predictable faults in television receivers
UEENEEH120A	Fault find and repair gaming and games equipment
UEENEEH122A	Fault find and repair remote control apparatus
UEENEEH123A	Fault find and repair microwave heating apparatus
UEENEEH124A	Repair predictable faults in audio components
UEENEEH138A	Fault find and repair complex power supplies
UEENEEH142A	Solve oscillator problems
UEENEEH150A	Assemble and set up basic security systems
UEENEEH152A	Enter instructions and test wired and wireless security systems
UEENEEH166A	Troubleshoot microcontroller based hardware systems
UEENEEH171A	Troubleshoot faults in television receivers
UEENEEH172A	Troubleshoot communication systems
UEENEEH174A	Troubleshoot audio/video recording equipment

UEENEEH187A	Solve problems in electronic musical equipment circuits
UEENEEI116A	Enter and verify operating instructions in microprocessor equipped devices
UEENEEC004B	Prepare specifications for the supply of materials and equipment for electrotechnology projects
UEENEEC005B	Estimate electrotechnology projects
UEENEEI113A	Install and administer Unix based computers
UEENEEI116A	Develop computer network services
UEENEEI117A	Install and configure Internetworking systems
UEENEEI124A	Integrate multiple computer operating systems on a client server network
UEENEEI153A	Set up and test biometric devices
UEENEEH133A	Fault find and repair telecommunication apparatus and systems
UEENEEH135A	Design custom electronic equipment installations
UEENEEH136A	Design commercial video/audio installations
UEENEEH157A	Develop basic plans for integrating security systems
UEENEEH175A	Troubleshooting in security system installations
UEENEEH176A	Diagnose and rectify faults in electronic display circuits
UEENEEH177A	Diagnose and rectify faults in recording and replay equipment
UEENEEH178A	Diagnose and rectify faults in camera circuits and equipment
UEENEEH179A	Diagnose and rectify faults in digital television circuits and apparatus
UEENEEH181A	Design electronic printed circuit boards
UEENEEI155A	Develop structured programs to control external devices
UEENEEC006B	Prepare tender submissions for electrotechnology projects
UEENEEI110A	Set up and create content for a web server
UEENEEI111A	Develop object oriented code
UEENEEI115A	Administer computer user networks
UEENEEI144A	Commission computer systems
UEENEEI145A	Modify-redesign of computer system
UEENEEI154A	Analyse and implement biometric techniques and applications
UEENEEI155A	Develop and validate biometric systems installation instructions
UEENEEE070B	Write specifications for computer systems engineering projects
UEENEEE160A	Provide engineering solutions for uses of materials and thermodynamic effects
UEENEEE161A	Analyse static and dynamic parameters of electrical equipment
UEENEEE163A	Analyse materials for suitability in electrical equipment
UEENEEH148A	Design and develop advanced digital systems
UEENEEH149A	Develop engineering solutions to audio electronic problems
UEENEEH158A	Design integrated security systems
UEENEEH159A	Design integrated complex security systems for multiple sites
UEENEEH182A	Develop engineering solutions to RF amplifiers problems
UEENEEH183A	Analyse the performance of wireless-based electronic/communication systems
UEENEEI156A	Develop and test code for microcontroller devices
UEENEEI114A	Design and manage enterprise computer networks
UEENEEI118A	Design and implement Internetworking systems
UEENEEI119A	Design and implement Internetworking systems — advanced routing
UEENEEI120A	Design and implement Internetworking systems — remote access

UEENEED121A	Design and implement Internetworking systems — multi-layer switching
UEENEED122A	Design and implement Internetworking systems — security
UEENEED123A	Design and implement Internetworking systems — wireless LANs/WANs
UEENEED150A	Develop control programs for micro-computer equipped devices
UEENEED151A	Provide programming solution for engineering problems
UEENEED152A	Design embedded controller systems
UEENEEE127A	Use advanced computational processes to provide solutions to energy sector engineering problems
UEENEEE128A	Develop engineering solutions to photonic system problems
UEENEEH147A	Assess electronic apparatus compliance
UEENEEH160A	Plan large electronic projects
UEENEEH184A	Modify digital signal processing (DSP) based sub-systems
UEENEEH185A	Design signal-conditioning subsystems

Custom Content Section

UEE61811 Advanced Diploma of Engineering Technology - Computer Systems

Modification History

Not applicable.

Description

Scope

This qualification provides enabling competencies to design, install/validate/evaluate and administer computer and network based systems and provide technical advice/sales.

Pathways Information

Not applicable.

Licensing/Regulatory Information

Not applicable.

Entry Requirements

Not applicable.

Employability Skills Summary

Not applicable.

Packaging Rules

Completion requirements

The requirements for granting this qualification will be met when competency is demonstrated and achieved for:

- All the Core competency standard units, defined in the Core Competency Standard Units table below and
- A combination of Elective competency standard units to achieve a total weighting of 1000 points in accordance with the Elective Competency Standard Units table below.

Core Competency Standard Units	Weighting Points
All Core competency standard units to be achieved	

UEENEED102A	Assemble, set-up and test personal computer hardware	80
UEENEED104A	Use software for engineering applications	40
UEENEED112A	Support computer software and hardware	120
UEENEED117A	Install and configure Internetworking systems	120
UEENEEE015B	Develop design brief for electrotechnology projects	40
UEENEEE038B	Participate in development and follow a personal competency development plan	20
UEENEEE081A	Apply material science to solving electrotechnology engineering problems	60
UEENEEE082A	Apply physics to solving electrotechnology engineering problems	60
UEENEEE101A	Apply Occupational Health Safety regulations, codes and practices in the workplace	20
UEENEEE102A	Fabricate, dismantle, assemble of electrotechnology components	40
UEENEEE104A	Solve problems in d.c. circuits	80
UEENEEE107A	Use drawings, diagrams, schedules, standards, codes and specifications	40
UEENEEE117A	Implement and monitor OHS energy sector procedures and policies	20
UEENEEE124A	Compile and produce an energy sector report	60
UEENEEE125A	Provide solutions to complex multiple path circuits problems	60
UEENEEE126A	Provide solutions to basic engineering computational problems	60
UEENEEE137A	Document and apply measures to control OHS risks associated with electrotechnology work	20
UEENEEH112A	Troubleshoot digital sub-systems	80
UEENEEH114A	Troubleshoot resonance circuits in an electronic apparatus	80

UEENEEH188A	Design and develop electronics/computer systems projects	40
UEENEEK132A	Develop energy sector strategies to address environmental and sustainability issues	20
Total points in core		1160

Elective Competency Standard Units

Complete Elective units to achieve a total of weighting of 1000 points from the following groups:

Group		Minimum points	Maximum points
A	Imported and Common Elective Units Imported units from other training packages and/or state accredited courses can be added to this group, but they must be selected from qualifications where the unit is first packaged at AQF level 6. If units have not being assigned a weighting by the relevant EE-Oz Industry Technical Advisory Committee, their weighting will be 10 points.	0	360
B	Qualification Elective Units	0	200
C	Qualification Elective Units	0	200
D	Qualification Elective Units	0	300
E	Qualification Elective Units You may select all your elective units from this Group	280	1000

Group A – Imported and Common Elective Units		Weighting Points
You may complete units to a maximum weighting of 360		
BSBINM501A	Manage an information or knowledge management system	50
BSBINN502A	Build and sustain an innovative work environment	50
BSBMGT502B	Manage people performance	70
BSBMGT516C	Facilitate continuous improvement	60

BSBWOR502B	Ensure team effectiveness	60
UEENEEC001B	Maintain documentation	20
UEENEEC002B	Source and purchase material/parts for installation or service jobs	20
UEENEEC003B	Provide quotations for installation or service jobs	20
UEENEEC010B	Deliver a service to customers	20
UEENEEED101A	Use computer applications relevant to a workplace	20
UEENEEEE020B	Provide basic instruction in the use of electrotechnology apparatus	20
	<p>Imported units from other training packages and/or state accredited courses can be added to this group, but they must be selected from qualifications where the unit is first packaged at AQF level 6. If units have not being assigned a weighting by the relevant EE-Oz Industry Technical Advisory Committee, their weighting will be 10 points.</p> <p>Note: For further information see Application of the NQC Flexibility Formula, UEE11 Electrotechnology Training Package, Version 1, Volume 1 Qualification Framework</p>	Up to 360 points

Group B – Qualification Elective Units		Weighting Points
You may complete units to a maximum weighting of 200		
UEENEEA101A	Assemble electronic components	40
UEENEEA102A	Select electronic components for assembly	20
UEENEEA104A	Modify electronic sub assemblies	40
UEENEEA106A	Use lead-free soldering techniques	40
UEENEEED129A	Develop web pages for engineering applications	40
UEENEEED130A	Select, install, configure and test multimedia components	40
UEENEEED143A	Install and configure a client computer operating system	40

	and software	
UEENEED146A	Set up and configure basic local area network (LAN)	80
UEENEED153A	Set up, configure and test biometric devices	40
UEENEEE105A	Fix and secure electrotechnology equipment	20
UEENEEE108A	Lay wiring/cabling and terminate accessories for extra-low voltage (ELV) circuits	40
UEENEEE123A	Solve basic problems electronic and digital equipment and circuits	80
UEENEEE179A	Identify and select components, accessories and materials for energy sector work activities	20
UEENEEF102A	Install and maintain cabling for multiple access to telecommunication services	120
UEENEEF104A	Install and modify performance data communication copper cabling	40
UEENEEF105A	Install and modify optical fibre performance data communication cabling	40
UEENEEF107A	Set up and configure the wireless capabilities of communications and data storage devices	40
UEENEEF108A	Select and arrange equipment for wireless communication networks	40
UEENEEF109A	Install and connect data and voice communication equipment	40
UEENEEF110A	Select and arrange data and voice equipment for local area networks	40
UEENEEH101A	Repair basic computer equipment faults by replacement of modules/sub-assemblies	40
UEENEEH103A	Repair routine business equipment faults	120
UEENEEH111A	Troubleshoot single phase input d.c. power supplies	40
UEENEEH113A	Troubleshoot amplifiers in an electronic apparatus	80
UEENEEH115A	Develop software solutions for microcontroller based systems	60

UEENEEH118A	Fault find and repair electronic apparatus	40
UEENEEH139A	Troubleshoot basic amplifier circuits	40
UEENEEH150A	Assemble and set up basic security systems	80
UEENEEH151A	Install large security systems	100
UEENEEH152A	Enter instructions and test wired and wireless security systems	40
UEENEEH166A	Troubleshoot microcontroller based hardware systems	40
UEENEEH169A	Solve problems in basic electronic circuits	100
UEENEEI116A	Enter and verify operating instructions in microprocessor equipped devices	20

Group C – Qualification Elective Units		Weighting Points
You may complete units to a maximum weighting of 200		
UEENEEC004B	Prepare specifications for the supply of materials and equipment for electrotechnology projects	40
UEENEEC005B	Estimate electrotechnology projects	40
UEENEED103A	Evaluate and modify object oriented code programs	40
UEENEED113A	Install and administer Unix based networked computers	80
UEENEED115A	Administer computer networks	80
UEENEED124A	Integrate multiple computer operating systems on a client server local area network	80
UEENEED154A	Analyse and implement biometric measuring techniques and applications	120
UEENEEE110A	Develop and implement energy sector maintenance programs	60
UEENEEE114A	Supervise and coordinate energy sector work activities	40
UEENEEH181A	Design electronic printed circuit boards	40

Group D – Qualification Elective Units		Weighting Points
You may complete units to a maximum weighting of 300		
UEENEEC006B	Prepare tender submissions for electrotechnology projects	60
UEENEEED110A	Set up, create and implement content for a web server	120
UEENEEED111A	Develop, implement and test object oriented code	140
UEENEEED116A	Develop computer network services	120
UEENEEED155A	Develop and validate biometric equipment/systems installation	120
UEENEEEEE070B	Write specifications for computer systems engineering projects	40
UEENEEED147A	Develop energy sector directory services	80
UEENEEEEE160A	Provide engineering solutions for uses of materials and thermodynamic effects	80
UEENEEEH145A	Develop engineering solutions to analogue electronic problems	80
UEENEEEH183A	Analyse the performance of wireless-based electronic/communication systems	40

Group E – Qualification Elective Units		Weighting Points
You must complete units to a minimum weighting of 280		
You may select all your elective units from this Group		
UEENEEED114A	Design and manage enterprise computer networks	80
UEENEEED118A	Design and implement Internetworking systems	120
UEENEEED119A	Design and implement Internetworking systems — advanced routing	100
UEENEEED120A	Design and implement Internetworking systems — remote access	100
UEENEEED121A	Design and implement Internetworking systems — multi-layer switching	100

UEENEED122A	Design and implement Internetworking systems — security	100
UEENEED123A	Design and implement Internetworking systems — wireless LANs/WANs	100
UEENEED148A	Plan computer systems projects	60
UEENEED150A	Develop control programs for micro-computer equipped devices	60
UEENEED151A	Provide programming solution for engineering problems	60
UEENEED152A	Design embedded controller systems	80
UEENEEE127A	Use advanced computational processes to provide solutions to energy sector engineering problems	80
UEENEEE128A	Develop engineering solutions to photonic system problems	80
UEENEED149A	Develop energy sector computer network applications infrastructure	80
UEENEEH147A	Assess electronic apparatus compliance	60
UEENEEH148A	Design and develop advanced digital systems	40
UEENEEH184A	Modify digital signal processing (DSP) based sub-systems	80
UEENEEH185A	Design signal-conditioning subsystems	80

Note:

1. Prerequisite pathways shall be identified and met for all elective units selected.
2. In selecting elective units considerations to career planning advice should be given to units that form part of a prerequisite pathway for the progression to achieve particular competencies or qualification at a higher level.
3. Registered training organisations shall also provide information related to the relevant pathway(s) that may be taken to achieve paraprofessional status ("associate membership") with a professional engineering membership organisation.

END OF QUALIFICATION**Unit Grid**

UEENEED102A Assemble, set-up and test personal computer hardware

UEENEED104A	Use software for engineering applications
UEENEED112A	Support computer software and hardware
UEENEED117A	Install and configure Internetworking systems
UEENEEE015B	Develop design brief for electrotechnology projects
UEENEEE038B	Participate in development and follow a personal competency development plan
UEENEEE081A	Apply material science to solving electrotechnology engineering problems
UEENEEE082A	Apply physics to solving electrotechnology engineering problems
UEENEEE101A	Apply Occupational Health Safety regulations, codes and practices in the workplace
UEENEEE102A	Fabricate, dismantle, assemble of electrotechnology components
UEENEEE104A	Solve problems in d.c. circuits
UEENEEE107A	Use drawings, diagrams, schedules, standards, codes and specifications
UEENEEE117A	Implement and monitor OHS energy sector procedures and policies
UEENEEE124A	Compile and produce an energy sector report
UEENEEE125A	Provide solutions to complex multiple path circuits problems
UEENEEE126A	Provide solutions to basic engineering computational problems
UEENEEE137A	Document and apply measures to control OHS risks associated with electrotechnology work
UEENEEH112A	Troubleshoot digital sub-systems
UEENEEH114A	Troubleshoot resonance circuits in an electronic apparatus
UEENEEH188A	Design and develop electronics/computer systems projects
UEENEEK132A	Develop energy sector strategies to address environmental and sustainability issues
BSBINM501A	Manage an information or knowledge management system
BSBINN502A	Build and sustain an innovative work environment
BSBMGT502B	Manage people performance
BSBMGT516C	Facilitate continuous improvement
BSBWOR502B	Ensure team effectiveness
UEENEEC001B	Maintain documentation
UEENEEC002B	Source and purchase material/parts for installation or service jobs
UEENEEC003B	Provide quotations for installation or service jobs
UEENEEC010B	Deliver a service to customers
UEENEED101A	Use computer applications relevant to a workplace
UEENEEE020B	Provide basic instruction in the use of electrotechnology apparatus
UEENEEA101A	Assemble electronic components
UEENEEA102A	Select electronic components for assembly
UEENEEA104A	Modify electronic sub assemblies
UEENEEA106A	Use lead-free soldering techniques
UEENEED129A	Develop web pages for engineering applications
UEENEED130A	Select, install, configure and test multimedia components
UEENEED143A	Install and configure a client computer operating system and software
UEENEED146A	Set up and configure basic local area network (LAN)
UEENEED153A	Set up, configure and test biometric devices
UEENEEE105A	Fix and secure electrotechnology equipment
UEENEEE108A	Lay wiring/cabbling and terminate accessories for extra-low voltage (ELV) circuits

UEENEEE123A	Solve basic problems electronic and digital equipment and circuits
UEENEEE179A	Identify and select components, accessories and materials for energy sector work activities
UEENEEF102A	Install and maintain cabling for multiple access to telecommunication services
UEENEEF104A	Install and modify performance data communication copper cabling
UEENEEF105A	Install and modify optical fibre performance data communication cabling
UEENEEF107A	Set up and configure the wireless capabilities of communications and data storage devices
UEENEEF108A	Select and arrange equipment for wireless communication networks
UEENEEF109A	Install and connect data and voice communication equipment
UEENEEF110A	Select and arrange data and voice equipment for local area networks
UEENEEH101A	Repair basic computer equipment faults by replacement of modules/sub-assemblies
UEENEEH103A	Repair routine business equipment faults
UEENEEH111A	Troubleshoot single phase input d.c. power supplies
UEENEEH113A	Troubleshoot amplifiers in an electronic apparatus
UEENEEH115A	Develop software solutions for microcontroller based systems
UEENEEH118A	Fault find and repair electronic apparatus
UEENEEH139A	Troubleshoot basic amplifier circuits
UEENEEH150A	Assemble and set up basic security systems
UEENEEH151A	Install large security systems
UEENEEH152A	Enter instructions and test wired and wireless security systems
UEENEEH166A	Troubleshoot microcontroller based hardware systems
UEENEEH169A	Solve problems in basic electronic circuits
UEENEEI116A	Enter and verify operating instructions in microprocessor equipped devices
UEENEEC004B	Prepare specifications for the supply of materials and equipment for electrotechnology projects
UEENEEC005B	Estimate electrotechnology projects
UEENEEED103A	Evaluate and modify object oriented code programs
UEENEEED113A	Install and administer Unix based networked computers
UEENEEED115A	Administer computer networks
UEENEEED124A	Integrate multiple computer operating systems on a client server local area network
UEENEEED154A	Analyse and implement biometric measuring techniques and applications
UEENEEEE110A	Develop and implement energy sector maintenance programs
UEENEEEE114A	Supervise and coordinate energy sector work activities
UEENEEH181A	Design electronic printed circuit boards
UEENEEC006B	Prepare tender submissions for electrotechnology projects
UEENEEED110A	Set up, create and implement content for a web server
UEENEEED111A	Develop, implement and test object oriented code
UEENEEED116A	Develop computer network services
UEENEEED155A	Develop and validate biometric equipment/systems installation
UEENEEEE070B	Write specifications for computer systems engineering projects
UEENEEED147A	Develop energy sector directory services

UEENEEE160A	Provide engineering solutions for uses of materials and thermodynamic effects
UEENEEH145A	Develop engineering solutions to analogue electronic problems
UEENEEH183A	Analyse the performance of wireless-based electronic/communication systems
UEENEEED114A	Design and manage enterprise computer networks
UEENEEED118A	Design and implement Internetworking systems
UEENEEED119A	Design and implement Internetworking systems — advanced routing
UEENEEED120A	Design and implement Internetworking systems — remote access
UEENEEED121A	Design and implement Internetworking systems — multi-layer switching
UEENEEED122A	Design and implement Internetworking systems — security
UEENEEED123A	Design and implement Internetworking systems — wireless LANs/WANs
UEENEEED148A	Plan computer systems projects
UEENEEED150A	Develop control programs for micro-computer equipped devices
UEENEEED151A	Provide programming solution for engineering problems
UEENEEED152A	Design embedded controller systems
UEENEEE127A	Use advanced computational processes to provide solutions to energy sector engineering problems
UEENEEE128A	Develop engineering solutions to photonic system problems
UEENEEED149A	Develop energy sector computer network applications infrastructure
UEENEEH147A	Assess electronic apparatus compliance
UEENEEH148A	Design and develop advanced digital systems
UEENEEH184A	Modify digital signal processing (DSP) based sub-systems
UEENEEH185A	Design signal-conditioning subsystems

UEE62011 Advanced Diploma of Engineering Technology - Renewable Energy

Modification History

Not applicable.

Description

Scope

This qualification provides competencies in preparation to design and validate/evaluate renewable energy equipment and systems and provide technical advice/sales.

Pathways Information

Not applicable.

Licensing/Regulatory Information

Not applicable.

Entry Requirements

Not applicable.

Employability Skills Summary

Not applicable.

Packaging Rules

Completion requirements

The requirements for granting this qualification will be met when competency is demonstrated and achieved for:

- All the Core competency standard units, defined in the Core Competency Standard Units table below and
- A combination of Elective competency standard units to achieve a total weighting of 900 points in accordance with the Elective Competency Standard Units table below.

Core Competency Standard Units	Weighting Points
All Core competency standard units to be achieved	

UEENEED104A	Use software for engineering applications	40
UEENEEE015B	Develop design briefs for electrotechnology projects	40
UEENEEE074B	Write specifications for renewable energy engineering projects	40
UEENEEE080A	Apply industry and community standards to professional engineering activities	20
UEENEEE081A	Apply material science to solving electrotechnology engineering problems	60
UEENEEE082A	Apply physics to solving electrotechnology engineering problems	60
UEENEEE101A	Apply Occupational Health Safety regulations, codes and practices in the workplace	20
UEENEEE102A	Fabricate, dismantle, assemble of utilities industry components	40
UEENEEE104A	Solve problems in d.c. circuits	80
UEENEEE105A	Fix and secure electrotechnology equipment	20
UEENEEE107A	Use drawings, diagrams, schedules, standards, codes and specifications	40
UEENEEE108A	Lay wiring/cabbling and terminate accessories for ELV circuits	40
UEENEEE117A	Implement and monitor energy sector OHS policies and procedures	20
UEENEEE124A	Compile and produce an energy sector detailed report	60
UEENEEE125A	Provide solutions to complex multiple path circuits problems	60
UEENEEE126A	Provide solutions to basic engineering computational problems	60
UEENEEE137A	Document and apply measures to control OHS risks associated with electrotechnology work	20
UEENEED101A	Solve problems in electromagnetic devices and related circuits	60

UEENEEG102A	Solve problems in low voltage a.c. circuits	80
UEENEEG149A	Provide engineering solutions to problems in complex polyphase power circuits	60
UEENEEK121A	Manage renewable energy (RE) projects	40
UEENEEK122A	Plan renewable energy (RE) projects	60
UEENEEK123A	Carry out basic repairs to renewable energy apparatus	80
UEENEEK125A	Solve basic problems in photovoltaic energy apparatus and systems	20
UEENEEK127A	Diagnose and rectify faults in renewable energy control systems	60
UEENEEK128A	Solve problems in stand-alone renewable energy apparatus and systems	60
UEENEEK132A	Develop energy sector strategies to address environmental and sustainability issues	20
Total points in core		1260

Elective Competency Standard Units

Complete Elective units to achieve a total of weighting of 900 points from the following groups:

Group		Minimum points	Maximum points
A	Imported and Common Elective Units Imported units from other training packages and/or state accredited courses can be added to this group, but they must be selected from qualifications where the unit is first packaged at AQF level 6. If units have not been assigned a weighting by the relevant EE-Oz Industry Technical Advisory Committee, their weighting will be 10 points.	0	360
B	Qualification Elective Units	0	240
C	Qualification Elective Units	0	220

Elective Competency Standard Units

Complete Elective units to achieve a total of weighting of 900 points from the following groups:

Group		Minimum points	Maximum points
A	Imported and Common Elective Units Imported units from other training packages and/or state accredited courses can be added to this group, but they must be selected from qualifications where the unit is first packaged at AQF level 6. If units have not being assigned a weighting by the relevant EE-Oz Industry Technical Advisory Committee, their weighting will be 10 points.	0	360
D	Qualification Elective Units	0	220
E	Qualification Elective Units You may select all your elective units from this Group	280	320

Group A – Imported and Common Elective Units		Weighting Points
You may complete units to a maximum weighting of 360		
BSBINM501A	Manage an information or knowledge management system	50
BSBINN502A	Build and sustain an innovative work environment	50
BSBMGT502B	Manage people performance	70
BSBMGT516C	Facilitate continuous improvement	60
BSBWOR502B	Ensure team effectiveness	60
UEENEEC001B	Maintain documentation	20
UEENEEC002B	Source and purchase material/parts for installation or service jobs	20
UEENEEC003B	Provide quotations for installation or service jobs	20
UEENEEC010B	Deliver a service to customers	20
UEENEED101A	Use computer applications relevant to a workplace	20

UEENEEE020B	Provide basic instruction in the use of electrotechnology apparatus	20
	<p>Imported units from other training packages and/or state accredited courses can be added to this group, but they must be selected from qualifications where the unit is first packaged at AQF level 6. If units have not being assigned a weighting by the relevant EE-Oz Industry Technical Advisory Committee, their weighting will be 10 points.</p> <p>Note: For further information see Application of the NQC Flexibility Formula, UEE11 Electrotechnology Training Package, Version 1, Volume 1 Qualification Framework</p>	Up to 360 points

Group B – Qualification Elective Units		Weighting Points
You may complete units to a maximum weighting of 240		
UEENEEE190A	Prepare engineering drawings using manual drafting and CAD for electrotechnology/utilities applications	60
UEENEEE191A	Prepare electrotechnology/utilities drawings using manual drafting and CAD equipment and software	60
UEENEEI150A	Develop, enter and verify discrete control programs for programmable controllers	60
UEENEEK107A	Conduct checks in the demand side use of remote area power supplies (RAPS)	40
UEENEEK108A	Plan periodic maintenance schedules of remote area power supplies (RAPS)	40
UEENEEK109A	Attend to breakdowns in remote area power supplies (RAPS)	20
UEENEEK117A	Maintain and repair facilities associated with remote area essential services	120
UEENEEK120A	Maintain operation of remote area power generation plant	120
UEENEEK124A	Solve basic problems in micro hydro systems	20
UEENEEK130A	Solve problems in wind energy conversion apparatus	60

	and systems	
UEENEEK134A	Install standalone extra low voltage photovoltaic power systems	60
UEENEEK137A	Install, set up and maintain ELV micro-hydro systems rated up to 6.4 kW	20
UEENEEK143A	Install wind energy conversion systems rated to 10 kW for ELV stand-alone applications	20
UEENEEK149A	Verify compliance and functionality of a renewable energy installations	40
UEENEEP024A	Attach cords and plugs to electrical equipment for connection to a single phase 230 Volt supply	20
UEENEEP025A	Attach cords, cables and plugs to electrical equipment for connection to 1000 Va.c. or 1500 Vd.c. supply	20
UEENEEP026A	Conduct in-service safety testing of electrical cord assemblies and cord connected appliances/equipment	20

Group C – Qualification Elective Units		Weighting Points
You may complete units to a maximum weighting of 220		
UEENEEC004B	Prepare specifications for the supply of equipment and materials for electrotechnology projects	40
UEENEEC005B	Estimate electrotechnology projects	40
UEENEEE114A	Supervise and coordinate utilities /electrotechnology work activities	40
UEENEEE192A	Produce detailed electrotechnology/utilities drawings using computer aided design equipment and software	60
UEENEEI151A	Develop, enter and verify programs for industrial control systems using high level instructions	60
UEENEEI152A	Develop, enter and verify programs in Supervisory Control and Data Acquisition systems	60
UEENEEK110A	Coordinate maintenance of renewable energy (RE) apparatus and systems	20
UEENEEK135A	Design photovoltaic grid connected power supply	60

	systems	
--	---------	--

Group D – Qualification Elective Units		Weighting Points
You may complete units to a maximum weighting of 220		
UEENEEG180A	Develop detailed and complex drawings for electrical systems using CAD systems	60
UEENEEK129A	Design renewable energy (RE) heating systems	120
UEENEEK131A	Design wind energy conversion systems (WECS) rated to 10 kW.	60
UEENEEK138A	Design micro-hydro power systems	60

Group E – Qualification Elective Units		Weighting Points
You must complete units to a minimum weighting of 280 to a maximum of 320		
UEENEEK133A	Design hybrid renewable power systems	80
UEENEEK139A	Design stand-alone renewable energy power systems	40
UEENEEK140A	Develop engineering solutions to renewable energy problems	60
UEENEEK146A	Design energy management controls systems for electrical installations in buildings	80
UEENEEK151A	Develop engineering strategies for energy reduction in buildings	60

Note:

1. Prerequisite pathways shall be identified and met for all elective units selected.
2. In selecting elective units considerations to career planning advice should be given to units that form part of a prerequisite pathway for the progression to achieve particular competencies or qualification at a higher level.
3. Registered training organisations shall also provide information related to the relevant pathway(s) that may be taken to achieve paraprofessional status ("associate membership") with a professional engineering membership organisation.

END OF QUALIFICATION

Unit Grid

UEENEEED104A	Use software for engineering applications
UEENEEEE015B	Develop design briefs for electrotechnology projects
UEENEEEE074B	Write specifications for renewable energy engineering projects
UEENEEEE080A	Apply industry and community standards to professional engineering activities
UEENEEEE081A	Apply material science to solving electrotechnology engineering problems
UEENEEEE082A	Apply physics to solving electrotechnology engineering problems
UEENEEEE101A	Apply Occupational Health Safety regulations, codes and practices in the workplace
UEENEEEE102A	Fabricate, dismantle, assemble of utilities industry components
UEENEEEE104A	Solve problems in d.c. circuits
UEENEEEE105A	Fix and secure electrotechnology equipment
UEENEEEE107A	Use drawings, diagrams, schedules, standards, codes and specifications
UEENEEEE108A	Lay wiring/cabling and terminate accessories for ELV circuits
UEENEEEE117A	Implement and monitor energy sector OHS policies and procedures
UEENEEEE124A	Compile and produce an energy sector detailed report
UEENEEEE125A	Provide solutions to complex multiple path circuits problems
UEENEEEE126A	Provide solutions to basic engineering computational problems
UEENEEEE137A	Document and apply measures to control OHS risks associated with electrotechnology work
UEENEEEG101A	Solve problems in electromagnetic devices and related circuits
UEENEEEG102A	Solve problems in low voltage a.c. circuits
UEENEEEG149A	Provide engineering solutions to problems in complex polyphase power circuits
UEENEEK121A	Manage renewable energy (RE) projects
UEENEEK122A	Plan renewable energy (RE) projects
UEENEEK123A	Carry out basic repairs to renewable energy apparatus
UEENEEK125A	Solve basic problems in photovoltaic energy apparatus and systems
UEENEEK127A	Diagnose and rectify faults in renewable energy control systems
UEENEEK128A	Solve problems in stand-alone renewable energy apparatus and systems
UEENEEK132A	Develop energy sector strategies to address environmental and sustainability issues
BSBINM501A	Manage an information or knowledge management system
BSBINN502A	Build and sustain an innovative work environment
BSBMGT502B	Manage people performance
BSBMGT516C	Facilitate continuous improvement
BSBWOR502B	Ensure team effectiveness
UEENEEEC001B	Maintain documentation
UEENEEEC002B	Source and purchase material/parts for installation or service jobs
UEENEEEC003B	Provide quotations for installation or service jobs
UEENEEEC010B	Deliver a service to customers

UEENEEI151A	Develop, enter and verify programs for industrial control systems using high level instructions
UEENEEI152A	Develop, enter and verify programs in Supervisory Control and Data Acquisition systems
UEENEEK110A	Coordinate maintenance of renewable energy (RE) apparatus and systems
UEENEEK135A	Design photovoltaic grid connected power supply systems
UEENEEG180A	Develop detailed and complex drawings for electrical systems using CAD systems
UEENEEK129A	Design renewable energy (RE) heating systems
UEENEEK131A	Design wind energy conversion systems (WECS) rated to 10 kW.
UEENEEK138A	Design micro-hydro power systems
UEENEEK133A	Design hybrid renewable power systems
UEENEEK139A	Design stand-alone renewable energy power systems
UEENEEK140A	Develop engineering solutions to renewable energy problems

UEENEEK146A Design energy management controls systems for electrical installations in buildings

UEENEEK151A Develop engineering strategies for energy reduction in buildings

Custom Content Section

Not applicable.

UEE62111 Advanced Diploma of Engineering Technology - Electrical

Modification History

Not applicable.

Description

Scope

This qualification provides enabling competencies to design and validate/evaluate electrical equipment and systems and provide technical advice/sales.

Pathways Information

Not applicable.

Licensing/Regulatory Information

Not applicable.

Entry Requirements

Not applicable.

Employability Skills Summary

Not applicable.

Packaging Rules

Completion requirements

The requirements for granting this qualification will be met when competency is demonstrated and achieved for:

- All the Core competency standard units, defined in the Core Competency Standard Units table below and
- A combination of Elective competency standard units to achieve a total weighting of 720 points in accordance with the Elective Competency Standard Units table below.

<p>Core Competency Standard Units All Core competency standard units to be achieved</p>	<p>Weighting Points</p>
--	--------------------------------

UEENEED104A	Use software for engineering applications	40
UEENEEE011C	Manage risk in electrotechnology activities	60
UEENEEE015B	Develop design briefs for electrotechnology projects	40
UEENEEE071B	Write specifications for electrical engineering projects	40
UEENEEE080A	Apply industry and community standards to engineering activities	20
UEENEEE081A	Apply material science to solving electrotechnology engineering problems	60
UEENEEE082A	Apply physics to solving electrotechnology engineering problems	60
UEENEEE083A	Establish and follow a competency development plan in an electrotechnology engineering discipline	120
UEENEEE101A	Apply Occupational Health and Safety regulations, codes and practices in the workplace	20
UEENEEE102A	Fabricate, assemble and dismantle utilities industry components	40
UEENEEE104A	Solve problems in d.c. circuits	80
UEENEEE107A	Use drawings, diagrams, schedules, standards, codes and specifications	40
UEENEEE117A	Implement and monitor energy sector OHS policies and procedures	20
UEENEEE124A	Compile and produce an energy sector detailed report	60
UEENEEE125A	Provide solutions to complex multiple path circuits problems	60
UEENEEE126A	Provide solutions to basic engineering computational problems	60
UEENEEE137A	Document and apply measures to control OHS risks associated with electrotechnology work	20
UEENEED006A	Solve problems in single and three phase low voltage machines	80
UEENEED033A	Solve problems in single and three phase low voltage	60

	electrical apparatus and circuits	
UEENEEG063A	Arrange circuits, control and protection for general electrical installations	40
UEENEEG101A	Solve problems in electromagnetic devices and related circuits	60
UEENEEG102A	Solve problems in low voltage a.c. circuits	80
UEENEEG106A	Terminate cables, cords and accessories for low voltage circuits	40
UEENEEG107A	Select wiring systems and cables for low voltage general electrical installations	60
UEENEEG149A	Provide engineering solutions to problems in complex polyphase power circuits	60
UEENEEG169A	Manage large electrical projects	40
UEENEEG170A	Plan large electrical projects	60
UEENEEK132A	Develop energy sector strategies to address environmental and sustainability issues	20
Total points in core		1440

Elective Competency Standard Units

Complete Elective units to achieve a total of weighting of 720 points from the following groups:

Group		Minimum points	Maximum points
A	<p>Imported and Common Elective Units</p> <p>Imported units from other training packages and/or state accredited courses can be added to this group, but they must be selected from qualifications where the unit is first packaged at AQF level 6. If units have not being assigned a weighting by the relevant EE-Oz Industry Technical Advisory Committee, their weighting will be 10 points.</p>	0	360
B	<p>Qualification Elective Units</p>	0	160

Elective Competency Standard Units

Complete Elective units to achieve a total of weighting of 720 points from the following groups:

Group		Minimum points	Maximum points
A	Imported and Common Elective Units Imported units from other training packages and/or state accredited courses can be added to this group, but they must be selected from qualifications where the unit is first packaged at AQF level 6. If units have not being assigned a weighting by the relevant EE-Oz Industry Technical Advisory Committee, their weighting will be 10 points.	0	360
C	Qualification Elective Units	0	220
D	Qualification Elective Units	0	220
E	Qualification Elective Units You may select all your elective units from this Group	200	720

Group A – Imported and Common Elective Units		Weighting Points
You may complete units to a maximum weighting of 360		
BSBINM501A	Manage an information or knowledge management system	50
BSBINN502A	Build and sustain an innovative work environment	50
BSBMGT502B	Manage people performance	70
BSBMGT516C	Facilitate continuous improvement	60
BSBWOR502B	Ensure team effectiveness	60
UEENEEC001B	Maintain documentation	20
UEENEEC002B	Source and purchase material/parts for installation or service jobs	20
UEENEEC003B	Provide quotations for installation or service jobs	20
UEENEEC010B	Deliver a service to customers	20

UEENEED101A	Use basic computer applications relevant to a energy sector workplace	20
UEENEEE020B	Provide basic instruction in the use of electrotechnology apparatus	20
	<p>Imported units from other training packages and/or state accredited courses can be added to this group, but they must be selected from qualifications where the unit is first packaged at AQF level 6. If units have not being assigned a weighting by the relevant EE-Oz Industry Technical Advisory Committee, their weighting will be 10 points.</p> <p>Note: For further information see Application of the NQC Flexibility Formula, UEE11 Electrotechnology Training Package, Version 1, Volume 1 Qualification Framework</p>	Up to 360 points

Group B – Qualification Elective Units		Weighting Points
You may complete units to a maximum weighting of 160		
UEENEEE105A	Fix and secure electrotechnology equipment	20
UEENEEE121A	Plan an residential integrated cabling system	40
UEENEEE190A	Prepare engineering drawings using manual drafting and CAD for electrotechnology/utilities applications	60
UEENEEE191A	Prepare electrotechnology/utilities drawings using manual drafting and CAD equipment and software	60
UEENEEF102A	Install and maintain cabling for multiple access to telecommunication services	120
UEENEEF104A	Install and modify performance data communication copper cabling	40
UEENEEG111A	Carry out repairs to electrical apparatus	40
UEENEEG120A	Select and arrange circuits and equipment for special electrical installations	60
UEENEEG181A	Provide advice on effective and energy efficient lighting products	20

UEENEEG182A	Supply effective and efficient lighting products for domestic and small commercial applications	40
UEENEEG183A	Provide advice on the application of energy efficient lighting for ambient and aesthetic effect	20
UEENEEH102A	Repair basic electronic apparatus faults by replacement of components	40
UEENEEH111A	Troubleshoot single phase input d.c. power supplies	40
UEENEEH150A	Assemble and set up basic wired and wireless security systems	80
UEENEEI101A	Use instrumentation drawings, specifications, standards and equipment manuals	40
UEENEEI116A	Enter and verify operating instructions in microprocessor equipped devices	20
UEENEEI138A	Provide solutions to extra low voltage (ELV) electro-pneumatic control systems and drives	60
UEENEEI140A	Plan the electrical installation of integrated systems	20
UEENEEI141A	Develop electrical integrated systems	20
UEENEEI150A	Develop, enter and verify discrete control programs for programmable controllers	60
UEENEEK125A	Solve basic problems in photovoltaic energy apparatus and systems	20

Group C – Qualification Elective Units		Weighting Points
You may complete units to a maximum weighting of 220		
UEENEEC005B	Estimate electrotechnology projects	40
UEENEEG125A	Plan LV electrical installations with a demand up to 400A per phase	40
UEENEEG128A	Plan layouts for electrical switchboards and control panels	40
UEENEEG179A	Develop detailed electrical drawings	60
UEENEEG184A	Provide photometric data for illumination system design	60

UEENEEG185A	Select effective and efficient light sources and luminaires for given locations and designs	60
UEENEEG186A	Design effective and efficient lighting for residential and commercial buildings	20
UEENEEG188A	Prepare quotations for the supply of effective and efficient lighting products for lighting projects	20
UEENEEI142A	Develop an electrical integrated system interface for access through a touch screen	20
UEENEEI143A	Develop access control of electrical integrated systems using logic-based programming tools	20
UEENEEI144A	Develop interfaces for multiple access methods to monitor, schedule and control an electrical integrated system	20
UEENEEI151A	Develop, enter and verify programs for industrial control systems using high level instructions	60
UEENEEI152A	Develop, enter and verify programs in Supervisory Control and Data Acquisition systems	60
UEENEEI155A	Develop structured programs to control external devices	40
UEENEEK135A	Design photovoltaic grid connected power supply systems	60

Group D – Qualification Elective Units		Weighting Points
You may complete units to a maximum weighting of 220		
UEENEEC006B	Prepare tender submissions for electrotechnology projects	60
UEENEEE110A	Develop and implement energy sector maintenance programs	60
UEENEEI147A	Develop energy sector directory services	80
UEENEEG127A	Design LV electrical installations with a demand greater than 400 A per phase	40
UEENEEG131A	Evaluate performance of LV electrical apparatus	40
UEENEEG180A	Develop detailed and complex drawings for electrical systems using CAD systems	60

UEENEEG187A	Design effective and efficient lighting for public, open and sports areas	20
UEENEEI145A	Diagnose and rectify faults in a.c. motor drive systems	60
UEENEEI146A	Diagnose and rectify faults in d.c. motor drive systems	60
UEENEEI147A	Diagnose and rectify faults in servo drive systems	60
UEENEEI156A	Develop and test code for microcontroller devices	60
UEENEEI157A	Configure and maintain industrial control system networks	60
UEENEEK129A	Design renewable energy (RE) heating systems	120
UEENEEK131A	Design wind energy conversion systems (WECS) rated to 10 kW.	60
UEENEEK138A	Design micro-hydro power systems	60

Group E – Qualification Elective Units		Weighting Points
You must complete units to a minimum weighting of 200 You may select all your elective units from this Group		
UEENEEC007B	Manage contract variations	40
UEENEEE078B	Contribute to risk management in electrotechnology systems	20
UEENEEE127A	Use advanced computational processes to provide solutions to engineering problems	80
UEENEEE128A	Develop engineering solutions to photonic problems	80
UEENEEED149A	Develop energy sector computer network applications infrastructure	80
UEENEEE160A	Provide engineering solutions for uses of materials and thermodynamic effects	80
UEENEEE161A	Analyse static and dynamic parameters of electrotechnology/utilities equipment	80
UEENEEE162A	Select drive components for equipment design	80
UEENEEE163A	Analyse materials for suitability in electrotechnology/utilities equipment	80

UEENEEE164A	Design electrical machine drives and production layout plans	80
UEENEEG130A	Design electrical switchboards rated for high fault levels	60
UEENEEG143A	Develop engineering solutions for synchronous machine problems	60
UEENEEG144A	Develop engineering solutions for direct current machine problems	60
UEENEEG145A	Develop engineering solutions for induction machine problems	60
UEENEEG160A	Evaluate performance of LV electrical machines	40
UEENEEG161A	Design and develop modifications for electrical machines	60
UEENEEH147A	Assess compliance of electronic apparatus	60
UEENEEH184A	Modify DSP based sub-systems	80
UEENEEH185A	Design a signal-conditioning subsystem	80
UEENEEH188A	Design and develop electronics/computer systems projects	40
UEENEEI123A	Design electronic control and instrumentation systems	60
UEENEEI128A	Set up controls on complex fluid systems	80
UEENEEI129A	Set up electronically controlled mechanically operated complex systems	80
UEENEEI130A	Set up electronically controlled robotically operated complex systems	80
UEENEEI153A	Design and configure Human-Machine Interface (HMI) networks	60
UEENEEI154A	Design a computer based control system	120
UEENEEK133A	Design hybrid renewable power systems	80
UEENEEK139A	Design stand-alone renewable energy power systems	40
UEENEEK140A	Develop engineering solutions to renewable energy problems	60
UEENEEK146A	Design energy management controls systems for electrical	80

	installations in buildings	
UEENEEK151A	Develop engineering strategies for energy reduction in buildings	60
UEENEEM052A	Classify hazardous areas — gas atmospheres	40
UEENEEM053A	Classify hazardous areas — dust atmospheres	40
UEENEEM057A	Design explosion-protected electrical systems and installations — gas atmospheres	20
UEENEEM058A	Design explosion-protected electrical systems and installations — dust atmospheres	20
UEENEEM059A	Design explosion-protected electrical systems and installations — pressurisation	20
UEENEEM068A	Assess the fitness-for-purpose of hazardous areas explosion-protected equipment — gas atmospheres	60
UEENEEM075A	Design explosion-protected electrical systems — Coal mining	20
UEENEEM079A	Design of gas detection systems and installations	20

Note:

1. Pre-requisite pathways shall be identified and met for all elective units selected.
2. In selecting elective units considerations to career planning advice should be given to units that form part of a pre-requisite pathway for the progression to achieve particular competencies or qualification at a higher level.
3. Registered training organisations shall also provide information related to the relevant pathway(s) that may be taken to achieve paraprofessional status ("associate membership") with a professional engineering membership organisation.

END OF QUALIFICATION**Unit Grid**

UEENEED104A	Use software for engineering applications
UEENEEE011C	Manage risk in electrotechnology activities
UEENEEE015B	Develop design briefs for electrotechnology projects
UEENEEE071B	Write specifications for electrical engineering projects
UEENEEE080A	Apply industry and community standards to engineering activities
UEENEEE081A	Apply material science to solving electrotechnology engineering problems
UEENEEE082A	Apply physics to solving electrotechnology engineering problems

UEENEEE083A	Establish and follow a competency development plan in an electrotechnology engineering discipline
UEENEEE101A	Apply Occupational Health and Safety regulations, codes and practices in the workplace
UEENEEE102A	Fabricate, assemble and dismantle utilities industry components
UEENEEE104A	Solve problems in d.c. circuits
UEENEEE107A	Use drawings, diagrams, schedules, standards, codes and specifications
UEENEEE117A	Implement and monitor energy sector OHS policies and procedures
UEENEEE124A	Compile and produce an energy sector detailed report
UEENEEE125A	Provide solutions to complex multiple path circuits problems
UEENEEE126A	Provide solutions to basic engineering computational problems
UEENEEE137A	Document and apply measures to control OHS risks associated with electrotechnology work
UEENEEG006A	Solve problems in single and three phase low voltage machines
UEENEEG033A	Solve problems in single and three phase low voltage electrical apparatus and circuits
UEENEEG063A	Arrange circuits, control and protection for general electrical installations
UEENEEG101A	Solve problems in electromagnetic devices and related circuits
UEENEEG102A	Solve problems in low voltage a.c. circuits
UEENEEG106A	Terminate cables, cords and accessories for low voltage circuits
UEENEEG107A	Select wiring systems and cables for low voltage general electrical installations
UEENEEG149A	Provide engineering solutions to problems in complex polyphase power circuits
UEENEEG169A	Manage large electrical projects
UEENEEG170A	Plan large electrical projects
UEENEEK132A	Develop energy sector strategies to address environmental and sustainability issues
BSBINM501A	Manage an information or knowledge management system
BSBINN502A	Build and sustain an innovative work environment
BSBMGT502B	Manage people performance
BSBMGT516C	Facilitate continuous improvement
BSBWOR502B	Ensure team effectiveness
UEENEEC001B	Maintain documentation
UEENEEC002B	Source and purchase material/parts for installation or service jobs
UEENEEC003B	Provide quotations for installation or service jobs
UEENEEC010B	Deliver a service to customers
UEENEEED101A	Use basic computer applications relevant to a energy sector workplace
UEENEEE020B	Provide basic instruction in the use of electrotechnology apparatus
UEENEEE105A	Fix and secure electrotechnology equipment
UEENEEE121A	Plan an residential integrated cabling system
UEENEEE190A	Prepare engineering drawings using manual drafting and CAD for electrotechnology/utilities applications
UEENEEE191A	Prepare electrotechnology/utilities drawings using manual drafting and CAD equipment and software
UEENEEF102A	Install and maintain cabling for multiple access to telecommunication services

UEENEEF104A	Install and modify performance data communication copper cabling
UEENEEG111A	Carry out repairs to electrical apparatus
UEENEEG120A	Select and arrange circuits and equipment for special electrical installations
UEENEEG181A	Provide advice on effective and energy efficient lighting products
UEENEEG182A	Supply effective and efficient lighting products for domestic and small commercial applications
UEENEEG183A	Provide advice on the application of energy efficient lighting for ambient and aesthetic effect
UEENEEH102A	Repair basic electronic apparatus faults by replacement of components
UEENEEH111A	Troubleshoot single phase input d.c. power supplies
UEENEEH150A	Assemble and set up basic wired and wireless security systems
UEENEEI101A	Use instrumentation drawings, specifications, standards and equipment manuals
UEENEEI116A	Enter and verify operating instructions in microprocessor equipped devices
UEENEEI138A	Provide solutions to extra low voltage (ELV) electro-pneumatic control systems and drives
UEENEEI140A	Plan the electrical installation of integrated systems
UEENEEI141A	Develop electrical integrated systems
UEENEEI150A	Develop, enter and verify discrete control programs for programmable controllers
UEENEEK125A	Solve basic problems in photovoltaic energy apparatus and systems
UEENEEC005B	Estimate electrotechnology projects
UEENEEG125A	Plan LV electrical installations with a demand up to 400A per phase
UEENEEG128A	Plan layouts for electrical switchboards and control panels
UEENEEG179A	Develop detailed electrical drawings
UEENEEG184A	Provide photometric data for illumination system design
UEENEEG185A	Select effective and efficient light sources and luminaires for given locations and designs
UEENEEG186A	Design effective and efficient lighting for residential and commercial buildings
UEENEEG188A	Prepare quotations for the supply of effective and efficient lighting products for lighting projects
UEENEEI142A	Develop an electrical integrated system interface for access through a touch screen
UEENEEI143A	Develop access control of electrical integrated systems using logic-based programming tools
UEENEEI144A	Develop interfaces for multiple access methods to monitor, schedule and control an electrical integrated system
UEENEEI151A	Develop, enter and verify programs for industrial control systems using high level instructions
UEENEEI152A	Develop, enter and verify programs in Supervisory Control and Data Acquisition systems
UEENEEI155A	Develop structured programs to control external devices
UEENEEK135A	Design photovoltaic grid connected power supply systems
UEENEEC006B	Prepare tender submissions for electrotechnology projects
UEENEEE110A	Develop and implement energy sector maintenance programs

UEENEE147A	Develop energy sector directory services
UEENEE127A	Design LV electrical installations with a demand greater than 400 A per phase
UEENEE131A	Evaluate performance of LV electrical apparatus
UEENEE180A	Develop detailed and complex drawings for electrical systems using CAD systems
UEENEE187A	Design effective and efficient lighting for public, open and sports areas
UEENEE145A	Diagnose and rectify faults in a.c. motor drive systems
UEENEE146A	Diagnose and rectify faults in d.c. motor drive systems
UEENEE147A	Diagnose and rectify faults in servo drive systems
UEENEE156A	Develop and test code for microcontroller devices
UEENEE157A	Configure and maintain industrial control system networks
UEENEE129A	Design renewable energy (RE) heating systems
UEENEE131A	Design wind energy conversion systems (WECS) rated to 10 kW.
UEENEE138A	Design micro-hydro power systems
UEENEE007B	Manage contract variations
UEENEE078B	Contribute to risk management in electrotechnology systems
UEENEE127A	Use advanced computational processes to provide solutions to engineering problems
UEENEE128A	Develop engineering solutions to photonic problems
UEENEE149A	Develop energy sector computer network applications infrastructure
UEENEE160A	Provide engineering solutions for uses of materials and thermodynamic effects
UEENEE161A	Analyse static and dynamic parameters of electrotechnology/utilities equipment
UEENEE162A	Select drive components for equipment design
UEENEE163A	Analyse materials for suitability in electrotechnology/utilities equipment
UEENEE164A	Design electrical machine drives and production layout plans
UEENEE130A	Design electrical switchboards rated for high fault levels
UEENEE143A	Develop engineering solutions for synchronous machine problems
UEENEE144A	Develop engineering solutions for direct current machine problems
UEENEE145A	Develop engineering solutions for induction machine problems
UEENEE160A	Evaluate performance of LV electrical machines
UEENEE161A	Design and develop modifications for electrical machines
UEENEE147A	Assess compliance of electronic apparatus
UEENEE184A	Modify DSP based sub-systems
UEENEE185A	Design a signal-conditioning subsystem
UEENEE188A	Design and develop electronics/computer systems projects
UEENEE123A	Design electronic control and instrumentation systems
UEENEE128A	Set up controls on complex fluid systems
UEENEE129A	Set up electronically controlled mechanically operated complex systems
UEENEE130A	Set up electronically controlled robotically operated complex systems
UEENEE153A	Design and configure Human-Machine Interface (HMI) networks
UEENEE154A	Design a computer based control system
UEENEE133A	Design hybrid renewable power systems
UEENEE139A	Design stand-alone renewable energy power systems

UEENEEK140A	Develop engineering solutions to renewable energy problems
UEENEEK146A	Design energy management controls systems for electrical installations in buildings
UEENEEK151A	Develop engineering strategies for energy reduction in buildings
UEENEEM052A	Classify hazardous areas — gas atmospheres
UEENEEM053A	Classify hazardous areas — dust atmospheres
UEENEEM057A	Design explosion-protected electrical systems and installations — gas atmospheres
UEENEEM058A	Design explosion-protected electrical systems and installations — dust atmospheres
UEENEEM059A	Design explosion-protected electrical systems and installations — pressurisation
UEENEEM068A	Assess the fitness-for-purpose of hazardous areas explosion-protected equipment — gas atmospheres
UEENEEM075A	Design explosion-protected electrical systems — Coal mining
UEENEEM079A	Design of gas detection systems and installations

UEE62211 Advanced Diploma of Electrical - Engineering

Modification History

Not Applicable

Description

Scope

This qualification provides competencies to design and validate/evaluate electrical equipment and systems, manage risk, estimate and manage projects and provide technical advice/sales. It develops competencies in the ethical and responsible application of mathematics, science, engineering techniques, Standards and Codes of Practice, engineering design practices, supervision and management of physical, human and financial resources in engineering.

The core competencies of this qualification meet the prescribed requirements for Engineering Associate membership of Engineers Australia and ERAC requirements for an 'Electrician's licence'.

Participants seeking Engineers Australia membership should ensure that their training provider is accredited by that body to provide Engineering Education Programs at the level of Engineering Associate.

Packaging Rules

Completion requirements

The requirements for granting this qualification will be met when competency is demonstrated and achieved for:

- All the Core competency standard units, defined in the Core Competency Standard Units table below and
- A combination of Elective competency standard units to achieve a total weighting of 480 points in accordance with the Elective Competency Standard Units table below.

Note: UEENEEG105A - Those holding an 'Unrestricted Electricians Licence or equivalent issued in an Australian State or Territory meet the requirements of this unit and its pre-requisite requirements.

Core Competency Standard Units		Weighting Points
All Core competency standard units to be achieved		
UEENEEED104A	Use engineering applications software on personal computers	40
UEENEEEE006B	Apply methods to maintain currency of industry developments	20
UEENEEEE011C	Manage risk in electrotechnology activities	60
UEENEEEE015B	Develop design briefs for electrotechnology projects	40
UEENEEEE071B	Write specifications for electrical engineering projects	40
UEENEEEE080A	Apply industry and community standards to engineering activities	20
UEENEEEE081A	Apply material science to solving electrotechnology engineering problems	60
UEENEEEE082A	Apply physics to solving electrotechnology engineering problems	60
UEENEEEE083A	Establish and follow a competency development plan in an electrotechnology engineering discipline	120
UEENEEEE101A	Apply Occupational Health and Safety regulations, codes and practices in the workplace	20
UEENEEEE102A	Fabricate, assemble and dismantle utilities industry components	40
UEENEEEE104A	Solve problems in d.c. circuits	80
UEENEEEE105A	Fix and secure electrotechnology equipment	20
UEENEEEE107A	Use drawings, diagrams, schedules, standards, codes and specifications	40

UEENEEE117A	Implement and monitor energy sector OHS policies and procedures	20
UEENEEE124A	Compile and produce an energy sector detailed report	60
UEENEEE125A	Provide engineering solutions for problems in complex multiple path circuits	60
UEENEEE126A	Provide solutions to basic engineering computational problems	60
UEENEEE137A	Document and apply measures to control OHS risks associated with electrotechnology work	20
UEENEEG006A	Solve problems in single and three phase low voltage machines	80
UEENEEG033A	Solve problems in single and three phase low voltage electrical apparatus and circuits	60
UEENEEG063A	Arrange circuits, control and protection for general electrical installations	40
UEENEEG101A	Solve problems in electromagnetic devices and related circuits	60
UEENEEG102A	Solve problems in low voltage a.c. circuits	80
UEENEEG103A	Install low voltage wiring and accessories	20
UEENEEG104A	Install appliances, switchgear and associated accessories for low voltage electrical installations	20
UEENEEG105A	Verify compliance and functionality of low voltage general electrical installations	40
UEENEEG106A	Terminate cables, cords and accessories for low voltage circuits	40
UEENEEG107A	Select wiring systems and cables for low voltage general electrical installations	60
UEENEEG108A	Trouble-shoot and repair faults in low voltage electrical apparatus and circuits	40
UEENEEG109A	Develop and connect electrical control circuits	80
UEENEEG149A	Provide engineering solutions to problems in complex polyphase power circuits	60

UEENEEG169A	Manage large electrical projects	40
UEENEEG170A	Plan large electrical projects	60
UEENEEK132A	Develop strategies to address environmental and sustainability issues in the energy sector	20
Total points in core		1680

Elective Competency Standard Units

Complete Elective units to achieve a total of weighting of 480 points from the following groups:

Group		Minimum points	Maximum points
A	Imported and Common Elective Units Imported units from other training packages and/or state accredited courses can be added to this group, but they must be selected from qualifications where the unit is first packaged at AQF level 6. If units have not being assigned a weighting by the relevant EE-Oz Industry Technical Advisory Committee, their weighting will be 10 points.	0	220
B	Qualification Elective Units	0	60
C	Qualification Elective Units	0	100
D	Qualification Elective Units	0	60
E	Qualification Elective Units You may select the majority of your elective units from this Group	260	480

Group A – Imported and Common Electives Units		Weighting Points
You may complete units to a maximum weighting of 220		
BSBMGT502B	Manage people performance	70
BSBINM501A	Manage an information or knowledge management system	50
BSBMGT516C	Facilitate continuous improvement	60

BSBINN502A	Build and sustain an innovative work environment	50
BSBWOR502B	Ensure team effectiveness	60
	<p>Imported units from other training packages and/or state accredited courses can be added to this group, but they must be selected from qualifications where the unit is first packaged at AQF level 6. If units have not being assigned a weighting by the relevant EE-Oz Industry Technical Advisory Committee, their weighting will be 10 points.</p> <p>Note: For further information see Application of the NQC Flexibility Formula, UEE11 Electrotechnology Training Package, Version 1, Volume 1 Qualification Framework</p>	Up to 220 points

Group B – Qualification Elective Units		Weighting Points
You may complete units to a maximum weighting of 60		
UEENEEA110A	Assemble, mount and connect control gear and switchgear	40
UEENEEA112A	Fabricate and assemble bus bars	40
UEENEEA113A	Mount and wire control panel equipment	40
UEENEEE121A	Plan an residential integrated cabling system	40
UEENEEF102A	Install and maintain cabling for multiple access to telecommunication services	120
UEENEEF104A	Install and modify performance data communication copper cabling	40
UEENEEG110A	Diagnose and rectify faults in d.c. electrical apparatus and circuits	60
UEENEEG111A	Carry out repairs to electrical apparatus	40
UEENEEG113A	Install and maintain emergency and safety systems.	60
UEENEEG116A	Diagnose and rectify faults in lifts/escalator systems	80
UEENEEG118A	Maintain operation of electrical mining equipment and systems	60

UEENEEG119A	Maintain the operation of electrical marine equipment and systems	60
UEENEEG120A	Select and arrange circuits and equipment for special electrical installations	60
UEENEEG126A	Install and maintain LV field power and distribution systems with a demand up to 200 A per phase	40
UEENEEG129A	Overhaul and repair switchgear and controlgear	60
UEENEEG150A	Wind electrical coils	40
UEENEEG151A	Place and connect electrical coils	40
UEENEEG152A	Rewind single phase machines	40
UEENEEG153A	Rewind LV three phase induction machines rated for low voltage	60
UEENEEG154A	Rewind LV direct current machines	60
UEENEEG157A	Conduct electrical tests on LV electrical machines	40
UEENEEG159A	Conduct mechanical tests of LV electrical machines	40
UEENEEG164A	Repair mechanical and electrical components of electrical machines	40
UEENEEG165A	Maintain and service electrical traction lifts	40
UEENEEG166A	Installation and maintenance of escalators, tread ways and moving walks	40
UEENEEG167A	Align and install lift components and equipment	20
UEENEEG171A	Install, set up and commission interval metering	20
UEENEEG181A	Provide advice on effective and energy efficient lighting products	20
UEENEEG182A	Supply effective and efficient lighting products for domestic and small commercial applications	40
UEENEEG183A	Provide advice on the application of energy efficient lighting for ambient and aesthetic effect	20
UEENEEG189A	Install and maintain emergency lighting systems	40

UEENEEH102A	Repair basic electronic apparatus faults by replacement of components	40
UEENEEH111A	Troubleshoot single phase input d.c. power supplies	40
UEENEEH150A	Assemble and set up basic wired and wireless security systems	80
UEENEEI101A	Use instrumentation drawings, specifications, standards and equipment manuals	40
UEENEEI102A	Solve problems in pressure measurement circuits and systems	40
UEENEEI103A	Solve problems in density/level measurement circuits and systems	40
UEENEEI104A	Solve problems in flow measurement circuits and systems	40
UEENEEI105A	Solve problems in temperature measurement circuits and systems	40
UEENEEI116A	Enter and verify operating instructions in microprocessor equipped devices	20
UEENEEI138A	Provide solutions to extra low voltage (ELV) electro-pneumatic control systems and drives	60
UEENEEI140A	Plan the electrical installation of integrated systems	20
UEENEEI141A	Develop electrical integrated systems	20
UEENEEI150A	Develop, enter and verify discrete control programs for programmable controllers	60
UEENEEJ102A	Prepare and connect refrigerant tubing and fittings	30
UEENEEJ103A	Establish the basic operating conditions of vapour compression systems	60
UEENEEJ104A	Establish the basic operating conditions of air conditioning systems	20
UEENEEK125A	Solve basic problems in photovoltaic energy apparatus and systems	20
UEENEEK142A	Apply environmentally and sustainable energy procedures in the energy sector	20

UEENEEK148A	Install, configure and commission photovoltaic grid connected power systems	40
UEENEEM019A	Attend to breakdowns in hazardous areas — coal mining	20
UEENEEM020A	Attend to breakdowns in hazardous areas — gas atmospheres	20
UEENEEM021A	Attend to breakdowns in hazardous areas — dust atmospheres	20
UEENEEM022A	Attend to breakdowns in hazardous areas — pressurisation	20
UEENEEM023A	Install explosion-protected equipment and wiring systems — coal mining	60
UEENEEM024A	Install explosion-protected equipment and wiring systems — gas atmospheres	60
UEENEEM025A	Install explosion-protected equipment and wiring systems — dust atmospheres	60
UEENEEM026A	Install explosion-protected equipment and wiring systems — pressurisation	60
UEENEEM027A	Maintain equipment in hazardous areas — coal mining	60
UEENEEM028A	Maintain equipment in hazardous areas — gas atmospheres	60
UEENEEM029A	Maintain equipment in hazardous areas — dust atmospheres	60
UEENEEM030A	Maintain equipment in hazardous areas — pressurisation	60
UEENEEM038A	Conduct testing of hazardous areas installations — coal mining	40
UEENEEM080A	Report on the integrity of explosion-protected equipment in hazardous area	20

Group C – Qualification Elective Units		Weighting Points
You may complete units to a maximum weighting of 100		
UEENEEM005B	Estimate electrotechnology projects	40

UEENEEE110A	Develop and implement energy sector maintenance programs	60
UEENEEG076A	Install and replace low voltage current transformer metering	20
UEENEEG121A	Verify compliance and functionality of special LV electrical installations	40
UEENEEG122A	Conduct compliance inspection of single phase LV electrical installations	60
UEENEEG123A	Conduct compliance inspection of LV electrical installations with demand exceeding 100 A per phase	40
UEENEEG124A	Conduct compliance inspection of special LV electrical installations	60
UEENEEG125A	Plan LV electrical installations with a demand up to 400A per phase	40
UEENEEG128A	Plan low voltage switchboard and control panel layouts	40
UEENEEG132A	Carry out and report electrical field testing findings	60
UEENEEG155A	Rewind three phase induction machines rated for HV to 3.3 kV	60
UEENEEG156A	Rewind three phase induction machines rated for HV above 3.3 kV	60
UEENEEG158A	Conduct electrical tests on HV electrical machines	60
UEENEEG162A	Set up and place LV electrical apparatus and associated circuits into service	40
UEENEEG168A	Diagnose and rectify faults in complex lifts equipment and systems	40
UEENEEG172A	Investigate and produce reports on electrical incidents	60
UEENEEG175A	Develop compliance policies and plans to conduct a electrical contracting business	80
UEENEEG177A	Select power factor correction equipment	40
UEENEEG179A	Develop detailed electrical drawings	60
UEENEEG184A	Provide photometric data for illumination system design	60

UEENEEG185A	Select effective and efficient light sources and luminaires for given locations and designs	60
UEENEEG186A	Design effective and efficient lighting for residential and commercial buildings	20
UEENEEG188A	Prepare quotations for the supply of effective and efficient lighting products for lighting projects	20
UEENEEI119A	Set up transducers and field control devices	60
UEENEEI120A	Provide solutions to problems in industrial control systems	60
UEENEEI124A	Fault find and repair analogue circuits and components in electronic control systems	60
UEENEEI125A	Provide solutions to fluid circuit operations	60
UEENEEI126A	Provide solutions to pneumatic/hydraulic system operations	80
UEENEEI139A	Diagnose and rectify faults in digital controls systems	60
UEENEEI142A	Develop an electrical integrated system interface for access through a touch screen	20
UEENEEI143A	Develop access control of electrical integrated systems using logic-based programming tools	20
UEENEEI144A	Develop interfaces for multiple access methods to monitor, schedule and control an electrical integrated system	20
UEENEEI148A	Provide solutions to single phase electronic power control problems	60
UEENEEI149A	Provide solutions to polyphase electronic power control problems	60
UEENEEI151A	Develop, enter and verify programs for industrial control systems using high level instructions	60
UEENEEI152A	Develop, enter and verify programs in Supervisory Control and Data Acquisition systems	60
UEENEEI155A	Develop structured programs to control external devices	40
UEENEEK135A	Design photovoltaic grid connected power supply	60

	systems	
UEENEEK145A	Implement and monitor energy sector environmental and sustainable energy policies and procedures	20
UEENEEK152A	Develop strategies to address sustainability issues for electrical installations	20
UEENEEK153A	Assessment of energy loads and uses for energy efficiency in residential, office and retail dwellings	40
UEENEEK154A	Assessment of energy loads and uses for energy efficiency in commercial facilities	40
UEENEEK155A	Assessment of energy loads and uses for energy efficiency in large industrial properties and enterprise	40
UEENEEM039A	Conduct testing of hazardous area installations — gas atmospheres	40
UEENEEM042A	Conduct visual inspection of hazardous areas installations	40
UEENEEM044A	Conduct detailed inspection of hazardous areas installations — gas atmospheres	40
UEENEEM047A	Develop and manage maintenance programs for hazardous areas electrical equipment — coal mining	20
UEENEEM078A	Manage compliance of hazardous areas	20
UETTDRIS67A	Solve problems in energy supply network equipment	80
UETTDRIS68A	Solve problems in energy supply network protection equipment and systems	40

Group D – Qualification Elective Units		Weighting Points
You may complete units to a maximum weighting of 60		
UEENEEC006B	Prepare tender submissions for electrotechnology projects	60
UEENEED147A	Develop energy sector directory services	80
UEENEED127A	Design electrical installations with a low voltage demand greater than 400 A per phase	40
UEENEED131A	Evaluate performance of low voltage electrical apparatus	40

UEENEEG160A	Evaluate performance of LV electrical machines	40
UEENEEI127A	Analyse complex electronic circuits controlling fluids	80
UEENEEI157A	Configure and maintain industrial control system networks	60
UEENEEK151A	Develop effective engineering strategies for energy reduction in buildings	60
UEENEEM036A	Conduct a conformity assessment of explosion-protected equipment — gas atmospheres	40
UEENEEM054A	Plan electrical installations for hazardous areas — gas atmospheres	20
UEENEEM065A	Conduct audit of hazardous areas installations — gas atmospheres	60
UETTDRIS70A	Diagnose and rectify faults in electrical energy distribution systems	60
UETTDRIS71A	Diagnose and rectify faults in electrical energy supply transmission systems	60
UETTDRIS72A	Diagnose and rectify faults in distributed Generation systems	60

Group E – Qualification Elective Units		Weighting Points
You must complete units to a minimum weighting of 260 You may select all your elective units from this Group		
UEENEEC007B	Manage contract variations	40
UEENEED150A	Develop industrial control programs for microcomputer equipped devices	60
UEENEED151A	Provide programming solution for computer systems engineering problems	60
UEENEED152A	Design embedded controller control systems	80
UEENEEE127A	Use advanced computational processes to provide solutions to energy sector engineering problems	80
UEENEED149A	Develop energy sector computer network applications infrastructure	80

UEENEEG130A	Design switchboards rated for high fault levels (greater than 400 A)	60
UEENEEG145A	Develop engineering solutions for induction machine and control problems	60
UEENEEG161A	Design and develop modifications to LV electrical machines	60
UEENEEI145A	Diagnose and rectify faults in a.c. motor drive systems	60
UEENEEI146A	Diagnose and rectify faults in d.c. motor drive systems	60
UEENEEI147A	Diagnose and rectify faults in servo drive systems	60
UEENEEI153A	Design and configure Human-Machine Interface (HMI) networks	60
UEENEEI154A	Design and use advanced programming tools PC networks and HMI interfacing	120
UEENEEI156A	Develop and test code for microcontroller devices	60
UEENEEM052A	Classify hazardous areas — gas atmospheres	40
UEENEEM057A	Design explosion-protected electrical systems and installations — gas atmospheres	20
UEENEEM068A	Assess the fitness-for-purpose of hazardous areas explosion-protected equipment — gas atmospheres	60
UETTDRIS73A	Develop engineering solutions for energy supply power transformer problems	60
UETTDRIS74A	Develop engineering solutions for energy supply system protection problems	60

Note:

1. Pre-requisite pathways shall be identified and met for all elective units selected.
2. In selecting elective units considerations to career planning advice should be given to units that form part of a pre-requisite pathway for the progression to achieve particular competencies or qualification at a higher level.
3. Registered training organisations shall also provide information related to the relevant pathway(s) that may be taken to achieve paraprofessional status ("associate membership") with a professional engineering membership organisation.

END OF QUALIFICATION

Unit Grid

UEENEEED104A	Use engineering applications software on personal computers
UEENEEEE006B	Apply methods to maintain currency of industry developments
UEENEEEE011C	Manage risk in electrotechnology activities
UEENEEEE015B	Develop design briefs for electrotechnology projects
UEENEEEE071B	Write specifications for electrical engineering projects
UEENEEEE080A	Apply industry and community standards to engineering activities
UEENEEEE081A	Apply material science to solving electrotechnology engineering problems
UEENEEEE082A	Apply physics to solving electrotechnology engineering problems
UEENEEEE083A	Establish and follow a competency development plan in an electrotechnology engineering discipline
UEENEEEE101A	Apply Occupational Health and Safety regulations, codes and practices in the workplace
UEENEEEE102A	Fabricate, assemble and dismantle utilities industry components
UEENEEEE104A	Solve problems in d.c. circuits
UEENEEEE105A	Fix and secure electrotechnology equipment
UEENEEEE107A	Use drawings, diagrams, schedules, standards, codes and specifications
UEENEEEE117A	Implement and monitor energy sector OHS policies and procedures
UEENEEEE124A	Compile and produce an energy sector detailed report
UEENEEEE125A	Provide engineering solutions for problems in complex multiple path circuits
UEENEEEE126A	Provide solutions to basic engineering computational problems
UEENEEEE137A	Document and apply measures to control OHS risks associated with electrotechnology work
UEENEEEG006A	Solve problems in single and three phase low voltage machines
UEENEEEG033A	Solve problems in single and three phase low voltage electrical apparatus and circuits
UEENEEEG063A	Arrange circuits, control and protection for general electrical installations
UEENEEEG101A	Solve problems in electromagnetic devices and related circuits
UEENEEEG102A	Solve problems in low voltage a.c. circuits
UEENEEEG103A	Install low voltage wiring and accessories
UEENEEEG104A	Install appliances, switchgear and associated accessories for low voltage electrical installations
UEENEEEG105A	Verify compliance and functionality of low voltage general electrical installations
UEENEEEG106A	Terminate cables, cords and accessories for low voltage circuits
UEENEEEG107A	Select wiring systems and cables for low voltage general electrical installations
UEENEEEG108A	Trouble-shoot and repair faults in low voltage electrical apparatus and circuits
UEENEEEG109A	Develop and connect electrical control circuits
UEENEEEG149A	Provide engineering solutions to problems in complex polyphase power circuits
UEENEEEG169A	Manage large electrical projects
UEENEEEG170A	Plan large electrical projects

UEENEEK132A	Develop strategies to address environmental and sustainability issues in the energy sector
BSBMGT502B	Manage people performance
BSBINM501A	Manage an information or knowledge management system
BSBMGT516C	Facilitate continuous improvement
BSBINN502A	Build and sustain an innovative work environment
BSBWOR502B	Ensure team effectiveness
UEENEEA110A	Assemble, mount and connect control gear and switchgear
UEENEEA112A	Fabricate and assemble bus bars
UEENEEA113A	Mount and wire control panel equipment
UEENEEE121A	Plan an residential integrated cabling system
UEENEEF102A	Install and maintain cabling for multiple access to telecommunication services
UEENEEF104A	Install and modify performance data communication copper cabling
UEENEEG110A	Diagnose and rectify faults in d.c. electrical apparatus and circuits
UEENEEG111A	Carry out repairs to electrical apparatus
UEENEEG113A	Install and maintain emergency and safety systems.
UEENEEG116A	Diagnose and rectify faults in lifts/escalator systems
UEENEEG118A	Maintain operation of electrical mining equipment and systems
UEENEEG119A	Maintain the operation of electrical marine equipment and systems
UEENEEG120A	Select and arrange circuits and equipment for special electrical installations
UEENEEG126A	Install and maintain LV field power and distribution systems with a demand up to 200 A per phase
UEENEEG129A	Overhaul and repair switchgear and controlgear
UEENEEG150A	Wind electrical coils
UEENEEG151A	Place and connect electrical coils
UEENEEG152A	Rewind single phase machines
UEENEEG153A	Rewind LV three phase induction machines rated for low voltage
UEENEEG154A	Rewind LV direct current machines
UEENEEG157A	Conduct electrical tests on LV electrical machines
UEENEEG159A	Conduct mechanical tests of LV electrical machines
UEENEEG164A	Repair mechanical and electrical components of electrical machines
UEENEEG165A	Maintain and service electrical traction lifts
UEENEEG166A	Installation and maintenance of escalators, tread ways and moving walks
UEENEEG167A	Align and install lift components and equipment
UEENEEG171A	Install, set up and commission interval metering
UEENEEG181A	Provide advice on effective and energy efficient lighting products
UEENEEG182A	Supply effective and efficient lighting products for domestic and small commercial applications
UEENEEG183A	Provide advice on the application of energy efficient lighting for ambient and aesthetic effect
UEENEEG189A	Install and maintain emergency lighting systems
UEENEEH102A	Repair basic electronic apparatus faults by replacement of components
UEENEEH111A	Troubleshoot single phase input d.c. power supplies
UEENEEH150A	Assemble and set up basic wired and wireless security systems

UEENEEI101A	Use instrumentation drawings, specifications, standards and equipment manuals
UEENEEI102A	Solve problems in pressure measurement circuits and systems
UEENEEI103A	Solve problems in density/level measurement circuits and systems
UEENEEI104A	Solve problems in flow measurement circuits and systems
UEENEEI105A	Solve problems in temperature measurement circuits and systems
UEENEEI116A	Enter and verify operating instructions in microprocessor equipped devices
UEENEEI138A	Provide solutions to extra low voltage (ELV) electro-pneumatic control systems and drives
UEENEEI140A	Plan the electrical installation of integrated systems
UEENEEI141A	Develop electrical integrated systems
UEENEEI150A	Develop, enter and verify discrete control programs for programmable controllers
UEENEEJ102A	Prepare and connect refrigerant tubing and fittings
UEENEEJ103A	Establish the basic operating conditions of vapour compression systems
UEENEEJ104A	Establish the basic operating conditions of air conditioning systems
UEENEEK125A	Solve basic problems in photovoltaic energy apparatus and systems
UEENEEK142A	Apply environmentally and sustainable energy procedures in the energy sector
UEENEEK148A	Install, configure and commission photovoltaic grid connected power systems
UEENEEM019A	Attend to breakdowns in hazardous areas — coal mining
UEENEEM020A	Attend to breakdowns in hazardous areas — gas atmospheres
UEENEEM021A	Attend to breakdowns in hazardous areas — dust atmospheres
UEENEEM022A	Attend to breakdowns in hazardous areas — pressurisation
UEENEEM023A	Install explosion-protected equipment and wiring systems — coal mining
UEENEEM024A	Install explosion-protected equipment and wiring systems — gas atmospheres
UEENEEM025A	Install explosion-protected equipment and wiring systems — dust atmospheres
UEENEEM026A	Install explosion-protected equipment and wiring systems — pressurisation
UEENEEM027A	Maintain equipment in hazardous areas — coal mining
UEENEEM028A	Maintain equipment in hazardous areas — gas atmospheres
UEENEEM029A	Maintain equipment in hazardous areas — dust atmospheres
UEENEEM030A	Maintain equipment in hazardous areas — pressurisation
UEENEEM038A	Conduct testing of hazardous areas installations — coal mining
UEENEEM080A	Report on the integrity of explosion-protected equipment in hazardous area
UEENEEC005B	Estimate electrotechnology projects
UEENEEE110A	Develop and implement energy sector maintenance programs
UEENEEG076A	Install and replace low voltage current transformer metering
UEENEEG121A	Verify compliance and functionality of special LV electrical installations
UEENEEG122A	Conduct compliance inspection of single phase LV electrical installations

UEENEEG123A	Conduct compliance inspection of LV electrical installations with demand exceeding 100 A per phase
UEENEEG124A	Conduct compliance inspection of special LV electrical installations
UEENEEG125A	Plan LV electrical installations with a demand up to 400A per phase
UEENEEG128A	Plan low voltage switchboard and control panel layouts
UEENEEG132A	Carry out and report electrical field testing findings
UEENEEG155A	Rewind three phase induction machines rated for HV to 3.3 kV
UEENEEG156A	Rewind three phase induction machines rated for HV above 3.3 kV
UEENEEG157A	Conduct electrical tests on LV electrical machines
UEENEEG158A	Conduct electrical tests on HV electrical machines
UEENEEG159A	Conduct mechanical tests on electrical machines and components
UEENEEG162A	Set up and place LV electrical apparatus and associated circuits into service
UEENEEG168A	Diagnose and rectify faults in complex lifts equipment and systems
UEENEEG172A	Investigate and produce reports on electrical incidents
UEENEEG175A	Develop compliance policies and plans to conduct a electrical contracting business
UEENEEG177A	Select power factor correction equipment
UEENEEG179A	Develop detailed electrical drawings
UEENEEG184A	Provide photometric data for illumination system design
UEENEEG185A	Select effective and efficient light sources and luminaires for given locations and designs
UEENEEG186A	Design effective and efficient lighting for residential and commercial buildings
UEENEEG188A	Prepare quotations for the supply of effective and efficient lighting products for lighting projects
UEENEEI119A	Set up transducers and field control devices
UEENEEI120A	Provide solutions to problems in industrial control systems
UEENEEI124A	Fault find and repair analogue circuits and components in electronic control systems
UEENEEI125A	Provide solutions to fluid circuit operations
UEENEEI126A	Provide solutions to pneumatic/hydraulic system operations
UEENEEI139A	Diagnose and rectify faults in digital controls systems
UEENEEI142A	Develop an electrical integrated system interface for access through a touch screen
UEENEEI143A	Develop access control of electrical integrated systems using logic-based programming tools
UEENEEI144A	Develop interfaces for multiple access methods to monitor, schedule and control an electrical integrated system
UEENEEI148A	Provide solutions to single phase electronic power control problems
UEENEEI149A	Provide solutions to polyphase electronic power control problems
UEENEEI150A	Develop, enter and verify discrete control programs for programmable controllers
UEENEEI151A	Develop, enter and verify programs for industrial control systems using high level instructions
UEENEEI152A	Develop, enter and verify programs in Supervisory Control and Data Acquisition systems
UEENEEI155A	Develop structured programs to control external devices

UEENEEK135A	Design photovoltaic grid connected power supply systems
UEENEEK145A	Implement and monitor energy sector environmental and sustainable energy policies and procedures
UEENEEK152A	Develop strategies to address sustainability issues for electrical installations
UEENEEK153A	Assessment of energy loads and uses for energy efficiency in residential, office and retail dwellings
UEENEEK154A	Assessment of energy loads and uses for energy efficiency in commercial facilities
UEENEEK155A	Assessment of energy loads and uses for energy efficiency in large industrial properties and enterprise
UEENEEM039A	Conduct testing of hazardous area installations — gas atmospheres
UEENEEM042A	Conduct visual inspection of hazardous areas installations
UEENEEM044A	Conduct detailed inspection of hazardous areas installations — gas atmospheres
UEENEEM047A	Develop and manage maintenance programs for hazardous areas electrical equipment — coal mining
UEENEEM078A	Manage compliance of hazardous areas
UETTDRIS67A	Solve problems in energy supply network equipment
UETTDRIS68A	Solve problems in energy supply network protection equipment and systems
UEENEEM006B	Prepare tender submissions for electrotechnology projects
UEENEED147A	Develop energy sector directory services
UEENEEM127A	Design electrical installations with a low voltage demand greater than 400 A per phase
UEENEEM131A	Evaluate performance of low voltage electrical apparatus
UEENEEM160A	Evaluate performance of LV electrical machines
UEENEEM127A	Analyse complex electronic circuits controlling fluids
UEENEEM157A	Configure and maintain industrial control system networks
UEENEEK151A	Develop effective engineering strategies for energy reduction in buildings
UEENEEM036A	Conduct a conformity assessment of explosion-protected equipment — gas atmospheres
UEENEEM054A	Plan electrical installations for hazardous areas — gas atmospheres
UEENEEM065A	Conduct audit of hazardous areas installations — gas atmospheres
UETTDRIS70A	Diagnose and rectify faults in electrical energy distribution systems
UETTDRIS71A	Diagnose and rectify faults in electrical energy supply transmission systems
UETTDRIS72A	Diagnose and rectify faults in distributed Generation systems
UEENEEM007B	Manage contract variations
UEENEEM150A	Develop industrial control programs for microcomputer equipped devices
UEENEEM151A	Provide programming solution for computer systems engineering problems
UEENEEM152A	Design embedded controller control systems
UEENEEM127A	Use advanced computational processes to provide solutions to energy sector engineering problems
UEENEEM149A	Develop energy sector computer network applications infrastructure

UEENEEG130A	Design switchboards rated for high fault levels (greater than 400 A)
UEENEEG145A	Develop engineering solutions for induction machine and control problems
UEENEEG161A	Design and develop modifications to LV electrical machines
UEENEEI145A	Diagnose and rectify faults in a.c. motor drive systems
UEENEEI146A	Diagnose and rectify faults in d.c. motor drive systems
UEENEEI147A	Diagnose and rectify faults in servo drive systems
UEENEEI153A	Design and configure Human-Machine Interface (HMI) networks
UEENEEI154A	Design and use advanced programming tools PC networks and HMI interfacing
UEENEEI156A	Develop and test code for microcontroller devices
UEENEEM052A	Classify hazardous areas — gas atmospheres
UEENEEM057A	Design explosion-protected electrical systems and installations — gas atmospheres
UEENEEM068A	Assess the fitness-for-purpose of hazardous areas explosion-protected equipment — gas atmospheres
UETTDRIS73A	Develop engineering solutions for energy supply power transformer problems
UETTDRIS74A	Develop engineering solutions for energy supply system protection problems

UEE62311 Advanced Diploma of Electrical Engineering - Coal Mining

Modification History

Not Applicable

Description

Scope

This qualification provides competencies to design and validate/evaluate coal mining electrical equipment and systems, manage risk, estimate and manage projects and provide technical advice/sales.

It develops competencies in the ethical and responsible application of mathematics, science, engineering techniques, Standards and Codes of Practice, engineering design practices, supervision and management of physical, human and financial resources in engineering.

The core competencies of this qualification meet the prescribed requirements for Engineering Associate membership of Engineers Australia and ERAC requirements for an 'Electrician's licence'.

Participants seeking Engineers Australia membership should ensure that their training provider is accredited by that body to provide Engineering Education Programs at the level of Engineering Associate.

Pathways Information

Not Applicable

Licensing/Regulatory Information

Not Applicable

Entry Requirements

Not Applicable

Employability Skills Summary

Not Applicable

Packaging Rules

Completion requirements

The requirements for granting this qualification will be met when competency is demonstrated and achieved for:

- All the Core competency standard units, defined in the Core Competency Standard Units table below and
- A combination of Elective competency standard units to achieve a total weighting of 320 points in accordance with the Elective Competency Standard Units table below.

Note: UEENEEG105A - Those holding an 'Unrestricted Electricians Licence or equivalent issued in an Australian State or Territory meet the requirements of this unit and its pre-requisite requirements.

Core Competency Standard Units		Weighting Points
All Core competency standard units to be achieved		
RIIRAI609A	Establish and maintain electrical installations, reticulation and protection systems	120
RIIRIS601A	Establish and maintain the risk management system	100
UEENEEED104A	Use engineering applications software on personal computers	40
UEENEEEE006B	Apply methods to maintain currency of industry developments	20
UEENEEEE015B	Develop design briefs for electrotechnology projects	40
UEENEEEE071B	Write specifications for electrical engineering projects	40
UEENEEEE080A	Apply industry and community standards to engineering activities	20
UEENEEEE081A	Apply material science to solving electrotechnology engineering problems	60
UEENEEEE082A	Apply physics to solving electrotechnology engineering problems	60
UEENEEEE083A	Establish and follow a competency development plan in an electrotechnology engineering discipline	120
UEENEEEE101A	Apply Occupational Health and Safety regulations, codes and practices in the workplace	20
UEENEEEE102A	Fabricate, assemble and dismantle utilities industry components	40
UEENEEEE104A	Solve problems in d.c. circuits	80

Core Competency Standard Units		Weighting Points
All Core competency standard units to be achieved		
UEENEEE105A	Fix and secure electrotechnology equipment	20
UEENEEE107A	Use drawings, diagrams, schedules, standards, codes and specifications	40
UEENEEE117A	Implement and monitor energy sector OHS policies and procedures	20
UEENEEE124A	Compile and produce an energy sector detailed report	60
UEENEEE125A	Provide engineering solutions for problems in complex multiple path circuits	60
UEENEEE126A	Provide solutions to basic engineering computational problems	60
UEENEEE137A	Document and apply measures to control OHS risks associated with electrotechnology work	20
UEENEEG006A	Solve problems in single and three phase low voltage machines	80
UEENEEG033A	Solve problems in single and three phase low voltage electrical apparatus and circuits	60
UEENEEG063A	Arrange circuits, control and protection for general electrical installations	40
UEENEEG101A	Solve problems in electromagnetic devices and related circuits	60
UEENEEG102A	Solve problems in low voltage a.c. circuits	80
UEENEEG103A	Install low voltage wiring and accessories	20
UEENEEG104A	Install appliances, switchgear and associated accessories for low voltage electrical installations	20
UEENEEG105A	Verify compliance and functionality of low voltage general electrical installations	40
UEENEEG106A	Terminate cables, cords and accessories for low voltage circuits	40

Core Competency Standard Units		Weighting Points
All Core competency standard units to be achieved		
UEENEEG107A	Select wiring systems and cables for low voltage general electrical installations	60
UEENEEG108A	Trouble-shoot and repair faults in low voltage electrical apparatus and circuits	40
UEENEEG109A	Develop and connect electrical control circuits	80
UEENEEG149A	Provide engineering solutions to problems in complex polyphase power circuits	60
UEENEEG169A	Manage large electrical projects	40
UEENEEG170A	Plan large electrical projects	60
UEENEEK132A	Develop strategies to address environmental and sustainability issues in the energy sector	20
Total points in core		1840

Elective Competency Standard Units			
Complete Elective units to achieve a total of weighting of 320 points from the following groups:			
Group		Minimum points	Maximum points
A	Imported and Common Elective Units Imported units from other training packages and/or state accredited courses can be added to this group, but they must be selected from qualifications where the unit is first packaged at AQF level 6. If units have not been assigned a weighting by the relevant EE-Oz Industry Technical Advisory Committee, their weighting will be 10 points.	0	160
B	Qualification Elective Units	0	60
C	Qualification Elective Units	0	100
D	Qualification Elective Units	0	60
E	Qualification Elective Units	160	320

	You may select the majority of your elective units from this Group		
--	--	--	--

Group A – Imported and Common Electives Units		Weighting Points
You may complete units to a maximum weighting of 160		
BSBMGT502B	Manage people performance	70
BSBINM501A	Manage an information or knowledge management system	50
BSBMGT516C	Facilitate continuous improvement	60
BSBINN502A	Build and sustain an innovative work environment	50
BSBWOR502B	Ensure team effectiveness	60
	<p>Imported units from other training packages and/or state accredited courses can be added to this group, but they must be selected from qualifications where the unit is first packaged at AQF level 6. If units have not being assigned a weighting by the relevant EE-Oz Industry Technical Advisory Committee, their weighting will be 10 points.</p> <p>Note: For further information see Application of the NQC Flexibility Formula, UEE11 Electrotechnology Training Package, Version 1, Volume 1 Qualification Framework</p>	Up to 160 points

Group B – Qualification Elective Units		Weighting Points
You may complete units to a maximum weighting of 60		
UEENEEM019A	Attend to breakdowns in hazardous areas — coal mining	20
UEENEEM023A	Install explosion-protected equipment and wiring systems — coal mining	60
UEENEEM027A	Maintain equipment in hazardous areas — coal mining	60
UEENEEM031A	Overhaul and repair of explosion-protected equipment — coal mining	60

UEENEEM080A	Report on the integrity of explosion-protected equipment in hazardous area	20
-------------	--	----

Group C – Qualification Elective Units		Weighting Points
You may complete units to a maximum weighting of 100		
UEENEEC005B	Estimate electrotechnology projects	40
UEENEEE110A	Develop and implement energy sector maintenance programs	60
UEENEEG121A	Verify compliance and functionality of special LV electrical installations	40
UEENEEG122A	Conduct compliance inspection of single phase LV electrical installations	60
UEENEEG123A	Conduct compliance inspection of LV electrical installations with demand exceeding 100 A per phase	40
UEENEEG124A	Conduct compliance inspection of special LV electrical installations	60
UEENEEG125A	Plan electrical installations with a low voltage demand up to 400 A per phase	40
UEENEEG128A	Plan low voltage switchboard and control panel layouts	40
UEENEEG157A	Conduct electrical tests on LV electrical machines	40
UEENEEG158A	Conduct electrical tests on HV electrical machines	60
UEENEEG159A	Conduct mechanical tests on electrical machines and components	40
UEENEEI139A	Diagnose and rectify faults in digital controls systems	60
UEENEEI150A	Develop, enter and verify discrete control programs for programmable controllers	60
UEENEEI155A	Develop structured programs to control external devices	40

UEENEEM038A	Conduct testing of hazardous area installations — coal mining	40
UEENEEM042A	Conduct visual inspection of hazardous areas installations	40
UEENEEM043A	Conduct detailed inspection of hazardous areas installations — coal mining	40
UEENEEM047A	Develop and manage maintenance programs for hazardous areas electrical equipment — coal mining	20
UEENEEM078A	Manage compliance of hazardous areas	20
UETTDRIS67A	Solve problems in energy supply network equipment	80
UETTDRIS68A	Solve problems in energy supply network protection equipment and systems	40

Group D – Qualification Elective Units		Weighting Points
You may complete units to a maximum weighting of 60		
UEENEEC006B	Prepare tender submissions for electrotechnology projects	60
UEENEEI152A	Develop, enter and verify programs in Supervisory Control and Data Acquisition systems	60
UEENEEI151A	Develop, enter and verify word and analogue control programs for programmable logic controllers.	60
UEENEEI157A	Configure and maintain industrial control system networks	60
UEENEED127A	Design electrical installations with a low voltage demand greater than 400 A per phase	40
UEENEED131A	Evaluate performance of low voltage electrical apparatus	40
UEENEED132A	Carry out low voltage electrical field testing and report findings	60

UEENEEG160A	Evaluate performance of LV electrical machines	40
UEENEEG172A	Investigate and report on electrical incidents and causes	60
UEENEEI153A	Design and configure Human-Machine Interface (HMI) networks	60
UEENEEI124A	Fault find and repair analogue circuits and components in electronic control systems	60
UEENEEM036A	Conduct a conformity assessment of explosion-protected equipment — gas atmospheres	40
UEENEEM035A	Conduct a conformity assessment of explosion-protected equipment — coal mining	40
UEENEEM064A	Conduct audit of hazardous areas installations — coal mining	60
UEENEEM074A	Plan electrical installations in hazardous areas —Coal mining	20

Group E – Qualification Elective Units		Weighting Points
You must complete units to a minimum weighting of 160 You may select all your elective units from this Group		
UEENEEC007B	Manage contract variations	40
UEENEEE127A	Use advanced computational processes to provide solutions to energy sector engineering problems	80
UEENEEG130A	Design switchboards rated for high fault levels (greater than 400 A)	60
UEENEEG145A	Develop engineering solutions for induction machine and control problems	60
UEENEEG161A	Design and develop modifications to LV electrical machines	60
UEENEEI145A	Diagnose and rectify faults in a.c. motor drive systems	60
UEENEEI146A	Diagnose and rectify faults in d.c. motor drive systems	60

UEENEEI147A	Diagnose and rectify faults in servo drive systems	60
UEENEEI154A	Design and use advanced programming tools PC network and HMI interfacing	120
UEENEEM067A	Assess the fitness-for-purpose of hazardous areas explosion-protected equipment — coal mining	60
UETTDRIS73A	Develop engineering solutions for energy supply power transformer problems	60

Note:

1. Pre-requisite pathways shall be identified and met for all elective units selected.
2. In selecting elective units considerations to career planning advice should be given to units that form part of a pre-requisite pathway for the progression to achieve particular competencies or qualification at a higher level.
3. Registered training organisations shall also provide information related to the relevant pathway(s) that may be taken to achieve paraprofessional status ("associate membership") with a professional engineering membership organisation.

END OF QUALIFICATION**Unit Grid**

RIIRAI609A	Establish and maintain electrical installations, reticulation and protection systems
RIIRIS601A	Establish and maintain the risk management system
UEENEEI104A	Use engineering applications software on personal computers
UEENEEE006B	Apply methods to maintain currency of industry developments
UEENEEE015B	Develop design briefs for electrotechnology projects
UEENEEE071B	Write specifications for electrical engineering projects
UEENEEE080A	Apply industry and community standards to engineering activities
UEENEEE081A	Apply material science to solving electrotechnology engineering problems
UEENEEE082A	Apply physics to solving electrotechnology engineering problems
UEENEEE083A	Establish and follow a competency development plan in an electrotechnology engineering discipline
UEENEEE101A	Apply Occupational Health and Safety regulations, codes and practices in the workplace
UEENEEE102A	Fabricate, assemble and dismantle utilities industry components
UEENEEE104A	Solve problems in d.c. circuits
UEENEEE105A	Fix and secure electrotechnology equipment
UEENEEE107A	Use drawings, diagrams, schedules, standards, codes and specifications
UEENEEE117A	Implement and monitor energy sector OHS policies and procedures
UEENEEE124A	Compile and produce an energy sector detailed report
UEENEEE125A	Provide engineering solutions for problems in complex multiple path circuits

UEENEEE126A	Provide solutions to basic engineering computational problems
UEENEEE137A	Document and apply measures to control OHS risks associated with electrotechnology work
UEENEEG006A	Solve problems in single and three phase low voltage machines
UEENEEG033A	Solve problems in single and three phase low voltage electrical apparatus and circuits
UEENEEG063A	Arrange circuits, control and protection for general electrical installations
UEENEEG101A	Solve problems in electromagnetic devices and related circuits
UEENEEG102A	Solve problems in low voltage a.c. circuits
UEENEEG103A	Install low voltage wiring and accessories
UEENEEG104A	Install appliances, switchgear and associated accessories for low voltage electrical installations
UEENEEG105A	Verify compliance and functionality of low voltage general electrical installations
UEENEEG106A	Terminate cables, cords and accessories for low voltage circuits
UEENEEG107A	Select wiring systems and cables for low voltage general electrical installations
UEENEEG108A	Trouble-shoot and repair faults in low voltage electrical apparatus and circuits
UEENEEG109A	Develop and connect electrical control circuits
UEENEEG149A	Provide engineering solutions to problems in complex polyphase power circuits
UEENEEG169A	Manage large electrical projects
UEENEEG170A	Plan large electrical projects
UEENEEK132A	Develop strategies to address environmental and sustainability issues in the energy sector
BSBMGT502B	Manage people performance
BSBINM501A	Manage an information or knowledge management system
BSBMGT516C	Facilitate continuous improvement
BSBINN502A	Build and sustain an innovative work environment
BSBWOR502B	Ensure team effectiveness
UEENEEM019A	Attend to breakdowns in hazardous areas — coal mining
UEENEEM023A	Install explosion-protected equipment and wiring systems — coal mining
UEENEEM027A	Maintain equipment in hazardous areas — coal mining
UEENEEM031A	Overhaul and repair of explosion-protected equipment — coal mining
UEENEEM080A	Report on the integrity of explosion-protected equipment in hazardous area
UEENEEC005B	Estimate electrotechnology projects
UEENEEE110A	Develop and implement energy sector maintenance programs
UEENEEG121A	Verify compliance and functionality of special LV electrical installations
UEENEEG122A	Conduct compliance inspection of single phase LV electrical installations
UEENEEG123A	Conduct compliance inspection of LV electrical installations with demand exceeding 100 A per phase
UEENEEG124A	Conduct compliance inspection of special LV electrical installations

UEENEEG125A	Plan electrical installations with a low voltage demand up to 400 A per phase
UEENEEG128A	Plan low voltage switchboard and control panel layouts
UEENEEG157A	Conduct electrical tests on LV electrical machines
UEENEEG158A	Conduct electrical tests on HV electrical machines
UEENEEG159A	Conduct mechanical tests on electrical machines and components
UEENEEI139A	Diagnose and rectify faults in digital controls systems
UEENEEI150A	Develop, enter and verify discrete control programs for programmable controllers
UEENEEI155A	Develop structured programs to control external devices
UEENEEM038A	Conduct testing of hazardous area installations — coal mining
UEENEEM042A	Conduct visual inspection of hazardous areas installations
UEENEEM043A	Conduct detailed inspection of hazardous areas installations — coal mining
UEENEEM047A	Develop and manage maintenance programs for hazardous areas electrical equipment — coal mining
UEENEEM078A	Manage compliance of hazardous areas
UETTDRIS67A	Solve problems in energy supply network equipment
UETTDRIS68A	Solve problems in energy supply network protection equipment and systems
UEENEEC006B	Prepare tender submissions for electrotechnology projects
UEENEEI152A	Develop, enter and verify programs in Supervisory Control and Data Acquisition systems
UEENEEI151A	Develop, enter and verify word and analogue control programs for programmable logic controllers.
UEENEEI157A	Configure and maintain industrial control system networks
UEENEEG127A	Design electrical installations with a low voltage demand greater than 400 A per phase
UEENEEG131A	Evaluate performance of low voltage electrical apparatus
UEENEEG132A	Carry out low voltage electrical field testing and report findings
UEENEEG160A	Evaluate performance of LV electrical machines
UEENEEG172A	Investigate and report on electrical incidents and causes
UEENEEI153A	Design and configure Human-Machine Interface (HMI) networks
UEENEEI124A	Fault find and repair analogue circuits and components in electronic control systems
UEENEEM036A	Conduct a conformity assessment of explosion-protected equipment — gas atmospheres
UEENEEM035A	Conduct a conformity assessment of explosion-protected equipment — coal mining
UEENEEM064A	Conduct audit of hazardous areas installations — coal mining
UEENEEM074A	Plan electrical installations in hazardous areas —Coal mining
UEENEEC007B	Manage contract variations
UEENEEE127A	Use advanced computational processes to provide solutions to energy sector engineering problems
UEENEEG130A	Design switchboards rated for high fault levels (greater than 400 A)
UEENEEG145A	Develop engineering solutions for induction machine and control problems

UEENEEG161A	Design and develop modifications to LV electrical machines
UEENEEI145A	Diagnose and rectify faults in a.c. motor drive systems
UEENEEI146A	Diagnose and rectify faults in d.c. motor drive systems
UEENEEI147A	Diagnose and rectify faults in servo drive systems
UEENEEI154A	Design and use advanced programming tools PC network and HMI interfacing
UEENEEM067A	Assess the fitness-for-purpose of hazardous areas explosion-protected equipment — coal mining
UETTDRIS73A	Develop engineering solutions for energy supply power transformer problems

UEE62411 Advanced Diploma of Engineering Technology - Air-conditioning and Refrigeration

Packaging Rules

Completion requirements

The requirements for granting this qualification will be met when competency is demonstrated and achieved for:

- All the Core competency standard units, defined in the Core Competency Standard Units table below and
- A combination of Elective competency standard units to achieve a total weighting of 800 points in accordance with the Elective Competency Standard Units table below.

Core Competency Standard Units	Weighting Points
All Core competency standard units to be achieved	

Core Competency Standard Units		Weighting Points
All Core competency standard units to be achieved		
UEENEED104A	Use engineering applications software on personal computers	40
UEENEEE080A	Apply industry and community standards to engineering activities	20
UEENEEE083A	Establish and follow a competency development plan in an electrotechnology engineering discipline	120
UEENEEE101A	Apply Occupational Health and Safety regulations, codes and practices in the workplace	20
UEENEEE102A	Fabricate, assemble and dismantle utilities industry components	40
UEENEEE107A	Use drawings, diagrams, schedules, standards, codes and specifications	40
UEENEEE124A	Compile and produce an energy sector detailed report	60
UEENEEE126A	Provide solutions to basic engineering computational problems	60
UEENEEE127A	Use advanced computational processes to provide solutions to energy sector engineering problems	80
UEENEEE129A	Solve electrotechnical engineering problems	60
UEENEEE137A	Document and apply measures to control OHS risks associated with electrotechnology work	20
UEENEEE146A	Identify effects of energy on machinery and materials in an energy sector environment	120
UEENEEJ069B	Plan refrigeration and air conditioning projects	60
UEENEEJ127A	Establish the thermodynamic parameters of refrigeration and air conditioning systems	80
UEENEEJ128A	Produce HVAC/R system design drawings	80
UEENEEJ129A	Establish heat loads for commercial refrigeration and air conditioning applications	80

Core Competency Standard Units		Weighting Points
All Core competency standard units to be achieved		
UEENEEJ138A	Analyse vibration and noise in refrigeration and air conditioning systems	80
UEENEEJ164A	Analyse the operation of HVAC air and hydronic systems	80
UEENEEJ165A	Evaluate thermodynamic and fluid parameters of refrigeration systems	100
UEENEEJ192A	Analyse the psychrometric performance of HVAC/R systems	50
UEENEEJ193A	Analyse the thermodynamic performance of HVAC/R systems	50
UEENEEK132A	Develop strategies to address environmental and sustainability issues in the energy sector	20
Total points in core		1360

Elective Competency Standard Units			
Complete Elective units to achieve a total of weighting of 800 points from the following groups:			
Group		Minimum points	Maximum points
A	Imported and Common Elective Units Imported units from other training packages and/or state accredited courses can be added to this group, but they must be selected from qualifications where the unit is first packaged at AQF level 6. If units have not been assigned a weighting by the relevant EE-Oz Industry Technical Advisory Committee, their weighting will be 10 points.	0	350
B	Qualification Elective Units	0	100
C	Qualification Elective Units	120	320
D	Qualification Elective Units	200	360
E	Qualification Elective Units	360	480

Group A – Imported and Common Electives Units		Weighting Points
You may complete units to a maximum weighting of 350		
UEENEEC001B	Maintain documentation	20
UEENEEC002B	Source and purchase material/parts for installation or service jobs	20
UEENEEC003B	Provide quotations for installation or service jobs	20
UEENEEC010B	Deliver a service to customers	20
UEENEEED101A	Use computer applications relevant to a workplace	20
UEENEEEE020B	Provide basic instruction in the use of electrotechnology apparatus	20
BSBINM501A	Manage an information or knowledge management system	50
BSBINN502A	Build and sustain an innovative work environment	50
	<p>Imported units from other training packages and/or state accredited courses can be added to this group, but they must be selected from qualifications where the unit is first packaged at AQF level 6. If units have not being assigned a weighting by the relevant EE-Oz Industry Technical Advisory Committee, their weighting will be 10 points.</p> <p>Note: For further information see Application of the NQC Flexibility Formula, UEE11 Electrotechnology Training Package, Version 1, Volume 1 Qualification Framework</p>	Up to 350 points

Group B – Qualification Elective Units		Weighting Points
You may complete units to a maximum weighting of 100		
UEENEEEE150A	Undertake computations in an energy sector environment	120
UEENEEJ103A	Establish the basic operating conditions of vapour compression systems	60

UEENEEJ110A	Select refrigerant piping, accessories and associated controls	50
UEENEEJ174A	Apply safety awareness and legal requirements for hydrocarbon refrigerants	10
UEENEEJ178A	Apply safety awareness and legal requirements for ammonia refrigerant	10
UEENEEJ184A	Apply safety awareness and legal requirements for Carbon Dioxide refrigerant	10

Group C – Qualification Elective Units		Weighting Points
You must complete units to a minimum weighting of 120 to a maximum of 320		
UEENEEC005B	Estimate electrotechnology projects	40
UEENEEJ130A	Produce HVAC/R control system diagrams	40
UEENEEJ190A	Select basic commercial refrigeration system equipment, components and accessories	40
UEENEEJ191A	Select residential air conditioning system equipment, components, and accessories	40
UEENEEK145A	Implement and monitor energy sector environmental and sustainable energy policies and procedures	20

Group D – Qualification Elective Units		Weighting Points
You must complete units to a minimum weighting of 200 to a maximum of 360		
UEENEEC006B	Prepare tender submissions for electrotechnology projects	60
UEENEEJ132A	Design commercial refrigeration systems and select components	80
UEENEEJ133A	Design industrial refrigeration systems and select components	60
UEENEEJ134A	Design heating, ventilation and air conditioning (HVAC) systems and select components	60

UEENEEJ135A	Design control systems for refrigeration or heating, ventilation and air conditioning systems	80
UEENEEJ136A	Evaluate and report on building services energy management systems	80
UEENEEJ137A	Evaluate and report on the indoor air quality of buildings	40
UEENEEJ177A	Design hydrocarbon refrigerated systems	40
UEENEEJ181A	Design ammonia refrigerated systems	40
UEENEEJ183A	Design secondary refrigerant systems	40
UEENEEJ187A	Design carbon dioxide refrigerated systems	40
UEENEEK151A	Develop effective engineering strategies for energy reduction in buildings	60

Group E – Qualification Elective Units		Weighting Points
You must complete units to a minimum weighting of 360 to a maximum of 480		
UEENEEC007B	Manage contract variations	40
UEENEEJ139A	Develop specifications and prepare drawings for HVAC/Refrigeration projects	60
UEENEEJ141A	Design complex commercial refrigeration systems and select equipment	40
UEENEEJ142A	Design complex industrial refrigeration systems and select equipment	40
UEENEEJ143A	Design complex air conditioning systems and select equipment	120
UEENEEJ144A	Design mechanical ventilation/exhaust systems and select equipment	40
UEENEEJ145A	Design hydronic systems and select equipment	80
UEENEEJ146A	Design complex control systems for refrigeration or heating, ventilation, air conditioning systems	80
UEENEEJ149A	Develop heat exchanger design specifications	80

UEENEEJ150A	Evaluate new and alternative technologies applicable to electrotechnology applications	40
-------------	--	----

Note:

1. Pre-requisite pathways shall be identified and met for all elective units selected.
2. In selecting elective units considerations to career planning advice should be given to units that form part of a pre-requisite pathway for the progression to achieve particular competencies or qualification at a higher level.
3. Registered training organisations shall also provide information related to the relevant pathway(s) that may be taken to achieve paraprofessional status ("associate membership") with a professional engineering membership organisation.

END OF QUALIFICATION

Unit Grid

UEENEE104A	Use engineering applications software on personal computers
UEENEEE080A	Apply industry and community standards to engineering activities
UEENEEE083A	Establish and follow a competency development plan in an electrotechnology engineering discipline
UEENEEE101A	Apply Occupational Health and Safety regulations, codes and practices in the workplace
UEENEEE102A	Fabricate, assemble and dismantle utilities industry components
UEENEEE107A	Use drawings, diagrams, schedules, standards, codes and specifications
UEENEEE124A	Compile and produce an energy sector detailed report
UEENEEE126A	Provide solutions to basic engineering computational problems
UEENEEE127A	Use advanced computational processes to provide solutions to energy sector engineering problems
UEENEEE129A	Solve electrotechnical engineering problems
UEENEEE137A	Document and apply measures to control OHS risks associated with electrotechnology work
UEENEEE146A	Identify effects of energy on machinery and materials in an energy sector environment
UEENEEJ069B	Plan refrigeration and air conditioning projects
UEENEEJ127A	Establish the thermodynamic parameters of refrigeration and air conditioning systems
UEENEEJ128A	Produce HVAC/R system design drawings
UEENEEJ129A	Establish heat loads for commercial refrigeration and air conditioning applications
UEENEEJ138A	Analyse vibration and noise in refrigeration and air conditioning systems
UEENEEJ164A	Analyse the operation of HVAC air and hydronic systems
UEENEEJ165A	Evaluate thermodynamic and fluid parameters of refrigeration systems
UEENEEJ192A	Analyse the psychrometric performance of HVAC/R systems
UEENEEJ193A	Analyse the thermodynamic performance of HVAC/R systems
UEENEEK132A	Develop strategies to address environmental and sustainability issues in the energy sector

UEENEEC001B	Maintain documentation
UEENEEC002B	Source and purchase material/parts for installation or service jobs
UEENEEC003B	Provide quotations for installation or service jobs
UEENEEC010B	Deliver a service to customers
UEENEEED101A	Use computer applications relevant to a workplace
UEENEEEE020B	Provide basic instruction in the use of electrotechnology apparatus
BSBINM501A	Manage an information or knowledge management system
BSBINN502A Build	and sustain an innovative work environment
UEENEEEE150A	Undertake computations in an energy sector environment
UEENEEJ103A	Establish the basic operating conditions of vapour compression systems
UEENEEJ110A	Select refrigerant piping, accessories and associated controls
UEENEEJ174A refrigerants	Apply safety awareness and legal requirements for hydrocarbon
UEENEEJ178A	Apply safety awareness and legal requirements for ammonia refrigerant
UEENEEJ184A refrigerant	Apply safety awareness and legal requirements for Carbon Dioxide
UEENEEC005B	Estimate electrotechnology projects
UEENEEJ130A	Produce HVAC/R control system diagrams
UEENEEJ190A and accessories	Select basic commercial refrigeration system equipment, components
UEENEEJ191A accessories	Select residential air conditioning system equipment, components, and
UEENEEK145A	Implement and monitor energy sector environmental and sustainable
energy policies and procedures	
UEENEEC006B	Prepare tender submissions for electrotechnology projects
UEENEEJ132A	Design commercial refrigeration systems and select components
UEENEEJ133A	Design industrial refrigeration systems and select components
UEENEEJ134A select components	Design heating, ventilation and air conditioning (HVAC) systems and
UEENEEJ135A conditioning systems	Design control systems for refrigeration or heating, ventilation and air
UEENEEJ136A	Evaluate and report on building services energy management systems
UEENEEJ137A	Evaluate and report on the indoor air quality of buildings
UEENEEJ177A	Design hydrocarbon refrigerated systems
UEENEEJ181A	Design ammonia refrigerated systems
UEENEEJ183A	Design secondary refrigerant systems
UEENEEJ187A	Design carbon dioxide refrigerated systems
UEENEEK151A buildings	Develop effective engineering strategies for energy reduction in
UEENEEC007B	Manage contract variations
UEENEEJ139A projects	Develop specifications and prepare drawings for HVAC/Refrigeration
UEENEEJ141A equipment	Design complex commercial refrigeration systems and select
UEENEEJ142A	Design complex industrial refrigeration systems and select equipment
UEENEEJ143A	Design complex air conditioning systems and select equipment
UEENEEJ144A	Design mechanical ventilation/exhaust systems and select equipment
UEENEEJ145A	Design hydronic systems and select equipment

- UEENEEJ146A Design complex control systems for refrigeration or heating, ventilation, air conditioning systems
- UEENEEJ149A Develop heat exchanger design specifications
- UEENEEJ150A Evaluate new and alternative technologies applicable to electrotechnology applications

UEE62511 Advanced Diploma of Air-conditioning and Refrigeration Engineering

Modification History

Not Applicable

Description

Scope

This qualification provides competencies to design and validate/evaluate refrigeration and air conditioning equipment and systems, manage risk, estimate and manage projects and provide technical advice/sales. It includes regulatory requirements for purchasing and handling refrigerants.

It develops competencies in the ethical and responsible application of mathematics, science, engineering techniques, Standards and Codes of Practice, engineering design practices, supervision and management of physical, human and financial resources in Refrigeration and Air Conditioning engineering.

Note:

The Ozone Protection and Synthetic Greenhouse Gas Legislation Amendment Bill 2003 apply to this qualification. Prior to planning the delivery of any training and/or assessment activities all legislative and regulatory requirements shall be identified and included.

The core competencies of this qualification meet the prescribed requirements for Engineering Associate membership of Engineers Australia.

Participants seeking Engineers Australia membership should ensure that their training provider is accredited by that body to provide Engineering Education Programs at the level of Engineering Associate.

Completion requirements

The requirements for granting this qualification will be met when competency is demonstrated and achieved for:

- All the Core competency standard units, defined in the Core Competency Standard Units table below and
- A combination of Elective competency standard units to achieve a total weighting of 250 points in accordance with the Elective Competency Standard Units table below.

Note: UEENEEJ109A - Those holding an ‘Certificate III in Refrigeration and Air-conditioning trade qualification or equivalent’ meet the requirements of this unit and its pre-requisite requirements.

Core Competency Standard Units		Weighting Points
All Core competency standard units to be achieved		
UEENEEED104A	Use engineering applications software on personal computers	40
UEENEEEE011C	Manage risk in electrotechnology activities	60
UEENEEEE080A	Apply industry and community standards to engineering activities	20
UEENEEEE083A	Establish and follow a competency development plan in an electrotechnology engineering discipline	120
UEENEEEE101A	Apply Occupational Health and Safety regulations, codes and practices in the workplace	20
UEENEEEE102A	Fabricate, assemble and dismantle utilities industry components	40
UEENEEEE103A	Solve problems in ELV single path circuits	40
UEENEEEE105A	Fix and secure electrotechnology equipment	20
UEENEEEE107A	Use drawings, diagrams, schedules, standards, codes and specifications	40
UEENEEEE117A	Implement and monitor energy sector OHS policies and procedures	20
UEENEEEE124A	Compile and produce an energy sector detailed report	60
UEENEEEE137A	Document and apply measures to control OHS risks	20

Core Competency Standard Units		Weighting Points
All Core competency standard units to be achieved		
	associated with electrotechnology work	
UEENEEJ040B	Manage refrigeration and air conditioning projects	40
UEENEEJ069B	Plan refrigeration and air conditioning projects	60
UEENEEJ102A	Prepare and connect refrigerant tubing and fitting	30
UEENEEJ103A	Establish the basic operating conditions of vapour compression systems	60
UEENEEJ104A	Establish the basic operating conditions of air conditioning systems	20
UEENEEJ106A	Install refrigerant pipe work, flow controls and accessories	60
UEENEEJ107A	Install air conditioning and refrigeration systems, major components and associated equipment	80
UEENEEJ108A	Recover, pressure test, evacuate, charge and leak test refrigerants	60
UEENEEJ109A	Verify functionality and compliance of refrigeration and air conditioning installations	20
UEENEEJ110A	Select refrigerant piping, accessories and associated controls	50
UEENEEJ111A	Diagnose and rectify faults in air conditioning and refrigeration systems and components	40
UEENEEJ113A	Commission air conditioning and refrigeration systems	40
UEENEEJ127A	Establish the thermodynamic parameters of refrigeration and air conditioning systems	80
UEENEEJ128A	Produce HVAC/R system design drawings	80
UEENEEJ129A	Establish heat loads for commercial refrigeration and/or air conditioning applications	80
UEENEEJ138A	Analyse vibration and noise in refrigeration and air conditioning systems	80

Core Competency Standard Units		Weighting Points
All Core competency standard units to be achieved		
UEENEEJ153A	Find and rectify faults in motors and associated controls in refrigeration and air conditioning systems	50
UEENEEJ164A	Analyse the operation of HVAC air and hydronic systems	80
UEENEEJ165A	Evaluate thermodynamic and fluid parameters of refrigeration systems	100
UEENEEJ170A	Diagnose and rectify faults in air conditioning and refrigeration control systems	70
UEENEEJ192A	Analyse the psychrometric performance of HVAC/R systems	50
UEENEEJ194A	Solve problems in low voltage refrigeration circuits	40
UEENEEK132A	Develop strategies to address environmental and sustainability issues in the energy sector	20
UEENEED012A	Disconnect / reconnect composite appliances connected to low voltage installation wiring	60
UEENEED017A	Locate and rectify faults in low voltage composite appliances using set procedures	20
UEENEED024A	Attach cords and plugs to electrical equipment for connection to a single phase 230 Volt supply	20
UEENEED025A	Attach cords, cables and plugs to electrical equipment for connection to 1000 Va.c. or 1500 Vd.c. supply	20
Total points in core		1910

Elective Competency Standard Units		
Complete Elective units to achieve a total of weighting of 250 points from the following groups:		
Group	Minimum points	Maximum points

A	Imported and Common Elective Units Imported units from other training packages and/or state accredited courses can be added to this group, but they must be selected from qualifications where the unit is first packaged at AQF level 6. If units have not being assigned a weighting by the relevant EE-Oz Industry Technical Advisory Committee, their weighting will be 10 points.	0	120
B	Qualification Elective Units	0	30
C	Qualification Elective Units	0	60
D	Qualification Elective Units	0	120
E	Qualification Elective Units You may select all of your elective units from this Group	120	250

Group A – Imported and Common Electives Units		Weighting Points
You may complete units to a maximum weighting of 120		
BSBMGT502B	Manage people performance	70
BSBINM501A	Manage an information or knowledge management system	50
BSBMGT516C	Facilitate continuous improvement	60
BSBINN502A	Build and sustain an innovative work environment	50
BSBWOR502B	Ensure team effectiveness	60
CPCCOHS1001A	Work safely in the construction industry	10
HLTCPR201B	Perform CPR	10
MEM16006A	Organise and communicate information	20
MEM16008A	Interact with computing technology	20
MEM30001A	Use computer aided drafting systems to produce basic engineering drawings	40
MEM30002A	Produce basic engineering graphics	40

MEM30003A	Produce detailed engineering drawings	80
MEM30004A	Use CAD to create and display 3D models	40
	<p>Imported units from other training packages and/or state accredited courses can be added to this group, but they must be selected from qualifications where the unit is first packaged at AQF level 6. If units have not being assigned a weighting by the relevant EE-Oz Industry Technical Advisory Committee, their weighting will be 10 points.</p> <p>Note: For further information see Application of the NQC Flexibility Formula, UEE11 Electrotechnology Training Package, Version 1, Volume 1 Qualification Framework</p>	Up to 120 points

Group B – Qualification Elective Units		Weighting Points
You may complete units to a maximum weighting of 30		
UEENEEJ114A	Resolve problems in hydronic systems	40
UEENEEJ115A	Resolve problems in beverage dispensers	40
UEENEEJ116A	Resolve problems in transport refrigeration systems	20
UEENEEJ117A	Resolve problems in ultra-low temperature refrigeration systems	20
UEENEEJ118A	Resolve problems in post mix refrigeration systems	20
UEENEEJ119A	Resolve problems in ice making systems	20
UEENEEJ166A	Resolve problems in dairy refrigeration systems	20
UEENEEJ167A	Resolve problems in central plant air conditioning systems	40
UEENEEJ168A	Maintain microbial control of refrigeration and air conditioning systems	20
UEENEEJ171A	Resolve problems in refrigerated beverage vending cabinets	20
UEENEEJ174A	Apply safety awareness and legal requirements for hydrocarbon refrigerants	10

UEENEEJ175A	Service and repair self contained hydrocarbon air conditioning and refrigeration systems	20
UEENEEJ176A	Install and commission hydrocarbon refrigeration systems, components and associated equipment	20
UEENEEJ178A	Apply safety awareness and legal requirements for ammonia refrigerant	10
UEENEEJ179A	Repair and service ammonia refrigeration systems	20
UEENEEJ180A	Install and commission ammonia refrigeration systems, components and associated equipment	20
UEENEEJ182A	Repair and service secondary refrigeration systems	20
UEENEEJ184A	Apply safety awareness and legal requirements for carbon dioxide refrigerant	10
UEENEEJ185A	Repair and service carbon dioxide refrigeration systems	20
UEENEEJ186A	Install and commission carbon dioxide refrigeration systems, components and associated equipment	20
UEENEEJ188A	Repair and service self contained carbon dioxide refrigeration and heat pump systems	20

Group C – Qualification Elective Units		Weighting Points
You may complete units to a maximum weighting of 60		
UEENEEC005B	Estimate electrotechnology projects	40
UEENEEJ130A	Produce HVAC/R control system diagrams	40
UEENEEJ190A	Select basic commercial refrigeration system equipment, components and accessories	40
UEENEEJ191A	Select residential air conditioning system equipment, components, and accessories	40
UEENEK145A	Implement and monitor energy sector environmental and sustainable energy policies and procedures	20

Group D – Qualification Elective Units		Weighting Points
You may complete units to a maximum weighting of 120		
UEENEEC006B	Prepare tender submissions for electrotechnology projects	60
UEENEEE015B	Develop design briefs for electrotechnology projects	40
UEENEEE126A	Provide solutions to basic engineering computational problems	60
UEENEEJ132A	Design commercial refrigeration systems and select components	80
UEENEEJ133A	Design industrial refrigeration systems and select components	80
UEENEEJ134A	Design heating, ventilation and air conditioning (HVAC) systems and select components	60
UEENEEJ135A	Design control systems for refrigeration or heating, ventilation and air conditioning systems	80
UEENEEJ136A	Evaluate and report on building services energy management systems	80
UEENEEJ137A	Evaluate and report on the indoor air quality of buildings	40
UEENEEJ177A	Design hydrocarbon refrigerated systems	40
UEENEEJ181A	Design ammonia refrigerated systems	40
UEENEEJ183A	Design secondary refrigerant systems	40
UEENEEJ187A	Design carbon dioxide refrigerated systems	40
UEENEEK151A	Develop effective engineering strategies for energy reduction in buildings	60

Group E – Qualification Elective Units		Weighting Points
You must complete units to a minimum weighting of 120		
You may select all your elective units from this Group		
UEENEEC007B	Manage contract variations	40

UEENEEJ139A	Develop specifications and prepare drawings for HVAC/Refrigeration projects	60
UEENEEJ141A	Design complex commercial refrigeration systems and select equipment	40
UEENEEJ142A	Design complex industrial refrigeration systems and select equipment	40
UEENEEJ143A	Design complex air conditioning systems and select equipment	120
UEENEEJ144A	Design mechanical ventilation/exhaust systems and select equipment	40
UEENEEJ145A	Design hydronic systems and select equipment	80
UEENEEJ146A	Design complex control systems for refrigeration or heating, ventilation, air conditioning systems	80
UEENEEJ147A	Audit energy use for commercial HVAC/Refrigeration systems	40
UEENEEJ148A	Audit HVAC/R control systems for compliance with regulations and standards	60
UEENEEJ149A	Develop heat exchanger design specifications	80
UEENEEJ150A	Evaluate new and alternative technologies applicable to electrotechnology applications	40

Note:

1. Pre-requisite pathways shall be identified and met for all elective units selected.
2. In selecting elective units considerations to career planning advice should be given to units that form part of a pre-requisite pathway for the progression to achieve particular competencies or qualification at a higher level
3. Registered training organisations shall also provide information related to the relevant pathway(s) that may be taken to achieve paraprofessional status ("associate membership") with a professional engineering membership organisation.

UEENEEJ145A	Design hydronic systems and select equipment
UEENEEJ146A ventilation, air conditioning systems	Design complex control systems for refrigeration or heating,
UEENEEJ147A	Audit energy use for commercial HVAC/Refrigeration systems
UEENEEJ148A standards	Audit HVAC/R control systems for compliance with regulations and
UEENEEJ149A	Develop heat exchanger design specifications
UEENEEJ150A	Evaluate new and alternative technologies applicable to electrotechnology applications

UEE63011 Advanced Diploma of Electrical Systems Engineering

Modification History

Not applicable.

Description

Scope

This qualification provides competencies to develop, design and validate/evaluate, select, commission, maintain and diagnose faults/malfunctions on advanced electrical equipment and systems. Also, provides skills to manage risk, estimate and manage projects and provide technical advice/sales.

It develops competencies in the ethical and responsible application of mathematics, science, engineering techniques, Standards and Codes of Practice, engineering design practices, supervision and management of physical, human and financial resources in engineering.

Pathways Information

Not applicable.

Licensing/Regulatory Information

Not applicable.

Entry Requirements

Not applicable.

Employability Skills Summary

Not applicable.

Packaging Rules

Completion requirements

The requirements for granting this qualification will be met when competency is demonstrated and achieved for:

- All the Core competency standard units, defined in the Core Competency Standard Units table below and
- A combination of Elective competency standard units to achieve a total weighting of 580 points in accordance with the Elective Competency Standard Units table below.

Note: UEENEEG199A - Those holding an 'Unrestricted Electrical Fitter Licence or equivalent issued in an Australian State or Territory meet the requirements of this unit and its pre-requisite requirements.

Core Competency Standard Units		Weighting Points
All Core competency standard units to be achieved		
UEENEEED104A	Use software for engineering applications	40
UEENEEEE006B	Apply methods to maintain currency of industry developments	20
UEENEEEE011C	Manage risk in electrotechnology activities	60
UEENEEEE015B	Develop design briefs for electrotechnology projects	40
UEENEEEE071B	Write specifications for electrical engineering projects	40
UEENEEEE080A	Apply industry and community standards to engineering activities	20
UEENEEEE081A	Apply material science to solving electrotechnology engineering problems	60
UEENEEEE082A	Apply physics to solving electrotechnology engineering problems	60
UEENEEEE083A	Establish and follow a competency development plan in an electrotechnology engineering discipline	120
UEENEEEE101A	Apply Occupational Health and Safety regulations, codes and practices in the workplace	20
UEENEEEE102A	Fabricate, assemble and dismantle utilities industry components	40
UEENEEEE104A	Solve problems in d.c. circuits	80
UEENEEEE105A	Fix and secure electrotechnology equipment	20
UEENEEEE107A	Use drawings, diagrams, schedules, standards, codes and specifications	40

Core Competency Standard Units		Weighting Points
All Core competency standard units to be achieved		
UEENEEE117A	Implement and monitor energy sector OHS policies and procedures	20
UEENEEE124A	Compile and produce an energy sector detailed report	60
UEENEEE125A	Provide engineering solutions for problems in complex multiple path circuits	60
UEENEEE126A	Provide solutions to basic engineering computational problems	60
UEENEEE137A	Document and apply measures to control OHS risks associated with electrotechnology work	20
UEENEEG006A	Solve problems in single and three phase low voltage machines	80
UEENEEG033A	Solve problems in single and three phase low voltage electrical apparatus and circuits	60
UEENEEG063A	Arrange circuits, control and protection for general electrical installations	40
UEENEEG101A	Solve problems in electromagnetic devices and related circuits	60
UEENEEG102A	Solve problems in low voltage a.c. circuits	80
UEENEEG106A	Terminate cables, cords and accessories for low voltage circuits	40
UEENEEG108A	Trouble-shoot and repair faults in low voltage electrical apparatus and circuits	40
UEENEEG109A	Develop and connect electrical control circuits	80
UEENEEG149A	Provide engineering solutions to problems in complex polyphase power circuits	60
UEENEEG169A	Manage large electrical projects	40
UEENEEG170A	Plan large electrical projects	60
UEENEEG199A	Verify compliance and functionality of existing circuits	40

Core Competency Standard Units		Weighting Points
All Core competency standard units to be achieved		
UEENEEK132A	Develop energy sector strategies to address environmental and sustainability issues	20
Total points in core		1580

Elective Competency Standard Units			
Complete Elective units to achieve a total of weighting of 580 points from the following groups:			
Group		Minimum points	Maximum points
A	Imported and Common Elective Units Imported units from other training packages and/or state accredited courses can be added to this group, but they must be selected from qualifications where the unit is first packaged at AQF level 6. If units have not being assigned a weighting by the relevant EE-Oz Industry Technical Advisory Committee, their weighting will be 10 points.	0	220
B	Qualification Elective Units	0	160
C	Qualification Elective Units	0	160
D	Qualification Elective Units	0	160
E	Qualification Elective Units You may select the majority of your elective units from this Group	200	580

Group A – Imported and Common Electives Units		Weighting Points
You may complete units to a maximum weighting of 220		
BSBMGT502B	Manage people performance	70
BSBINM501A	Manage an information or knowledge management system	50
BSBMGT516C	Facilitate continuous improvement	60
BSBINN502A	Build and sustain an innovative work environment	50

BSBWOR502B	Ensure team effectiveness	60
	<p>Imported units from other training packages and/or state accredited courses can be added to this group, but they must be selected from qualifications where the unit is first packaged at AQF level 6. If units have not being assigned a weighting by the relevant EE-Oz Industry Technical Advisory Committee, their weighting will be 10 points.</p> <p>Note: For further information see Application of the NQC Flexibility Formula, UEE11 Electrotechnology Training Package, Version 1, Volume 1 Qualification Framework</p>	Up to 220 points

Group B – Qualification Elective Units		Weighting Points
You may complete units to a maximum weighting of 160		
UEENEEA110A	Assemble, mount and connect control gear and switchgear	40
UEENEEA112A	Fabricate and assemble bus bars	40
UEENEEA113A	Mount and wire control panel equipment	40
UEENEEG107A	Select wiring systems and cables for low voltage general electrical installations	60
UEENEEG110A	Diagnose and rectify faults in d.c. electrical apparatus and circuits	60
UEENEEG111A	Carry out repairs to electrical apparatus	40
UEENEEG116A	Diagnose and rectify faults in lifts/escalator systems	80
UEENEEG118A	Maintain operation of electrical mining equipment and systems	60
UEENEEG119A	Maintain the operation of electrical marine equipment and systems	60
UEENEEG120A	Select and arrange circuits and equipment for special electrical installations	60
UEENEEG129A	Overhaul and repair switchgear and controlgear	60
UEENEEG150A	Wind electrical coils	40

UEENEEG151A	Place and connect electrical coils	40
UEENEEG152A	Rewind single phase machines	40
UEENEEG153A	Rewind LV three phase induction machines rated for low voltage	60
UEENEEG154A	Rewind LV direct current machines	60
UEENEEG157A	Conduct electrical tests on LV electrical machines	40
UEENEEG159A	Conduct mechanical tests of LV electrical machines	40
UEENEEG164A	Repair mechanical and electrical components of electrical machines	40
UEENEEG165A	Maintain and service electrical traction lifts	40
UEENEEG166A	Installation and maintenance of escalators, tread ways and moving walks	40
UEENEEG167A	Align and install lift components and equipment	20
UEENEEG171A	Install, set up and commission interval metering	20
UEENEEG181A	Provide advice on effective and energy efficient lighting products	20
UEENEEG182A	Supply effective and efficient lighting products for domestic and small commercial applications	40
UEENEEG183A	Provide advice on the application of energy efficient lighting for ambient and aesthetic effect	20
UEENEEG189A	Install and maintain emergency lighting systems	40
UEENEEH102A	Repair basic electronic apparatus faults by replacement of components	40
UEENEEH111A	Troubleshoot single phase input d.c. power supplies	40
UEENEEH150A	Assemble and set up basic wired and wireless security systems	80
UEENEEI101A	Use instrumentation drawings, specifications, standards and equipment manuals	40
UEENEEI102A	Solve problems in pressure measurement circuits and systems	40

UEENEEI103A	Solve problems in density/level measurement circuits and systems	40
UEENEEI104A	Solve problems in flow measurement circuits and systems	40
UEENEEI105A	Solve problems in temperature measurement circuits and systems	40
UEENEEI116A	Enter and verify operating instructions in microprocessor equipped devices	20
UEENEEI138A	Provide solutions to extra low voltage (ELV) electro-pneumatic control systems and drives	60
UEENEEI140A	Plan the electrical installation of integrated systems	20
UEENEEI141A	Develop electrical integrated systems	20
UEENEEI150A	Develop, enter and verify discrete control programs for programmable controllers	60
UEENEEJ102A	Prepare and connect refrigerant tubing and fittings	30
UEENEEJ103A	Establish the basic operating conditions of vapour compression systems	60
UEENEEJ104A	Establish the basic operating conditions of air conditioning systems	20
UEENEEM019A	Attend to breakdowns in hazardous areas — coal mining	20
UEENEEM020A	Attend to breakdowns in hazardous areas — gas atmospheres	20
UEENEEM021A	Attend to breakdowns in hazardous areas — dust atmospheres	20
UEENEEM022A	Attend to breakdowns in hazardous areas — pressurisation	20
UEENEEM027A	Maintain equipment in hazardous areas — coal mining	60
UEENEEM028A	Maintain equipment in hazardous areas — gas atmospheres	60
UEENEEM029A	Maintain equipment in hazardous areas — dust atmospheres	60
UEENEEM030A	Maintain equipment in hazardous areas — pressurisation	60

UEENEEM038A	Conduct testing of hazardous areas installations — coal mining	40
UEENEEM080A	Report on the integrity of explosion-protected equipment in hazardous area	20

Group C – Qualification Elective Units		Weighting Points
You may complete units to a maximum weighting of 160		
UEENEEC005B	Estimate electrotechnology projects	40
UEENEEL125A	Plan LV electrical installations with a demand up to 400A per phase	40
UEENEEL128A	Plan layouts for electrical switchboards and control panels	40
UEENEEL155A	Rewind three phase induction machines rated for HV to 3.3 kV	60
UEENEEL156A	Rewind three phase induction machines rated for HV above 3.3 kV	60
UEENEEL158A	Conduct electrical tests on HV electrical machines	60
UEENEEL162A	Set up and place LV electrical apparatus and associated circuits into service	40
UEENEEL168A	Diagnose and rectify faults in complex lifts equipment and systems	40
UEENEEL172A	Investigate and produce reports on electrical incidents	60
UEENEEL175A	Develop compliance policies and plans to conduct a electrical contracting business	80
UEENEEL179A	Develop detailed electrical drawings	60
UEENEEL184A	Provide photometric data for illumination system design	60
UEENEEL185A	Select effective and efficient light sources and luminaires for given locations and designs	60
UEENEEL186A	Design effective and efficient lighting for residential and commercial buildings	20
UEENEEL188A	Prepare quotations for the supply of effective and efficient lighting products for lighting projects	20

UEENEEI119A	Set up transducers and field control devices	60
UEENEEI120A	Provide solutions to problems in industrial control systems	60
UEENEEI124B	Diagnose and rectify faults in electronic control systems	60
UEENEEI125A	Provide solutions to fluid circuit operations	60
UEENEEI126A	Provide solutions to pneumatic/hydraulic system operations	80
UEENEEI139A	Diagnose and rectify faults in digital controls systems	60
UEENEEI142A	Develop an electrical integrated system interface for access through a touch screen	20
UEENEEI143A	Develop access control of electrical integrated systems using logic-based programming tools	20
UEENEEI144A	Develop interfaces for multiple access methods to monitor, schedule and control an electrical integrated system	20
UEENEEI148A	Provide solutions to single phase electronic power control problems	60
UEENEEI149A	Provide solutions to polyphase electronic power control problems	60
UEENEEI151A	Develop, enter and verify programs for industrial control systems using high level instructions	60
UEENEEI152A	Develop, enter and verify programs in Supervisory Control and Data Acquisition systems	60
UEENEEI155A	Develop structured programs to control external devices	40
UEENEEM039A	Conduct testing of hazardous area installations — gas atmospheres	40
UEENEEM042A	Conduct visual inspection of hazardous areas installations	40
UEENEEM044A	Conduct detailed inspection of hazardous areas installations — gas atmospheres	40
UEENEEM047A	Develop and manage maintenance programs for hazardous areas electrical equipment — coal mining	20
UEENEEM078A	Manage compliance of hazardous areas	20

Group D – Qualification Elective Units		Weighting Points
You may complete units to a maximum weighting of 160		
UEENEEC006B	Prepare tender submissions for electrotechnology projects	60
UEENEEE110A	Develop and implement energy sector maintenance programs	60
UEENEEG127A	Design LV electrical installations with a demand greater than 400 A per phase	40
UEENEEG131A	Evaluate performance of LV electrical apparatus	40
UEENEEG180A	Develop detailed and complex drawings for electrical systems using CAD systems	60
UEENEEG187A	Design effective and efficient lighting for public, open and sports areas	20
UEENEEI127A	Analyse complex electronic circuits controlling fluids	80
UEENEEI145A	Diagnose and rectify faults in a.c. motor drive systems	60
UEENEEI146A	Diagnose and rectify faults in d.c. motor drive systems	60
UEENEEI147A	Diagnose and rectify faults in servo drive systems	60
UEENEEI156A	Develop and test code for microcontroller devices	60
UEENEEI157A	Configure and maintain industrial control system networks	60
UEENEEK129A	Design renewable energy (RE) heating systems	120
UEENEEK131A	Design wind energy conversion systems (WECS) rated to 10 kW.	60
UEENEEK138A	Design micro-hydro power systems	60
UEENEEM035A	Conduct a conformity assessment of explosion-protected equipment — coal mining	40
UEENEEM036A	Conduct a conformity assessment of explosion-protected equipment — gas atmospheres	40
UEENEEM037A	Conduct a conformity assessment of explosion-protected equipment — dust atmospheres	40
UEENEEM054A	Plan electrical installations for hazardous areas — gas	20

	atmospheres	
UEENEEM064A	Conduct audit of hazardous areas installations — coal mining	60
UEENEEM065A	Conduct audit of hazardous areas installations — gas atmospheres	60
UEENEEM066A	Conduct audit of hazardous areas installations — dust atmospheres	60
UEENEEM067A	Assess the fitness-for-purpose of hazardous areas explosion-protected equipment — coal mining	60
UEENEEM068A	Assess the fitness-for-purpose of hazardous areas explosion-protected equipment — gas atmospheres	60
UEENEEM069A	Assess the fitness-for-purpose of hazardous areas explosion-protected equipment — dust atmospheres	60

Group E – Qualification Elective Units		Weighting Points
You must complete units to a minimum weighting of 200 You may select all your elective units from this Group		
UEENEEM007B	Manage contract variations	40
UEENEEE127A	Use advanced computational processes to provide solutions to engineering problems	80
UEENEEE128A	Develop engineering solutions to photonic problems	80
UEENEEE160A	Provide engineering solutions for uses of materials and thermodynamic effects	80
UEENEEE161A	Analyse static and dynamic parameters of electrotechnology/utilities equipment	80
UEENEEE162A	Select drive components for equipment design	80
UEENEEE163A	Analyse materials for suitability in electrotechnology/utilities equipment	80
UEENEEE164A	Design electrical machine drives and production layout plans	80
UEENEEE078B	Contribute to risk management in electrotechnology systems	20

UEENEEG130A	Design electrical switchboards rated for high fault levels	60
UEENEEG143A	Develop engineering solutions for synchronous machine problems	60
UEENEEG144A	Develop engineering solutions for direct current machine problems	60
UEENEEG145A	Develop engineering solutions for induction machine problems	60
UEENEEG160A	Evaluate performance of LV electrical machines	40
UEENEEG161A	Design and develop modifications for electrical machines	60
UEENEEH147A	Assess compliance of electronic apparatus	60
UEENEEH184A	Modify DSP based sub-systems	80
UEENEEH185A	Design a signal-conditioning subsystem	80
UEENEEH188A	Design and develop electronics/computer systems projects	40
UEENEEI123A	Design electronic control and instrumentation systems	60
UEENEEI128A	Set up controls on complex fluid systems	80
UEENEEI129A	Set up electronically controlled mechanically operated complex systems	80
UEENEEI130A	Set up electronically controlled robotically operated complex systems	80
UEENEEI153A	Design and configure Human-Machine Interface (HMI) networks	60
UEENEEI154A	Design a computer based control system	120
UEENEEK133A	Design hybrid renewable power systems	80
UEENEEK139A	Design stand-alone renewable energy power systems	40
UEENEEK140A	Develop engineering solutions to renewable energy problems	60
UEENEEK146A	Design energy management controls systems for electrical installations in buildings	80
UEENEEK151A	Develop engineering strategies for energy reduction in	60

	buildings	
UEENEEM052A	Classify hazardous areas — gas atmospheres	40
UEENEEM053A	Classify hazardous areas — dust atmospheres	40
UEENEEM057A	Design explosion-protected electrical systems and installations — gas atmospheres	20
UEENEEM058A	Design explosion-protected electrical systems and installations — dust atmospheres	20
UEENEEM059A	Design explosion-protected electrical systems and installations — pressurisation	20
UEENEEM075A	Design explosion-protected electrical systems — Coal mining	20
UEENEEM079A	Design of gas detection systems and installations	20

Note:

- 1.Pre-requisite pathways shall be identified and met for all elective units selected.
- 2.In selecting elective units considerations to career planning advice should be given to units that form part of a pre-requisite pathway for the progression to achieve particular competencies or qualification at a higher level.
- 3.Registered training organisations shall also provide information related to the relevant pathway(s) that may be taken to achieve paraprofessional status ("associate membership") with a professional engineering membership organisation.

END OF QUALIFICATION**Unit Grid**

UEENEED104A	Use software for engineering applications
UEENEEE006B	Apply methods to maintain currency of industry developments
UEENEEE011C	Manage risk in electrotechnology activities
UEENEEE015B	Develop design briefs for electrotechnology projects
UEENEEE071B	Write specifications for electrical engineering projects
UEENEEE080A	Apply industry and community standards to engineering activities
UEENEEE081A	Apply material science to solving electrotechnology engineering problems
UEENEEE082A	Apply physics to solving electrotechnology engineering problems
UEENEEE083A	Establish and follow a competency development plan in an electrotechnology engineering discipline
UEENEEE101A	Apply Occupational Health and Safety regulations, codes and practices in the workplace
UEENEEE102A	Fabricate, assemble and dismantle utilities industry components
UEENEEE104A	Solve problems in d.c. circuits

UEENEEE105A	Fix and secure electrotechnology equipment
UEENEEE107A	Use drawings, diagrams, schedules, standards, codes and specifications
UEENEEE117A	Implement and monitor energy sector OHS policies and procedures
UEENEEE124A	Compile and produce an energy sector detailed report
UEENEEE125A	Provide engineering solutions for problems in complex multiple path circuits
UEENEEE126A	Provide solutions to basic engineering computational problems
UEENEEE137A	Document and apply measures to control OHS risks associated with electrotechnology work
UEENEEG006A	Solve problems in single and three phase low voltage machines
UEENEEG033A	Solve problems in single and three phase low voltage electrical apparatus and circuits
UEENEEG063A	Arrange circuits, control and protection for general electrical installations
UEENEEG101A	Solve problems in electromagnetic devices and related circuits
UEENEEG102A	Solve problems in low voltage a.c. circuits
UEENEEG106A	Terminate cables, cords and accessories for low voltage circuits
UEENEEG108A	Trouble-shoot and repair faults in low voltage electrical apparatus and circuits
UEENEEG109A	Develop and connect electrical control circuits
UEENEEG149A	Provide engineering solutions to problems in complex polyphase power circuits
UEENEEG169A	Manage large electrical projects
UEENEEG170A	Plan large electrical projects
UEENEEG199A	Verify compliance and functionality of existing circuits
UEENEEK132A	Develop energy sector strategies to address environmental and sustainability issues
BSBMGT502B	Manage people performance
BSBINM501A	Manage an information or knowledge management system
BSBMGT516C	Facilitate continuous improvement
BSBINN502A	Build and sustain an innovative work environment
BSBWOR502B	Ensure team effectiveness
UEENEEA110A	Assemble, mount and connect control gear and switchgear
UEENEEA112A	Fabricate and assemble bus bars
UEENEEA113A	Mount and wire control panel equipment
UEENEEG107A	Select wiring systems and cables for low voltage general electrical installations
UEENEEG110A	Diagnose and rectify faults in d.c. electrical apparatus and circuits
UEENEEG111A	Carry out repairs to electrical apparatus
UEENEEG116A	Diagnose and rectify faults in lifts/escalator systems
UEENEEG118A	Maintain operation of electrical mining equipment and systems
UEENEEG119A	Maintain the operation of electrical marine equipment and systems
UEENEEG120A	Select and arrange circuits and equipment for special electrical installations
UEENEEG129A	Overhaul and repair switchgear and controlgear
UEENEEG150A	Wind electrical coils
UEENEEG151A	Place and connect electrical coils
UEENEEG152A	Rewind single phase machines

UEENEEG153A	Rewind LV three phase induction machines rated for low voltage
UEENEEG154A	Rewind LV direct current machines
UEENEEG157A	Conduct electrical tests on LV electrical machines
UEENEEG159A	Conduct mechanical tests of LV electrical machines
UEENEEG164A	Repair mechanical and electrical components of electrical machines
UEENEEG165A	Maintain and service electrical traction lifts
UEENEEG166A	Installation and maintenance of escalators, tread ways and moving walks
UEENEEG167A	Align and install lift components and equipment
UEENEEG171A	Install, set up and commission interval metering
UEENEEG181A	Provide advice on effective and energy efficient lighting products
UEENEEG182A	Supply effective and efficient lighting products for domestic and small commercial applications
UEENEEG183A	Provide advice on the application of energy efficient lighting for ambient and aesthetic effect
UEENEEG189A	Install and maintain emergency lighting systems
UEENEEH102A	Repair basic electronic apparatus faults by replacement of components
UEENEEH111A	Troubleshoot single phase input d.c. power supplies
UEENEEH150A	Assemble and set up basic wired and wireless security systems
UEENEEI101A	Use instrumentation drawings, specifications, standards and equipment manuals
UEENEEI102A	Solve problems in pressure measurement circuits and systems
UEENEEI103A	Solve problems in density/level measurement circuits and systems
UEENEEI104A	Solve problems in flow measurement circuits and systems
UEENEEI105A	Solve problems in temperature measurement circuits and systems
UEENEEI116A	Enter and verify operating instructions in microprocessor equipped devices
UEENEEI138A	Provide solutions to extra low voltage (ELV) electro-pneumatic control systems and drives
UEENEEI140A	Plan the electrical installation of integrated systems
UEENEEI141A	Develop electrical integrated systems
UEENEEI150A	Develop, enter and verify discrete control programs for programmable controllers
UEENEEJ102A	Prepare and connect refrigerant tubing and fittings
UEENEEJ103A	Establish the basic operating conditions of vapour compression systems
UEENEEJ104A	Establish the basic operating conditions of air conditioning systems
UEENEEM019A	Attend to breakdowns in hazardous areas — coal mining
UEENEEM020A	Attend to breakdowns in hazardous areas — gas atmospheres
UEENEEM021A	Attend to breakdowns in hazardous areas — dust atmospheres
UEENEEM022A	Attend to breakdowns in hazardous areas — pressurisation
UEENEEM027A	Maintain equipment in hazardous areas — coal mining
UEENEEM028A	Maintain equipment in hazardous areas — gas atmospheres
UEENEEM029A	Maintain equipment in hazardous areas — dust atmospheres
UEENEEM030A	Maintain equipment in hazardous areas — pressurisation
UEENEEM038A	Conduct testing of hazardous areas installations — coal mining
UEENEEM080A	Report on the integrity of explosion-protected equipment in hazardous area
UEENEEC005B	Estimate electrotechnology projects

UEENEEG125A	Plan LV electrical installations with a demand up to 400A per phase
UEENEEG128A	Plan layouts for electrical switchboards and control panels
UEENEEG155A	Rewind three phase induction machines rated for HV to 3.3 kV
UEENEEG156A	Rewind three phase induction machines rated for HV above 3.3 kV
UEENEEG158A	Conduct electrical tests on HV electrical machines
UEENEEG162A	Set up and place LV electrical apparatus and associated circuits into service
UEENEEG168A	Diagnose and rectify faults in complex lifts equipment and systems
UEENEEG172A	Investigate and produce reports on electrical incidents
UEENEEG175A	Develop compliance policies and plans to conduct a electrical contracting business
UEENEEG179A	Develop detailed electrical drawings
UEENEEG184A	Provide photometric data for illumination system design
UEENEEG185A	Select effective and efficient light sources and luminaires for given locations and designs
UEENEEG186A	Design effective and efficient lighting for residential and commercial buildings
UEENEEG188A	Prepare quotations for the supply of effective and efficient lighting products for lighting projects
UEENEEI119A	Set up transducers and field control devices
UEENEEI120A	Provide solutions to problems in industrial control systems
UEENEEI124B	Diagnose and rectify faults in electronic control systems
UEENEEI125A	Provide solutions to fluid circuit operations
UEENEEI126A	Provide solutions to pneumatic/hydraulic system operations
UEENEEI139A	Diagnose and rectify faults in digital controls systems
UEENEEI142A	Develop an electrical integrated system interface for access through a touch screen
UEENEEI143A	Develop access control of electrical integrated systems using logic-based programming tools
UEENEEI144A	Develop interfaces for multiple access methods to monitor, schedule and control an electrical integrated system
UEENEEI148A	Provide solutions to single phase electronic power control problems
UEENEEI149A	Provide solutions to polyphase electronic power control problems
UEENEEI151A	Develop, enter and verify programs for industrial control systems using high level instructions
UEENEEI152A	Develop, enter and verify programs in Supervisory Control and Data Acquisition systems
UEENEEI155A	Develop structured programs to control external devices
UEENEEM039A	Conduct testing of hazardous area installations — gas atmospheres
UEENEEM042A	Conduct visual inspection of hazardous areas installations
UEENEEM044A	Conduct detailed inspection of hazardous areas installations — gas atmospheres
UEENEEM047A	Develop and manage maintenance programs for hazardous areas electrical equipment — coal mining
UEENEEM078A	Manage compliance of hazardous areas
UEENEEM006B	Prepare tender submissions for electrotechnology projects
UEENEEE110A	Develop and implement energy sector maintenance programs

UEENEEG127A	Design LV electrical installations with a demand greater than 400 A per phase
UEENEEG131A	Evaluate performance of LV electrical apparatus
UEENEEG180A	Develop detailed and complex drawings for electrical systems using CAD systems
UEENEEG187A	Design effective and efficient lighting for public, open and sports areas
UEENEEI127A	Analyse complex electronic circuits controlling fluids
UEENEEI145A	Diagnose and rectify faults in a.c. motor drive systems
UEENEEI146A	Diagnose and rectify faults in d.c. motor drive systems
UEENEEI147A	Diagnose and rectify faults in servo drive systems
UEENEEI156A	Develop and test code for microcontroller devices
UEENEEI157A	Configure and maintain industrial control system networks
UEENEEK129A	Design renewable energy (RE) heating systems
UEENEEK131A	Design wind energy conversion systems (WECS) rated to 10 kW.
UEENEEK138A	Design micro-hydro power systems
UEENEEM035A	Conduct a conformity assessment of explosion-protected equipment — coal mining
UEENEEM036A	Conduct a conformity assessment of explosion-protected equipment — gas atmospheres
UEENEEM037A	Conduct a conformity assessment of explosion-protected equipment — dust atmospheres
UEENEEM054A	Plan electrical installations for hazardous areas — gas atmospheres
UEENEEM064A	Conduct audit of hazardous areas installations — coal mining
UEENEEM065A	Conduct audit of hazardous areas installations — gas atmospheres
UEENEEM066A	Conduct audit of hazardous areas installations — dust atmospheres
UEENEEM067A	Assess the fitness-for-purpose of hazardous areas explosion-protected equipment — coal mining
UEENEEM068A	Assess the fitness-for-purpose of hazardous areas explosion-protected equipment — gas atmospheres
UEENEEM069A	Assess the fitness-for-purpose of hazardous areas explosion-protected equipment — dust atmospheres
UEENEEM007B	Manage contract variations
UEENEEE127A	Use advanced computational processes to provide solutions to engineering problems
UEENEEE128A	Develop engineering solutions to photonic problems
UEENEEE160A	Provide engineering solutions for uses of materials and thermodynamic effects
UEENEEE161A	Analyse static and dynamic parameters of electrotechnology/utilities equipment
UEENEEE162A	Select drive components for equipment design
UEENEEE163A	Analyse materials for suitability in electrotechnology/utilities equipment
UEENEEE164A	Design electrical machine drives and production layout plans
UEENEEE078B	Contribute to risk management in electrotechnology systems
UEENEEG130A	Design electrical switchboards rated for high fault levels
UEENEEG143A	Develop engineering solutions for synchronous machine problems
UEENEEG144A	Develop engineering solutions for direct current machine problems
UEENEEG145A	Develop engineering solutions for induction machine problems

UEENEEG160A	Evaluate performance of LV electrical machines
UEENEEG161A	Design and develop modifications for electrical machines
UEENEEH147A	Assess compliance of electronic apparatus
UEENEEH184A	Modify DSP based sub-systems
UEENEEH185A	Design a signal-conditioning subsystem
UEENEEH188A	Design and develop electronics/computer systems projects
UEENEEI123A	Design electronic control and instrumentation systems
UEENEEI128A	Set up controls on complex fluid systems
UEENEEI129A	Set up electronically controlled mechanically operated complex systems
UEENEEI130A	Set up electronically controlled robotically operated complex systems
UEENEEI153A	Design and configure Human-Machine Interface (HMI) networks
UEENEEI154A	Design a computer based control system
UEENEEK133A	Design hybrid renewable power systems
UEENEEK139A	Design stand-alone renewable energy power systems
UEENEEK140A	Develop engineering solutions to renewable energy problems
UEENEEK146A	Design energy management controls systems for electrical installations in buildings
UEENEEK151A	Develop engineering strategies for energy reduction in buildings
UEENEEM052A	Classify hazardous areas — gas atmospheres
UEENEEM053A	Classify hazardous areas — dust atmospheres
UEENEEM057A	Design explosion-protected electrical systems and installations — gas atmospheres
UEENEEM058A	Design explosion-protected electrical systems and installations — dust atmospheres
UEENEEM059A	Design explosion-protected electrical systems and installations — pressurisation
UEENEEM075A	Design explosion-protected electrical systems — Coal mining
UEENEEM079A	Design of gas detection systems and installations

UEE11 Data Communications - ACMA 'Open' Cabling Provider

Modification History

Not applicable.

Description

Not applicable.

Pathways Information

The units of competency in this skill set will contribute to the completion of relevant Certificate III, Certificate IV, Diploma and Advanced Diploma qualifications from the UEE11 Electrotechnology Training Package. Please consult the packaging rules of the relevant qualification for further advice.

Licensing/Regulatory Information

Readers should ensure that they have also read the part of the Training Package that outlines licensing and regulatory requirements.

Skill Set Requirements

Not applicable.

Unit Grid

UEENEEF102A	Install and maintain cabling for multiple access to telecommunication services
UEENEEE102A	Fabricate, assemble and dismantle utilities industry components
UEENEEE104A	Solve problems in d.c. circuits
UEENEEE105A	Fix and secure electrotechnology equipment
UEENEEE107A	Use drawings, diagrams, schedules, standards, codes and specifications

Target Group

It is essential that anyone undertaking this skill set already holds the Competency Standard Units:

UEENEEE103A Solve problems in ELV single path circuits

Note:

This Skill Set meets the minimum ACMA 'prescribed level of knowledge and skill that safeguards matters of health, safety, network integrity and addresses matters of interoperability where customer equipment and standard telephone service are involved' for ACMA 'Open' Cabling Provider Registration.

Suggested words for Statement of Attainment

This Skill Set from the UEE11 Electrotechnology Training Package meets the industry requirements for ACMA 'Open' Cabling Provider

Custom Content Section

Not applicable.

UEE11 Data Communications - ACMA Restricted Telecommunications Cabling R (Trunc)

Modification History

Not applicable.

Description

Not applicable.

Pathways Information

The units of competency in this skill set will contribute to the completion of relevant Certificate II, Certificate III and Certificate IV, qualifications from the UEE11 Electrotechnology Training Package.

Please consult the packaging rules of the relevant qualification for further advice.

Licensing/Regulatory Information

Readers should ensure that they have also read the part of the Training Package that outlines licensing and regulatory requirements.

Skill Set Requirements

Not applicable.

Unit Grid

UEENEEF101A	Install and connect cabling for direct access to telecommunications service
UEENEEE102A	Fabricate, assemble and dismantle utilities industry components
UEENEEE105A	Fix and secure electrotechnology equipment
UEENEEE107A	Use drawings, diagrams, schedules, standards, codes and specifications

Target Group

It is essential that anyone undertaking this skill set already holds the Competency Standard

Units:

UEENEEF106A Solve problems in voice and data communications circuits

Note:

This Skill Set meets the minimum ACMA ‘prescribed level of knowledge and skill that safeguards matters of health, safety, network integrity and addresses matters of interoperability where customer equipment and standard telephone service are involved’ for ACMA ‘Restricted’ Cabling Provider Registration.

Suggested words for Statement of Attainment

This Skill Set from the UEE11 Electrotechnology Training Package meets the industry requirements for ACMA Restricted Telecommunications Cabling Registration.

Custom Content Section

Not applicable.

UEE11 Data Communications - Install Aerial Communication Cables

Modification History

Not applicable.

Description

Not applicable.

Pathways Information

The units of competency in this skill set will contribute to the completion of relevant Certificate III, Certificate IV, Diploma and Advanced Diploma qualifications from the UEE11 Electrotechnology Training Package. Please consult the packaging rules of the relevant qualification for further advice.

Licensing/Regulatory Information

Readers should ensure that they have also read the part of the Training Package that outlines licensing and regulatory requirements.

Skill Set Requirements

Not applicable.

Unit Grid

UEENEEF112A	Install aerial telecommunication cables
UEENEEF102A	Install and maintain cabling for multiple access to telecommunication services
UEENEEE102A	Fabricate, assemble and dismantle utilities industry components
UEENEEE104A	Solve problems in d.c. circuits
UEENEEE105A	Fix and secure electrotechnology equipment
UEENEEE107A	Use drawings, diagrams, schedules, standards, codes and specifications

Target Group

It is essential that anyone undertaking this skill set already holds the Competency Standard Units:

UEENEEE103A Solve problems in ELV single path circuits

Note:

This Skill Set meets the minimum ACMA ‘prescribed level of knowledge and skill that safeguards matters of health, safety, network integrity and addresses matters of interoperability where customer equipment and standard telephone service are involved’ for ACMA ‘Open’ Cabling Provider Registration with aerial endorsement.

Suggested words for Statement of Attainment

This Skill Set from the UEE11 Electrotechnology Training Package meets the industry requirements for Install aerial communication cables

UEE11 Electrical - Install and Set Up Interval Metering

Modification History

Not applicable.

Description

Not applicable.

Pathways Information

The units of competency in this skill set will contribute to the completion of relevant Certificate III, Certificate IV, Diploma and Advanced Diploma qualifications from the UEE11 Electrotechnology Training Package. Please consult the packaging rules of the relevant qualification for further advice.

Licensing/Regulatory Information

Readers should ensure that they have also read the part of the Training Package that outlines licensing and regulatory requirements.

Skill Set Requirements

Not applicable.

Unit Grid

UEE11-171A Install, set up and commission interval metering

Target Group

It is essential that anyone undertaking this skill set already holds the Competency Standard

Unit:

UEE11-105A Verify compliance and functionality of low voltage general electrical installations

OR

A current unrestricted electrical licence issued in an Australian State or Territory.

Suggested words for Statement of Attainment

This Skill Set from the UEE11 Electrotechnology Training Package meets the industry requirements for Install and set up interval metering

Custom Content Section

Not applicable.

UEE11 Electrical - Providing advice on lighting products

Modification History

Not applicable.

Description

Not applicable.

Pathways Information

The units of competency in this skill set will contribute to the completion of relevant Certificate III, Certificate IV, Diploma and Advanced Diploma qualifications from the UEE11 Electrotechnology Training Package.

Please consult the packaging rules of the relevant qualification for further advice.

Licensing/Regulatory Information

Readers should ensure that they have also read the part of the Training Package that outlines licensing and regulatory requirements.

Skill Set Requirements

Not applicable.

Unit Grid

UEENEEG181A Provide advice on effective and energy efficient lighting products

UEENEEG182A Supply effective and efficient lighting products for domestic and small commercial applications

Target Group

It is essential that anyone undertaking this skill set works in the electrical and/or retail industry where customers will seek a advice on effective and energy efficient lighting products

Suggested words for Statement of Attainment

This Skill Set from the UEE11 Electrotechnology Training Package meets the industry requirements for Electrical – Providing advice on lighting products

Custom Content Section

Not applicable.

UEE11 Electronic - Fire Detection and Alarm Systems - Installation, Main (Trunc)

Modification History

Not applicable.

Description

Not applicable.

Pathways Information

The units of competency in this skill set will contribute to the completion of relevant Certificate III, Certificate IV, Diploma and Advanced Diploma qualifications from the UEE11 Electrotechnology Training Package. Please consult the packaging rules of the relevant qualification for further advice.

Licensing/Regulatory Information

Readers should ensure that they have also read the part of the Training Package that outlines licensing and regulatory requirements.

Skill Set Requirements

Not applicable.

Unit Grid

UEENEEH161A	Install fire detection and warning system apparatus
UEENEEH162A	Verify compliance and functionality of fire protection system installations
UEENEEH163A	Enter and verify programs for fire protection systems
UEENEEH164A	Commission large fire protection systems
UEENEEH165A	Troubleshoot fire protection systems

Target Group

It is essential that anyone undertaking this skill set already holds the Competency Standard Units:

- UEENEEE102A, Fabricate, assemble and dismantle utilities industry components
- UEENEEE105A, Fix and secure electrotechnology equipment
- UEENEEE107A, Use drawings, diagrams, schedules, standards, codes and specifications

OR

A current unrestricted electrical licence issued in an Australian State or Territory.

Note: As agreed with the Fire Protection Industry (ODS & SGG) Board, existing workers in the fire protection sector may be deemed to have met the above pre-requisite competencies if they:

- Hold the Australian Communications and Media Authority's restricted or open cablers registration and can demonstrate three (3) years wiring and installation experience in the fire protection sector.

OR

- Hold the Australian Communications and Media Authority's open cablers registration and can demonstrate three (3) years wiring and installation experience in the security or communications sectors.
-

Suggested words for Statement of Attainment

This Skill Set from the UEE11 Electrotechnology Training Package meets the industry requirements for Install and set up interval metering

Custom Content Section

Not applicable.

UEE11 Hazardous Areas - Attend to Breakdowns in Hazardous Areas - Coal Mining

Modification History

Not applicable.

Description

Not applicable.

Pathways Information

The units of competency in this skill set will contribute to the completion of relevant Diploma and Advanced Diploma qualifications from the UEE11 Electrotechnology Training Package. Please consult the packaging rules of the relevant qualification for further advice.

Licensing/Regulatory Information

Readers should ensure that they have also read the part of the Training Package that outlines licensing and regulatory requirements.

Skill Set Requirements

Not applicable.

Unit Grid

UEENEEM019A Attend to breakdowns in hazardous areas - coal mining
UEENEEM080A Report on the integrity of explosion-protected equipment in a hazardous area

Target Group

It is essential that anyone undertaking this skill set already holds the Competencies in attending to breakdowns in general electrical or instrumentation equipment mechanical plant/equipment service and maintenance at least AQF level 3 or equivalent.

Note :

This Skill Set is directly equivalent to the Unit 2.3 Attend to breakdowns in hazardous areas in the Australian/New Zealand Standard AS/NZS 4761.1; 2008 Competencies for working with electrical equipment for hazardous areas (EEHA) Part 1: Competency Standards.

Equivalence includes endorsement in the explosion-protection techniques listed in the Range statement of the unit UEENEEM019A

Suggested words for Statement of Attainment

This Skill Set from the UEE11 Electrotechnology Training Package meets the industry requirements for Attend to breakdowns in hazardous areas - coal mining

Custom Content Section

Not applicable.

UEE11 Hazardous Areas - Carry Out Overhaul and Repair of Explosion-Protected (Trunc)

Modification History

Not applicable.

Description

Not applicable.

Pathways Information

The units of competency in this skill set will contribute to the completion of relevant Diploma and Advanced Diploma qualifications from the UEE11 Electrotechnology Training Package. Please consult the packaging rules of the relevant qualification for further advice.

Licensing/Regulatory Information

Readers should ensure that they have also read the part of the Training Package that outlines licensing and regulatory requirements.

Skill Set Requirements

Not applicable.

Unit Grid

UEENEEM060A Carry out overhaul and repair of explosion-protected equipment - coal mining

Target Group

It is essential that anyone undertaking this skill set already holds the Competency Standard Unit:

UEENEEG164A Repair and maintain mechanical components of electrical machines

Note :

This Skill Set is directly equivalent to the Unit 2.20 Carry out overhaul and repair of explosion-protected equipment in the Australian/New Zealand Standard AS/NZS 4761.1; 2008 Competencies for working with electrical equipment for hazardous areas (EEHA) Part 1: Competency Standards.

Equivalence includes endorsement in the explosion-protection techniques listed in the Range statement of the unit UEENEEM060A.

Suggested words for Statement of Attainment

This Skill Set from the UEE11 Electrotechnology Training Package meets the industry requirements for Carry out overhaul and repair of explosion-protected equipment - coal mining

Custom Content Section

Not applicable.

UEE11 Hazardous Areas - Conduct a Conformity Assessment of Explosion-Pro (Trunc)

Modification History

Not applicable.

Description

Not applicable.

Pathways Information

The units of competency in this skill set will contribute to the completion of relevant Diploma and Advanced Diploma qualifications from the UEE11 Electrotechnology Training Package. Please consult the packaging rules of the relevant qualification for further advice.

Licensing/Regulatory Information

Readers should ensure that they have also read the part of the Training Package that outlines licensing and regulatory requirements.

Skill Set Requirements

Not applicable.

Unit Grid

UEENEEM035A	Conduct a conformity assessment of explosion-protected equipment - coal mining
UEENEEE124A	Compile and produce an electrotechnology report

Target Group

It is essential that anyone undertaking this skill set already holds the relevant AQF 5 Qualification from the UEE11 Electrotechnology Training Package or equivalent

Note :

This Skill Set is directly equivalent to the Unit 2.9 Conduct a conformity assessment of explosion-protected equipment in the Australian/New Zealand Standard AS/NZS 4761.1; 2008 Competencies for working with electrical equipment for hazardous areas (EEHA) Part 1: Competency Standards.

Equivalence includes endorsement in the explosion-protection techniques listed in the Range statement of the unit UEENEE035A.

Suggested words for Statement of Attainment

This Skill Set from the UEE11 Electrotechnology Training Package meets the industry requirements for Conduct a conformity assessment of explosion-protected equipment - for coal mining

Custom Content Section

Not applicable.

UEE11 Hazardous Areas - Conduct Audit of Hazardous Areas Installations - (Trunc)

Modification History

Not applicable.

Description

Not applicable.

Pathways Information

The units of competency in this skill set will contribute to the completion of relevant Diploma and Advanced Diploma qualifications from the UEE11 Electrotechnology Training Package. Please consult the packaging rules of the relevant qualification for further advice.

Licensing/Regulatory Information

Readers should ensure that they have also read the part of the Training Package that outlines licensing and regulatory requirements.

Skill Set Requirements

Not applicable.

Unit Grid

UEENEEM064A	Conduct audit of hazardous areas installations - coal mining
UEENEEM080A	Report on the integrity of explosion-protected equipment in a hazardous area

Target Group

It is essential that anyone undertaking this skill set already holds the Relevant AQF 5 Post Trade Qualification from the UEE11 Electrotechnology Training Package or equivalent

Note :

This Skill Set is directly equivalent to the Unit 2.21 Conduct audit of hazardous areas installations in the Australian/New Zealand Standard AS/NZS 4761.1; 2008 Competencies for working with electrical equipment for hazardous areas (EEHA) Part 1: Competency Standards.

Equivalence includes endorsement in the explosion-protection techniques listed in the Range statement of the unit UEENEEM064A.

Suggested words for Statement of Attainment

This Skill Set from the UEE11 Electrotechnology Training Package meets the industry requirements for Conduct audit of hazardous areas installations - coal mining

Custom Content Section

Not applicable.

Note :

This Skill Set is directly equivalent to the Unit 2.8 Overhaul and repair of explosion-protected equipment in the Australian/New Zealand Standard AS/NZS 4761.1; 2008 Competencies for working with electrical equipment for hazardous areas (EEHA) Part 1: Competency Standards.

Equivalence includes endorsement in the explosion-protection techniques listed in the Range statement of the unit UEENEEM031A.

Suggested words for Statement of Attainment

This Skill Set from the UEE11 Electrotechnology Training Package meets the industry requirements for Overhaul and repair of explosion-protected equipment - coal mining

Custom Content Section

Not applicable.

UEE11 Hazardous Areas - Plan Electrical Installations in Hazardous Areas (Trunc)

Modification History

Not applicable.

Description

Not applicable.

Pathways Information

The units of competency in this skill set will contribute to the completion of relevant Diploma and Advanced Diploma qualifications from the UEE11 Electrotechnology Training Package. Please consult the packaging rules of the relevant qualification for further advice.

Licensing/Regulatory Information

Readers should ensure that they have also read the part of the Training Package that outlines licensing and regulatory requirements.

Skill Set Requirements

Not applicable.

Unit Grid

UEENEEM074A Plan electrical installations in hazardous areas - Coal mining

Target Group

It is essential that anyone undertaking this skill set already holds the Competency Standard Unit:

UEENEEM125A Plan electrical installations with a low voltage demand up to 400 A per phase

Note :

This Skill Set is directly equivalent to the Unit 2.17 Plan electrical installations in hazardous areas in the Australian/New Zealand Standard AS/NZS 4761.1; 2008 Competencies for working with electrical equipment for hazardous areas (EEHA) Part 1: Competency Standards.

Equivalence includes endorsement in the explosion-protection techniques listed in the Range statement of the unit UEENEEM074A.

Suggested words for Statement of Attainment

This Skill Set from the UEE11 Electrotechnology Training Package meets the industry requirements for Plan electrical installations in hazardous areas - Coal mining

Custom Content Section

Not applicable.

UEE11 Instrumentation - Develop a integrated system interface for access (Trunc)

Modification History

Not applicable.

Description

Not applicable.

Pathways Information

The unit of competency in this skill set will contribute to the completion of relevant Certificate III, Certificate IV, Diploma and Advanced Diploma qualifications from the UEE11 Electrotechnology Training Package. Please consult the packaging rules of the relevant qualification for further advice.

Licensing/Regulatory Information

Readers should ensure that they have also read the part of the Training Package that outlines licensing and regulatory requirements.

Skill Set Requirements

Not applicable.

Unit Grid

UEENEEI142A Develop an electrical integrated system interface for access through a touch screen

Target Group

It is essential that anyone undertaking this skill set already holds Competency Standard Unit: UEENEEI141A Develop electrical integrated systems

Also, it may be aligned with a vendor training program that is shown to have the same competency outcomes as this unit

Suggested words for Statement of Attainment

This Skill Set from the UEE11 Electrotechnology Training Package meets the industry requirements for developing basic touch screen access in an integrated system

Custom Content Section

Not applicable.

UEE11 Instrumentation - Develop access control of integrated systems usi (Trunc)

Modification History

Not applicable.

Description

Not applicable.

Pathways Information

The unit of competency in this skill set will contribute to the completion of relevant Certificate III, Certificate IV, Diploma and Advanced Diploma qualifications from the UEE11 Electrotechnology Training Package. Please consult the packaging rules of the relevant qualification for further advice.

Licensing/Regulatory Information

Readers should ensure that they have also read the part of the Training Package that outlines licensing and regulatory requirements.

Skill Set Requirements

Not applicable.

Unit Grid

UEENEEI143A Develop access control of electrical integrated systems using logic-based programming tools

Target Group

It is essential that anyone undertaking this skill set already holds Competency Standard Unit: UEENEEI142A Develop an electrical integrated system interface for access through a touch screen

and seek to expand the competency to using logic-based programming tools.

Also, it may be aligned with a vendor training program that is shown to have the same competency outcomes as this unit.

Suggested words for Statement of Attainment

This Skill Set from the UEE11 Electrotechnology Training Package meets the industry requirements for developing access control of integrated system using logic-based programming tools.

Custom Content Section

Not applicable.

UEE11 Instrumentation - Develop integrated systems

Modification History

Not applicable.

Description

Not applicable.

Pathways Information

The unit of competency in this skill set will contribute to the completion of relevant Certificate III, Certificate IV, Diploma and Advanced Diploma qualifications from the UEE11 Electrotechnology Training Package. Please consult the packaging rules of the relevant qualification for further advice.

Licensing/Regulatory Information

Readers should ensure that they have also read the part of the Training Package that outlines licensing and regulatory requirements.

Skill Set Requirements

Not applicable.

Unit Grid

UEENEEI141A Develop electrical integrated systems

Target Group

It is essential that anyone undertaking this skill set already holds Competency Standard Units in electrical, electronic and data communication work and competency in the use of personal computers. Examples of a suitable competencies are (but not limited to):

UEENEEE108A Lay wiring/cablings and terminate accessories for extra-low voltage (ELV) circuits

or

UEENEEG106A Terminate cables, cords and accessories for low voltage circuits

and

UEENEEI101A Use computer applications relevant to a workplace

Also, it is suitable for employment-based programs under an approved contract of training and may be aligned with a vendor training program that is shown to have the same competency outcomes as this unit

Suggested words for Statement of Attainment

This Skill Set from the UEE11 Electrotechnology Training Package meets the industry requirements for developing integrated systems

Custom Content Section

Not applicable.

UEE11 Instrumentation - Develop interfaces for multiple access methods t (Trunc)

Modification History

Not applicable.

Description

Not applicable.

Pathways Information

The unit of competency in this skill set will contribute to the completion of relevant Certificate III, Certificate IV, Diploma and Advanced Diploma qualifications from the UEE11 Electrotechnology Training Package. Please consult the packaging rules of the relevant qualification for further advice.

Licensing/Regulatory Information

Readers should ensure that they have also read the part of the Training Package that outlines licensing and regulatory requirements.

Skill Set Requirements

Not applicable.

Unit Grid

UEENEEI144A Develop interfaces for multiple access methods to monitor, schedule and control an electrical integrated system

Target Group

It is essential that anyone undertaking this skill set already holds Competency Standard Unit: UEENEEI142A Develop an electrical integrated system interface for access through a touch screen

and seek to expand the competency to developing multiple access of an integrated system. Also, it may be aligned with a vendor training program that is shown to have the same competency outcomes as this unit

Suggested words for Statement of Attainment

This Skill Set from the UEE11 Electrotechnology Training Package meets the industry requirements for developing multiple access control of integrated systems.

Custom Content Section

Not applicable.

UEE11 Instrumentation - Plan the installation of integrated systems

Modification History

Not applicable.

Description

Not applicable.

Pathways Information

The unit of competency in this skill set will contribute to the completion of relevant Certificate III, Certificate IV, Diploma and Advanced Diploma qualifications from the UEE11 Electrotechnology Training Package. Please consult the packaging rules of the relevant qualification for further advice.

Licensing/Regulatory Information

Readers should ensure that they have also read the part of the Training Package that outlines licensing and regulatory requirements.

Skill Set Requirements

Not applicable.

Unit Grid

UEENEEI140A Plan the electrical installation of integrated systems

Target Group

It is essential that anyone undertaking this skill set already holds Competency Standard Units in electrical, electronic and data communication work. Examples of a suitable competency is (but not limited to):

UEENEEE108A Lay wiring/cabling and terminate accessories for extra-low voltage (ELV) circuits

or

UEENEEG106A Terminate cables, cords and accessories for low voltage circuits

It is suitable for employment-based programs under an approved contract of training and may be aligned with a vendor training program that is shown to have the same competency outcomes as this unit

Suggested words for Statement of Attainment

This Skill Set from the UEE11 Electrotechnology Training Package meets the industry requirements for Planning Integrated Systems

Custom Content Section

Not applicable.

UEE11 Refrigeration-Air Conditioning - Design Ammonia Refrigeration Systems

Modification History

Not applicable.

Description

Not applicable.

Pathways Information

The units of competency in this skill set will contribute to the completion of relevant, Diploma and Advanced Diploma qualifications from the UEE11 Electrotechnology Training Package.

Please consult the packaging rules of the relevant qualification for further advice.

Licensing/Regulatory Information

Readers should ensure that they have also read the part of the Training Package that outlines licensing and regulatory requirements.

Skill Set Requirements

Not applicable.

Unit Grid

UEENEEJ181A	Design ammonia refrigerated systems
UEENEEJ178A	Apply safety awareness and legal requirements for ammonia refrigerant
UEENEEJ132A	Design commercial refrigeration systems and select components

Target Group

It is essential that anyone undertaking this skill set already holds the Competency Standard Unit:

UEENEEJ165A Evaluate thermodynamic and fluid parameters of refrigeration systems

Note: Those holding any of the following qualifications from the UEE11 Electrotechnology Training Package, or equivalent, meet the requirements of UEENEEJ165A and its pre-requisites.

- Diploma of Refrigeration and Air-conditioning Engineering
- Advanced Diploma of Refrigeration and Air-conditioning Engineering
- Advanced Diploma of Refrigeration and Air-conditioning - Technology
-

Suggested words for Statement of Attainment

This Skill Set from the UEE11 Electrotechnology Training Package meets the industry requirements for Design ammonia refrigeration systems.

Custom Content Section

Not applicable.

UEE11 Refrigeration-Air Conditioning - Design Complex Carbon Dioxide Ref (Trunc)

Modification History

Not applicable.

Description

Not applicable.

Pathways Information

The units of competency in this skill set will contribute to the completion of relevant, Diploma and Advanced Diploma qualifications from the UEE11 Electrotechnology Training Package.

Please consult the packaging rules of the relevant qualification for further advice.

Licensing/Regulatory Information

Readers should ensure that they have also read the part of the Training Package that outlines licensing and regulatory requirements.

Skill Set Requirements

Not applicable.

Unit Grid

UEENEEJ187A	Design carbon dioxide refrigeration systems
UEENEEJ184A	Apply safety awareness and legal requirements for carbon dioxide refrigerant
UEENEEJ132A	Design commercial refrigeration systems and select components

Target Group

It is essential that anyone undertaking this skill set already holds the Competency Standard Unit:

UEENEEJ165A Evaluate thermodynamic and fluid parameters of refrigeration systems

Note: Those holding any of the following qualifications from the UEE11 Electrotechnology Training Package, or equivalent, meet the requirements of UEENEEJ165A and its pre-requisites.

- Diploma of Refrigeration and Air-conditioning Engineering
- Advanced Diploma of Refrigeration and Air-conditioning Engineering
- Advanced Diploma of Refrigeration and Air-conditioning - Technology
-

Suggested words for Statement of Attainment

This Skill Set from the UEE11 Electrotechnology Training Package meets the industry requirements for Design complex carbon dioxide refrigeration systems

Custom Content Section

Not applicable.

UEE11 Refrigeration-Air Conditioning - Design Hydrocarbon Refrigeration Systems

Modification History

Not applicable.

Description

Not applicable.

Pathways Information

The units of competency in this skill set will contribute to the completion of relevant, Diploma and Advanced Diploma qualifications from the UEE11 Electrotechnology Training Package.

Please consult the packaging rules of the relevant qualification for further advice.

Licensing/Regulatory Information

Readers should ensure that they have also read the part of the Training Package that outlines licensing and regulatory requirements.

Skill Set Requirements

Not applicable.

Unit Grid

UEENEEJ177A	Design hydrocarbon refrigerated systems
UEENEEJ174A	Apply safety awareness and legal requirements for hydrocarbon refrigerants
UEENEEJ132A	Design commercial refrigeration systems and select components

Target Group

It is essential that anyone undertaking this skill set already holds the Competency Standard Unit:

UEENEEJ165A Evaluate thermodynamic and fluid parameters of refrigeration systems

Note: Those holding any of the following qualifications from the UEE11 Electrotechnology Training Package, or equivalent, meet the requirements of UEENEEJ165A and its pre-requisites.

- Diploma of Refrigeration and Air-conditioning Engineering
- Advanced Diploma of Refrigeration and Air-conditioning Engineering
- Advanced Diploma of Refrigeration and Air-conditioning - Technology
-

Suggested words for Statement of Attainment

This Skill Set from the UEE11 Electrotechnology Training Package meets the industry requirements for Design hydrocarbon refrigeration systems.

Custom Content Section

Not applicable.

UEE11 Refrigeration-Air Conditioning - Design Secondary Refrigeration Systems

Modification History

Not applicable.

Description

Not applicable.

Pathways Information

The units of competency in this skill set will contribute to the completion of relevant, Diploma and Advanced Diploma qualifications from the UEE11 Electrotechnology Training Package.

Please consult the packaging rules of the relevant qualification for further advice.

Licensing/Regulatory Information

Readers should ensure that they have also read the part of the Training Package that outlines licensing and regulatory requirements.

Skill Set Requirements

Not applicable.

Unit Grid

UEENEEJ183A	Design secondary refrigerant systems
UEENEEJ132A	Design commercial refrigeration systems and select components

Target Group

It is essential that anyone undertaking this skill set already holds the Competency Standard Unit:

UEENEEJ165A Evaluate thermodynamic and fluid parameters of refrigeration systems

Note: Those holding any of the following qualifications from the UEE11 Electrotechnology Training Package, or equivalent, meet the requirements of UEENEEJ165A and its pre-requisites.

- Diploma of Refrigeration and Air-conditioning Engineering
- Advanced Diploma of Refrigeration and Air-conditioning Engineering

- Advanced Diploma of Refrigeration and Air-conditioning - Technology
-

Suggested words for Statement of Attainment

This Skill Set from the UEE11 Electrotechnology Training Package meets the industry requirements for Design secondary refrigeration systems.

Custom Content Section

Not applicable.

UEE11 Refrigeration-Air Conditioning - Install and Commission Ammonia Re (Trunc)

Modification History

Not applicable.

Description

Not applicable.

Pathways Information

The units of competency in this skill set will contribute to the completion of relevant Certificate III, Certificate IV, Diploma and Advanced Diploma qualifications from the UEE11 Electrotechnology Training Package.

Please consult the packaging rules of the relevant qualification for further advice.

Licensing/Regulatory Information

Readers should ensure that they have also read the part of the Training Package that outlines licensing and regulatory requirements.

Skill Set Requirements

Not applicable.

Unit Grid

UEENEEJ180A	Install and commission ammonia refrigeration systems, components and associated equipment
UEENEEJ179A	Repair and service Ammonia refrigeration systems
UEENEEJ178A	Apply safety awareness and legal requirements for Ammonia refrigerant

Target Group

It is essential that anyone undertaking this skill set already holds the Competency Standard

Units:

UEENEEJ111A Diagnose and rectify faults in air conditioning and refrigeration systems and components

AND

UEENEEJ113A Commission air conditioning and refrigeration systems

Note : Those holding a Certificate III in Refrigeration and Air Conditioning from the UEE11 Electrotechnology Training Package, or equivalent, meet the requirements of these units and their pre-requisite requirements

Suggested words for Statement of Attainment

This Skill Set from the UEE11 Electrotechnology Training Package meets the industry requirements for Install and Commission Ammonia Refrigeration Systems

Custom Content Section

UEE11 Sustainable - Designer of Grid Connected Photovoltaic Systems

Modification History

Not applicable.

Description

Not applicable.

Pathways Information

The units of competency in this skill set will contribute to the completion of relevant Certificate III, Certificate IV, Diploma and Advanced Diploma qualifications from the UEE11 Electrotechnology Training Package.

Please consult the packaging rules of the relevant qualification for further advice.

Licensing/Regulatory Information

Readers should ensure that they have also read the part of the Training Package that outlines licensing and regulatory requirements.

Skill Set Requirements

Not applicable.

Unit Grid

UEENEEK125A	Solve basic problems in photovoltaic energy apparatus and systems
UEENEEK135A	Design grid connected photovoltaic power supply systems
UEENEEE103A	Solve problems in ELV single path circuits
UEENEEE104A	Solve problems in d.c. circuits
UEENEEE105A	Fix and secure electrotechnology equipment
UEENEEE107A	Use drawings, diagrams, schedules, standards, codes and specifications
UEENEEE108A (ELV) circuits	Lay wiring/cabling and terminate accessories for extra-low voltage
UEENEEE137A	Document and apply measures to control OHS risks associated with electrotechnology work

Target Group

It is essential that anyone undertaking this skill set already holds a degree in Electrical Engineering, an Advanced Diploma or Diploma of Electrical Engineering or a trade qualification in the electrical trades.

Suggested words for Statement of Attainment

This Skill Set from the UEE11 Electrotechnology Training Package meets the industry requirements for Designer of Grid Connected Photovoltaic Systems

UEENEEE117A	Implement and monitor energy sector OHS policies and procedures

Target Group

It is essential that anyone undertaking this skill set already holds a degree in Electrical Engineering, an Advanced Diploma or Diploma of Electrical Engineering or an electrical trade qualification from the Electrotechnology Training Package or equivalent.

Suggested words for Statement of Attainment

This Skill Set from the UEE11 Electrotechnology Training Package meets the industry requirements for an Energy Efficiency Auditor

Custom Content Section

Not applicable.

UEE11 Sustainable - Energy Efficiency Systems Designer

Modification History

Not applicable.

Description

Not applicable.

Pathways Information

The units of competency in this skill set will contribute to the completion of relevant Diploma and Advanced Diploma qualifications from the UEE11 Electrotechnology Training Package. Please consult the packaging rules of the relevant qualification for further advice.

Licensing/Regulatory Information

Readers should ensure that they have also read the part of the Training Package that outlines licensing and regulatory requirements.

Skill Set Requirements

Not applicable.

Unit Grid

UEENEEK146A	Design energy management controls for electrical installations in buildings
UEENEEE129A	Solve electrotechnical engineering problems
UEENEEE078B	Contribute to risk management in electrotechnology systems
UEENEEG131A	Evaluate performance of low voltage electrical apparatus

Target Group

It is essential that anyone undertaking this skill set already holds a degree in Electrical Engineering, an Advanced Diploma or Diploma of Electrical Engineering or an electrical trade qualification from the Electrotechnology Training Package or equivalent.

Suggested words for Statement of Attainment

This Skill Set from the UEE11 Electrotechnology Training Package meets the industry requirements for a Designer of Energy Efficient Systems

Custom Content Section

Not applicable.

UEE11 Sustainable - Energy Efficiency Systems Developer

Pathways Information

The units of competency in this skill set will contribute to the completion of relevant Diploma and Advanced Diploma qualifications from the UEE11 Electrotechnology Training Package. Please consult the packaging rules of the relevant qualification for further advice.

Licensing/Regulatory Information

Readers should ensure that they have also read the part of the Training Package that outlines licensing and regulatory requirements.

Skill Set Requirements

Not applicable.

Unit Grid

UEENEEG170A	Plan large electrical projects
UEENEEI140A	Plan the electrical installation of integrated systems
UEENEEI141A	Develop electrical integrated systems
UEENEEI142A	Develop an electrical integrated system interface for access through a touch screen
UEENEEI143A	Develop access control of electrical integrated systems using logic-based programming tools
UEENEEI144A	Develop interfaces for multiple access methods to monitor, schedule and control an electrical integrated system
UEENEEE078B	Contribute to risk management in electrotechnology systems

Target Group

It is essential that anyone undertaking this skill set already holds the Competency Standard Units:

UEENEEI101A	Use computer applications relevant to a workplace
-------------	---

And

UEENEEG106A Terminate cables, cords and accessories for low voltage circuits

Or

UEENEEE108A Lay wiring/cabbling and terminate accessories for extra-low voltage (ELV) circuits

Suggested words for Statement of Attainment

This Skill Set from the UEE11 Electrotechnology Training Package meets the industry requirements for Energy Efficiency Systems Integration

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers fitting and inter connecting of electronic sub assemblies. It encompasses the safe use of hand tools, powered tools, identifying components, high reliability soldering, following set procedures and work instructions and keeping work records.

Application of the Unit

Application of the Unit 2)

This unit is intended for competency development entry-level employment-based programs incorporated in approved contracts of training.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Pre-Requisites

Prerequisite Unit(s) 4)

Competencies 4.1)

Granting of competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed:

UEENEEE101A Apply Occupational Health Safety regulations, codes and practices in the workplace

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 3 Writing 3 Numeracy 3

Employability Skills Information

Employability Skills 5)

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit

Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to assemble electronic components.	1.1 OHS procedures for a given work area are identified, obtained and understood
	1.2 Established OHS risk control measures for work preparation are followed
	1.3 Work instructions are obtained and understood
	1.4 Advice is sought from the work supervisor to ensure the work is co-ordinated effectively with others
	1.5 Materials required for work are obtained in accordance with established routines and procedures
	1.6 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety
2 Assemble electronic components.	2.1 Established OHS risk control work measures are followed
	2.2 Circuits are checked as being isolated where necessary in strict accordance OHS requirements and procedures
	2.3 Interconnections are made to comply with industry/ enterprise standards.
	2.4 Work is completed in acceptable timeframe given environment and workplace conditions
3 Check quality of assembled components.	3.1 Established OHS risk control measures for work completion are followed
	3.2 Quality of assembled component is checked against enterprise/industry standards
	3.3 Prescribed solutions are used where corrective actions to assembled components are necessary

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and assembling electronic apparatus.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EA101A Electronic component assembly

Evidence shall show an understanding of assembling electronic apparatus, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

- T1. Identification of surface mount components
- T2. Requirements of standard with respect to surface mount soldering
- T3. Post solder inspection
- T4. Ball grid arrays

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit. It must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of 9.1) Assessment

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment

intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects
of evidence
required to
demonstrate
competency in
this unit** 9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit must be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Assemble electronic apparatus as described in 8) and including:
 - A Following assembly instructions.
 - B Correctly selecting and placing components.
 - C Making connection without damaging components.
 - D Adhering to quality procedures.
 - E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

Context of and specific resources for 9.3)

assessment

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment it must ensure that the conditions for assessment are authentic and as far as possible reproduce and replicate the workplace and is consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to assembling electronic apparatus.

Method of assessment**9.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units**9.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEA102 Select electronic components for assembly
A

UEENEEE102 Fabricate, dismantle, assemble of utilities

A industry components

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated by assembling at least two different electronic apparatus consisting of a chassis, printed circuit board, adjustment components and interconnections in an environment designed specifically for the purpose.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

3 Complete work report.	<p>3.1 Established OHS risk control measures for work completion are followed.</p> <p>3.2 Work report forms/data sheets on components are completed accurately.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and the selection of electronic components.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EA102A Electronic component basics and selection

Evidence shall show an understanding of selecting electronic components, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

T1. Types of components encompassing:

- resistors, inductors, capacitors, diodes, transistor, integrated circuits, printed circuit boards, sub-assemblies, and mounting/enclosing, connection and termination hardware.

T2. The physical features and primary characteristic of components encompassing:

- features include shape, size and connections
- characteristics include parameter and power ratings and polarity.
- methods of identifying and marking of component ratings.
- identifying and handling static sensitive components.
- selection of components

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit. It must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit must be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Select electronic components as described in 8) and including:

- A Following job specifications
- B Identifying and selecting components
- C Handling components without damaging them
- D Adhering to quality procedures
- E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment it must ensure that the conditions for assessment are authentic and as far as possible reproduce and replicate the workplace and is consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to the selection of electronic components.

Method of assessment 9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units 9.5)

Employability Skills 5)

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the Performance Criteria describe the required performance

essential outcomes of a competency standard unit needed to demonstrate achievement of the element.
Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to set-up machine.	1.1 OHS procedures for a given work area are identified, obtained and understood
	1.2 Established OHS risk control measures for work preparation are followed.
	1.3 Work instructions are obtained and understood
	1.4 Advice is sought from the work supervisor to ensure that work is co-ordinated effectively with others
	1.5 Materials required for the work are obtained in accordance with established routines and procedures
	1.6 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety
2 Set-up machine.	2.1 Established OHS risk control work measures are followed
	2.2 Machines are checked as being isolated where necessary in strict accordance OHS requirements and procedures
	2.3 Electronic components are selected, sorted and placed in accordance with work instructions and established routines
	2.4 Machine is set up in accordance with routine instructions ensuring specified components are loaded correctly
	2.5 Prescribed solutions are used to resolve issues with supply of component

ELEMENT	PERFORMANCE CRITERIA
	2.6 Routine quality checks are conducted to ensure components comply with enterprise/industry standards
	2.7 Work is completed in acceptable timeframe given environment and workplace conditions
3 Complete work report.	3.1 Established OHS risk control measures for work completion are followed.
	3.2 Operational checks of machine are carried out in accordance with established routines to ensure quality outcome are met
	3.3 Work report forms/data sheets on components are completed accurately

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and setting up and checking electronic component placement machines.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EA103A Electronic component assembly placement machines

Evidence shall show an understanding of electronic component place equipment, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

- T1. Process control requirements and procedures
- T2. Solder paste composition encompassing:
 - storage and shelf life
 - preparation
 - testing
- T3. Solder paste deposition equipment encompassing:
 - manual, setup and application

REQUIRED SKILLS AND KNOWLEDGE

- automatic, setup and application
- T4. Automatic component placement systems encompassing:
- set up
 - operation
 - adjustments
- T5. Reflow ovens and solder reflow
- T6. Cleaning agents and techniques
- T7. Inspection methods and procedures

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit. It must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may

be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects
of evidence
required to
demonstrate
competency in
this unit** 9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit must be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Set-up and check electronic component placement machines as described in 8) and including:

- A Following assembly job specifications.
- B Identifying components.
- C Handling components without damaging them.
- D Conducting machine operation checks.
- E Adhering to quality procedures.
- F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment it must ensure that the conditions for assessment are authentic and as far as possible reproduce and replicate the workplace and is consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to setting up and checking electronic component placement machines.

Method of assessment 9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units 9.5)

For optimisation of training and assessment effort, competency

development in this unit may be arranged concurrently with unit:

UEENEEA10 Assemble electronic components
1A

UEENEEA10 Select electronic components for assembly
2A

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated by setting up and checking electronic component assembly machines in an environment designed specifically for the purpose.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not applicable.

Competency Field

Competency Field **11)**
Assembly

UEENEEA104A Modify electronic sub assemblies

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers correcting and or modifying electronic sub assemblies. It encompasses working safely, high reliability de-soldering/soldering, checking components against job specifications, testing and following quality procedures.

Application of the Unit

Application of the Unit 2)

This unit is intended for competency development entry-level employment-based programs incorporated in approved contracts of training.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Pre-Requisites

Prerequisite Unit(s) 4)

Competencies 4.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEA1 Assemble electronic components
01A

UEENEEA1 Select electronic components for assembly
02A

UEENEEE1 Apply Occupational Health Safety
01A regulations, codes and practices in the
workplace

UEENEEE1 Fabricate, assemble and dismantle utilities
02A industry components

AND

UEENEEE1 Solve problems in ELV single path circuits
03A

OR

UEENEEE1 Solve problems in d.c. circuits
04A

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and Numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 3 Writing 3 Numeracy 3

Employability Skills Information

Employability Skills 5)

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit
 Performance Criteria describe the required performance needed to demonstrate achievement of the element.
 Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to modify	<p>1.1 OHS procedures for a given work area are identified, obtained and understood</p> <p>1.2 OHS risk control measures for work preparation are followed</p> <p>1.3 The nature of the rework is determined from documentation or from work supervisor to establish the scope of work to be undertaken</p> <p>1.4 Rework of subassemblies is coordinated with others involved in the work to ensure work schedules are met and safety measures are followed</p> <p>1.5 Sources of materials that may be required for the work are established in accordance with established procedures</p> <p>1.6 Tools and equipment required for rework are selected for their effectiveness and checked for correct operation and safety</p>

ELEMENT	PERFORMANCE CRITERIA
2 Modify sub assemblies.	2.1 OHS risk control work measures and procedures are followed
	2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures
	2.3 Circuits are checked as being isolated where necessary in strict accordance OHS requirements and procedures
	2.4 Components are de-connected and re-connected in accordance with principles and technology of connection methods used
	2.5 Work is carried out in compliance with quality procedures and enterprise/industry standards
	2.6 Rework of subassemblies is completed in acceptable timeframe and given environment and workplace conditions
3 Check quality of modified sub assemblies.	3.1 OHS risk control measures for work completion are followed
	3.2 Quality of rework is checked against enterprise/industry standards
	3.3 Functional tests on reworked subassemblies are carried out in accordance with established routines
	3.4 Actions are taken to rectify defects within the scope of established routines
	3.5 Report forms/data sheets on rework of subassemblies are completed accurately

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this

REQUIRED SKILLS AND KNOWLEDGE

unit.

Evidence must show that knowledge has been acquired of safe working practices and modifying/reworking electronic sub assemblies.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EA104A Electronic sub assembly modification techniques

Evidence shall show an understanding of electronic sub assemblies modification techniques, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

T1. Enterprise quality management system encompassing:

- purpose of a quality system
- procedures pertaining to the relevant work function
- work instructions pertaining to the relevant work function

T2. Printed wiring board substrate repair encompassing:

- warpage and cracking damage
 - blistering and delaminating

T3. Conductor patterns repair, including encompassing:

- pad repair and replacement
- track repair, alteration, replacement.

T4. Conformal coatings encompassing:

- types
- removal
- replacement

T5. Quality checks encompassing:

- enterprise/ industry standards
- functional tests
- report forms/data sheets

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit. It must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction

EVIDENCE GUIDE

with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in 9.2)

this unit

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit must be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Rework electronic sub assemblies as described in 8) and including:
 - A Following job specifications
 - B Using high reliability de-soldering/soldering techniques
 - C Removing and placing components without damage
 - D Adhering to quality procedures
 - E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic

assessment with the above listed items

**Context of and
specific
resources for
assessment** 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment it must ensure that the conditions for assessment are authentic and as far as possible reproduce and replicate the workplace and is consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to reworking electronic sub assemblies.

**Method of
assessment** 9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent
assessment and
relationship with
other units** 9.5)

For optimisation of training and assessment effort, competency

development in this unit may be arranged concurrently with unit:

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit

Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to carryout lead-free soldering.	1.1 OHS procedures for a given work area are identified, obtained and understood
	1.2 OHS risk control measures for work preparation are followed
	1.3 The nature of the work is determined from documentation or from work supervisor to establish the scope of work to be undertaken
	1.4 Work is coordinated with others involved in the work to ensure work schedules are met and safety measures are followed.
	1.5 Materials required for the work are sourced and check for compliance with lead-free soldering requirements and in accordance with established procedures
	1.6 Tools and equipment required for the work are selected for their effectiveness and checked for correct operation and safety
2 Carry out lead-free soldering	2.1 OHS risk control work measures and procedures are followed
	2.2 Knowledge of lead-free soldering characteristic and requirements are applied to soldering/de-soldering operations
	2.3 Components are connected and de-connected in accordance with lead-free soldering principles and technology
	2.4 Work is carried out in compliance with quality procedures and enterprise/industry standards
	2.5 Lead-free soldering is completed in acceptable timeframe and given environment and workplace conditions
3 Check quality of lead-free soldering	3.1 OHS risk control measures for work completion

ELEMENT	PERFORMANCE CRITERIA
work.	are followed
	3.2 Quality of lead-free is checked against enterprise/ industry standards.
	3.3 Functional tests on lead-free soldered connections are carried out in accordance with established routines
	3.4 Actions are taken to rectify defects within the scope of established routines.
	3.5 Report forms/data sheets on lead-free soldering work are completed accurately

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and lead-free soldering techniques for connecting/de-connecting electronic components.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EA106A Lead-free soldering techniques

Evidence shall show an understanding of Lead-free soldering techniques, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

T1. Enterprise quality management system encompassing:

- purpose of a quality system
- procedures pertaining to the relevant work function
- work instructions pertaining to the relevant work function

T2. Lead-free solder issues encompassing:

- safety
- environmental

T3. Solder types and characteristics encompassing:

- solder wires and pastes - including bimetal and trimetal
- solder characteristics - including melt and wetting temperatures, soldering

REQUIRED SKILLS AND KNOWLEDGE

temperature and flow behaviour.

- characteristic differences between lead and lead-free solders.
- industry standards

T4. Types of fluxes and their activity level encompassing:

- water soluble, no-clean and cleanable fluxes

T5. Component requirements for lead-free soldering encompassing:

- printed Circuit board (PCB) - including HAZL, ID marking, conformance certificates and re-working old PCBs
 - component considerations - including lead/end cap material, temperature capability and the like.

T6. Lead-free soldering cleaning requirements encompassing:

- chemicals and consumable materials, when to clean, white residues and the like.

T7. Equipment requirements encompassing:

- temperature stability, recovery capability, tip size, tip shape, tip metal mass, tin erosion and the like.

T8. Soldering techniques encompassing:

- soldering tip selection, temperature setting, preheating, use of soldering irons and the like.

T9 Completed soldered connections compliance requirements

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit. It must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects
of evidence
required to
demonstrate
competency in
this unit** 9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit must be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Apply lead-free soldering technology as described in 8) and including:

- A Following job specifications
- B Using high reliability lead-free soldering/de-soldering techniques
- C Handling components without damage
- D Adhering to quality procedures
- E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment it must ensure that the conditions for assessment are authentic and as far as possible reproduce and replicate the workplace and is consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to applying lead-free soldering technology.

Method of assessment 9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units 9.5)

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEA10 Assemble electronic components
1A

UEENEEA10 Modify electronic sub assemblies
4A

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated by applying lead-free soldering technology to any of the following in an environment designed specifically for the purpose.

- printed circuit board assembly,
- electronic sub-assembly rework,
- discrete component connections, and
- electronic equipment repair

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

 Assembly

UEENEEA107A Make up wiring looms for internal wiring of appliances and machinery

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers assembling wiring loom and fitting termination devices to conductor ends. It encompasses working safely and to a specified standards, identifying cables, measuring, cutting and shaping cables, arranging and securing cables into shaped looms, applying cable end termination devices and undertaken quality checks.

Application of the Unit

Application of the Unit 2)

This unit is intended for competency development entry-level employment-based programs incorporated in approved contracts of training. In particular it is applicable to an industry or enterprise for assembly or repair functions at AQF 2.

Licensing/Regulatory Information

License to practice 3)

During Training: Competency development activities are subject to regulations directly related to licencing, occupational health and safety and where applicable contracts of training such as apprenticeships.

In the workplace: The application of the skills and knowledge described in this unit require a license to practice in the workplace where work is carried out on

License to practice

3)

electrical installations which are designed to operate at voltages greater than 50 V a.c. or 120 V d.c.

Other conditions may apply under State and Territory legislative and regulatory requirements.

Pre-Requisites

Prerequisite Unit(s)

4)

Competencies

4.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE1 01A Apply Occupational Health Safety regulations, codes and practices in the workplace

Further Information:

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills

4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and Numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 4 Writing 4 Numeracy 4

Employability Skills Information

Employability Skills

5)

The required outcomes described in this unit of competency contain applicable facets of Employability

Employability Skills

5)

Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit

Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1 Prepare to make up wiring looms

- 1.1 OHS procedures for a given work area are identified, obtained and understood
- 1.2 Established OHS risk control measures for work preparation are followed
- 1.3 Work instructions including layout, wiring schedule and quality compliance criteria are obtained and understood
- 1.4 Materials required for the work are obtained in accordance with established routines and procedures.
- 1.5 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety.

2 Make up wiring looms

- 2.1 Established OHS risk control work measures are followed
- 2.2 Cable specified for each core of the wiring loom is identified, selected and cut the specified length,
- 2.3 Wiring loom is assembled and formed in accordance with work instructions, standards and

ELEMENT	PERFORMANCE CRITERIA
	established routines.
	2.4 Cable end and prepared and termination devices and identification tags fitted in accordance with work instructions, standards and established routines
	2.5 Procedures for referring non-routine events to immediate supervisor for directions are followed
	2.6 Work is carried out efficiently without waste of materials or damage to apparatus, the surrounding environment or services and using sustainable energy practices
3 Check quality of completed wiring looms.	3.1 Established OHS risk control measures for work completion are followed
	3.2 Completed wiring loom assembly is inspected and tested against quality compliance criteria in accordance with established routines.
	3.3 Defects in the quality of the wiring loom are identified and corrected using prescribed procedures.
	3.4 Work report forms are completed accurately and appropriate person(s) notified in accordance with established routine.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and making up and assembling wiring looms.

The knowledge and skills shall be contextualised to current industry standards, technologies and practices.

KS01-EA107A

Wiring looms and assembly techniques

Evidence shall show an understanding of wiring loom assembly techniques to an extent indicated by the following aspects:

T1 Structural components of cables and their purpose

Note:

Components include conductors and conductor material; insulation; sheathings and servings.

T2 Cable types and application in wiring looms

T3 Wiring looms encompassing:

- purpose
- components — cables, ties/supports, cable end terminal devices and identification markers/tags
- assembly techniques using cable schedules and template

T4 Conductor handling and cable terminations encompassing:

- insulation removal and replacement
- application of connecting devices for conductors and terminals
- stress release on cables/conductors.

T5 Wiring loom quality encompassing:

- typical compliance criteria
- testing cable cores (testing includes insulation resistance and continuity of each cable core).
- inspection (inspection points includes correct number and placement of cable cores, cable end terminals, cable ties/supports/enclosures and cable core markers/tags).

T6 Hand and power tools used in making up wiring looms encompassing:

- types of tools and their purpose
- techniques for the correct and safe use of these tools
- hazards associated with their use
- care and maintenance of hand tools

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit. It must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit must be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Making up wiring looms for internal wiring of appliances and machinery as described in 8) and including:

- A Understanding work instructions.
- B Obtaining correct materials and tools for the work.
- C Checking tools for correct operation and safety.
- D Identifying, selecting and cutting cable cores to

length as specified.

- E Preparing cable ends and fitting termination devices and identification tags as specified.
- F Inspecting and testing the completed wiring loom and identifying non-compliance defects
- G Using prescribed procedures to correct defects in quality of completed wiring loom.
- H Reporting completion of the work appropriately.
- I Dealing appropriately with unplanned events.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment it must ensure that the conditions for assessment are authentic and as far as possible reproduce and replicate the workplace and is consistent with the approved industry simulation policy.

In addition to the resources listed above in context of and specific resources for assessment, evidence should show demonstrated competency in the make up and assembly of wiring looms.

Method of assessment 9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent
assessment and
relationship with
other units** 9.5)

There are no concurrent assessment recommendations for this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to making up at least two different wiring looms assemblies.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not applicable.

Competency Field

Competency Field 11)
Assembly

UEENEEA110A Assemble, mount and connect control gear and switchgear

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers the assembling and mounting of controlgear and switchgear including the interconnections within a switchboard enclosure intended to operate at voltages up to 1,000 V a.c. or 1,500 V d.c. It encompasses working safely, following standards, specifications and component manufacturers requirements, matching equipment with that specified, terminating cables and connecting wiring and completing necessary documentation.

Application of the Unit

Application of the Unit 2)

This unit is intended for competency development entry-level employment-based programs incorporated in approved contracts of training.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit do not require a licence to practise in a workplace specifically for the purpose of assembling control panels. In another workplace a licence to practise may be required subject to regulation to undertake electrical work. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable

License to practice**3)**

contracts of training such as apprenticeships.

Pre-Requisites**Prerequisite Unit(s)****4)****Competencies****4.1)**

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE1 01A	Apply Occupational Health Safety regulations, codes and practices in the workplace
UEENEEE1 02A	Fabricate, dismantle, assemble of utilities industry components
UEENEEE1 04A	Solve problems in d.c. circuits
UEENEEE1 05A	Fix and secure electrotechnology equipment
UEENEEE1 07A	Use drawings, diagrams, schedules, standards, codes and specifications
UEENEEG0 06A	Solve problems in single and three phase low voltage machines
UEENEEG0 63A	Arrange circuits, control and protection for general electrical installations
UEENEEG1 01A	Solve problems in electromagnetic devices and related circuits
UEENEEG1 02A	Solve problems in low voltage a.c. circuits
UEENEEG1 06A	Terminate cables, cords and accessories for low voltage circuits
UEENEEG1 09A	Develop and connect electrical control circuits

Prerequisite Unit(s) 4)

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and Numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading 4 Writing 4 Numeracy 4

Employability Skills Information

Employability Skills 5)

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit

Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices, assembling, mounting and connecting switchgear and controlgear.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EA110A Switchgear and control gear mounting and wiring

Evidence shall show an understanding of switchgear and control gear mounting and wiring techniques to an extent indicated by the following aspects:

T1 Safety issues associated with switchgear and control gear assembly and installation

T2 Types of switchgear and other equipment encompassing:

- relays
- contactors
- motor starters
- variable drives
- transformers

REQUIRED SKILLS AND KNOWLEDGE

- fuses
- load break switches
- switch fuses
- circuit breakers
- air break
- oil type
- interlock devices
- bus bars and cleats
- bus ties

T3 Labelling and numbering encompassing:

- cable labelling/identification
- component labelling/identification
- use of terminal strips to assist fault finding

T4 Component layout encompassing:

- wiring and schematic diagrams
- placement /layout of power circuit devices and components
- placement/layout of control circuit devices and components

T5 Choice of switchgear and control gear encompassing:

- voltage ratings
- current ratings
- overload and fuse settings
- number of operations

T6 Other considerations encompassing:

- earthing
- size of power and control circuit conductors
- equipment layout methods and accessories

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit. It must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment**9.1)**

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit**9.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit must be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement

 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Assemble, mount and connect switchgear and controlgear as described in 8) and including:

- A Following assembly instructions.
- B Correctly selecting and placing, switchgear and control gear.
- C Making connection without damaging switchgear/control.
- D Adhering to quality procedures.
- E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment it must ensure that the conditions for assessment are authentic and as far as possible reproduce and replicate the workplace and is consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to assembling, mounting and connecting switchgear and controlgear.

Method of assessment 9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units 9.5)

There are no concurrent assessment recommendations for this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated by assembling at least two different control panels comprising more than essential services and general supply main switches, metering and sub main controls.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and making and assembling bus bars.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EA112A Bus bar fabrication and assembly techniques

Evidence shall show an understanding of bus bar fabrication and assembly techniques to an extent indicated by the following aspects:

T1 Chemical and metallurgical properties of busbars encompassing:

- copper
- aluminium
- copper clad aluminium
- hard drawn copper
- annealing
- types of high conductivity copper

T2 Design considerations encompassing:

- electrical and thermal resistance
- mechanical strength in tension, compression and shear
- resistance to fatigue failure
- electrical resistance of surface films
- ease of fabrication
- resistance to corrosion
- first cost and high eventual recovery value
- choice of busbar materials
- creep properties
- fatigue properties
- self extinguishing arcs in Cu and Al
- insulated busbar
- provision for busbar expansion

T3 Busbar types encompassing:

- main bus bars
- intermediate bus bars
- cell bus bars
- droppers
- flexible joints
- hanger bars
- short-circuit frames

T4 Current carrying capacity encompassing:

- standard cross sections of bar
- ~~current ratings~~

UEENEEA113A Mount and wire control panel equipment

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers mounting control devices, wiring support in control panel enclosures and installing the interconnecting wiring. It encompasses working safely, following layout and circuit diagrams, mounting equipment, installing and terminating wiring, functional testing and completing necessary documentation.

Application of the Unit

Application of the Unit 2)

This unit is intended for competency development entry-level employment-based programs incorporated in approved contracts of training.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit do not require a licence to practise in a workplace specifically for the purpose of assembling control panels. In another workplace a licence to practise may be required subject to regulation to undertake electrical work. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Pre-Requisites

Prerequisite Unit(s) 4)

Competencies 4.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE1 01A	Apply Occupational Health Safety regulations, codes and practices in the workplace
UEENEEE1 02A	Fabricate, dismantle, assemble of utilities industry components
UEENEEE1 04A	Solve problems in d.c. circuits
UEENEEE1 05A	Fix and secure electrotechnology equipment
UEENEEE1 07A	Use drawings, diagrams, schedules, standards, codes and specifications
UEENEEG0 06A	Solve problems in single and three phase low voltage machines
UEENEEG0 63A	Arrange circuits, control and protection for general electrical installations
UEENEEG1 01A	Solve problems in electromagnetic devices and related circuits
UEENEEG1 02A	Solve problems in low voltage a.c. circuits
UEENEEG1 06A	Terminate cables, cords and accessories for low voltage circuits
UEENEEG1 09A	Develop and connect electrical control circuits

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy 4.2)

skills

Participants are best equipped to achieve competency in this unit if they have reading, writing and Numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 4 Writing 4 Numeracy 4

Employability Skills Information**Employability Skills 5)**

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit. Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to mount and wire control panel equipment.	1.1 OHS procedures for a given work area are identified, obtained and understood
	1.2 Established OHS risk control measures for work preparation are followed
	1.3 Work instructions, including layout and wiring diagrams, are obtained and understood.

ELEMENT	PERFORMANCE CRITERIA
	1.4 Advice is sought from the work supervisor to ensure the work is co-ordinated effectively with others
	1.5 Materials required for the work are obtained in accordance with established routines and procedures
	1.6 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety
2 Mount and wire control panel equipment.	2.1 Established OHS risk control work measures are followed
	2.2 Circuits are checked as being isolated where necessary in strict accordance OHS requirements and procedures
	2.3 Control panels components are fitted in accordance with work instructions, standards and established routines
	2.4 Interconnections are made in accordance with work instructions, standards and established routines
	2.5 Routine quality checks are carried out in accordance with work instructions
	2.6 Completed control panel is tested against work instructions and industry standards and in strict accordance with OHS risk control measures
	2.7 Procedures for referring non-routine events to immediate supervisor for directions are followed
	2.8 Work is carried out efficiently without waste of materials or damage to apparatus, the surrounding environment or services and using sustainable energy practices
3 Check quality of control panels.	3.1 Established OHS risk control measures for work completion are followed
	3.2 Quality of assembled control panel is tested

ELEMENT	PERFORMANCE CRITERIA
	against work instructions and industry standards and in accordance with established routines
3.3	Prescribed solutions are used where corrective actions to assembled components are necessary
3.4	Work report forms are completed accurately and appropriate person(s) notified in accordance with established routine

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices, mounting and wiring control panel equipment.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EA113A Control panel equipment mounting and wiring techniques

Evidence shall show an understanding of control panel equipment mounting and wiring techniques to an extent indicated by the following aspects:

T1 Control panel types and mounting techniques encompassing:

- metallic
- non-metallic (insulated)
- direct mounting on insulated panels
- rear connections
- DIN mounted switchgear
- strapped harness wiring
- use of duct to support and channel wiring
- clearances

T2 Labelling and numbering encompassing:

- cable labelling/identification
- component labelling/identification
- use of terminal strips to assist fault finding

REQUIRED SKILLS AND KNOWLEDGE

T3 Component layout encompassing:

- wiring and schematic diagrams
- placement /layout of power circuit devices and components
- placement/layout of control circuit devices and components
- Interconnecting plugs and sockets

T4 Choice of switchgear and control gear encompassing:

- voltage ratings
- current ratings
- overload and fuse settings
- number of operations

T5 Other considerations encompassing:

- earthing of panels
- size of power and control circuit conductors
- effect of high current devices on electromagnetic components or PLCs
- effect on electronic components of other devices

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit. It must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects
of evidence
required to
demonstrate
competency in
this unit** 9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit must be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Assemble and wire control panels as described in 8) and including:

- A Following assembly instructions.
- B Selecting and placing components correctly.
- C Making connection without damaging control panel components.
- D Adhering to quality procedures.
- E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment it must ensure that the conditions for assessment are authentic and as far as possible reproduce and replicate the workplace and is consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to assembling and wiring control panels.

Method of assessment 9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units 9.5)

There are no concurrent assessment recommendations for this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated by assembling at least two different control panels comprising controls for more than two electrical machines, electro-mechanical and/or electronic control and devices such as relays, timers, logic controllers, indicators, switches/push buttons and the like.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Competency Field

Competency Field	11)
	Assembly

UEENEEB101A Operate and maintain amateur radio communication stations

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit deals with operation and maintenance of amateur radio communication stations suitable to HF, VHF and SHF communication using multiple modes of operation. It encompasses correct operating procedures, safe working practices, following written and oral instruction and procedures, basic testing techniques, dismantling and assembling apparatus, disconnecting and reconnecting components, and operating to the Standard Licence Level as prescribed by the Australian Communication Media Authority.

Application of the Unit

Application of the Unit 2)

This unit may apply to persons entering work in electrotechnology and may be used in school-based vocational programs.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit do require an Australian Communications and Media Authority (ACMA) license to practice in the workplace provided equipment is not connected to permanent installation wiring at voltage above 50 V a.c. or 120 V d.c. However,

License to practice 3)

practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Pre-Requisites**Prerequisite Unit(s) 4)****Competencies 4.1)**

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE1 Apply Occupational Health and Safety
01A regulations, codes and practices in the
workplace

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and Numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 3 Writing 3 Numeracy 3

Employability Skills Information**Employability Skills 5)**

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

- 6) Elements describe the essential outcomes of a competency standard unit. Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | |
|--|---|
| 1 Prepare to operate an amateur radio communication station. | 1.1 OHS procedures for a given work area are identified, obtained and understood through established routines and procedures |
| | 1.2 Established OHS risk control measures and procedures are followed in preparation for amateur radio activities |
| | 1.3 The nature of the operation of activity is identified to be within the Amateur Radio Standard Licence Conditions Determination |
| | 1.4 Sources of materials that may be required for the Amateur Radio activities are identified and utilised according to manufacturer specifications and established routines and procedures |
| | 1.5 Interference to other services is recognised and attended to by good operating practices, and advice is sought from the ACMA to ensure interference to other services does not occur |
| | 1.6 Resources, tools, apparatus and testing devices needed to carry out work are obtained and checked for correct operation and safety |
| 2 Operate an amateur radio communication station. | 2.1 Established OHS risk control measures and procedures for carrying out the work are followed |
| | 2.2 The need to test or measure equipment is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures |

ELEMENT	PERFORMANCE CRITERIA
	2.3 Circuits/apparatus are checked as being isolated where necessary in strict accordance with OHS requirements and procedures
	2.4 Radio communications operating practices and procedures are demonstrated and are in accordance with established requirements
	2.5 Amateur radio communication station is operated in accordance with Standard Licence Operator's level as prescribed by the Australian Communication Media Authority
	2.6 Methods for dealing with unexpected situations are selected on the basis of safety, discussions with appropriate persons and specified work outcomes
	2.7 Set-up is carried out efficiently without waste of materials or damage to apparatus, the surrounding environment or services and using sustainable energy principles
3 Maintain an amateur radio communication station	3.1 OHS work completion risk control measures and procedures are followed.
	3.2 Modules/sub-assemblies are tagged during the dismantling to help ensure correct and efficient reassembly and stored to protect them against loss or damage.
	3.3 Apparatus is dismantled and assembled in accordance with manufacturer guidelines.
	3.4 Repairs are affected efficiently without damage to other components, apparatus or circuits and in accordance with established procedures
	3.5 Repairs are carried out efficiently without unnecessary waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices
	3.6 Apparatus is assembled in an appropriate sequence with all modules/sub-assemblies and parts correctly placed, secured and connected in

ELEMENT	PERFORMANCE CRITERIA
	accordance with manufacturer guidelines and industry practice
	3.7 Repaired radio equipment, where appropriate, is tested and returned to service to ensure operating parameters are not exceeded
	3.8 Procedures for referring non-routine events to appropriate authorities are followed
	3.9 Work and operating area is cleaned and made safe in accordance with established procedures
4 Identify and assemble amateur radio communication equipment and associated apparatus	4.1 Established OHS risk control measures and procedures for carrying out the work are followed
	4.2 Requirements for the item to be assembled are identified
	4.3 Item is assembled in accordance with established procedures and relevant engineering standards
	4.4 Assembled unit is tested to ensure that the operating parameters of the station will not be compromised
	4.5 Adjustments are made to the equipment where required to optimise reception
	4.6 Commission the equipment as constructed for on air performance.
5 Complete work and maintain reports	5.1 OHS work completion risk control measures and procedures are followed
	5.2 Work site is cleaned and made safe in accordance with established procedures
	5.3 Adjustment settings are documented and appropriate person(s) notified in accordance with established procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and carrying out radio station operation, basic maintenance and assembly of radio communication equipment.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EB101A Amateur radio communication principles, operation and maintenance

Evidence shall show an understanding of amateur radio communication principles, operation and maintenance practices, and technical overview, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

T1. Nature of Amateur Radio encompassing:

- Nature of Amateur radio
- Types of licences
- Allocation of frequency bands

T2. Licence Conditions encompassing:

- Conditions of licences
- Purpose of the Amateur Service
- Communications by Amateur stations
- Distress and Urgency signals
- Station identification
- Amateur call signs
- Secret messages
- Entertainment not permitted
- Amateur frequency bands and emissions
- Permitted power output
- Notification of change of address
- Harmful interference
- Authorised use of Amateur stations
- Inspection of Amateur licences
- Restriction of operation to avoid interference
- Use of the Licence Condition Determinations

T3. Mathematics used for Amateur radio operation encompassing:

- addition, subtraction, multiplication and division
- fractions, percentage, and decimal notation

REQUIRED SKILLS AND KNOWLEDGE

- units and sub-units; (mega, kilo, UNIT, micro, and pico)
- calculations using simple formulae

T4. Amateur radio technical basics encompassing:

- Mains power overview
- Mains power supplies overview
- Voltage and current overview
- Resistance overview
- Ohm's Law overview and the relationship between voltage, current and resistance
- Power in DC circuits overview including calculations related to power in a DC circuit using current and voltage, current and resistance or voltage and resistance.
- Capacitance overview
- Inductance overview
- AC circuits overview
- Impedance and reactance overview
- Tuned circuits overview
- Transformers overview
- Solid state devices overview

T5. Transmitters and Receivers – basic overview encompassing:

- Block diagrams of simple transmitters
- Mixers
- Modulation
- Amplifiers
- Transmission quality
- Receiver parameters and terminology
- Simple block diagrams of a Receiver
- Frequency converters
- IF amplifier
- Automatic Gain Control
- Transceivers

T6. Transmission lines and Antennas overview encompassing:

- Transmission line basics
- Baluns
- Standing waves
- Antenna Matching Units (ATU)
- Antennas
- Identification of common antennas
- Radiated Power

T7. Propagation overview encompassing:

REQUIRED SKILLS AND KNOWLEDGE

- Electromagnetic radiation
- Ionosphere

T8. Interference and Electromagnetic Compatibility (EMC) overview encompassing:

- Interference - Points of entry into electronic equipment
- Filters
- EMC

T9. Operating Practices and Procedures overview encompassing:

- Equipment practices
- Authorised frequencies and emissions
- Requirement not to transmit on frequencies in use
- Operating practices
- Operating through a repeater
- Make an all-stations call and change frequency
- Transmitter measurements
- Correcting simple equipment maladjustments
- Recognised abbreviations
- Phonetic alphabet

T10. Safety overview encompassing:

- Dangerous voltages
- Electrical safety - equipment to be approved
- Awareness of State Electricity Authority requirements
- Electrical earthing
- Fuses
- Correct fuses to be used
- Replacing fuses
- Station layout for safety
- Power lead safety
- Know location and desirability of a mains OFF switch
- Actions to be taken in the event of an accident involving electricity
- Electric shocks
- Call for help – use of resuscitation techniques
- Battery safety
- Antennas and safety
- Radio waves can be dangerous
- Safe distance from an antenna
- Antenna erection
- Securing and siting antennas
- Lightning protection

REQUIRED SKILLS AND KNOWLEDGE

- Safe use of headphones
- Station security

T11. Measurements encompassing:

- Frequency measurements
- RF Power measurements
- SWR measurements
- Multimeter measurements

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit. It must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

The Australian Communications and Media Authority and the Wireless of Australia have established agreed minimal assessment requirements for licensing of amateur radio stations, including the minimal requirements for assessors.

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the

most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required, regulatory requirements and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects
of evidence
required to
demonstrate
competency in
this unit** 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a

percentile graded result for the purpose of regulatory or licensing requirements.

- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
- Operate and maintain an amateur radio station, dismantling and assembling apparatus and disconnecting and reconnecting components including:

- A Following manufacturer service instructions and licence conditions determination for radio station assembly and dismantling, including transmitter, power, measurement and adjustment.
- B Demonstrating on HF and VHF correct operating procedure as prescribed by the Australian Communications and Media Authority.
- C Connecting and disconnecting components to radio equipment manufacturer requirements and appropriate engineering requirements, including minor soldering
- D Identifying common types of transmission lines, coaxial connectors, antennas and symbols.
- E Assembling a radio frequency choke used for the elimination of potential interference.
- F Testing a coaxial cable for continuity and standing wave ratio, including explaining how to correct a high standing wave ratio, and demonstrating the use of a signal strength metre.
- G Demonstrating the correct use of voice repeaters with and without continuous tone coded squelch system (CTCSS) and/or dual tone multi frequency signalling.
- H Correctly using an amateur radio according to ACMA licence and standard operating procedures
- I Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic

assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and
specific
resources for
assessment** 9.3)

This unit must be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Relevant Australian and International standards for the assembly and operation of an amateur radio station.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should also be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment it must ensure that the conditions for assessment are authentic and as far as possible reproduce and replicate the workplace and is consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to assembling, dismantling and operating an amateur radio station, including the assembly of an antenna, power supply unit or an equivalent circuit.

**Method of
assessment** 9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires

assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent
assessment and
relationship with
other units** **9.5)**

There are no concurrent assessment recommendations for this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to carrying out the operation and maintenance of an amateur radio communication station.

The operation and maintenance shall be limited to:

- the requirements as prescribed by the Australian Communications and Media Authority, Amateur Operator Certificate of Proficiency (Standard) Syllabus Documentation and Licence Conditions Determination, and
- Assembly of an antenna and power supply or equivalent item of apparatus to industry standards, that may include minor soldering

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

maintaining documentation.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EC001B Maintaining documentation

Evidence shall show an understanding of maintaining documentation to an extent indicated by the following aspects:

T1. Enterprise communication methods encompassing:

- Communicating with personnel encompassing:
 - Oral communications
 - Written procedures and work instructions
- Communicating with suppliers
- Communicating with customers

T2. Work activities records encompassing:

- Purpose and extent of maintaining work activities records in an enterprise
- Types of records for maintaining work activities in an enterprise
- Methods for recording and maintaining work records
- Work records required by regulation requirements

T3. Using basic computers and applications encompassing:

- Starting up
- Selecting application
- Entering information
- Saving
- Printing

9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this

EVIDENCE GUIDE

shall incorporate evidence that shows a candidate is able to:

- Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
- Apply sustainable energy principles and practices as specified in the performance criteria and range statement
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Maintain documentation in any electrotechnology enterprise information system, including:
 - A Following enterprise documentation requirements.
 - B Enabling documentation to communicate clearly to others.
 - C Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

EVIDENCE GUIDE

Where simulation is considered a suitable strategy for assessment it must ensure that the conditions for assessment are authentic and as far as possible reproduce and replicate the workplace and is consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to maintaining documentation.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

For optimisation of training and assessment effort, competence in this unit may be assessed concurrently with any unit or units that require formal documentation.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated by maintaining documentation in any electrotechnology enterprise information system.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers sourcing and purchasing/ordering materials/parts for installation or service jobs. It encompasses following job specification, using manufacturer's catalogues, making telephone, internet or email enquiries, selecting compliance materials and completing the necessary purchasing documentation.

Note: In the unit the value of materials for installation jobs is limited to \$20k.

Application of the Unit

Application of the Unit 2)

This unit is intended for competency development entry-level employment-based programs incorporated in approved contracts of training. It applies to any formal recognition for this standard at the aligned AQF 3 level or higher.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and where

License to practice 3)
applicable contracts of training such as apprenticeships.

Pre-Requisites

Prerequisite Unit(s) 4)

Competencies 4.1)

There are no prerequisite competencies for this unit.

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 4 Writing 4 Numeracy 4

Employability Skills Information

Employability Skills 5)

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a unit of competency Performance criteria describe the required performance needed to demonstrate achievement of the Element.
Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Establish the extent of the materials to be purchased.	1.1 OHS procedures for a given work area are identified, obtained and understood
	1.2 Established OHS risk control measures and procedures are followed
	1.3 The extent of installation or service work is determined from job specifications, drawings or results of service calls
	1.4 Materials required for the work are determined from job specifications or requirements resulting from service calls
	1.5 Materials or parts required are documented in accordance with established routine procedures
2 Source and purchase materials.	2.1 Sources of materials are obtained based on availability and price using catalogues, computers and/or telephone in accordance with established routine procedures
	2.2 Approval to purchase alternative materials/parts is sought from an appropriately qualified and authorised person
	2.3 Price for the supply of materials/parts, particularly non-standard high cost items, is sought in accordance with routine established procedures
	2.4 Approval to purchase materials or parts is obtained in writing from the customer or other authorised person in accordance with established routine procedures
	2.5 Purchases are initiated based on price and availability of materials/parts within the required timeframe and in accordance with established routine procedures
3 Document material purchases.	3.1 Material or part purchases are allocated against the appropriate jobs

ELEMENT**PERFORMANCE CRITERIA**

3.2 Material or part purchases are documented in accordance with established routine procedures.

Note:

Prices to include discounts, GST and delivery costs

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and the sourcing and purchasing of material/parts for installation or service jobs.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EC002B

Material Acquisition

Evidence shall show an understanding of material acquisition to an extent indicated by the following aspects:

T1. Enterprise communication methods encompassing:

- Communicating with personnel encompassing:
 - Oral communications
 - Written procedures and work instructions
- Communicating with suppliers
- Communicating with customers

T2. Work activities records encompassing:

- Purpose and extent of maintaining work activities records in an enterprise
- Types of records for maintaining work activities in an enterprise
- Methods for recording and maintaining work records
- Work records required by regulation requirements

T3. Enterprise purchasing system encompassing:

- Purchasing process
- Common suppliers
- Authorities to purchase

T4. Using basic computers and applications encompassing:

REQUIRED SKILLS AND KNOWLEDGE

- Starting up
- Selecting application
- Entering information
- Saving
- Printing

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit. It must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

EVIDENCE GUIDE

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Source and purchase material/parts for installation or service jobs as described in 8) including:

EVIDENCE GUIDE

- A Establishing the extent of work on which purchases are to be based.
- B Determining the material or parts required accurately.
- C Using at least two methods to source materials.
- D Obtaining quotations for supply of materials/parts.
- E Obtaining approval to purchase.
- F Establishing availability and arranging supply within the required timeframe.
- G Documenting material/part purchases accurately.
- H Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment it must ensure that the conditions for assessment are authentic and as far as possible reproduce and replicate the workplace and is consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to sourcing and purchasing of material/parts for installation or service jobs.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part

EVIDENCE GUIDE

3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed:

UEENEE001B Use basic computer applications

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to sourcing and purchasing materials/parts for at least two installation jobs, two service job or one installation and one service job and may apply to any of the following electrotechnology disciplines.

- Automation technologies
- Computers
- Data Communications
- Electrical
- Electrical Machines
- Electronics
- Fire Protection
- Instrumentation
- Refrigeration and Air Conditioning
- Renewable/sustainable energy, and
- Security technology

Generic terms used throughout this Vocational Standard shall be regarded as part of

Prerequisite Unit(s) 4)

Competencies 4.1)

There are no prerequisite competencies for this unit.

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 4 Writing 4 Numeracy 4

Employability Skills Information

Employability Skills 5)

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a unit of competency

Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Establish the extent of the work.	1.1 OHS procedures for a given work area are identified, obtained and understood
	1.2 Established OHS risk control measures and procedures are followed
	1.3 The extent of installation or service work is determined from job specifications and discussions with customer and/or other appropriate person(s)
	1.4 The extent of installation or service work on which a quotation is to be given is documented as a job specification and agreement sought with customer or other appropriate person(s)
	1.5 OHS and other regulatory requirements are incorporated in the work on which the quotation is based
	1.6 Requests for alterations to the job specification are negotiated with customer or other appropriate person(s) and within the constraints imposed by regulatory requirements
	1.7 A date by which the quotation is to be submitted is agreed with the customer and/or other appropriate person(s)
2 Develop quotations.	2.1 Material take-offs are performed accurately and checked against job specification(s)
	2.2 Materials, labour and other costs are determined from industry standard labour rates, enterprise costing arrangements and/or material suppliers
	2.3 Quotations are checked for accuracy in costing and against job specification
3 Document and submit quotation.	3.1 Quotation is documented in accordance with established policies and procedures
	3.2 Quotation is submitted to customer within by an agreed date

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and providing quotations for installation and service jobs

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EC003B

Installation or service jobs quotations

Evidence shall show an understanding of installation or service jobs quotations to an extent indicated by the following aspects:

T1. Enterprise communication methods encompassing:

- Communicating with personnel encompassing:
 - Oral communications
 - Written procedures and work instructions
- Communicating with suppliers
- Communicating with customers

T2. Work activities records encompassing:

- Purpose and extent of maintaining work activities records in an enterprise
- Types of records for maintaining work activities in an enterprise
- Methods for recording and maintaining work records
- Work records required by regulation requirements

T3. Enterprise customer relations protocols encompassing:

- Purpose of customer relations
- Procedures for dealing with customers
- Dealing with customer issues

T4. Costing methods in an enterprise encompassing:

- Costing policy
- Purchase prices and discounts for materials
- Labour charge out rates
- Margins

T5. Costing small jobs encompassing:

- Resources to be quantified and costed
- Costing labour plant and materials
- Service costs and margins.

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit. It must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in

the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers writing technical specifications for the supply of materials and equipment for electrotechnology projects. It encompasses establishing the performance requirements, comparing requirements with available materials and equipment, specifying material and equipment performance requirements and documenting the specifications.

Application of the Unit

Application of the Unit 2)

This unit is suitable for competency development employment-based programs incorporated in approved contracts of training. It applies to any formal recognition for this standard at the aligned AQF 5 level or higher.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships

Pre-Requisites

Prerequisite Unit(s) 4)

Competencies 4.1)

There are no prerequisite competencies for this unit.

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 5 Writing 5 Numeracy 5

Employability Skills Information

Employability Skills 5)

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a unit of competency

Performance criteria describe the required performance needed to demonstrate achievement of the Element.

Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

ELEMENT	PERFORMANCE CRITERIA
1 Establish performance and prescribed parameters of materials and equipment.	1.1 OHS procedures for a given work area are identified, obtained and understood.
	1.2 The extent of the work is established from design brief, specification and/or other relevant documentation and from discussions with appropriate person(s).
	1.3 The performance and prescribed parameters of materials and equipment is established from design brief, specification and/or other relevant documentation and from discussions with appropriate person(s).
	1.4 A date by which the materials and equipment is required is determined from design brief, specification and/or other relevant documentation and from discussions with appropriate person(s).
	1.5 Activities are planned to meet scheduled timeframe in consultation with others involved in the work.
2 Prepare specifications for supply of materials and equipment.	2.1 Manufacturer specifications and limitations of materials and equipment are sought.
	2.2 Manufacturer specifications and limitations are compared with the established performance and prescribed parameters for materials and equipment.
	2.3 Sources and availability of materials and equipment are established in accordance with organisation policies and procedures.
	2.4 Specifications for the supply of materials and equipment, including required evidence of compliance are developed in accordance with enterprise policy.
	2.5 Additional services such as equipment set up/commissioning and training are incorporate in the specifications where relevant.
	2.6 Solutions to unplanned events are implemented consistent with enterprise policy.

ELEMENT	PERFORMANCE CRITERIA
3 Document and submit quotation.	3.1 Material and equipment supply documentation is forwarded to appropriate person for processing in accordance with enterprise policies.
	3.2 Material and equipment supply documentation is filed in accordance with enterprise policies

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and preparing specifications for the supply of materials and equipment for electrotechnology projects.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EC004B Specifications preparation - materials and equipment

Evidence shall show an understanding of specifications preparation - materials and equipment to an extent indicated by the following aspects:

- T1 Purpose and nature of specification
- T2 Performance based specifications
- T3 Prescriptive specifications
- T4 Acceptable evidence of compliance
- T5 Additional service required with the supply of equipment
- T6 Dealing with suppliers and manufacturer's
- T7 Documenting specification.

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit. It must be read in

EVIDENCE GUIDE

conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate

9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

EVIDENCE GUIDE

competency in this unit

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Prepare specifications for the supply of materials and equipment for electrotechnology projects as described in 8) including:
 - A Ascertain the extent of the project accurately
 - B Establishing performance and prescribed parameters of materials and equipment
 - C Comparing material/equipment manufacturer specifications and limitations with the established performance and prescribed parameters accurately
 - D Including in the specifications required evidence of compliance

EVIDENCE GUIDE

- E Identifying the need for additional services and incorporating this in the specification
- F Documenting the specifications clearly
- G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment it must ensure that the conditions for assessment are authentic and as far as possible reproduce and replicate the workplace and is consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to preparing specifications for the supply of materials and equipment for electrotechnology projects.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

EVIDENCE GUIDE

Concurrent assessment and relationship with other units

9.5)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed:

UEENEED001B Use basic computer applications relevant to a workplace

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to preparing specifications for the supply of materials and equipment for at least two different electrotechnology projects exceeding \$20k and may apply to any of the following electrotechnology disciplines.

- Automation technologies
- Computers
- Data Communications
- Electrical
- Electrical Machines
- Electronics
- Fire Protection
- Instrumentation
- Refrigeration and Air Conditioning
- Renewable/sustainable energy, and
- Security technology

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers estimate material and labour costs for competitive quotation/tenders for work exceeding \$20k. It encompasses reading and understanding job specifications, material take-offs, determining labour and site requirements, costing and documenting.

Application of the Unit

Application of the Unit 2)

This unit is suitable for competency development employment-based programs incorporated in approved contracts of training. It applies to any formal recognition for this standard at the aligned AQF 5 level or higher.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Pre-Requisites

Prerequisite Unit(s) 4)

Competencies 4.1)

There are no prerequisite competencies for this unit.

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 5 Writing 5 Numeracy 5

Employability Skills Information

Employability Skills 5)

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a unit of competency

Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1 Ascertain the extent of the project.

1.1 OHS procedures for a given work area are identified, obtained and understood.

ELEMENT	PERFORMANCE CRITERIA
	1.2 Established OHS risk control measures and procedures are followed.
	1.3 The extent of the project is established from design brief, specification and/or other relevant documentation and from discussions with appropriate person(s).
	1.4 A date by which the estimate is to be completed is determined from design brief, specification and/or other relevant documentation and from discussions with appropriate person(s).
	1.5 Activities are planned to meet scheduled timeframe in consultation with others involved in the work.
2 Estimate project.	2.1 Material take-offs are performed accurately and checked against job specifications.
	2.2 Materials, labour and other costs are determined from industry standard labour rates, enterprise costing arrangements and /or material suppliers.
	2.3 Sources and availability of materials and human resources needed for the project are established in accordance with organisation policies and procedures.
	2.4 Estimates are checked and revised where necessary, for accuracy in costing and against job specification, in consultation with appropriate person(s).
	2.5 Solutions to unplanned events are implemented consistent with enterprise policy.
3 Document and submit quotation.	3.1 Project estimates are documented in accordance with established policies and procedures.
	3.2 Quotation is forwarded to appropriate person(s) for inclusion in a submission within the specified timeframe.
	3.3 Quotation documentation is filed in accordance with established policies and procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and estimating electrotechnology projects.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EC005B

Electrotechnology projects estimation

Evidence shall show an understanding of estimating electrotechnology projects to an extent indicated by the following aspects:

T1. Estimating electrotechnology projects encompassing:

- Documents used in estimating
- Resources to be quantified and costed
- Material take-off methods
- Costing:
 - resource (labour, plant, equipment and materials)
 - contingency
 - money
 - margins
- Labour rates method of costing
- Life cycle costing analysis
- Documenting estimations and costing.
- Evaluating estimates and costs

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit. It must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment

EVIDENCE GUIDE

Guidelines of this Training Package.

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence shall also

EVIDENCE GUIDE

comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Estimate electrotechnology projects as described in 8) including:
 - A Ascertaining the extent of the project accurately.
 - B Planning estimation work effectively.
 - C Estimating the job competitively.
 - D Checking the estimates accurately.
 - E Documenting the estimates clearly.
 - F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of

EVIDENCE GUIDE

a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment it must ensure that the conditions for assessment are authentic and as far as possible reproduce and replicate the workplace and is consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to estimating electrotechnology projects.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed:

UEENEED001B Use basic computer applications relevant to a workplace

Range Statement

RANGE STATEMENT

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to estimating at least two electrotechnology projects for a competitive quotation/tender. The value of the jobs shall exceed \$20k and may apply to any of the following electrotechnology disciplines.

- Automation technologies
- Computers
- Data Communications
- Electrical
- Electrical Machines
- Electronics
- Fire Protection
- Instrumentation
- Refrigeration and Air Conditioning
- Renewable/sustainable energy, and
- Security technology

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers the preparation of tender documents. It encompasses reading and understanding tender requirements and project specifications, verifying estimates and capacity to meet timelines, complying with legal requirements and documenting submissions.

Application of the Unit

Application of the Unit 2)

This unit is intended for competency development entry-level employment-based programs incorporated in approved contracts of training. It applies to any formal recognition for this standard at the aligned AQF 5 level or higher.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Pre-Requisites

Prerequisite Unit(s) 4)

4.1) Competencies

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEC005B Estimate electrotechnology projects

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 5 Writing 5 Numeracy 5

Employability Skills Information

Employability Skills 5)

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a unit of competency

Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Ascertain tender requirements.	1.1 OHS procedures for a given work area are identified, obtained and understood.
	1.2 Established OHS risk control measures and procedures are followed.
	1.3 The extent of the work under the tender is determined from tender documents.
	1.4 Special conditions and requirements for lodging the tender are ascertained from tender documents.
	1.5 Appropriately competent person(s) is engaged to estimate material, labour and other costs.
	1.6 Activities are planned to meet specified tender closing date/time.
2 Assemble tender submission.	2.1 All inputs to the tender are obtained and checked with person(s) responsible for their development.
	2.2 Materials and human resources needed to complete the work under the conditions of the tender are confirmed with person(s) responsible.
	2.3 Legal advice is sought on contingent aspects of the tender.
	2.4 Contingency allowances are included in the tender in accordance with established policies and procedures.
3 Document tender submission.	3.1 Tender submission is documented in tender lodgement requirements and in accordance with established policies and procedures.
	3.2 Tender submission is checked for accuracy against tender documents and all other inputs and made ready for lodgement before the closing date/time.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and preparing tender submissions.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EC006B Electrotechnology project tenders

Evidence shall show an understanding of electrotechnology project tenders to an extent indicated by the following aspects:

- T1 Purpose and sources of a tender
- T2 Documents supplied with a tender
- T3 Typical special conditions included in a tender
- T4 Tender submission requirements

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit. It must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace.

EVIDENCE GUIDE

However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit.It may be required by some jurisdictions that RTOs

EVIDENCE GUIDE

provide a percentile graded result for the purpose of regulatory or licensing requirements.

- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Prepare tender submissions for electrotechnology projects as described in 8) including:
 - A Ascertaining the extent of the work under the tender accurately
 - B Ascertaining special conditions and requirements for lodging the tender
 - C Planning tender submission work effectively
 - D Checking all input to the tender submission accurately
 - E Applying legal advice to contingent issues
 - F Documenting the tender submission ready for lodgement before the closing date/time
 - G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

EVIDENCE GUIDE

Where simulation is considered a suitable strategy for assessment it must ensure that the conditions for assessment are authentic and as far as possible reproduce and replicate the workplace and is consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to preparing tender submission for electrotechnology projects.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

1 Ascertain the terms of 1.1 OHS procedures for a given work area are

ELEMENT	PERFORMANCE CRITERIA
the contract.	identified, obtained and understood.
	1.2 Established OHS risk control measures and procedures are followed.
	1.3 The extent of the work under the original contract price is ascertained from tender submission/acceptance documents and associated work specifications, plans and diagrams.
	1.4 Arrangements under the contract for costing and claiming variations are ascertained from tender submission/acceptance and contract documents.
2 Manage contract variations.	2.1 The extent of a variation is determined and formal variation issued by the customer representative or other appropriate person.
	2.2 Variation is priced in accordance with the contract and established policies and procedures.
	2.3 Variation approvals are negotiated with reference to contract obligations of both parties and in accordance with established policies and procedures.
	2.4 Variation resolution proceeding is initiated for variations not agreed to by the client representative.
	2.5 Approved variations are submitted for payment promptly and in accordance with established policies and procedures.
	2.6 Variations documents are forwarded to appropriate person(s) within the organisation in accordance with established policies and procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and managing contract variations.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EC007B Contract variations management

Evidence shall show an understanding of contract variations management to an extent indicated by the following aspects:

T1. Estimating electrotechnology projects encompassing:

- Documents used in estimating
- Resources to be quantified and costed
- Material take-off methods
- Costing:
 - resource (labour, plant, equipment and materials)
 - contingency
 - money
 - margins
- Labour rates method of costing
- Life cycle costing analysis
- Documenting estimations and costing.
- Evaluating estimates and costs

T2. Format, responsibilities and obligations of a contract encompassing:

- Contract purpose and formats
- Documents legally attached to a contract
- Responsibilities and obligations of parties entering a contract
- Regulatory requirements

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit. It must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction

EVIDENCE GUIDE

with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence shall also

EVIDENCE GUIDE

comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Manage contract variations as described in 8) including:
 - A Ascertaining the terms of the contract accurately.
 - B Ascertaining the contract arrangements for claiming variations.
 - C Pricing variation in accordance with the contract.
 - D Initiating variation resolution proceeding, where applicable.
 - E Negotiating contract variation approvals.
 - F Forwarding variation documentation appropriately.
 - G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic

EVIDENCE GUIDE

assessment with the above listed items.

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment it must ensure that the conditions for assessment are authentic and as far as possible reproduce and replicate the workplace and is consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to managing contract variations.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed:

UEENEE001B Use basic computer applications relevant to a workplace

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to managing at least five variations to electrotechnology contracts. The contracts may apply to any of the following electrotechnology disciplines

- Automation technologies
- Computers
- Data Communications
- Electrical
- Electrical Machines
- Electronics
- Fire Protection
- Instrumentation
- Refrigeration and Air Conditioning
- Renewable/sustainable energy, and
- Security technology

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers the receiving and storing of materials and equipment for a construction site or workshop store. It encompasses receiving materials and equipment, checking consignment notes, storing materials and equipment and completing the necessary documentation.

Application of the Unit

Application of the Unit 2)

This unit is intended for competency development entry-level employment-based programs incorporated in approved contracts of training.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work

platforms, powder operated fixing tools, and power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

Pre-Requisites

Prerequisite Unit(s) 4)

Competencies 4.1)

There are no prerequisite competencies for this unit.

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 3 Writing 3 Numeracy 3

Employability Skills Information

Employability Skills 5)

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

- 6) Elements describe the essential outcomes of a unit of competency
- Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Receive materials and equipment.	1.1 OHS procedures for a given work area are identified, obtained and understood.
	1.2 OHS risk control work measures and procedures are followed.
	1.3 Documentation on pending material and equipment deliveries is read, and content and time of the delivery is understood.
	1.4 Deliveries are checked against consignment documentation before they are received.
	1.5 Discrepancies in deliveries are notified to work supervisor and supplier in accordance with established routines.
	1.6 Materials and equipment are handled in strict accordance with OHS risk control work preparation measures and procedures.
2 Store materials and equipment.	2.1 OHS risk control work measures and procedures are followed.
	2.2 Material and equipment are stored to prevent damage or loss in accordance with established routines.
	2.3 Security of the stored materials and equipment is maintained in accordance with established routines.
	2.4 Material and equipment documentation is forwarded to an appropriate person in accordance with established routine/procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and of receiving and storing materials and equipment.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EC008B

Electrotechnology work store materials and equipment

Evidence shall show an understanding of electrotechnology work store materials and equipment to an extent indicated by the following aspects:

T1. Enterprise communication methods encompassing:

- Communicating with personnel encompassing:
 - Oral communications
 - Written procedures and work instructions
- Communicating with suppliers
- Communicating with customers

T2. Work activities records encompassing:

- Purpose and extent of maintaining work activities records in an enterprise
- Types of records for maintaining work activities in an enterprise
- Methods for recording and maintaining work records
- Work records required by regulation requirements

T3. Stock control methods encompassing:

- Enterprise purchasing policy
- Stock data base
- Purchase and sales entry mechanisms
- Reordering methods

T4. Using basic computers and applications encompassing:

- Starting up
- Selecting application

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit. It must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

EVIDENCE GUIDE

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Receive and store materials and equipment for electrotechnology work as described in 8) including:
 - A Determining content and time of pending deliveries from relevant documentation.
 - B Dealing with discrepancies in deliveries.
 - C Storing and securing materials and equipment to prevent damage or loss.

EVIDENCE GUIDE

- D Forwarding documentation appropriately.
- E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment it must ensure that the conditions for assessment are authentic and as far as possible reproduce and replicate the workplace and is consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to receiving and storing materials and equipment for electrotechnology work.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

For optimisation of training and assessment effort, competence in this unit may be assessed concurrently with any unit or units

EVIDENCE GUIDE

that require formal documentation.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to receiving and storing materials and equipment for a construction site or workshop store.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers providing quotations for compliance inspections and technical safety audits. It encompasses reading and understanding job specification, pricing labour and site costs, completing the necessary quotation documentation and applying the necessary customer relations protocols.

Application of the Unit

Application of the Unit 2)

This unit is intended for competency development entry-level employment-based programs incorporated in approved contracts of training. It applies to any formal recognition for this standard at the aligned AQF 4 level or higher.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Pre-Requisites

Prerequisite Unit(s) 4)

Competencies 4.1)

There are no prerequisite competencies for this unit.

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 5 Writing 5 Numeracy 5

Employability Skills Information

Employability Skills 5)

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a unit of competency

Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

ELEMENT	PERFORMANCE CRITERIA
1 Establish the extent of the work.	1.1 OHS procedures for a given work area are identified, obtained and understood.
	1.2 Established OHS risk control measures and procedures are followed.
	1.3 The extent of inspection or audit service work is determined from job specifications and drawings and from discussions with customer and/or other appropriate person(s).
	1.4 The extent of inspection or audit service work on which a quotation is to be given is documented as a job specification and agreement sought with customer or other appropriate person(s).
	1.5 OHS and other regulatory requirements are incorporated in the work on which the quotation is based.
	1.6 A date by which the quotation is to be submitted is agreed with the customer and/or other appropriate person(s).
2 Develop quotations	2.1 Labour and other costs are determined from industry standard labour rates and/or enterprise costing arrangements.
	2.2 Costing is performed accurately and checked against job specifications.
	2.3 Quotations are checked for accuracy in costing and against job specifications.
3 Document and submit quotation.	3.1 Quotation is documented in accordance with established policies and procedures.
	3.2 Quotation is submitted to customer within by an agreed date.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and providing quotations for inspection and compliance audit services.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EC009B Inspection and compliance audit services quotations

Evidence shall show an understanding of inspection and compliance audit services quotations to an extent indicated by the following aspects:

T1. Enterprise communication methods encompassing:

- Communicating with personnel encompassing:
 - Oral communications
 - Written procedures and work instructions
- Communicating with suppliers
- Communicating with customers

T2. Work activities records encompassing:

- Purpose and extent of maintaining work activities records in an enterprise
- Types of records for maintaining work activities in an enterprise
- Methods for recording and maintaining work records
- Work records required by regulation requirements

T3. Enterprise customer relations protocols encompassing:

- Purpose of customer relations
- Procedures for dealing with customers
- Dealing with customer issues

T4. Costing methods in an enterprise encompassing:

- Costing policy
- Purchase prices and discounts for materials
- Labour charge out rates
- Margins

T5. Costing small jobs encompassing:

- Resources to be quantified and costed
- Costing labour plant and materials
- Service costs and margins.

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit. It must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of 9.2)

EVIDENCE GUIDE

evidence required to demonstrate competency in this unit

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Provide quotations for inspection and compliance audit services as described in 8) including:
 - A Establishing the extent of work on which the quotation is to be based.
 - B Determining the extent of labour and other costs.
 - C Costing the job appropriately.
 - D Checking the quotation.
 - E Documenting the quotation clearly.

EVIDENCE GUIDE

- F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment it must ensure that the conditions for assessment are authentic and as far as possible reproduce and replicate the workplace and is consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to providing quotations for inspection and compliance audit services.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed:

UEENEE001B Use basic computer applications relevant to a

EVIDENCE GUIDE

workplace

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to providing at least one quotation for an inspection job and one for compliance audit. The value of the jobs shall not exceeding \$20k and may apply to any of the following electrotechnology disciplines.

- Automation technologies
- Computers
- Data Communications
- Electrical
- Electrical Machines
- Electronics
- Fire protection
- Instrumentation
- Refrigeration and Air Conditioning
- Renewable/sustainable energy, and
- Security technology

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a unit of competency

Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1 Interact with

1.1 Communication with customers is conducted in

ELEMENT	PERFORMANCE CRITERIA
customers.	a professional and courteous manner according to established procedures.
	1.2 Customer enquiries are responded to promptly and politely and in accordance with established procedures.
	1.3 Personal dress and presentation is maintained in line with established procedures.
	1.4 Appropriate interpersonal skills are used to facilitate accurate and relevant exchange of information.
2 Identify customer needs.	2.1 Customer needs are assessed so that priorities for service delivery can be identified in accordance with established procedures.
	2.2 Appropriate questioning and active listening are used to determine customer needs.
	2.3 Customers are provided with information about available options for meeting their needs and assisted to identify their preferred option.
	2.4 Personal limitations in addressing customer needs are identified and where appropriate assistance is sought from appropriate personnel.
3 Deliver a service to customers.	3.1 Prompt customer service is provided to meet identified needs in accordance with established procedures.
	3.2 Service provided follows OHS policies and procedures and work is appropriately sequenced in accordance with requirements.
	3.3 Service provided is coordinated effectively with others involved on the work site.
	3.4 Customer complaints are handled sensitively and courteously in accordance with established procedures.
	3.5 Opportunities to enhance the quality of service and products are identified and taken whenever possible.

ELEMENT	PERFORMANCE CRITERIA
4 Evaluate and complete service.	4.1 Own work is monitored and adjusted according to requirements for job quality, customer service and efficient resource use.
	4.2 Customer service records are inspected and verified after service is completed to ensure requirements are met.
	4.3 Appropriate personnel are notified of the completion of the repair work and details are documented in accordance with established procedures and requirements.
	4.4 Variations in the quality of service and/or products from required standards are detected and reported in accordance with established procedures.
	4.5 Additional information or follow-up action is completed in line with customer needs.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and delivering a service to customers.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EC010B Customer service

Evidence shall show an understanding of customer service to an extent indicated by the following aspects:

T1. Enterprise communication methods encompassing:

- Communicating with personnel encompassing:
 - Oral communications
 - Written procedures and work instructions
- Communicating with suppliers

REQUIRED SKILLS AND KNOWLEDGE

- Communicating with customers
- T2. Work activities records encompassing:
 - Purpose and extent of maintaining work activities records in an enterprise
 - Types of records for maintaining work activities in an enterprise
 - Methods for recording and maintaining work records
 - Work records required by regulation requirements
- T3. Problem solving concepts and techniques encompassing:
 - Identify problems - process and quality problems; equipment selection, availability and failure; teamwork and work allocation problems; safety and emergency situations and incident; performance gaps; profit improvement and the like.
 - Mathematical Tools - average, standard deviation and the like.
 - Use of analytical techniques in problem solving - brainstorming; fishbone diagrams/cause and effect diagrams; logic trees; process logic/process requirements; similarity/difference analysis; pare to analysis; force field/SWOT analysis.
 - Using tools to assistance in problem solving - Procedures and work instructions; Safety data sheets; Job cards; Maintenance logs; Plant drawing.
 - Determine corrective action:
 - Tools
 - Mode of communication procedure used within each enterprise
 - Established work procedures and policies
 - Size and structure of the teams/enterprise
 - Group goals - team, section, enterprise
 - Enterprise specific conflict resolution procedures
 - Action plans
 - Priority requirements
 - Measurable objectives
 - Resource requirements
 - Methods for reaching objectives
 - Timelines
 - Safety requirements
 - Risk assessment
 - Environmental requirements
 - Communicate recommendations - feedback requirements; corrective action and analysis; following up recommendations and the like.
 - Implement Monitoring encompassing:
 - Identifying components to be measured
 - Measurement and monitoring techniques
 - Measurement and monitoring tools

REQUIRED SKILLS AND KNOWLEDGE

T4. Enterprise customer relations protocols encompassing:

- Purpose of customer relations
- Procedures for dealing with customers
- Dealing with customer issues

T5. Enterprise quality management system encompassing:

- Purpose of a quality system
- Procedures pertaining to the relevant work function
- Work instructions pertaining to the relevant work function

T6. Instructing users in the use of specific items of equipment and systems encompassing:

- Methods for evaluating user needs - how equipment is used efficiently and safely and identifying wear and tear and damage to the equipment that requires repairing.
- Basic instruction methods - be appropriate to the culture of the users and the equipment for which instruction is given.
- Methods for evaluating user's ability use equipment correctly

Evidence Guide

EVIDENCE GUIDE

Guidelines of this Training Package.

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence shall also

EVIDENCE GUIDE

comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Direct technical and non-technical enquiries to appropriate personnel as described in 8) including:
 - A Interacting with customers appropriately.
 - B Identifying nature of the enquiry accurately.
 - C Directing the enquirer to the appropriate personnel.
 - D Informing appropriate personnel of the enquiry.
 - E Documenting all enquiries in accordance with routine procedures.
 - F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Context of and 9.3)

EVIDENCE GUIDE

specific resources for assessment This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment it must ensure that the conditions for assessment are authentic and as far as possible reproduce and replicate the workplace and is consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to directing technical and non-technical enquiries to appropriate personnel.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

For optimisation of training and assessment effort, competence in this unit may be assessed concurrently with any unit or units that require formal documentation.

Range Statement

RANGE STATEMENT

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to directing technical and non-technical enquiries to appropriate personnel in any of the electrotechnology disciplines.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers the application of industry/enterprise policies in actively participating in work activities and in one's own competency development. It complies with established industry/enterprise procedures regarding how work is conducted, understanding responsibilities and obligations under competency development plan, following activities for developing competency, self-monitoring competency development and meeting trainee obligations for periodic reporting of competency development activities.

Application of the Unit

Application of the Unit 2)

This unit applies to a recognised development program that leads to the acquisition of a formal award at AQF level 3 or higher.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit may require a license to practice in the workplace subject to regulation for undertaking electrical work.

Practice in the workplace and during training is also

subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, and power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

Pre-Requisites

Prerequisite Unit(s) 4)

Competencies 4.1)

There are no prerequisite competencies for this unit.

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 4 Writing 4 Numeracy 4

Employability Skills Information

Employability Skills

5)

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a unit of competency

Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1 Comply with business equipment industry/enterprise work policies and procedures	1.1	Industry/enterprise policies and procedures for all work activities are identified and obtained.
	1.2	Clarification on how particular work is to be carried out and the procedures involved is sought from the immediate supervisor/appropriate person.
	1.3	Unexpected situations are dealt with safely and in accordance with industry/enterprise policies and procedures, and with the approval of an authorised person.
2 Monitor and respond to a personal competency development plan.	2.1	All aspects of the competency development plan are confirmed in consultation with appropriate persons.
	2.2	All components of the competency development plan are followed diligently.
	2.3	Opportunities to practise skills and apply knowledge relative to a particular competency

ELEMENT

PERFORMANCE CRITERIA

- are pursued.
- 2.4 Assistance is sought from appropriate persons to overcome difficulties in developing skills and applying knowledge relevant to a particular competency.
- 2.5 Progress in competency development is self-monitored against the competency development plan and industry/enterprise policies and procedures.
- 2.6 Modifications to the personal competency development plan are made in consultation with appropriate persons.
- 2.7 Obligations are met for periodic and timely reporting of competency development activities.
- 2.8 Periodic competency development activities report is validated by an appropriate person in accordance with industry/enterprise policies and procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and participating in development and following a personal competency development plan.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EC013B

development activities

Business equipment work competency

Evidence shall show an understanding of business equipment work competency development activities to an extent indicated by the following aspects:

T1. Responsibilities under a competency development plan:

- Competency Development (Training) Plans encompassing:

REQUIRED SKILLS AND KNOWLEDGE

- state/territories requirements (acts/regulations)
- competency development (training) contracts
- competency development (training) period
- purpose of competency development (training) plans
- process in developing competency development (training) plans
- parties involved in the competency development (training) plan
- Qualification Structure encompassing:
 - scope of work
 - Training Packages - electrotechnology
 - competency standard units (CSUs)
 - structure of Qualification
 - off-Job Requirements
 - on-Job Requirements
- Responsibilities of Parties to the contract encompassing:
 - employer responsibilities
 - learner responsibilities
 - RTO responsibilities
 - State Training Authorities (STA)
- Electrotechnology Industry Career Opportunities encompassing:
 - industry Areas
 - qualification levels
 - career paths
- Industry customs and practices encompassing:
 - industry bodies – employer and employee representatives
 - regulatory bodies – including licensing/registration, OHS, IR, training authorities – apprentice/trainee regulation
 - vocational and technical education system – Australian Qualification Framework (AQF), credentials, Australian Qualification Training Framework (AQTF)
- Monitoring of Workplace Evidence encompassing:
 - workplace exposure and practices and relationship with competency standard units
 - methods of collecting workplace evidence
 - monitoring period cycle
 - requirements of workplace evidence
 - actions taken for unsatisfactory progression
 - role of state training authority (STA)
 - apprentice/learner responsibilities
 - employer responsibilities

REQUIRED SKILLS AND KNOWLEDGE

- RTO Policies encompassing:
 - apprentice/Learner Responsibilities
 - teachers/Trainers Responsibilities
 - absenteeism
 - off-Job component assessment specifications
 - on-Job component assessment specifications
 - qualification completion requirements and award
 - advanced standing and/or RPL
 - result review procedures
- Apprentice/Learner Discipline Policy encompassing:
 - apprentices/Learners rights
 - apprentice/Learner responsibilities
 - breaches of discipline
 - types of penalties Apprentice/Learner Responsibilities
- Attendance at the Vocational and Technical Education Centre encompassing:
 - importance of attendance
 - record management of attendance
 - attendance cards
 - advice to employer of absences
- Fire and Emergencies at the Vocational and Technical Education Centre encompassing:
 - designated fire and emergency exists
 - procedures in the event of a fire
 - evacuation procedures
 - assembly points importance of attendance
- Occupational Health and Safety at the Vocational and Technical Education Centre encompassing:
 - eye protection
 - foot protection
 - protective clothing
 - personal injuries
 - mobile phones and personal belonging
 - dress regulations
 - rotating machinery, designated fire and emergency exists
- Entry Requirements encompassing:
 - numeracy requirements
 - literacy requirements
 - vocational and technical education centre support mechanisms

REQUIRED SKILLS AND KNOWLEDGE

- testing and appropriate action by learner Eye protection
- Vocational and Technical Education Centre Tour encompassing:
 - vocational and technical education centre layout
 - building layout
 - tour of building and vocational and technical education centre

T2. Methods of monitoring and reporting competency development activities encompassing:

- RTOs responsibility to receive and monitor workplace activities of the apprentice/learner
- Industry requirements for monitoring workplace evidence
- Acceptable methods for monitoring and reporting workplace activities
- Apprentice's/Learner's responsibility to participate in the reporting of workplace activities
- RTOs requirements in periodically evaluating development of apprentices/learners from the workplace activities information gathered, and providing feedback and advice on areas requiring improvement
- Employers responsibilities to participate in monitoring, reporting and confirming workplace activities, and assisting in overcoming areas requiring development by the apprentice/learner
- Options for appeal or assistance from RTO or State Training Authority (STA)

T3. Enterprise work activities policies and procedures encompassing:

- Need for policies and procedures
- Scope for an industry/enterprise to establish work activity policies and procedures - policies and procedure related to safety, effective work outcomes, customer relations, conflict resolution and competency development.
- Following work activities procedures

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit. It must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of 9.1)

EVIDENCE GUIDE

Assessment

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline,

EVIDENCE GUIDE

work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:

- Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
- Apply sustainable energy principles and practices as specified in the performance criteria and range statement
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Participate in business equipment work and competency development activities as described in 8) including:
 - A Identifying and confirming the context, requirements and responsibilities of the competency development (training) plan to be met
 - B Identifying and confirming the critical industry, enterprise and regulatory policies, procedures and context applicable to all work activities
 - C Identifying and confirming the applicable training practices, requirements, administration, costs and support service policies and procedures provided by the RTO to all vocational and technical education activities
 - D Seeking clarification of how particular work is to be carried out and the procedures involved
 - E Dealing with unexpected situations in accordance with industry/enterprise policies and procedures, and with the approval of an authorised person

EVIDENCE GUIDE

- F Reporting periodically the competency development activities in accordance with requirements
- G Periodically reviewing progress of the competency development activities in accordance with requirements
- H Pursuing strategies to develop opportunities for gaining the range of workplace experiences and exposure
- I Progressing successfully against periodic or staged evaluative performance events according to requirements
- J Seeking assistance to overcome difficulties in developing competency
- K Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment it must ensure that the conditions for assessment are authentic and as far as possible reproduce and replicate the workplace and is consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to participating in development and following a personal competency development plan.

EVIDENCE GUIDE

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

Competency in this unit shall be assessed concurrently with the all core and nominated elective units in a qualification.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated following the completion of a range of performance process activities that contribute to assisting in the evaluation of progress towards the development of competency. This unit applies to those engaged in employment-based programs covered by an approved contract of training under a relevant state/territory training act seeking to complete the qualification. Incorporate therein is the requirement for deployment of an approved competency development (training) plan.

The Plan specifies the competency standard units, which are to be attained to complete the qualification. This unit is a core requirement for the completion of the qualification. It encompasses the processes required to participate in the development of competence by an apprentice/learner in the industry and in particular the activities associated with performance in the workplace and in vocational and technical education. It includes but is not limited to recognising and participating in:

- 1) The competency development plan:
 - Context of the plan

- State/Territory regulatory requirements (Acts/Regulations)
- Competency development (training) contracts
- Competency development (nominal training) period
- Purpose of competency development (training) plans
- Process in developing competency development (training) plans
- Parties involved in the competency development (training) plan
- Responsibilities of Parties:
 - RTO responsibilities
 - Role of State Training Authority (STA)
 - Employer responsibilities
 - Employee/Learner responsibilities
- Context of responsible parties:
 - Industry customs, work practices
 - Industry bodies – employer and employee representatives
 - Regulatory bodies, including licensing/registration, OHS, IR, training authorities – apprentice/trainee regulation
 - Vocational and technical education system – AQF, credentials, AQTF
 - RTO training practices, requirements, administration, costs, and support services
- Workplace practice and exposure:
 - Timely reporting of workplace exposures and practice
 - Supervisor confirmation of workplace exposures and practices in a structured workplace report
 - Workplace evidence reporting:
 - Unit of work
 - Elements and performance of work
 - Range of items exposed to and practised on
 - Level of supervision received
 - Period of exposure
- Workplace evidence validation:
 - Currency of evidence
 - Authenticity of evidence
 - Sufficiency of evidence
- Workplace evidence reporting review:
 - Contribution towards progressive development for the qualification
 - Competency standard unit progressive reporting
 - Regular review of progress report
 - Timing of periodic monitoring/evaluation
 - Procedures for monitoring and analysing progress
 - Procedures for responding to anomalies in competency development

- Procedures for liaison with the workplace supervisor
- Periodic evaluation of competency development (training) progress:
 - Stages of progress that are to be met in developing competent performance
 - Evaluation of progress against requisite stages of development towards competent performance
 - Implementation of remedial measures
 - Periodic progress report formally confirmed to parties

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and participating in development and following a personal competency development plan.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EC014A Computer equipment work competency development activities

Evidence shall show an understanding of computer equipment work competency development activities to an extent indicated by the following aspects:

T1. Responsibilities under a competency development plan:

- Competency Development (Training) Plans encompassing:
 - state/territories requirements (acts/regulations)
 - competency development (training) contracts
 - competency development (training) period
 - purpose of competency development (training) plans
 - process in developing competency development (training) plans
 - parties involved in the competency development (training) plan
- Qualification Structure encompassing:
 - scope of work
 - Training Packages - electrotechnology
 - competency standard units (CSUs)
 - structure of Qualification
 - off-Job Requirements
 - on-Job Requirements
- Responsibilities of Parties to the contract encompassing:
 - employer responsibilities
 - learner responsibilities
 - RTO responsibilities
 - State Training Authorities (STA)
- Electrotechnology Industry Career Opportunities encompassing:
 - industry Areas
 - qualification levels
 - career paths
- Industry customs and practices encompassing:
 - industry bodies – employer and employee representatives

REQUIRED SKILLS AND KNOWLEDGE

- regulatory bodies – including licensing/registration, OHS, IR, training authorities – apprentice/trainee regulation
- vocational and technical education system – Australian Qualification Framework (AQF), credentials, Australian Qualification Training Framework (AQTF)
- Monitoring of Workplace Evidence encompassing:
 - workplace exposure and practices and relationship with competency standard units
 - methods of collecting workplace evidence
 - monitoring period cycle
 - requirements of workplace evidence
 - actions taken for unsatisfactory progression
 - role of state training authority (STA)
 - apprentice/learner responsibilities
 - employer responsibilities
- RTO Policies encompassing:
 - apprentice/Learner Responsibilities
 - teachers/trainers Responsibilities
 - absenteeism
 - off-Job component assessment specifications
 - on-Job component assessment specifications
 - qualification completion requirements and award
 - advanced standing and/or RPL
 - result review procedures
- Apprentice/Learner Discipline Policy encompassing:
 - apprentices/learners rights
 - apprentice/learner responsibilities
 - breaches of discipline
 - types of penalties Apprentice/Learner Responsibilities
- Attendance at the Vocational and Technical Education Centre encompassing:
 - importance of attendance
 - record management of attendance
 - attendance cards
 - advice to employer of absences
- Fire and Emergencies at the Vocational and Technical Education Centre encompassing:
 - designated fire and emergency exits
 - procedures in the event of a fire
 - evacuation procedures

REQUIRED SKILLS AND KNOWLEDGE

- assembly points importance of attendance
- Occupational Health and Safety at the Vocational and Technical Education Centre encompassing:
 - eye protection
 - foot protection
 - protective clothing
 - personal injuries
 - mobile phones and personal belonging
 - dress regulations
 - rotating machinery, designated fire and emergency exists
- Entry Requirements encompassing:
 - numeracy requirements
 - literacy requirements
 - vocational and technical education centre support mechanisms
 - testing and appropriate action by learner Eye protection
- Vocational and Technical Education Centre Tour encompassing:
 - vocational and technical education centre layout
 - building layout
 - tour of building and vocational and technical education centre

T2. Methods of monitoring and reporting competency development activities encompassing:

- RTOs responsibility to receive and monitor workplace activities of the apprentice/learner
- Industry requirements for monitoring workplace evidence
- Acceptable methods for monitoring and reporting workplace activities
- Apprentice's/Learner's responsibility to participate in the reporting of workplace activities
- RTOs requirements in periodically evaluating development of apprentices/learners from the workplace activities information gathered, and providing feedback and advice on areas requiring improvement
- Employers responsibilities to participate in monitoring, reporting and confirming workplace activities, and assisting in overcoming areas requiring development by the apprentice/learner
- Options for appeal or assistance from RTO or State Training Authority (STA)

T3. Enterprise work activities policies and procedures encompassing:

- Need for policies and procedures
- Scope for an industry/enterprise to establish work activity policies and procedures
 - policies and procedure related to safety, effective work outcomes, customer relations, conflict resolution and competency development.
- Following work activities procedures

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit. It must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in

EVIDENCE GUIDE

the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Participate in computer equipment work and competency development activities as described in 8) including:
 - A Identifying and confirming the context, requirements and responsibilities of the competency development (training) plan to be met
 - B Identifying and confirming the critical industry, enterprise and regulatory policies, procedures and

EVIDENCE GUIDE

context applicable to all work activities

- C Identifying and confirming the applicable training practices, requirements, administration, costs and support service policies and procedures provided by the RTO to all vocational and technical education activities
- D Seeking clarification of how particular work is to be carried out and the procedures involved
- E Dealing with unexpected situations in accordance with industry/enterprise policies and procedures, and with the approval of an authorised person
- F Reporting periodically the competency development activities in accordance with requirements
- G Periodically reviewing progress of the competency development activities in accordance with requirements
- H Pursuing strategies to develop opportunities for gaining the range of workplace experiences and exposure
- I Progressing successfully against periodic or staged evaluative performance events according to requirements
- J Seeking assistance to overcome difficulties in developing competency
- K Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

EVIDENCE GUIDE

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment it must ensure that the conditions for assessment are authentic and as far as possible reproduce and replicate the workplace and is consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to participating in development and following a personal competency development plan.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

Competency in this unit shall be assessed concurrently with the all core and nominated elective units in a qualification.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated following the completion of a range of performance process activities that contribute to assisting in the evaluation of progress towards the development of competency. The unit applies to those engaged in employment-based programs covered by an approved contract of training under a relevant State/Territory training Act seeking to complete the qualification. Incorporated therein is the requirement for deploying an approved competency development (training) plan.

The Plan specifies the units which are to be attained to complete the qualification. This unit is a core requirement for the completion of the qualification. It encompasses the processes required to participate in the development of competence by an apprentice/learner in the industry and in particular the activities associated with performance in the workplace and in vocational and technical education. It includes but is not limited to recognising and participating in:

- The competency development plan:
 - Context of the plan
 - State/Territory regulatory requirements (Acts/Regulations)
 - Competency development (training) contracts
 - Competency development (nominal training) period
 - Purpose of competency development (training) plans
 - Process in developing competency development (training) plans
 - Parties involved in the competency development (training) plan
- Responsibilities of Parties:
 - RTO responsibilities
 - Role of State Training Authority (STA)
 - Employer responsibilities
 - Employee/Learner responsibilities
- Context of responsible parties:
 - Industry customs, work practices
 - Industry bodies – employer and employee representatives
 - Regulatory bodies, including licensing/registration, OHS, IR, training authorities – apprentice/trainee regulation
 - Vocational and technical education system – AQF, credentials, AQTF
 - RTO training practices, requirements, administration, costs, and support services
- Workplace practice and exposure:
 - Timely reporting of workplace exposures and practice
 - Supervisor confirmation of workplace exposures and practices in a structured workplace report
- Workplace evidence reporting:
 - Unit of work
 - Elements and performance of work
 - Range of items exposed to and practised on

- Level of supervision received
- Period of exposure
- Workplace evidence validation:
 - Currency of evidence
 - Authenticity of evidence
 - Sufficiency of evidence
- Workplace evidence reporting review:
 - Contribution towards progressive development for the qualification
 - Competency standard unit progressive reporting
 - Regular review of progress report
 - Timing of periodic monitoring/evaluation
 - Procedures for monitoring and analysing progress
 - Procedures for responding to anomalies in competency development
 - Procedures for liaison with the workplace supervisor
- Periodic evaluation of competency development (training) progress:
 - Stages of progress that are to be met in developing competent performance
 - Evaluation of progress against requisite stages of development towards competent performance
 - Implementation of remedial measures
 - Periodic progress report formally confirmed to parties

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers the application of industry/enterprise policies in actively participating in work activities and in one's own competency development. It complies with established industry/enterprise procedures regarding how work is conducted, understanding responsibilities and obligations under competency development plan, following activities for developing competency, self-monitoring competency development and meeting trainee obligations for periodic reporting of competency development activities.

Application of the Unit

Application of the Unit 2)

This unit applies to a recognised development program that leads to the acquisition of a formal award at AQF level 3 or higher.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit may require a license to practice in the workplace subject to regulation for undertaking electrical work.

Pre-Requisites

Prerequisite Unit(s) 4)

Competencies 4.1)

There are no prerequisite competencies for this unit.

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 4 Writing 4 Numeracy 4

Employability Skills Information

Employability Skills 5)

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a unit of competency

Performance criteria describe the required performance needed to demonstrate achievement of the Element.

Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

ELEMENT	PERFORMANCE CRITERIA
1 Comply with voice and data communications industry/enterprise work policies and procedures	1.1 Industry/enterprise policies and procedures for all work activities are identified and obtained
	1.2 Clarification on how particular work is to be carried out and the procedures involved is sought from the immediate supervisor/appropriate person
	1.3 Unexpected situations are dealt with safely and in accordance with industry/enterprise policies and procedures, and with the approval of an authorised person
2 Monitor and respond to a personal competency development plan.	2.1 All aspects of the competency development plan are confirmed in consultation with appropriate persons
	2.2 All components of the competency development plan are followed diligently
	2.3 Opportunities to practise skills and apply knowledge relative to a particular competency are pursued
	2.4 Assistance is sought from appropriate persons to overcome difficulties in developing skills and applying knowledge relevant to a particular competency
	2.5 Progress in competency development is self-monitored against the competency development plan and industry/enterprise policies and procedures
	2.6 Modifications to the personal competency development plan are made in consultation with appropriate persons
	2.7 Obligations are met for periodic and timely reporting of competency development activities
	2.8 Periodic competency development activities report is validated by an appropriate person in accordance with industry/enterprise policies and procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and participating in development and following a personal competency development plan.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EC016B Voice and data communications work competency development activities

Evidence shall show an understanding of voice and data communications work competency development activities to an extent indicated by the following aspects:

T1. Responsibilities under a competency development plan:

- Competency Development (Training) Plans encompassing:
 - state/territories requirements (acts/regulations)
 - competency development (training) contracts
 - competency development (training) period
 - purpose of competency development (training) plans
 - process in developing competency development (training) plans
 - parties involved in the competency development (training) plan
- Qualification Structure encompassing:
 - scope of work
 - Training Packages - electrotechnology
 - competency standard units (CSUs)
 - structure of Qualification
 - off-Job Requirements
 - on-Job Requirements
- Responsibilities of Parties to the contract encompassing:
 - employer responsibilities
 - learner responsibilities
 - RTO responsibilities
 - State Training Authorities (STA)
- Electrotechnology Industry Career Opportunities encompassing:
 - industry Areas
 - qualification levels
 - career paths

REQUIRED SKILLS AND KNOWLEDGE

- Industry customs and practices encompassing:
 - industry bodies – employer and employee representatives
 - regulatory bodies – including licensing/registration, OHS, IR, training authorities – apprentice/trainee regulation
 - vocational and technical education system – Australian Qualification Framework (AQF), credentials, Australian Qualification Training Framework (AQTF)
- Monitoring of Workplace Evidence encompassing:
 - workplace exposure and practices and relationship with competency standard units
 - methods of collecting workplace evidence
 - monitoring period cycle
 - requirements of workplace evidence
 - actions taken for unsatisfactory progression
 - role of state training authority (STA)
 - apprentice/learner responsibilities
 - employer responsibilities
- RTO Policies encompassing:
 - apprentice/Learner Responsibilities
 - teachers/Trainers Responsibilities
 - absenteeism
 - off-Job component assessment specifications
 - on-Job component assessment specifications
 - qualification completion requirements and award
 - advanced standing and/or RPL
 - result review procedures
- Apprentice/Learner Discipline Policy encompassing:
 - apprentices/Learners rights
 - apprentice/Learner responsibilities
 - breaches of discipline
 - types of penalties Apprentice/Learner Responsibilities
- Attendance at the Vocational and Technical Education Centre encompassing:
 - importance of attendance
 - record management of attendance
 - attendance cards
 - advice to employer of absences
- Fire and Emergencies at the Vocational and Technical Education Centre encompassing:
 - designated fire and emergency exists

REQUIRED SKILLS AND KNOWLEDGE

- procedures in the event of a fire
- evacuation procedures
- assembly points importance of attendance
- Occupational Health and Safety at the Vocational and Technical Education Centre encompassing:
 - eye protection
 - foot protection
 - protective clothing
 - personal injuries
 - mobile phones and personal belonging
 - dress regulations
 - rotating machinery, designated fire and emergency exists
- Entry Requirements encompassing:
 - numeracy requirements
 - literacy requirements
 - vocational and technical education centre support mechanisms
 - testing and appropriate action by learner Eye protection
- Vocational and Technical Education Centre Tour encompassing:
 - vocational and technical education centre layout
 - building layout
 - tour of building and vocational and technical education centre

T2. Methods of monitoring and reporting competency development activities encompassing:

- RTOs responsibility to receive and monitor workplace activities of the apprentice/learner
- Industry requirements for monitoring workplace evidence
- Acceptable methods for monitoring and reporting workplace activities
- Apprentice's/Learner's responsibility to participate in the reporting of workplace activities
- RTOs requirements in periodically evaluating development of apprentices/learners from the workplace activities information gathered, and providing feedback and advice on areas requiring improvement
- Employers responsibilities to participate in monitoring, reporting and confirming workplace activities, and assisting in overcoming areas requiring development by the apprentice/learner
- Options for appeal or assistance from RTO or State Training Authority (STA)

T3. Enterprise work activities policies and procedures encompassing:

- Need for policies and procedures
- Scope for an industry/enterprise to establish work activity policies and procedures

REQUIRED SKILLS AND KNOWLEDGE

- policies and procedure related to safety, effective work outcomes, customer relations, conflict resolution and competency development.
- Following work activities procedures

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit. It must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

EVIDENCE GUIDE

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence shall also comprise:

- A representative body of work performance demonstrated

EVIDENCE GUIDE

within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:

- Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
- Apply sustainable energy principles and practices as specified in the performance criteria and range statement
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Participate in voice and data communications work and competency development activities as described in 8) including:
 - A Identifying and confirming the context, requirements and responsibilities of the competency development (training) plan to be met
 - B Identifying and confirming the critical industry, enterprise and regulatory policies, procedures and context applicable to all work activities
 - C Identifying and confirming the applicable training practices, requirements, administration, costs and support service policies and procedures provided by the RTO to all vocational and technical education activities
 - D Seeking clarification of how particular work is to be carried out and the procedures involved
 - E Dealing with unexpected situations in accordance with industry/enterprise policies and procedures,

EVIDENCE GUIDE

- and with the approval of an authorised person
- F Reporting periodically the competency development activities in accordance with requirements
 - G Periodically reviewing progress of the competency development activities in accordance with requirements
 - H Pursuing strategies to develop opportunities for gaining the range of workplace experiences and exposure
 - I Progressing successfully against periodic or staged evaluative performance events according to requirements
 - G Seeking assistance to overcome difficulties in developing competency
 - K Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment it must ensure that the conditions for assessment are authentic and as far as possible reproduce and replicate the workplace and is consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to participating in development and following a personal competency development plan.

EVIDENCE GUIDE

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

Competency in this unit shall be assessed concurrently with the all core and nominated elective units in a qualification.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated following the completion of a range of performance process activities that contribute to assisting in the evaluation of progress towards the development of competency. The unit applies to those engaged in employment-based programs covered by an approved contract of training under a relevant State/Territory training Act seeking to complete the qualification. Incorporated therein is the requirement for deploying an approved competency development (training) plan.

The Plan specifies the units which are to be attained to complete the qualification. This unit is a core requirement for the completion of the qualification. It encompasses the processes required to participate in the development of competence by an apprentice/learner in the industry and in particular the activities associated with performance in the workplace and in vocational and technical education. It includes but is not limited to recognising and participating in:

- The competency development plan:
 - Context of the plan
 - State/Territory regulatory requirements (Acts/Regulations)

- Competency development (training) contracts
- Competency development (nominal training) period
- Purpose of competency development (training) plans
- Process in developing competency development (training) plans
- Parties involved in the competency development (training) plan
- Responsibilities of Parties:
 - RTO responsibilities
 - Role of State Training Authority (STA)
 - Employer responsibilities
 - Employee/Learner responsibilities
- Context of responsible parties:
 - Industry customs, work practices
 - Industry bodies – employer and employee representatives
 - Regulatory bodies, including licensing/registration, OHS, IR, training authorities – apprentice/trainee regulation
 - Vocational and technical education system – AQF, credentials, AQTF
 - RTO training practices, requirements, administration, costs, and support services
- Workplace practice and exposure:
 - Timely reporting of workplace exposures and practice
 - Supervisor confirmation of workplace exposures and practices in a structured workplace report
- Workplace evidence reporting:
 - Unit of work
 - Elements and performance of work
 - Range of items exposed to and practised on
 - Level of supervision received
 - Period of exposure
- Workplace evidence validation:
 - Currency of evidence
 - Authenticity of evidence
 - Sufficiency of evidence
- Workplace evidence reporting review:
 - Contribution towards progressive development for the qualification
 - Competency standard unit progressive reporting
 - Regular review of progress report
 - Timing of periodic monitoring/evaluation
 - Procedures for monitoring and analysing progress
 - Procedures for responding to anomalies in competency development
 - Procedures for liaison with the workplace supervisor

- Periodic evaluation of competency development (training) progress:
 - Stages of progress that are to be met in developing competent performance
 - Evaluation of progress against requisite stages of development towards competent performance
 - Implementation of remedial measures
 - Periodic progress report formally confirmed to parties

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

accordance with industry/enterprise policies and procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and participating in development and following a personal competency development plan.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EC017B

Appliance servicing work competency

development activities

Evidence shall show an understanding of appliance servicing work competency development activities to an extent indicated by the following aspects:

T1. Responsibilities under a competency development plan:

- Competency Development (Training) Plans encompassing:
 - state/territories requirements (acts/regulations)
 - competency development (training) contracts
 - competency development (training) period
 - purpose of competency development (training) plans
 - process in developing competency development (training) plans
 - parties involved in the competency development (training) plan
- Qualification Structure encompassing:
 - scope of work
 - Training Packages - electrotechnology
 - competency standard units (CSUs)
 - structure of Qualification
 - off-Job Requirements
 - on-Job Requirements
- Responsibilities of Parties to the contract encompassing:
 - employer responsibilities
 - learner responsibilities
 - RTO responsibilities

REQUIRED SKILLS AND KNOWLEDGE

- State Training Authorities (STA)
- Electrotechnology Industry Career Opportunities encompassing:
 - industry Areas
 - qualification levels
 - career paths
- Industry customs and practices encompassing:
 - industry bodies – employer and employee representatives
 - regulatory bodies – including licensing/registration, OHS, IR, training authorities – apprentice/trainee regulation
 - vocational and technical education system – Australian Qualification Framework (AQF), credentials, Australian Qualification Training Framework (AQTF)
- Monitoring of Workplace Evidence encompassing:
 - workplace exposure and practices and relationship with competency standard units
 - methods of collecting workplace evidence
 - monitoring period cycle
 - requirements of workplace evidence
 - actions taken for unsatisfactory progression
 - role of state training authority (STA)
 - apprentice/learner responsibilities
 - employer responsibilities
- RTO Policies encompassing:
 - apprentice/Learner Responsibilities
 - teachers/trainers Responsibilities
 - absenteeism
 - off-Job component assessment specifications
 - on-Job component assessment specifications
 - qualification completion requirements and award
 - advanced standing and/or RPL
 - result review procedures
- Apprentice/Learner Discipline Policy encompassing:
 - apprentices/learners rights
 - apprentice/learner responsibilities
 - breaches of discipline
 - types of penalties Apprentice/Learner Responsibilities
- Attendance at the Vocational and Technical Education Centre encompassing:
 - importance of attendance
 - record management of attendance

REQUIRED SKILLS AND KNOWLEDGE

- attendance cards
- advice to employer of absences
- Fire and Emergencies at the Vocational and Technical Education Centre encompassing:
 - designated fire and emergency exists
 - procedures in the event of a fire
 - evacuation procedures
 - assembly points importance of attendance
- Occupational Health and Safety at the Vocational and Technical Education Centre encompassing:
 - eye protection
 - foot protection
 - protective clothing
 - personal injuries
 - mobile phones and personal belonging
 - dress regulations
 - rotating machinery, designated fire and emergency exists
- Entry Requirements encompassing:
 - numeracy requirements
 - literacy requirements
 - vocational and technical education centre support mechanisms
 - testing and appropriate action by learner Eye protection
- Vocational and Technical Education Centre Tour encompassing:
 - vocational and technical education centre layout
 - building layout
 - tour of building and vocational and technical education centre

T2. Methods of monitoring and reporting competency development activities encompassing:

- RTOs responsibility to receive and monitor workplace activities of the apprentice/learner
- Industry requirements for monitoring workplace evidence
- Acceptable methods for monitoring and reporting workplace activities
- Apprentice's/Learner's responsibility to participate in the reporting of workplace activities
- RTOs requirements in periodically evaluating development of apprentices/learners from the workplace activities information gathered, and providing feedback and advice on areas requiring improvement
- Employers responsibilities to participate in monitoring, reporting and confirming workplace activities, and assisting in overcoming areas requiring development by the apprentice/learner

REQUIRED SKILLS AND KNOWLEDGE

- Options for appeal or assistance from RTO or State Training Authority (STA)
- T3. Enterprise work activities policies and procedures encompassing:
- Need for policies and procedures
 - Scope for an industry/enterprise to establish work activity policies and procedures - policies and procedure related to safety, effective work outcomes, customer relations, conflict resolution and competency development.
 - Following work activities procedures

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit. It must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material

EVIDENCE GUIDE

carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:

EVIDENCE GUIDE

- Participate in appliance servicing work and competency development activities as described in 8) including:
 - A Identifying and confirming the context, requirements and responsibilities of the competency development (training) plan to be met
 - B Identifying and confirming the critical industry, enterprise and regulatory policies, procedures and context applicable to all work activities
 - C Identifying and confirming the applicable training practices, requirements, administration, costs and support service policies and procedures provided by the RTO to all vocational and technical education activities
 - D Seeking clarification of how particular work is to be carried out and the procedures involved
 - E Dealing with unexpected situations in accordance with industry/enterprise policies and procedures, and with the approval of an authorised person
 - F Reporting periodically the competency development activities in accordance with requirements
 - G Periodically reviewing progress of the competency development activities in accordance with requirements
 - H Pursuing strategies to develop opportunities for gaining the range of workplace experiences and exposure
 - I Progressing successfully against periodic or staged evaluative performance events according to requirements
 - G Seeking assistance to overcome difficulties in developing competency
 - K Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

EVIDENCE GUIDE

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment it must ensure that the conditions for assessment are authentic and as far as possible reproduce and replicate the workplace and is consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to participating in development and following a personal competency development plan.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

This unit shall be assessed concurrently with other units in a qualification.

UEENEEJ061B Verify compliance and functionality of appliances

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated following the completion of a range of performance process activities that contribute to assisting in the evaluation of progress towards the development of competency. The unit applies to those engaged in employment-based programs covered by an approved contract of training under a relevant State/Territory training Act seeking to complete the qualification. Incorporated therein is the requirement for deploying an approved competency development (training) plan.

The Plan specifies the units which are to be attained to complete the qualification. This unit is a core requirement for the completion of the qualification. It encompasses the processes required to participate in the development of competence by an apprentice/learner in the industry and in particular the activities associated with performance in the workplace and in vocational and technical education. It includes but is not limited to recognising and participating in:

- The competency development plan:
 - Context of the plan
 - State/Territory regulatory requirements (Acts/Regulations)
 - Competency development (training) contracts
 - Competency development (nominal training) period
 - Purpose of competency development (training) plans
 - Process in developing competency development (training) plans
 - Parties involved in the competency development (training) plan
- Responsibilities of Parties:
 - RTO responsibilities
 - Role of State Training Authority (STA)
 - Employer responsibilities
 - Employee/Learner responsibilities
- Context of responsible parties:
 - Industry customs, work practices
 - Industry bodies – employer and employee representatives
 - Regulatory bodies, including licensing/registration, OHS, IR, training authorities – apprentice/trainee regulation
 - Vocational and technical education system – AQF, credentials, AQTF
 - RTO training practices, requirements, administration, costs, and support services
- Workplace practice and exposure:
 - Timely reporting of workplace exposures and practice

- Supervisor confirmation of workplace exposures and practices in a structured workplace report
- Workplace evidence reporting:
 - Unit of work
 - Elements and performance of work
 - Range of items exposed to and practised on
 - Level of supervision received
 - Period of exposure
- Workplace evidence validation:
 - Currency of evidence
 - Authenticity of evidence
 - Sufficiency of evidence
- Workplace evidence reporting review:
 - Contribution towards progressive development for the qualification
 - Competency standard unit progressive reporting
 - Regular review of progress report
 - Timing of periodic monitoring/evaluation
 - Procedures for monitoring and analysing progress
 - Procedures for responding to anomalies in competency development
 - Procedures for liaison with the workplace supervisor
- Periodic evaluation of competency development (training) progress:
 - Stages of progress that are to be met in developing competent performance
 - Evaluation of progress against requisite stages of development towards competent performance
 - Implementation of remedial measures
 - Periodic progress report formally confirmed to parties

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

1.1) Descriptor

This unit covers the application of industry/enterprise policies in actively participating in work activities and in one's own competency development. It complies with established industry/enterprise procedures regarding how work is conducted, understanding responsibilities and obligations under competency development plan, following activities for developing competency, self-monitoring competency development and meeting trainee obligations for periodic reporting of competency development activities.

Application of the Unit

Application of the Unit 2)

This unit applies to a recognised development program that leads to the acquisition of a formal award at AQF level 3 or higher.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit may require a license to practice in the workplace subject to regulation for undertaking electrical work.

Practice in the workplace and during training is also

subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, and power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

Pre-Requisites

Prerequisite Unit(s) 4)

Competencies 4.1)

There are no prerequisite competencies for this unit.

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 4 Writing 4 Numeracy 4

Employability Skills Information

Employability Skills

5)

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a unit of competency

Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1 Comply with electrical machine repair industry/enterprise work policies and procedures	1.1	Industry/enterprise policies and procedures for all work activities are identified and obtained.
	1.2	Clarification on how particular work is to be carried out and the procedures involved is sought from the immediate supervisor/appropriate person.
	1.3	Unexpected situations are dealt with safely and in accordance with industry/enterprise policies and procedures, and with the approval of an authorised person.
2 Monitor and respond to a personal competency development plan.	2.1	All aspects of the competency development plan are confirmed in consultation with appropriate persons.
	2.2	All components of the competency development plan are followed diligently.
	2.3	Opportunities to practise skills and apply knowledge relative to a particular competency

ELEMENT

PERFORMANCE CRITERIA

are pursued.

2.4 Assistance is sought from appropriate persons to overcome difficulties in developing skills and applying knowledge relevant to a particular competency.

2.5 Progress in competency development is self-monitored against the competency development plan and industry/enterprise policies and procedures.

2.6 Modifications to the personal competency development plan are made in consultation with appropriate persons.

2.7 Obligations are met for periodic and timely reporting of competency development activities.

2.8 Periodic competency development activities report is validated by an appropriate person in accordance with industry/enterprise policies and procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and participating in development and following a personal competency development plan.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EC018B

Electrical machine repair work competency

development activities

Evidence shall show an understanding of electrical machine repair work competency development activities to an extent indicated by the following aspects:

T1. Responsibilities under a competency development plan:

- Competency Development (Training) Plans encompassing:

REQUIRED SKILLS AND KNOWLEDGE

- state/territories requirements (acts/regulations)
- competency development (training) contracts
- competency development (training) period
- purpose of competency development (training) plans
- process in developing competency development (training) plans
- parties involved in the competency development (training) plan
- Qualification Structure encompassing:
 - scope of work
 - Training Packages - electrotechnology
 - competency standard units (CSUs)
 - structure of Qualification
 - off-Job Requirements
 - on-Job Requirements
- Responsibilities of Parties to the contract encompassing:
 - employer responsibilities
 - learner responsibilities
 - RTO responsibilities
 - State Training Authorities (STA)
- Electrotechnology Industry Career Opportunities encompassing:
 - industry Areas
 - qualification levels
 - career paths
- Industry customs and practices encompassing:
 - industry bodies – employer and employee representatives
 - regulatory bodies – including licensing/registration, OHS, IR, training authorities – apprentice/trainee regulation
 - vocational and technical education system – Australian Qualification Framework (AQF), credentials, Australian Qualification Training Framework (AQTF)
- Monitoring of Workplace Evidence encompassing:
 - workplace exposure and practices and relationship with competency standard units
 - methods of collecting workplace evidence
 - monitoring period cycle
 - requirements of workplace evidence
 - actions taken for unsatisfactory progression
 - role of state training authority (STA)
 - apprentice/learner responsibilities
 - employer responsibilities

REQUIRED SKILLS AND KNOWLEDGE

- RTO Policies encompassing:
 - apprentice/Learner Responsibilities
 - teachers/Trainers Responsibilities
 - absenteeism
 - off-Job component assessment specifications
 - on-Job component assessment specifications
 - qualification completion requirements and award
 - advanced standing and/or RPL
 - result review procedures
- Apprentice/Learner Discipline Policy encompassing:
 - apprentices/Learners rights
 - apprentice/Learner responsibilities
 - breaches of discipline
 - types of penalties Apprentice/Learner Responsibilities
- Attendance at the Vocational and Technical Education Centre encompassing:
 - importance of attendance
 - record management of attendance
 - attendance cards
 - advice to employer of absences
- Fire and Emergencies at the Vocational and Technical Education Centre encompassing:
 - designated fire and emergency exists
 - procedures in the event of a fire
 - evacuation procedures
 - assembly points importance of attendance
- Occupational Health and Safety at the Vocational and Technical Education Centre encompassing:
 - eye protection
 - foot protection
 - protective clothing
 - personal injuries
 - mobile phones and personal belonging
 - dress regulations
 - rotating machinery, designated fire and emergency exists
- Entry Requirements encompassing:
 - numeracy requirements
 - literacy requirements
 - vocational and technical education centre support mechanisms

REQUIRED SKILLS AND KNOWLEDGE

- testing and appropriate action by learner Eye protection
- Vocational and Technical Education Centre Tour encompassing:
 - vocational and technical education centre layout
 - building layout
 - tour of building and vocational and technical education centre

T2. Methods of monitoring and reporting competency development activities encompassing:

- RTOs responsibility to receive and monitor workplace activities of the apprentice/learner
- Industry requirements for monitoring workplace evidence
- Acceptable methods for monitoring and reporting workplace activities
- Apprentice's/Learner's responsibility to participate in the reporting of workplace activities
- RTOs requirements in periodically evaluating development of apprentices/learners from the workplace activities information gathered, and providing feedback and advice on areas requiring improvement
- Employers responsibilities to participate in monitoring, reporting and confirming workplace activities, and assisting in overcoming areas requiring development by the apprentice/learner
- Options for appeal or assistance from RTO or State Training Authority (STA)

T3. Enterprise work activities policies and procedures encompassing:

- Need for policies and procedures
- Scope for an industry/enterprise to establish work activity policies and procedures - policies and procedure related to safety, effective work outcomes, customer relations, conflict resolution and competency development.
- Following work activities procedures

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit. It must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of 9.1)

EVIDENCE GUIDE

Assessment

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline,

EVIDENCE GUIDE

work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:

- Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
- Apply sustainable energy principles and practices as specified in the performance criteria and range statement
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Participate in electrical machine repair work and competency development activities as described in 8) including:
 - A Identifying and confirming the context, requirements and responsibilities of the competency development (training) plan to be met
 - B Identifying and confirming the critical industry, enterprise and regulatory policies, procedures and context applicable to all work activities
 - C Identifying and confirming the applicable training practices, requirements, administration, costs and support service policies and procedures provided by the RTO to all vocational and technical education activities
 - D Seeking clarification of how particular work is to be carried out and the procedures involved
 - E Dealing with unexpected situations in accordance with industry/enterprise policies and procedures, and with the approval of an authorised person

EVIDENCE GUIDE

- F Reporting periodically the competency development activities in accordance with requirements
- G Periodically reviewing progress of the competency development activities in accordance with requirements
- H Pursuing strategies to develop opportunities for gaining the range of workplace experiences and exposure
- I Progressing successfully against periodic or staged evaluative performance events according to requirements
- G Seeking assistance to overcome difficulties in developing competency
- K Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment it must ensure that the conditions for assessment are authentic and as far as possible reproduce and replicate the workplace and is consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to participating in development and following a personal competency development plan.

EVIDENCE GUIDE

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

Competency in this unit shall be assessed concurrently with the all core and nominated elective units in a qualification.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated following the completion of a range of performance process activities that contribute to assisting in the evaluation of progress towards the development of competency. The unit applies to those engaged in employment-based programs covered by an approved contract of training under a relevant State/Territory training Act seeking to complete the qualification. Incorporated therein is the requirement for deploying an approved competency development (training) plan.

The Plan specifies the units which are to be attained to complete the qualification. This unit is a core requirement for the completion of the qualification. It encompasses the processes required to participate in the development of competence by an apprentice/learner in the industry and in particular the activities associated with performance in the workplace and in vocational and technical education. It includes but is not limited to recognising and participating in:

- The competency development plan:
 - Context of the plan
 - State/Territory regulatory requirements (Acts/Regulations)

- Competency development (training) contracts
- Competency development (nominal training) period
- Purpose of competency development (training) plans
- Process in developing competency development (training) plans
- Parties involved in the competency development (training) plan
- Responsibilities of Parties:
 - RTO responsibilities
 - Role of State Training Authority (STA)
 - Employer responsibilities
 - Employee/Learner responsibilities
- Context of responsible parties:
 - Industry customs, work practices
 - Industry bodies – employer and employee representatives
 - Regulatory bodies, including licensing/registration, OHS, IR, training authorities – apprentice/trainee regulation
 - Vocational and technical education system – AQF, credentials, AQTF
 - RTO training practices, requirements, administration, costs, and support services
- Workplace practice and exposure:
 - Timely reporting of workplace exposures and practice
 - Supervisor confirmation of workplace exposures and practices in a structured workplace report
- Workplace evidence reporting:
 - Unit of work
 - Elements and performance of work
 - Range of items exposed to and practised on
 - Level of supervision received
 - Period of exposure
- Workplace evidence validation:
 - Currency of evidence
 - Authenticity of evidence
 - Sufficiency of evidence
- Workplace evidence reporting review:
 - Contribution towards progressive development for the qualification
 - Competency standard unit progressive reporting
 - Regular review of progress report
 - Timing of periodic monitoring/evaluation
 - Procedures for monitoring and analysing progress
 - Procedures for responding to anomalies in competency development
 - Procedures for liaison with the workplace supervisor

- Periodic evaluation of competency development (training) progress:
 - Stages of progress that are to be met in developing competent performance
 - Evaluation of progress against requisite stages of development towards competent performance
 - Implementation of remedial measures
 - Periodic progress report formally confirmed to parties

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

Competency in this unit shall be assessed concurrently with the all core and nominated elective units in a qualification.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated following the completion of a range of performance process activities that contribute to assisting in the evaluation of progress towards the development of competency. The unit applies to those engaged in employment-based programs covered by an approved contract of training under a relevant State/Territory training Act seeking to complete the qualification. Incorporated therein is the requirement for deploying an approved competency development (training) plan.

The Plan specifies the units which are to be attained to complete the qualification. This unit is a core requirement for the completion of the qualification. It encompasses the processes required to participate in the development of competence by an apprentice/learner in the industry and in particular the activities associated with performance in the workplace and in vocational and technical education. It includes but is not limited to recognising and participating in:

- The competency development plan:
 - Context of the plan
 - State/Territory regulatory requirements (Acts/Regulations)

- Competency development (training) contracts
- Competency development (nominal training) period
- Purpose of competency development (training) plans
- Process in developing competency development (training) plans
- Parties involved in the competency development (training) plan
- Responsibilities of Parties:
 - RTO responsibilities
 - Role of State Training Authority (STA)
 - Employer responsibilities
 - Employee/Learner responsibilities
- Context of responsible parties:
 - Industry customs, work practices
 - Industry bodies – employer and employee representatives
 - Regulatory bodies, including licensing/registration, OHS, IR, training authorities – apprentice/trainee regulation
 - Vocational and technical education system – AQF, credentials, AQTF
 - RTO training practices, requirements, administration, costs, and support services
- Workplace practice and exposure:
 - Timely reporting of workplace exposures and practice
 - Supervisor confirmation of workplace exposures and practices in a structured workplace report
- Workplace evidence reporting:
 - Unit of work
 - Elements and performance of work
 - Range of items exposed to and practised on
 - Level of supervision received
 - Period of exposure
- Workplace evidence validation:
 - Currency of evidence
 - Authenticity of evidence
 - Sufficiency of evidence
 - Workplace evidence reporting review:
 - Contribution towards progressive development for the qualification
 - Competency standard unit progressive reporting
 - Regular review of progress report
 - Timing of periodic monitoring/evaluation
 - Procedures for monitoring and analysing progress
 - Procedures for responding to anomalies in competency development
 - Procedures for liaison with the workplace supervisor

- Periodic evaluation of competency development (training) progress:
- Stages of progress that are to be met in developing competent performance
- Evaluation of progress against requisite stages of development towards competent performance
- Implementation of remedial measures
- Periodic progress report formally confirmed to parties

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers the application of industry/enterprise policies in actively participating in work activities and in one's own competency development. It complies with established industry/enterprise procedures regarding how work is conducted, understanding responsibilities and obligations under competency development plan, following activities for developing competency, self-monitoring competency development and meeting trainee obligations for periodic reporting of competency development activities.

Application of the Unit

Application of the Unit 2)

This unit applies to a recognised development program that leads to the acquisition of a formal award at AQF level 3 or higher.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit require a licence to practise in the workplace subject to regulations for undertaking of electrical work. Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where

applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, and power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

Pre-Requisites

Prerequisite Unit(s) 4)

Competencies 4.1)

There are no prerequisite competencies for this unit.

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 4 Writing 4 Numeracy 4

Employability Skills Information

Employability Skills

5)

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a unit of competency

Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1	Comply with electrical industry/enterprise work policies and procedures	1.1	Industry/enterprise policies and procedures for all work activities are identified and obtained.
		1.2	Clarification on how particular work is to be carried out and the procedures involved is sought from the immediate supervisor/appropriate person.
		1.3	Unexpected situations are dealt with safely and in accordance with industry/enterprise policies and procedures, and with the approval of an authorised person.
2	Monitor and respond to a personal competency development plan.	2.1	All aspects of the competency development plan are confirmed in consultation with appropriate persons.
		2.2	All components of the competency development plan are followed diligently.
		2.3	Opportunities to practise skills and apply knowledge relative to a particular competency

ELEMENT

PERFORMANCE CRITERIA

- are pursued.
- 2.4 Assistance is sought from appropriate persons to overcome difficulties in developing skills and applying knowledge relevant to a particular competency.
- 2.5 Progress in competency development is self-monitored against the competency development plan and industry/enterprise policies and procedures.
- 2.6 Modifications to the personal competency development plan are made in consultation with appropriate persons.
- 2.7 Obligations are met for periodic and timely reporting of competency development activities.
- 2.8 Periodic competency development activities report is validated by an appropriate person in accordance with industry/enterprise policies and procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and participating in development and following a personal competency development plan.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EC020B activities

Electrical work competency development

Evidence shall show an understanding of electrical work competency development activities to an extent indicated by the following aspects:

T1. Responsibilities under a competency development plan:

- Competency Development (Training) Plans encompassing:

REQUIRED SKILLS AND KNOWLEDGE

- state/territories requirements (acts/regulations)
- competency development (training) contracts
- competency development (training) period
- purpose of competency development (training) plans
- process in developing competency development (training) plans
- parties involved in the competency development (training) plan
- Qualification Structure encompassing:
 - scope of work
 - Training Packages - electrotechnology
 - competency standard units (CSUs)
 - structure of Qualification
 - off-Job Requirements
 - on-Job Requirements
- Responsibilities of Parties to the contract encompassing:
 - employer responsibilities
 - learner responsibilities
 - RTO responsibilities
 - State Training Authorities (STA)
- Electrotechnology Industry Career Opportunities encompassing:
 - industry Areas
 - qualification levels
 - career paths
- Industry customs and practices encompassing:
 - industry bodies – employer and employee representatives
 - regulatory bodies – including licensing/registration, OHS, IR, training authorities – apprentice/trainee regulation
 - vocational and technical education system – Australian Qualification Framework (AQF), credentials, Australian Qualification Training Framework (AQTF)
- Monitoring of Workplace Evidence encompassing:
 - workplace exposure and practices and relationship with competency standard units
 - methods of collecting workplace evidence
 - monitoring period cycle
 - requirements of workplace evidence
 - actions taken for unsatisfactory progression
 - role of state training authority (STA)
 - apprentice/learner responsibilities
 - employer responsibilities

REQUIRED SKILLS AND KNOWLEDGE

- RTO Policies encompassing:
 - apprentice/Learner Responsibilities
 - teachers/trainers Responsibilities
 - absenteeism
 - off-Job component assessment specifications
 - on-Job component assessment specifications
 - qualification completion requirements and award
 - advanced standing and/or RPL
 - result review procedures
- Apprentice/Learner Discipline Policy encompassing:
 - apprentices/learners rights
 - apprentice/learner responsibilities
 - breaches of discipline
 - types of penalties Apprentice/Learner Responsibilities
- Attendance at the Vocational and Technical Education Centre encompassing:
 - importance of attendance
 - record management of attendance
 - attendance cards
 - advice to employer of absences
- Fire and Emergencies at the Vocational and Technical Education Centre encompassing:
 - designated fire and emergency exists
 - procedures in the event of a fire
 - evacuation procedures
 - assembly points importance of attendance
- Occupational Health and Safety at the Vocational and Technical Education Centre encompassing:
 - eye protection
 - foot protection
 - protective clothing
 - personal injuries
 - mobile phones and personal belonging
 - dress regulations
 - rotating machinery, designated fire and emergency exists
- Entry Requirements encompassing:
 - numeracy requirements
 - literacy requirements
 - vocational and technical education centre support mechanisms

REQUIRED SKILLS AND KNOWLEDGE

- testing and appropriate action by learner Eye protection
- Vocational and Technical Education Centre Tour encompassing:
 - vocational and technical education centre layout
 - building layout
 - tour of building and vocational and technical education centre

T2. Methods of monitoring and reporting competency development activities encompassing:

- RTOs responsibility to receive and monitor workplace activities of the apprentice/learner
- Industry requirements for monitoring workplace evidence
- Acceptable methods for monitoring and reporting workplace activities
- Apprentice's/Learner's responsibility to participate in the reporting of workplace activities
- RTOs requirements in periodically evaluating development of apprentices/learners from the workplace activities information gathered, and providing feedback and advice on areas requiring improvement
- Employers responsibilities to participate in monitoring, reporting and confirming workplace activities, and assisting in overcoming areas requiring development by the apprentice/learner
- Options for appeal or assistance from RTO or State Training Authority (STA)

T3. Enterprise work activities policies and procedures encompassing:

- Need for policies and procedures
- Scope for an industry/enterprise to establish work activity policies and procedures - policies and procedure related to safety, effective work outcomes, customer relations, conflict resolution and competency development.
- Following work activities procedures

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit. It must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of 9.1)

EVIDENCE GUIDE

Assessment

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline,

EVIDENCE GUIDE

work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:

- Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
- Apply sustainable energy principles and practices as specified in the performance criteria and range statement
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Participate in electrical work and competency development activities as described in 8) including:
 - A Identifying and confirming the context, requirements and responsibilities of the competency development (training) plan to be met
 - B Identifying and confirming the critical industry, enterprise and regulatory policies, procedures and context applicable to all work activities
 - C Identifying and confirming the applicable training practices, requirements, administration, costs and support service policies and procedures provided by the RTO to all vocational and technical education activities
 - D Seeking clarification of how particular work is to be carried out and the procedures involved
 - E Dealing with unexpected situations in accordance with industry/enterprise policies and procedures, and with the approval of an authorised person

EVIDENCE GUIDE

- F Reporting periodically the competency development activities in accordance with requirements
- G Periodically reviewing progress of the competency development activities in accordance with requirements
- H Pursuing strategies to develop opportunities for gaining the range of workplace experiences and exposure
- I Progressing successfully against periodic or staged evaluative performance events according to requirements
- G Seeking assistance to overcome difficulties in developing competency
- K Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment it must ensure that the conditions for assessment are authentic and as far as possible reproduce and replicate the workplace and is consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to participating in development and following a personal competency development plan.

EVIDENCE GUIDE

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

This unit shall be assessed concurrently with other units in a qualification.

UEENECC005B Verify compliance and functionality of general electrical installations

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated following the completion of a range of performance process activities that contribute to assisting in the evaluation of progress towards the development of competency. The unit applies to those engaged in employment-based programs covered by an approved contract of training under a relevant State/Territory training Act seeking to complete the qualification. Incorporated therein is the requirement for deploying an approved competency development (training) plan.

The Plan specifies the units which are to be attained to complete the qualification. This unit is a core requirement for the completion of the qualification. It encompasses the processes required to participate in the development of competence by an apprentice/learner in the industry and in particular the activities associated with performance in the workplace and in vocational and technical education. It includes but is not limited to recognising and participating in:

- The competency development plan:

- Context of the plan
- State/Territory regulatory requirements (Acts/Regulations)
- Competency development (training) contracts
- Competency development (nominal training) period
- Purpose of competency development (training) plans
- Process in developing competency development (training) plans
- Parties involved in the competency development (training) plan
- Responsibilities of Parties:
 - RTO responsibilities
 - Role of State Training Authority (STA)
 - Employer responsibilities
 - Employee/Learner responsibilities
- Context of responsible parties:
 - Industry customs, work practices
 - Industry bodies – employer and employee representatives
 - Regulatory bodies, including licensing/registration, OHS, IR, training authorities – apprentice/trainee regulation
 - Vocational and technical education system – AQF, credentials, AQTF
 - RTO training practices, requirements, administration, costs, and support services
- Workplace practice and exposure:
 - Timely reporting of workplace exposures and practice
 - Supervisor confirmation of workplace exposures and practices in a structured workplace report
- Workplace evidence reporting:
 - Unit of work
 - Elements and performance of work
 - Range of items exposed to and practised on
 - Level of supervision received
 - Period of exposure
- Workplace evidence validation:
 - Currency of evidence
 - Authenticity of evidence
 - Sufficiency of evidence
- Workplace evidence reporting review:
 - Contribution towards progressive development for the qualification
 - Competency standard unit progressive reporting
 - Regular review of progress report
 - Timing of periodic monitoring/evaluation
 - Procedures for monitoring and analysing progress

- Procedures for responding to anomalies in competency development
- Procedures for liaison with the workplace supervisor
- Periodic evaluation of competency development (training) progress:
 - Stages of progress that are to be met in developing competent performance
 - Evaluation of progress against requisite stages of development towards competent performance
 - Implementation of remedial measures
 - Periodic progress report formally confirmed to parties

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers the application of industry/enterprise policies in actively participating in work activities and in one's own competency development. It complies with established industry/enterprise procedures regarding how work is conducted, understanding responsibilities and obligations under competency development plan, following activities for developing competency, self-monitoring competency development and meeting trainee obligations for periodic reporting of competency development activities.

Application of the Unit

Application of the Unit 2)

This unit applies to a recognised development program that leads to the acquisition of a formal award at AQF level 3 or higher.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit do not require a licence to practise in the workplace provided equipment is not connected to installation wiring at voltage above 50 V a.c. or 120 V d.c. However other conditions may apply in some States and Territories

subject to regulations related to electrical work.

Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, and power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

Pre-Requisites

Prerequisite Unit(s) 4)

Competencies 4.1)

There are no prerequisite competencies for this unit.

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 4 Writing 4 Numeracy 4

Employability Skills Information

Employability Skills

5)

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a unit of competency

Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1 Comply with electronics and communications industry/enterprise work policies and procedures	1.1	Industry/enterprise policies and procedures for all work activities are identified and obtained.
	1.2	Clarification on how particular work is to be carried out and the procedures involved is sought from the immediate supervisor/appropriate person.
	1.3	Unexpected situations are dealt with safely and in accordance with industry/enterprise policies and procedures, and with the approval of an authorised person.
2 Monitor and respond to a personal competency development plan.	2.1	All aspects of the competency development plan are confirmed in consultation with appropriate persons.
	2.2	All components of the competency development plan are followed diligently.
	2.3	Opportunities to practise skills and apply knowledge relative to a particular competency

ELEMENT

PERFORMANCE CRITERIA

- are pursued.
- 2.4 Assistance is sought from appropriate persons to overcome difficulties in developing skills and applying knowledge relevant to a particular competency.
 - 2.5 Progress in competency development is self-monitored against the competency development plan and industry/enterprise policies and procedures.
 - 2.6 Modifications to the personal competency development plan are made in consultation with appropriate persons.
 - 2.7 Obligations are met for periodic and timely reporting of competency development activities.
 - 2.8 Periodic competency development activities report is validated by an appropriate person in accordance with industry/enterprise policies and procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and participating in development and following a personal competency development plan.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EC021B Electronics and communications work competency development activities

Evidence shall show an understanding of electronics and communications work competency development activities to an extent indicated by the following aspects:

T1. Responsibilities under a competency development plan:

- Competency Development (Training) Plans encompassing:

REQUIRED SKILLS AND KNOWLEDGE

- state/territories requirements (acts/regulations)
- competency development (training) contracts
- competency development (training) period
- purpose of competency development (training) plans
- process in developing competency development (training) plans
- parties involved in the competency development (training) plan
- Qualification Structure encompassing:
 - scope of work
 - Training Packages - electrotechnology
 - competency standard units (CSUs)
 - structure of Qualification
 - off-Job Requirements

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit. It must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of 9.1)

EVIDENCE GUIDE

Assessment

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline,

EVIDENCE GUIDE

work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:

- Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
- Apply sustainable energy principles and practices as specified in the performance criteria and range statement
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Participate in electronics and communications work and competency development activities as described in 8) including:
 - A Identifying and confirming the context, requirements and responsibilities of the competency development (training) plan to be met
 - B Identifying and confirming the critical industry, enterprise and regulatory policies, procedures and context applicable to all work activities
 - C Identifying and confirming the applicable training practices, requirements, administration, costs and support service policies and procedures provided by the RTO to all vocational and technical education activities
 - D Seeking clarification of how particular work is to be carried out and the procedures involved
 - E Dealing with unexpected situations in accordance with industry/enterprise policies and procedures, and with the approval of an authorised person

EVIDENCE GUIDE

- F Reporting periodically the competency development activities in accordance with requirements
- G Periodically reviewing progress of the competency development activities in accordance with requirements
- H Pursuing strategies to develop opportunities for gaining the range of workplace experiences and exposure
- I Progressing successfully against periodic or staged evaluative performance events according to requirements
- G Seeking assistance to overcome difficulties in developing competency
- K Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment it must ensure that the conditions for assessment are authentic and as far as possible reproduce and replicate the workplace and is consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to participating in development and following a personal competency development plan.

EVIDENCE GUIDE

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

Competency in this unit shall be assessed concurrently with the all core and nominated elective units in a qualification.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated following the completion of a range of performance process activities that contribute to assisting in the evaluation of progress towards the development of competency. The unit applies to those engaged in employment-based programs covered by an approved contract of training under a relevant State/Territory training Act seeking to complete the qualification. Incorporated therein is the requirement for deploying an approved competency development (training) plan.

The Plan specifies the units which are to be attained to complete the qualification. This unit is a core requirement for the completion of the qualification. It encompasses the processes required to participate in the development of competence by an apprentice/learner in the industry and in particular the activities associated with performance in the workplace and in vocational and technical education. It includes but is not limited to recognising and participating in:

- The competency development plan:
 - Context of the plan
 - State/Territory regulatory requirements (Acts/Regulations)

- Competency development (training) contracts
- Competency development (nominal training) period
- Purpose of competency development (training) plans

There are no prerequisite competencies for this unit.

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 4 Writing 4 Numeracy 4

Employability Skills Information

Employability Skills

5)

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a unit of competency

Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1 Comply with fire protection control industry/enterprise work policies and procedures	1.1	Industry/enterprise policies and procedures for all work activities are identified and obtained.
	1.2	Clarification on how particular work is to be carried out and the procedures involved is sought from the immediate supervisor/appropriate person.
	1.3	Unexpected situations are dealt with safely and in accordance with industry/enterprise policies and procedures, and with the approval of an authorised person.
2 Monitor and respond to a personal competency development plan.	2.1	All aspects of the competency development plan are confirmed in consultation with appropriate persons.
	2.2	All components of the competency development plan are followed diligently.
	2.3	Opportunities to practise skills and apply knowledge relative to a particular competency

ELEMENT

PERFORMANCE CRITERIA

- are pursued.
- 2.4 Assistance is sought from appropriate persons to overcome difficulties in developing skills and applying knowledge relevant to a particular competency.
- 2.5 Progress in competency development is self-monitored against the competency development plan and industry/enterprise policies and procedures.
- 2.6 Modifications to the personal competency development plan are made in consultation with appropriate persons.
- 2.7 Obligations are met for periodic and timely reporting of competency development activities.
- 2.8 Periodic competency development activities report is validated by an appropriate person in accordance with industry/enterprise policies and procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and participating in development and following a personal competency development plan.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EC022B

Fire protection control work competency

development activities

Evidence shall show an understanding of fire protection control work competency development activities to an extent indicated by the following aspects:

T1. Responsibilities under a competency development plan:

- Competency Development (Training) Plans encompassing:

REQUIRED SKILLS AND KNOWLEDGE

- state/territories requirements (acts/regulations)
- competency development (training) contracts
- competency development (training) period
- purpose of competency development (training) plans
- process in developing competency development (training) plans
- parties involved in the competency development (training) plan
- Qualification Structure encompassing:
 - scope of work
 - Training Packages - electrotechnology
 - competency standard units (CSUs)
 - structure of Qualification
 - off-Job Requirements
 - on-Job Requirements
- Responsibilities of Parties to the contract encompassing:
 - employer responsibilities
 - learner responsibilities
 - RTO responsibilities
 - State Training Authorities (STA)
- Electrotechnology Industry Career Opportunities encompassing:
 - industry Areas
 - qualification levels
 - career paths
- Industry customs and practices encompassing:
 - industry bodies – employer and employee representatives
 - regulatory bodies – including licensing/registration, OHS, IR, training authorities – apprentice/trainee regulation
 - vocational and technical education system – Australian Qualification Framework (AQF), credentials, Australian Qualification Training Framework (AQTF)
- Monitoring of Workplace Evidence encompassing:
 - workplace exposure and practices and relationship with competency standard units
 - methods of collecting workplace evidence
 - monitoring period cycle
 - requirements of workplace evidence
 - actions taken for unsatisfactory progression
 - role of state training authority (STA)
 - apprentice/learner responsibilities
 - employer responsibilities

REQUIRED SKILLS AND KNOWLEDGE

- RTO Policies encompassing:
 - apprentice/Learner Responsibilities
 - teachers/Trainers Responsibilities
 - absenteeism
 - off-Job component assessment specifications
 - on-Job component assessment specifications
 - qualification completion requirements and award
 - advanced standing and/or RPL
 - result review procedures
- Apprentice/Learner Discipline Policy encompassing:
 - apprentices/Learners rights
 - apprentice/Learner responsibilities
 - breaches of discipline
 - types of penalties Apprentice/Learner Responsibilities
- Attendance at the Vocational and Technical Education Centre encompassing:
 - importance of attendance
 - record management of attendance
 - attendance cards
 - advice to employer of absences
- Fire and Emergencies at the Vocational and Technical Education Centre encompassing:
 - designated fire and emergency exists
 - procedures in the event of a fire
 - evacuation procedures
 - assembly points importance of attendance
- Occupational Health and Safety at the Vocational and Technical Education Centre encompassing:
 - eye protection
 - foot protection
 - protective clothing
 - personal injuries
 - mobile phones and personal belonging
 - dress regulations
 - rotating machinery, designated fire and emergency exists
- Entry Requirements encompassing:
 - numeracy requirements
 - literacy requirements
 - vocational and technical education centre support mechanisms

REQUIRED SKILLS AND KNOWLEDGE

- testing and appropriate action by learner Eye protection
- Vocational and Technical Education Centre Tour encompassing:
 - vocational and technical education centre layout
 - building layout
 - tour of building and vocational and technical education centre

T2. Methods of monitoring and reporting competency development activities encompassing:

- RTOs responsibility to receive and monitor workplace activities of the apprentice/learner
- Industry requirements for monitoring workplace evidence
- Acceptable methods for monitoring and reporting workplace activities
- Apprentice's/Learner's responsibility to participate in the reporting of workplace activities
- RTOs requirements in periodically evaluating development of apprentices/learners from the workplace activities information gathered, and providing feedback and advice on areas requiring improvement
- Employers responsibilities to participate in monitoring, reporting and confirming workplace activities, and assisting in overcoming areas requiring development by the apprentice/learner
- Options for appeal or assistance from RTO or State Training Authority (STA)

T3. Enterprise work activities policies and procedures encompassing:

- Need for policies and procedures
- Scope for an industry/enterprise to establish work activity policies and procedures - policies and procedure related to safety, effective work outcomes, customer relations, conflict resolution and competency development.
- Following work activities procedures

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit. It must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of 9.1)

EVIDENCE GUIDE

Assessment

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline,

EVIDENCE GUIDE

work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:

- Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
- Apply sustainable energy principles and practices as specified in the performance criteria and range statement
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Participate in fire protection control work and competency development activities as described in 8) including:
 - A Identifying and confirming the context, requirements and responsibilities of the competency development (training) plan to be met
 - B Identifying and confirming the critical industry, enterprise and regulatory policies, procedures and context applicable to all work activities
 - C Identifying and confirming the applicable training practices, requirements, administration, costs and support service policies and procedures provided by the RTO to all vocational and technical education activities
 - D Seeking clarification of how particular work is to be carried out and the procedures involved
 - E Dealing with unexpected situations in accordance with industry/enterprise policies and procedures, and with the approval of an authorised person

EVIDENCE GUIDE

- F Reporting periodically the competency development activities in accordance with requirements
- G Periodically reviewing progress of the competency development activities in accordance with requirements
- H Pursuing strategies to develop opportunities for gaining the range of workplace experiences and exposure
- I Progressing successfully against periodic or staged evaluative performance events according to requirements
- G Seeking assistance to overcome difficulties in developing competency
- K Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment it must ensure that the conditions for assessment are authentic and as far as possible reproduce and replicate the workplace and is consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to participating in development and following a personal competency development plan.

EVIDENCE GUIDE

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

Competency in this unit shall be assessed concurrently with the all core and nominated elective units in a qualification.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated following the completion of a range of performance process activities that contribute to assisting in the evaluation of progress towards the development of competency. The unit applies to those engaged in employment-based programs covered by an approved contract of training under a relevant State/Territory training Act seeking to complete the qualification. Incorporated therein is the requirement for deploying an approved competency development (training) plan.

The Plan specifies the units which are to be attained to complete the qualification. This unit is a core requirement for the completion of the qualification. It encompasses the processes required to participate in the development of competence by an apprentice/learner in the industry and in particular the activities associated with performance in the workplace and in vocational and technical education. It includes but is not limited to recognising and participating in:

- The competency development plan:
 - Context of the plan
 - State/Territory regulatory requirements (Acts/Regulations)

- Competency development (training) contracts
- Competency development (nominal training) period
- Purpose of competency development (training) plans
- Process in developing competency development (training) plans
- Parties involved in the competency development (training) plan
- Responsibilities of Parties:
 - RTO responsibilities
 - Role of State Training Authority (STA)
 - Employer responsibilities
 - Employee/Learner responsibilities
- Context of responsible parties:
 - Industry customs, work practices
 - Industry bodies – employer and employee representatives
 - Regulatory bodies, including licensing/registration, OHS, IR, training authorities – apprentice/trainee regulation
 - Vocational and technical education system – AQF, credentials, AQTF
 - RTO training practices, requirements, administration, costs, and support services
- Workplace practice and exposure:
 - Timely reporting of workplace exposures and practice
 - Supervisor confirmation of workplace exposures and practices in a structured workplace report
- Workplace evidence reporting:
 - Unit of work
 - Elements and performance of work
 - Range of items exposed to and practised on
 - Level of supervision received
 - Period of exposure
- Workplace evidence validation:
 - Currency of evidence
 - Authenticity of evidence
 - Sufficiency of evidence
- Workplace evidence reporting review:
 - Contribution towards progressive development for the qualification
 - Competency standard unit progressive reporting
 - Regular review of progress report
 - Timing of periodic monitoring/evaluation
 - Procedures for monitoring and analysing progress
 - Procedures for responding to anomalies in competency development
 - Procedures for liaison with the workplace supervisor

- Periodic evaluation of competency development (training) progress:
 - Stages of progress that are to be met in developing competent performance
 - Evaluation of progress against requisite stages of development towards competent performance
 - Implementation of remedial measures
 - Periodic progress report formally confirmed to parties

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers the application of industry/enterprise policies in actively participating in work activities and in one's own competency development. It complies with established industry/enterprise procedures regarding how work is conducted, understanding responsibilities and obligations under competency development plan, following activities for developing competency, self-monitoring competency development and meeting trainee obligations for periodic reporting of competency development activities.

Application of the Unit

Application of the Unit 2)

This unit applies to a recognised development program that leads to the acquisition of a formal award at AQF level 3 or higher.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit may require a license to practice in the workplace subject to regulation for undertaking electrical work.

Practice in the workplace and during training is also

subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, and power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

Pre-Requisites

Prerequisite Unit(s) 4)

Competencies 4.1)

There are no prerequisite competencies for this unit.

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 4 Writing 4 Numeracy 4

Employability Skills Information

Employability Skills

5)

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a unit of competency

Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1 Comply with gaming electronic industry/enterprise work policies and procedures	1.1	Industry/enterprise policies and procedures for all work activities are identified and obtained.
	1.2	Clarification on how particular work is to be carried out and the procedures involved is sought from the immediate supervisor/appropriate person.
	1.3	Unexpected situations are dealt with safely and in accordance with industry/enterprise policies and procedures, and with the approval of an authorised person.
2 Monitor and respond to a personal competency development plan.	2.1	All aspects of the competency development plan are confirmed in consultation with appropriate persons.
	2.2	All components of the competency development plan are followed diligently.
	2.3	Opportunities to practise skills and apply knowledge relative to a particular competency

ELEMENT

PERFORMANCE CRITERIA

are pursued.

2.4 Assistance is sought from appropriate persons to overcome difficulties in developing skills and applying knowledge relevant to a particular competency.

2.5 Progress in competency development is self-monitored against the competency development plan and industry/enterprise policies and procedures.

2.6 Modifications to the personal competency development plan are made in consultation with appropriate persons.

2.7 Obligations are met for periodic and timely reporting of competency development activities.

2.8 Periodic competency development activities report is validated by an appropriate person in accordance with industry/enterprise policies and procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and participating in development and following a personal competency development plan.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EC023B Gaming electronic work competency development activities

Evidence shall show an understanding of gaming electronic work competency development activities to an extent indicated by the following aspects:

T1. Responsibilities under a competency development plan:

- Competency Development (Training) Plans encompassing:
 - state/territories requirements (acts/regulations)

REQUIRED SKILLS AND KNOWLEDGE

- competency development (training) contracts
- competency development (training) period
- purpose of competency development (training) plans

| 1 | Comply with instrumentation and control industry/enterprise work policies and procedures | 1.1 | Industry/enterprise policies and procedures for all work activities are identified and obtained. |
| | | 1.2 | Clarification on how particular work is to be carried out and the procedures involved is sought from the immediate supervisor/appropriate person. |
| | | 1.3 | Unexpected situations are dealt with safely and in accordance with industry/enterprise policies and procedures, and with the approval of an authorised person. |
| 2 | Monitor and respond to a personal competency development plan. | 2.1 | All aspects of the competency development plan are confirmed in consultation with appropriate persons. |
| | | 2.2 | All components of the competency development plan are followed diligently. |
| | | 2.3 | Opportunities to practise skills and apply knowledge relative to a particular competency are pursued. |
| | | 2.4 | Assistance is sought from appropriate persons to overcome difficulties in developing skills and applying knowledge relevant to a particular competency. |
| | | 2.5 | Progress in competency development is self-monitored against the competency development plan and industry/enterprise policies and procedures. |
| | | 2.6 | Modifications to the personal competency development plan are made in consultation with |

ELEMENT

PERFORMANCE CRITERIA

appropriate persons.

- 2.7 Obligations are met for periodic and timely reporting of competency development activities.
- 2.8 Periodic competency development activities report is validated by an appropriate person in accordance with industry/enterprise policies and procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and participating in development and following a personal competency development plan.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EC024A Instrumentation and control work competency development activities

Evidence shall show an understanding of instrumentation and control work competency development activities to an extent indicated by the following aspects:

T1. Responsibilities under a competency development plan:

- Competency Development (Training) Plans encompassing:
 - state/territories requirements (acts/regulations)
 - competency development (training) contracts
 - competency development (training) period
 - purpose of competency development (training) plans
 - process in developing competency development (training) plans
 - parties involved in the competency development (training) plan
- Qualification Structure encompassing:
 - scope of work
 - Training Packages - electrotechnology
 - competency standard units (CSUs)
 - structure of Qualification
 - off-Job Requirements

REQUIRED SKILLS AND KNOWLEDGE

- on-Job Requirements
- Responsibilities of Parties to the contract encompassing:
 - employer responsibilities
 - learner responsibilities
 - RTO responsibilities
 - State Training Authorities (STA)
- Electrotechnology Industry Career Opportunities encompassing:
 - industry Areas
 - qualification levels
 - career paths
- Industry customs and practices encompassing:
 - industry bodies – employer and employee representatives
 - regulatory bodies – including licensing/registration, OHS, IR, training authorities – apprentice/trainee regulation
 - vocational and technical education system – Australian Qualification Framework (AQF), credentials, Australian Qualification Training Framework (AQTF)
- Monitoring of Workplace Evidence encompassing:
 - workplace exposure and practices and relationship with competency standard units
 - methods of collecting workplace evidence
 - monitoring period cycle
 - requirements of workplace evidence
 - actions taken for unsatisfactory progression
 - role of state training authority (STA)
 - apprentice/learner responsibilities
 - employer responsibilities
- RTO Policies encompassing:
 - apprentice/Learner Responsibilities
 - teachers/trainers Responsibilities
 - absenteeism
 - off-Job component assessment specifications
 - on-Job component assessment specifications
 - qualification completion requirements and award
 - advanced standing and/or RPL
 - result review procedures
- Apprentice/Learner Discipline Policy encompassing:
 - apprentices/learners rights
 - apprentice/learner responsibilities

REQUIRED SKILLS AND KNOWLEDGE

- breaches of discipline
- types of penalties Apprentice/Learner Responsibilities
- Attendance at the Vocational and Technical Education Centre encompassing:
 - importance of attendance
 - record management of attendance
 - attendance cards
 - advice to employer of absences
- Fire and Emergencies at the Vocational and Technical Education Centre encompassing:
 - designated fire and emergency exists
 - procedures in the event of a fire
 - evacuation procedures
 - assembly points importance of attendance
- Occupational Health and Safety at the Vocational and Technical Education Centre encompassing:
 - eye protection
 - foot protection
 - protective clothing
 - personal injuries
 - mobile phones and personal belonging
 - dress regulations
 - rotating machinery, designated fire and emergency exists
- Entry Requirements encompassing:
 - numeracy requirements
 - literacy requirements
 - vocational and technical education centre support mechanisms
 - testing and appropriate action by learner Eye protection
- Vocational and Technical Education Centre Tour encompassing:
 - vocational and technical education centre layout
 - building layout
 - tour of building and vocational and technical education centre

T2. Methods of monitoring and reporting competency development activities encompassing:

- RTOs responsibility to receive and monitor workplace activities of the apprentice/learner
- Industry requirements for monitoring workplace evidence
- Acceptable methods for monitoring and reporting workplace activities
- Apprentice's/Learner's responsibility to participate in the reporting of workplace activities

REQUIRED SKILLS AND KNOWLEDGE

- RTOs requirements in periodically evaluating development of apprentices/learners from the workplace activities information gathered, and providing feedback and advice on areas requiring improvement
 - Employers responsibilities to participate in monitoring, reporting and confirming workplace activities, and assisting in overcoming areas requiring development by the apprentice/learner
 - Options for appeal or assistance from RTO or State Training Authority (STA)
- T3. Enterprise work activities policies and procedures encompassing:
- Need for policies and procedures
 - Scope for an industry/enterprise to establish work activity policies and procedures - policies and procedure related to safety, effective work outcomes, customer relations, conflict resolution and competency development.
 - Following work activities procedures

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit. It must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment,

EVIDENCE GUIDE

the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment

EVIDENCE GUIDE

- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Participate in instrumentation and control work and competency development activities as detailed in 8) including:
 - A Identifying and confirming the context, requirements and responsibilities of the competency development (training) plan to be met
 - B Identifying and confirming the critical industry, enterprise and regulatory policies, procedures and context applicable to all work activities
 - C Identifying and confirming the applicable training practices, requirements, administration, costs and support service policies and procedures provided by the RTO to all vocational and technical education activities
 - D Seeking clarification of how particular work is to be carried out and the procedures involved
 - E Dealing with unexpected situations in accordance with industry/enterprise policies and procedures, and with the approval of an authorised person
 - F Reporting periodically the competency development activities in accordance with requirements
 - G Periodically reviewing progress of the competency development activities in accordance with requirements
 - H Pursuing strategies to develop opportunities for gaining the range of workplace experiences and exposure
 - I Progressing successfully against periodic or staged evaluative performance events according to requirements

EVIDENCE GUIDE

- G Seeking assistance to overcome difficulties in developing competency
- K Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment it must ensure that the conditions for assessment are authentic and as far as possible reproduce and replicate the workplace and is consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to participating in development and following a personal competency development plan.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and

9.5)

This unit shall be assessed concurrently with other units in a

EVIDENCE GUIDE

relationship with other units qualification.

UEENEEI012B Verify compliance and functionality of process control installations

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated following the completion of a range of performance process activities that contribute to assisting in the evaluation of progress towards the development of competency. The unit applies to those engaged in employment-based programs covered by an approved contract of training under a relevant State/Territory training Act seeking to complete the qualification. Incorporated therein is the requirement for deploying an approved competency development (training) plan.

The Plan specifies the units which are to be attained to complete the qualification. This unit is a core requirement for the completion of the qualification. It encompasses the processes required to participate in the development of competence by an apprentice/learner in the industry and in particular the activities associated with performance in the workplace and in vocational and technical education. It includes but is not limited to recognising and participating in:

- The competency development plan:
 - Context of the plan
 - State/Territory regulatory requirements (Acts/Regulations)
 - Competency development (training) contracts
 - Competency development (nominal training) period
 - Purpose of competency development (training) plans
 - Process in developing competency development (training) plans
 - Parties involved in the competency development (training) plan
- Responsibilities of Parties:
 - RTO responsibilities
 - Role of State Training Authority (STA)
 - Employer responsibilities
 - Employee/Learner responsibilities
- Context of responsible parties:

- Industry customs, work practices
- Industry bodies – employer and employee representatives
- Regulatory bodies, including licensing/registration, OHS, IR, training authorities – apprentice/trainee regulation
- Vocational and technical education system – AQF, credentials, AQTF
- RTO training practices, requirements, administration, costs, and support services
- Workplace practice and exposure:
 - Timely reporting of workplace exposures and practice
 - Supervisor confirmation of workplace exposures and practices in a structured workplace report
- Workplace evidence reporting:
 - Unit of work
 - Elements and performance of work
 - Range of items exposed to and practised on
 - Level of supervision received
 - Period of exposure
- Workplace evidence validation:
 - Currency of evidence
 - Authenticity of evidence
 - Sufficiency of evidence
- Workplace evidence reporting review:
 - Contribution towards progressive development for the qualification
 - Competency standard unit progressive reporting
 - Regular review of progress report
 - Timing of periodic monitoring/evaluation
 - Procedures for monitoring and analysing progress
 - Procedures for responding to anomalies in competency development
 - Procedures for liaison with the workplace supervisor
- Periodic evaluation of competency development (training) progress:
 - Stages of progress that are to be met in developing competent performance
 - Evaluation of progress against requisite stages of development towards competent performance
 - Implementation of remedial measures
 - Periodic progress report formally confirmed to parties

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers the application of industry/enterprise policies in actively participating in work activities and in one's own competency development. It complies with established industry/enterprise procedures regarding how work is conducted, understanding responsibilities and obligations under competency development plan, following activities for developing competency, self-monitoring competency development and meeting trainee obligations for periodic reporting of competency development activities.

Application of the Unit

Application of the Unit 2)

This unit applies to a recognised development program that leads to the acquisition of a formal award at AQF level 3 or higher.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit may require a license to practice in the workplace subject to regulation for undertaking electrical work.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, and power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

Pre-Requisites

Prerequisite Unit(s) 4)

Competencies 4.1)

There are no prerequisite competencies for this unit.

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 4 Writing 4 Numeracy 4

Employability Skills Information

Employability Skills 5)

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

- 6) Elements describe the essential outcomes of a unit of competency
- Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

- 2.8 Periodic competency development activities report is validated by an appropriate person in accordance with industry/enterprise policies and procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and participating in development and following a personal competency development plan.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EC025B Refrigeration and air conditioning work competency development activities

Evidence shall show an understanding of refrigeration and air conditioning work competency development activities to an extent indicated by the following aspects:

T1. Responsibilities under a competency development plan:

- Competency Development (Training) Plans encompassing:
 - state/territories requirements (acts/regulations)
 - competency development (training) contracts
 - competency development (training) period
 - purpose of competency development (training) plans
 - process in developing competency development (training) plans
 - parties involved in the competency development (training) plan
- Qualification Structure encompassing:
 - scope of work
 - Training Packages - electrotechnology
 - competency standard units (CSUs)
 - structure of Qualification
 - off-Job Requirements

REQUIRED SKILLS AND KNOWLEDGE

- on-Job Requirements
- Responsibilities of Parties to the contract encompassing:
 - employer responsibilities
 - learner responsibilities
 - RTO responsibilities
 - State Training Authorities (STA)
- Electrotechnology Industry Career Opportunities encompassing:
 - industry Areas
 - qualification levels
 - career paths
- Industry customs and practices encompassing:
 - industry bodies – employer and employee representatives
 - regulatory bodies – including licensing/registration, OHS, IR, training authorities – apprentice/trainee regulation
 - vocational and technical education system – Australian Qualification Framework (AQF), credentials, Australian Qualification Training Framework (AQTF)
- Monitoring of Workplace Evidence encompassing:
 - workplace exposure and practices and relationship with competency standard units
 - methods of collecting workplace evidence
 - monitoring period cycle
 - requirements of workplace evidence
 - actions taken for unsatisfactory progression
 - role of state training authority (STA)
 - apprentice/learner responsibilities
 - employer responsibilities
- RTO Policies encompassing:
 - apprentice/Learner Responsibilities
 - teachers/Trainers Responsibilities
 - absenteeism
 - off-Job component assessment specifications
 - on-Job component assessment specifications
 - qualification completion requirements and award
 - advanced standing and/or RPL
 - result review procedures
- Apprentice/Learner Discipline Policy encompassing:
 - apprentices/Learners rights
 - apprentice/Learner responsibilities

REQUIRED SKILLS AND KNOWLEDGE

- breaches of discipline
- types of penalties Apprentice/Learner Responsibilities
- Attendance at the Vocational and Technical Education Centre encompassing:
 - importance of attendance
 - record management of attendance
 - attendance cards
 - advice to employer of absences
- Fire and Emergencies at the Vocational and Technical Education Centre encompassing:
 - designated fire and emergency exists
 - procedures in the event of a fire
 - evacuation procedures
 - assembly points importance of attendance
- Occupational Health and Safety at the Vocational and Technical Education Centre encompassing:
 - eye protection
 - foot protection
 - protective clothing
 - personal injuries
 - mobile phones and personal belonging
 - dress regulations
 - rotating machinery, designated fire and emergency exists
- Entry Requirements encompassing:
 - numeracy requirements
 - literacy requirements
 - vocational and technical education centre support mechanisms
 - testing and appropriate action by learner Eye protection
- Vocational and Technical Education Centre Tour encompassing:
 - vocational and technical education centre layout
 - building layout
 - tour of building and vocational and technical education centre

T2. Methods of monitoring and reporting competency development activities encompassing:

- RTOs responsibility to receive and monitor workplace activities of the apprentice/learner
- Industry requirements for monitoring workplace evidence
- Acceptable methods for monitoring and reporting workplace activities
- Apprentice's/Learner's responsibility to participate in the reporting of workplace activities

REQUIRED SKILLS AND KNOWLEDGE

- RTOs requirements in periodically evaluating development of apprentices/learners from the workplace activities information gathered, and providing feedback and advice on areas requiring improvement
 - Employers responsibilities to participate in monitoring, reporting and confirming workplace activities, and assisting in overcoming areas requiring development by the apprentice/learner
 - Options for appeal or assistance from RTO or State Training Authority (STA)
- T3. Enterprise work activities policies and procedures encompassing:
- Need for policies and procedures
 - Scope for an industry/enterprise to establish work activity policies and procedures - policies and procedure related to safety, effective work outcomes, customer relations, conflict resolution and competency development.
 - Following work activities procedures

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit. It must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment,

EVIDENCE GUIDE

the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment

EVIDENCE GUIDE

- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Participate in refrigeration and air conditioning work and competency development activities as described in 8) including:
 - A Identifying and confirming the context, requirements and responsibilities of the competency development (training) plan to be met
 - B Identifying and confirming the critical industry, enterprise and regulatory policies, procedures and context applicable to all work activities
 - C Identifying and confirming the applicable training practices, requirements, administration, costs and support service policies and procedures provided by the RTO to all vocational and technical education activities
 - D Seeking clarification of how particular work is to be carried out and the procedures involved
 - E Dealing with unexpected situations in accordance with industry/enterprise policies and procedures, and with the approval of an authorised person
 - F Reporting periodically the competency development activities in accordance with requirements
 - G Periodically reviewing progress of the competency development activities in accordance with requirements

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers the application of industry/enterprise policies in actively participating in work activities and in one's own competency development. It complies with established industry/enterprise procedures regarding how work is conducted, understanding responsibilities and obligations under competency development plan, following activities for developing competency, self-monitoring competency development and meeting trainee obligations for periodic reporting of competency development activities.

Application of the Unit

Application of the Unit 2)

This unit applies to a recognised development program that leads to the acquisition of a formal award at AQF level 3 or higher.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit may require a license to practice in the workplace subject to regulation for undertaking electrical work.

Practice of this unit in the workplace is subject to State

and Territory Security Industry regulations. Where the security system has a call-back-to-base facility practice in the workplace is also subject to ACMA regulations to undertake cabling work.

Note:

Units 'UEENEEF016A and UEENEEF002B provide the required skill and knowledge for registration in accordance with ACMA regulations for undertaking cabling work.

Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, and power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a unit of competency

Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1 Comply with security equipment industry/enterprise work policies and procedures	1.1	Industry/enterprise policies and procedures for all work activities are obtained
	1.2	Clarification on how particular work is to be carried out and the procedures involved is sought from the immediate supervisor/appropriate person
	1.3	Unexpected situations are dealt with safely and in accordance with industry/enterprise policies and procedures, and with the approval of an authorised person.
2 Monitor and respond to a personal competency	2.1	All aspects of the competency development plan are confirmed in consultation with appropriate persons.

ELEMENT	PERFORMANCE CRITERIA
development plan.	2.2 All components of the competency development plan are followed diligently
	2.3 Opportunities to practise skills and apply knowledge relative to a particular competency are pursued
	2.4 Assistance is sought from appropriate persons to overcome difficulties in developing skills and applying knowledge relevant to a particular competency.
	2.5 Progress in competency development is self-monitored against the competency development plan and industry/enterprise policies and procedures.
	2.6 Modifications to the personal competency development plan are made in consultation with appropriate persons.
	2.7 Obligations are met for periodic and timely reporting of competency development activities.
	2.8 Periodic competency development activities report is validated by an appropriate person in accordance with industry/enterprise policies and procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and participating in development and following a personal competency development plan.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

**KS01-EC026A
development activities**

Security equipment work competency

REQUIRED SKILLS AND KNOWLEDGE

Evidence shall show an understanding of security equipment work competency development activities to an extent indicated by the following aspects:

T1. Responsibilities under a competency development plan:

- Competency Development (Training) Plans encompassing:
 - state/territories requirements (acts/regulations)
 - competency development (training) contracts
 - competency development (training) period
 - purpose of competency development (training) plans
 - process in developing competency development (training) plans
 - parties involved in the competency development (training) plan
- Qualification Structure encompassing:
 - scope of work
 - Training Packages - electrotechnology
 - competency standard units (CSUs)
 - structure of Qualification
 - off-Job Requirements
 - on-Job Requirements
- Responsibilities of Parties to the contract encompassing:
 - employer responsibilities
 - learner responsibilities
 - RTO responsibilities
 - State Training Authorities (STA)
- Electrotechnology Industry Career Opportunities encompassing:
 - industry Areas
 - qualification levels
 - career paths
- Industry customs and practices encompassing:
 - industry bodies – employer and employee representatives
 - regulatory bodies – including licensing/registration, OHS, IR, training authorities – apprentice/trainee regulation
 - vocational and technical education system – Australian Qualification Framework (AQF), credentials, Australian Qualification Training Framework (AQTF)
- Monitoring of Workplace Evidence encompassing:
 - workplace exposure and practices and relationship with competency standard units
 - methods of collecting workplace evidence
 - monitoring period cycle

REQUIRED SKILLS AND KNOWLEDGE

- requirements of workplace evidence
- actions taken for unsatisfactory progression
- role of state training authority (STA)
- apprentice/learner responsibilities
- employer responsibilities
- RTO Policies encompassing:
 - apprentice/Learner Responsibilities
 - teachers/trainers Responsibilities
 - absenteeism
 - off-Job component assessment specifications
 - on-Job component assessment specifications
 - qualification completion requirements and award
 - advanced standing and/or RPL
 - result review procedures
- Apprentice/Learner Discipline Policy encompassing:
 - apprentices/learners rights
 - apprentice/learner responsibilities
 - breaches of discipline
 - types of penalties Apprentice/Learner Responsibilities
- Attendance at the Vocational and Technical Education Centre encompassing:
 - importance of attendance
 - record management of attendance
 - attendance cards
 - advice to employer of absences
- Fire and Emergencies at the Vocational and Technical Education Centre encompassing:
 - designated fire and emergency exits
 - procedures in the event of a fire
 - evacuation procedures
 - assembly points importance of attendance
- Occupational Health and Safety at the Vocational and Technical Education Centre encompassing:
 - eye protection
 - foot protection
 - protective clothing
 - personal injuries
 - mobile phones and personal belonging
 - dress regulations

REQUIRED SKILLS AND KNOWLEDGE

- rotating machinery, designated fire and emergency exists
- Entry Requirements encompassing:
 - numeracy requirements
 - literacy requirements
 - vocational and technical education centre support mechanisms
 - testing and appropriate action by learner Eye protection
- Vocational and Technical Education Centre Tour encompassing:
 - vocational and technical education centre layout
 - building layout
 - tour of building and vocational and technical education centre

T2. Methods of monitoring and reporting competency development activities encompassing:

- RTOs responsibility to receive and monitor workplace activities of the apprentice/learner
- Industry requirements for monitoring workplace evidence
- Acceptable methods for monitoring and reporting workplace activities
- Apprentice's/Learner's responsibility to participate in the reporting of workplace activities
- RTOs requirements in periodically evaluating development of apprentices/learners from the workplace activities information gathered, and providing feedback and advice on areas requiring improvement
- Employers responsibilities to participate in monitoring, reporting and confirming workplace activities, and assisting in overcoming areas requiring development by the apprentice/learner
- Options for appeal or assistance from RTO or State Training Authority (STA)

T3. Enterprise work activities policies and procedures encompassing:

- Need for policies and procedures
- Scope for an industry/enterprise to establish work activity policies and procedures
 - policies and procedure related to safety, effective work outcomes, customer relations, conflict resolution and competency development.
- Following work activities procedures

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit. It must be read in conjunction with the performance criteria and the range statement of the unit and the

EVIDENCE GUIDE

Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered

EVIDENCE GUIDE

holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Participate in security equipment work and competency development activities as described in 8) including:
 - A Identifying and confirming the context, requirements and responsibilities of the competency development (training) plan to be met
 - B Identifying and confirming the critical industry, enterprise and regulatory policies, procedures and context applicable to all work activities
 - C Identifying and confirming the applicable training practices, requirements, administration, costs and support service policies and procedures provided by the RTO to all vocational and technical education activities

EVIDENCE GUIDE

- D Seeking clarification of how particular work is to be carried out and the procedures involved
- E Dealing with unexpected situations in accordance with industry/enterprise policies and procedures, and with the approval of an authorised person
- F Reporting periodically the competency development activities in accordance with requirements
- G Periodically reviewing progress of the competency development activities in accordance with requirements
- H Pursuing strategies to develop opportunities for gaining the range of workplace experiences and exposure
- I Progressing successfully against periodic or staged evaluative performance events according to requirements
- G Seeking assistance to overcome difficulties in developing competency
- K Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment it must ensure that the conditions for assessment are authentic and as far as possible reproduce and replicate the workplace and is consistent with the approved industry

EVIDENCE GUIDE

simulation policy.

The resources used for assessment should reflect current industry practices in relation to participating in development and following a personal competency development plan.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

Competency in this unit shall be assessed concurrently with the all core and nominated elective units in a qualification.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated following the completion of a range of performance process activities that contribute to assisting in the evaluation of progress towards the development of competency. The unit applies to those engaged in employment-based programs covered by an approved contract of training under a relevant State/Territory training Act seeking to complete the qualification. Incorporated therein is the requirement for deploying an approved competency development (training) plan.

The Plan specifies the units which are to be attained to complete the qualification. This unit is a core requirement for the completion of the qualification. It encompasses the processes required to participate in the development of competence by an apprentice/learner in the industry and in particular the activities associated with performance in the workplace and in vocational and technical education. It includes

but is not limited to recognising and participating in:

- The competency development plan:
 - Context of the plan
 - State/Territory regulatory requirements (Acts/Regulations)
 - Competency development (training) contracts
 - Competency development (nominal training) period
 - Purpose of competency development (training) plans
 - Process in developing competency development (training) plans
 - Parties involved in the competency development (training) plan
- Responsibilities of Parties:
 - RTO responsibilities
 - Role of State Training Authority (STA)
 - Employer responsibilities
 - Employee/Learner responsibilities
- Context of responsible parties:
 - Industry customs, work practices
 - Industry bodies – employer and employee representatives
 - Regulatory bodies, including licensing/registration, OHS, IR, training authorities – apprentice/trainee regulation
 - Vocational and technical education system – AQF, credentials, AQTF
 - RTO training practices, requirements, administration, costs, and support services
- Workplace practice and exposure:
 - Timely reporting of workplace exposures and practice
 - Supervisor confirmation of workplace exposures and practices in a structured workplace report
- Workplace evidence reporting:
 - Unit of work
 - Elements and performance of work
 - Range of items exposed to and practised on
 - Level of supervision received
 - Period of exposure
- Workplace evidence validation:
 - Currency of evidence
 - Authenticity of evidence
 - Sufficiency of evidence
- Workplace evidence reporting review:
 - Contribution towards progressive development for the qualification
 - Competency standard unit progressive reporting
 - Regular review of progress report

- Timing of periodic monitoring/evaluation
- Procedures for monitoring and analysing progress
- Procedures for responding to anomalies in competency development
- Procedures for liaison with the workplace supervisor
- Periodic evaluation of competency development (training) progress:
- Stages of progress that are to be met in developing competent performance
- Evaluation of progress against requisite stages of development towards competent performance
- Implementation of remedial measures
- Periodic progress report formally confirmed to parties

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers the application of industry/enterprise policies in actively participating in work activities and in one's own competency development. It complies with established industry/enterprise procedures regarding how work is conducted, understanding responsibilities and obligations under competency development plan, following activities for developing competency, self-monitoring competency development and meeting trainee obligations for periodic reporting of competency development activities.

Application of the Unit

Application of the Unit 2)

This unit applies to a recognised development program that leads to the acquisition of a formal award at AQF level 3 or higher.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit may require a license to practice in the workplace subject to regulation for undertaking electrical work.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, and power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

Pre-Requisites

Prerequisite Unit(s) 4)

Competencies 4.1)

There are no prerequisite competencies for this unit.

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 4 Writing 4 Numeracy 4

Employability Skills Information

Employability Skills 5)

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

- 6) Elements describe the essential outcomes of a unit of competency
- Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | | | |
|---|---|-----|--|
| 1 | Comply with rail communications and networks industry/enterprise work policies and procedures | 1.1 | Industry/enterprise policies and procedures for all work activities are identified and obtained. |

PERFORMANCE CRITERIA

appropriate persons.

- 2.7 Obligations are met for periodic and timely reporting of competency development activities.
- 2.8 Periodic competency development activities report is validated by an appropriate person in accordance with industry/enterprise policies and procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and participating in development and following a personal competency development plan.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EC027A Rail communications and networks work competency development activities

Evidence shall show an understanding of rail communications and networks work competency development activities to an extent indicated by the following aspects:

T1. Responsibilities under a competency development plan:

- Competency Development (Training) Plans encompassing:
 - state/territories requirements (acts/regulations)
 - competency development (training) contracts
 - competency development (training) period
 - purpose of competency development (training) plans
 - process in developing competency development (training) plans
 - parties involved in the competency development (training) plan
- Qualification Structure encompassing:
 - scope of work
 - Training Packages - electrotechnology
 - competency standard units (CSUs)
 - structure of Qualification
 - off-Job Requirements

REQUIRED SKILLS AND KNOWLEDGE

- on-Job Requirements
- Responsibilities of Parties to the contract encompassing:
 - employer responsibilities
 - learner responsibilities
 - RTO responsibilities
 - State Training Authorities (STA)
- Electrotechnology Industry Career Opportunities encompassing:
 - industry Areas
 - qualification levels
 - career paths
- Industry customs and practices encompassing:
 - industry bodies – employer and employee representatives
 - regulatory bodies – including licensing/registration, OHS, IR, training authorities – apprentice/trainee regulation
 - vocational and technical education system – Australian Qualification Framework (AQF), credentials, Australian Qualification Training Framework (AQTF)
- Monitoring of Workplace Evidence encompassing:
 - workplace exposure and practices and relationship with competency standard units
 - methods of collecting workplace evidence
 - monitoring period cycle
 - requirements of workplace evidence
 - actions taken for unsatisfactory progression
 - role of state training authority (STA)
 - apprentice/learner responsibilities
 - employer responsibilities
- RTO Policies encompassing:
 - apprentice/Learner Responsibilities
 - teachers/trainers Responsibilities
 - absenteeism
 - off-Job component assessment specifications
 - on-Job component assessment specifications
 - qualification completion requirements and award
 - advanced standing and/or RPL
 - result review procedures
- Apprentice/Learner Discipline Policy encompassing:
 - apprentices/learners rights
 - apprentice/learner responsibilities

REQUIRED SKILLS AND KNOWLEDGE

- breaches of discipline
- types of penalties Apprentice/Learner Responsibilities
- Attendance at the Vocational and Technical Education Centre encompassing:
 - importance of attendance
 - record management of attendance
 - attendance cards
 - advice to employer of absences
- Fire and Emergencies at the Vocational and Technical Education Centre encompassing:
 - designated fire and emergency exists
 - procedures in the event of a fire
 - evacuation procedures
 - assembly points importance of attendance
- Occupational Health and Safety at the Vocational and Technical Education Centre encompassing:
 - eye protection
 - foot protection
 - protective clothing
 - personal injuries
 - mobile phones and personal belonging
 - dress regulations
 - rotating machinery, designated fire and emergency exists
- Entry Requirements encompassing:
 - numeracy requirements
 - literacy requirements
 - vocational and technical education centre support mechanisms
 - testing and appropriate action by learner Eye protection
- Vocational and Technical Education Centre Tour encompassing:
 - vocational and technical education centre layout
 - building layout
 - tour of building and vocational and technical education centre

T2. Methods of monitoring and reporting competency development activities encompassing:

- RTOs responsibility to receive and monitor workplace activities of the apprentice/learner
- Industry requirements for monitoring workplace evidence
- Acceptable methods for monitoring and reporting workplace activities
- Apprentice's/Learner's responsibility to participate in the reporting of workplace activities

REQUIRED SKILLS AND KNOWLEDGE

- RTOs requirements in periodically evaluating development of apprentices/learners from the workplace activities information gathered, and providing feedback and advice on areas requiring improvement
 - Employers responsibilities to participate in monitoring, reporting and confirming workplace activities, and assisting in overcoming areas requiring development by the apprentice/learner
 - Options for appeal or assistance from RTO or State Training Authority (STA)
- T3. Enterprise work activities policies and procedures encompassing:
- Need for policies and procedures
 - Scope for an industry/enterprise to establish work activity policies and procedures - policies and procedure related to safety, effective work outcomes, customer relations, conflict resolution and competency development.
 - Following work activities procedures

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit. It must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment,

EVIDENCE GUIDE

the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment

EVIDENCE GUIDE

- Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Participate in rail communications and networks work and competency development activities as described in 8) including:
 - A Identifying and confirming the context, requirements and responsibilities of the competency development (training) plan to be met
 - B Identifying and confirming the critical industry, enterprise and regulatory policies, procedures and context applicable to all work activities
 - C Identifying and confirming the applicable training practices, requirements, administration, costs and support service policies and procedures provided by the RTO to all vocational and technical education activities
 - D Seeking clarification of how particular work is to be carried out and the procedures involved
 - E Dealing with unexpected situations in accordance with industry/enterprise policies and procedures, and with the approval of an authorised person
 - F Reporting periodically the competency development activities in accordance with requirements
 - G Periodically reviewing progress of the competency development activities in accordance with requirements
 - H Pursuing strategies to develop opportunities for gaining the range of workplace experiences and exposure
 - I Progressing successfully against periodic or staged evaluative performance events according to requirements

EVIDENCE GUIDE

- G Seeking assistance to overcome difficulties in developing competency
- K Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment it must ensure that the conditions for assessment are authentic and as far as possible reproduce and replicate the workplace and is consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to participating in development and following a personal competency development plan.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with

9.5)

Competency in this unit shall be assessed concurrently with the

other units all core and nominated elective units in a qualification.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated following the completion of a range of performance process activities that contribute to assisting in the evaluation of progress towards the development of competency. The unit applies to those engaged in employment-based programs covered by an approved contract of training under a relevant State/Territory training Act seeking to complete the qualification. Incorporated therein is the requirement for deploying an approved competency development (training) plan.

The Plan specifies the units which are to be attained to complete the qualification. This unit is a core requirement for the completion of the qualification. It encompasses the processes required to participate in the development of competence by an apprentice/learner in the industry and in particular the activities associated with performance in the workplace and in vocational and technical education. It includes but is not limited to recognising and participating in:

- The competency development plan:
 - Context of the plan
 - State/Territory regulatory requirements (Acts/Regulations)
 - Competency development (training) contracts
 - Competency development (nominal training) period
 - Purpose of competency development (training) plans
 - Process in developing competency development (training) plans
 - Parties involved in the competency development (training) plan
- Responsibilities of Parties:
 - RTO responsibilities
 - Role of State Training Authority (STA)
 - Employer responsibilities
 - Employee/Learner responsibilities
- Context of responsible parties:
 - Industry customs, work practices
 - Industry bodies – employer and employee representatives
 - Regulatory bodies, including licensing/registration, OHS, IR, training

- authorities – apprentice/trainee regulation
- Vocational and technical education system – AQF, credentials, AQTF
- RTO training practices, requirements, administration, costs, and support services
- Workplace practice and exposure:
 - Timely reporting of workplace exposures and practice
 - Supervisor confirmation of workplace exposures and practices in a structured workplace report
- Workplace evidence reporting:
 - Unit of work
 - Elements and performance of work
 - Range of items exposed to and practised on
 - Level of supervision received
 - Period of exposure
- Workplace evidence validation:
 - Currency of evidence
 - Authenticity of evidence
 - Sufficiency of evidence
- Workplace evidence reporting review:
 - Contribution towards progressive development for the qualification
 - Competency standard unit progressive reporting
 - Regular review of progress report
 - Timing of periodic monitoring/evaluation
 - Procedures for monitoring and analysing progress
 - Procedures for responding to anomalies in competency development
 - Procedures for liaison with the workplace supervisor
- Periodic evaluation of competency development (training) progress:
 - Stages of progress that are to be met in developing competent performance
 - Evaluation of progress against requisite stages of development towards competent performance
 - Implementation of remedial measures
 - Periodic progress report formally confirmed to parties

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers the basic use of personal computers application relevant to a work function. It encompasses switching the computer on, applying user preferences, selecting basic applications, entering and retrieving information and printing files.

Note:

This unit applies to all aspects of Electrotechnology – engineering applications only. For general competencies related to Information Technologies refer to the latest endorsed IT Training Package.

Application of the Unit

Application of the Unit 2)

This unit is intended for competency development entry-level employment-based programs incorporated in approved contracts of training. It may be used to augment previously acquired competencies.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit do not require a license to practice in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and where

License to practice 3)
 applicable contracts of training such as apprenticeships.

Pre-Requisites

Prerequisite Unit(s) 4)

Competencies 4.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE1 01A Apply Occupational Health Safety regulations, codes and practices in the workplace.

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading 3 Writing 3 Numeracy 3

Employability Skills Information

Employability Skills 5)

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

- 6) Elements describe the essential outcomes of a competency standard unit. Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to use computer applications.	1.1 OHS procedures for a given work area are identified, obtained and understood through established routines and procedures.
	1.2 Established OHS risk control measures and procedures in relation to computer and keyboard use are followed.
	1.3 Information required for the use of the application is obtained from appropriate sources.
	1.4 Computer is started up and desktop icons are manipulated to access desired application, directories and files.
	1.5 On-screen instructions in relation to any anomaly such as a virus warning are followed.
	1.6 Help directory is used to resolve any straightforward start up or access issues or anomalies.
2 Use computer basic application.	2.1 Established OHS risk control measures and procedures for carrying out the work are followed.
	2.2 Information is added, altered or deleted as needed in accordance with application user instructions.
	2.3 Routine checks are made to ensure accuracy of information in accordance with quality requirements.
3 Output information	3.1 Completed files are stored appropriately in

ELEMENT	PERFORMANCE CRITERIA
from an application.	accordance with enterprise requirements.
	3.2 Files are printed for a formal record and/or to forward to others.
	3.3 Files are sent via email in a readable format.
4 Shut down computer.	4.1 Files are named, arranged, saved and backed up in accordance with enterprise requirements.
	4.2 Computer shutdown procedures are followed and computer switched off.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices using basic computer applications relevant to a workplace.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-ED101A

Basic Computer Applications

Evidence shall show an understanding of computer use basics to an extent indicated by the following aspects:

- T1 Starting up
- T2 Selecting application
- T3 Entering information
- T4 Saving
- T5 Printing

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit and must be read in

EVIDENCE GUIDE

conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects 9.2)

**of evidence
required to
demonstrate
competency in
this unit**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Use basic computer applications relevant to workplace as described in 8) and including:
 - A Correctly starting-up a computer.
 - B Dealing with anomalies appropriately.
 - C Following application instructions to input and output information.
 - D Storing information appropriately.

- E Outputting information to a printer.
- F Forwarding information via email and/or web mail in a readable format.
- G Producing, storing and forwarding engineering related reports and/or results using at least three computer applications according to requirements
- H Shutting down a computer correctly
- I Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency to produce, store and forward engineering related reports and/or results using a range of

computer applications.

**Method of
assessment** **9.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent
assessment and
relationship with
other units** **9.5)**

There are no concurrent assessment recommendations for this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall/may be demonstrated in relation to at least three of the following using computer applications to produce, store and forward engineering related reports and/or results at a basic level.

- Word processing
- Spread sheet
- Drawings
- Business management
- Apparatus set-up
- Note:

Apparatus set-up applications are invariably vendor specific and include icon-based integration and control applications.

RANGE STATEMENT

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not applicable.

Competency Field

Competency Field	11)
	Computer Systems

UEENEED102A Assemble, set-up and test computing devices

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers assembly, setting up and testing personal computers as directed in computer service manuals. It encompasses safe working practices, checking computer components, assembling components to form a basic personal computer, installing and testing basic operating system, drivers and application software, following written and oral instruction and applying customer relations procedures.

Note:

This unit applies to all aspects of Electrotechnology – engineering applications only. For general competencies related to Information Technologies refer to the latest endorsed IT Training Package.

Application of the Unit

Application of the Unit 2)

This unit is intended for competency development entry-level employment-based programs incorporated in approved contracts of training. It may be used to augment formally-acquired competencies.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit may require a license to practice in the workplace subject to

License to practice 3)

regulations for undertaking electrical work. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Pre-Requisites**Prerequisite Unit(s) 4)****Competencies 4.1)**

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE1 Apply Occupational Health Safety
01A regulations, codes and practices in the
workplace

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 3 Writing 3 Numeracy 3

Employability Skills Information**Employability Skills 5)**

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

- 6) Elements describe the essential outcomes of a competency standard unit
- Performance Criteria describe the required performance needed to demonstrate achievement of the element.
- Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Assemble computing devices.	1.1 OHS procedures for a given work area are identified, obtained and understood through established routines and procedures.
	1.2 Established OHS risk control measures and procedures in relation to computer and keyboard use are followed.
	1.3 Advice is sought from the work supervisor to ensure the work is co-ordinated effectively with others.
	1.4 Computer, components, operating system and application software are obtained in accordance with established routines and checked as meeting requirements.
	1.5 Computer components are assembled and connected in accordance with manufacturer's instructions.
	1.6 Routine quality checks are carried out in accordance with work instructions.
	1.7 Procedures are followed for referring non-routine events to immediate supervisor for directions.
2 Install operating system and application software.	2.1 Established OHS risk control measures and procedures for carrying out the work are followed.
	2.2 Minimum hardware requirements are established that are appropriate for the operating system that

ELEMENT	PERFORMANCE CRITERIA
	will be installed.
	2.3 Computer is started up and on-screen instructions for the installation of the operating system to default configuration are followed, including drivers and network interfaces.
	2.4 Application software is installed to default configuration following on-screen installation instruction.
	2.5 Ensure authentication and data security and integrity is implemented on a computing device which may include antivirus and logins.
	2.6 Computer shutdown procedures are followed and computer switched off.
	2.7 Routine quality checks are carried out in accordance with work instructions.
	2.8 Procedures for referring non-routine events to immediate supervisor for directions are followed.
3 Test computer operation.	3.1 Established OHS risk control measures and procedures for carrying out the work are followed.
	3.2 Computer is switched on and start-up procedures are followed and checked.
	3.3 Operating system and application programs are checked to be opening and operating correctly.
	3.4 Faults are identified as being the result of faulty hardware or software.
	3.5 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
	3.6 Faults are rectified in accordance with computer hardware, operating system and application instructions.
	3.7 Procedures for referring non-routine events to

ELEMENT	PERFORMANCE CRITERIA
	immediate supervisor for directions are followed.
	3.8 Computer shutdown procedures are followed and computer switched off.
	3.9 Work is carried out efficiently without waste of materials or damage to apparatus, circuits, the surrounding environment or services and using sustainable energy principles.
4 Complete work and report.	4.1 OHS risk control work completion measures and procedures are followed.
	4.2 Work area is cleaned and made safe in accordance with established procedures.
	4.3 Work supervisor is notified of the completion of the work in accordance with established procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices, assembling, setting-up and testing personal computers.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-ED102A

Computing device servicing

Evidence shall show an understanding of computing devices' hardware structure to an extent indicated by the following aspects:

T1 Sub-assemblies architecture and their function

Note: Examples include motherboards, memory modules, video modules, connecting buses, storage devices and other components.

T2 Assembling and dismantling techniques

T3 Hardware faults and troubleshooting techniques

Note: Confined to subsystem level eg. PCI –E Cards or similar,

REQUIRED SKILLS AND KNOWLEDGE

- T4 Basic network hardware and components
- T5 Connection of network media
- T6 Set up of standard network configuration
- T7 Sub-assemblies faults and troubleshooting techniques
- T8 Repair techniques
- T9 Operating systems in use.
- T10 Operating System installation and configuration
- T11 Basic authentication and file and directory security
- T12 Occupational health and safety fundamentals as they relate to computing device assembly/disassembly.

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by

various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects
of evidence
required to
demonstrate
competency in
this unit** 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Assemble, set up and test computing device as described in 8) and including:

- A Correctly connecting computing devices components and peripherals.
- B Installing a basic operating system for single user and network operation.
- C Installing application software to default configuration.
- D Testing computer network operation.
- E Identifying and rectifying interconnection faults.
- F Shutting down a computer correctly.

- G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.
- H Document procedures involved in performing tasks A to E.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to assembling, setting up and testing personal computers.

Method of assessment 9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent
assessment and
relationship with
other units** 9.5)

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers evaluating and modifying programs based on object-oriented code. It encompasses safe working practices, following written and oral instruction and procedures, applying knowledge of object-oriented code scripting and testing and documenting outcomes.

Note:

This unit applies to all aspects of Electrotechnology – engineering applications only. For general competencies related to Information Technologies refer to the latest endorsed IT Training Package.

Application of the Unit

Application of the Unit 2)

This unit applies to any recognised development program that leads to the acquisition of a formal award at AQF level 4 or higher.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit do not require a license to practice in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Pre-Requisites

Prerequisite Unit(s) 4)

Competencies 4.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEED1 01A Use basic computer applications relevant to a energy sector workplace

UEENEEE1 01A Apply Occupational Health Safety regulations, codes and practices in the workplace

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 5 Writing 5 Numeracy 5

Employability Skills Information

Employability Skills 5)

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

- 6) Elements describe the essential outcomes of a competency standard unit. Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | | | |
|---|--|-----|--|
| 1 | Prepare to evaluate and modify programs written in object oriented code. | 1.1 | OHS processes and procedures for a given work area are identified, obtained and understood. |
| | | 1.2 | Established OHS risk control measures and procedures are followed in preparation for the work. |
| | | 1.3 | The extent of program modification work is determined from job performance specifications and in consultation with relevant persons. |
| | | 1.4 | Activities are planned to meet scheduled timelines in consultation with others involved in the work. |
| | | 1.5 | Appropriate development kit and software are selected based on specified requirements and performance standard. |
| | | 1.6 | Strategies are implemented to ensure programming is carried out efficiently. |
| 2 | Evaluate and modify programs written in object oriented code. | 2.1 | OHS risk control measures and procedures for carrying out the work are followed. |
| | | 2.2 | Knowledge of computer function features are applied to object oriented programming. |
| | | 2.3 | Correct syntax is applied to evaluating and modifying. |
| | | 2.4 | Key features of the a object orientated programming language are applied to evaluation |

ELEMENT	PERFORMANCE CRITERIA
	and modification. (See Note)
	2.5 Approaches to issues/problems are analysed to provide most effective solutions.
	2.6 Quality of work is monitored against personal performance agreement and/or established organisational or professional standards.
3 Test and document modified programs written in object oriented code.	3.1 Procedures are developed to test modified programming. 3.2 Problems and bugs in code are rectified to ensure specification in the creation of the code is met. 3.3 Intermediate and final work reports are written in accordance with professional standards, and presented to appropriate person(s). Note. Key features include object; class; instance; member data/fields; member attributes/methods and local variables.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and evaluating and modifying programs written in object oriented code.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a Performance Criteria describe the required performance needed to demonstrate achievement of the element.

competency standard unit Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to use computer applications.	1.1 OHS procedures for a given work area are identified, obtained and understood through established routines and procedures.
	1.2 Established OHS risk control measures and procedures in relation to computer and keyboard use are followed.
	1.3 Application software and information required for use is obtained from appropriate sources.
	1.4 On-screen instructions in relation to any anomaly such as a virus warning are followed.
	1.5 Help menu is used to resolve any straightforward start up or access issues or anomalies.
2 Use engineering application software.	2.1 Established OHS risk control measures and procedures for carrying out the work are followed.
	2.2 Techniques that apply to a particular software package are used to produce appropriate files.
	2.3 Routine checks are made to ensure accuracy of information in accordance with quality requirements.
3 Output information from an application.	3.1 Completed files are stored appropriately in accordance with enterprise requirements.
	3.2 Files are printed for formal records and/or forwarded to others.
4 Shut down computer.	4.1 Files are named, arranged, saved and backed up in accordance with enterprise requirements.
	4.2 Computer shutdown procedures are followed and computer switched off.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices using engineering application software.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-ED104A Personal computers, engineering applications software basic

Evidence shall show an understanding of object orientated programming basics to an extent indicated by the following aspects:

T1 Computer Systems Overview encompassing:

- Safety
- Applications of computers in industry
- Types of computer systems
- Hardware components
- Software and firmware
- Memory
- Peripherals
- Removable storage devices
- PC hardware inventory
- Networking

T2 Operating System Overview encompassing:

- Software layer model
- Function and characteristics of an operating system
- File structure
- Formatting disks
- Boot process
- Configuration files

T3 Windows Operating System encompassing

- Windows screen
- Windows Explorer
- File management
- Managing software, updates, backups and virus protection.

T4 Word Processors encompassing

REQUIRED SKILLS AND KNOWLEDGE

- Word files
- Formatting
- Engineering symbols
- Tables and lists
- Drawings
- Spelling, grammar, and ‘search-and-replace’
- Printing

T5 Spreadsheets encompassing

- Parts of a spreadsheet
- Excel file management
- Inserting data into spreadsheets
- Formatting spreadsheets
- Charts
- Engineering problem solving
- Printing

T6 Databases encompassing:

- Features and purpose of database
- Searching existing database
- Creating a simple database
- Manipulating data in a database
- Advance sort functions
- Reports

T7 Transferring Data Between Windows Applications encompassing:

- Moving data between Word, Excel and Access

T8 Drawing and Computer Assisted Design (CAD) programs encompassing:

- Computer drawing using applications such as Visio.
- Incorporation of electrical/electronic symbols into computer drawings.

T9 E-mail and Internet Browsers encompassing:

- Browsers
- Search Engines
- Web-based e-mail (e.g. Hotmail)
- Application-based e-mail (e.g. Outlook).

Evidence Guide

EVIDENCE GUIDE

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Use engineering applications software as described in 8) and including:
 - A Following application instructions to input and output information.
 - B Storing information appropriately.
 - C Outputting information to a printer.
 - D Transferring information between systems.

- E Saving, storing and backing up files for effective retrieval by others.
- F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to using engineering application software.

Method of assessment 9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent
assessment and
relationship with
other units** 9.5)

There are no concurrent assessment recommendations for this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to using at least two of the following types of engineering applications at a basic level.

- Office Applications
- Computer Aided Design
- Engineering data analysis software
- Engineering modelling
- Project management
- Network simulator
- Protocol analyser

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers installation, set up, implementation and provision of on-going support of web services. It encompasses working safely, installing and administering server software and databases, server side scripting, configuring access and security and documenting work activities.

Note:

This unit applies to all aspects of Electrotechnology – engineering applications only. For general competencies related to Information Technologies refer to the latest endorsed IT Training Package.

Application of the Unit

Application of the Unit 2)

This unit applies to any recognised development program that leads to the acquisition of a formal award at AQF level 5 or higher.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit do not require a license to practice in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and where

License to practice

3)

applicable contracts of training such as apprenticeships.

Pre-Requisites

Prerequisite Unit(s)

4)

Competencies

4.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE1 01A Apply Occupational Health Safety regulations, codes and practices in the workplace

Literacy and numeracy skills

4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading 5 Writing 5 Numeracy 5

Employability Skills Information

Employability Skills

5)

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

- 6) Elements describe the essential outcomes of a competency standard unit. Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | | | |
|---|--|-----|---|
| 1 | Prepare to develop and implement web based server. | 1.1 | OHS processes and procedures for a given work area are identified, obtained and understood. |
| | | 1.2 | Established OHS risk control measures and procedures are followed in preparation for the work. |
| | | 1.3 | The extent of development work is determined from server performance specifications and in consultation with relevant persons. |
| | | 1.4 | Activities are planned to meet scheduled timelines in consultation with others involved in the work. |
| | | 1.5 | Appropriate development tools and software are selected based on specified requirements and performance standards. |
| | | 1.6 | Strategies are implemented to ensure development work is carried out efficiently. |
| 2 | Develop web services. | 2.1 | OHS risk control measures and procedures for carrying out the work are followed. |
| | | 2.2 | Server software is installed and configured to ensure effective functionality and security. (See Note 1) |
| | | 2.3 | Knowledge of syntax functions and features of mark-up languages scripts in current use are applied to developing client-side programming. (See Notes 2 and 3) |

ELEMENT**PERFORMANCE CRITERIA**

- | | |
|------|---|
| 2.4 | Pages are created and rendered with relative and absolute links, images and table formatting using cascaded styles sheets. |
| 2.5 | Forms are created with a variety of appropriate elements and element groupings to make forms easy to follow. |
| 2.6 | Knowledge of server scripting languages in current use is applied to scripting to developing client-side programming and validations. (See Note 4) |
| 2.7 | Scripts are written to provide web functionality and management of relation databases. (See Notes 5 and 6 |
| 2.8 | Scripts are written to provide web functionality and management of browser windows, security, web application deployment and administration consoles. |
| 2.9 | A number of individual solutions are integrated to meet the specifications of a web application project. |
| 2.10 | Approaches to issues/problems are analysed to provide most effective solutions. |
| 2.11 | Quality of work is monitored against personal performance agreement and/or established organisational or professional standards. |
| 3 | Test, evaluate, implement and document the developed web services. |
| 3.1 | Testing and procedures are developed to evaluate client-side programming and web applications and services. |
| 3.2 | Problems and bugs in client-side programming, and web services functionality are identified and rectified to ensure specification are met. |
| 3.3 | Intermediate and final work reports are written in accordance with professional standards and presented to appropriate person(s). |

ELEMENT**PERFORMANCE CRITERIA**

Notes.

1. Examples of web software are Apache, IIS.
2. Examples of mark-up languages are HTML, XML and XSL.
3. Example of scripts are JavaScript and VB script.
4. Examples of server scripting languages are JSP, ASP, PHP and Perl
5. Examples of relational databases are SQL variants and Access
6. Examples of database connectivity components are ODBC, JDBC and ADO

Required Skills and Knowledge**REQUIRED SKILLS AND KNOWLEDGE**

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and setting up and creating content for a web server.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-ED110A**Web application server and services**

Evidence shall show an understanding of the programming elements and web servers to an extent indicated by the following aspects:

T1 Algorithm Design encompassing:

- Problem Definition
- Steps in Problem-Solving
- Modular Design
- Top-Down Design
- Flow-Charts and Structured Programming
- Pseudo-Code
- Filtering allowable Data Input
- Using standard Input & Output methods
- Object-Oriented Design (brief intro.)
- Documentation Rationale
- Acceptable Documentation Method

REQUIRED SKILLS AND KNOWLEDGE

T2 Machine-Code, Assemblers and Compilers

T3 Brief History of Languages & Limitations

T4 Parameters of different programming languages encompassing:

- Constants and variables
- Data types and declarations
- Logical flow control
- Detecting breaches of structure
- Documentation instruction examples
- Procedures and function calls
- Parameter-passing
- Local and global variables
- Object-oriented methods
- Classes and objects, encapsulation and inheritance.
- Visual programming methods
- General-purpose program libraries

T5 Data structures encompassing:

- Records
- Arrays
- File Input/output

T6 Testing and validation encompassing:

- Sequencing the process
 - Inconsistencies detection
- Note, An examples is comparing code to documentation, commonly called 'Desk-Checking'.
- Test data selection
 - Modular testing & debug
 - Problems with using non-standard methods for data input and output.
 - Common bugs
 - Comparison of HTTP servers and platforms

Note.

Examples include IIS and Apache

T7 Comparison of Application servers and platforms

Note.

Examples include J2EE / tomcat, .NET

T8 HTTP Servers encompassing:

- Installation requirements and methods

REQUIRED SKILLS AND KNOWLEDGE

- Security configuration
 - Content publishing and security
- T9 WEB application technologies encompassing:
- Server installation and deployment
 - Security
- T10 Server scripting technologies encompassing:
- WEB application installation and deployment
 - Application server administration
- T11 Web services overview encompassing:
- WEB services XML, API, RPC
 - XML API processing
 - XML DOM
 - SOAP (simple object access protocol)
 - WEB Services Security

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside

the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement

- Apply sustainable energy principles and practices as specified in the performance criteria and range statement
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Set up and create content for a web server as described in 8) and including:

- A Interpreting server performance requirements.
- B Identifying the appropriate development tools and software.
- C Installing and configure web server software.
- D Creating and rendering effective web pages.
- E Providing web functionality and management of relation databases.
- F Providing web functionality and management of browser windows, security, web application deployment and administration consoles.
- G Developing testing procedures.
- H Identifying problem and bugs in client-side programming and web services functionality.
- I Rectifying problem and bugs.
- J Writing intermediate and final work reports to the required standard.
- K Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to setting up and creating content in a web server.

Method of assessment 9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units 9.5)

There are no concurrent assessment recommendations for this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to web and application servers and web services technology within a multi-tier client-server environment. This shall include:

- Development, implementation and testing HTML pages with at least four of the following features:
 - Relative and absolute links, images and table formatting
 - Cascaded styles sheets
 - Forms
 - New browser windows
 - Validation of form data
- Development, implementation and testing of server scripting for database access with at least four of the following features:
 - Form data input response
 - Form data processing
 - Database access
 - Output of database table contents
 - Insertion of table data to database
- Installation and administration of key features of Web and Web application servers

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This competency standard unit covers developing, implementing and testing object oriented programming solutions using object orientated programming language. It encompasses following development brief, using appropriate development software, writing code that features classes, inheritance, arrays, and advanced library components and documenting development activities.

Note:

This unit applies to all aspects of Electrotechnology - engineering applications only. For general competencies related Information Technologies refer to the latest endorsed IT Training Package.

Application of the Unit

Application of the Unit 2)

This competency standard unit is intended to apply to any recognised development program that leads to the acquisition of a formal award at AQF level 5 or higher.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit do not require a licence to practice in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and where

License to practice 3)

applicable contracts of training such as apprenticeships and the like.

Pre-Requisites**Prerequisite Unit(s) 4)****Competencies 4.1)**

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEED1 01A Use basic computer applications relevant to a energy sector workplace

UEENEEE1 01A Apply Occupational Health Safety regulations, codes and practices in the workplace

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 “Literacy and Numeracy”

Reading 5 Writing 5 Numeracy 5

Employability Skills Information**Employability Skills 5)**

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged

Employability Skills

5)

will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit
 Performance Criteria describe the required performance needed to demonstrate achievement of the element.
 Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria**ELEMENT****PERFORMANCE CRITERIA**

1 Prepare to develop object oriented code.	1.1 OHS processes and procedures for a given work area are obtained and understood.
	1.2 Established OHS risk control measures and procedures in preparation for the work are followed.
	1.3 The extent of code development work is determined from job performance specifications and in consultations with relevant persons.
	1.4 Activities are planned to meet scheduled timelines in consultation with others involved on the work.
	1.5 Appropriate development kit and software are selected based on specified requirements and performance standard.
	1.6 Strategies are implemented to ensure programming is carried out efficiently.
2 Develop code.	2.1 OHS risk control measures and procedures for carrying out the work are followed.
	2.2 Correct syntax is applied when developing code.
	2.3 Key features of the object orientated programming language are applied to develop

ELEMENT	PERFORMANCE CRITERIA
	and test solutions. Note: Key feature include object; class; instance; member data/fields; member attributes / methods and variables.
	2.4 Code is written that features data encapsulation, inheritance and libraries.
	2.5 Approaches to issues/problems are analysed to provide most effective solutions.
	2.6 Quality of work is monitored against personal performance agreement and/or established organizational or professional standards.
3 Test and document the development of object oriented code.	3.1 Testing procedures are developed to analyse code. 3.2 Problems and bugs in code are rectified to ensure specifications are met. 3.3 Intermediate and final documentation is written in accordance with professional standards and presented to appropriate person or persons.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and developing object oriented code.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-ED111A

Object orientated programming

Evidence shall show an understanding of object orientated programming to an extent indicated by the following aspects:

T1 OO programming language elements

REQUIRED SKILLS AND KNOWLEDGE

T2 OO programming language operators and control structures

T3 Creating new classes

T4 Using system libraries

Note: Examples may include:

System, Strings, String Buffer, Math and Wrapper classes.

T5 Inheritance encompassing:

- Inheritance and object orientated programming
- Support for inheritance
- Access modifiers and inheritance
- Overriding
- Use of this and super
- Inheritance and constructors
- Extending classes
- Interfaces
- Polymorphism and dynamic binding

T6 Defining and using arrays

T7 Creating Graphical User Interfaces (GUI) applications using library classes

T8 Using GUI components and event-driven programming

T9 Exception handling

T10 File I/O

T11 Collections and collection framework

T12 Multithreading

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit of competency and must be read in conjunction with the performance criteria and the range statement of the unit of competency and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this Competency Standard Unit and shall be used in conjunction with all components parts of this unit and, performed in accordance with the Assessment Guidelines of this Training Package.

Overview of 9.1)

Assessment

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with Industry and, Regulatory policy in this regard.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence need to be 'rich' in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practiced. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria

shall be demonstrated on at least two occasions in accordance with the “Assessment Guidelines – UEE11”. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range; and
 - Apply sustainable energy principles and practices as specified in the performance criteria and range; and
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements; and
 - Demonstrate an appropriate level of skills enabling employment; and
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures; and
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Develop object oriented code as described in 8) and including:

- | | |
|---|--|
| A | Using all key features of object oriented programming. |
| B | Developing testing procedures. |
| C | Identifying problems and bugs in code. |
| D | Rectifying and documenting problems and bugs in code. |
| E | Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items. |

Context of and specific resources for 9.3)

assessment

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this competency standard unit.

Resources required to assess this unit are listed above in context of assessment', which should also be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment it must ensure that the conditions for assessment are authentic and as far as possible reproduce and replicate the workplace and is consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to developing object oriented code.

Method of assessment

9.4)

This competency standard unit shall be assessed by methods given in Volume 1, Part 3 "Assessment Guidelines".

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this competency standard unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

There are no concurrent assessment recommendations for this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit of competency as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to developing object oriented code will consist of multiple user-classes with each of the following items occurring on at least two occasions:

- Inheritance
- Arrays
- GUI Components
- Exceptions
- File/I/O
- Event handling

Generic terms are used throughout this Vocational Standard shall be regarded as part of the Range of Variables in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

ELEMENT

PERFORMANCE CRITERIA

- damage.
- 3.5 Faults are identified using logical techniques drawing on knowledge of computer/peripheral hardware components and measured values of operating parameters.
 - 3.6 Faulty components are rechecked and their fault status confirmed.
 - 3.7 Operating system malfunctions are identified using logical techniques drawing on knowledge of operating system configuration requirements.
 - 3.8 Device driver malfunctions are identified using logical techniques drawing on knowledge of device driver software configuration requirements.
 - 3.9 Application software malfunctions are identified using logical techniques drawing on knowledge of software configuration requirements.
 - 3.10 Malfunctions are rectified using latest software versions, incremental updates and bug and security patches.
 - 3.11 Computer hardware/peripheral device, operating system, including device drivers, and application software are tested in preparation for return to service/customer.
 - 3.12 Redundant files are removed and disposed of or archived in accordance with established procedures.
 - 3.13 Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes.
 - 3.14 Maintenance is carried out efficiently without waste of materials and energy or damage to apparatus, the surrounding environment or other services.
- 4 Complete and report upgrading and maintenance
- 4.1 OHS work completion risk control measures and procedures are followed.

ELEMENT

activities.

PERFORMANCE CRITERIA

- 4.2 Work area is cleaned and made safe in accordance with established procedures.
- 4.3 Written justification is produced for hardware software upgrading and maintenance.
- 4.4 Upgrading and maintenance is documented and appropriate person(s) notified in accordance with established procedures.

Note:

1. Example of materials are motherboards, processors and memory modules.
2. Example include complete version update, incremental (download) updates and security and bug patches.
3. Examples include Internet access, word processing, spreadsheet, graphics, publishing and industrial applications.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and supporting computers hardware and software.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-ED112A

Computer peripherals and operating systems

Evidence shall show an understanding of computer peripherals and operating systems to an extent indicated by the following aspects:

- T1 Types and applications of computer peripherals
- T2 Operating principles of computer peripheral hardware
- T3 Management of peripheral devices
- T4 Operating system components and structure
- T5 Operating system installation, upgrades and migration

REQUIRED SKILLS AND KNOWLEDGE

- T6 Operating system imaging and deployment
- T7 Configuring hardware, device drivers, and applications
- T8 Configuring network connectivity
- T9 File structure and management
- T10 Configuring file and folder access
- T11 Authentication and authorisation
- T12 Remote access
- T13 Monitoring and maintaining an operating system using system tools
- T14 Configuring backup and recovery options
- T15 Operating system malfunctions and solutions
- T16 Troubleshooting techniques
- T17 Occupational health and safety fundamentals as they relate to computing device assembly/disassembly and computer operating systems.

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that,

in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects
of evidence
required to
demonstrate
competency in
this unit** 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
- Support computer hardware and software as described in 8) and including:
 - Upgrade a computer including:
 - A Obtaining appropriate upgrading subsystems
 - B Dismantling, fitting upgrading subsystems and reassembling correctly
 - C Testing upgrade
 - D Documenting upgrading activities
 - Install and upgrade computer software on at least two occasions including:
- E Identifying deployment or upgrade needs

- F Installing and configuring operating system and applications software
- G Testing upgraded software
- H Documenting upgrade activities
 - Maintain a computer and two external peripheral devices including:
- I Testing and identifying faulty components
- J Dismantling, fitting replacement components and reassembling correctly
- K Testing maintenance repair
- L Documenting maintenance activities
 - Maintain computer software on at least two occasions including:
- M Monitor and maintain the operating system and applications software
- N Configure backup and recovery options
- O Identifying operating system malfunctions
- P Identifying device driver malfunctions
- Q Identifying application malfunctions
- R Rectifying software malfunctions
- S Dealing with redundant files
- T Documenting maintenance activities
- U Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to support computers hardware and software.

Method of assessment 9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units 9.5)

There are no concurrent assessment recommendations for this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to maintaining and upgrading the operating system, including device drivers and at least three application software types for a personal computer and server.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

UEENEED113A Install and administer Unix based networked computers

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers the installation and administration of UNIX based and networked computers. It encompasses safe working practices, performing basic UNIX, Linux or Mac OSX operating system installation, administration functions of logging in and out, setting up GUI applications, manipulating text files, creating and searching files and directories, changing permissions, using text editors, identifying and modifying initialization files, streamlining command, execution using shell features, using basic network commands and documenting all administration activities.

Note:

This unit applies to all aspects of Electrotechnology – engineering applications only. For general competencies related to Information Technologies refer to the latest endorsed IT Training Package.

Application of the Unit

Application of the Unit 2)

This unit applies to any recognised development program that leads to the acquisition of a formal award at AQF level 4 or higher.

Licensing/Regulatory Information

License to practice 3)

License to practice 3)

The skills and knowledge described in this unit do not require a license to practice in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Pre-Requisites

Prerequisite Unit(s) 4)

Competencies 4.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE1 01A Apply Occupational Health Safety regulations, codes and practices in the workplace

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading 5 Writing 5 Numeracy 5

Employability Skills Information

Employability Skills 5)

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit
 Performance Criteria describe the required performance needed to demonstrate achievement of the element.
 Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | | | |
|---|---|-----|--|
| 1 | Prepare to install, upgrade and maintain network operations. | 1.1 | OHS procedures for a given work area are identified, obtained and understood. |
| | | 1.2 | Established OHS risk control measures and procedures are followed in preparation for the work. |
| | | 1.3 | The nature of the administration work is established from network specifications and in consultation with appropriate person(s). |
| | | 1.4 | Activities are planned to meet scheduled timelines in consultation with others involved in the work. |
| | | 1.5 | Unix system variants, versions and updates needed to maintain the computers and networks are identified and obtained in accordance with established procedures and checked against job requirements. |
| 2 | Install, upgrade and maintain Unix-based computers and network operations | 2.1 | OHS risk control measures and procedures for carrying out the work are followed. |
| | | 2.2 | Unix operating system is installed upgraded and configured on computers and servers in accordance with developer's instructions and network requirements. |

ELEMENT	PERFORMANCE CRITERIA
2.3	Devices and drivers, desktop environment, network protocols and services and system security are implemented in accordance with requirements.
2.4	Access to resources is configured within the limitations specified for each users.
2.5	Unix-based network malfunctions are identified and rectified using logical techniques and drawing knowledge of devices and drivers, storage, basic network protocols, connections and services and system security configuration processes.
2.6	Network performance and reliability is monitored and optimised in accordance with established procedures.
2.7	Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes.
2.8	Unix-based network administration is carried out efficiently without waste of materials and energy or damage to apparatus, the surrounding environment or other services.
3 Document network administration activities.	<p data-bbox="549 1312 1294 1458">3.1 Written justification is produced for network upgrading and maintenance and appropriate person(s) notified in accordance with established procedures.</p> <p data-bbox="549 1491 1225 1594">3.2 Network administration documentation are maintained in accordance with established procedures.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and

REQUIRED SKILLS AND KNOWLEDGE

installing, configuring and administering Unix based computers.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-ED113A Unix fundamentals and operating systems

Evidence shall show an understanding of computer operating systems Unix fundamentals, Mac OSX fundamentals to an extent indicated by the following aspects:

T1 Operating system components and structure

T2 System installation and configuration

Note.

System installation includes drivers and internet access and simple networking

T3 File structure and management

T4 System tools

Note:

Examples include control panels, wizards and the like

T5 Operating systems malfunctions and solutions

T6 Troubleshooting techniques.

T7 UNIX operating systems encompassing:

- Overview of basic function, components and concepts of computer systems and operating systems
- History of UNIX and flavours of UNIX
- UNIX administrators role

T8 Accessing UNIX and common desktop environment encompassing:

- User Accounts
- Desktop environment
- Customising using Style Manager
- Sub-panels

T9 Graphical User Interface (GUI) Applications encompassing:

- Using Mail Tool, Calendar Manager and other applications
- Using GUI help and other help systems
- Troubleshooting

T10 Accessing files and directories encompassing:

- File system structure and navigation
- Pathnames
- Listing directory contents
- Identifying and using meta-characters

REQUIRED SKILLS AND KNOWLEDGE

T11 Directory and file management encompassing:

- Using Command Line
- Using File Manager

T12 File and user information utilities encompassing:

- File systems
- File processing commands
- Users
- Scripting

T13 File security encompassing:

- Overview of security concepts and functions
- Permissions
- Changing permissions with Command Line and File Manager

T14 Printing encompassing:

- Command line printing
- Print manager, print status and queue
- Printing from File Manager

T15 Backup and restoring data encompassing:

- Overview of back up and restoring strategies
- Using tar utility to perform file storage
- Compression tools
- Using jar command
- GUI backup tools

T16 System processes and memory management encompassing:

- Processes and PIDs
- Terminating a process
- Memory management

T17 Korn and C Shells encompassing:

- Overview of shell
- Korn Shell features
- C Shell Features
- Shell Feature Comparison

T18 Customisation encompassing:

- Overview of customisation
- Initialisation files
- Shell customisation
- GUI customisation

REQUIRED SKILLS AND KNOWLEDGE

T19 Network Basics encompassing:

- Client – Server
- Network commands
- NIS+ and NFS+

T20 Mac OSX operating systems encompassing:

- System structure and component functions
- System Installation
- Setting user preferences
- T21 Security encompassing:
- Setting up multiple user accounts
- Role and function of Keychain

T22 Networking/internet set up procedures

T23 Onstalling applications software

T24 Installing and managing server software encompassing:

- Setting up servers for a variety of protocols
- Managing access

T25 Using ‘Terminal’

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships.

However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:

- Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
- Apply sustainable energy principles and practices as specified in the performance criteria and range statement
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Install and administer Unix based computers as described in 8) and including:
 - A Identify the Unix-based operating system variants, versions and updates required.
 - B Installing, upgrading and configuring computer operating system correctly.
 - C Configuring access to resources for each user.
 - D Identifying computer/network malfunctions.
 - E Rectifying computer/network malfunctions.
 - F Documenting computer/network administration activities.
 - G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a

workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to installing and administering Unix based computers.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers designing and managing enterprise computer networks. It encompasses safe working practices, the design and management of network and application services, core identity and access management components, directory services infrastructure components, designing physical and logical directory service topologies, designing a public key infrastructure (PKI), designing for business continuity and data availability, and documenting all design and management activities.

Note:

This unit applies to all aspects of Electrotechnology – engineering applications only. For general competencies related to Information Technologies refer to the latest endorsed IT Training Package.

Application of the Unit

Application of the Unit 2)

This unit applies to any recognised development program that leads to the acquisition of a formal award at AQF level 6.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit do not require a license to practice in the workplace. However,

License to practice 3)

practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Pre-Requisites**Prerequisite Unit(s) 4)****Competencies 4.1)**

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE1 01A Apply Occupational Health Safety regulations, codes and practices in the workplace

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 5 Writing 5 Numeracy5

Employability Skills Information**Employability Skills 5)**

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

- 6) Elements describe the essential outcomes of a competency standard unit. Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | | | |
|---|---|-----|--|
| 1 | Develop design for an enterprise network. | 1.1 | OHS processes and procedures for a given work area are identified, obtained and understood. |
| | | 1.2 | The extent of the network to be designed is determined from design brief and/or in consultation with appropriate persons. |
| | | 1.3 | Business requirements of the enterprise are analysed taking into account existing and projected business model, organisational and Information Technology management structures. |
| | | 1.4 | Consideration is given to factors that will have an impact on the design such as business priorities, growth, growth strategy, regulatory framework, risk, and cost. |
| | | 1.5 | Existing and planned technical and environment goals of the enterprise are evaluated and documented. (See Note 1) |
| | | 1.6 | Consideration is given to technical factors that will have an impact on the design. (See Note 2) |
| | | 1.7 | Client access and end-user needs and usage patterns and disaster recovery requirements are evaluated and documented. |
| | | 1.8 | Design specification is written using information obtained from the analysis and evaluations of enterprise business and technical requirements. |
| | | 1.9 | Network specification is presented and discussed with person(s) of higher authority. |

ELEMENT	PERFORMANCE CRITERIA
	1.10 Alterations to the network specification resulting from the presentation/discussion are negotiated with person(s) of higher authority within the constraints of organisation's policy.
2 Design an enterprise network.	2.1 Knowledge and complexities of alternative network infrastructures and currently available technologies are applied to network design. (See Note 3)
	2.2 Network design is developed to incorporate all required Wide Area Network (WAN) infrastructure, Internet connectivity and implementation and management strategies.
	2.3 Risk management strategies are sought and obtained for incorporating into the network design.
	2.4 Network design is reviewed against all inputs and adjusted to rectify any anomalies.
	2.5 Network design proposal is documented in accordance with organisation policies and procedures.
	2.6 Network design is presented and discussed with person(s) of higher authority.
	2.7 Alterations to the network design resulting from the presentation/discussion are negotiated with person(s) of higher authority within the constraints of organisation's policy.
	2.8 Final design is documented and approval obtained from appropriate person(s).
3 Implement and manage an enterprise network.	3.1 OHS risk control measures and procedures for carrying out the work are followed.
	3.2 Server and client computer hardware are installed and configured in compliance with design specifications and network industry standards. (See Note 4)
	3.3 User and Group objects are created and group

ELEMENT**PERFORMANCE CRITERIA**

- policy implemented. (Notes 5 and 6)
- 3.4 Directory services, data storage, shared resources Internet information services, remote access and network security are managed to ensure effective operation of the network. (Notes 7 to 11)
- 3.5 Approaches to issues/problems are analysed to provide most effective solutions.
- 3.6 Quality of work is monitored against personal performance agreement and/or established organisational or professional standards.
- 4 Diagnose network malfunctions.
- 4.1 OHS risk control measures and procedures for carrying out the work are followed.
- 4.2 Network operation is monitored and malfunctions are diagnosed to ascertain their cause using network diagnostic tools. (Note 12)
- 4.3 Network malfunctions are rectified using effective techniques and drawing knowledge of network topology and complexities of network interactivity.
- 4.4 Approaches to issues/problems are analysed to provide most effective solutions.
- 4.5 Quality of work is monitored against personal performance agreement and/or established organisational or professional standards.
- 5 Report network management activities.
- 5.1 Written justification is produced for enterprise network services solutions and forwarded to appropriate person/s in accordance with established procedures.
- 5.2 Network service development records are maintained in accordance with established procedures.

Notes.

1. Examples are company size, user and resource distribution, various site connectivity, bandwidth, service performance, availability and scalability, data and system

ELEMENT**PERFORMANCE CRITERIA**

access patterns, network roles and responsibilities and security considerations

2. Examples are currently available resources, services, network infrastructure, protocols and hosts, Transmission Control Protocol and Internet Protocol hardware, planned upgrades, support and network and systems management.

3. Examples of network infrastructure are topology, TCP/IP networking strategy, DHCP strategy, Design of name resolution services, Multi-protocol strategy and Distributed File Strategy

4. Hardware installation includes using qualified tools, driver signing options, digital signatures on driver files and systems support for legacy hardware devices.

5. Example of user and group objects are computer accounts, groups configuring accounts via a directory service, searching for objects, use of templates for creating user accounts and resetting accounts

6. Examples of group policy implementation are deploying software, updates and assigning and publishing applications.

7. Examples of directory services are publishing resources, performing searches and configuring printer objects

8. Examples of data storage are NTFS and FAT file systems such as New Technology File Systems (NTFS) and File Allocation Table (FAT), quotas, Encrypting File Systems, configuring volumes and basic and dynamic disks, file and folder permissions and compression and domain-based distributed file systems.

9. Examples of shared resources are folders, web sharing, folder permissions, printers and printer permissions.

10. Examples of Internet Information Services are virtual directories and servers, Internet and intranet browsing, authentication and Secure Sockets Layer (SSL), File Transfer Protocol (FTP) services and access permissions for intranet server

11. Examples of Network security are user account lockout settings, password management, Group Policy to run logon scripts and link objects, auditing and security log file.

12. Examples of network operations are routing TCP/IP, DHCP, Domain Name Service, name resolution, starting

ELEMENT**PERFORMANCE CRITERIA**

servers, client computers, User and group objects, directory service replication problems, End-User Group Policy and remote access.

Required Skills and Knowledge**REQUIRED SKILLS AND KNOWLEDGE**

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe work practices and designing and managing enterprise networks.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-ED114A**Design and manage enterprise computer networks**

Evidence shall show an understanding of enterprise computer network design and management processes to an extent indicated by the following aspects:

T1 Analyse business requirements:

- Existing and planned business model and organisational structure
- Factors impacting on design decisions

T2 Analyse technical requirements:

- Evaluation of the company's existing and planned technical and environmental goals
- Client access, end user work needs and usage patterns
- Disaster recovery options

T3 Plan for network and application services

- Name resolution
- IP addressing
- Network access policies
- Remote access strategies
- Support for legacy clients
- Application virtualisation
- Locally installed software
- Web based applications
- Terminal services licensing
- Remote desktop services infrastructure

REQUIRED SKILLS AND KNOWLEDGE

T4 Design and manage directory service identity and management components

- Directory service logical components
- Directory service functional levels
- Intra-organisational authorisation and authentication
- Schema modifications
- Directory service physical topologies
 - Placement of servers
 - Definition of physical site boundaries
 - Site replication parameters
 - Printer location policies
- Directory service administrative model
 - Delegation of administration
 - Group strategies
 - Compliance auditing
 - Group administration
 - Organisational structure
- Enterprise level policy strategy
- Directory service logical component migration strategies
- Directory service upgrade and restructuring
- Cross component authentication
- Backwards compatibility
- Implementation planning
- Environmental preparation
- Branch office deployment
 - Authentication strategies
 - Server security
- Implement a public key infrastructure (PKI)
- Plan for interoperability
 - Inter-organisational authorisation and authentication
 - Application authentication interoperability
 - Cross platform interoperability

T5 Design and manage business continuity and data availability

- Plan for business continuity
 - Service availability
 - Directory service recovery
- Software updates
- Compliance management
- Patch management strategies

REQUIRED SKILLS AND KNOWLEDGE

- Operating system virtualisation strategies
 - Server consolidation
 - Application compatibility
 - Virtualisation management
 - Placement of servers
- Data management and data access
 - Data security
 - Data accessibility
 - Redundancy
 - Data collaboration

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place,

access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or

licensing requirements.

- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
- Design and manage enterprise networks as described in 8) and including:

- A Analysing business requirements.
- B Analysing technical requirements.
- C Obtaining approval for network design specification.
- D Designing a practical network in compliance with specifications and industry standards.
- E Implementing network design.
- F Diagnosing and rectifying the cause of network malfunctions effectively.
- G Documenting justification for network solutions.
- H Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to design and management of enterprise computer networks.

Method of assessment 9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units 9.5)

There are no concurrent assessment recommendations for this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation design and management of any enterprise network consisting of multiple sites and users and is to provide users with email and Internet access, shared resources and security.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers the administration of network servers. It encompasses safe working practices, planning server installations and upgrades, planning for infrastructure services roles, establishing and maintaining user and group permissions, planning for remote administration, delegated administration, network security and shared resource management, monitoring and maintaining servers for performance evaluation and optimisation, terminal server infrastructure, application deployment, planning for business continuity and high availability, and documenting all administration activities.

Note:

This unit applies to all aspects of Electrotechnology – engineering applications only. For general competencies related to Information Technologies refer to the latest endorsed IT Training Package.

Application of the Unit

Application of the Unit 2)

This unit applies to any recognised development program that leads to the acquisition of a formal award at AQF level 5 or higher.

Licensing/Regulatory Information

License to practice 3)

License to practice 3)

The skills and knowledge described in this unit do not require a license to practice in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Pre-Requisites**Prerequisite Unit(s) 4)****Competencies 4.1)**

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEED1 24A Integrate multiple computer operating systems on a client server network

UEENEEE1 01A Apply Occupational Health Safety regulations, codes and practices in the workplace

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 5 Writing 5 Numeracy 5

Employability Skills Information**Employability Skills 5)**

The required outcomes described in this unit of competency contain applicable facets of Employability

Employability Skills

5)

Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit
 Performance Criteria describe the required performance needed to demonstrate achievement of the element.
 Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria**ELEMENT****PERFORMANCE CRITERIA**

1 Prepare to install, upgrade and maintain network operations.	1.1 OHS procedures for a given work area are identified, obtained and understood.
	1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
	1.3 The nature of the network is established from network specifications and in consultation with appropriate person(s).
	1.4 Activities are planned to meet scheduled timelines in consultation with others involved in the work.
	1.5 Network operating system versions and updates needed to maintain the network are obtained in accordance with established procedures and checked against job requirements. (See Note 1)
2 Install, upgrade and maintain network operations.	2.1 OHS risk control measures and procedures for carrying out the work are followed.
	2.2 Server operating systems in current use are installed and upgraded and configure in

ELEMENT**PERFORMANCE CRITERIA**

- accordance with developer's instructions and network requirements. (See Note 2)
- 2.3 Devices and drivers, desktop environment, network protocols and services and system security are implemented in accordance with requirements.
- 2.4 Access to resources is configured within the limitations specified for each users.
- 2.5 Network malfunctions are identified and rectified using logical techniques and drawing knowledge of devices and drivers, storage, network protocols, connections and services and system security configuration processes.
- 2.6 Network performance and reliability is monitored and optimised in accordance with established procedures.
- 2.7 Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes.
- 2.8 Network administration is carried out efficiently without waste of materials and energy or damage to apparatus, the surrounding environment or other services.
- 2.9 Written justification is produced for network maintenance and upgrading and appropriate person(s) notified in accordance with established procedures.
- 3 Document network administration activities.
- 3.1 Network administration documentation are maintained in accordance with established procedures.
- 3.2 OHS procedures for a given work area are identified, obtained and understood.

Notes:

1. Examples may include new deployment, complete version upgrade, incremental updates, and security and bug patches.
2. Examples of operating systems include Windows

ELEMENT**PERFORMANCE CRITERIA**

Server 2008, Mac OS X Server, Unix and Linux variants.

3. Examples of optimising network performance include implementing a patch management strategy, monitoring servers for performance evaluation and optimisation, removal of redundant components and maintaining storage capacity, and monitoring and maintaining security and policies.

Required Skills and Knowledge**REQUIRED SKILLS AND KNOWLEDGE**

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and administering user networks.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-ED115A**Administer computer networks**

Evidence shall show an understanding of administering computer networks to an extent indicated by the following aspects:

T1 Server deployment encompassing:

- Operating system edition selection
- Roll back planning
- Encryption implementation requirements
- Attended installations
- Hardware device driver installation and configuration
- Installation, configuration and troubleshooting of peripheral I/O devices
- Automated server deployment
- Address assignment
- Name resolution
- Infrastructure services server rolls:
 - Address assignment
 - Name resolution
 - Network access
 - Directory services
 - Application services
 - Certificate services

REQUIRED SKILLS AND KNOWLEDGE

- Application servers and services
 - Virtualisation server planning
 - Server availability
 - Server resilience
 - Server accessibility
- File and print server roles
 - Access permissions
 - Storage quotas
 - Replication
 - Indexing
 - File storage policies
 - Server availability
 - Printer availability

T2 Server management encompassing:

- Remote administration
- Remote desktop
- Server management technologies
- Delegation policies and procedures
- Delegation of administration of directory service objects
- Application management
- Planning and implementing policy strategies

T3 Monitoring and maintaining servers encompassing:

- Operating system patch level maintenance
- Server update services
- Application patch level maintenance
- Server and service monitoring, optimisation, event management, trending and baseline analysis
- Remote access
- Network access
- Server security
- Firewall rules and policies
- Authentication and authorisation, data security, and auditing

T4 Application and data provisioning encompassing:

- Virtualisation
- Terminal server infrastructure
- Resource allocation
- Application virtualisation alternatives
- Application deployment

REQUIRED SKILLS AND KNOWLEDGE

- Shared resources
- Off line data access

T5 Business continuity and high availability:

- Storage solutions
- Storage management
- Service redundancy
- Service availability
- Data recovery strategy
- Server recovery strategy
- Directory service recovery strategy
- Object level recovery

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the

most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects
of evidence
required to
demonstrate
competency in
this unit** 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a

percentile graded result for the purpose of regulatory or licensing requirements.

- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Administer user networks as described in 8) and including:

- A Establishing network requirements and operating system versions and updates, including infrastructure, applications, file and print server services roles.
- B Installing, upgrading and configuring server operating system correctly as per network requirements.
- C Define server management strategies, delegated administration, and policy strategies
- D Monitor and maintain servers including implementing a patch management strategy, monitoring for performance evaluation and optimisation and monitor and maintain security and policies
- E Identifying and rectifying network malfunctions.
- F Provision applications and data, including virtualisation, resource allocation, application deployment, shared resources and off-line data access
- G Plan storage solutions, high availability, and backup and recovery
- H Documenting network administration activities.
- I Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with

performance criteria and critical aspects of evidence shall be clearly identified.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to administering user networks.

Method of assessment 9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units 9.5)

There are no concurrent assessment recommendations for this unit.

| 3.2 | Network service development records are maintained in accordance with established procedures. |

Notes.

1. Examples of network infrastructure components may include DNS, DHCP, Remote Access, Network Protocols, IP Routing and WINS

2. Examples of management components may include Management Consoles, Server Manager, and Remote administration tools.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and developing network services.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-ED116A

Develop computer network services

Evidence shall show an understanding of network services to an extent indicated by the following aspects:

T1 IPv4 and IPv6 addressing

- Configure IP address options
- Subnetting and supernetting
- Interoperability between IPv4 and IPv6

T2 Domain Name Service (DNS) encompassing:

- Install and configure a DNS Server Service
- Configuring Zones, DNS records and replication
- Configuring DNS clients

T3 Dynamic Host Configuration Protocol (DHCP)

- Installation of a DHCP Server Service
- DHCP server options and scopes
- DHCP relay agents
- Exclusions and reservations
- DHCPv6

T4 Configure routing and firewalls

- Routing protocols
- Maintaining routing tables
- Demand dial routing
- Inbound and outbound and custom firewall rules
- IPSec policies

T5 Remote access

- Remote access policies
- Network Address Translation (NAT)
- VPN protocols
- Authentication policies and protocols

REQUIRED SKILLS AND KNOWLEDGE

T6 File and print services

- Configure a file server, including file system permissions and encryption methodologies
- Configure backup and restore
- Manage file server resources
- Configure and print services monitor

T7 Monitor and maintain network services

- Configure update services
- Configure performance monitoring
- Configure event logs
- Gather network data

Evidence Guide

EVIDENCE GUIDE

Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to install and configure internetworking systems.	1.1 OHS processes and procedures for a given work area are obtained and understood.
	1.2 Established OHS risk control measures and procedures in preparation for the work are followed.
	1.3 The extent of internetworking to be installed and configured is determined from internetworking performance specifications and in consultations with relevant persons.
	1.4 Media and software required for internetworking is selected in accordance with organisation's established procedures.
	1.5 Network cabling test reports are obtained and reviewed to determine whether it complies with the required regulatory and performance standard.
	1.6 Activities are planned to meet scheduled timelines in consultation with others involved on the work.
	1.7 Appropriate development tools and software are selected based on specified requirements and performance standard.
	1.8 Strategies are implemented to ensure network development is carried out efficiently.
2 Install and configure internetworking systems.	2.1 OHS risk control measures and procedures for carrying out the work are followed.
	2.2 Knowledge of internetworking arrangements, subnetting and routing protocols are applied to installing and configuring routers and TCP/IP

ELEMENT	PERFORMANCE CRITERIA
	addresses.
	2.3 Routing protocols are selected and configured as per requirements specified for the internetworking systems.
	2.4 Common routing, TCP/IP and access malfunctions are identified and rectified using known solutions drawing knowledge of basic internetworking arrangements and protocol.
	2.5 Approaches to issues/problems are analysed to provide most effective solutions.
	2.6 Quality of work is monitored against personal performance agreement and/or established organizational or professional standards.
3 Report install and configuring of internetworking systems.	<p>3.1 Written justification is made for internetworking installation and configuring activities and appropriate person/s notified in accordance with established procedures.</p> <p>3.2 Network services records are maintained in accordance with established procedures.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and installing and configuring networking systems.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-ED117A

Internet Networks

Evidence shall show an understanding of network basics to an extent indicated by the following aspects:

- T1 Calculate subnet addresses and masks
- T2 Layer 3 and 4 Protocols

REQUIRED SKILLS AND KNOWLEDGE

- T3 Static and dynamic routing
- T4 Basic Router Configuration
- T5 Router Security
- T6 Router Boot Sequence
- T7 Router operating system management
- T8 Password Recovery
- T9 Router components and interfaces
- T10 Troubleshooting at all layers
- T11 Interior and Exterior routing protocols
- T12 Distance vector routing protocols
- T13 Link state routing protocols
- T14 Routing tables
- T15 Metrics used by routing protocols to find routes
- T16 Advantages and disadvantages of distance vector and link state routing protocols
- T17 Route summarisation

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit of competency and must be read in conjunction with the performance criteria and the range statement of the unit of competency and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this Competency Standard Unit and shall be used in conjunction with all components parts of this unit and, performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for

apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with Industry and, Regulatory policy in this regard.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence need to be 'rich' in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practiced. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the "Assessment Guidelines – UEE11". Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:

- Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range; and
- Apply sustainable energy principles and practices as specified in the performance criteria and range; and
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements; and
- Demonstrate an appropriate level of skills enabling employment; and
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures; and
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Install and configure networking systems as described in 8) and including:
 - A Establishing the extent of internetworking installation.
 - B Selecting appropriate internetworking media and software.
 - C Determining whether network cabling is compliant.
 - D Installing and configuring basic routing and TCP/IP protocols.
 - E Calculate variable length subnet mask as per requirements specified for the internetworking systems.
 - F Identifying common routing, TCP/IP and access malfunctions.
 - G Applying known solutions to common routing, TCP/IP and access malfunctions.
 - H Documenting internetworking installation and configuration activities.
 - I Dealing with unplanned events by drawing on essential knowledge and skills to provide

appropriate solutions incorporated in the holistic assessment with the above listed items.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this competency standard unit.

Resources required to assess this unit are listed above in context of assessment', which should also be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment it must ensure that the conditions for assessment are authentic and as far as possible reproduce and replicate the workplace and is consistent with the approved industry simulation policy.

In addition to the resources listed above in context of and specific resources for assessment, evidence should show demonstrated competency in installing and configuring networking systems.

Method of assessment 9.4)

This competency standard unit shall be assessed by methods given in Volume 1, Part 3 "Assessment Guidelines".

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this competency standard unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent
assessment and
relationship with
other units** 9.5)

There are no concurrent assessment recommendations for this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit of competency as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This competency standard unit shall be demonstrated in relation to installing and configuring internetworking systems between two Local Area Networks (LANs) to form a Wide Area Network (WAN) or a LAN and the Internet.

Generic terms are used throughout this Vocational Standard shall be regarded as part of the Range of Variables in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This competency standard unit covers the design, implementation and performance monitoring of internetworking systems. It encompasses safe working practice, evaluating customer requirements, applying sound design principles, using Wide Area Network (WAN) technologies, complying with regulation and standards, and documentation of design and performance monitoring.

Note:

This unit applies to all aspects of Electrotechnology - engineering applications only. For general competencies related Information Technologies refer to the latest endorsed IT Training Package.

Application of the Unit

Application of the Unit 2)

This competency standard unit is intended to apply to any recognised development program that leads to the acquisition of a formal award at AQF level 5 or higher.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit do not

License to practice 3)

require a licence to practice in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships and the like.

Pre-Requisites

Prerequisite Unit(s) 4)

Competencies 4.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE1 01A Apply Occupational Health Safety regulations, codes and practices in the workplace

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 “Literacy and Numeracy”

Reading 5 Writing 5 Numeracy 5

Employability Skills Information

Employability Skills 5)

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

- 6) Elements describe the essential outcomes of a competency standard unit. Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to design internetworking systems.	1.1 OHS processes and procedures for a given work area are obtained and understood.
	1.2 Established OHS risk control measures and procedures in preparation for the work are followed.
	1.3 Design brief for the internetworking is developed and documented in consultations with person(s) of higher authority.
	1.4 Work team/group is arranged of appropriately competent persons in accordance with skills required to meet work outcomes and organisation's established procedures.
	1.5 Activities are planned to meet scheduled timelines in consultation with others involved on the work.
	1.6 Strategies are implemented to ensure network development is carried out efficiently.
2 Design internetworking systems.	2.1 Internetworking system is designed to comply with design brief and consideration of economical and appropriately effective design solutions.
	2.2 Switching, routing and WAN technologies are included in the internetworking system design.
	2.3 Internetworking system design includes specification of required media that is compliant

ELEMENT	PERFORMANCE CRITERIA
	with industry standards.
	2.4 Internetworking system design is documented in accordance with organisation's policies and procedures.
	2.5 Internetworking system design is presented and discussed with person(s) of higher authority.
	2.6 Alterations to the internetworking system design resulting from the presentation/discussion are negotiated with person(s) of higher authority within the constraints of organisation's policy.
	2.7 Final internetworking system design is documented and approval obtained from person(s) of higher authority.
3 Implement internetworking systems.	3.1 Activities are planned to meet scheduled timelines in consultation with others involved on the work.
	3.2 Appropriate development tools and software are selected based on specified requirements and performance standard.
	3.3 Knowledge of internetworking arrangements and protocols is applied to installing, configuring and testing switching, routing and WAN technologies.
	3.4 System malfunctions are identified during testing and rectified using logical techniques drawing knowledge of internetworking arrangements and protocol.
	3.5 Approaches to issues/problems are analysed to provide most effective solutions.
	3.6 Quality of work is monitored against personal performance agreement and/or established organizational or professional standards.
	3.7 Final internetworking system design and implementation are documented in accordance organisation's established procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and designing and implementing internetworking systems.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-ED118A

Internet, local and wide area networks

- T1 Basic Switch Configuration
- T2 Basic VLAN Configuration
- T3 VLAN Design
- T4 Configure Inter VLAN routing
- T5 Configure VLAN trunking protocol
- T6 Configure Spanning Tree Protocol
- T7 Network Security and Risk Management
- T8 Network Performance Assessment
- T9 Wireless LAN Configuration:
 - Wireless LAN Standards
 - Wireless LAN Operation
 - Troubleshoot Wireless LAN
- T10 LAN Design
- T11 Design Report Presentation
- T12 Wide Area Networks (WANs) Technologies
- T13 WAN Design
- T14 WAN Protocols including Authentication
- T15 WAN Management and Security
- T16 Interior Gateway Protocol (IGP) Configuration
- T17 Access Lists configuration
- T18 Network Address Translation
- T19 Configure DHCP Service

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit of competency and must be read in conjunction with the performance criteria and the range statement of the unit of competency and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this Competency Standard Unit and shall be used in conjunction with all components parts of this unit and, performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with Industry and, Regulatory policy in this regard.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence need to be 'rich' in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practiced. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the “Assessment Guidelines – UEE11”. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range; and
 - Apply sustainable energy principles and practices as specified in the performance criteria and range; and
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements; and
 - Demonstrate an appropriate level of skills enabling employment; and
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures; and
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Design and implement internetworking systems as described in 8) and including:
 - A Developing an internetworking system design brief.
 - B Planning work activities including requirements for work team/group.

- C Designing internetworking system based on economic and effective solutions that meet with design brief requirements.
- D Detailing switching, routing and WAN technologies and specification for internetworking media in the design.
- E Documenting and presenting design for approval.
- F Implementing internetworking system design.
- G Identifying and rectifying system malfunctions.
- H Documenting internetworking installation and configuration activities.
- I Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this competency standard unit.

Resources required to assess this unit are listed above in context of assessment', which should also be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment it must ensure that the conditions for assessment are authentic and as far as possible reproduce and replicate the workplace and is consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to designing and implementing internetworking systems.

Method of assessment**9.4)**

This competency standard unit shall be assessed by methods given in Volume 1, Part 3 “Assessment Guidelines”.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this competency standard unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units**9.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEED11 9A	Design and implement Internetworking systems — advanced routing	—
UEENEED12 0A	Design and implement Internetworking systems — remote access	—

ELEMENT

PERFORMANCE CRITERIA

multiple, advanced, IP routing protocols such as OSPF, EIGRP, and BGP, access lists (security) and edge router connectivity into BGP networks

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and designing and implementing Internetworking systems - advanced routing.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-ED119A

Advanced routing methods and protocols

Evidence shall show an understanding of routing methods and protocols to an extent indicated by the following aspects

T1 The Routing Process

- Routing table establishment
- Routing advertisement methods

T2 Scalable Internet Protocol (IP) addresses encompassing:

- Scaling with IPv4
- Variable Length subnet Mask (VLSM) and supernetting
- IPv6
- Network Address Translation (NAT) and Port Address Translation (PAT)

T3 Routing protocols in current use.

Note.

1. Examples include Routing Information Protocol (RIPv2), Enhanced Interior Gateway Protocol (EIGRP), Open Shortest Path First (OSPF) covering single, multi and NBMA areas and Virtual links, On-Demand Routing (ODR), Border Gateway Protocols (BGP) covering applications, communities, peer groups and route reflectors.

2. Other relevant routing protocols may be included.

T4 Multi-protocol routing encompassing:

- Static and floating static routes
- Route optimisation
- Route redistribution

REQUIRED SKILLS AND KNOWLEDGE

- Route filtering
- T5 Default route

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing

on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to design Internetworking systems.	<p>1.1 OHS processes and procedures for a given work area are identified, obtained and understood.</p> <p>1.2 Established OHS risk control measures and procedures are followed in preparation for the work.</p> <p>1.3 Design brief for the advanced remote access is developed and documented in consultation with person(s) of higher authority.</p> <p>1.4 Work team/group is arranged of appropriately competent persons in accordance with skills required to meet work outcomes and organisation's established procedures.</p> <p>1.5 Activities are planned to meet scheduled timelines in consultation with others involved in the work.</p> <p>1.6 Strategies are implemented to ensure network development is carried out efficiently.</p>
2 Design Internetworking systems.	<p>2.1 Internetworking system is designed to comply with design brief and consideration of economical and appropriately effective design solutions.</p> <p>2.2 Advanced remote access technologies are included in the Internetworking system design. (See Note)</p> <p>2.3 Internetworking system design includes specification of required media that is compliant</p>

ELEMENT

PERFORMANCE CRITERIA

- with industry standards.
- 2.4 Internetworking system design is documented in accordance with organisation policies and procedures.
- 2.5 Internetworking system design is presented and discussed with person(s) of higher authority.
- 2.6 Alterations to the Internetworking system design resulting from the presentation/discussion are negotiated with person(s) of higher authority within the constraints of organisation's policy.
- 2.7 Final Internetworking system design is documented and approval obtained from person(s) of higher authority.
- 3 Implement Internetworking systems.
- 3.1 Activities are planned to meet scheduled timelines in consultation with others involved in the work.
- 3.2 Appropriate development tools and software are selected based on specified requirements and performance standard.
- 3.3 Knowledge of Internetworking arrangements and protocols is applied to installing, configuring and testing advance routing technologies.
- 3.4 System malfunctions are identified during testing and rectified using logical techniques drawing knowledge of Internetworking arrangements and protocol.
- 3.5 Approaches to issues/problems are analysed to provide most effective solutions.
- 3.6 Quality of work is monitored against personal performance agreement and/or established organisational or professional standards.
- 3.7 Final Internetworking system design and implementation are documented in accordance organisation's established procedures.

Note.

ELEMENT

PERFORMANCE CRITERIA

Examples of advanced remote access technologies are asynchronous connections, Point-to-Point Protocol (PPP) architecture, protocol, call back, and compression ISDN architecture, protocol layers, BRI and DDR and X.25, Frame Relay, and AAA.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and designing and implementing Internetworking systems - remote access.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-ED120A

Networks, remote access

Evidence shall show an understanding of remote access to networks to an extent indicated by the following aspects:

T1 Network devices and feature sets used for remote access networks encompassing:

- Typical Wide Area Networks (WAN) service.
- Devices for interfacing to WAN services
- Features of WAN services
- Required network device feature sets for effective WAN connectivity

T2 Asynchronous On-Demand WAN services encompassing:

- Asynchronous vs. synchronous services.
- Configuring asynchronous Connections with modems
- Interfacing hosts and modems
- Configuring Point-to-point Protocols (PPP) and related network access with Password Authentication Protocols (PAP) and Challenge Hand Shake Authentication Protocols (CHAP)

T3 Synchronous and leased WAN connectivity encompassing:

- Current industry-standard WAN services

Note.

Examples include X.25, ISDN and Frame Relay

- Configuring remote connections
- Configuring dial-on-demand routing.

REQUIRED SKILLS AND KNOWLEDGE

- Traffic Flow
- Configuring backup links
- Managing network performance with queuing and compression

T4 Scaling remote access networks with Network Address Translation (NAT) and Port Address Translation (PAT)

T5 Controlling corporate network access

- Router-based access control (like access-control lists, reflexive access control, context-bases access control)
- Configuring access, authentication and accounting control systems using current current industry standard tools.

Note.

Example of current industry standard tools is Remote Authentication Dial-In User Service (RADIUS)

T6 Troubleshooting the remote access network.

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be ‘rich’ in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its ‘richness’. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE11’. Evidence shall also

comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Design and implement Internetworking systems – remote access as described in 8) and including:
 - A Developing a design brief for advanced remote access technologies in an Internetworking system.
 - B Planning work activities including requirements for work team/group.
 - C Designing Internetworking system based on economic and effective solutions that meet with design brief requirements
 - D Detailing advanced remote access technologies and specification for Internetworking media in the design.
 - E Documenting and presenting design for approval.
 - F Implementing Internetworking system design.
 - G Identifying and rectifying system malfunctions.
 - H Documenting Internetworking installation and configuration activities.

- I Detail technologies and media specifications used in the design of advanced wireless LANs technologies.
- J Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to designing and implementing Internetworking systems – remote access.

Method of assessment 9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate

the essential knowledge and skills described in this unit.

**Concurrent
assessment and
relationship with
other units**

9.5)

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEED11 Design and implement Internetworking systems —
8A

UEENEED11 Design and implement Internetworking systems —
9A advance routing

UEENEED12 Design and implement Internetworking systems —
1A multi-layer switching

UEENEED12 Design and implement Internetworking systems —
2A security

UEENEED12 Design and implement Internetworking systems —
3A wireless LANs/WANs

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation the designing and implementing internetworking system - remote access technologies in an Internetworking system between two Local Area Networks (LANs) to form a Wide Area Network (WAN) or a LAN and the Internet.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not applicable.

Competency Field

Competency Field 11)

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers the design, implementation and performance monitoring of Internetworking systems. It encompasses safe working practice, evaluating customer requirements, applying sound design principles, complying with regulation and standards, incorporation and advance multi-layer switching technologies access and documentation of design and performance monitoring.

Note:

This unit applies to all aspects of Electrotechnology – engineering applications only. For general competencies related to Information Technologies refer to the latest endorsed IT Training Package.

Application of the Unit

Application of the Unit 2)

This unit applies to any recognised development program that leads to the acquisition of a formal award at AQF level 5 or higher.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit do not

License to practice

3)

require a license to practice in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Pre-Requisites

Prerequisite Unit(s)

4)

Competencies

4.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE1 01A Apply Occupational Health Safety regulations, codes and practices in the workplace

Literacy and numeracy skills

4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 5 Writing 5 Numeracy 5

Employability Skills Information

Employability Skills

5)

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

- 6) Elements describe the essential outcomes of a competency standard unit
- Performance Criteria describe the required performance needed to demonstrate achievement of the element.
- Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to design Internetworking systems.	1.1 OHS processes and procedures for a given work area are identified, obtained and understood.
	1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
	1.3 Design brief for the advance multi-layer switching technologies is developed and documented in consultation with person(s) of higher authority.
	1.4 Work team/group is arranged of appropriately competent persons in accordance with skills required to meet work outcomes and organisation's established procedures.
	1.5 Activities are planned to meet scheduled timelines in consultation with others involved in the work.
	1.6 Strategies are implemented to ensure network development is carried out efficiently.
2 Design Internetworking systems.	2.1 Internetworking system is designed to comply with design brief and consideration of economical and appropriately effective design solutions.
	2.2 Advance multi-layer switching technologies are included in the Internetworking system design. (See Note)

ELEMENT

PERFORMANCE CRITERIA

- | | | |
|---|------------------------------------|--|
| | 2.3 | Internetworking system design includes specification of required media that is compliant with industry standards. |
| | 2.4 | Internetworking system design is documented in accordance with organisation policies and procedures. |
| | 2.5 | Internetworking system design is presented and discussed with person(s) of higher authority. |
| | 2.6 | Alterations to the Internetworking system design resulting from the presentation/discussion are negotiated with person(s) of higher authority within the constraints of organisation's policy. |
| | 2.7 | Final Internetworking system design is documented and approval obtained from person(s) of higher authority. |
| 3 | Implement Internetworking systems. | |
| | 3.1 | Activities are planned to meet scheduled timelines in consultation with others involved in the work. |
| | 3.2 | Appropriate development tools and software are selected based on specified requirements and performance standard. |
| | 3.3 | Knowledge of Internetworking arrangements and protocols is applied to installing, configuring and testing advance routing technologies. |
| | 3.4 | System malfunctions are identified during testing and rectified using logical techniques drawing knowledge of Internetworking arrangements and protocol. |
| | 3.5 | Approaches to issues/problems are analysed to provide most effective solutions. |
| | 3.6 | Quality of work is monitored against personal performance agreement and/or established organisational or professional standards. |
| | 3.7 | Final Internetworking system design and implementation are documented in accordance organisation's established procedures. |

ELEMENT

PERFORMANCE CRITERIA

Note.

Examples of multi-layer switching technologies are, Fast Ethernet, Gigabit Ethernet, VLAN basics, types, identification, and trunking protocol, Spanning Tree Protocol, MLS processes, and configuration and multicasting protocols and routing.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and designing and implementing Internetworking systems - multi-layer switching.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-ED121A

Multi-layer switched networks

Evidence shall show an understanding of multi-layer switched networks to an extent indicated by the following aspects:

T1 Campus network design encompassing:

- core layer
- distribution layer
- access layer
- selection of appropriate devices
- defining workgroups

T2 Managing Redundant Links encompassing:

- Spanning Tree Protocols (STP)
- Controlling STP in redundant environments
- STP in Virtual Local Area Network (VLAN) environments
- Configuring redundant routing protocols for a fault-tolerant routing

Note.

An example is Hot Standby routing protocol (HSRP)

T3 Fast layer 2 services encompassing:

- Fast Ethernet
- Trunking
- Fast Ether channels

REQUIRED SKILLS AND KNOWLEDGE

- Gigabit services
- T4 Inter VLAN Routing encompassing:
- Hardware vs. Software switching
 - Overview of fast switching technologies
 - Elements of a multi-layer switch
 - Configuring multi-layer switches
- T5 Multicast encompassing:
- Multi-cast group management
 - Configuring multi-cast control at layer 2
 - Configuring multi-cast control at layer 3
- T6 Controlling Access to the Campus Network
- T7 Managing Network Traffic

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry

and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. ELEMENT**PERFORMANCE CRITERIA**

Note.

1. Examples of advance security technologies are firewalls intrusion detection feature of CSACS, Cisco IOS routers, PIX for AAA service, site-to-site VPNs between Cisco devices and remote access VPNs between Cisco device and clients.

Required Skills and Knowledge**REQUIRED SKILLS AND KNOWLEDGE**

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and designing and implementing Internetworking systems - security.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-ED122A**Fundamentals of network security**

Evidence shall show an understanding of fundamentals of network security to an extent indicated by the following aspects:

- T1 Network Security fundamentals
- T2 Securing Perimeter Routers
- T3 Access Control Lists (ACLs)
- T4 Router Authentication, Authorisation and Accounting (AAA) Security
- T5 Intrusion Detection
- T6 Internet Protocol (IP) Security
- T7 Virtual Private Network (VPN)
- T8 Firewalls
- T9 Translations and Connections
- T10 Access Control Lists for Firewalls
- T11 AAA and Firewalls
- T12 Intrusion
- T13 Intrusion Detection Systems (IDS)
- T14 Firewall Failover and System Maintenance

REQUIRED SKILLS AND KNOWLEDGE

- T15 Firewall VPN's
- T16 Firewall Device Management
- T17 Network Security Testing
- T18 Secure Network Design
- T19 IPS Signatures and Signature Alarms
- T20 Troubleshoot Wireless, VoIP and SAN Security
- T21 Cryptographic Services

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being

assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects
of evidence
required to
demonstrate
competency in
this unit** 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Design and implement Internetworking systems – security as described in 8) and including:
 - A Developing a design brief for advance security technologies in an Internetworking system design brief.
 - B Planning work activities including requirements for work team/group.
 - C Designing Internetworking system based on economic and effective solutions that meet with design brief requirements.
 - D Detailing advance security technologies and specification for Internetworking media in the design.

E	Documenting and presenting design for approval.
F	Implementing Internetworking system design.
G	Identifying and rectifying system malfunctions.
H	Documenting Internetworking installation and configuration activities.
I	Detail technologies and media specifications used in the design of advanced wireless LANs technologies.
J	Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to designing and implementing Internetworking systems – security.

Method of assessment 9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEED11 9A	Design and implement Internetworking systems — advance routing	—
UEENEED12 0A	Design and implement Internetworking systems — remote access	—
UEENEED12 1A	Design and implement Internetworking systems — multi-layer switching	—
UEENEED12 3A	Design and implement Internetworking systems — wireless LANs/WANs	—

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to designing and implementing Internetworking systems - security between two Local Area Networks (LANs) to form a Wide Area Network (WAN) or a LAN and the Internet.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these

RANGE STATEMENT

and other terms that apply are given in Volume 2, Part 2.1.

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This competency standard unit covers the design, implementation and performance monitoring of internetworking systems. It encompasses safe working practice, evaluating customer requirements, applying sound design principles, complying with regulation and standards, incorporation and advanced wireless LANs technologies and documentation of design and performance monitoring.

Note:

This unit applies to all aspects of Electrotechnology - engineering applications only. For general competencies related Information Technologies refer to the latest endorsed IT Training Package.

Application of the Unit

Application of the Unit 2)

This competency standard unit is intended to apply to any recognised development program that leads to the acquisition of a formal award at AQF level 5 or higher.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit do not require a licence to practice in the workplace. However,

License to practice 3)

practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships and the like.

Pre-Requisites

Prerequisite Unit(s) 4)

Competencies 4.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE1 Apply Occupational Health Safety
01A regulations, codes and practices in the
workplace

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading 5 Writing 5 Numeracy 5

Employability Skills Information

Employability Skills 5)

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

- 6) Elements describe the essential outcomes of a competency standard unit. Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | | | |
|---|--|-----|--|
| 1 | Prepare to design internetworking systems. | 1.1 | OHS processes and procedures for a given work area are obtained and understood. |
| | | 1.2 | Established OHS risk control measures and procedures in preparation for the work are followed. |
| | | 1.3 | Design brief for the advanced wireless LANs technologies is developed and documented in consultations with person(s) of higher authority. |
| | | 1.4 | Work team/group is arranged of appropriately competent persons in accordance with skills required to meet work outcomes and organisation's established procedures. |
| | | 1.5 | Activities are planned to meet scheduled timelines in consultation with others involved on the work. |
| | | 1.6 | Strategies are implemented to ensure network development is carried out efficiently. |
| 2 | Design internetworking systems. | 2.1 | Internetworking system is designed to comply with design brief and consideration of economical and appropriately effective design solutions. |
| | | 2.2 | Advanced wireless LANs technologies are included in the internetworking system design. (See Note 1) |
| | | 2.3 | Internetworking system design includes specification of required media that is compliant |

ELEMENT

PERFORMANCE CRITERIA

- with industry standards.
- 2.4 Internetworking system design is documented in accordance with organisation's policies and procedures.
- 2.5 Internetworking system design is presented and discussed with person(s) of higher authority.
- 2.6 Alterations to the internetworking system design resulting from the presentation/discussion are negotiated with person(s) of higher authority within the constraints of organisation's policy.
- 2.7 Final internetworking system design is documented and approval obtained from person(s) of higher authority.
- 3 Implement internetworking systems.
- 3.1 Activities are planned to meet scheduled timelines in consultation with others involved on the work.
- 3.2 Appropriate development tools and software are selected based on specified requirements and performance standard.
- 3.3 Knowledge of internetworking arrangements and protocols is applied to installing, configuring and testing advance wireless LANs technologies.
- 3.4 System malfunctions and performance issues are identified during testing and rectified using logical techniques drawing knowledge of internetworking arrangements and protocol. (See Note 2)
- 3.5 Approaches to issues/problems are analysed to provide most effective solutions.
- 3.6 Quality of work is monitored against personal performance agreement and/or established organizational or professional standards.
- 3.7 Final internetworking system design and implementation are documented in accordance organisation's established procedures.

ELEMENT

PERFORMANCE CRITERIA

Note.

1. Wireless LAN technologies may include compliance with IEEE 802.11 standards, and frequency and channel usage, in-building and building-to-building WLANs and devices and appropriate antennas that meet mobility and throughput specifications, hardware set-up and software configuration of wireless products including security using WEP, WPA, and 802.1x protocols.

2. Performance issues may include using event logging, command-line utilities, and diagnostic tools

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and designing and implementing internetworking systems - wireless LANs/WANs.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-ED123A

Fundamentals of wireless security

Evidence shall show an understanding of fundamentals of wireless security to an extent indicated by the following aspects:

- T1 Wireless Standards
- T2 Wireless radio technologies
- T3 Wireless topologies
- T4 Network Interface Cards (NICs)
- T5 Access points
- T6 Wireless Bridges and routers
- T7 Antennas
- T8 Security
- T9 Application design and site survey preparation
- T10 Troubleshooting, management, monitoring and diagnostics
- T11 802.11 authentication and encryption methods

REQUIRED SKILLS AND KNOWLEDGE

- T12 Wireless roaming
- T13 Wireless LAN network management software tools
- T14 Frequency interference
- T15 Emerging technologies

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit of competency and must be read in conjunction with the performance criteria and the range statement of the unit of competency and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this Competency Standard Unit and shall be used in conjunction with all components parts of this unit and, performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with Industry and, Regulatory policy in this regard.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence

need to be 'rich' in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practiced. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the "Assessment Guidelines – UEE11". Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range; and
 - Apply sustainable energy principles and practices as specified in the performance criteria and range; and
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements. ; and
 - Demonstrate an appropriate level of skills enabling employment; and
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures;

and

- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Design and implement internetworking systems – wireless LANs and WANs as described in 8) and including:
 - A Developing a design brief for advance wireless LAN technologies in an internetworking system design brief.
 - B Planning work activities including requirements for work team/group.
 - C Designing internetworking system based on economic and effective solutions that meet with design brief requirements.
 - D Detail technologies and media specifications used in the design of advanced wireless LANs technologies.
 - E Documenting and presenting design for approval.
 - F Implementing internetworking system design.
 - G Identifying and rectifying system malfunctions.
 - H Documenting internetworking installation and configuration activities.
 - I Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this competency standard unit.

Resources required to assess this unit are listed above in context of assessment', which should also be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment it must ensure that the conditions for assessment are authentic and as far as possible reproduce and replicate the workplace and is consistent with the approved industry simulation policy.

In addition to the resources listed above in context of and specific resources for assessment, evidence should show demonstrated competency in designing and implementing internetworking systems – wireless LANs/WANs.

Method of assessment

9.4)

This competency standard unit shall be assessed by methods given in Volume 1, Part 3 "Assessment Guidelines".

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this competency standard unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEED11 Design and implement internetworking systems
8A

UEENEED11 Design and implement internetworking systems —
9A advance routing

UEENEED12 Design and implement internetworking systems —
0A remote access

UEENEED12 1A	Design and implement internetworking systems — multi-layer switching
UEENEED12 2A	Design and implement internetworking systems — security

Range Statement

RANGE STATEMENT

10) This relates to the unit of competency as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This competency standard unit shall be demonstrated in relation to designing and implementing internetworking systems - wireless LANs/WANs between two Local Area Networks (LANs) to form a Wide Area Network (WAN) or a LAN and the Internet.

Elements and Performance Criteria Pre-Content

- 6) Elements describe the essential outcomes of a competency standard unit. Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | | | |
|---|---|-----|--|
| 1 | Prepare to install multiple operating systems on computers and a client server network. | 1.1 | OHS processes and procedures for a given work area are obtained and understood. |
| | | 1.2 | Established OHS risk control measures and procedures in preparation for the work are followed. |
| | | 1.3 | Operating systems, devices, software and services required are determined from network performance specifications and in consultations with persons of higher authority. |
| | | 1.4 | Network security policy is reviewed in network performance specifications and in consultation with person(s) of higher authority. |
| | | 1.5 | Activities are planned to meet scheduled timelines in consultation with others involved on the work. |
| | | 1.6 | Appropriate persons are consulted to ensure the work is co-ordinated effectively with others involved or affected by the work. |
| 2 | Install and configure computer and network operating systems. | 2.1 | OHS risk control measures and procedures for carrying out the work are followed. |
| | | 2.2 | Knowledge of computer and network operations and network infrastructure are applied to installing and configuring operating systems and software on computers and client server. |

ELEMENT

PERFORMANCE CRITERIA

- 2.3 Network protocols are installed and configured to integrate computers using different operating systems in compliance with industry standards and variants as specified for the network.
- 2.4 Security measures of the network are implemented in compliance with security policy, industry standards and requirements specified for the network.
- 2.5 Disaster recovery plan is tested for absolute effectiveness and compliance with enterprise security policy.
- 2.6 Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes.
- 3 Monitor and optimise computer and network performance.
 - 3.1 OHS risk control measures and procedures for carrying out the work are followed.
 - 3.2 Network is monitored and common methods are implemented to optimise system performance.
 - 3.3 Common computer and server malfunctions are identified and rectified using logical techniques and known solutions.
 - 3.4 Computer and server operating system incremental updates and security patches are installed as soon as they are available.
 - 3.5 Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes.
 - 3.6 On-going checks of the quality of work outcomes are undertaken in accordance with job specification, technical standards, enterprise policy and/or regulatory requirements.
 - 3.7 Work is carried out efficiently without unnecessary waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.

ELEMENT	PERFORMANCE CRITERIA
4 Report integration and outcome of network monitoring activities.	4.1 Written justification is made for solutions used to rectify malfunctions and appropriate person/s notified in accordance with established procedures. 4.2 Computer and network installation and monitoring records are maintained in accordance with established procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

competency standard unit Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to develop web pages for engineering applications.	1.1 OHS processes and procedures for a given work area are identified, obtained and understood.
	1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
	1.3 The extent of development work is determined from page development specifications, including engineering subject matter, and in consultation with relevant persons.
	1.4 Activities are planned to meet scheduled timelines in consultation with others involved in the work.
	1.5 Appropriate development tools and software are selected based on specified requirements and performance standards.
	1.6 Strategies are implemented to ensure development work is carried out efficiently.
2 Develop web pages for engineering applications.	2.1 OHS risk control measures and procedures for carrying out the work are followed.
	2.2 Knowledge of syntax functions and features of mark-up languages scripts in current use are applied to developing client-side programming. (Notes 1 and 2)
	2.3 Pages are created and rendered with relative and absolute links, images and table formatting using cascaded styles sheets.
	2.4 Forms are created with a variety of appropriate elements and element groupings to make forms

ELEMENT**PERFORMANCE CRITERIA**

	easy to follow.
	2.5 Knowledge of server scripting languages in current use is applied to scripting to developing client-side programming and validations. (See Note 3)
	2.6 Approaches to issues/problems are analysed to provide most effective solutions.
	2.7 Quality of work is monitored against personal performance agreement and/or established organisational or professional standards.
3 Test, evaluate, implement and document the developed web pages.	3.1 Testing and procedures are developed to evaluate web page programming.
	3.2 Problems and bugs in web page programming are identified and rectified to ensure specifications are met.
	3.3 Intermediate and final work reports are written in accordance with professional standards and presented to appropriate person(s).

Note

1. Examples of mark-up languages are HTML, XML and XSL.
2. Examples of scripts are JavaScript and VB script.
3. Examples of server scripting languages are JSP, ASP, PHP and Perl.

Required Skills and Knowledge**REQUIRED SKILLS AND KNOWLEDGE**

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and developing basic web pages for engineering applications.

REQUIRED SKILLS AND KNOWLEDGE

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-ED129A Client side programming and server scripting

Evidence shall show an understanding of client side programming them to an extent indicated by the following aspects:

T1 Client server architecture

T2 Hyper Text Markup Language (HTML) encompassing:

- Forms
- Table
- Cascading style sheets

T3 Hyper Text Markup Language (HTML) scripting encompassing:

- Exposed object model
- Events and event handling
- Objects methods, properties, events
- Window, document, form, and form elements
- String object, methods, properties
- Form field validation

Note:

Examples of scripting language are JavaScript and Visual Basic (VB) Script

T4 Extendable Markup Language (XML) encompassing:

- Syntax
- Structure (well formed XML)
- Schemas
- Transformations
- Parsing Document Object Model (DOM) and Simple API (SAX)
- Scripting to Document Object Model (DOM)

T5 Extendible Stylesheet Language (XSL) generating HTML from XML

T6 Wireless thin client programming

Note.

Examples include Java2 Micro Edition (JEME), Mobile Information Device Profile (MIDP), Windows CE and Palm OS

T7 Consideration for system architecture

T8 Configurations and profile overview

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Develop basic web pages for engineering applications as described in 8) and including:

- A Interpreting page development requirements.
- B Identifying the appropriate development tools and software.
- C Creating and rendering effective web pages.

- D Providing basic web functionality.
- E Developing testing procedures.
- F Identifying problem and bugs in web page program.
- G Rectifying problem and bugs.
- H Writing intermediate and final work reports to the required standard.
- I Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to developing basic web pages for engineering applications.

Method of assessment 9.4)

This unit shall be assessed by methods given in Volume 1, Part 3

‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent
assessment and
relationship with
other units** 9.5)

There are no concurrent assessment recommendations for this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to developing basic web pages for engineering applications for any electrotechnology engineering disciplines. This shall include

- Development, implementation and testing HTML pages with at least four of the following features:
 - Relative and absolute links, images and table formatting
 - Cascaded styles sheets
 - Forms
 - New browser windows
 - Validation of form data
- Development, implementation and testing of server scripting for database access with at least four of the following features:
 - Form data input response
 - Form data processing
 - Database access
 - Output of database table contents
 - Insertion of table data to database

RANGE STATEMENT

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not applicable.

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers assembly, setting-up and testing multimedia computer systems as directed in computer service manuals and device/driver documentation. It encompasses safe working practices, and selecting, installing, configuring and testing multimedia computer system components, applications, and driver software, following written and oral instruction and applying customer relations' procedures.

Note:

This unit applies to all aspects of Electrotechnology – engineering applications only. For general competencies related to Information Technologies refer to the latest endorsed IT Training Package.

Application of the Unit

Application of the Unit 2)

This unit is intended for competency development entry-level employment-based programs incorporated in approved contracts of training. It may be used to augment formally-acquired competencies.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit do not require a license to practice in the workplace. However,

License to practice 3)

practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Pre-Requisites**Prerequisite Unit(s) 4)****Competencies 4.1)**

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEED1 02A Assemble, set-up and test personal computer hardware

UEENEEE1 01A Apply Occupational Health Safety regulations, codes and practices in the workplace

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 3 Writing 3 Numeracy 3

Employability Skills Information**Employability Skills 5)**

The required outcomes described in this unit of competency contain applicable facets of Employability

Employability Skills

5)

Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit
Performance Criteria describe the required performance needed to demonstrate achievement of the element.
Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria**ELEMENT****PERFORMANCE CRITERIA**

1	Select and prepare to install multimedia components.	1.1	OHS procedures for a given work area are identified, obtained and understood through established routines and procedures.
		1.2	Established OHS risk control measures and procedures in relation to computer and keyboard use are followed.
		1.3	Advice is sought from the work supervisor to ensure the work is co-ordinated effectively with others.
		1.4	Multimedia components, drivers, and application software are obtained in accordance with established routines and checked as meeting requirements.
		1.5	Multimedia devices, drivers, and application software are correctly selected given user requirements and manufacturer specifications.
2	Install multimedia components.	2.1	Established OHS risk control measures and procedures for carrying out the work are followed.
		2.2	Multimedia components are assembled and connected in accordance with manufacturer

ELEMENT	PERFORMANCE CRITERIA
	instructions.
	2.3 Multimedia devices, drivers, and application software are correctly selected given user requirements and manufacturer specifications.
	2.4 Multimedia devices are correctly installed and where not hot pluggable, computer is switched on and start-up procedures are followed and checked.
	2.5 Multimedia devices, operating system, application programs, and multimedia devices are to be checked to be opening and operating correctly.
	2.6 Multimedia devices and drivers are tested to be working correctly and benchmarked against similar devices for performance comparisons.
	2.7 Faults are identified as being the result of either faulty hardware or software.
	2.8 Faults are rectified in accordance with computer hardware, operating system and application instructions in strict accordance with OHS requirements.
	2.9 Procedures for referring non-routine events to immediate supervisor for directions are followed.
	2.10 Computer shutdown procedures are followed and computer switched off.
	2.11 Work is carried out efficiently without waste of materials or damage to apparatus, circuits, the surrounding environment or services and using sustainable energy principles.
3 Complete work and report.	3.1 OHS risk control work completion measures and procedures are followed.
	3.2 Work area is cleaned and made safe in accordance with established procedures.
	3.3 Work supervisor is notified of the completion of the work in accordance with established

ELEMENT PERFORMANCE CRITERIA

procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and selecting, installing, configuring and testing multimedia devices.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-ED130A Multimedia computer components

Evidence shall show an understanding of computer multimedia subsystem components to an extent indicated by the following aspects:

T1 Multimedia subsystems

Note:

Examples include new multimedia standards, pixel resolution, scanning, resolution, output resolution, printer resolution, microprocessor speeds, INTEL INCOMP Index rating, cache memory speeds, system bus transfer speeds, configure a mother board, trouble shoot a mother board

T2 Multimedia storage devices

Note:

Examples include USB/flash, hard disk drive, multimedia storage devices, removable storage hard disk drive, CD-ROM/DVD drive, digital tape (DAT) drive

T3 Video cards, types and specifications

Note:

Examples include video processor, graphic processing, video RAM, bus interferences, resolution, full motion video, still image, driver software and updates

T4 Sound cards and sound card standards

Note:

Examples include MIDI interface, sound card applications, sound card connectors, FM synthesis, wave table, sound card file formats

T5 CD-ROM's, CD-ROM/DVD standards

Note:

REQUIRED SKILLS AND KNOWLEDGE

Examples include CD-ROM/DVD cache memory, CD-compatible, CD/DVD drive transfer speeds, CD-ROM/DVD interfaces, photo CD/DVD compatible, CD/DVD recordable, multi-session compatible.

T6 Colour printers

Note:

Examples include types of colour printers, construction and operation, dot matrix, ink-jet, laser, dye sublimation.

T7 Colour scanners

Note:

Examples include types of scanners, construction and operation, drivers and scanning software.

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the

most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects
of evidence
required to
demonstrate
competency in
this unit** 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Select, install, configure and test multimedia devices as described in 8) and including:
 - A Connecting computer, components and peripherals in accordance with requirements
 - B Assembling on three separate occasions multimedia computer devices
 - C Setting up on three separate occasions multimedia computer devices
 - D Testing on three separate occasions multimedia computer devices
 - E Documenting and reporting multimedia computer device activities and results.

- F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to selecting, installing, configuring and testing multimedia devices.

Method of assessment 9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units 9.5)

There are no concurrent assessment recommendations for this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to assembling, setting-up, and testing multimedia computer systems as directed in computer service manuals and device/driver documentation. It is to include demonstrated competence across assembly, setting-up and testing multimedia computer devices on three occasions respectively, using computer service manuals and device/driver documentation.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Elements and Performance Criteria Pre-Content

- 6) Elements describe the essential outcomes of a competency standard unit. Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to install and configure a computer operating system and software.	1.1 OHS procedures for a given work area are identified, obtained and understood.
	1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
	1.3 The scope of work to be undertaken is determined from documentation or from discussions with work supervisor.
	1.4 Operating system and application software versions as required for the installation are obtained in accordance with established procedures and checked against job requirements.
2 Upgrade computer and peripheral software.	2.1 OHS risk control measures and procedures for carrying out the work are followed.
	2.2 Operating system and application and network software components are installed in accordance with installation instructions and industry practices.
	2.3 Operating system, software applications and network, including device drivers, are tested in preparation for return to service/customer.
	2.4 Operating system network and software malfunctions are identified using logical techniques drawing on knowledge of operating

ELEMENT	PERFORMANCE CRITERIA
	system configuration requirements.
	2.5 Malfunctions are rectified using latest software versions, incremental updates and bug and security patches.
	2.6 Methods for dealing with unexpected situations are decided on the basis of safety and required work outcomes.
	2.7 Installation and configuration is carried out efficiently without waste of materials and energy or damage to apparatus, the surrounding environment or other services.
3 Complete and report upgrading and maintenance activities.	3.1 OHS work completion risk control measures and procedures are followed.
	3.2 Work area is cleaned and made safe in accordance with established procedures.
	3.3 Operating system network and software installation is documented and appropriate person(s) notified in accordance with established procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and installing and configuring a computer operating system and software.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-ED143A Client computer operating systems and software

Evidence shall show an understanding of computer operating systems to an extent indicated by the following aspects:

T1 Basic function, components and concepts

REQUIRED SKILLS AND KNOWLEDGE

T2 Operating systems available

T3 System installation and configuration

Note: Systems installation includes drivers, internet access and simple networking

T4 Operating system components and structure

T5 File structure and management

T6 System tools

Note: Example include control panels , wizards and the like

T7 Operating systems malfunctions and solutions

T8 Troubleshooting techniques

T9 Occupation health and safety fundamentals as they relate to computing device assemble/ disassembly and computer operating systems.

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry

and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit
 Performance Criteria describe the required performance needed to demonstrate achievement of the element.
 Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to commission computer systems	1.1 OHS procedures for a given work area are obtained and understood.
	1.2 Established OHS risk control measures and procedures in preparation for the work are followed.
	1.3 Safety hazards that have not previously been identified are noted and established risk control measures are implemented.
	1.4 Appropriate personnel are consulted to ensure the work is co-ordinated effectively with others involved on the work site.

ELEMENT	PERFORMANCE CRITERIA
	1.5 System operating parameters are identified by reviewing system specifications and component technical data.
	1.6 Tools, equipment, applications, and testing devices needed for the work are obtained in accordance with established procedures and checked for correct operation and safety.
	1.7 Preparatory work is checked to ensure no unnecessary damage has occurred and complies with requirements.
	1.8 Circuits are checked as being isolated, where necessary, in strict accordance OHS requirements and procedures.
2 Commission computer systems.	2.1 OHS risk control measures and procedures for carrying out the work are followed.
	2.2 Testing/measuring devices are connected and set up in accordance with requirements for a particular system.
	2.3 Measurements and adjustments are made to computer equipment to provide optimum system performance in accordance with system specifications and/or regulatory requirements.
	2.4 Decisions for dealing with unexpected situations are made from discussions with appropriate persons and job specifications and requirements.
	2.5 Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes.
	2.6 Systems' commissioning procedures are performed in accordance with requirements.
	2.7 Commissioning is carried out efficiently without unnecessary waste of materials or damage to apparatus, the surrounding environment or services and using sustainable energy principles.
3 Completion and report commissioning	3.1 OHS risk control work completion measures and procedures are followed.

ELEMENT	PERFORMANCE CRITERIA
activities.	
	3.2 Adjustment settings are documented in accordance with established procedures.
	3.3 Work site is cleaned and made safe in accordance with established procedures.
	3.4 Commissioning results and work completion are notified to appropriate person or persons in accordance with established procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and commissioning computer systems.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-ED144A Commissioning processes and procedures

Evidence shall show an understanding of commissioning process processes and procedures to an extent indicated by the following aspects:

- T1 Purpose of commissioning
- T2 Commissioning planning and documentation
- T3 Procedures for commissioning systems encompassing:
 - configuring
 - calibrating
 - tuning
 - validating system performance to specification
 - procedures followed to commission instrument systems
- T4 Purpose and importance of documentation

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit of competency and must be read in conjunction with the performance criteria and the range statement of the unit of competency and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this Competency Standard Unit and shall be used in conjunction with all components parts of this unit and, performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with Industry and, Regulatory policy in this regard.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence need to be 'rich' in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practiced. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the “Assessment Guidelines – UEE11”. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range; and
 - Apply sustainable energy principles and practices as specified in the performance criteria and range; and
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements. ; and
 - Demonstrate an appropriate level of skills enabling employment; and
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures; and
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Commission computer systems as described in 8) and including:
 - A Identifying system design performance parameters and requirements
 - B Measuring and adjusting system components to provide optimum system performance

- C Ensuring system operates within regulatory and/or specification requirements
- D Documenting adjustment settings with established procedures
- E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this competency standard unit.

Resources required to assess this unit are listed above in Context of assessment', which should also be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment it must ensure that the conditions for assessment are authentic and as far as possible reproduce and replicate the workplace and is consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to commissioning computer systems.

Method of assessment 9.4)

This competency standard unit shall be assessed by methods given in Volume 1, Part 3 “Assessment Guidelines”.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this competency standard unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent
assessment and
relationship with
other units** **9.5)**

There are no concurrent assessment recommendations for this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit of competency as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This competency standard unit shall be demonstrated in relation to commissioning two different types of computer systems and associated components and controls.

Generic terms are used throughout this Vocational Standard shall be regarded as part of the Range of Variables in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This competency standard unit covers the modification and redesign of industrial computer systems to augment existing systems for clients. It encompasses safe working practices, system parameter reconfiguration, analysis to assure optimum performance, following procedures, and documenting final modifications and settings.

Application of the Unit

Application of the Unit 2)

This competency standard unit is intended to augment formally acquired competencies. It is suitable for employment-based programs under an approved contract of training or institutional based delivery. It is intended to apply to any formal recognition for this standard at the aligned AQF 5 level.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit require a licence to practice in the workplace where plant and equipment operate at voltage above 50 V a.c. or 120 V d.c. In some States/Territories a licence is required to practice this unit in the workplace subject to regulations for undertaking refrigeration and air conditioning work and in particular working with refrigerants. Practice in

License to practice**3)**

workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships and the like.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment and the like. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus, site rehabilitation and the like.

2. Compliance may be required in various jurisdictions relating to currency in first aid, confined space, lifting, risk safety measure and the like.

Pre-Requisites**Prerequisite Unit(s)****4)****Competencies****4.1)**

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE1 01A Apply Occupational Health Safety regulations, codes and practices in the workplace

Literacy and numeracy skills**4.2)**

Participants are best equipped to achieve this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading 5 Writing 5 Numeracy 5

Employability Skills Information

Employability Skills 5)

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit
Performance Criteria describe the required performance needed to demonstrate achievement of the element.
Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to modify-redesign of computer system(s)	1.1 OHS procedures for a given work area are obtained and understood.
	1.2 Established OHS risk control measures and procedures in preparation for the work are followed.
	1.3 Safety hazards that have not previously been identified are noted and established risk control measures are implemented.
	1.4 Appropriate personnel are consulted to ensure the work is co-ordinated effectively with others involved on the work site.
	1.5 System operating parameters are identified by reviewing system specifications and component technical data.

ELEMENT**PERFORMANCE CRITERIA**

- | | | |
|---|--|--|
| | 1.6 | The limitations, use and operation of the system to be modified is established from original specifications, manufacturers' data and the like |
| | 1.7 | The extent of modification is determined from measurements, tests, inspections, system limitations and other relevant requirements |
| | 1.8 | Specifications and instructions for the modifications are documented in accordance with requirements and organisational procedures |
| | 1.9 | Tools, equipment, applications, and devices needed for the work are obtained in accordance with established procedures and checked for correct operation and safety. |
| | 1.10 | Preparatory work is checked to ensure no unnecessary damage has occurred and complies with requirements. |
| 2 | Generate modification-redesign of computer system(s) | |
| | 2.1 | OHS risk control measures and procedures for carrying out the work are followed. |
| | 2.2 | Alternative modification arrangements are considered and discussed with appropriate personnel |
| | 2.3 | Safety, functionality and economic considerations are incorporated in the proposed modification design |
| | 2.4 | Proposed modification complies with all requirements and includes specifications and documentation for alteration of the system(s) |
| | 2.5 | Changes in the use and operation of the system(s) as a consequence of the proposed modification are included in the documentation |
| | 2.6 | Decisions for dealing with unexpected situations are made from discussions with appropriate persons and job specifications and requirements. |
| | 2.7 | Methods for dealing with unexpected situations are selected on the basis of safety and specified |

ELEMENT	PERFORMANCE CRITERIA
	work outcomes.
	2.8 Modification-redesign is carried out efficiently without unnecessary waste of materials or damage to apparatus, the surrounding environment or services and using sustainable energy principles.
3 Completion and report modification-redesign activities.	3.1 OHS risk control work completion measures and procedures are followed.
	3.2 Proposed modification is checked under established procedures for compliance with all relevant requirements
	3.3 Work site is cleaned and made safe in accordance with established procedures.
	3.4 Proposed modification is submitted for appropriate organisational approval and, where applicable, statutory or regulatory approval
	3.5 Approved copies of the modification-redesign documents are issued, and copies retained, documented and stored in records in accordance with established procedures and requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and modifying-redesigning computer systems.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-ED145A Industrial Computer Systems Engineering Design

Evidence shall show an understanding of engineering design processes to an extent indicated by the following aspects:

REQUIRED SKILLS AND KNOWLEDGE

T1 The functional and non-functional requirements of a customer encompassing:

- scope of the project,
- non-functional requirements

Note:

Examples include economics (time, cost) including total life-cycle costs - design, implementation (construction), maintenance (operation), decommissioning (recycling); aesthetics (quality)

T2 Design objectives (specifications) to satisfy a given set of customer attributes

Note:

Establishing the specifications by defining the problem and producing a solution to satisfy the customer.

T3 Creation of the design plan through solution synthesis by selecting or creating the solution

T4 Analysis

T5 Optimisation of the proposed solution

T6 Validations of the resulting design against the customer's needs

T7 Implementation of the selected design

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit of competency and must be read in conjunction with the performance criteria and the range statement of the unit of competency and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this Competency Standard Unit and shall be used in conjunction with all components parts of this unit and, performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment

is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with Industry and, Regulatory policy in this regard.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence need to be 'rich' in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practiced. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the "Assessment Guidelines – UEE11". Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace

procedures and practices including the use of risk control measures as specified in the performance criteria and range; and

- Apply sustainable energy principles and practices as specified in the performance criteria and range; and
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements. ; and
- Demonstrate an appropriate level of skills enabling employment; and
- Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures; and
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Modify-redesign of computer systems as described in 8) and including:

- A Developing outlines of alternative redesigns.
- B Developing the modified-redesigned system within the safety and functional requirements and budget limitations.
- C Documenting and presenting modifications-redesigns effectively.
- D Successfully negotiating system alteration requests.
- E Obtaining approval for final modified-redesigned system.
- F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this competency standard unit.

Resources required to assess this unit are listed above in Context of assessment', which should also be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment it must ensure that the conditions for assessment are authentic and as far as possible reproduce and replicate the workplace and is consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to modifying-redesigning computer systems.

Method of assessment 9.4)

This competency standard unit shall be assessed by methods given in Volume 1, Part 3 "Assessment Guidelines".

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this competency standard unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units 9.5)

There are no concurrent assessment recommendations for this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit of competency as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This competency standard unit shall be demonstrated in relation to modifying-redesigning computer systems across two different and representative types of computer systems and associated components, applications, and controls.

Generic terms are used throughout this Vocational Standard shall be regarded as part of the Range of Variables in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit
 Performance Criteria describe the required performance needed to demonstrate achievement of the element.
 Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria**ELEMENT****PERFORMANCE CRITERIA**

1 Prepare to set up and configure basic local area network.	1.1	OHS processes and procedures for a given work area are identified, obtained and understood.
	1.2	The extent of set-up and configuration work is determined from job specifications and in consultation with appropriate person(s).
	1.3	Appropriate personnel are consulted to ensure the work is coordinated effectively with others involved on the work site.
	1.4	Hardware and software needed for the work is obtained in accordance with established procedures and checked against job requirements.
	1.5	Preparatory work is checked to ensure no damage has occurred and complies with requirements.
2 Set up, configure and maintain basic local area network.	2.1	OHS risk control measures and procedures for carrying out the work are followed.
	2.2	Layout of network hardware, cabling and outlets is determined from job specifications or in consultation with appropriate person(s).

ELEMENT**PERFORMANCE CRITERIA**

- | | |
|-----|--|
| 2.3 | Hardware is installed in accordance with network requirements. (See Note 1) |
| 2.4 | Network software and protocols are installed and configured in accordance with network requirements. (See Note 2) |
| 2.5 | Network operations are tested and anomalies identified and corrected. |
| 2.6 | Reported network failures and faults are responded to and appropriate tools and methods are used to |
| 2.7 | Identified causes of reported problems are rectified and network is tested in accordance with established procedures. |
| 2.8 | Unexpected situations are dealt with safely and with the approval of an authorised person. |
| 2.9 | Set-up configuration and maintenance are carried out efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices. |
| 3 | Complete work and document activities. |
| 3.1 | OHS risk control work completion measures and procedures are followed. |
| 3.2 | Work site is cleaned and made safe in accordance with established procedures. |
| 3.3 | Network configuration and maintenance records are maintained in accordance with established procedures. |
| 3.4 | Service report is completed and forwarded to appropriate person(s) in accordance with established procedures. |

Notes.

1. Examples of hardware are network card, server, router, hub.
2. Examples of configuration are network protocols, user accounts and permissions, shared devices and security.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and to setting up and configuring a basic local area network.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-ED146A

Local area network fundamentals

Evidence shall show an understanding of local area network fundamentals to an extent indicated by the following aspects:

T1 Analogue and digital signals encompassing:

- How information is carried
- Signal distortion

Note.

Examples include attenuation, reflection, noise, dispersion, jitter, latency and collisions

T2 The OSI model for computer system interconnect

- Physical Layer
- Data Link Layer
- Network Layer
- Transport Layer
- Session Layer
- Presentation Layer
- Application Layer
- Purpose of the each layer of OSI Model
- Comparing TCP and IP
- TCP and UDP
- TCP segment format
- UDP segment format
- TCP Connection Methods

T3 Types of networks, network components and hardware

T4 Local Area Network (LAN) architectures

General principle of Local Area Network (LAN) encompassing:

- benefits of a LAN.

REQUIRED SKILLS AND KNOWLEDGE

- the elements of a LAN.
- the different types of network topology and their applications.

T5 Cabling and termination arrangements for a LAN system and define all the hardware requirements encompassing:

- Network standards:

Note.

Examples are 10/100 BASE T and 10/100 BASE F.

- Applications of different types of coaxial cable, twisted pair, optical fibre cable and microwave as the transmission medium for a LAN.

T6 Multiple access units and their function

Note.

Examples are hubs, switches, access points, routers and the like

T7 LAN Standards

Note.

Examples are Ethernet (IEEE 802.3) Token Ring (IEEE 802.5) Wireless Ethernet (IEEE 802.11).

T8 Basic principle of medium access methods such as polling, token passing and CSMA/CD.

T9 Current network operating systems available for establishing a LAN encompassing:

- Network protocols
- Concepts of TCP/IP addressing
- Peer-to-peer and server based
- Establishing workgroups.
- File and device sharing

T10 Network hardware installation methods encompassing:

- Installing network card
- Installing hubs, switches and routers

T11 Concepts and the hardware required for internet and worldwide web working LANs

T12 Network software installation and configuration methods encompassing:

- Loading and configuring operating software
- Basic configuration of router operating system
- Setting up user accounts and permissions
- Establishing security

T13 Network testing and diagnostic tools and methods

T14 Networking protocols

REQUIRED SKILLS AND KNOWLEDGE

- T15 Network signal propagation
- T16 Basics of Encoding Networking Signals
- T17 IP addressing and subnetting

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects
of evidence
required to
demonstrate
competency in
this unit** 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:

- Set up and configure basic local area network as described in 8) and including:
 - A Establishing the extent of work accurately.
 - B Obtaining specified hardware and software.
 - C Laying out network appropriately.
 - D Installing hardware as specified.
 - E Installing and configuring software to requirements.
 - F Identifying and correcting anomalies.
 - G Diagnosing and rectifying the cause of malfunctions effectively.
 - H Documenting network activities.
 - I Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to setting up and configuring basic local area

network.

**Method of
assessment** **9.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent
assessment and
relationship with
other units** **9.5)**

There are no concurrent assessment recommendations for this unit.

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers developing energy sector directory services to support centralised management and security, centralised authentication, information security and single sign on for network users, and standardised access to application data. It encompasses safe working practices, configuring directory integrated Domain Name System (DNS), installing and configuring directory services infrastructure, directory roles and services, creating and managing directory objects, maintaining the directory services environment, configuring certificate services, and documenting development activities.

Note:

This unit applies to all aspects of energy sector engineering applications only. For general competencies related to Information Technologies refer to the latest endorsed IT Training Package.

Application of the Unit

Application of the Unit 2)

This unit applies to any recognised development program that leads to the acquisition of a formal award at AQF level 5 or higher.

Licensing/Regulatory Information

License to practice 3)

License to practice 3)

The skills and knowledge described in this unit do not require a license to practice in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Pre-Requisites**Prerequisite Unit(s) 4)****Competencies 4.1)**

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE1 Apply Occupational Health Safety
01A regulations, codes and practices in the
workplace

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 5 Writing 5 Numeracy 5

Employability Skills Information**Employability Skills 5)**

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit
 Performance Criteria describe the required performance needed to demonstrate achievement of the element.
 Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to develop energy sector directory services.	<p>1.1 OHS processes and procedures for a given work area are identified, obtained and understood.</p> <p>1.2 Established OHS risk control measures and procedures are followed in preparation for the work.</p> <p>1.3 The extent of directory services to be developed is determined from network performance specifications and in consultation with relevant persons.</p> <p>1.4 Activities are planned to meet scheduled time lines in consultation with others involved in the work.</p> <p>1.5 Appropriate development tools and software are selected based on specified requirements and performance standard.</p> <p>1.6 Strategies are implemented to ensure network development is carried out efficiently.</p>
2 Install, configure and manage energy sector directory services.	<p>2.1 OHS risk control measures and procedures for carrying out the work are followed.</p> <p>2.2 Knowledge and complexities of directory services are applied to developing a directory services infrastructure.</p>

ELEMENT**PERFORMANCE CRITERIA**

- | | |
|------|--|
| 2.3 | Structural components of directory services are installed and configured in compliance with industry standards and variants as specified for the network. (Notes 1 and 2) |
| 2.4 | Management components of directory services are configured in compliance with industry standards and requirements specified for the network. (See Note 3) |
| 2.5 | Security components of directory services are created using appropriate policy tools in compliance with current industry standards and requirements specified for the network. |
| 2.6 | Directory service malfunctions are identified and rectified using logical techniques and drawing knowledge of complex network infrastructure. |
| 2.7 | Directory services are monitored and solutions are developed to optimise network performance and reliability in accordance with established procedures. |
| 2.8 | Security events are analysed and actions taken in accordance with established policy. |
| 2.9 | Approaches to issues/problems are analysed to provide most effective solutions. |
| 2.10 | Quality of work is monitored against personal performance agreement and/or established organisational or professional standards. |
| 3 | Report network administration activities |
| 3.1 | Written justification is produced for directory services development activities and appropriate person/s notified in accordance with established procedures. |
| 3.2 | Network service development records are maintained in accordance with established procedures. |

Notes.

1. Examples of structural components may include domains, domain controllers, sites, subnets, site links, connection objects, Organisational units and DNS.

ELEMENT**PERFORMANCE CRITERIA**

2. Examples of configuring may include site memberships global catalogue designation, zones for dynamic and secure dynamic updates and creation and configuration of DNS records.

3. Management components may include Management consoles, Active Directory Users and Computers, Domains and Trusts, Sites and Services

Required Skills and Knowledge**REQUIRED SKILLS AND KNOWLEDGE**

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and developing energy sector network services.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-ED147A**Energy sector directory services**

Evidence shall show an understanding of directory services to an extent indicated by the following aspects:

T1 Configuring directory service integrated Domain Name System (DNS)

- Configuring zones
- Configuring DNS server settings
- Configuring zone transfers and replication

T2 Configuring the directory services infrastructure

- Configuring logical directory topologies
- Configuring trust relationships
- Configuring physical site topology infrastructure
- Configuring directory replication
- Configuring directory services master roles

T3 Configuring directory service roles and services

- Configuring authentication servers
- Configuring command line server installations
- Configuring rights management
- Configure domain controllers
- Configure trust policies

REQUIRED SKILLS AND KNOWLEDGE

T4 Creating and maintaining directory service objects

- Creating and maintaining accounts
- Create and apply policy objects
- Configure policy templates
- Deploy and manage software using policies
- Configure account policies

T5 Maintaining the directory services environment

- Configure backup and recovery for directory services
- Perform off-line maintenance
- Monitor the directory service

T6 Configure certificate services

- Install certificate services
- Configure the certification authority (CA) server settings
- Manage certificate templates
- Manage certificate enrolments
- Manage certificate revocations

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency

in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgement.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the time frames typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range

statement

- Apply sustainable energy principles and practices as specified in the performance criteria and range statement
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Develop energy sector directory services as described in 8) and including:

- A Configuring directory integrated name resolution.
- B Installing and configuring a directory services infrastructure.
- C Configuring directory services roles and services.
- D Creating and maintaining directory services objects.
- E Maintaining the directory environment
- F Configuring certificate services
- G Documenting directory services development activities.
- H Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor certification may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to developing energy sector directory services.

Method of assessment 9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units 9.5)

There are no concurrent assessment recommendations for this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation developing and managing energy sector directory services for a network that is to provide centralised management and security, centralised authentication, information security and single sign on for network users, and standardised access to application data.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not applicable.

Competency Field

Competency Field	11)

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers development and documentation of industrial computer systems project proposals, milestones and completions. The unit encompasses, establishing budgets, critical path analysis, development of workflow strategies, documenting, presenting and negotiating budgets and timelines.

Application of the Unit

Application of the Unit 2)

This unit is intended for competency development entry-level employment-based programs incorporated in approved contracts of training. It applies to any formal recognition for this standard at the aligned AQF 6 level or higher.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit do not require a license to practice in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Pre-Requisites

Prerequisite Unit(s) 4)

Competencies 4.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEE1 01A Apply Occupational Health Safety regulations, codes and practices in the workplace

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 5 Writing 5 Numeracy 5

Employability Skills Information

Employability Skills 5)

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit

Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to plan project.	<p>1.1 OHS processes and procedures for a given work area are identified, obtained and understood.</p> <p>1.2 Established techniques for project planning are reviewed are adopted in accordance with organisation policies.</p> <p>1.3 The extent of the project is established from design brief, specification and/or other relevant documentation and from discussions with appropriate person(s).</p>
2 Develop project plan proposal.	<p>2.1 Estimated plant, material, labour and other costs are sought and obtained from appropriate person(s) in accordance with organisation policies and procedures.</p> <p>2.2 Project budget is established from estimated plant, material, labour and other costs in accordance with organisation policies and procedures.</p> <p>2.3 Knowledge of critical path analysis is applied to developing workflow strategies.</p> <p>2.4 Sources and availability of materials and human resources needed for the project are established in accordance with organisation policies and procedures.</p> <p>2.5 Risk management strategies are sought and obtained for incorporating into the project plan.</p> <p>2.6 Project plan is reviewed against all inputs and adjusted to rectify any anomalies.</p> <p>2.7 Project plan proposal is documented in accordance with organisation policies and procedures.</p>
3 Obtain approval for project plan.	3.1 Project plan is presented and discussed with person(s) of higher authority.

ELEMENT**PERFORMANCE CRITERIA**

- 3.2 Alterations to the project plan resulting from the presentation/discussion are negotiated with person(s) of higher authority within the constraints of organisation's policy.
- 3.3 Final project plan is documented and approval obtained from appropriate person(s).

Required Skills and Knowledge**REQUIRED SKILLS AND KNOWLEDGE**

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and planning computer systems projects.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-ED148A**Industrial Computer Systems Project****Planning**

Evidence shall show an understanding of project planning to an extent indicated by the following aspects:

- T1 Purpose of project planning
- T2 Documents needed to plan a project
- T3 Factors influencing sequence and restraints of project activities
- T4 Critical path analysis encompassing:
- Graphical representation methods
 - Methods of representing time/rates

Evidence Guide**EVIDENCE GUIDE**

9) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction

EVIDENCE GUIDE

with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in 9.2)

this unit

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Plan computer systems projects as described in 8) and including:
 - A Determining the project requirements accurately.
 - B Establishing a project budget.
 - C Developing effective work flow strategies.
 - D Documenting project plan proposal.
 - E Negotiating alterations to the proposed project plan successfully.
 - F Obtaining approval of the final plan.
 - G Dealing with unplanned events by drawing on

essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to planning computer systems projects.

Method of assessment 9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary

equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent
assessment and
relationship with
other units** 9.5)

There are no concurrent assessment recommendations for this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to a planning of a computer system project that is representative, with not less than the following features:

- Security
- Redundancy
- Scalability
- 100 users
- Catering multiple operating systems

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Elements and Performance Criteria Pre-Content

- 6) Elements describe the essential outcomes of a competency standard unit. Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to develop a network applications infrastructure.	<p>1.1 OHS processes and procedures for a given work area are identified, obtained and understood.</p> <p>1.2 Established OHS risk control measures and procedures are followed in preparation for the work.</p> <p>1.3 The extent of network application infrastructure to be developed is determined from network performance specifications and in consultation with relevant persons.</p> <p>1.4 Activities are planned to meet scheduled time lines in consultation with others involved in the work.</p> <p>1.5 Appropriate development tools and software are selected based on specified requirements and performance standard.</p> <p>1.6 Strategies are implemented to ensure network development is carried out efficiently.</p>
2 Install, configure and manage applications infrastructure components.	<p>2.1 OHS risk control measures and procedures for carrying out the work are followed.</p> <p>2.2 Knowledge and complexities of network applications infrastructure are applied to developing the network.</p> <p>2.3 Network applications infrastructure components in current use and installed and configured in compliance with industry standards and variants</p>

ELEMENT

PERFORMANCE CRITERIA

as specified for the network. (See Note 1)

- | | |
|------|---|
| 2.4 | Management components of the network applications infrastructure are configured in compliance with current industry practices and requirements specified for the network. |
| 2.5 | Security components of network the network applications infrastructure are created in compliance with current industry practices and requirements specified for the network. (See Note 2) |
| 2.6 | Network malfunctions are identified and rectified using logical techniques and drawing knowledge of complex network infrastructure. |
| 2.7 | Network is monitored and solutions are developed to optimise network performance and reliability in accordance with established procedures. |
| 2.8 | Security events are analysed and actions taken in accordance with established policy. |
| 2.9 | Approaches to issues/problems are analysed to provide most effective solutions. |
| 2.10 | Quality of work is monitored against personal performance agreement and/or established organisational or professional standards. |
| 3 | Report network administration activities |
| 3.1 | Written justification is produced for network services development activities and appropriate person/s notified in accordance with established procedures. |
| 3.2 | Network applications infrastructure development records are maintained in accordance with established procedures. |

Notes.

1. Examples of network applications infrastructure components may include Windows Deployment services, KMS servers, virtualisation, remote access services, Internet Information Server (IIS), streaming media services, Microsoft Share Point.

ELEMENT

PERFORMANCE CRITERIA

2. Examples of security components may include KMS servers, certificate configurations, authorisation policies, Group Policy, SSL security.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and developing energy sector network services.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-ED149A **infrastructure**

Energy sector computer network applications

Evidence shall show an understanding of network applications infrastructure to an extent indicated by the following aspects:

T1 Deploying network servers:

- Install from media
- Use automated installation services
- Deploy servers using imaging
- Dynamic driver provisioning
- Operating system activation
- Configuring virtual servers
- Failover clustering and load balancing
- Storage technologies

T2 Remote desktop services

- Provide access to remote resources
- Configure remote application access
- Provide authorisation and single sign on (SSO)
- Remote desktop authorisation policies
- Monitor remote desktop resources
- Configure allocation of resources using resource management tools
- Configure remote desktop licensing

REQUIRED SKILLS AND KNOWLEDGE

T3 Configure a web services infrastructure

- Configure web applications
- Manage web sites
- Manage virtual directories
- Configure web applications
- Configure FTP services
- Configure SMTP services
- Create service accounts
- Manage web server technologies
- Configure backup and restore options
- Configure certificate security
- Configure web authentication and permissions

T4 Configure network application services

- Manage streaming media services
- Configure on demand replication
- Configure multicast streaming
- Secure streaming media
- Provide encryption methodologies
- Configure rights management
- Configure content management systems (CMS)
- Configure a document library
- Configure network applications

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment,

such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgement.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. - 6) Elements describe the essential outcomes of a competency standard unit. Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | |
|---|--|
| 1 Prepare to develop control programs for microcomputer equipped devices. | 1.1 OHS processes and procedures for a given work area are identified, obtained and understood. |
| | 1.2 Established OHS risk control measures and procedures are followed in preparation for the work. |
| | 1.3 The extent of development work is determined from design brief and in consultation with relevant persons. |
| | 1.4 Development work is planned to meet scheduled timelines in consultation with others involved on the work site. |
| | 1.5 Appropriate development tools and software are selected based on specified requirements and performance standards. |
| | 1.6 Materials and devices/components required for the work are selected on compatibility of specifications with control requirements and project budget constraints. |
| | 1.7 Strategies are implemented to ensure development work is carried out efficiently. |
| 2 Develop control programs. | 2.1 OHS risk control measures and procedures for carrying out the work are followed. |
| | 2.2 Knowledge of computer-equipped devices and systems and compliance standards are applied to the design. |

ELEMENT

PERFORMANCE CRITERIA

- | | | | |
|---|--|--|---|
| | 2.3 | Alternative arrangements for the development are considered based on the requirements outlined in the design brief. | |
| | 2.4 | Safety, functional and budget considerations are incorporated in the design. | |
| | 2.5 | Prototype devices and circuits are constructed and tested for compliance with the design brief and regulatory requirements. | |
| | 2.6 | Knowledge of programming language code, functions and features in current use are applied to developing control programs. | |
| | 2.7 | Prototype malfunctions are rectified and re-tested to ensure effective operation of design. | |
| | 2.8 | Program development is documented for submission to appropriate person(s) for approval | |
| | 2.9 | Approaches to issues/problems are analysed to provide most effective solutions. | |
| | 2.10 | Quality of work is monitored against personal performance agreement and/or established organisational or professional standards. | |
| 3 | Test, evaluate, implement and document control programs. | 3.1 | Testing and procedures are developed to evaluate control program. |
| | | 3.2 | Problems and bugs in program are identified and rectified to ensure specifications are met. |
| | | 3.3 | Intermediate and final work reports are written in accordance with professional standards and presented to appropriate person(s). |

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this

REQUIRED SKILLS AND KNOWLEDGE

- arrays and strings
- user-defined data types

T10 Interfacing high-level languages to assembler encompassing:

- in-line assembly.
- bit manipulation
- IO port addressing

T11 Interrupt Service Routines

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment

- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Develop control programs for microcomputer equipped devices as described in 8) and including:
 - A Determining the extent of development work requirements.
 - B Identifying the appropriate development tools and software.
 - C Selecting devices/components compatibility with control requirements and project budget constraints.
 - D Developing control program within the safety and functional requirements and budget limitations.
 - E Documenting and presenting program development effectively.
 - F Successfully negotiating program alteration requests.
 - G Obtaining approval for final program developed.
 - H Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to developing control programs for microcomputer equipped devices.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

There are no concurrent assessment recommendations for this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to developing control programs for microcomputer equipped devices with at least five interacting functions and using a programming language currently used in industry.

Note.

RANGE STATEMENT

Although 'C' and assembler languages are preferred, other relevant language in current industry use may be used.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers developing, implementing and testing programming solutions, using a structured programming language. It encompasses following design brief using appropriate development software, writing code and documenting development activities.

Note 1:

Typical engineering problems are those encountered in meeting requirements in a design brief, meeting performance requirements and compliance standards, revising a systems operating parameters and dealing with system malfunctions.

Note 2:

This unit applies to all aspects of Electrotechnology – engineering applications only. For general competencies related to Information Technologies refer to the latest endorsed IT Training Package.

Application of the Unit

Application of the Unit 2)

This unit applies to any recognised development program that leads to the acquisition of a formal award at AQF level 5 or higher.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit do not require a license to practice in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Pre-Requisites

Prerequisite Unit(s) 4)

Competencies 4.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE1 01A Apply Occupational Health Safety regulations, codes and practices in the workplace

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 5 Writing 5 Numeracy 5

Employability Skills Information

Employability Skills 5)

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the

Employability Skills

5)

qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit

Performance Criteria describe the required performance needed to demonstrate achievement of the element.

Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1 Prepare to develop programming solution.

1.1 OHS processes and procedures for a given work area are identified, obtained and understood.

1.2 Established OHS risk control measures and procedures are followed in preparation for the work.

1.3 The extent of engineering problem is determined from performance specifications and situation reports and in consultation with relevant persons.

1.4 Activities are planned to meet scheduled timelines in consultation with others involved in the work

1.5 Appropriate development kit and software tools are selected based on specified requirements and performance standard.

1.6 Strategies are implemented to ensure programming is carried out efficiently.

2 Develop programming solutions.

2.1 OHS risk control measures and procedures for carrying out the work are followed.

2.2 Knowledge of programming functions and

ELEMENT

PERFORMANCE CRITERIA

		features are applied to providing a programming solution.
	2.3	Code in existing programs is analysed and modifications or corrections made to rectify program performance.
	2.4	Key features of the programming language are applied to develop and test solutions. (Note)
	2.5	Approaches to issues/problems are analysed to provide most effective solutions.
	2.6	Quality of work is monitored against personal performance agreement and/or established organisational or professional standards.
3	Test and document the programming solutions.	
	3.1	Testing procedures are developed to analyse code developed in relevant programming language.
	3.2	Problems and bugs in program are rectified to ensure compliance with program performance requirements.
	3.3	Intermediate and final work reports are written in accordance with professional standards and presented to appropriate person(s).

Note:

1. Key features include that features classes, inheritance, polymorphism, arrays and packages.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and provide programming solution for engineering problems.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

REQUIRED SKILLS AND KNOWLEDGE

KS01-ED151A applications

High level programming for engineering

Evidence shall show an understanding of control programming fundamentals and high-level language programming as it is applied to engineering applications to an extent indicated by the following aspects:

- T1 Control applications of software
- T2 Software terminology
- T3 Programming languages currently used by industry
- T4 Program development

Note:

Examples may include flowcharts, pseudocode, algorithms

T5 Programming concepts encompassing:

- programming structure
- documentation
- compiling source code
- generating executable files
- scalar and structured data types
- constants and variables
- reading from keyboard and writing to screen
- arithmetic, relational and logical operations
- making decisions
- looping operations
- programming to access external devices via I/O boards
- functions

Note:

Examples may include macros; global and local variables, auto and static variables; Intrinsic functions used in control; Writing functions; Linking in external functions to control hardware

- numerical and character arrays

T6 Complex data types and structures encompassing:

- Pointers/references
- arrays and strings
- user-defined data types

T7 Interfacing high-level languages to assembler encompassing:

- in-line assembly.
- bit manipulation
- IO port addressing

REQUIRED SKILLS AND KNOWLEDGE

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to

safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Provide programming solution for engineering problems as described in 8) and including:

- A Understanding the engineering programming problem.
- B Using all key features of programming language.
- C Developing testing procedures.
- D Identifying problems and bugs in code.
- E Rectifying problems and bugs in code.
- F Writing intermediate and final documents in accordance with professional standards.
- G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry

practices in relation to providing programming solution for engineering problems.

Method of assessment **9.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units **9.5)**

There are no concurrent assessment recommendations for this unit

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to providing programming solution for engineering problems in any high level programming language used in engineering applications.

Note:

Example of programming languages are 'C', and object oriented languages such as 'C++', Java and Visual Basic.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

systems.

- | | |
|-----|--|
| 2.2 | Knowledge of embedded devices and systems and compliance standards are applied to the design. |
| 2.3 | Alternative arrangements for the design are considered based on the requirements outlined in the design brief. |
| 2.4 | Safety, functional and budget considerations are incorporated in the design. |
| 2.5 | Prototype devices and circuits are constructed and tested for compliance with the design brief and regulatory requirements. |
| 2.6 | Prototype malfunctions are rectified and retested to ensure effective operation of design. |
| 2.7 | Embedded system design is documented for submission to appropriate person(s) for approval. |
| 2.8 | Solutions to unplanned situation are provided consistent with organisation policy. |
| 3 | Obtain approval for embedded systems design. |
| 3.1 | Embedded system design is presented and explained to client representative and/or other relevant person(s). |
| 3.2 | Requests for design modifications are negotiated with relevant person(s) within the constraints of organisation policy. |
| 3.3 | Final design is documented and approval obtained from appropriate person(s). |
| 3.4 | Quality of work is monitored against personal performance agreement and/or established organisational or professional standards. |

Note.

Prototype construction includes programming some devices.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and designing embedded controller systems.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-ED152A

Embedded microcontroller programming

Evidence shall show an understanding of microprocessor assembly language and high-level language programming as it is applied to engineering applications to an extent indicated by the following aspects:

T1 CPU Architecture

- registers.
- instruction set considerations, common and advanced instructions.
- addressing modes supported: direct, indirect, indexed etc.
- software interrupts and system calls.

T2 Processor And System Support

- instruction pre-fetch pipeline.
- system timer chip, function and programming.
- hardware interrupts programming considerations.
- DMA devices and support.
- co-processors and bus interface.

T3 Modular Programming

- separately compiled and linked assembly language modules.
- library modules.
- macros.

T4 Documentation And Debugging

- system specification and documentation
- debugging and tracing program execution

T5 Complex data types and structures encompassing:

- Pointers/references
- arrays and strings
- user-defined data types

T6 Interfacing high-level languages to assembler encompassing:

ELEMENT	PERFORMANCE CRITERIA
	person(s)
	2.4 Hardware is set up in accordance with network requirements (See Note 1)
	2.5 Biometric devices are set up and configured in accordance with network requirements.
	2.6 Biometric devices on a network are tested and anomalies identified and corrected.
	2.7 Biometric device failures are responded to and rectified in accordance with requirements.
	2.8 Essential knowledge and associated skills required to set up and test biometric devices are applied to ensure work is carried out efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.
	2.9 Identified causes of reported problems are rectified and biometric devices are tested in accordance with established procedures.
	2.10 Unexpected situations are dealt with safely and with the approval of an authorised person.
	2.11 Biometric device installation and set-up are carried out efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.
3 Complete set up, test and report.	3.1 OHS risk control work completion measures and procedures are followed.
	3.2 Work area is cleaned and made safe in accordance with established procedures.
	3.3 Biometric device installation and maintenance records are maintained in accordance with established procedures.
	3.4 Service report is completed and forwarded to appropriate person(s) in accordance with established procedures.

ELEMENT**PERFORMANCE CRITERIA**

Note 1:

Connection of equipment may include both plug connected power supply and network

Required Skills and Knowledge**REQUIRED SKILLS AND KNOWLEDGE**

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and setting up and testing biometric devices.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-ED153A**Biometric devices**

Evidence shall show an understanding of biometric devices to an extent indicated by the following aspects:

T1 Biometrics techniques and processes including definitions, terminology, advantages, disadvantages and applications

Note.

Includes basic principles of database design, software techniques, classifier combination, feature extraction, feature enhancement, chain code methods, image analysis, biometric transforms, matching techniques, verification and identification, biometric tools, statistical measures of biometrics

T2 Biometric device tools, software and testing techniques

T3 Physical interaction with biometric devices including operation and installation of biometric devices examples are iris scanners, hand scanners voice recognition apparatus, facial recognition devices and like equipment

T4 Legal aspects of biometrics

- Australian laws impacting on biometrics security and privacy legislation.
- Australian standards

Evidence Guide**EVIDENCE GUIDE**

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Set up and test biometric devices as described in 8) and including:
 - A Placing equipment in accordance with regulatory and customer requirements.
 - B Applying knowledge of relevant legislation, standards and/or codes of practice pertaining to security and privacy associated with biometric devices

- C Selecting appropriate equipment.
- D Entering functions and parameters in accordance with requirements.
- E Testing and verifying functional operation of device(s).
- F Responding to system anomalies to effect functionality of device(s) according to requirements.
- G Completing necessary documentation including handing over equipment maintenance and operating instructions documents to the customer.
- H Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the

approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to setting up and testing biometric devices.

Method of assessment **9.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units **9.5)**

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in unit UEENEE101A and other discipline specific occupational health and safety units shall be incorporated in relation to this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to setting up and testing four different types of biometric device.

Note.

Examples of biometric devices are iris recognition scanners, palm print scanners, signature readers, voice recognition devices, data capture devices.

Generic terms used throughout this Vocational Standard shall be regarded as part of

RANGE STATEMENT

the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers analysing and implementing the various established biometric techniques and applications as implemented in the field of biometric measurements. This is achieved through evaluation of the major biometric system from enrolment phase, interaction with the operator and subject, to decision making. It encompasses safe working practices, following written and oral instructions and procedures, applying knowledge of biometric systems then implementing, testing and evaluating their performance while documenting outcomes.

Application of the Unit

Application of the Unit 2)

This unit applies to any recognised development program that leads to the acquisition of a formal award at AQF level 5 or higher.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit do not require a license to practice in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and where

License to practice

3)

applicable contracts of training such as apprenticeships.

Pre-Requisites

Prerequisite Unit(s)

4)

Competencies

4.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEED1 02A Assemble, set up and test computing devices

UEENEED1 46A Set up and configure basic local area network (LAN)

UEENEED1 53A Set up and test biometric devices

UEENEEE1 01A Apply Occupational Health Safety regulations, codes and practices in the workplace

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills

4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 5 Writing 5 Numeracy 5

Employability Skills Information

Employability Skills 5)

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit
Performance Criteria describe the required performance needed to demonstrate achievement of the element.
Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | |
|---|---|
| 1 Prepare to analyse and implement biometric techniques and applications. | 1.1 OHS processes and procedures for a given work area are identified, obtained and understood. |
| | 1.2 Established OHS risk control measures and procedures are followed in preparation for the work. |
| | 1.3 Consideration is given to technical factors that will have an impact on the design and system rollout in criminal, civil and commercial settings. |
| | 1.4 Technical and physical requirements of a biometric system required for efficient implementation and system rollout are identified |
| | 1.5 Existing and planned technical and environmental goals of the enterprise are evaluated and documented. |

ELEMENT

PERFORMANCE CRITERIA

- | | |
|-----|---|
| 1.6 | Work team/group is arranged of appropriately competent persons in accordance with skills required to meet work outcomes and organisation's established procedures. |
| 1.7 | Activities are planned to meet scheduled timelines in consultation with others involved in the work. |
| 1.8 | Correct operation and safety of software, tools, equipment, and testing devices needed to carry out the work are obtained and checked in accord requirements. |
| 1.9 | Work supervisor or customers are consulted to determine which functions of the system are to be used and the parameters of each and seek written confirmation. |
| 2 | Analyse and implement biometric techniques and applications |
| 2.1 | OHS risk control measures and procedures for carrying out the work are followed. |
| 2.2 | Knowledge of technology and the processes of implementation used with biometric systems are applied in analysing and implementing biometric techniques and applications according to requirements. |
| 2.3 | Performance of landline versus mobile telephony in association with biometric systems is analysed.

Note:
Analysis and evaluation to incorporate development process, target enrolment, identification and verification, system installation requirements, software, equipment requirements and instructions for the biometric system. |
| 2.4 | Safety, functional and budgetary considerations are incorporated in the installation design plan analysis and evaluation. |
| 2.5 | Hardware and software required for the |

ELEMENT

PERFORMANCE CRITERIA

- biometric system are analysed and implemented in accordance with the developed plan and established procedures.
- 2.6 Australian and International standards and/or codes of practice are used to evaluate compliance.
- 2.7 Practical aspects and limitations of biometric system implementation are demonstrated through the use of multi-biometrics.
- 2.8 Location of each device in the installation of the biometric system to ensure correct operation of system functions is documented.
- 2.9 Solutions to unplanned situation are provided that are consistent with legal requirements and established procedures.
- 3 Report on biometric system analysis and implementation
- 3.1 Hardware and software required for the biometric system are analysed for compliance requirements and in accordance with OHS requirements and established procedures
- 3.2 Activities are planned to meet scheduled timelines in consultation with others involved in the work.
- 3.3 Possible system malfunctions are identified during system analysis and implementation using logical techniques drawing on knowledge of biometric systems.
- 3.4 Approaches to issues/problems are analysed to provide most effective solutions.
- 3.5 Work completion is documented and notified appropriate person(s) or persons in accordance with established procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and analysing and implementing biometric techniques and applications for in field use.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-ED154A Biometric Equipment/Systems Techniques and Applications

Evidence shall show an understanding of automatic data capture and biometric systems techniques and applications to an extent indicated by the following aspects:

- T1 Forms of automatic data capture, advantages and disadvantages
 - T2 Selection of barcodes from standards
 - T3 Suitability of automatic data capture equipment including readers, printers, ancillary devices and radio frequency for various applications
 - T4 Interfacing issues between systems involving different hardware and software
 - T5 Functional design and construction of a simple system
 - T6 Complex biometric systems technology applications used in forensics, genetics, civil and commercial environments,, government departments and defence for verification of identities, encompassing:
 - Voice Recognition
 - Speech Recognition
 - Handwriting Analysis
 - Signature Verification
 - DNA Technology
 - Multi-biometrics
- Note.
- Examples of biometrics system technologies used including voice recognition interfacing components and hardware, speech extraction and evaluate speech recognition system performance, handwriting digitizers tablets, hardware and software used in signature verification, DNA technology in biometric systems,
- T7 Technical principles, parameters, and processes underpinning each biometric system technology in identity and verification recognition
 - T8 Typical selection, evaluation and testing criterion and methods of biometrics systems, encompassing:
 - comparative features of selection, evaluation and testing methods of various biometrics systems
 - vendor claims, product suitability and product specifications

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment

Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Analyse and implement biometric techniques and applications as described in 8) and including:
 - A Evaluating fingerprint matching, palm print analysis, hand geometry investigation, facial verification, iris recognition, retinal scan, voice recognition, speaker verification, handwriting analysis, signature verification, DNA technology

- techniques and applications for in field of biometric use
- B Implementing advice of fingerprint matching, palm print analysis, hand geometry investigation, facial verification, iris recognition, retinal scan, voice recognition, speaker verification, handwriting analysis, signature verification, DNA technology techniques and applications for in field of biometric use
- C Any two of the following features:
- analysis and evaluation development process
 - target enrolment
 - identification and verification
 - system installation requirements
 - software requirements
 - equipment requirements and instructions
- D Applying knowledge of relevant legislation, standards and/or codes of practice pertaining to security and privacy associated with biometric system techniques and applications
- E Documenting and recording results in accordance with requirements
- F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to analysing and implementing a biometric system for in field use.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and developing biometric system installation, instructions and validating requirements of biometric systems.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-ED155A

Biometrics and Security

Evidence shall show an understanding of biometrics equipment techniques and applications and biometric and security to an extent indicated by the following

REQUIRED SKILLS AND KNOWLEDGE

aspects:

T1 Technology applications used in forensics, genetics, civil and commercial environments and government departments for verification of identities, encompassing:

- Fingerprint matching
- Palm Print
- Hand Geometry
- Face Verification
- Iris Recognition
- Retina Scan

Note.

Examples of biometrics equipment technology used including scanning and digitizing of samples, enhancement of captured data, feature extraction, classification, matching, searching and manual verification

T2 Technical principles, parameters, and processes underpinning each of the above technologies in identity recognition

T3 Typical selection, evaluation and testing criterion and methods of biometrics equipment, encompassing:

- comparative features of selection, evaluation and testing methods of various classes of equipment
- vendor claims, product suitability and product specifications

T4 Compliance requirements for implementing security on personal computers and computer networks

T5 Compliance requirements for securing voice over the internet

T6 Compliance requirements for assuring IT network security and capital planning measures encompassing:

- security risks versus investment risks,
- investment management life cycle
- capital management and investment control
- alternatives and budget analyses of IT security

T7 Security implementation encompassing:

- biometrics in law and relationship with legislation
- trusted networks, cryptography and data security characteristics
- advanced authentication, digital certificates and digital signatures
- cost comparison and evaluative analysis

T8 Laws, standards and compliance guidelines encompassing:

- international
- national

REQUIRED SKILLS AND KNOWLEDGE

- local
- codes
- institutional

T9 Preparing and selecting a vendor encompassing:

- client needs analysis
- project parameters according to business needs analysis
- project goals and criteria
- tender process management
- project monitoring and evaluation

T10 Deployment principles for rollout of Biometrics system(s) encompassing:

- scalability and manageability
- trailing and testing
- commissioning
- compliance documentation

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside

the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement

- Apply sustainable energy principles and practices as specified in the performance criteria and range statement
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Develop and validate biometric equipment/systems installation as described in 8) and including:
 - A Evaluating operating functions and parameters
 - B Selecting appropriate equipment.
 - C Any two of the following features:
 - securing computer networks
 - data base design
 - measurement of a biometric system
 - equipment requirements and instructions
 - D Entering functions and parameters correctly.
 - E Testing and verify system operation.
 - F Correcting system anomalies effectively.
 - G Applying knowledge of relevant legislation, standards and/or codes of practice pertaining to security and privacy associated with biometric system techniques and applications
 - H Documenting and recording results in accordance with requirements
 - I Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to developing and validating biometric equipment/systems installation.

Method of assessment 9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units 9.5)

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers methods for keeping up-to-date with developments in electrotechnology-adopted technologies, standards and safety that affect the currency of competencies held. It encompasses accessing relevant information and skills and using formal and informal ways of acquiring this information and skills.

Application of the Unit

Application of the Unit 2)

This competency standard is suitable for employment-based programs under an approved contract of training at the AQF level of the qualification in which the unit is first packaged or higher.

The unit may be selected as an elective from the relevant schedule (see qualification packaging rules) provided that all prerequisite units are undertaken or addressed through recognition processes.

This unit may be included in a skill set provided that it is listed in the schedule of electives (see Qualification Framework) and all prerequisite units are undertaken or addressed through recognition processes.

Delivery and assessment of this unit should be undertaken within regard to the requirements of License to Practice

Application of the Unit 2)

(1.2 above), Prerequisite Competencies and Literacy and Numeracy skills (2 above) and the recommendations for concurrent assessment and relationship with other units (9.5 below).

Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting, risk safety measures etc.

Licensing/Regulatory Information**License to practice 3)**

The skills and knowledge described in this unit require a license in the relevant discipline to practice in the workplace. Also, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Pre-Requisites**Prerequisite Unit(s) 4)****Competencies 4.1)**

Prerequisite Unit(s) 4)

Competency in this unit can only be gained by persons who have a licence to practice in an electrotechnology discipline.

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 4 Writing 4 Numeracy 4

Employability Skills Information

Employability Skills 5)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a unit of competency

Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1 Prepare to apply

1.1 Areas of work activity that may be affected by

ELEMENT	PERFORMANCE CRITERIA
methods to maintain currency of industry developments	outdated methods and knowledge are identified.
	1.2 Information and advice is sought on the effects of current legislated requirements on work outcomes.
	1.3 Sources of information related to technical and regulatory developments are investigated.
2 Apply methods to maintain currency of industry developments	2.1 Methods are used to ensure that the application of OHS policies complies with current regulations, codes and practices.
	2.2 Methods are used to ensure technical aspects of work undertaken are aligned to current practices and comply with current regulations.
	2.3 Methods are used to ensure managerial aspects of work undertaken are aligned to current practices and comply with current regulations.
	2.4 Formally recognised methods for maintaining currency of industry developments are identified and applied.
	2.5 Maintenance of current knowledge and practices for the work undertaken is documented in accordance with formally recognised processes.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and applying methods to maintain currency of industry developments.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EE006B Requirements and methods for maintaining currency in industry developments

Evidence shall show an understanding of requirements and methods for maintaining

REQUIRED SKILLS AND KNOWLEDGE

currency in industry developments to an extent indicated by the following aspects:

- Requirements to maintain currency in industry practices and products encompassing:
 - Regulatory
 - Industry
 - Professional/Association
 - Other
- Sources of information in industry changes and new developments encompassing:
 - Legislation and regulation
 - Technical Standards
 - Codes and industry/work practices and processes
 - Manufacture's product catalogues and instruction manuals
 - Industry Journals
 - Safety and environmental issues
- Currency of technology, machinery, equipment and tools applications and uses
- Acceptable methods of formally maintaining currency

Note.

1. Examples are formal industry refresher programs, industry seminars, product promotion programs and the like.
2. Acceptable methods may vary in different jurisdictions

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or

EVIDENCE GUIDE

final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement

EVIDENCE GUIDE

- Apply sustainable energy principles and practices as specified in the performance criteria and range statement
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Apply methods to maintain currency of industry developments in 8) and including:
 - A Identifying areas of work affected by outdated methods and knowledge.
 - B Using methods to ensure current OHS practices are applied.
 - C Using methods to ensure technical aspects of work are aligned to current practices and comply with current regulations.
 - D Using methods to ensure managerial aspects of work undertaken are aligned to current practices and comply with current regulations.
 - E Applying formally recognised methods to maintain currency of industry developments.
 - F Documenting maintenance of current knowledge and practices for the work undertaken appropriately.
 - G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Context of and specific resources

9.3)

This unit should be assessed as it relates to normal work

EVIDENCE GUIDE

for assessment practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to applying methods to maintain currency of industry developments.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEE018B Establish, maintain and evaluate OHS systems

Range Statement

RANGE STATEMENT

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to applying methods to maintain currency of industry developments in any electrotechnology discipline in which work is undertaken.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers the quality assurance and risk management compliance processes for maintenance of the electrotechnology aspects of plant and equipment. It encompasses working safely and to technical, quality and risk management standards, work specifications and maintenance schedules, sample inspections, evaluating components and completing the necessary maintenance documentation.

Application of the Unit

Application of the Unit **2)**

This unit apply to any qualification in this standard at an AQF 3 level.

Licensing/Regulatory Information

License to practice **3)**

The skills and knowledge described in this unit require a license to practice in the workplace where plant and equipment operate at voltage above 50 V a.c. or 120 V d.c. Where refrigeration and air conditioning are involved practice in the workplace is subject to Federal/State/Territory regulations covering the use of refrigerants and the relevant codes of practice; in some

jurisdictions a licence is required.

Practice in the workplace is also subject to regulations directly related to occupational health and safe and contracts of training such as new apprenticeships.

Pre-Requisites

Prerequisite Unit(s) 4)

Competencies 4.1)

There are no prerequisite competencies for this unit.

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 3 Writing 3 Numeracy 3

Employability Skills Information

Employability Skills 5)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a unit of competency

Performance criteria describe the required performance needed to demonstrate achievement of the Element.

Assessment of performance is to be consistent with the

evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to comply with scheduled maintenance program processes.	1.1 OHS procedures for a given work area are identified, obtained and understood.
	1.2 Established OHS risk control measures and procedures in preparation for the work are followed.
	1.3 Safety hazards which have not previously identified are noted and established risk control measures are implemented.
	1.4 The maintenance schedule and process compliance requirements are confirmed and work appropriately sequenced in accordance with established procedures.
	1.5 Appropriate person(s) are consulted to ensure the work is coordinated effectively with others involved on the work site.
	1.6 Location equipment to be maintained is determined from maintenance schedule procedures and/or system specifications and diagrams.
	1.7 Resources needed to conduct the maintenance is obtained in accordance with established procedures and checked against job requirements.
	1.8 Tools, equipment and testing devices needed to conduct the maintenance are obtained in accordance with established procedures and checked for correct operation and safety.
2 Comply with scheduled maintenance program processes.	2.1 OHS risk control measures and procedures for carrying out the work are followed.
	2.2 Test or measure on a live and operating system in strict accordance with OHS requirements and

ELEMENT

PERFORMANCE CRITERIA

- within established safety procedures.
- 2.3 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures.
- 2.4 Apparatus to be maintained is inspected and evaluated for compliance with requirements in accordance with maintenance schedule.
- 2.5 Non-compliant apparatus/components are documented and arrangements made for their rectification in accordance with established procedures.
- 2.6 Established methods for dealing with unexpected situations are discussed with appropriate person or persons and documented.
- 2.7 Ongoing checks of the quality of the maintenance are undertaken in accordance with established procedures.
- 2.8 Maintenance process compliance is performed efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.
- 3 Completion of maintenance compliance processes.
- 3.1 OHS work completion risk control measures and procedures are followed.
- 3.2 Work site and equipment is cleaned and made safe in accordance with established procedures.
- 3.3 Final checks are made to verify that the maintenance complies with requirements.
- 3.4 Maintenance completion is documented and appropriate person(s) notified in accordance with established procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and complying with scheduled and preventative maintenance program processes.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EE009B Scheduled maintenance process

Evidence shall show an understanding of maintenance processors to an extent indicated by the following aspects:

- Maintenance principles encompassing:
 - maintenance function
 - role of maintenance department
 - occupational health and safety requirements
- Maintenance systems encompassing:
 - maintenance terminology
 - preventative maintenance
 - predictive maintenance
 - corrective maintenance
- Data acquisition encompassing:
 - plant history cards/files
 - inspection techniques
 - predictive maintenance
 - remote visual inspection
 - non-destructive testing
 - thermography
 - vibration analysis
 - oil analysis
- Maintenance plan encompassing:
 - characteristics of plant operation
 - assessment of failure characteristics
 - link failure characteristics to maintenance systems
 - identify production windows
 - resources
 - labour
 - materials
 - establish plan
 - implementation procedures

REQUIRED SKILLS AND KNOWLEDGE

- Review of maintenance plan encompassing:
 - analysis of records
 - manual recording methods
- Computerised recording methods

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing

EVIDENCE GUIDE

on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Comply with scheduled and preventative maintenance program processes as described in 8) and including:

EVIDENCE GUIDE

- A Interpreting maintenance schedule requirements correctly.
- B Following quality assurance and risk management compliance processes.
- C Following maintenance schedule.
- D Inspecting and evaluating apparatus for quality assurance and risk compliance.
- E Arranging for corrective action of non compliant apparatus.
- F Documenting maintenance work.
- G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to complying with scheduled and

EVIDENCE GUIDE

preventative maintenance program processes.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

There are no concurrent assessment recommendations for this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to scheduled and preventative maintenance compliance processes of at least three different items of installed equipment in the any of the following electrotechnology disciplines.

- Appliances
- Business equipment
- Computers
- Data Communications
- Electrical
- Electrical Machines
- Electronics
- Fire protection

RANGE STATEMENT

- Instrumentation
- Lifts
- Mining, electrical
- Marine, electrical
- Refrigeration and Air Conditioning
- Uninterruptible power supplies (UPS)
- Stand alone generator sets
- Renewable / sustainable energy
- Security technology

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a unit of competency Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT PERFORMANCE CRITERIA

ELEMENT	PERFORMANCE CRITERIA
1 Identify risks and develop management strategies.	1.1 OHS policies, processes and procedures for a given work area are identified, obtained and understood.
	1.2 The extent of a program or project is established from design brief, specification and/or other relevant documentation and from discussions with appropriate person(s).
	1.3 Potential, perceived and actual risk events are identified, documented and analysed, in consultation with risk professionals and appropriate other person(s) in accordance with organisation policies and procedures.
	1.4 Risk management methods, tools and techniques are used to assist in the analysis and reporting of identified risk events.
	1.5 Risk management techniques are used to analyse risk events, assess options and recommend risk approaches to appropriate person(s) for approval.
	1.6 Risk management processes and procedures are developed and agreed to by all stakeholders and communicated to ensure clarity of understanding and ongoing management of risk factors.
	1.7 OHS risk control measure are incorporated in the in the in the risk management strategies in compliance with organisation's OHS policy and regulations.
	1.8 Condition monitoring of plant and equipment and criteria for repair and/or replacement are incorporated in the risk management strategies
2 Implement and monitor risk management strategies.	2.1 Risk management processes and procedures are incorporated into work and project plans to ensure common approach achieving outcomes.
	2.2 Activities are monitored against programs and projects plans to identify and respond to variations in accordance with risk management processes and procedures.
	2.3 Agreed risk responses are implemented and plans modified to reflect changing project objectives in an environment of uncertainty.
3 Evaluate risk	3.1 Project outcomes are reviewed with appropriate person(s)

ELEMENT	PERFORMANCE CRITERIA
management strategies.	to determine effectiveness of risk management processes and procedures.
3.2	Risk issues and recommended improvements are identified, documented and passed to appropriate person(s) for approval to incorporate them into ongoing programs and future program and project and plans.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and managing risk in electrotechnology activities.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EE011C Risk management, application and techniques

Evidence shall show an understanding of risk management to an extent indicated by the following aspects:

- T1 The need for risk management within the broad project management framework
- T2 Risk management methodologies, their capabilities, limitations, applicability and outcomes
- T3 Uncertainty and the means of measurement
- T4 The application of risk management tools and techniques
- T5 Risk management in the context of the project life cycle and other project management functions
- T6 Implementing risk management

Employability Skills 5)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a unit of competency

Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

ELEMENT	PERFORMANCE CRITERIA
1 Establish the scope of the electrotechnology project.	1.1 OHS processes and procedures for a given work area are identified, obtained and understood.
	1.2 Project deliverables and budget are established from project planning and other relevant documentation and from discussions with appropriate person(s).
	1.3 Measurable outcomes are identified to evaluate the electrotechnology project on completion from project planning and other relevant documentation.
	1.4 Plant, materials and skills needed to meet project outcomes are established from project planning and other relevant documentation.
	1.5 Processes and procedures are developed for managing contract variations from discussions with appropriate person(s) and in accordance with contractual agreement.
2 Manage and implement the electrotechnology project.	2.1 OHS policies, procedures and programs are implemented and monitored.
	2.2 Achievement of electrotechnology project outcomes is delegated to appropriately competent persons involved in the project.
	2.3 Risk events are identified and project strategies implemented to ensure that outcomes are achieved to standard of quality specified in the contract and to safety standards required by organisation's policy.
	2.4 Procurement processes and procedures are monitored to ensure on-time supply of plant and materials and in accordance with organisation policy.
	2.5 Verification of the project technical design, modification, installation, and/or maintenance of system and equipment parameters is frequently made against specifications and established procedures.
	2.6 Project is progress is monitored against

ELEMENT	PERFORMANCE CRITERIA
	schedule, quality requirements and budget.
	2.7 Conflict issues at the work site and between stakeholders, clients and regulators are identified and managed in accordance with organisation's policy.
	2.8 Variations are managed in accordance with agreed processes and in accordance with the contract.
	2.9 Project records are maintained and progress reports written and forwarded to all appropriate person(s).
3 Complete electrotechnology project.	3.1 Project outcomes are reviewed against original plan, implemented risk strategies, contract variations, safety record and budget.
	3.2 Project completion acceptance is sought from appropriate person(s) and hand-over documented in accordance with organisation policy.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and managing electrotechnology projects.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EE012B

Electro project management

Evidence shall show an understanding of project management concepts and customer/client relations to an extent indicated by the following aspects:

T1 Defining project parameters

Note:

Examples may include: Project scope; Project stakeholders and clients; Project phases and the relationship between phases; Time requirements and limitations; Resource

REQUIRED SKILLS AND KNOWLEDGE

requirements and limitations; Quality requirements and limitations.

T2 Time management

Note:

Examples may include: time management concepts; standard practices for ensuring a project runs to time and the like.

T3 Financial management

Note.

Examples may include: Financial management concepts; Standard practices for managing project finances; Project budgets; Costs, variations and estimations; Invoicing against project phases/deliverables; Acquittals and the like.

T4 Quality management

Note.

Examples may include: Quality management concepts; Standard practices for managing quality within a project.

T5 Human Resource management

Note.

Examples may include: human resource management concepts; standard practices for managing personnel within a project

T6 Communication management

Note.

Examples may include: Communication management concepts; Standard practices for managing communication within a project and the like.

T7 Risk management and contingencies

Note.

Examples may include: risk management concepts; standard practices for managing risk within a project; Internal risks; External risks; Risk minimisation; Risk removal; Contingencies and the like.

T8 Procurement management

Note.

Examples may include: procurement management concepts; standard practices for managing procurement and the like.

9 Physical Resource management

Note.

Examples may include: Types of physical resource, including; Equipment, Technology, Information, Facilities; Physical resource management concepts;

REQUIRED SKILLS AND KNOWLEDGE

Standard practices for managing physical resources

T10 Contracts

Note.

Examples may include: Understanding project contracts; Standard practices for working to contract specifications; Contract format; Contract content; Legal obligations of contract parties; Accompanying documentation including; Contract Schedules and the like.

T11 Performance assessment and continuous improvement

Note.

Examples may include: standard performance assessment practices; standard continuous improvement practices and the like

T12 Engineering ethics principles

T13 Importance of customer/client relations encompassing:

- Interpersonal skills that enhance customer/client
- Dispute resolution
- Customer/client relations strategies

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances,

EVIDENCE GUIDE

assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit.

EVIDENCE GUIDE

It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.

- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Manage electrotechnology projects as described in 8) and including:
 - A Establishing the scope of the project accurately.
 - B Ascertaining the input of a project.
 - C Developing effective management processes.
 - D Managing resources and variations effectively.
 - E Resolving conflicts.
 - F Adopting risk management strategies.
 - G Maintaining records and submitting progress reports.
 - H Meeting project outcomes.
 - I Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of

EVIDENCE GUIDE

a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to managing electrotechnology projects.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

There are no concurrent assessment recommendations for this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and

RANGE STATEMENT

situations that will affect performance.

This unit shall be demonstrated in managing an electrotechnology project in relation to a program or an individual project involving design, modifications, installation and or maintenance of systems and equipment having the following attributes:

- management of safety
- budget
- variations
- personnel
- resources and critical path timelines
- necessary progress
- completion documentation

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Descriptor

Unit Descriptor

1)

1.1) Descriptor

This unit covers development and documentation of project proposals, milestones and completions. The unit encompasses, establishing budgets, critical path analysis, development of workflow strategies, documenting, presenting and negotiating budgets and timelines.

Application of the Unit

Application of the Unit 2)

This unit is intended for competency development entry-level employment based programs incorporated in approved contracts of training. It is intended to apply to any formal recognition for this standard at the aligned AQF 5 level or higher.

Licensing/Regulatory Information

License to practice

3)

The skills and knowledge described in this unit do not require a license to practice in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Pre-Requisites

Prerequisite Unit(s) 4)

Competencies 4.1)

There are no prerequisite competencies for this unit.

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 5 Writing 5 Numeracy 5

Employability Skills Information

Employability Skills 5)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a unit of competency

Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to plan project.	<p>1.1 OHS processes and procedures for a given work area are identified, obtained and understood.</p> <p>1.2 Established techniques for project planning are reviewed are adopted in accordance with organisation policies.</p> <p>1.3 The extent of the project is established from design brief, specification and/or other relevant documentation and from discussions with appropriate person(s).</p>
2 Develop project plan proposal.	<p>2.1 Estimated plant, material, labour and other costs are sought and obtained from appropriate person(s) in accordance with organisation policies and procedures.</p> <p>2.2 Project budget is established from estimated plant, material, labour and other costs in accordance with organisation policies and procedures.</p> <p>2.3 Knowledge of critical path analysis is applied to developing workflow strategies.</p> <p>2.4 Sources and availability of materials and human resources needed for the project are established in accordance with organisation policies and procedures.</p> <p>2.5 Risk management strategies are sought and obtained for incorporating in the project plan.</p> <p>2.6 Project plan is reviewed against all inputs and adjusted to rectify any anomalies.</p> <p>2.7 Project plan proposal is documented in accordance with organisation policies and procedures.</p>
3 Obtain approval for project plan.	<p>3.1 Project plan is presented and discussed with person(s) of higher authority.</p> <p>3.2 Alterations to the project plan resulting from the presentation/discussion are negotiated with person(s) of higher authority within the constraints of organisation policy.</p>

ELEMENT**PERFORMANCE CRITERIA**

- 3.3 Final project plan is documented and approval obtained from appropriate person(s).

Required Skills and Knowledge

KS01-EE013B**Electro project planning**

Evidence shall show an understanding of project planning and critical path analysis to an extent indicated by the following aspects:

- T1 Purpose of project planning
- T2 Documents needed to plan a project
- T3 Factors influencing sequence and restraints of project activities
- T4 Critical path analysis encompassing:
 - Graphical representation methods
 - Methods of representing time/rates
- T5 Purpose of critical path analysis
- T6 Essential data
- T7 Relational sequence of work activities
- T8 Graphical representation methods
- T9 Methods of representing time/rates
- T10 Monitoring methods

Evidence Guide

EVIDENCE GUIDE

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit**9.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Plan electrotechnology projects as described in 8) and including:
 - A Determining the project requirements accurately.
 - B Establishing a project budget.
 - C Developing effective work flow strategies.
 - D Documenting project plan proposal.
 - E Negotiating alterations to the proposed project plan successfully.

Critical aspects of evidence required to demonstrate competency in this**9.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

- F Obtaining approval of the final plan.
- G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

Context of and specific resources for assessment**9.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to planning electrotechnology projects.

Method of assessment**9.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a unit of competency

Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to develop design briefs.	1.1 OHS processes and procedures for a given work area are identified, obtained and understood.
	1.2 Established techniques for project planning are reviewed are adopted in accordance with organisation policies.
	1.3 The scope of the project is evaluated and project parameters established using a formal evaluation/survey processes.
	1.4 Criteria from other related works impacting on the project are determined from specification of other work, site visits and/or discussion with appropriate person(s).
	1.5 Project budget is established by setting realistic expectations of deliverables and in consideration of tangible quality differences that result in the deliver the best value.
2 Develop design briefs.	2.1 Design brief is developed to include scenarios/requirements established in consultation with appropriate person(s), and regulatory requirements.
	2.2 Design brief is developed in collaboration with all relevant design professionals and contractors involved in the project.
	2.3 Competent persons required for the project are identified and their roles specified in the design brief.
	2.4 Project design brief is reviewed against all inputs and adjusted to rectify any anomalies.
	2.5 Project design brief proposal is documented in accordance with organisation policies and procedures.
3 Obtain approval for design briefs.	3.1 Project design brief is presented and discussed with person(s) of higher authority.
	3.2 Alterations to the project design brief resulting from the presentation/discussion are negotiated with person(s) of higher authority within the

ELEMENT**PERFORMANCE CRITERIA**

constraints of organisation policy.

- 3.3 Final project design brief is documented and approval obtained from appropriate person(s).

Required Skills and Knowledge**REQUIRED SKILLS AND KNOWLEDGE**

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and developing design briefs for electrotechnology projects.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EE015B Electro project design briefs

Evidence shall show an understanding of enterprise customer relations protocols to an extent indicated by the following aspects:

T1 Purpose of customer relations encompassing:

- Procedures for dealing with customers
- Dealing with customer issues

T2 Purpose of critical path analysis encompassing:

- Essential data
- Relational sequence of work activities
- Graphical representation methods
- Methods of representing time/rates
- Monitoring methods

Evidence Guide**EVIDENCE GUIDE**

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction

EVIDENCE GUIDE

with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence shall also

EVIDENCE GUIDE

comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Develop design briefs for electrotechnology projects as described in 8) and including:
 - A Establishing the scope and parameters of the project.
 - B Determining the impact of other related works.
 - C Developing design brief incorporating scenarios and all requirements.
 - D Identifying competencies required for the project.
 - E Documenting project plan proposal.
 - F Negotiating alterations to the proposed design brief successfully.
 - G Obtaining approval of the final brief.
 - H Dealing with unplanned events by drawing on

EVIDENCE GUIDE

essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to developing design briefs for electrotechnology projects.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent

assessment and relationship with other units

There are no concurrent assessment recommendations for this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to developing requirements to be incorporated in to the design of electrotechnology projects with the following attributes:

- safety requirements met
- client expectations established
- cost effective solutions are pursued and assured
- design requirements documentation

Developing a project design brief incorporating shall be demonstrated in any of the following electrotechnology disciplines:

- Automation technologies
- Computers
- Data Communications
- Electrical
- Electrical Machines
- Electronics
- Fire protection
- Instrumentation
- Refrigeration and Air Conditioning
- Renewable / sustainable energy
- Security technology

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

ELEMENT

PERFORMANCE CRITERIA

- | | | | |
|---|----------------------------|-----|--|
| 1 | Prepare to instruct users. | 1.1 | OHS procedures for a given work area are obtained and understood through established routines and procedures. |
| | | 1.2 | Established OHS risk control measures and procedures in preparation for the work are followed. |
| | | 1.3 | Apparatus on which users are to be instructed is confirmed with work supervisor and/or other appropriate person(s). |
| | | 1.4 | Safety features and safe use of the apparatus are reviewed by and understood. |
| | | 1.5 | Familiarity with the apparatus is gained by reference to manufacturer's user material and a preliminary run through to ensure the process is understood. |
| | | 1.6 | Materials required to instruct are obtained in accordance with established routines and procedures. |
| 2 | Instruct users. | 2.1 | Users are informed of all the safety features and safe use of the apparatus in accordance with manufacturer's instruction and regulatory requirements. |
| | | 2.2 | Users are instructed in the set up and use of the apparatus in accordance with manufacturer's instruction. |
| | | 2.3 | Users are given the opportunity to show that they understand the safety aspects, set up features and operation of the apparatus. |
| | | 2.4 | A copy of the apparatus manufacturer's user instruction and other related documentation is given the appropriate person(s). |
| | | 2.5 | Procedures for referring non-routine events to immediate supervisor for directions are followed. |
| | | 2.6 | Instructions are given efficiently without damage to apparatus, the surrounding environment or |

ELEMENT

PERFORMANCE CRITERIA

services and using sustainable energy practices.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and providing basic instruction in the use of electrotechnology apparatus

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EE20B

User instructions techniques

Evidence shall show an understanding of instructing users in the use of specific items of equipment and systems to an extent indicated by the following aspects:

T1 Methods for evaluating user needs - how equipment is used efficiently and safely and identifying wear and tear and damage to the equipment that requires repairing.

T2 Basic instruction methods - appropriate to the culture of the users and the equipment for which instruction is given.

T3 Methods for evaluating user's ability use equipment correctly

T4 Communicating with personnel encompassing:

- Oral communications
- Written procedures and work instructions

T5 Communicating with suppliers

T6 Communicating with customers

T7 Purpose and extent of maintaining work activities records in an enterprise encompassing:

- Types of records for maintaining work activities in an enterprise
- Methods for recording and maintaining work records
- Work records required by regulation requirements

T8 Customer relations encompassing:

- Purpose
- Procedures for dealing with customers
- Dealing with customer issues

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in

EVIDENCE GUIDE

the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Provide basic instruction in the use of electrotechnology apparatus as described in 8) and including:
 - A Following manufacturer's user instructions.
 - B Giving clear instructions in the use of the apparatus.
 - C Giving users the opportunity to show that they understand the safe use of the apparatus.

EVIDENCE GUIDE

- D Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to providing basic instruction in the use of electrotechnology apparatus.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

EVIDENCE GUIDE

Concurrent assessment and relationship with other units

9.5)

For optimisation of training and assessment effort, competence in this unit may be assessed concurrently with other related units making up a qualification or possible skill clusters covering a unit or units that require formal documentation.

Components of this unit are included in the critical aspects of evidence of all units to help ensure the appropriate level of responsibility for safety has been acquired.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to any single item of electrotechnology apparatus and its control.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, part 2.1.

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers the application of skills and knowledge in taking responsibility for one's own competency development. It encompasses understanding the structure of a competency development plan, participating the development of a personal competency development plan, understanding responsibilities and obligation under competency development plan, following activities for developing competency, self-monitoring competency development and meeting trainee obligations for periodic reporting of competency development activities.

Application of the Unit

Application of the Unit 2)

This unit is intended to support competency development entry-level employment and post qualification based programs incorporated in approved contracts of training and approved programs.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit do not require a license to practice in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and where

applicable contracts of training such as apprenticeships.

Pre-Requisites

Prerequisite Unit(s) 4)

Competencies 4.1)

There are no prerequisite competencies for this unit.

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 3 Writing 3 Numeracy 3

Employability Skills Information

Employability Skills 5)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a unit of competency

Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Participate in the development of a personal competency development plan.	1.1 The nature of competency-based training is sought from discussions with appropriate persons and understood.
	1.2 The responsibilities/obligations of trainees/learners, their employers, trainers and assessors in a competency-based development program are sought from discussions with appropriate persons and understood.
	1.3 Competencies to be achieved in a personal competency development plan are established in discussions with appropriate persons.
	1.4 Details on how to achieve the individual competencies in the plan are sought from discussions with appropriate persons and understood.
2 Follow a personal competency development plan.	2.1 All aspects of the competency development plan are put into practice and followed diligently.
	2.2 Opportunities to practise skills and apply knowledge relative to a particular competency are pursued
	2.3 Assistance is sought from appropriate persons to overcome difficulties in develop skills and apply knowledge relevant to a particular competency.
	2.4 Progress in competency development is self monitored against the competency development plan.
	2.5 Modifications to the personal competency development plan are made in consultation with appropriate persons.
	2.6 Trainee/learners responsibility for periodic and timely reporting of competency development activities is followed.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and participating in development and following a personal competency development plan.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EE038B Responsibilities under a competency development plan

Evidence shall show an understanding of responsibilities under a competency development plan to an extent indicated by the following aspects:

- Competency Development (Training) Plans encompassing:
 - state/territories requirements (acts/regulations)
 - competency development (training) contracts
 - competency development (training) period
 - purpose of competency development (training) plans
 - process in developing competency development (training) plans
 - parties involved in the competency development (training) plan
- Qualification Structure encompassing:
 - scope of work
 - Training Packages - electrotechnology
 - competency standard units (CSUs)
 - structure of Qualification
 - off-Job Requirements
 - on-Job Requirements
- Responsibilities of Parties to the contract encompassing:
 - employer responsibilities
 - learner responsibilities
 - RTO responsibilities
 - State Training Authorities (STA)
- Electrotechnology Industry Career Opportunities encompassing:
 - industry Areas
 - qualification levels
 - career paths
- Industry customs and practices encompassing:
 - industry bodies – employer and employee representatives
 - regulatory bodies – including licensing/registration, OHS, IR, training

REQUIRED SKILLS AND KNOWLEDGE

- authorities – apprentice/trainee regulation
- vocational and technical education system – Australian Qualification Framework (AQF), credentials, Australian Qualification Training Framework (AQTF)
- Monitoring of Workplace Evidence encompassing:
 - workplace exposure and practices and relationship with competency standard units
 - methods of collecting workplace evidence
 - monitoring period cycle
 - requirements of workplace evidence
 - actions taken for unsatisfactory progression
 - role of state training authority (STA)
 - apprentice/learner responsibilities
 - employer responsibilities
- RTO Policies encompassing:
 - apprentice/Learner Responsibilities
 - teachers/trainers Responsibilities
 - absenteeism
 - off-Job component assessment specifications
 - on-Job component assessment specifications
 - qualification completion requirements and award
 - advanced standing and/or RPL
 - result review procedures
- Apprentice/Learner Discipline Policy encompassing:
 - apprentices/learners rights
 - apprentice/learner responsibilities
 - breaches of discipline
 - types of penalties Apprentice/Learner Responsibilities
- Attendance at the Vocational and Technical Education Centre encompassing:
 - importance of attendance
 - record management of attendance
 - attendance cards
 - advice to employer of absences
- Fire and Emergencies at the Vocational and Technical Education Centre encompassing:
 - designated fire and emergency exits
 - procedures in the event of a fire
 - evacuation procedures
 - assembly points importance of attendance

REQUIRED SKILLS AND KNOWLEDGE

- Occupational Health and Safety at the Vocational and Technical Education Centre encompassing:
 - eye protection
 - foot protection
 - protective clothing
 - personal injuries
 - mobile phones and personal belonging
 - dress regulations
 - rotating machinery, designated fire and emergency exists
- Entry Requirements encompassing:
 - numeracy requirements
 - literacy requirements
 - vocational and technical education centre support mechanisms
 - testing and appropriate action by learner Eye protection
- Vocational and Technical Education Centre Tour encompassing:
 - vocational and technical education centre layout
 - building layout
 - tour of building and vocational and technical education centre

KS02-EE038B Methods of monitoring and reporting competency development activities

- Evidence shall show an understanding of methods of monitoring and reporting workplace activities indicated by the following aspects:
- RTOs responsibility to receive and monitor workplace activities of the apprentice/learner
- Industry requirements for monitoring workplace evidence
- Acceptable methods for monitoring and reporting workplace activities
- Apprentice's/Learner's responsibility to participate in the reporting of workplace activities
- RTOs requirements in periodically evaluating development of apprentices/learners from the workplace activities information gathered, and providing feedback and advice on areas requiring improvement
- Employers responsibilities to participate in monitoring, reporting and confirming workplace activities, and assisting in overcoming areas requiring development by the apprentice/learner
- Options for appeal or assistance from RTO or State Training Authority (STA)

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of 9.2)

EVIDENCE GUIDE

evidence required to demonstrate competency in this unit

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Participate in development and follow a personal competency development plan as described in 8) and including:
 - A Seeking and understanding the responsibilities under a competency development plan.
 - B Seeking and understanding how to achieve the individual competencies in the plan.
 - C Following all aspects of the plan diligently.
 - D Pursuing opportunities to develop competency.

EVIDENCE GUIDE

- E Seeking assistance to overcome difficulties in developing competency.
- F Self-monitoring competency development.
- G Periodically reporting competency development activities.
- H Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to participating in development and following a personal competency development plan.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

EVIDENCE GUIDE

Concurrent assessment and relationship with other units

9.5)

For optimisation of training and assessment effort, competence development in this unit may be assessed concurrently with other units in a qualification.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to participating in development and follow a personal competency development plan in an electrotechnology discipline with the following attributes:

- responsibility for one's own competency development in developing and applying skills and knowledge
- structure of a competency development plan
- development of a personal competency development plan participation
- responsibilities and obligation under the competency development plan
- activities for developing competency followed
- competency development self-monitoring
- trainee obligations met
- periodic reporting of competency development activities met

Participating in development and follow a personal competency development plan shall be demonstrated in any of the following Electrotechnology disciplines:

- Automation technologies
- Computers
- Data Communications
- Electrical
- Electrical Machines
- Electronics
- Fire protection
- Instrumentation

RANGE STATEMENT

- Refrigeration and Air Conditioning
- Renewable / sustainable energy
- Security technology

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers developing requirement to be incorporated into the writing of specifications for computer systems engineering projects. It encompasses determining the safety requirements to be met, establishing client expectations, ensuring cost effective solutions are pursued and documenting design and technical requirements.

Application of the Unit

Application of the Unit 2)

This unit is intended for competency development entry-level employment based programs incorporated in approved contracts of training. It is intended to apply to any formal recognition for this standard at the aligned AQF 5 level or higher.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit do not require a license to practice in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships

Pre-Requisites

Prerequisite Unit(s) 4)

Competencies 4.1)

There are no prerequisite competencies for this unit.

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 5 Writing 5 Numeracy 5

Employability Skills Information

Employability Skills 5)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a unit of competency

Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare specification requirements.	1.1 OHS processes and procedures for a given work area are identified, obtained and understood.
	1.2 Established techniques for specification writing are reviewed and adopted in accordance with organisation policies.
	1.3 The scope of the specification is established using a formal evaluation/survey processes.
	1.4 Criteria from other related works impacting on the specification are determined from other relevant documentation, site visits and/or discussion with appropriate person(s).
2 Write specification.	2.1 Specification is developed to include scenarios/requirements established in consultation with appropriate person(s), and regulatory requirements.
	2.2 Specification is developed in collaboration with all relevant design professionals and contractors involved in the project.
	2.3 Competent persons required for the project are identified and their roles specified in the specification.
	2.4 Specification is reviewed against all inputs and adjusted to rectify any anomalies.
	2.5 Specification is developed in accordance with organisation policies and procedures.
3 Approval of specification is obtained.	3.1 Specification is presented and discussed with person(s) of higher authority.
	3.2 Alterations to the specification resulting from the discussion are negotiated with person(s) of higher authority within the constraints of organisation policy.
	3.3 Specification is finalised and approval obtained from appropriate person(s).

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and writing specifications for computer systems engineering projects.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EE070B Computer systems engineering specification development

Evidence shall show an understanding of computer systems engineering specification writing to an extent indicated by the following aspects:

T1 Computer systems engineering specifications encompassing:

- Purpose and nature of specification
- Performance based specifications
- Prescriptive specifications
- Acceptable evidence of compliance
- Additional service required with the supply of equipment

T2 Dealing with suppliers and manufacturer's encompassing:

- Documenting specification
- Customer/client relations encompassing:
- Importance of customer/client relations
- Interpersonal skills that enhance customer/client
- Dispute resolution
- Customer/client relations strategies

T3 Using basic computers functions encompassing:

- Starting up
- Selecting application
- Entering information
- Saving
- Printing

T4 Research skills encompassing:

- Terminology - Terminology used in a research workplace; Terminology used in research-specific literature and the like.
- Theory – why conduct research - The history of research; past research successes; past research failures; Research Protocols; Research practices and the like.
- The research environment - The research work environment; Standard research

REQUIRED SKILLS AND KNOWLEDGE

practices; Industrial, legal, ethical, political and market environment considerations; Legislation and regulation; Contractual obligations of all parties and the like.

- Planning to conduct research - Concept development and/or research brief analysis; Research objectives; Research deliverables; Research project plan; Literature reviews; Methodology development, including; Experimental design, Technology selection, Information Management system selection and the like
- Clients - identifying client viewpoints and stake in project; Identifying client requirements and parameters; Determining research budgets, timelines, milestones and quality attributes with clients.
- Research, Development and Commercialisation - Research and Development goals versus Commercialisation goals and realities; Research and Development to inspire a commercialisation process

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a unit of competency

Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

ELEMENT	PERFORMANCE CRITERIA
1 Prepare specification requirements.	1.1 OHS processes and procedures for a given work area are identified, obtained and understood.
	1.2 Established techniques for specification writing are reviewed and adopted in accordance with organisation policies.
	1.3 The scope of the specification is established using a formal evaluation/survey processes.
	1.4 Criteria from other related works impacting on the specification are determined from other relevant documentation, site visits and/or discussion with appropriate person(s).
2 Write specification.	2.1 Specification is developed to include scenarios/requirements established in consultation with appropriate person(s), and regulatory requirements.
	2.2 Specification is developed in collaboration with all relevant design professionals and contractors involved in the project.
	2.3 Competent persons required for the project are identified and their roles specified in the specification.
	2.4 Specification is reviewed against all inputs and adjusted to rectify any anomalies.
	2.5 Specification is developed in accordance with organisation policies and procedures.
3 Approval of specification is obtained.	3.1 Specification is presented and discussed with person(s) of higher authority.
	3.2 Alterations to the specification resulting from the discussion are negotiated with person(s) of higher authority within the constraints of organisation policy.
	3.3 Specification is finalised and approval obtained from appropriate person(s).

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and writing specifications for electrical engineering projects.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EE071B Electrical engineering specification development

Evidence shall show an understanding of electrical engineering specification writing to an extent indicated by the following aspects:

T1 Electrical engineering specifications encompassing:

- Purpose and nature of specification
- Performance based specifications
- Prescriptive specifications
- Acceptable evidence of compliance
- Additional service required with the supply of equipment

T2 Dealing with suppliers and manufacturer's encompassing:

- Documenting specification
- Customer/client relations encompassing:
- Importance of customer/client relations
- Interpersonal skills that enhance customer/client
- Dispute resolution
- Customer/client relations strategies

T3 Using basic computers functions encompassing:

- Starting up
- Selecting application
- Entering information
- Saving
- Printing

T4 Research skills encompassing:

- Terminology - Terminology used in a research workplace; Terminology used in research-specific literature and the like.
- Theory – why conduct research - The history of research; past research successes; past research failures; Research Protocols; Research practices and the like.
- The research environment - The research work environment; Standard research practices; Industrial, legal, ethical, political and market environment considerations; Legislation and regulation; Contractual obligations of all parties

REQUIRED SKILLS AND KNOWLEDGE

and the like.

- Planning to conduct research - Concept development and/or research brief analysis; Research objectives; Research deliverables; Research project plan; Literature reviews; Methodology development, including; Experimental design, Technology selection, Information Management system selection and the like
- Clients - identifying client viewpoints and stake in project; Identifying client requirements and parameters; Determining research budgets, timelines, milestones and quality attributes with clients.
- Research, Development and Commercialisation - Research and Development goals versus Commercialisation goals and realities; Research and Development to inspire a commercialisation process

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies

EVIDENCE GUIDE

being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and

EVIDENCE GUIDE

workplace procedures

- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Write specifications for electrical engineering projects as described in 8) and including:
 - A Establishing the scope and parameters of the specification.
 - B Determining the impact of other related works.
 - C Developing the specification incorporating scenarios and all requirements.
 - D Identifying competencies required for the specification.
 - E Writing specifications.
 - F Negotiating alterations to the proposed specification successfully.
 - G Obtaining approval of the final specification.
 - H Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be

EVIDENCE GUIDE

consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to writing specifications for electrical engineering projects.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

There are no concurrent assessment recommendations for this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to developing specifications for at least one medium sized electrical engineering project with the following attributes:

- safety requirements met
- client expectations established
- cost effective solutions pursued and assured
- design and technical requirements documentation

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these

RANGE STATEMENT

and other terms that apply are given in Volume 2, Part 2.1.

Unit Descriptor

Unit Descriptor

1)

1.1) Descriptor

This unit covers developing requirement to be incorporated into the writing of specifications for electronics and communication engineering projects. It encompasses determining the safety requirements to be met, establishing client expectations, ensuring cost effective solutions are pursued and documenting design and technical requirements.

Application of the Unit

Application of the Unit 4)

This unit is intended for competency development entry-level employment based programs incorporated in approved contracts of training. It is intended to apply to any formal recognition for this standard at the aligned AQF 5 level or higher.

Licensing/Regulatory Information

1.2) License to practice

The skills and knowledge described in this unit do not require a license to practice in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships

Pre-Requisites

Prerequisite Unit(s) 2)

2.1) Competencies

There are no prerequisite competencies for this unit.

Employability Skills Information

Employability Skills 3)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a unit of competency

Performance criteria describe the required performance needed to demonstrate achievement of the Element.
Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1 Prepare specification requirements.	1.1 OHS processes and procedures for a given work area are identified, obtained and understood.
	1.2 Established techniques for specification writing are reviewed and adopted in accordance with organisation policies.

ELEMENT

PERFORMANCE CRITERIA

	1.3	The scope of the specification is established using a formal evaluation/survey processes.
	1.4	Criteria from other related works impacting on the specification are determined from other relevant documentation, site visits and/or discussion with appropriate person(s).
2 Write specification.	2.1	Specification is developed to include scenarios/requirements established in consultation with appropriate person(s), and regulatory requirements.
	2.2	Specification is developed in collaboration with all relevant design professionals and contractors involved in the project.
	2.3	Competent persons required for the project are identified and their roles specified in the specification.
	2.4	Specification is reviewed against all inputs and adjusted to rectify any anomalies.
	2.5	Specification is developed in accordance with organisation policies and procedures.
3 Approval of specification is obtained.	3.1	Specification is presented and discussed with person(s) of higher authority.
	3.2	Alterations to the specification resulting from the discussion are negotiated with person(s) of higher authority within the constraints of organisation policy.
	3.3	Specification is finalised and approval obtained from appropriate person(s).

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) This describes the essential skills and knowledge and their level, required for this unit.

REQUIRED SKILLS AND KNOWLEDGE

Evidence shall show that knowledge has been acquired of safe working practices and writing specifications for electronics and communications engineering projects.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EE072B Electronics and communications engineering specification development

Evidence shall show an understanding of electronics and communications engineering specification writing to an extent indicated by the following aspects:

REQUIRED SKILLS AND KNOWLEDGE

7) This describes the essential skills and knowledge and their level, required for this unit.

REQUIRED SKILLS AND KNOWLEDGE

Evidence shall show that knowledge has been acquired of safe working practices and writing specifications for renewable energy engineering projects.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EE074B Renewable energy engineering specification development

Evidence shall show an understanding of renewable energy engineering specification writing to an extent indicated by the following aspects:

T1 Renewable energy engineering specifications encompassing:

- Purpose and nature of specification
- Performance based specifications
- Prescriptive specifications
- Acceptable evidence of compliance
- Additional service required with the supply of equipment

T2 Dealing with suppliers and manufacturer's encompassing:

- Documenting specification
- Customer/client relations encompassing:
- Importance of customer/client relations
- Interpersonal skills that enhance customer/client
- Dispute resolution
- Customer/client relations strategies

T3 Using basic computers functions encompassing:

- Starting up
- Selecting application
- Entering information
- Saving
- Printing

T4 Research skills encompassing:

- Terminology - Terminology used in a research workplace; Terminology used in research-specific literature and the like.
- Theory – why conduct research - The history of research; past research successes; past research failures; Research Protocols; Research practices and the like.
- The research environment - The research work environment; Standard research practices; Industrial, legal, ethical, political and market environment considerations; Legislation and regulation; Contractual obligations of all parties and the like.
- Planning to conduct research - Concept development and/or research brief analysis; Research objectives; Research deliverables; Research project plan; Literature reviews; Methodology development, including; Experimental design,

REQUIRED SKILLS AND KNOWLEDGE

- Technology selection, Information Management system selection and the like
- Clients - identifying client viewpoints and stake in project; Identifying client requirements and parameters; Determining research budgets, timelines, milestones and quality attributes with clients.
 - Research, Development and Commercialisation - Research and Development goals versus Commercialisation goals and realities; Research and Development to inspire a commercialisation process

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence

EVIDENCE GUIDE

need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:

EVIDENCE GUIDE

- Write specifications for renewable energy engineering projects as described in 8) and including:
 - A Establishing the scope and parameters of the specification.
 - B Determining the impact of other related works.
 - C Developing the specification incorporating scenarios and all requirements.
 - D Identifying competencies required for the specification.
 - E Writing specifications.
 - F Negotiating alterations to the proposed specification successfully.
 - G Obtaining approval of the final specification.
 - H Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to writing specifications for renewable energy engineering projects.

EVIDENCE GUIDE

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

There are no concurrent assessment recommendations for this unit.

Range Statement

RANGE STATEMENT

8) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to developing a specification for at least one medium sized renewable energy engineering project with the following attributes:

- safety requirements met
- client expectations established
- cost effective solutions pursued and assured
- design and technical requirements documentation

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not Applicable

Competency Field

2.2) Literacy and numeracy skills

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

Unit Descriptor

Unit Descriptor

1)

1.1) Descriptor

This unit covers developing requirement to be incorporated into the writing of specifications for industrial electronics and control projects. It encompasses determining the safety requirements to be met, establishing client expectations, ensuring cost effective solutions are pursued and documenting design and technical requirements.

Application of the Unit

Application of the Unit 4)

This unit is intended for competency development entry-level employment based programs incorporated in approved contracts of training. It is intended to apply to any formal recognition for this standard at the aligned AQF 5 level or higher.

Licensing/Regulatory Information

1.2) License to practice

The skills and knowledge described in this unit do not require a license to practice in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships

Pre-Requisites

Prerequisite Unit(s) 2)

2.1) Competencies

There are no prerequisite competencies for this unit.

Employability Skills Information

Employability Skills 3)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a unit of competency

Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | | |
|---------------------------------------|-----|---|
| 1 Prepare specification requirements. | 1.1 | OHS processes and procedures for a given work area are identified, obtained and understood. |
| | 1.2 | Established techniques for specification writing are reviewed and adopted in accordance with organisation policies. |

ELEMENT	PERFORMANCE CRITERIA
	1.3 The scope of the specification is established using a formal evaluation/survey processes.
	1.4 Criteria from other related works impacting on the specification are determined from other relevant documentation, site visits and/or discussion with appropriate person(s).
2 Write specification.	2.1 Specification is developed to include scenarios/requirements established in consultation with appropriate person(s), and regulatory requirements.
	2.2 Specification is developed in collaboration with all relevant design professionals and contractors involved in the project.
	2.3 Competent persons required for the project are identified and their roles specified in the specification.
	2.4 Specification is reviewed against all inputs and adjusted to rectify any anomalies.
	2.5 Specification is developed in accordance with organisation policies and procedures.
3 Approval of specification is obtained.	3.1 Specification is presented and discussed with person(s) of higher authority.
	3.2 Alterations to the specification resulting from the discussion are negotiated with person(s) of higher authority within the constraints of organisation policy.
	3.3 Specification is finalised and approval obtained from appropriate person(s).

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) This describes the essential skills and knowledge and their level, required for this unit.

REQUIRED SKILLS AND KNOWLEDGE

Evidence shall show that knowledge has been acquired of safe working practices and writing specifications for industrial electronics and control projects.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EE075B Industrial electronics and control engineering specification development

Evidence shall show an understanding of industrial electronics and control engineering specification writing to an extent indicated by the following aspects:

T1 Industrial electronics and control engineering specifications encompassing:

- Purpose and nature of specification
- Performance based specifications
- Prescriptive specifications
- Acceptable evidence of compliance
- Additional service required with the supply of equipment

T2 Dealing with suppliers and manufacturer's encompassing:

- Documenting specification
- Customer/client relations encompassing:
- Importance of customer/client relations
- Interpersonal skills that enhance customer/client
- Dispute resolution
- Customer/client relations strategies

T3 Using basic computers functions encompassing:

- Starting up

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a unit of competency

Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1 Contribute to the identification of risks and development of management strategies

1.1 OHS policies, processes and procedures for a given work area are identified, obtained and understood.

1.2 The extent of a program or project is established from design brief, specification and/or other relevant documentation and from discussions

ELEMENT**PERFORMANCE CRITERIA**

- with appropriate person(s).
- 1.3 Potential, perceived and actual risk events and electrotechnology systems risks are identified, documented and analysed, in consultation with appropriate other person(s) in accordance with organisation policies and procedures.
- 1.4 Risk management methods, tools and techniques are used to assist in the analysis and reporting of identified risk events.
- 1.5 Risk management techniques are used to analyse electrotechnology systems risks and risk events, assess options and recommend risk approaches to appropriate person(s) for approval.
- 1.6 Draft risk management processes and procedures are developed and communicated with all stakeholders to ensure understanding of management of risk factors.
- 1.7 Risk management processes and procedures are submitted to appropriate person(s) for approval in accordance with established procedures.
- 1.8 OHS risk control measures are submitted for incorporation in the risk management strategies in compliance with organisation's OHS policy and regulations.
- 2 Contribute to the implementation and monitoring of risk management strategies.
- 2.1 Risk management processes and procedures are produced and submitted for incorporation into work and project plans to ensure common approach achieving outcomes.
- 2.2 Activities are monitored against programs and projects plans to identify and responses submitted to appropriate person(s) for approval for variations in accordance with risk management processes and established procedures.
- 2.3 Agreed risk responses are revised for implementation and plans modified following approval to reflect changing project objectives in

ELEMENT	PERFORMANCE CRITERIA
3 Contribute to the evaluation of risk management strategies.	an environment of uncertainty, in accordance with risk management processes and established procedures..
3.1	Project outcomes are reviewed with appropriate person(s) to determine effectiveness of risk management processes and established procedures.
3.2	Risk issues and recommended improvements are identified, documented and submitted to appropriate person(s) for approval to incorporate them into ongoing programs and future program and project and plans.
3.3	Outcomes are documented and recorded/stored in accordance established procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and contributing to the managing of risk in electrotechnology activities.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EE078B Principles of risk management, applications, practices and techniques

Evidence shall show an understanding of principles of risk management, applications, practices and techniques to an extent indicated by the following aspects:

T1 Risk Management principles encompassing:

- models including reasonable and practicable
- hazard and risk
- safety and health
- safety risk including Injury Causation Model and Error Agencies
- health Risk including Occupational Hygiene Model
- hierarchy of Controls (Engineering and Administrative)

REQUIRED SKILLS AND KNOWLEDGE

- T2 Principles of risk management planning
- T3 Principles of risk Assessment - planning and prioritisation
- T4 Principles of risk mitigation – handling and monitoring
- T5 Principles of risk management procedures encompassing:
- OHS practices – general, training, manual handling, and specific technical/occupational, organisational procedures
 - OHS networks
 - Hazard control and reporting
 - Incident notification
 - Emergency procedures and first aid

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures

EVIDENCE GUIDE

that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and

EVIDENCE GUIDE

workplace procedures

- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Contribute to risk management in electrotechnology systems as described in 8) and including:
 - A Contributing to identifying potential, perceived and actual risk events.
 - B Using risk management methods, tools and techniques to assist in the analysis and reporting.
 - C Contributing to incorporation of risk management processes and procedures into program and project plans.
 - D Contributing to the monitoring and responding to electrotechnology systems and risk events effectively.
 - E Identifying improvements and documenting recommendation for their inclusion in ongoing or future programs and projects.
 - F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment

EVIDENCE GUIDE

environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to contributing to risk management in electrotechnology systems.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEH041B Manage electronics/computer systems projects

Range Statement

RANGE STATEMENT

8) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in contributing to the management of risk in electrotechnology systems related to OHS, environment, resources and financial

RANGE STATEMENT

viability with the following attributes:

- electrotechnology systems risks identification
- risk events
- likelihood and consequences of risk events
- evaluating risk
- risk management planning
- mitigation of risk for a program or an individual project
- technical requirements documentation

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not Applicable

Competency Field**2.2) Literacy and numeracy skills**

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Unit Descriptor

Unit Descriptor

1)

1.1) Descriptor

This unit covers the industry and community standards expected of engineers. It encompasses knowledge and application of ethical and community standards, seeking advice regarding broader implications of engineering works, adopting appropriate technologies and engaging in current engineering issues.

Application of the Unit

Application of the Unit 4)

This unit is intended for competency development entry-level employment based programs incorporated in approved contracts of training. It is intended to apply to any formal recognition for this standard at the aligned AQF 6 level or higher.

Licensing/Regulatory Information

1.2) License to practice

The skills and knowledge described in this unit do not require a license to practice in the workplace. However other conditions may apply in some jurisdictions subject to regulations related to electrical work. Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as cadetships.

Pre-Requisites

Prerequisite Unit(s) 2)

2.1) Competencies

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Employability Skills Information

Employability Skills 3)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a unit of competency Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1 Review ethical and 1.1 Ethical standards of relevant professional bodies are

ELEMENT	PERFORMANCE CRITERIA
community standards and processes	reviewed and understood.
	1.2 Advice on the application processes for applying ethical, community and technical standards is obtained from persons of higher authority.
	1.3 Contributions to periodic revision of standards is made through formal discussions with colleagues and written submissions to public reviews.
2 Apply ethical and community standards and processes	2.1 Established ethical standards are apply to all professional dealings and activities.
	2.2 Work is planed and managed within the framework of community and technical standards.
	2.3 Compliance with relevant community and technical standards is incorporated in assuring quality of work outcomes.
	2.4 Advice on engineering issues and adoption of particular technologies with regard to standards is sought from persons of higher authority.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of industry and community standards expected of engineers.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EE080A

Ethical standards and their application

Evidence shall show an understanding of ethical standards and their application to an extent indicated by the following aspects:

- T1 Purpose of ethical standards.
- T2 The common tenets of ethical standards.
- T3 Ethical standards of professional bodies in the electrotechnology industry
- T4 Application of ethical standards

REQUIRED SKILLS AND KNOWLEDGE

KS02-EE080A

Development of community standards

Evidence shall show an understanding of the development of community standards to an extent indicated by the following aspects:

- T1 Purpose of standards and how they are applied
- T2 Difference between 'standards', 'codes of practice' and 'guidelines'
- T3 Legal implications of 'standards', 'codes of practice' and 'guidelines'
- T4 Standards development organisations and compliance systems
- T5 Standards development process and community involvement.

Evidence Guide

 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - as described in 8) and including:

EVIDENCE GUIDE

- A Reviewing and understanding ethical standards
- B Seeking advice on applying standards
- C Contributing to periodic review of standards
- D Working ethically
- E Ensuring work outcomes are compliant with relevant standards
- F Seeking advice on engineering issues and adoption of particular technologies with regard to standards

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to industry and community standards expected of engineers.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential

EVIDENCE GUIDE

knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with other core units an AQF 6 qualification or higher. Examples are:

UEENEEG069B Manage electrical projects

UEENEEG070B Plan electrical projects

Range Statement

RANGE STATEMENT

8) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to a qualification at AQF 6 level or higher

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a unit of competency Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to apply material science to developing solutions to electrotechnology problems.	1.1 OHS procedures for a given work area are obtained and understood.
	1.2 OHS risk control work preparation measures and procedures are followed.
	1.3 The nature of the purpose and environment in which the materials are to be used is obtained and understood from documentation or from work supervisor.
	1.4 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety.
2 Apply material science to developing solutions to electrotechnology problems.	2.1 OHS risk control work measures and procedures are followed.
	2.2 Tests and measurements are undertaken in strict accordance with OHS requirements and within established safety procedures.
	2.3 Solutions to electrotechnology problems draw upon knowledge of material science, including tests and measurements and interpreting their results.
	2.4 Effects of particular environments on materials and visa versa and known health risks are considered in resolving electrotechnology problems.
	2.5 Unexpected situations are dealt with safely and with the approval of an authorised person.
3 Report the solutions to electrotechnology problems.	3.1 Proposed solutions to electrotechnology problems are documented with science based justification for the solutions.
	3.2 Known health risks exposed by a material and/or its application are included in the report.
	3.3 Proposed solution report is forwarded to the appropriate person in accordance with established procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of material science in electrotechnology.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EE081A

Materials science in electrotechnology

Evidence shall show an understanding of base materials to an extent indicated by the following aspects:

T1 Classification, nature and physical properties of materials used in electrotechnology

- Solids
- Liquids
- gases

T2 Dielectric strength and dielectric breakdown, examples to include applications using solids, liquids, gases and vacuum

T3 Conductors and semiconductors

- materials
- applications, including photo voltaic and hv insulation

T4 Chemical effects on materials

- cells, including fuel cells
- electrolysis
- corrosion
- safety

T5 Material processing and manufacturing.

T6 Environment and health issues

Evidence Guide

The Evidence Guide forms an integral part of this unit. It must be used in conjunction

EVIDENCE GUIDE

with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence shall also

EVIDENCE GUIDE

comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Evaluate base materials as described in 8) and including:
 - A Obtaining and understanding nature of the electrotechnology problem and environment in which the materials are to be used
 - B Appropriate tools, equipment and testing devices are selected
 - C Using knowledge of the material science, tests and measurement results effectively.
 - D Considering environment and health risks
 - E Clearly documenting proposed solutions and their scientific justification
 - G Dealing with unplanned events

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a

EVIDENCE GUIDE

workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to material science in electrotechnology.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Employability Skills Information

Employability Skills 3)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a unit of competency Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to apply physics to developing solutions to electrotechnology related problems.	1.1 OHS procedures for a given work area are identified, obtained and understood.
	1.2 OHS risk control work preparation measures and procedures are followed.
	1.3 The nature of the problem is obtained and understood from documentation or from work supervisor.
	1.4 Problems are clearly stated in writing and/or diagrammatic form to ensure they are understood and appropriate methods used to resolve them.
	1.5 Equipment and testing devices needed to develop solutions to problems are obtained and checked for correct operation and safety
2 Apply the laws of physics to developing solutions to electrotechnology problems.	2.1 OHS risk control work measures and procedures are followed.
	2.2 Tests and measurements are undertaken in strict accordance with OHS requirements and within established safety procedures.
	2.3 Knowledge of laws of physics are drawn to develop resolutions problems in static and dynamics including tests and measurements and interpreting their results.
	2.4 Theoretical and measured values are applied to developing solutions to problems in static and dynamics
	2.5 Consideration is given to adverse effects in the developed solutions of problems
	2.6 Unexpected situations are dealt with safely and with the approval of an authorised person.
3 Report solutions of problems in static and dynamics	3.1 Proposed solutions to electrotechnology problems are documented with science based justification for the solutions..
	3.2 Known adverse effects and outcome of developed solution are included in the report

ELEMENT

PERFORMANCE CRITERIA

- 3.3 Solution report is forwarded to the and appropriate person notified in accordance with established procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of physics and how they apply to solving electrotechnology related problems.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EE082A

Electrotechnology engineering physics

Evidence shall show an understanding of electro engineering physics to an extent indicated by the following aspects:

T1 Measurement encompassing

- SI units in measurement of physical phenomena
- Uncertainty and tolerance

T2 Linear motion

T3 Angular motion

T4 Simple harmonic motion and vibration

T5 Wave theory

- Interference
- Diffraction

T6 Electromagnetic waves and propagation

T7 Optics

- Mirrors and lenses
- Optical fibre

T8 Acoustics and ultrasonics

T9 Heat capacity and heat transfer

- Fluid power

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

EVIDENCE GUIDE

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Develop solution to problems in statics and dynamics as described in 8) and including:
 - A Understanding and clearly stating the nature of the problem
 - B Obtaining the appropriate equipment and testing devices needed to develop solutions to problems
 - C Using knowledge of laws of physics are drawn to develop resolutions problems in static and dynamics
 - D Applying theoretical and measured values to developing

EVIDENCE GUIDE

solutions to problems in static and dynamics

- E Consideration is given to adverse effects in the developed solutions
- F Reporting accurately the developed solutions, recommendations and justification
- G Dealing with unplanned events

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to physics and how they apply to solving electrotechnology related problems.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with

9.5)

There are no concurrent assessment recommendations for this

EVIDENCE GUIDE

other units unit.

Range Statement

RANGE STATEMENT

8) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to developing solution to problems involving linear and angular motion, harmonics, wave propagation, interference and diffraction, electromagnetic wave propagation, optics acoustics and heat capacity and transfer.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not Applicable

Competency Field

2.3) Literacy and numeracy skills

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

2.3) Literacy and numeracy skills

Competency Field 5)

Electrotechnology

UEENEEE083A Establish and follow a competency development plan in an electrotechnology engineering discipline

Unit Descriptor

Unit Descriptor

1)

1.1) Descriptor

This unit covers establishing and following a plan for one's own competency development. It encompasses establishing a plan in consultation with the enrolling registered training organisation (RTO), following industry/enterprise procedures regarding how work is conducted, understanding responsibilities and obligations under competency development plan, following activities for developing competency, pursuing opportunities to develop competencies, to self-monitoring competency development and meeting obligations for periodic reporting of competency development activities.

Application of the Unit

Application of the Unit

4)

This unit applies to a recognised development program that leads to the acquisition of a formal award at AQF level 6

Licensing/Regulatory Information

1.2) License to practice

The skills and knowledge described in this unit require a licence to practise in the workplace subject to regulations for undertaking of electrical work. Practice in workplace and during training is also subject to regulations directly related to

1.2) License to practice

occupational health and safety and where applicable a contracts of training.

Pre-Requisites

Prerequisite Unit(s) 2)

2.1) Competencies

There are no prerequisite competencies for this unit.

Employability Skills Information

Employability Skills 3)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a unit of competency Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1 Establish a competency	1.1 A competency development plan incorporating course work, assessment scheme and workplace activities is
--------------------------	--

ELEMENT	PERFORMANCE CRITERIA
development plan	established in consultation with the enrolling RTO.
	1.2 Obligations and expectations of the competency development plan are obtained and understood.
2 Comply with engineering industry/enterprise workplace policies and procedures	2.1 Industry/enterprise workplace policies and procedures for all work activities are obtained and understood.
	2.2 Work instructions are followed, any clarification involved being sought from the immediate supervisor/appropriate person.
	2.3 Unexpected situations are dealt with safely and in accordance with industry/enterprise policies and procedures, and with the approval of an authorised person.
3 Monitor and respond to a personal competency development plan.	3.1 All aspects of the competency development plan are confirmed in consultation with appropriate persons.
	3.2 All components of the competency development plan are followed diligently.
	3.3 Opportunities to practise skills and apply knowledge relative to a particular competency are pursued.
	3.4 Assistance is sought from appropriate persons to overcome difficulties in developing skills and applying knowledge relevant to a particular competency.
	3.5 Progress in competency development is self-monitored against the competency development plan and industry/enterprise policies and procedures.
	3.6 Modifications to the personal competency development plan are made in consultation with appropriate persons.
	3.7 Obligations are met for the regular and accurate reporting of competency development activities as per industry/enterprise policies and procedures.
	3.8 Periodic competency development activities report is validated by an appropriate person in accordance with industry/enterprise policies and procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and participating in development and following a personal competency development plan.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EE083A

Engineering competency development

Evidence shall show an understanding of engineering competency development to an extent indicated by the following aspects:

T1 Components of a competency development plan encompassing:

- Competencies to be achieved
- Course work and timetable
- Assessment scheme
- Aspects of competency to be developed in the workplace
- Methods of monitoring and recording relevant workplace activities.

T2 Obligations and expectations under a competency development plan

T3 Scope for industry/enterprise policies and procedures

- Policies and procedure related to safety, effective work outcomes, customer relations, conflict resolution and competency development.
- Monitoring and reporting work activities.

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment

EVIDENCE GUIDE

intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and

EVIDENCE GUIDE

range statement

- Apply sustainable energy principles and practices as specified in the performance criteria and range statement
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Participate in electrical work and competency development activities as described in 8) including:
 - A Establishing a competency development plan in consultation with the enrolling Registered Training Organisation (RTO).
 - B Understanding obligations and expectations of the competency development plan.
 - C Understand industry/enterprise workplace policies and procedures
 - D Following work instructions and seeking clarification of how particular work is to be carried out and the procedures involved.
 - E Dealing with unexpected situations in accordance with industry/enterprise policies and procedures, and with the approval of an authorised person
 - F Reporting periodically the competency development activities in accordance with requirements
 - G Periodically reviewing progress of the competency development activities in accordance with requirements
 - H Pursuing strategies to develop opportunities for gaining the range of workplace experiences and exposure
 - I Progressing successfully against periodic or staged evaluative performance events

EVIDENCE GUIDE

G Seeking assistance to overcome difficulties in developing competency

K Dealing with unplanned events.

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment it must ensure that the conditions for assessment are authentic and as far as possible reproduce and replicate the workplace and is consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to participating in development and following a personal competency development plan.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

This unit shall be assessed concurrently with other units in a qualification.

Range Statement

RANGE STATEMENT

8) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to other units in an advance diploma qualification to contribute the evidence used in evaluating when competency has been sufficiently demonstrated. The unit applies to both the educational program provided by a registered training organisation and real work under a formal training agreement.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not Applicable

Competency Field

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a unit of competency

Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1	Prepare specification requirements.	1.1	OHS processes and procedures for a given work area are identified, obtained and understood.
		1.2	Established techniques for specification writing are reviewed and adopted in accordance with organisation policies.

ELEMENT	PERFORMANCE CRITERIA
	<p>1.3 The scope of the specification is established using a formal evaluation/survey processes.</p> <p>1.4 Criteria from other related works impacting on the specification are determined from other relevant documentation, site visits and/or discussion with appropriate person(s).</p>
2 Write specification.	<p>2.1 Specification is developed to include scenarios/requirements established in consultation with appropriate person(s), and regulatory requirements.</p> <p>2.2 Specification is developed in collaboration with all relevant design professionals and contractors involved in the project.</p> <p>2.3 Competent persons required for the project are identified and their roles specified in the specification.</p> <p>2.4 Specification is reviewed against all inputs and adjusted to rectify any anomalies.</p> <p>2.5 Specification is developed in accordance with organisation policies and procedures.</p>
3 Approval of specification is obtained.	<p>3.1 Specification is presented and discussed with person(s) of higher authority.</p> <p>3.2 Alterations to the specification resulting from the discussion are negotiated with person(s) of higher authority within the constraints of organisation policy.</p> <p>3.3 Specification is finalised and approval obtained from appropriate person(s).</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) This describes the essential skills and knowledge and their level, required for this unit.

REQUIRED SKILLS AND KNOWLEDGE

Evidence shall show that knowledge has been acquired of safe working practices and writing specifications for electrical engineering projects.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EE084B Electrotechnology engineering specification development

Evidence shall show an understanding of specification writing to an extent indicated by the following aspects:

T1 Engineering specifications encompassing:

- Purpose and nature of specification
- Performance based specifications
- Prescriptive specifications
- Acceptable evidence of compliance
- Additional service required with the supply of equipment

T2 Dealing with suppliers and manufacturer's encompassing:

- Documenting specification
- Customer/client relations encompassing:
 - Importance of customer/client relations
 - Interpersonal skills that enhance customer/client
- Dispute resolution
- Customer/client relations strategies

T3 Using basic computers functions encompassing:

- Starting up
- Selecting application
- Entering information
- Saving
- Printing

T4 Research skills encompassing:

- Terminology - Terminology used in a research workplace; Terminology used in research-specific literature and the like.
- Theory – why conduct research - The history of research; past research successes; past research failures; Research Protocols; Research practices and the like.
- The research environment - The research work environment; Standard research practices; Industrial, legal, ethical, political and market environment considerations; Legislation and regulation; Contractual obligations of all parties and the like.
- Planning to conduct research - Concept development and/or research brief analysis; Research objectives; Research deliverables; Research project plan; Literature reviews; Methodology development, including; Experimental design,

REQUIRED SKILLS AND KNOWLEDGE

- Technology selection, Information Management system selection and the like
- Clients - identifying client viewpoints and stake in project; Identifying client requirements and parameters; Determining research budgets, timelines, milestones and quality attributes with clients.
 - Research, Development and Commercialisation - Research and Development goals versus Commercialisation goals and realities; Research and Development to inspire a commercialisation process

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence

EVIDENCE GUIDE

need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:

EVIDENCE GUIDE

- Write specifications for electrical engineering projects as described in 8) and including:
 - A Establishing the scope and parameters of the specification.
 - B Determining the impact of other related works.
 - C Developing the specification incorporating scenarios and all requirements.
 - D Identifying competencies required for the specification.
 - E Writing specifications.
 - F Negotiating alterations to the proposed specification successfully.
 - G Obtaining approval of the final specification.
 - H Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to writing specifications for electrotechnology engineering projects.

EVIDENCE GUIDE

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

There are no concurrent assessment recommendations for this unit.

Range Statement

RANGE STATEMENT

8) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to developing specifications for at least one medium sized electrotechnology engineering project with the following attributes:

- safety requirements met
- client expectations established
- cost effective solutions pursued and assured
- design and technical requirements documentation

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not Applicable

Competency Field

2.2) Literacy and numeracy skills

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Unit Descriptor

Unit Descriptor

1)

1.1) Descriptor

This unit specifies the mandatory requirements of occupational health and safety and how they apply to the various electrotechnology work functions. It encompasses responsibilities for health and safety, risk management processes at all operative levels and adherence to safety practices as part of the normal way of doing work.

Application of the Unit

Not Applicable

Licensing/Regulatory Information

1.2) License to practice

During Training: Competency development activities are subject to regulations directly related to licencing, occupational health and safety and where applicable contracts of training such as apprenticeships.

In the workplace: The application of the skills and knowledge described in this unit require a license to practice in the workplace where work is carried out on electrical equipment or installations which are designed to operate at voltages greater than 50 V a.c. or 120 V d.c.

Other conditions may apply under State and Territory legislative and regulatory requirements.

Pre-Requisites

Prerequisite Unit(s) 2)

2.1) Competencies

There are no prerequisite competencies for this unit.

Employability Skills Information

Employability Skills 3)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Application of the Unit 4)

This unit addresses information, processes and techniques for the application of general occupational health and safety requirements in workplaces and is essential for employees without managerial or supervisory responsibilities

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a unit of competency
Performance criteria describe the required performance needed to demonstrate achievement of the Element.
Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1 Prepare to enter a work area	1.1 Work area access permits are obtained from appropriate personnel according to established procedures
--------------------------------	--

ELEMENT	PERFORMANCE CRITERIA
	1.2 Safe work methods for controlling risk obtained, read and understood prior to undertaking a work activity.
	1.3 Preparations for electrical and non-electrical isolation are carried out to prevent creation of hazards from loss of machine/system/process control according to established procedures.
	1.4 Tools and equipment needed for the work are checked for safety and correct functionality according to established procedures and regulatory requirements.
2 Apply safe working practices.	2.1 Safe work methods for controlling risk are followed accurately.
	2.2 Workplace procedures for dealing with accidents, fires and emergencies are followed according to work procedures and scope of responsibility and competencies.
3. Follow workplace procedures for hazard identification and risk control	3.1 Hazards are identified and control measures implemented and monitored through active participation in the consultation process with employer and other employees.
	3.2 Hazards in the work area are recognised and reported to appropriate personnel according to established procedures.
	3.3 OHS records of incidents are completed in accordance with regulatory requirements and established procedures.
	3.4 Workplace instructions and training are followed accurately within established procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) This describes the essential skills and knowledge and their level, required for this

REQUIRED SKILLS AND KNOWLEDGE

unit.

Evidence shall show that knowledge has been acquired of safe working practices and applying OHS practices in the workplace.

The knowledge and skills shall be contextualised to current industry standards, technologies and practices.

KS01-EE101A Occupational Health and Safety principles

Evidence shall show an understanding of Occupational Health and Safety to an extent indicated by the following aspects

T1 The basic legal requirements covering occupational health and safety in the workplace encompassing:

- underlying principles of OH&S
- general aims and objectives of the relevant state or territory legislation relating to OH&S.
- employer and employee responsibilities, rights and obligations.
- major functions of safety committees and representatives.
- powers given to Occupational Health and Safety Inspectors
- housekeeping and potential hazards in relation to improper housekeeping
- selecting appropriate personal protective equipment (PPE) given hazardous situations

T2 The work environment encompassing:

- typical hazards associated with a range of work environments
- procedures used to control the risks associated with these hazards
- principles of risk assessment / management and state the purpose of each.
- hierarchy of OH&S hazard control measures.
- required documentation for risk assessment.
- commonly used workplace safety signs.
- workplace emergencies that pose a threat to health and safety and suitable procedure for an emergency workplace evacuation.
- appropriate fire extinguisher for a given type of fire.
- requirements for the location, mounting and maintenance of portable fire extinguishers.
- basic process of fighting a fire.
- Importance of safe premises, buildings and security in an industrial setting and the consequences of non-compliance.
- standard work procedure.

T3 Manual Handling encompassing:

- typical manual handling injuries and the effect they can have on lifestyle
- situations that may cause manual handling injuries
- correct procedures for lifting and carrying to prevent manual handling injuries

REQUIRED SKILLS AND KNOWLEDGE

T4 Chemicals in the workplace encompassing:

- hazardous substances and dangerous goods.
- classification of chemicals as hazardous substances and/or dangerous goods
- requirements for labelling of chemicals in the workplace
- safe storage procedures for chemicals
- purpose and interpretation of material safety data sheet (MSDS)

T5 Working at heights encompassing:

- dangers associated with working on ladders and scaffolds
- identification of work area as a height risk and use appropriate safety equipment to prevent a fall
- selecting an appropriate ladder for a given situation and perform a safety check before use
- precautions that should be taken when ascending and working off a ladder
- precautions that should be taken when working on and around a scaffold and elevated platforms.

T6 Confined spaces encompassing:

- hazards associated with working in a confined space
- identifying workplace situations that could be classified as a confined space
- control measures for working in a designated confined space

T7 Physical and psychological hazards encompassing:

- short and long term effects of excessive noise and techniques to avoid damage to hearing due to excessive noise
- effects of vibration on the human body and work practices to protect against vibration
- effects of thermal stress on the human body and work practices to protect against thermal stress
- effects of ultraviolet (UV) radiation on the human body and work practices to protect against UV radiation.
- dangers associated with laser operated equipment and tools and suitable protective measures to overcome the danger.
- occupational overuse syndrome, how it occurs and means to overcome it
- factors that cause stress in the workplace, symptoms of a person suffering from stress and personal stress management techniques
- detrimental effects and dangers of drug and alcohol use in the workplace

T8 Working safely with electricity encompassing:

- effects of electric shock on the human body
- common causes of electrical accidents
- precautions that can minimise the chance of electric shock (earthing, extra low voltage, fuses, circuit breakers and residual current devices – RCDs)

REQUIRED SKILLS AND KNOWLEDGE

- protection offered by a residual current device (RCD)
- need for ensuring the (safe) isolation of an electrical supply
- appropriate method of removing an electric shock victim from a live electrical situation

T9 Life support - CPR in the workplace encompassing:

- First Aid.
- responsibilities of the First Aider.
- priorities of first aid management for any accident or injury.
- procedures required at an accident scene.
- legal and ethical issues, which may impact on the management of care.
- 'Duty of Care'.
- examination of a casualty for injuries.
- effect of cardio pulmonary arrest on the body.
- Managing simulated conditions of: airway obstruction; respiratory arrest and cardio pulmonary arrest,
- single and two-person cardio pulmonary resuscitation (CPR).
- signs and symptoms of an altered level of consciousness
- management of simulation of a casualty with an altered level of consciousness.
- signs and symptoms of shock.
- management of simulation of a casualty in shock

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the

EVIDENCE GUIDE

application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance

EVIDENCE GUIDE

criteria and range statement encompassing:

- Apply sustainable energy principles and practices as specified in the performance criteria and range statement
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Applying OHS practices in the workplace as described in 8) and including:
 - A Preparing to enter the workplace including, the use of work permits and clearances and isolation permissions.
 - B Understanding and following risk control safe work methods.
 - C Applying work procedures and instructions as they apply to risk control measures.
 - D Dealing with accidents and emergencies within the scope of responsibility.
 - E Participation in consultation processes, identifying hazards and implementing and monitoring control measures.
 - F Dealing with unplanned events

Note:

Ability to implement these Occupation Health and Safety measures shall be demonstrated on all occasions safety issues arise.

**Context of and
specific resources**

9.3)

EVIDENCE GUIDE

for assessment

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to applying OHS practices in the workplace.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

This unit shall be assessed concurrently, as it relates to other units undertaken in a possible skill clusters or qualification.

Components of this unit are included in the critical aspects of evidence of all units to help ensure the appropriate level of responsibility for safety has been acquired

Range Statement

RANGE STATEMENT

8) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to each of the following

- Relevant Occupational Health and Safety legislation, regulations and codes of practice related to hazards present in the industry and particular workplace
- Accepted industry work procedures and the specific safety procedures and work instructions for particular workplace.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not Applicable

Competency Field

2.2) Literacy and numeracy skills

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

Custom Content Section

Competency Field 5)

Electrotechnology

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

Modification History

Unit Descriptor

Unit Descriptor

1)

1.1) Descriptor

This unit covers basic fitting and fabrication techniques as they apply in the various utilities industry work functions. It encompasses the safe use of hand, fixed and portable power tools; cutting, shaping joining and fixing using metallic and non-metallic materials; dismantling and assembling equipment; basic mechanical measurement and marking-out and reading drawings/diagrams.

Application of the Unit

Not Applicable

Licensing/Regulatory Information

1.2) License to practice

During Training: Competency development activities are subject to regulations directly related to licencing, occupational health and safety and where applicable contracts of training such as apprenticeships.

In the workplace: The application of the skills and knowledge described in this unit require a license to practice in the workplace where work is carried out on electrical equipment or installations which are designed to operate at voltages greater than 50 V a.c. or 120 V d.c.

Other conditions may apply under State and Territory legislative and regulatory requirements.

Pre-Requisites

Prerequisite Unit(s) 2)

2.1) Competencies

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

2.2) Further Information:

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Employability Skills Information

Employability Skills 3)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Application of the Unit 4)

4.1) General Application

This unit applies to persons entering work in utilities industry and may be used in school-based vocational programs.

4.2) Importation

RTOs wishing to import this unit into any qualification under the flexibility provisions of NQC Training Package Policy

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare for dismantling, assembling and fabrication work.	<p>1.1 OHS procedures for a given work area are obtained and understood through established routines and procedures.</p> <p>1.2 Established OHS risk control measures and procedures in preparation for the work are followed.</p> <p>1.3 Safety hazard not previously identified are reported and advice on risk control measures is sought from the work supervisor.</p> <p>1.4 The nature of the work is obtained from documentation and from work supervisor to establish the scope of work to be undertaken.</p> <p>1.5 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.</p> <p>1.6 Materials required for the work are obtained in accordance with established routines and procedures.</p> <p>1.7 Tools, equipment and measuring devices needed to carry out the work are obtained and checked for correct operation and safety.</p> <p>1.8 Cutting tools such as drills and chisels are sharpened to suit the material on which they are to be used.</p>
2 Dismantle and assemble utilities industry apparatus.	<p>2.1 Established OHS risk control measures and procedures for carrying out the work are followed.</p> <p>2.2 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures.</p> <p>2.3 Appropriate tools are selected and used correctly and</p>

ELEMENT	PERFORMANCE CRITERIA
	safely in dismantling and assembling apparatus.
2.4	Manufacturer apparatus dismantling and assembling guides are used where applicable.
2.5	Components are marked or tagged during the dismantling to help ensure correct and efficient reassembly.
2.6	Dismantled components and parts are stored to protect them against loss or damage.
2.7	Apparatus is dismantled and assembled efficiently without waste of materials and energy and/or damage to apparatus and the surrounding environment or services.
2.8	Procedures for referring non-routine events to immediate supervisor for directions are followed.
2.9	Routine quality checks are carried out in accordance with work instructions.
2.10	OHS risk control work completion measures and procedures are followed.
2.11	Work site is cleaned and made safe in accordance with established procedures.
2.12	Work supervisor is notified of the completion of the work in accordance with established procedures.
3 Fabricate utilities industry components.	3.1 Established OHS risk control measures and procedures for carrying out the work are followed.
	3.2 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures.
	3.3 Appropriate tools are selected and used correctly and safely in fabricating components.
	3.4 Drawings and instruction for the fabrication of components are followed.
	3.5 Component dimensions are determined directly or by calculation from information given in job drawings and instructions.

ELEMENT	PERFORMANCE CRITERIA
3.6	Components are fabricated efficiently without waste of materials and energy and/or damage to the surrounding environment or services.
3.7	Procedures for referring non-routine events to immediate supervisor for directions are followed.
3.8	Routine quality checks are carried out in accordance with work instructions.
3.9	OHS risk control work completion measures and procedures are followed.
3.10	Work site is cleaned and made safe in accordance with established procedures.
3.11	Work supervisor is notified of the completion of the work in accordance with established procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and fabricating, dismantling, assembling of utilities industry components.

The knowledge and skills shall be contextualised to current industry standards, technologies and practices.

KS01-EE102A

Hand and power tools and their application

Evidence shall show an understanding of hand and power tools and their application to an extent indicated by the following aspects:

T1 Mechanical drawing interpretation and sketching encompassing:

- drawing standards and conventions used in drawings of mechanical components as specified in AS1100
- basic abbreviations and symbols used in drawing of mechanical components
- interpretation of mechanical drawings commonly used in the electrotechnology industry (orthogonal projection, third angle - detail and assembly drawings, pictorial views)
- laying out a drawing of mechanical components using engineering drawing

REQUIRED SKILLS AND KNOWLEDGE

convention.

- freehand drawings of mechanical components showing all information needed for its manufacture/fabrication

T2 Workshop planning and materials encompassing:

- methods used to work safely in an industrial work environment.
- typical non-electrical hazards in the workplace
- control measures for dealing with hazards identified.
- Conducting a risk assessment on a given work environment, documenting and assessing the risks identified
- type of metallic and non-metallic materials used in the electrotechnology industry and application of the common materials
- planning process

T3 Measuring and marking out encompassing:

- reasons for measuring and marking out
- tools used for marking out
- measuring and marking out a project accurately following correct procedures.
- sustainable energy work practices related to reducing waste when marking out.

T4 Holding and cutting encompassing:

- common tools for holding (bench vices, multi-grips, vice grips, wrenches).
- common tools for cutting metallic and non-metallic material (hacksaws, wood saws, chisels, pliers, files)
- procedure for using a range of tools for cutting, shaping, and finishing metallic and non-metallic materials
- safety procedures when using holding and cutting tools

T5 Drills and drilling encompassing:

- types of drills used in the electrotechnology industry
- sharpening twist drills
- drilling metallic and non-metallic components
- safe use of a bench drill

T6 Tapping and threading encompassing:

- type and size of commonly used threads used in electrotechnology work
- taps and tap wrenches
- tapping metallic and non-metallic components
- stock and die tools
- threading metallic and non-metallic components

T7 General Hand Tools encompassing:

- hammers used in electrotechnology work
- screwdrivers used in electrotechnology work

REQUIRED SKILLS AND KNOWLEDGE

- spanners and sockets used in electrotechnology work
- pliers used in electrotechnology work
- assembling components applicable to electrotechnology industry using a variety of hand tools.

T8 Joining techniques encompassing:

- types of machine screws and nuts
- forms of welding (Oxy-acetylene, electric arc welding).
- forms of brazing and hard soldering
- process of soft soldering
- joining components using machine screws
- joining components using welding, brazing or soldering techniques

T9 Portable electric power tools encompassing:

- portable electric power tools (grinders, drills, jigsaws, saws)
- applications of portable electric power tools used in the electrotechnology work.
- using portable power tools.
- fabricating components using power tools (drills, grinders)

T10 Sheet metal work encompassing:

- types of sheet metal materials used in the electrotechnology work.
- names and applications of the types of fabrication materials.
- tools used with sheet metals in electrotechnology work (hacksaw, tinsnips, guillotines, punches, notching tools, folding machines)
- techniques used in fabricating sheet metal (cutting, bending, drilling/punching, joining, cutting mitres).
- marking out, cutting, bending, drilling and/or cutting and/or punching holes, joining and cutting mitred joints using sheet metal.
- sustainable energy work practices to reducing waste when fabricating using sheet metal.
- fabricating components using sheet metal and fabrication tools.

T11 Low tolerance measurement encompassing:

- tolerance
- techniques in using vernier callipers
- techniques in using micrometers.
- using vernier callipers to measure engineering components
- using micrometers to measuring engineering components

T12 Dismantling and assembly techniques encompassing:

- tools used in dismantling and assembling electrotechnology equipment (spanners, screwdrivers, bearing pullers, etc).
- procedures for ensuring the safe treatment of dismantled components.
- dismantling electrical, electronic, instrumentation or refrigeration/air conditioning

REQUIRED SKILLS AND KNOWLEDGE

- piece of equipment using correct procedures.
- assembling electrical, electronic, instrumentation or refrigeration/air conditioning piece of equipment using correct procedures.

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more

EVIDENCE GUIDE

critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Fabricate, dismantle, assemble of utilities industry components as described in 8) and including:
 - A Selecting and using hand tools appropriate to a task correctly and safely
 - B Selecting and using power tools appropriate to a task

EVIDENCE GUIDE

correctly and safely

- C Sharpening at least two drill bits each for use different types of material.
- D Interpreting mechanical drawings/diagrams and instructions correctly.
- E Dismantle and assemble an apparatus relevant to utilities industry discipline in which competency is sought.
- F Fabricate a component relevant to the utilities industry discipline in which competency is sought.
- G Dealing with unplanned events

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to dismantling, assembling and fabricating utilities industry components.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment

EVIDENCE GUIDE

and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

Range Statement

RANGE STATEMENT

8) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to installation, fault finding, maintenance, repair or development work functions in any of the following disciplines:

- Electrotechnology Disciplines
- Gas industry Disciplines
- ESI Transmission, Distribution and Rail Disciplines
- ESI Generation Disciplines

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

UEENEEE103A Solve problems in ELV single path circuits

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers providing known solutions to predictable problems in single path circuits operated at extra-low voltage (ELV) as they apply to various energy sector work functions. It encompasses working safely, problem solving procedures, including the use of basic voltage, current and resistance measuring devices, providing known solutions to predictable circuit problems.

Application of the Unit

Application of the Unit 2)

This unit shall apply to persons entering work in the energy sector and may be used in school-based vocational programs.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit do not require a license to practice in the workplace. However they are subject to regulations directly related to occupational health and safe and contracts of training such as new apprenticeships.

Pre-Requisites

Prerequisite Unit(s) 4)

Competencies 4.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE1 01A Apply Occupational Health and Safety regulations, codes and practices in the workplace

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 3 Writing 3 Numeracy 3

Employability Skills Information

Employability Skills 5)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit Performance Criteria describe the required performance needed to demonstrate achievement of the element.
Assessment of performance is to be consistent with the

Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to work on extra-low voltage single path electrical circuits.	1.1 OHS procedures for a given work area are identified, obtained and understood.
	1.2 OHS risk control work preparation measures and procedures are followed.
	1.3 The nature of the circuit(s) problem is obtained from documentation or from work supervisor to establish the scope of work to be undertaken.
	1.4 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.
	1.5 Sources of materials that may be required for the work are identified and accessed in accordance with established procedures.
	1.6 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety.
2 Solve problem in extra-low voltage single path electrical circuits.	2.1 OHS risk control work measures and procedures are followed.
	2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
	2.3 Circuits are checked as being isolated where necessary in strict accordance OHS requirements and procedures.
	2.4 Established routines are used to solve circuit problems using measured and calculated values as they apply to single path, single source circuits.
	2.5 Problems are solved without damage to apparatus, circuits, the surrounding environment

ELEMENT	PERFORMANCE CRITERIA
3 Complete work and document problem solving activities.	or services and using sustainable energy practices.
3.1	OHS work completion risk control measures and procedures are followed.
3.2	Work site is cleaned and made safe in accordance with established procedures.
3.3	Justification for solutions used to solve circuit problems is documented.
3.4	Work completion is documented and appropriate person(s) notified in accordance with established routine procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and solving problems in extra-low voltage single path circuits.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EE103A

Single Path d.c. Circuits

Evidence shall show an understanding of single path d.c. circuits to an extent indicated by the following aspects:

T1 Basic electrical concepts encompassing:

- electrotechnology industry
- static and current electricity
- production of electricity by renewable and non renewable energy sources
- transportation of electricity from the source to the load via the transmission and distribution systems
- utilisation of electricity by the various loads
- basic calculations involving quantity of electricity, velocity and speed with relationship to the generation and transportation of electricity.

T2 Basic electrical circuit encompassing:

REQUIRED SKILLS AND KNOWLEDGE

- symbols used to represent an electrical energy source, a load, a switch and a circuit protection device in a circuit diagram
- purpose of each component in the circuit
- effects of an open-circuit, a closed-circuit and a short-circuit
- multiple and sub-multiple units

T3 Ohm's Law encompassing:

- basic d.c. single path circuit.
- voltage and currents levels in a basic d.c. single path circuit.
- effects of an open-circuit, a closed-circuit and a short-circuit on a basic d.c. single path relationship between voltage and current from measured values in a simple circuit
- determining voltage, current and resistance in a circuit given any two of these quantities
- graphical relationships of voltage, current and resistance
- relationship between voltage, current and resistance

T4 Electrical power encompassing:

- relationship between force, power, work and energy
- power dissipated in circuit from voltage, current and resistance values
- power ratings of devices
- measurement electrical power in a d.c. circuit
- effects of power rating of various resistors

T5 Effects of electrical current encompassing:

- physiological effects of current and the fundamental principles (listed in AS/NZS 3000) for protection against the this effect
- basic principles by which electric current can result in the production of heat; the production of magnetic fields; a chemical reaction
- typical uses of the effects of current
- mechanisms by which metals corrode
- fundamental principles (listed in AS/NZS3000) for protection against the damaging effects of current

T6 EMF sources energy sources and conversion electrical energy encompassing:

- basic principles of producing a emf from the interaction of a moving conductor in a magnetic field.
- basic principles of producing an emf from the heating of one junction of a thermocouple.
- basic principles of producing a emf by the application of sun light falling on the surface of photovoltaic cells
- basic principles of generating a emf when a mechanical force is applied to a crystal (piezo electric effect)
- principles of producing a electrical current from primary, secondary and fuel cells

REQUIRED SKILLS AND KNOWLEDGE

- input, output, efficiency or losses of electrical systems and machines
- effect of losses in electrical wiring and machines
- principle of conservation of energy

T7 Resistors encompassing:

- features of fixed and variable resistor types and typical applications
- identification of fixed and variable resistors
- various types of fixed resistors used in the Electro technology Industry. e.g. wire-wound, carbon film, tapped resistors.
- various types of variable resistors used in the Electro technology Industry e.g. adjustable resistors: potentiometer and rheostat; light dependent resistor (LDR); voltage dependent resistor (VDR) and temperature dependent resistor (NTC, PTC).
- characteristics of temperature, voltage and light dependent resistors and typical applications of each
- power ratings of a resistor.
- power loss (heat) occurring in a conductor.
- resistance of a colour coded resistor from colour code tables and confirm the value by measurement.
- measurement of resistance of a range of variable resistors under varying conditions of light, voltage, temperature conditions.
- specifying a resistor for a particular application.

T8 Series circuits encompassing:

- circuit diagram of a single-source d.c. 'series' circuit.
- Identification of the major components of a 'series' circuit: power supply; loads; connecting leads and switch
- applications where 'series' circuits are used in the Electro technology industry.
- characteristics of a 'series' circuit - connection of loads, current path, voltage drops, power dissipation and affects of an open circuit in a 'series' circuit.
- the voltage, current, resistances or power dissipated from measured or given values of any two of these quantities
- relationship between voltage drops and resistance in a simple voltage divider network.
- setting up and connecting a single-source series dc circuit
- measurement of resistance, voltage and current values in a single source series circuit
- effect of an open-circuit on a series connected circuit

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Solve problems in extra-low voltage single path circuits as described in 8) and including:

- A Determining the operating parameters of an existing circuit.
- B Altering an existing circuit to comply with specified operating parameters.
- C Developing circuits to comply with a specified

function and operating parameters.

- D Identifying loss of supply.
- E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to solve problems in extra-low voltage single path circuits.

Method of assessment 9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential

knowledge and skills described in this unit.

**Concurrent
assessment and
relationship with
other units** 9.5)

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in unit UEENEEE101A and other discipline specific occupational health and safety units shall be incorporated in relation to this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to:

- Single source single path circuits as they apply to problems related to installation, fault finding, maintenance or development work functions in any of the following disciplines:
 - Computers
 - Data Communications
 - Electrical
 - Electronics
 - Fire protection
 - Instrumentation
 - Refrigeration and Air Conditioning,
 - Renewable and sustainable energy systems, and
 - Security technology
- In relation to at least three of the following types of circuit problems and on at least two occasions:
 - Determining the operating parameters of an existing circuit
 - Identifying and locating open-circuits
 - Identifying and locating short-circuits
 - Identifying loss of supply

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these

RANGE STATEMENT

and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not applicable.

Competency Field

Competency Field	11)
	Electrotechnology

UEENEEE104A Solve problems in d.c. circuits

Modification History

Not Applicable

Unit Descriptor

Unit Descriptor

1)

1.1) Descriptor

This unit covers determining correct operation of single source d.c. series, parallel and series-parallel circuits and providing solutions as they apply to various electrotechnology work functions. It encompasses working safely, problem solving procedures, including the use of voltage, current and resistance measuring devices, providing solutions derived from measurements and calculations to predictable problems in single and multiple path circuits.

Application of the Unit

Not Applicable

Licensing/Regulatory Information

1.2) License to practice

During Training: Competency development activities are subject to regulations directly related to licencing, occupational health and safety and where applicable contracts of training such as apprenticeships.

In the workplace: The application of the skills and knowledge described in this unit require a license to practice in the workplace where work is carried out on electrical equipment or installations which are designed to operate at voltages greater than 50 V a.c. or 120 V d.c.

Other conditions may apply under State and Territory legislative and regulatory requirements.

Pre-Requisites

Prerequisite Unit(s) 2)

2.1) Competencies

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

2.2) Further Information:

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Employability Skills Information

Employability Skills 3)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Application of the Unit 4)

4.1) General Application

This unit applies to competency development entry-level employment based programs incorporated in approved contracts of training.

4.2) Importation

RTOs wishing to import this unit into any qualification under the flexibility provisions of NQC Training Package Policy

Elements and Performance Criteria Pre-Content

6) Elements describe Performance criteria describe the required performance needed

the essential outcomes to demonstrate achievement of the Element. Assessment of a unit of competency performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to work on d.c. electrical circuits.	1.1 OHS procedures for a given work area are identified, obtained and understood.
	1.2 OHS risk control work preparation measures and procedures are followed.
	1.3 The nature of the circuit problem is obtained from documentation or from work supervisor to establish the scope of work to be undertaken.
	1.4 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.
	1.5 Sources of materials that may be required for the work are identified and accessed in accordance with established procedures.
	1.6 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety.
2 Solve d.c. circuit problems.	2.1 OHS risk control work measures and procedures are followed.
	2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
	2.3 Circuits are checked as being isolated where necessary in strict accordance OHS requirements and procedures.
	2.4 Established methodological techniques are used to solve d.c. circuit problems from measure and calculated values as they apply to electrical circuit.
	2.5 Unexpected situations are dealt with safely and with the approval of an authorised person.

ELEMENT	PERFORMANCE CRITERIA
	2.6 Problems are solved without damage to apparatus, circuits, the surrounding environment or services and using sustainable energy practices.
3 Complete work and document problem solving activities.	3.1 OHS work completion risk control measures and procedures are followed.
	3.2 Work site is cleaned and made safe in accordance with established procedures.
	3.3 Justification for solutions used to solve circuit problems is documented.
	3.4 Work completion is documented and appropriate person(s) notified in accordance with established procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and solving problems in d.c. circuits.

The knowledge and skills shall be contextualised to current industry standards, technologies and practices.

KS01-EE104A

Direct current circuits

Evidence shall show an understanding of electrical fundamentals and direct current multiple path circuits to an extent indicated by the following aspects:

T1 Basic electrical concepts encompassing:

- electrotechnology industry
- static and current electricity
- production of electricity by renewable and non renewable energy sources
- transportation of electricity from the source to the load via the transmission and distribution systems
- utilisation of electricity by the various loads
- basic calculations involving quantity of electricity, velocity and speed with relationship to the generation and transportation of electricity.

REQUIRED SKILLS AND KNOWLEDGE

T2 Basic electrical circuit encompassing:

- symbols used to represent an electrical energy source, a load, a switch and a circuit protection device in a circuit diagram
- purpose of each component in the circuit
- effects of an open-circuit, a closed-circuit and a short-circuit
- multiple and sub-multiple units

T3 Ohm's Law encompassing:

- basic d.c. single path circuit.
- voltage and currents levels in a basic d.c. single path circuit.
- effects of an open-circuit, a closed-circuit and a short-circuit on a basic d.c. single path relationship between voltage and current from measured values in a simple circuit
- determining voltage, current and resistance in a circuit given any two of these quantities
- graphical relationships of voltage, current and resistance
- relationship between voltage, current and resistance

T4 Electrical power encompassing:

- relationship between force, power, work and energy
- power dissipated in circuit from voltage, current and resistance values
- power ratings of devices
- measurement electrical power in a d.c. circuit
- effects of power rating of various resistors

T5 Effects of electrical current encompassing:

- physiological effects of current and the fundamental principles (listed in AS/NZS 3000) for protection against the this effect
- basic principles by which electric current can result in the production of heat; the production of magnetic fields; a chemical reaction
- typical uses of the effects of current
- mechanisms by which metals corrode
- fundamental principles (listed in AS/NZS3000) for protection against the damaging effects of current

T6 EMF sources energy sources and conversion electrical energy encompassing:

- basic principles of producing a emf from the interaction of a moving conductor in a magnetic field.
- basic principles of producing an emf from the heating of one junction of a thermocouple.
- basic principles of producing a emf by the application of sun light falling on the surface of photovoltaic cells
- basic principles of generating a emf when a mechanical force is applied to a crystal

REQUIRED SKILLS AND KNOWLEDGE

(piezo electric effect)

- principles of producing a electrical current from primary, secondary and fuel cells
- input, output, efficiency or losses of electrical systems and machines
- effect of losses in electrical wiring and machines
- principle of conservation of energy

T7 Resistors encompassing:

- features of fixed and variable resistor types and typical applications
- identification of fixed and variable resistors
- various types of fixed resistors used in the Electro technology Industry. e.g. wire-wound, carbon film, tapped resistors.
- various types of variable resistors used in the Electro technology Industry e.g. adjustable resistors: potentiometer and rheostat; light dependent resistor (LDR); voltage dependent resistor (VDR) and temperature dependent resistor (NTC, PTC).
- characteristics of temperature, voltage and light dependent resistors and typical applications of each
- power ratings of a resistor.
- power loss (heat) occurring in a conductor.
- resistance of a colour coded resistor from colour code tables and confirm the value by measurement.
- measurement of resistance of a range of variable resistors under varying conditions of light, voltage, temperature conditions.
- specifying a resistor for a particular application.

T8 Series circuits encompassing:

- circuit diagram of a single-source d.c. 'series' circuit.
- Identification of the major components of a 'series' circuit: power supply; loads; connecting leads and switch
- applications where 'series' circuits are used in the Electro technology industry.
- characteristics of a 'series' circuit - connection of loads, current path, voltage drops, power dissipation and affects of an open circuit in a 'series' circuit.
- the voltage, current, resistances or power dissipated from measured or given values of any two of these quantities
- relationship between voltage drops and resistance in a simple voltage divider network.
- setting up and connecting a single-source series dc circuit
- measurement of resistance, voltage and current values in a single source series circuit
- effect of an open-circuit on a series connected circuit

T9 Parallel circuits encompassing:

- schematic diagram of a single-source d.c. 'parallel' circuit.
- major components of a 'parallel' circuit (power supply, loads, connecting leads and

REQUIRED SKILLS AND KNOWLEDGE

switch)

- applications where 'parallel' circuits are used in the Electrotechnology industry.
- characteristics of a 'parallel' circuit. (load connection, current paths, voltage drops, power dissipation, affects of an open circuit in a 'parallel' circuit).
- relationship between currents entering a junction and currents leaving a junction
- relationship between branch currents and resistances in a two branch current divider network.
- calculation of the total resistance of a 'parallel' circuit.
- calculation of the total current of a 'parallel' circuit.
- Calculation of the total voltage and the individual voltage drops of a 'parallel' circuit.
- setting up and connecting a single-source d.c. parallel circuit
- resistance, voltage and current measurements in a single-source parallel circuit
- voltage, current, resistance or power dissipated from measured values of any of these quantities
- output current and voltage levels of connecting cells in parallel.

T10 Series/parallel circuits encompassing:

- schematic diagram of a single-source d.c. 'series/parallel' circuit.
- major components of a 'series/parallel' circuit (power supply, loads, connecting leads and switch)
- applications where 'series/parallel' circuits are used in the Electrotechnology industry.
- characteristics of a 'series/parallel' circuit. (load connection, current paths, voltage drops, power dissipation, affects of an open circuit in a 'series/parallel' circuit).
- relationship between voltages, currents and resistances in a bridge network.
- calculation of the total resistance of a 'series/parallel' circuit.
- calculation of the total current of a 'series/parallel' circuit.
- calculation of the total voltage and the individual voltage drops of a 'series/parallel' circuit.
- setting up and connecting a single-source d.c. series/ parallel circuit
- resistance, voltage and current measurements in a single-source d.c. series / parallel circuit
- the voltage, current, resistances or power dissipated from measured values of any two of these quantities

T11 Factors affecting resistance encompassing:

- four factors that affect the resistance of a conductor (type of material, length, cross-sectional area and temperature)
- affect the change in the type of material (resistivity) has on the resistance of a conductor.
- affect the change in 'length' has on the resistance of a conductor.
- affect the change in 'cross-sectional area' has on the resistance of a conductor.

REQUIRED SKILLS AND KNOWLEDGE

- effects of temperature change on the resistance of various conducting materials
- effects of resistance on the current-carrying capacity and voltage drop in cables.
- calculation of the resistance of a conductor from factors such as conductor length, cross-sectional area, resistivity and changes in temperature
- using digital and analogue ohmmeter to measure the change in resistance of different types of conductive materials (copper, aluminium, nichrome, tungsten) when those materials undergo a change in type of material length, cross-sectional area and temperature.

T12 Effects of meters in a circuit encompassing:

- selecting an appropriate meter in terms of units to be measured, range, loading effect and accuracy for a given application.
- measuring resistance using direct, volt-ammeter and bridge methods.
- instruments used in the field to measure voltage, current, resistance and insulation resistance and the typical circumstances in which they are used.
- hazards involved in using electrical instruments and the safety control measures that should be taken.
- operating characteristics of analogue and digital meters.
- correct techniques to read the scale of an analogue meters and how to reduce the 'parallax' error.
- types of voltmeters used in the Electrotechnology industry – bench type, clamp meter, Multimeter, etc.
- purpose and characteristics (internal resistance, range, loading effect and accuracy) of a voltmeter.
- types of voltage indicator testers. e.g. LED, neon, solenoid, volt-stick, series tester, etc. and explain the purpose of each voltage indicator tester.
- operation of various voltage indicator testers.
- advantages and disadvantages of each voltage indicator tester.
- various types of ammeters used in the Electrotechnology industry – bench, clamp meter, multimeter, etc.
- purpose of an ammeter and the correct connection (series) of an ammeter into a circuit.
- reasons why the internal resistance of an ammeter must be extremely low and the dangers and consequences of connecting an ammeter in parallel and/or wrong polarity.
- selecting an appropriate meter in terms of units to be measured, range, loading effect and accuracy for a given application
- connecting an analogue/digital voltmeter into a circuit ensuring the polarities are correct and take various voltage readings.
- loading effect of various voltmeters when measuring voltage across various loads.
- using voltage indicator testers to detect the presence of various voltage levels.
- connecting analogue/digital ammeter into a circuit ensuring the polarities are correct and take various current readings.

REQUIRED SKILLS AND KNOWLEDGE

T13 Resistance measurement encompassing:

- Identification of instruments used in the field to measure resistance (including insulation resistance) and the typical circumstances in which they are used.
- the purpose of an Insulation Resistance (IR) Tester.
- the parts and functions of various analogue and digital IR Tester (selector range switch, zero ohms adjustment, battery check function, scale and connecting leads).
- reasons why the supply must be isolated prior to using the IR tester.
- where and why the continuity test would be used in an electrical installation.
- where and why the insulation resistance test would be used in an electrical installation.
- the voltage ranges of an IR tester and where each range may be used. e.g. 250 V d.c, 500 V d.c and 1000 V d.c
- AS/NZS3000 Wiring Rules requirements – continuity test and insulation resistance (IR) test.
- purpose of regular IR tester calibration.
- the correct methods of storing the IR tester after use
- carry out a calibration check on a IR Tester
- measurement of low values of resistance using an IR tester continuity functions.
- measurement of high values of resistance using an IR tester insulation resistance function.
- volt-ammeter (short shunt and long shunt) methods of measuring resistance.
- calculation of resistance values using voltmeter and ammeter reading (long and short shunt connections)
- measurement of resistance using volt-ammeter methods

T14 Capacitors and Capacitance encompassing:

- basic construction of standard capacitor, highlighting the: plates, dielectric and connecting leads
- different types of dielectric material and each dielectric's relative permittivity.
- identification of various types of capacitors commonly used in the Electrotechnology industry (fixed value capacitors -stacked plate, rolled, electrolytic, ceramic, mica and Variable value capacitors – tuning and trimmer)
- circuit symbol of various types of capacitors: standard; variable, trimmer and polarised
- terms: Capacitance (C), Electric charge (Q) and Energy (W)
- unit of: Capacitance (Farad), Electric charge (Coulomb) and Energy (Joule)
- factors affecting capacitance (the effective area of the plates, the distance between the plates and the type of dielectric) and explain how these factors are present in all circuits to some extent.
- how a capacitor is charged in a d.c. circuit.
- behaviour of a series d.c. circuit containing resistance and capacitance components. - charge and discharge curves

REQUIRED SKILLS AND KNOWLEDGE

- the term ‘Time Constant’ and its relationship to the charging and discharging of a capacitor.
- calculation of quantities from given information: Capacitance ($Q = VC$); Energy ($W = \frac{1}{2}CV^2$); Voltage ($V = Q/C$)
- calculation one time constant as well as the time taken to fully charge and discharge a given capacitor. ($\tau = RC$)
- connection of a series d.c. circuit containing capacitance and resistor to determine the time constant of the circuit

T15 Capacitors in Series and Parallel encompassing:

- hazards involved in working with capacitance effects and the safety control measures that should be taken.
- safe handling and the correct methods of discharging various size capacitors
- dangers of a charged capacitor and the consequences of discharging a capacitor through a person
- factors which determine the capacitance of a capacitor and explain how these factors are present in all circuits to some extent.
- effects of capacitors connected in parallel by calculating their equivalent capacitance.
- effects on the total capacitance of capacitors connected in series by calculating their equivalent capacitance.
- Connecting capacitors in series and/or parallel configurations to achieve various capacitance values.
- common faults in capacitors.
- testing of capacitors to determine serviceability.
- application of capacitors in the Electrotechnology industry.

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form

EVIDENCE GUIDE

that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:

EVIDENCE GUIDE

- Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
- Apply sustainable energy principles and practices as specified in the performance criteria and range statement
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Solving problems in d.c. circuits as described in 8) and including:
 - A Using methodological techniques to solve d.c. circuit problems from measure and calculated values
 - B Determining the operating parameters of an existing circuit.
 - C Altering an existing circuit to comply with specified operating parameters.
 - D Developing circuits to comply with a specified function and operating parameters.
 - E Dealing with unplanned events

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

EVIDENCE GUIDE

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to solving problems in d.c. circuits.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

There are no concurrent assessment recommendations for this unit.

Range Statement

RANGE STATEMENT

8) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to single source series, parallel and series-parallel d.c. circuits as they apply to problems related to installation, fault finding, maintenance or development work functions and at least two of the following types of circuit problems and on more than one occasions:

- Determining the operating parameters of an existing circuit
- Altering an existing circuit to comply with specified operating parameters
- Developing circuits to comply with a specified function and operating parameters

RANGE STATEMENT

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not Applicable

Competency Field**2.2) Literacy and numeracy skills**

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

2.2) Literacy and numeracy skills

Competency Field 5)

Electrotechnology

UEENEEE105A Fix and secure electrotechnology equipment

Modification History

Unit Descriptor

Unit Descriptor

1)

1.1) Descriptor

This unit covers fixing, securing and mounting techniques as apply in the various electrotechnology work functions. It encompasses the safe use of hand and portable power tools, safe lifting techniques, safe use of ladders and elevated platforms and the selection and safe application of fixing devices and supporting accessories/equipment.

Application of the Unit

Not Applicable

Licensing/Regulatory Information

1.2) License to practice

During Training: Competency development activities are subject to regulations directly related to licencing, occupational health and safety and where applicable contracts of training such as apprenticeships.

In the workplace: The application of the skills and knowledge described in this unit require a license to practice in the workplace where work is carried out on electrical equipment or installations which are designed to operate at voltages greater than 50 V a.c. or 120 V d.c.

Other conditions may apply under State and Territory legislative and regulatory requirements.

Pre-Requisites

Prerequisite Unit(s) 2)

2.1) Competencies

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

2.2) Further Information:

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Employability Skills Information

Employability Skills 3)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Application of the Unit 4)

4.1) General Application

This unit applies to all qualifications, competencies and/or Skill Sets which require an electrical licence.

4.2) Importation

RTOs wishing to import this unit into any qualification under the flexibility provisions of NQC Training Package Policy

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes Performance criteria describe the required performance needed to demonstrate achievement of the Element.

of a unit of competency Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to fix and secure equipment.	<p>1.1 OHS procedures for a given work area are identified, obtained and understood.</p> <p>1.2 OHS risk control work preparation measures and procedures are followed.</p> <p>1.3 The scope of work to be undertaken is obtained from documentation or from work supervisor.</p> <p>1.4 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.</p> <p>1.5 Sources of materials that may be required for the work are identified and accessed in accordance with established procedures.</p> <p>1.6 Fixing devices are selected for their suitable ability for the environment, the load they are to support and substratum's into which they are to be installed.</p> <p>1.7 Supporting accessories/equipment is selected for suitability for the environment and ability to support and protect from damage that which they are intended to support.</p> <p>1.8 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety.</p>
2 Install fixing and support devices.	<p>2.1 Electrical isolation is arranged where work is within arm's reach of exposed conductive parts, plant or machinery in strict accordance OHS requirements and procedures.</p> <p>2.2 Other OHS risk control measures relevant to the work site are followed.</p> <p>2.3 Fixing devices are installed in accordance with manufacturer instructions.</p>

ELEMENT	PERFORMANCE CRITERIA
	2.4 Support accessories/equipment is install accurately and to comply with technical standards and job specifications.
	2.5 Work is carried out efficiently without waste of materials or damage to apparatus, circuits, the surrounding environment or services and using sustainable energy principles.
3 Complete fixing and support work.	3.1 OHS risk control work completion measures and procedures are followed.
	3.2 Work site is tidied and tools and equipment cleaned and securely stored.
	3.3 Appropriate personnel are notified of the work completion.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and fixing and securing equipment.

The knowledge and skills shall be contextualised to current industry standards, technologies and practices.

KS01-EE105A

Fixing and support devices/techniques

Evidence shall show an understanding of accessories and support and fixing device and methods and their use to an extent indicated by the following aspects:

T1. Device for securing and mounting electrical/electronic/instrumentation/refrigeration/air-conditioning/telecommunications accessories for supporting, fixing and protecting wiring/cabling/piping and functional accessories to hollow walls encompassing:

- types and safe application of devices for hollow wall fixing and support
- methods/techniques used to fix/support to wood, hollow wall, masonry blocks, plasterboard, panelling
- types and safe application of fixing devices used in the electrotechnology industry for wood and hollow wall structures (wood screws, coach bolts, self-tappers, self

REQUIRED SKILLS AND KNOWLEDGE

drilling, metal thread, hollow wall anchors, behind plaster brackets, stud brackets, plasterboard devices, toggle devices)

- types of tools used for hollow wall fixing and supporting.
- using various fixing methods to fix/support to hollow walls.

T2. Device for securing and mounting

electrical/electronic/instrumentation/refrigeration/

air-conditioning/telecommunications accessories for supporting, fixing and protecting wiring/cabling/piping and functional accessories to solid walls encompassing:

- types and safe application of devices used for solid wall fixing and support
- methods/techniques used in to fix to masonry and concrete structures
- fixing devices used in the electrotechnology industry for solid wall structures (wall-plugs, expanding concrete fixing devices, gas powered fixing tools, powder actuated fixing tools, loxins, dynabolts, chemical devices)
- regulatory requirements for use of powder fixing tools.
- hand and power tools used in fixing and supporting accessories
- using various fixing methods to fix/support to solid walls

T3. Device for securing and mounting

electrical/electronic/instrumentation/refrigeration/

air-conditioning/telecommunications accessories for supporting, fixing and protecting wiring/cabling/piping and functional accessories to metal fixing encompassing:

- accessories that may be fixed to metal (saddle clips, conduits, brackets, switches)
- techniques for fixing to metal
- fixing devices: coach bolts, self-tappers, metal thread bolts, hollow wall anchors, rivets
- fixing tools - spanners, screwdrivers, power screw drivers, pop riveters, files, reamers
- OH&S issues related to drilling, cutting, eye protection, metal filings, swarf, noise
- Using power drills, drill bits, change drill speeds.
- Install a fixing device and accessory capable of supporting up to 20 kg on the metal plate.

T4. Securing and mounting electrical/electronic/instrumentation/refrigeration/

air-conditioning/telecommunications accessories for supporting, fixing and protecting wiring/cabling/piping and functional accessories using fixing adhesives and tapes encompassing:

- types and safe application of using adhesives and tapes as fixing devices (load limits of different commercial products)
- accessories that may be fixed using adhesives and tapes
- techniques for the application of adhesives and tapes
- tools used to apply and cut adhesives and tapes
- hazards and safety measures when working with adhesives and chemical fixing devices (fumes, cutting, eye protection, physical contact, hand protection,

ingestion)

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are

EVIDENCE GUIDE

raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Fix and secure electrical equipment as described in 8) and including:
 - A Selecting fixing for loads of < 5 kg, < 20 kg and < 50 kg and suitable for the environment in which they are to be installed.

EVIDENCE GUIDE

- B Installing fixing devices in compliance with manufacturers instructions
- C Installing appropriate devices for fixing to a hollow wall, brick, concrete and steel.
- D Installing fixing support accessories/equipment relevant the discipline in which competency is sought.
- E Dealing with unplanned events

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to fixing and securing electrical equipment.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent

9.5)

EVIDENCE GUIDE

assessment and relationship with other units

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with units covering other installation competencies.

Range Statement

RANGE STATEMENT

8) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to installation, fault finding, maintenance or development work functions in any of the following disciplines:

- Appliances
- Business equipment
- Computers
- Data Communications
- Electrical
- Electrical Machines
- Electronics
- Fire protection
- Instrumentation
- Refrigeration and Air Conditioning
- Renewable / sustainable energy, and
- Security technology

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not Applicable

Competency Field

2.2) Literacy and numeracy skills

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

2.2) Literacy and numeracy skills

Competency Field 5)

Unit Descriptor

Unit Descriptor

1)

1.1) Descriptor

This unit covers the use of drawings, diagrams, cable schedules, standards, codes and specifications as they apply to the various electrotechnology work functions. It encompasses the rudiments for communicating with schematic, wiring and mechanical diagrams and equipment and cable/connection schedules, manuals, site and architectural drawings and plans showing the location of services, apparatus, plant and machinery and understanding the use and format of compliance standards and job specifications.

Application of the Unit

Not Applicable

Licensing/Regulatory Information

1.2) License to practice

During Training: Competency development activities are subject to regulations directly related to licencing, occupational health and safety and where applicable contracts of training such as apprenticeships.

In the workplace: The application of the skills and knowledge described in this unit require a license to practice in the workplace where work is carried out on electrical equipment or installations which are designed to operate at voltages greater than 50 V a.c. or 120 V d.c.

Other conditions may apply under State and Territory legislative and regulatory requirements.

Pre-Requisites

Prerequisite Unit(s) 2)

2.1) Competencies

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

2.2) Further Information:

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Employability Skills Information

Employability Skills 3)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Application of the Unit 4)

4.1) General Application

This unit applies to competency development entry-level employment based programs incorporated in approved contracts of training.

4.2) Importation

RTOs wishing to import this unit into any qualification under the flexibility provisions of NQC Training Package Policy

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to use drawings, diagrams, schedules and manuals.	1.1 Established OHS risk control measures and procedures are followed.
	1.2 The need for drawings, diagrams, schedules or manuals is determined from the nature of the work to be undertaken.
	1.3 Established routines and procedures are followed to obtain drawings, diagrams, schedules or manuals required for the work to be undertaken.
2 Use drawings, diagrams, schedules and manuals to obtain job information.	2.1 Drawings, diagrams, schedules and/or manuals are selected, appropriate to the work being undertaken.
	2.2 Drawings, diagrams and schedules are interpreted using knowledge of drawing layouts, conventions and symbols.
	2.3 Dimensions are extracted from drawings and diagrams for application to work undertaken.
	2.4 Location of equipment is determined from equipment schedules and location diagrams.
	2.5 Manuals are reviewed to ascertain their format and where information relevant to the work to be undertaken is located.
	2.6 Information given in manuals is interpreted in relation to the work to be undertaken.
3 Use drawings, diagrams, schedules and manuals to convey information	3.1 Drawing conventions are used in neat freehand drawings to convey information and ideas to others involved in the work to be undertaken.
	3.2 Drawing conventions are used to neatly correct

ELEMENT	PERFORMANCE CRITERIA
and ideas.	freehand original job drawing to show final 'as-installed' arrangement.
3.3	Corrected drawings are forwarded to appropriate person(s) in accordance with established procedures.
4 Prepare to use compliance standards, codes and specifications.	4.1 Compliance Standards and Codes that apply to particular disciplines are sought and obtained.
	4.2 The format of compliance Standards and Codes that apply to particular disciplines are reviewed and understood.
	4.3 The purpose and format and typical content of job specifications are reviewed and understood.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and using drawings, diagrams, cable schedules, standards, codes and specifications.

The knowledge and skills shall be contextualised to current industry standards, technologies and practices.

KS01-EE107A

Drawings, diagrams and schedules

Evidence shall show an understanding of drawings, diagrams and schedules used in electrotechnology work to an extent indicated by the following aspects:

T1 Architectural drawings encompassing:

- site plans, floor plans detailed drawings and standard drawings
- architectural floor plan to determine the power and lighting or communications / audio/video layouts required in a domestic installation
- site plan to locate the service point, consumers mains, communication services, main switchboard, distribution boards and/or builders supplies.
- standard drawing scales to determine the actual lengths represented by dimensions on an architectural drawing.
- reading and interpretation of floor plans to determine the location of the electrical/communication/audio accessories and appliances.
- Australian standard symbols used on floor plans to show the location of the accessories

REQUIRED SKILLS AND KNOWLEDGE

and appliances as detailed in an electrical schedule.

T2 Electrical drawings encompassing:

- types of electrical drawings: block, circuit, wiring and ladder diagrams
- purpose and application of block, circuit, wiring diagrams and ladder diagrams
- Australian standard symbols used to represent components on electrical diagrams.
- conventions used in and the features of circuit diagrams
- converting a circuit diagram to a wiring diagram
- identification of cable type, origin and route from a cable schedule.
- developing a cable schedule for a given installation.

T3 Circuit diagrams encompassing:

- purpose of circuit diagrams in the electrotechnology industry
- conventions used in and the features of circuit diagrams
- sketching basic circuit diagrams
- common symbols used in circuit diagram (Australian Drawing Standard AS/NZS 1102)
- developing switching charts to identify the terminals of various types of switches
- connecting equipment using circuit diagrams.

T4 Wiring diagrams encompassing:

- purpose of wiring diagrams in the electrotechnology industry
- conventions used in and the features of wiring diagrams
- sketching basic wiring diagrams
- common symbols used in wiring diagram (Australian Drawing Standard AS/NZS 1102)
- connecting equipment using wiring diagrams.

T5 Building construction drawings and diagrams encompassing:

- building types: timber frame, brick veneer, double brick and metal frame.
- identification of different types of: footings, floors, external walls, roofs, interior walls
- typical cable routes through buildings, structures and premises
- sequence of each constructional stage for brick, brick veneer and timber cottages
- identification of the stages at which the electrical/communications - first and second fixing occurs in the constructional sequence
- areas of cooperation between electrical/communications and other building trades

KS02-EE107A standards and codes

Introduction to regulations, compliance

Evidence shall show an understanding of regulations, compliance standards and codes that apply to electrical work to an extent indicated by the following aspects:

T1 Regulation for undertaking electrical work encompassing:

- scope of work covered by licensing in the electrotechnology industry (Electrical

REQUIRED SKILLS AND KNOWLEDGE

licensing)

- legislative requirements for ensuring electrical or electronic equipment is safe i.e. compliance requirements of electrical installations

T2 Standards philosophy and format encompassing:

- performance verses prescriptive requirements
- purpose of technical standards and their development
- role of standards Australia/New Zealand, International Organisation for Standardisation (ISO) and the International Electrotechnical Commission (IEC)
- how standards are used in compulsory and accreditation compliance schemes.
- arrangement and use of technical standards in relation to electrical and electronic work
- how to read and apply a standard.
- Standards and codes that apply to all types of electrical installations
- Standards include Standards mandated under regulation (e.g. Wiring Rules) or by an authority, deemed-to-comply standard and local service requirements (e.g. Service rules).
- Codes include those applicable to electrical safe working practices and some aspects of the Building Code of Australia.

T3 Purpose, format and content of typical job specifications encompassing:

- NATSPEC specification system - provide the most common templates on which job specification are written.

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work

EVIDENCE GUIDE

environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be

EVIDENCE GUIDE

required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.

- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Use drawings, diagrams, schedules, standards, codes and specifications as described in 8) Range and including:
 - A Identifying drawings, diagrams, schedules and manuals relevant to the work to be undertaken.
 - B Interpreting drawings, diagrams, schedules and manuals correctly.
 - C Using correct conventions in freehand drawings.
 - D Giving correct information in freehand drawings.
 - E Obtaining compliance Standards and Codes applicable to particular disciplines
 - F Reviewing and understanding the format of compliance Standards and Codes that apply to particular disciplines
 - G Reviewing the format and content of typical job specifications.
 - H Dealing with unplanned events

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

EVIDENCE GUIDE

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to using drawings, diagrams, schedules and manuals.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with units covering the use of drawings, diagrams, schedules, standards, codes or specifications is required.

Range Statement

RANGE STATEMENT

8) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to assembly, installation, fault finding, maintenance or development work functions in any of the following disciplines:

- Appliances
- Business equipment
- Computers
- Data Communications

RANGE STATEMENT

- Electrical
- Electrical Machines
- Electronics
- Fire protection
- Instrumentation
- Refrigeration and Air Conditioning
- Renewable / sustainable energy, and
- Security technology

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not Applicable

Competency Field

2.2) Literacy and numeracy skills

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers the laying of wiring/cabling, connection of accessories and continuity and insulation resistance testing of circuits intended to operate at extra-low voltage. Typically this includes circuits and accessories for ELV powered devices, security, controls, integrated systems, audio/video systems. It encompasses the principles of single source, single load power circuits, control circuits and communications circuits, safe working practices and following work processes that satisfy electrical principles for safety and functionality.

Application of the Unit

Application of the Unit 2)

This unit is intended for competency development in entry-level employment based programs incorporated in approved contracts of training.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit do not require a license to practice in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

License to practice 3)

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, and power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

Pre-Requisites

Prerequisite Unit(s) 4)

Competencies 4.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE1 01A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE1 02A Fabricate, dismantle, assemble of utilities industry components

UEENEEE1 05A Fix and secure electrotechnology equipment

UEENEEE1 07A Use drawings, diagrams, schedules, standards, codes and specifications

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and

Numeracy⁷

Reading 3 Writing 3 Numeracy 3

Employability Skills Information

Employability Skills 5)

Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | |
|--|--|
| 1 Prepare to lay wiring/cabling and connect accessories for extra-low voltage circuits. | 1.1 OHS procedures for a given work area are obtained and understood through established routines. |
| | 1.2 Established OHS risk control measures in preparation for the work are followed. |
| | 1.3 Safety hazards not previously identified are reported and advice on risk control measures is sought from the work supervisor. |
| | 1.4 The nature and location of the work is obtained from work supervisor or other appropriate person to establish the scope of work to be |

ELEMENT	PERFORMANCE CRITERIA
	undertaken.
	1.5 Advice is sought from the work supervisor or other appropriate person to ensure the work is coordinated effectively with others.
	1.6 Sources of materials that may be required for the work are established in accordance with established routines.
	1.7 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety.
2 Lay wiring/cabling and connect accessories for extra-low voltage circuits.	2.1 Established OHS risk control measures for carrying out the work are followed.
	2.2 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures.
	2.3 Wiring and accessories are installed to comply standards and job specifications with sufficient excess to affect terminations.
	2.4 Accessories are installed straight and square in the required locations and within acceptable tolerances.
	2.5 Cables and conductors are terminated at accessories in accordance with manufacture's specifications and regulatory requirements.
	2.6 Cables installed for future service and marked in accordance with the cable identification scheme and terminated in compliance with regulatory requirements.
	2.7 Procedures for referring non-routine events to immediate supervisor for directions are followed.
	2.8 Cable installation and termination is carried out efficiently without waste of materials or damage to apparatus, circuits or the surrounding environment and using sustainable energy practices.

ELEMENT	PERFORMANCE CRITERIA
3 Complete and report work activities.	3.1 OHS work completion risk control measures and procedures are followed.
	3.2 Work site is cleaned and made safe in accordance with established procedures.
	3.3 Work supervisor is notified of the completion of the installation work in accordance with established routines.

Required Skills and Knowledge

EQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and laying wiring/cabling and terminate accessories for extra-low voltage circuits.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EE108A

Extra low voltage wiring

Evidence shall show an understanding of extra low voltage wiring cable protection and support method and accessories to an extent indicated by the following aspects:

T1 Cable protection and support method and accessories encompassing:

- Requirements to protect and support cables adequately - protection against mechanical damage, protection from adverse temperatures and corrosion and protection from magnetic field that may affect the performance of the cable.
- Cable support and protection devices, accessories and typical applications - metallic and non-metallic conduits, duct and trunking, cable ladder and tray, cable clips and ties and related accessories.
- Installation techniques - cable installation equipment and cable drawing and hauling techniques

T2 Types of cables used in the electrotechnology industry and their application encompassing:

- Structural components of cables and their purpose - conductors and conductor material; insulation; sheathings and servings.
- Application of various cables types
- Cable variates - single cables, flexible cables, flexible cords, shielded cables, armoured cables, ribbon cables, other similar and like cables

EQUIRED SKILLS AND KNOWLEDGE

- Typical characteristics and use of power circuit cables and control circuit cables

T3 Installing cables in buildings, structures and premises encompassing:

- Building construction method and construction sequence.
- Typical cable routes through buildings, structures and premises.
- Building codes affecting the installation of cables in buildings, structures and premises - limitation on penetration structural elements and maintenance of fire protection interiority
- Cable segregation requirements

T4 Basic cable and conductor terminations encompassing:

- Insulation removal and replacement
- Conductor handling and cable terminations encompassing:
 - General aspects and soldering involving pins on electronic components and stranded conductors carrying current up to 25 amperes.
 - Application of connecting devices for conductors and terminals
 - Continuity through connections and insulation resistance testing
 - Stress release on cables/conductors.

T5 Technical standards, regulations and codes related to extra-low voltage work encompassing:

- Limitation imposed by regulations
- How to read and apply a standard
- Aspects of technical Standards that apply to extra-low voltage work

T6 Environmental and heritage regulation effecting electrotechnology work encompassing:

- Purpose of environmental and heritage regulation
- Typical issues affecting electrotechnology services and systems
- Meeting requirements

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Lay wiring/cabling and terminate accessories for extra-low voltage in power and control circuits as described in 8) and including:

- A Understanding the nature of the work.
- B Selecting appropriate tools, cables and accessories.
- C Following appropriate cable routes.
- D Installing cable and accessories to requirements.
- E Terminating cables and accessories to manufacture's specifications and requirements.
- F Cleaning worksite.
- G Notifying completion of work using established procedures.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to laying wiring/cabling and terminate accessories for extra-low voltage circuits.

Method of assessment 9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units 9.5)

For optimisation of training and assessment effort, competency

development in this unit may be arranged concurrently with unit:

UEENEEE10 Fabricate, dismantle, assemble of utilities industry
2A components

UEENEEE10 Fix and secure electrotechnology equipment
5A

UEENEEE10 Use drawings, diagrams, schedules, standards,
7A codes and specifications

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to laying wiring/cabling and connecting accessories for extra-low voltage power and control cabling systems circuits using:

- At least one of the following wiring/cabling systems:
 - Unenclosed thermoplastic sheathed (TPS) cable
 - Enclosed thermoplastic insulated (TPI) or sheathed cables, and
- At least three of the following wiring/cabling systems:
 - single cable,
 - flexible cable,
 - flexible cord,
 - shielded cable,
 - ribbon cable,
 - other similar and like cable

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Establish maintenance requirements.	1.1 OHS processes and procedures for a given work area are identified, obtained and understood.
	1.2 Established OHS risk control measures and procedures in preparation for the work are followed.
	1.3 Policies and procedures are developed to include OHS practices, skills required and frequency and level of maintenance work.
	1.4 The extent of the maintenance program is determined from plant performance specifications and in consultation with relevant person(s).
	1.5 Appropriately competent persons are engaged to assess the risks associated with individual equipment failure.
	1.6 Level and frequency of repair/replace to be done under maintenance work is established from risk assessment reports and manufacture's recommendations and standards reflecting acceptable exposure to risk of equipment failure.
	1.7 Systems are established to manage and record maintenance work in accordance with organisation and regulatory requirements.
2 Develop and implement maintenance program.	2.1 Schedules are developed detailing maintenance levels and frequency for all equipment items based risk assessment reports and manufacture's recommendations.
	2.2 Procedures are developed and implemented to ensure the maintenance program is followed in accordance with the planned schedule and requirements.
	2.3 Procedures are developed and implemented to ensure records are maintained in accordance with planned schedule and requirements.
	2.4 Maintenance program is documented in accordance with in accordance with professional

ELEMENT	PERFORMANCE CRITERIA
	standards and organisation procedures.
3 Evaluate maintenance program.	3.1 Periodic and sample inspection reports are used to ascertain maintenance quality and the need for revision of maintenance schedule and frequency.
	3.2 Maintenance schedule is periodically reviewed and revised to maintain acceptable level of risk associated with equipment failure.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and developing and implementing maintenance programs.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EE110A

Scheduled maintenance processes

Evidence shall show an understanding of scheduled maintenance processors to an extent indicated by the following aspects:

T1 Maintenance principles encompassing:

- maintenance function
- role of maintenance department
- occupational health and safety requirements

T2 Maintenance systems encompassing:

- maintenance terminology
- preventative maintenance
- predictive maintenance
- corrective maintenance

T3 Data acquisition encompassing:

- plant history cards/files
- inspection techniques
- predictive maintenance
- remote visual inspection
- non-destructive testing

REQUIRED SKILLS AND KNOWLEDGE

- thermography
- vibration analysis
- oil analysis

T4 Maintenance plan encompassing:

- characteristics of plant operation
- assessment of failure characteristics
- link failure characteristics to maintenance systems
- identify production windows
- resources
- labour
- materials
- establish plan
- implementation procedures

T5 Review of maintenance plan encompassing:

- analysis of records
- manual recording methods

T6 Computerised recording methods

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to

include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace

procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement

- Apply sustainable energy principles and practices as specified in the performance criteria and range statement
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Develop and implement maintenance programs as described in 8) and including:

- A Determining the extent of the maintenance program accurately.
- B Establishing the level and frequency of maintenance reflecting acceptable exposure to risk of equipment failure.
- C Developing an effective maintenance schedule implementation procedures.
- D Developing a maintenance record system.
- E Developing Ongoing maintenance evaluation scheme.
- F Documenting the maintenance program clearly.
- G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to developing and implementing maintenance programs.

Method of assessment 9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units 9.5)

There are no concurrent assessment recommendations for this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to developing and implement a maintenance program for a plant with at least 10 different types of items included in the schedule. Plant may be for production, process or building services.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not applicable.

Competency Field

Competency Field	11)
	Electrotechnology

UEENEEE125A Provide engineering solutions for problems in complex multiple path circuits

Modification History

Not Applicable

Unit Descriptor

Unit Descriptor

1)

1.1) Descriptor

This unit covers determining correct operation of complex multiple path circuits and providing engineering solutions as they apply to various branches of electrotechnology work functions. It encompasses working safely, problem solving procedures, including using electrical measuring devices, applying appropriate circuit theorems and providing solutions derived from measurements and calculations and justification for such solutions.

Application of the Unit

Application of the Unit

4)

This unit is intended to augment formally acquired competencies. It is suitable for employment-based programs under an approved contract of training.

Licensing/Regulatory Information

1.2) License to practice

The skills and knowledge described in this unit require a license to practice in the workplace where plant and equipment operate at voltage above 50 V a.c. or 120 V d.c. However other conditions may apply in some jurisdictions subject to regulations related to electrical work. Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Pre-Requisites

Prerequisite Unit(s) 2)

2.1) Competencies

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE126A Provide solutions to basic engineering computational problems

Employability Skills Information

Employability Skills 3)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a unit of competency Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1 Prepare to solve problems in complex	1.1 OHS procedures for a given work area are identified, obtained and understood.
--	---

ELEMENT		PERFORMANCE CRITERIA
multiple path circuits.	1.2	OHS risk control work preparation measures and procedures are followed.
	1.3	The nature of the circuit(s) problem is obtained from documentation or from work supervisor to establish the scope of work to be undertaken.
	1.4	Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.
	1.5	Sources of materials that may be required for the work are identified and accessed in accordance with established procedures.
	1.6	Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety.
	2 Solve problems in complex multiple path circuits	2.1
2.2		The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
2.3		Circuits are checked as being isolated where necessary in strict accordance OHS requirements and procedures.
2.4		Established methods are used to solve circuit problems from measure and calculated values as they apply to complex multiple path circuit.
2.5		Unexpected situations are dealt with safely and with the approval of an authorised person.
2.6		Problems are solved without damage to apparatus, circuits, the surrounding environment or services and using sustainable energy practices.
3 Complete work and document problem solving activities.	3.1	OHS work completion risk control measures and procedures are followed.
	3.2	Work site is cleaned and made safe in accordance with established procedures.

ELEMENT

PERFORMANCE CRITERIA

- 3.3 Justification for solutions used to solve circuit problems is documented.
- 3.4 Work completion is documented and appropriate person(s) notified in accordance with established procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and provide engineering solutions for solving problems in complex multiple path circuits.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EE125A

Circuit analysis

Evidence shall show an understanding of circuit analysis to an extent indicated by the following aspects:

T1 Voltage/Current Sources and Kirchhoff's Law for d.c. Linear Circuits encompassing:

- calculating the effect of the internal resistance on terminal voltage and current delivered for practical voltage sources and current sources
- calculating current and voltage in any d.c. network of up to two loops and three sources.
- Kirchhoff's Law using a circuit simulation program.
- function and operation of an electronics circuit simulation program.
- using electronics circuit simulation program.

T2 Superposition Principles for d.c. Linear Circuits encompassing:

- d.c. networks (two loops, three sources)
- using simulation programs
- calculating current and voltage in any d.c. network of up to two loops and three sources.
- Superposition theorem using a circuit simulation program.

T3 Mesh and Nodal Analysis for d.c. Linear Circuits encompassing:

- writing mesh equations for d.c. networks containing up to three loops.
- writing Nodal equations for d.c. networks containing up to three nodes.
- using mesh analysis to find currents in d.c. networks of up to two loops.
- using nodal analysis to find node voltage and branch currents in d.c. networks of up to two nodes

REQUIRED SKILLS AND KNOWLEDGE

- using a circuit simulation program to confirm the results of Mesh analysis or Nodal analysis of d.c. networks.

T4 Thévenin's principles for d.c. Linear Circuits encompassing:

- calculating the effect of the internal resistance on terminal voltage and current delivered for practical voltage sources and current sources.
- calculating the Thévenin equivalent voltage and resistance for d.c. networks and determining the load current, voltage and power.
- converting the Thévenin equivalent circuit to a Norton equivalent circuit and vice versa.
- verifying the equivalence of Thévenin equivalent circuits by measurement.

T5 Norton's principles for d.c. linear circuits encompassing:

- calculating the effect of the internal resistance on terminal voltage and current delivered for practical voltage sources and current sources.
- calculating the Norton equivalent current and resistance for d.c. networks and determining the load current, voltage and power.
- converting the Thévenin equivalent circuit to a Norton equivalent circuit and vice versa.
- verifying the equivalence of Norton equivalent circuits by measurement.

T6 Phasors encompassing:

- time domain and frequency domain
- frequency, angular frequency and units of measurement
- defining rms and convert between time domain and rms phasor values for a sine wave.
- converting between angular frequency and frequency.
- using a calculator to convert between polar and rectangular forms of phasor.
- representing a.c. voltages on a phasor diagram.

T7 Complex Impedance encompassing:

- defining impedance, resistance and reactance.
- defining admittance, conductance and susceptance.
- converting between conductance to resistance.
- converting between susceptance and reactance.
- converting between impedance and admittance.
- sketching impedance and admittance diagrams.
- calculating two-component series equivalent circuits and two-component parallel equivalent circuits and convert between these forms.

T8 Series and parallel a.c. linear circuits encompassing:

- Kirchhoff's Laws
- series equivalent impedance
- parallel equivalent impedance
- voltage divider and current divider rules
- calculating and measuring voltage and currents in a series a.c. circuit and draw the phasor diagram.

REQUIRED SKILLS AND KNOWLEDGE

- calculating and measuring currents in a parallel a.c. circuit and draw the phasor diagram.
- calculating and measuring voltage and currents in a series/parallel a.c. circuit and draw the phasor diagram.

T9 Superposition principles and Kirchoff's Laws applied to a.c. linear circuits encompassing:

- calculating current and voltage in any a.c. network of up to two loops and two sources.
- using circuit simulation programs to demonstrate the superposition theorem.
- function and operation of an electronics circuit simulation program.
- entering given circuit specifications into an electronic circuit program.
- setting the circuit simulation program operation parameters including input and output values, ranges and graduation.
- producing hardcopies of the circuit and analyse results.

T10 Mesh and Nodal analysis for a.c. linear circuits encompassing:

- Mesh analysis
- Node voltages and nodal analysis
- matrix representation
- method of determinants
- writing mesh equations for a.c. networks containing up to three loops.
- writing nodal equations for a.c. networks containing up to three nodes.
- using mesh analysis to find currents in a.c. networks of up to two loops.
- using nodal analysis to find node voltage and branch currents in a.c. networks of up to two nodes.
- using a circuit simulation program to confirm the results of mesh analysis or nodal analysis of a.c. networks.

T11 Thévenin and Norton theorems applied to a.c. linear circuits encompassing:

- calculating the effect of the internal resistance on terminal voltage and current delivered for practical voltage sources and current sources.
- calculating the Thévenin equivalent voltage and impedance for a.c. networks and determining the load current, voltage and power.
- calculating the Norton equivalent current and impedance for a.c. networks and determining the load current, voltage and power.
- converting the Thévenin equivalent circuit to a Norton equivalent circuit and vice versa.
- verifying the equivalence of Thévenin and Norton equivalent circuits by measurement.

T12 Star-delta conversions encompassing:

- Star connections
- Star-delta transformation formula equations
- selection of appropriate conversion
- calculating the delta connected equivalent of a star connected balanced a.c. or d.c. load and vice versa.
- converting a complex non-series/parallel network to a series/parallel network by means

REQUIRED SKILLS AND KNOWLEDGE

of star-delta or delta-star conversions.

- verifying star-delta and delta-star network conversions by measurements.

T13 Complex a.c. power and maximum power transfer theorem encompassing:

- true power, reactive power and apparent power
- maximum power transfer
- calculating real, reactive and apparent power for series/parallel a.c. circuits and state the appropriate units of measurement.
- calculating the power factor of a.c. series/parallel circuits.
- drawing power triangle for a given circuit.
- calculating the load value which would consume maximum power and calculate this power for d.c. networks.
- calculating the load value which would consume maximum power in an a.c. network when the load is a pure resistance and calculate the power.
- calculating the load value which would consume maximum power in an a.c. network when the load is an impedance of variable resistance and reactance and calculate the power.
- verifying load selection by measurement.

T14 Transients encompassing:

- transients in R-C and R-L circuits
- growth and decay
- calculating voltage and currents in R-C series circuits using exponential equations.
- calculating voltage and currents in R-L series circuits using exponential equations

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment

Range Statement

RANGE STATEMENT

8) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to:

- Complex series-parallel circuits as they apply to problems related to engineering diagnosis and development work functions in any of the following disciplines:
 - Computers
 - Data Communications
 - Electrical
 - Electronics
 - Instrumentation
 - Refrigeration and Air Conditioning

RANGE STATEMENT

- In relation to the following types of circuit problems and on at least two occasions:
 - Determining the operating parameters of an existing circuit
 - Altering an existing circuit to comply with specified operating parameters
 - Developing circuits to comply with a specified function and operating parameters

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit

Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to supervise and coordinate work activities	1.1 OHS processes and procedures for a given work area are identified, obtained and understood.
	1.2 Job specification and requirements are obtained and understood.
	1.3 Plant, materials and skills needed for the work are established from specifications and other relevant documentation.
	1.4 Plant, materials, personnel and others needed for the work are accessed in accordance with established procedures.
2 Supervise and coordinate work activities.	2.1 OHS policies, procedures and programs are implemented and monitored.
	2.2 Guidance and work instructions are given to appropriate personnel to ensure the various aspects of the work are sequenced and completed in accordance with job specifications and requirements.
	2.3 Cooperation is sought from others involved in the work to ensure the various aspects of the work are coordinated effectively.
	2.4 Work progress is monitored against schedules, job specifications and requirements.
	2.5 Conflict issues at the work site are dealt with in accordance with established procedures.
	2.6 Requested variations to job specification are dealt with in accordance with established procedures and processes.
	2.7 Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes.
3 Document supervision and coordination activities.	3.1 Job records are maintained in accordance with established procedures.
	3.2 Processes are followed to ensure activities are

ELEMENT**PERFORMANCE CRITERIA**

carried out to established procedures.

Required Skills and Knowledge**REQUIRED SKILLS AND KNOWLEDGE**

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and supervising and coordinating energy sector work activities.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EE114A**Energy sector supervision fundamentals**

Evidence shall show an understanding of energy sector supervision to an extent indicated by the following aspects:

- T1 Importance of customer/client relations
- T2 Interpersonal skills that enhance customer/client
- T3 Dispute resolution
- T4 Customer/client relations strategies
- T5 Responsibilities of workplace supervisors
- T6 Effective instruction methods
- T7 Methods for seeking the cooperation of others
- T8 Dealing with conflict
- T9 Identify problems - Process and quality problems; Equipment selection, availability and failure; Teamwork and work allocation problems; Safety and emergency situations and incident; Performance gaps; Profit improvement and the like.
- T10 Mathematical Tools - Average, Standard deviation and the like.
- T11 Use of analytical techniques in problem solving - Brainstorming; Fishbone diagrams/cause and effect diagrams; Logic trees; Process logic/process requirements; Similarity/difference analysis; Pareto analysis; Force field/SWOT analysis.
- T12 Using tools to assistance in problem solving - Procedures and work instructions; Safety data sheets; Job cards; Maintenance logs; Plant drawing.
- T13 Determine corrective action encompassing:
 - Tools

REQUIRED SKILLS AND KNOWLEDGE

- Mode of communication procedure used within each enterprise
- Established work procedures and policies
- Size and structure of the teams/enterprise
- Group goals - team, section, enterprise
- Enterprise specific conflict resolution procedures
- Action plans
- Priority requirements
- Measurable objectives
- Resource requirements
- Methods for reaching objectives
- Timelines
- Safety requirements
- Risk assessment
- Environmental requirements

T14 Communicate recommendations - Feedback requirements; Corrective action and analysis; Following up recommendations and the like.

T15 Implement Monitoring encompassing:

- Identifying components to be measured
- Measurement and monitoring techniques
- Measurement and monitoring tools

T16 Purpose of a quality system

T17 Procedures pertaining to the relevant work function

T18 Work instructions pertaining to the relevant work function

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of 9.1) Assessment

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects
of evidence
required to
demonstrate
competency in
this unit** 9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also

comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Supervise and coordinate energy sector work activities as described in 8) and including:
 - A Understanding job specification and requirements.
 - B Accessing appropriate plant, materials and personnel.
 - C Providing effective guidance and instructions to personnel.
 - D Obtaining the cooperation of others.
 - E Dealing with conflicts in accordance with established procedures.
 - F Dealing with job variations in accordance with established procedures.
 - G Ensuring work completion documentation is accurate and forwarded to appropriate persons.
 - H Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic

assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and
specific
resources for
assessment** 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to supervising and coordinating energy sector work activities.

**Method of
assessment** 9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment

and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent
assessment and
relationship with
other units** 9.5)

There are no concurrent assessment recommendations for this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to supervising and coordinating of work activities the energy sector with the following attributes:

- working safety
- implementing safety procedures and processes
- sequencing of work activities
- providing guidance and work instructions to others
- job requirements are met
- necessary work documentation maintained

Supervising and coordinating work activities shall be demonstrated in any of the following energy sector disciplines.

- Automation technologies
- Computers
- Data Communications
- Electrical
- Electrical Machines
- Electronics
- Fire protection
- Instrumentation
- Refrigeration and Air Conditioning
- Renewable / sustainable energy
- Security technology

Generic terms used throughout this Vocational Standard shall be regarded as part of

RANGE STATEMENT

the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers the mandatory requirements of persons in a supervisory role to implement and monitor an organisation's occupational health and safety policies, procedures and programs. It encompasses understanding an organisation's OHS obligations, providing safety information to staff, implementing and monitoring participative arrangements, safety procedures and training and maintaining safety records.

Application of the Unit

Application of the Unit 2)

This unit addresses information, processes and techniques for the application of general occupational health and safety requirements in workplaces and is essential for employees work supervisory responsibilities. The unit is based on Generic Competency A in the National Guidelines for Integrating OHS Competencies into National Industry Competency Standards [NOHSC: 7025 (1998) 2nd Edition].

Note:

All States/Territories and the Commonwealth have enacted legislation that establishes a general duty of care for workplace parties to ensure healthy and safe working conditions. In most workplaces, the final responsibility for providing a healthy and safe working environment, as far as practicable, rests with the employer. Employees also have a duty of care in relation to OHS that ensures their health and safety and that of others in the

workplace. The relevant jurisdictional OHS legislation should always be consulted to ascertain the exact duties set down for employers and employees.

Licensing/Regulatory Information

License to practice 3)

The competency described in this unit does not directly require a license to practice but is subject to regulations for occupational health and safety and contracts of training where they apply.

Pre-Requisites

Prerequisite Unit(s) 4)

Competencies 4.1)

There are no prerequisite competencies for this unit.

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 5 Writing 5 Numeracy 5

Employability Skills Information

Employability Skills 5)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability

Employability Skills

5)

Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit
 Performance Criteria describe the required performance needed to demonstrate achievement of the element.
 Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1 Provide OHS information to the work group.	1.1 Relevant provisions of occupational health and safety legislation and codes of practice are accurately and clearly explained to the work group. 1.2 Information on the organisation's occupational health and safety policies, procedures and programs is provided in a readily accessible manner and is accurately and clearly explained to the work group. 1.3. Information about identified hazards and the outcomes of risk assessment and risk control procedures is regularly provided and is accurately and clearly explained to the work group.
2 Implement and monitor participative arrangements for the management of OHS.	2.1 Organisational procedures for consultation over occupational health and safety issues are implemented and monitored to ensure that all members of the work group have the opportunity to contribute. 2.2 Issues raised through consultation are dealt with and resolved promptly or referred to the appropriate personnel for resolution in accordance with workplace procedures for issue

ELEMENT	PERFORMANCE CRITERIA
	resolution.
	2.3 The outcomes of consultation over occupational health and safety issues are made known to the work group promptly.
3. Implement and monitor the procedures for identifying hazards, assessing risk and controlling risks.	<p>3.1 Existing and potential hazards in the work area are identified and reported so that risk assessment and risk control procedures can be applied.</p> <p>3.2 Work procedures to control risks are implemented and adherence to them by the work group is monitored in accordance with workplace procedures.</p> <p>3.3 Existing procedures to control risks are implemented and adherence to them by the work group is monitored in accordance with workplace procedures.</p> <p>3.4 Inadequacies in existing risk control measures are identified in accordance with the hierarchy of control and reported to designated personnel.</p> <p>3.5 Inadequacies in resource allocation for implementation of risk control measures identified and reported to designated personnel.</p>
4. Implement the procedures for dealing with hazardous events.	<p>4.1 Workplace procedures for dealing with hazardous events are implemented whenever necessary to ensure that prompt control action is taken.</p> <p>4.2 Hazardous events are investigated to identify their cause in accordance with investigation procedures.</p> <p>4.3 Control measures to prevent recurrence and minimise risks of hazardous events are implemented based on the hierarchy of control if within scope of responsibilities and competencies or alternatively referred to designated personnel for implementation.</p>

ELEMENT	PERFORMANCE CRITERIA
5 Implement and monitor the procedures for OHS training.	5.1 Occupational health and safety training needs are identified accurately, specifying gaps between occupational health and safety competencies required and those held by work group members. 5.2 Arrangements are made for fulfilling identified occupational health and safety training needs in both on and off-the-job training programs in consultation with relevant parties.
6 Implement and monitor the procedures for maintaining OHS records.	6.1 Occupational health and safety records for work area are accurately and legibly completed in accordance with workplace requirements for occupational health and safety records and legal requirements for the maintenance of records of occupational injury and disease. 6.2 Aggregate information from the area's occupational health and safety records is used to identify hazards and monitor risk control procedures within work according to organisational procedures and within scope of responsibilities and competencies.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and implementing and monitoring energy sector OHS policies and procedures

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EE117A Energy sector Occupational Health and Safety, supervisory responsibilities

Evidence shall show an understanding of OHS enterprise responsibilities to an extent indicated by the following aspects:

- T1 Provisions of relevant occupational health and safety legislation
- T2 Principles and practice of effective occupational health and safety management

REQUIRED SKILLS AND KNOWLEDGE

- T3 Workplace hazards, range and selection of control measures
- T4 Organisational health and safety management systems and policies and procedures needed for legislative compliance
- T5 Impact of characteristics and composition of the workforce on occupational health and safety management
- T6 Relevance of occupational health and safety management to other organisational management policies, procedures and systems.
- T7 Analysis of entire work environment and judge occupational health and safety interventions
- T8 Analysis of relevant workplace data
- T9 Ability to assess resources needed for risk control.

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by

various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be

required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.

- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Implement and monitor energy sector OHS policies and procedures as described in 8) and including:

- A Providing OHS information to the work group.
- B Implementing and monitoring participative arrangements for the management of OHS.
- C Implementing and monitoring the procedures for identifying hazards, assessing risks and controlling risks.
- D Implementing the procedures for dealing with hazardous events.
- E Implementing and monitoring the procedures for OHS.
- F Implementing and monitoring the procedures for maintaining OHS records.
- G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to implementing and monitoring energy sector OHS policies and procedures.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

For optimisation of training and assessment effort, competence in this unit may be assessed concurrently with other related units making up a qualification or possible skill clusters.

Components of this unit are included in the critical aspects of evidence of all units to help ensure the appropriate level of responsibility for safety has been acquired.

Range Statement

RANGE STATEMENT

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to implementing and monitoring energy sector OHS policies and procedures with the following attributes:

- organisation's OHS obligations
- safety information to staff
- participative arrangements implementation and monitoring
- safety procedures
- training
- safety records maintained

Implementing and monitoring the mandatory requirements of persons in a supervisory role an organisation's occupational health and safety policies, procedures and programs shall be demonstrated in the following:

- Relevant Occupational Health and Safety legislation, regulations and codes of practice related to hazards present in the industry and particular workplace
- Implementation of OHS and the specific safety procedures and work instructions for particular workplace

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit
 Performance Criteria describe the required performance needed to demonstrate achievement of the element.
 Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria**ELEMENT****PERFORMANCE CRITERIA**

- | | | | |
|---|--|------|---|
| 1 | Establish and maintain the framework for the OHS system. | 1.1 | Occupational health and safety policies are developed which clearly express the organisation's commitment with respect to occupational health and safety within the area of managerial responsibility and how relevant occupational health and safety legislation will be implemented, consistent with overall organisational policies. |
| | | 1.2 | Occupational health and safety responsibilities and duties which will allow implementation and integration of the occupational health and safety system are clearly defined, allocated and included in job descriptions and duty statements for all relevant positions. |
| | | 1.3. | Financial and human resources for the operation of the occupational health and safety system are identified, sought and/or provided in a timely and consistent manner. |
| | | 1.4 | Information on the occupational health and safety system and procedures for the area of managerial responsibility is provided and explained in a form which is readily accessible |

ELEMENT	PERFORMANCE CRITERIA
	to employees.
2 Establish and maintain participative arrangements for management of OHS.	<p>2.1 Appropriate consultative processes are established and maintained in consultation with employees and their representatives in accordance with relevant occupational health and safety legislation and consistent with the organisation's overall process for consultation.</p> <p>2.2 Issues raised through participation and consultation are dealt with and resolved promptly and effectively in accordance with procedures for issue resolution.</p> <p>2.3 Information about the outcomes of participation and consultation is provided in a manner accessible to employees.</p>
3 Establish and maintain procedures for identifying hazards, assessing risk and controlling risk.	<p>3.1 Existing and potential hazards within the area of managerial responsibility are correctly identified and identification confirmed in accordance with Occupational Health and Safety legislation, codes of practice and trends identified from the occupational health and safety records system.</p> <p>3.2 A procedure for ongoing identification of hazards is developed and integrated within systems of work and procedures.</p> <p>3.3 Activities are appropriately monitored to ensure that this procedure is adopted effectively throughout the area of managerial responsibility.</p> <p>3.4 Hazards identification is addressed at the planning, design and evaluation stages of any change in the workplace to ensure that new hazards are not created.</p> <p>3.5 Risks presented by identified hazards are correctly assessed in accordance with occupational health and safety legislation and coded of practice.</p> <p>3.6 A procedure for ongoing assessment of risk is developed and integrated within systems of work and procedures.</p>

ELEMENT**PERFORMANCE CRITERIA**

- | | |
|------|---|
| 3.7 | Activities are monitored to ensure that this procedure is adopted effectively throughout the area of managerial responsibility. |
| 3.8 | Risk assessment is addressed at the planning, design and evaluation stages of any change within the area of managerial responsibility to ensure that the risk from hazards is not increased. |
| 3.9 | Measures to control assessed risks are developed and implemented in accordance with the hierarchy of control, relevant occupational health and safety legislation, codes of practices and trends identified from the occupational health and safety records system. |
| 3.10 | When measures which control a risk at its source are not immediately practicable, interim solutions are implemented until a control measure is developed. |
| 3.11 | A procedure for ongoing control of risks, based on the hierarchy of control, is developed and integrated with general systems of work and procedures. |
| 3.12 | Activities are monitored to ensure that the risk control procedure is adopted effectively throughout the area of managerial responsibility. |
| 3.13 | Risk control is addressed at the planning, design and evaluation stages of any change within the area of managerial responsibility to ensure that adequate risk control measures are included. |
| 3.14 | Inadequacies in existing risk control measures are identified in accordance with the hierarchy of control, and resources enabling implementation of new measures are sought and/or provided according to appropriate procedures. |
| 4 | Establish and maintain procedures for dealing with hazardous events. |
| 4.1 | Potential hazardous events are correctly identified. |

ELEMENT	PERFORMANCE CRITERIA
	<p>4.2 Procedures which would control the risks associated with hazardous events and meet any legislative requirements as a minimum are developed in consultation with appropriate emergency services.</p> <p>4.3 Appropriate information and training is provided to all employees to enable implementation of the correct procedures in all relevant circumstances.</p>
5 Establish and maintain OHS training program.	5.1 An occupational health and safety training program is developed and implemented to identify and fulfil employees' occupational health and safety training needs as part of the organisation's general training program.
6 Establish and maintain a system for OHS records.	6.1 A system for keeping occupational health and safety records is established and monitored to allow identification of patterns of occupational injury and disease within the area of managerial responsibility.
7 Evaluate the OHS system and related policies, procedures and programs.	<p>7.1 The effectiveness of the occupational health and safety system and related policies, procedures and programs is assessed according to the organisation's aims with respect to occupational health and safety.</p> <p>7.2 Improvements to the occupational health and safety system are developed and implemented to ensure more effective achievements of the organisation's aims with respect to occupational health and safety.</p> <p>7.3 Compliance with occupational health and safety legislation and codes of practice is assessed to ensure that legal occupational health and safety standards are maintained as a minimum.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this

REQUIRED SKILLS AND KNOWLEDGE

unit.

Evidence shall show that knowledge has been acquired of safe working practices and establishing, maintaining and evaluating energy sector OHS systems.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EE118A Energy sector Occupational Health and Safety, enterprise responsibilities

Evidence shall show an understanding of OHS enterprise responsibilities to an extent indicated by the following aspects:

- T1 Provisions of relevant health and safety legislation
- T2 Principles and practice of effective occupational health and safety management
- T3 Management arrangements relating to regulatory compliance
- T4 Enterprise hazards and risks, control measures and relevant expertise required
- T5 Characteristics and composition of workforce and their impact on occupational health and safety management
- T6 Relevance of enterprise management systems to occupational health and safety management
- T7 Analysis of working environment and design of appropriate occupational health and safety management systems
- T8 Analysis of relevant data and evaluation of occupational health and safety system effectiveness
- T9 Assess resources to establish and maintain occupational health and safety management systems.

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of 9.1)

Assessment

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria

shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
 - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
 - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
 - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
 - Demonstrate an appropriate level of skills enabling employment
 - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Establish, maintain and evaluate energy sector OHS systems as described in 8) and including:
 - A Establishing and maintaining the framework for the OHS system.
 - B Establishing and maintaining participative arrangements for management of OHS.
 - C Establishing and maintaining procedures for identifying hazards, assessing risk and controlling risk.
 - D Establishing and maintaining procedures for dealing with hazardous events.
 - E Establishing and maintaining OHS training programs.
 - F Establish and maintain a system for OHS records.
 - G Evaluating the OHS system and related policies, procedures and programs.

H Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Ability to implement these Occupational Health and Safety measures shall be demonstrated on all occasions safety issues arise.

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to establishing, maintaining and evaluating OHS systems.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended

for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent
assessment and
relationship with
other units** 9.5)

For optimisation of training and assessment effort, competence in this unit may be assessed concurrently with other related units making up a qualification or possible skill clusters.

Components of this unit are included in the critical aspects of evidence of all units to help ensure the appropriate level of responsibility for safety has been acquired.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to establishing, maintaining and evaluating energy sector OHS systems with the following attributes:

- organisation's OHS obligations
- participative arrangements establishment and maintained
- hazard identification procedures
- risk assessment and control measures
- hazardous incidents procedures for response
- safety training
- safety records
- safety system evaluation

Establishing, maintaining and evaluating OHS systems shall be demonstrated in the following:

- Relevant occupational health and safety legislation, regulations and codes of practice related to hazards present in the industry and particular workplace
- Establishing, maintaining and evaluating OHS system for the particular enterprise/organisation

RANGE STATEMENT

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not applicable.

Competency Field

Competency Field	11)
	Electrotechnology

UEENEEE119A Solve problems in multiple path extra low voltage (ELV) a.c. (Trunc)

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers determining correct operation of single source ELV a.c. parallel and series-parallel circuits and providing solutions as they apply to various electrotechnology work functions. It encompasses working safely, problem solving procedures, including the use of voltage, current and resistance measuring devices, providing solutions derived from measurements and calculations to predictable problems in multiple path circuits.

Application of the Unit

Application of the Unit 2)

This competency standard is suitable for employment-based programs under an approved contract of training at the AQF level of the qualification in which the unit is first packaged or higher.

The unit may be selected as an elective from the relevant schedule (see qualification packaging rules) provided that all prerequisite units are undertaken or addressed through recognition processes.

This unit may be included in a skill set provided that it is listed in the schedule of electives (see Qualification Framework) and all prerequisite units are undertaken or addressed through recognition processes.

Delivery and assessment of this unit should be undertaken with regard to the requirements of License to Practice (1.2 above), Prerequisite Competencies and Literacy and Numeracy skills (2 above) and the recommendations for concurrent assessment and relationship with other units (9.5 below).

Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting, risk safety measures etc.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit require a license to practice in the workplace where plant and equipment operate at voltage above 50 V a.c. or 120 V a.c. However other conditions may apply in some jurisdictions subject to regulations related to electrical work. Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Pre-Requisites

Prerequisite Unit(s) 4)

Competencies 4.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE1 01A Apply Occupational Health Safety regulations, codes and practices in the workplace

UEENEEE1 04A Solve problems in d.c. circuits

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 4 Writing 4 Numeracy 5

Employability Skills Information

Employability Skills 5)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

- 6) Elements describe the essential outcomes of a competency standard unit
 Performance Criteria describe the required performance needed to demonstrate achievement of the element.
 Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to work on multiple path ELV a.c. electrical circuits.	1.1 OHS procedures for a given work area are identified, obtained and understood.
	1.2 OHS risk control work preparation measures and procedures are followed.
	1.3 The nature of the circuit(s) problem is obtained from documentation or from work supervisor to establish the scope of work to be undertaken.
	1.4 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.
	1.5 Sources of materials that may be required for the work are identified and accessed in accordance with established procedures.
	1.6 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety.
2 Solve multiple path ELV a.c. circuit problems.	2.1 OHS risk control work measures and procedures are followed.
	2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
	2.3 Circuits are checked as being isolated where necessary in strict accordance OHS requirements and procedures.
	2.4 Established methods are used to solve a.c. circuit problems from measure and calculated

ELEMENT	PERFORMANCE CRITERIA
	values as they apply to multiple path electrical circuit.
	2.5 Unexpected situations are dealt with safely and with the approval of an authorised person.
	2.6 Problems are solved without damage to apparatus, circuits, the surrounding environment or services and using sustainable energy practices.
3 Complete work and document problem solving activities.	3.1 OHS work completion risk control measures and procedures are followed.
	3.2 Work site is cleaned and made safe in accordance with established procedures.
	3.3 Justification for solutions used to solve circuit problems is documented.
	3.4 Work completion is documented and appropriate person(s) notified in accordance with established procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and solving problems in multiple path ELV a.c. circuits.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EE119A

Alternating current principles – single phase

Evidence shall show an understanding of alternating currents principles used in power circuits to an extent indicated by the following aspects:

T1 Sinusoidal alternating voltage and current encompassing:

- Generation of a sinusoidal voltage with a single turn coil rotated in a uniform magnetic field.
- the terms ‘period’, ‘maximum value’, ‘peak-to-peak value’, ‘instantaneous value’, ‘average value’, ‘root-mean-square (r.m.s.) value’, ‘crest factor’ and ‘form factor’

REQUIRED SKILLS AND KNOWLEDGE

in relation to a sinusoidal waveform.

- the instantaneous value of induced voltage of a generated sinusoidal waveform.
- measurement of the instantaneous, peak, peak-to-peak values and the period of a sinusoidal waveform.
- the root-mean-square (r.m.s.) value and frequency of a sinusoidal waveform .
- phase relationship between two or more sinusoidal waveforms.

T2 Phasors encompassing:

- the terms ‘in-phase’, ‘out-of-phase’, ‘phase angle’, ‘lead’, and ‘lag’.
- the phase angle between two or more alternating quantities from a given sinusoidal waveform diagram.
- convention for representing voltage, current and the reference quantity in a phasor diagram.
- phasor diagrams two or more a.c. values of voltage and/or current.

T3 Resistance in a.c. circuits encompassing:

- connection of a single-source a.c. circuit to take resistance, voltage and current measurements.
- the voltage, current, resistances or power dissipated from measured or given values of any two of these quantities.
- the relationship between voltage drops and current in a resistive a.c. circuit.

T4 Inductance in a.c. circuits encompassing:

- definition of ‘inductive reactance’.
- the inductive reactance of a given inductor and show the relationship between inductive reactance and frequency.
- equivalent inductive reactance in an a.c. circuit or any part of a circuit.
- application of Ohm’s Law to determine voltage, current or inductive reactance in a purely inductive a.c. circuit given any two of these quantities.
- examples of inductive components in power circuits and systems and describe their effect on the phase relationship between voltage and current.
- the comparative current limiting characteristics of inductors and resistors.

T5 Capacitance in a.c. circuits encompassing:

- definition of ‘capacitive reactance’.
- the capacitive reactance of a given capacitor and the relationship between capacitive reactance and frequency.
- equivalent capacitive reactance in an a.c. circuit or any part of a circuit.
- application of Ohm’s Law to determine voltage, current or capacitive reactance in a purely capacitive a.c. circuit given any two of these quantities.
- examples of capacitive components in power circuits and systems and describe their effect on the phase relationship between voltage and current.

T6 Impedance encompassing:

REQUIRED SKILLS AND KNOWLEDGE

- definition of 'impedance'.
- impedance of series, parallel and series-parallel circuits and diagrams showing the relationship between resistive, inductive and capacitive components (impedance triangle).
- connection of a single-source a.c. circuit and take resistance, voltage and current measurements.
- voltage, current or impedance values from measured or given values of any two of these quantities.
- phasor diagram usage to solve problems and show the relationship between voltages and currents in a.c. circuits.

T7 Resonance encompassing:

- conditions in a circuit that produce resonance.
- the relationship between resonance and frequency.
- the effect on the current of series resonance and parallel resonance conditions.
- applications where resonance is applied

T8 Power and power factor encompassing:

- difference between true power, apparent power and reactive power and the units.
- definition of the term "power factor".
- the effects of low power factor.
- local and AS/NZS 3000 requirements regarding the power factor of an installation and power factor improvement equipment.

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best

utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit 9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline,

work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:

- Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
- Apply sustainable energy principles and practices as specified in the performance criteria and range statement
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
 - Solve problems in multiple path ELV a.c. circuits as described in 8) and including:

- A Determining the operating parameters of an existing circuit.
- B Altering an existing circuit to comply with specified operating parameters.
- C Developing circuits to comply with a specified function and operating parameters.
- D Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Context of and specific resources for assessment 9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials

to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to solving problems in multiple path ELV a.c. circuits.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEE10 Solve problems in d.c. circuits
4A

Range Statement

RANGE STATEMENT

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to:

- Single source parallel and series-parallel a.c. circuits as they apply to problems related to installation, fault finding, maintenance or development work functions in any of the following disciplines:
 - Computers
 - Data Communications
 - Electrical
 - Electronics
 - Fire protection
 - Instrumentation
 - Refrigeration and Air Conditioning
- In relation to at least two of the following types of circuit problems and on at least two occasions
 - determining the operating parameters of an existing circuit
 - altering an existing circuit to comply with specified operating parameters
 - developing circuits to comply with a specified function and operating parameters

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

UEENEEE121A Plan an integrated cabling installation system

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers the planning of cable routes for intelligent power and lighting, information and communications, entertainment systems, distributed video and audio; energy management and control; security and safety; digital home health; age and assisted living;.. This unit encompasses determining immediate and future cabling needs of an installation and their origins and termination points, planning cable routes, specifying cable types, sizes, fixing/support methods and cable identification systems and documenting cabling plans based on calculated and/or deemed-to-comply solutions as well as the planning of the wiring hub if required.

Application of the Unit

Application of the Unit 2)

This unit is intended as an additional competency to relevant competencies previously acquired. It is suitable for employment-based programs under an approved contract of training at the aligned AQF 3 level or higher.

Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit do not require a license to practice in the workplace. However practice in this unit is subject to regulations directly

License to practice

3)

related to occupational health and safe and contracts of training such as new apprenticeships.

Pre-Requisites**Prerequisite Unit(s)**

4)

Competencies

4.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE1 01A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE1 02A Fabricate, assemble and dismantle utilities industry components

UEENEEE1 05A Fix and secure electrotechnology equipment

UEENEEE1 07A Use drawings, diagrams, schedules, standards, codes and specifications

AND

UEENEEE1 08A Lay wiring/cabling and terminate accessories for extra-low voltage (ELV) circuits

OR

UEENEEG1 06A Terminate cables, cords and accessories for low voltage circuits

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

Literacy and numeracy skills

4.2)

Participants are best equipped to achieve competency in

this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading 4 Writing 4 Numeracy 4

Employability Skills Information

Employability Skills 5)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

- | | |
|---|--|
| 1 Determine immediate and future cabling needs. | 1.1 OHS risk control measures and procedures for carrying out the work are followed. |
| | 1.2 Work supervisor or customers are consulted to determine immediate and future services required. |
| | 1.3 Immediate and future location of service items and accessories is determined and written confirmation sought from appropriate persons. |

ELEMENT	PERFORMANCE CRITERIA
2 Plan an integrate cabling system for immediate and future services	<p>1.4 Safety and other regulatory requirements to which the installation shall comply are obtained and understood.</p> <p>2.1 Types and sizes of cables required for the various services are chosen to comply with technical standards, codes and regulations.</p> <p>2.2 Cables are arranged into circuits to ensure safe and functional operation of the services for which they are intended and to comply with technical standards, codes, regulations and budgetary restraints.</p> <p>2.3 Cabling for protective and functional earthing arrangements is determined to comply with technical standards, codes and regulations.</p> <p>2.4 Cabling routes are planned and cable support and methods for protection against damage specified to ensure compliance with technical standards, codes and regulations.</p> <p>2.5 Cable identification scheme is developed to aid installation of services.</p> <p>2.6 Methods of terminating cables intended for future services are specified to ensure compliance with technical standards, codes and regulations.</p>
3 Document the integrated cabling plan	<p>3.1 Types and sizes of cables chosen, together with supporting justification, are documented in accordance with established procedures.</p> <p>3.2 Cable routes and cable support and methods for protection against damage are documented in accordance with established procedures.</p> <p>3.3 Cable identification scheme and methods of terminating cables intended for future services are documented in accordance with established procedures.</p> <p>3.4 Acceptance of the integrated cabling plan is sought from appropriate persons.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and planning integrated cabling installations.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EE121A Planning integrated cabling installations

Evidence shall show an understanding of integrated cabling systems to an extent indicated by the following aspects:

T1 Overview of relevant residential systems encompassing:

- information and communications
- entertainment
- energy management
- security and safety
- digital home health
- age and assisted living
- intelligent lighting and power

T2 Information and communications system encompassing:

- computing
- home video conferencing
- intercoms
- telephony

T3 Entertainment encompassing:

- distributed audio and video
- free-to-air TV and HDTV
- home theatre
